

Title **Correction to enable Rel4 extensions in Location Reporting Control procedure**
Source **Nokia, Ericsson, Alcatel, Nortel Networks**
Agenda Item **7.3.4**

Please find attached in the zip file, as company proposal, the revisions 4 of the CR525 and 526 (revisions 2 are RAN3 approved CRs included in RP-020751). The revision 3 of those CRs were submitted in RP-020819 by the same companies, but as some errors were pointed out on the RAN3 reflector, new revisions are proposed in this contribution.

RAN3 Tdoc	Spec	curr. Vers.	new Vers.	REL	CR	Rev	Cat	Title	Work item
Company proposal	25.413	4.6.0	4.7.0	REL-4	525	4	F	Correction to enable Rel4 extensions in Location Reporting Control procedure	TEI4
Company proposal	25.413	5.2.0	5.3.0	REL-5	526	4	A	Correction to enable Rel4 extensions in Location Reporting Control procedure	TEI4

Alcatel, Nokia, Ericsson and Nortel Networks had long discussions after RAN3#33 and finally agreed on the attached CRs 525r4 and 526r4. These CRs are submitted as company proposal as agreed at last RAN3#33 meeting. The intention of Alcatel, Nokia, Ericsson and Nortel Networks is to approve in TSG RAN those attached CRs 525r4 and 526r4 instead of the RAN3 approved ones (CRs 525r2/526r2 in RP-020751). The previous CRs 525r3 and 526r3 submitted in RP-020819 should be considered as withdrawn.

The differences between the RAN3 CRs 525r2/526r2 and the attached CRs are the following ones:

- 1- We have decided to move the *Rel4 Vertical Accuracy Code, Positioning Priority, Response Time and Client Type* IEs directly in the extension container at the top level of the LOCATION REPORTING CONTROL message. Indeed those IEs are not moved inside one IE group (used to be the *Request Type Extension IE*) in the extension container at the top level of the LOCATION REPORTING CONTROL message, because if in later release there is a need to introduce a new value for one of those IEs, this new value will force RNCes from previous releases to ignore the whole IE group (e.g. the *Request Type Extension IE*) in the extension container and then handled the request in a release 99 manner (the criticality is only on the *Request Type Extension IE*, not on each of the contained IEs).
- With other words, a simple addition of a value in later release could jeopardise the whole *Request Type Extension IE* and the Rel4 RANAP LCS functionality.
- 2- In the tabular format and in the ASN.1, all IEs are now optional and the conditions are moved in the procedural text.
- 3- Vertical Accuracy Code is said dedicated to Geographical Area (obvious anyway, but better to say it). Furthermore whether or not the *Vertical Accuracy Code IE* is present, the *Accuracy Code IE* always represents horizontal accuracy requirement (even in R99).
- 4- Response Time is mandatory only if available at CN (no change to the conditions of previous CR525r2). When not available in CN, the RNC considers "Delay Tolerant".
- 5- Positioning Priority is mandatory only if available in CN (no change to the conditions of previous CR525r2). When not available in CN, the RNC considers "Normal Priority".
- 6- Client Type, previously mandatory when the Report Area is Geographical Area or SA, is now mandatory only when the Report Area is Geographical Area and mandatory if available at CN when the Report Area is SA.
- 7- Considering the whole correction of the LCS RANAP functionality providing by those CRs, it does not make sense to keep the ellipsis notation in the middle of the list of values for the *Client Type IE*.
- 8- We finally corrected some ASN.1 mistakes that have been introduced in the agreed CR 525r2 and 526r2 as well as in CR 525r3 and 526r3.

We all hope that TSG RAN will agree to these CRs. They are the unique opportunity to make things clean and to avoid any future non-backwards compatibility issues in the future.

CHANGE REQUEST

⌘ **25.413** CR **525** ⌘ rev **4** ⌘ Current version: **4.6.0** ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

Proposed change affects: UICC apps ME Radio Access Network Core Network

Title:	⌘ Correction to enable Rel4 extensions in Location Reporting Control procedure.	
Source:	⌘ Nokia, Ericsson, Alcatel, Nortel Networks	
Work item code:	⌘ TEI4	Date: ⌘ 29 November 2002
Category:	⌘ F Use <u>one</u> of the following categories: F (correction) A (corresponds to a correction in an earlier release) B (addition of feature), C (functional modification of feature) D (editorial modification)	Release: ⌘ Rel-4 Use <u>one</u> of the following releases: 2 (GSM Phase 2) R96 (Release 1996) R97 (Release 1997) R98 (Release 1998) R99 (Release 1999) Rel-4 (Release 4) Rel-5 (Release 5) Rel-6 (Release 6)

Reason for change:	⌘ During RAN3#32, a RANAP Review ad hoc was held where a new issue was raised (see R3-022277). This issue B.9 was also discussed during an email discussion in order to prepare CRs for RAN3#33. Release 4 support of extended positionning in RANAP was approved at RAN3#23 in CR R3-012626 (revision 7!), based on the email discussion report in R3-012322. This CR introduced some new Rel4 IEs after the ellipsis notation in the SEQUENCE Type Request Type IE in the LOCATION REPORTING CONTROL message. However TR 25.921 in section 10.5.1 recommends that adding New IEs or IE groups should be achieved by using the protocol extension container and not by using the ellipsis notation for adding at the top level of message and adding in the SEQUENCE type. Indeed nothing mandates nor restricts an ASN.1 decoder implementation to behave according to one of the two opposite behaviors in the following scenario: - R4 Sept02 CN LOCATION REPORTING CONTROL -> R99 RNC: either skip those unknown Rel4 IEs received after the ellipsis notation (succesfull R99 treatment of the message) or ignore the whole Request Type IE because not fully comprehended (logical error, procedure rejected). Furthermore in the scenario of a R99 CN LOCATION REPORTING CONTROL sent to R4 Sept02 RNC, the RNC will be expecting those Rel4 IEs depending on their conditions and therefore when the conditions are true, we will always have an abstract syntax error that will end up in ignoring the whole Request Type IE (logical error, procedure rejected).
	<u>Revision 3:</u> Moreover, 1) There is no reason to get the Client Type as mandatory when the Report Area is Service Area since there is no need for specific formatting in the Location Report for that case: the response is always SAI.

2) The Positioning priority is mandatory for event cases "Direct" and "Change of service area" whereas it should only be optional according to TS23.271 section 5.5.1 which states: "The following generic attributes are identified for the Location Service Request information flow: Priority, if needed". It is also in line with TS08.08 clause 3.2.1.71 that mentions the LCS priority IE as optional.

Revision 4: Finally,

- 1) some ASN.1 mistakes included in the revision 3 remained.
- 2) Considering the whole correction of the LCS RANAP functionality providing by that CR, there is no point of keeping the ellipsis notation in the middle of the list of values for the *Client Type* IE.
- 3) whether or not the *Vertical Accuracy Code* IE is present, the *Accuracy Code* IE always represents horizontal accuracy requirement (even in R99).

Summary of change:

The Rel4 *Vertical Accuracy Code*, *Positioning Priority*, *Response Time* and *Client Type* IEs are moved in the extension container at the top level of the LOCATION REPORTING CONTROL message.

Revision 3: Those IEs are not moved inside one IE group in the extension container at the top level of the LOCATION REPORTING CONTROL message, because if in later release there is a need to introduce a new value for one of those IEs, this new value will force RNCes from previous releases to ignore the whole IE group in the extension container and then handled the request in a release 99 manner.

Revision 3: The Client Type is not anymore mandatory when the Report Area is Service Area: in this case, it shall be included by the CN only if available.
The Positioning priority is not mandatory anymore: it shall be included by the CN only if available.

Revision 4: Finally,

- 1) some ASN.1 mistakes included in the revision 3 are corrected.
- 2) The ellipsis notation is moved at the end of the list of values for the *Client Type* IE.
- 3) whether or not the *Vertical Accuracy Code* IE is present, the *Accuracy Code* IE always represents horizontal accuracy requirement (even in R99). So we could say simply that this is horizontal accuracy (we cannot change the R99 name of the IE).

The procedure text of the Location Reporting Control procedure is completed accordingly.

Finally, as a combined CR, this CR covers also the clarification of the issue B.2 (see R3-022277) and therefore adds the wording "the value refers to [x1]" in the semantic description for the *Positioning Priority* IE and *Response time* IE with [x1] as a new reference to 22.071 in RANAP in order to have a pointer towards the meaning of the values of those IEs.

Impact assessment towards the previous version of the specification (same release):

This CR has isolated impact with the previous version of the specification (same release) because of change in the content (ASN.1) of the LOCATION REPORTING CONTROL message.

The CR has an impact under protocol and functional point of view.

The impact can be considered isolated because the change affects the Location Reporting Control function.

It should be noted that this CR introduces a not backward compatible change compared to previous Rel4 version of RANAP specification, as shown in the following scenarios:

R4 Sept02 CN LOCATION REPORTING CONTROL -> R4 Dec02 RNC: it does not work for ASN.1 decoder implementation not capable of skipping those

		unknown IEs received after the ellipsis notation. It works otherwise in R99 manner. R4 Dec02 CN LOCATION REPORTING CONTROL -> R4 Sept02 RNC: it does not work at all.								
Consequences if not approved:	⌘	If Rel4 CNs and RNCs are not upgraded based on that CR, the R99 Location Reporting Control function does not work at all in the following cases: <ul style="list-style-type: none"> ▪ R99 CN LOCATION REPORTING CONTROL -> R4 Sept02 RNC ▪ R4 Sept02 CN LOCATION REPORTING CONTROL -> R99 RNC for ASN.1 decoder implementation not capable of skipping those unknown IEs received after the ellipsis notation. It should be noted that this CR is not backward compatible change compared to previous Rel4 version of RANAP specification in order to enable forward compatibility with R99 functionality and R99 nodes. <u>Revision 3:</u> Moreover, the Positioning Priority and Client Type would be required from the CN even if not available , and the Client Type would be signalled even when not needed in the RNC.								
Clauses affected:	⌘	2, 8.19.2, 9.1.29, 9.2.1.16, 9.2.1.x2 (new), 9.2.1.x3 (new), 9.2.1.x4 (new), 9.2.1.x5 (new), 9.3.3, 9.3.4 and 9.3.6								
Other specs affected:	⌘	<table border="1" style="display: inline-table; vertical-align: middle;"> <tr> <td>Y</td> <td>N</td> </tr> <tr> <td>X</td> <td>Other core specifications</td> </tr> <tr> <td>X</td> <td>Test specifications</td> </tr> <tr> <td>X</td> <td>O&M Specifications</td> </tr> </table> Mirror CR526rev4 25.413 REL-5	Y	N	X	Other core specifications	X	Test specifications	X	O&M Specifications

Other comments:	⌘	Suggestions for new numbers: <ul style="list-style-type: none"> - new reference number in Rel4, x1=26 - new section number in Rel4, 9.2.1.x2=9.2.1.46a - new section number in Rel4, 9.2.1.x3=9.2.1.46b - new section number in Rel4, 9.2.1.x4=9.2.1.46c - new section number in Rel4, 9.2.1.x5=9.2.1.46d 								

How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

8.19.2 Successful Operation

Figure 21: Location Reporting Control procedure. Successful operation.

The CN shall initiate the procedure by generating a LOCATION REPORTING CONTROL message.

The *Request Type* IE shall indicate to the serving RNC whether:

- to report directly;
- to stop a direct report;
- to report upon change of Service area, or
- to stop reporting at change of Service Area.

If reporting upon change of Service Area is requested, the Serving RNC shall report whenever the UE moves between Service Areas. For this procedure, only Service Areas that are defined for the PS and CS domains shall be considered.

The *Request Type* IE shall also indicate what type of location information the serving RNC shall report. The location information is either of the following types:

- Service Area Identifier, or
- Geographical area, including geographical coordinates with or without requested accuracy. If the Vertical Accuracy Code IE is included, the Accuracy Code IE in the Request Type IE shall be present. The Accuracy Code IE shall be understood as the horizontal accuracy code, response time, priority and the client type.

A request for a direct report can be done in parallel with having an active request to report upon change of Service Area for the same UE. The request to report upon change of Service Area shall not be affected by this.

Any of the Vertical Accuracy Code IE, Response Time IE, Positioning Priority IE or Client Type IE shall be included according to the following rules:

- Vertical Accuracy Code shall be included, if available, in connection with Geographical Area,
- Response time shall be included, if available, in connection with request for start of direct reporting of Geographical Area,
- Client type shall be included in connection with request for start of direct reporting of Geographical Area and, if available, in request for direct reporting of SAI,
- Positioning Priority shall be included, if available, in connection with request for start of direct reporting or in connection with request for start of reporting upon change of Service Area.

When no Positioning Priority IE is included, the RNC shall consider the request as if “Normal Priority” value had been received.

When no Response Time IE is included, the RNC shall consider the request as if “Delay Tolerant” value had been received.

Interaction with Relocation:

The order to perform location reporting at change of Service Area is lost in UTRAN at successful Relocation of SRNS. If the location reporting at change of Service Area shall continue also after the relocation has been performed, the Location Reporting Control procedure shall thus be re-initiated from the CN towards the future SRNC after the Relocation Resource Allocation procedure has been executed successfully.

9.1.29 LOCATION REPORTING CONTROL

This message is sent by the CN to initiate, modify or stop location reporting from the RNC to the CN.

Direction: CN → RNC.

Signalling bearer mode: Connection oriented.

IE/Group Name	Presence	Range	IE type and reference	Semantics description	Criticality	Assigned Criticality
Message Type	M		9.2.1.1		YES	ignore
Request Type	M		9.2.1.16		YES	ignore

Client Type	O		9.2.1.x5		YES	ignore

9.2.1 Radio Network Layer Related IEs

Lots of unaffected parts in 9.2.1 not shown

9.2.1.16 Request Type

This element indicates the type of UE location to be reported from RNC and it is either a Service Area or Geographical Area.

IE/Group Name	Presence	Range	IE type and reference	Semantics description
Request Type				
>Event	M		ENUMERATED(Stop Change of service area, Direct, Change of service area, ..., Stop Direct)	
>Report Area	M		ENUMERATED(Service Area, Geographical Area, ...)	When the Event IE is set to "Stop Change of service area" or to "Stop Direct", the value of the Report area IE shall be the same as in the LOCATION REPORTING CONTROL message that initiated the location reporting.
>Horizontal-Accuracy Code	O		INTEGER(0..127)	The requested accuracy "r" is derived from the "accuracy code" k by $r = 10 \times (1.1^k - 1)$. <u>The Accuracy Code IE</u> shall be understood as the horizontal accuracy code.
>Vertical Accuracy Code	O		INTEGER(0..127)	The requested accuracy "v" is derived from the "accuracy code" k by $v = 45 \times (1.025^k - 1)$.
>Response time	C— ifDirect&G eoAreaRep ortArea		ENUMERATED (Low Delay, Delay Tolerant, ...)	
>Positioning Priority	C— ifDirect&Ch angeArea		ENUMERATED(High Priority, Normal Priority, ...)	
>Client type	C— ifDirect		ENUMERATED(Emergency Services, Value Added Services, PLMN Operator Services, Lawful Intercept Services, ..., PLMN Operator broadcast services, PLMN Operator O&M, PLMN Operator anonymous statistics, PLMN Operator Target MS service support)	Identifies the type of client

Condition	Explanation
#Direct&GeoAreaReportArea	This IE shall be present if the <i>Event</i> IE is set to 'Direct' and the <i>Report Area</i> IE is set to 'Geographical Area'.
#Direct	This IE shall be present if the <i>Event</i> IE is set to 'Direct'.
#Direct&ChangeArea	This IE shall be present if the <i>Event</i> IE is set to 'Direct' or "Change of Service Area".

Lots of unaffected parts in 9.2.1 not shown

9.2.1.46 Global CN-ID

Global CN-ID is used to globally identify a CN node.

IE/Group Name	Presence	Range	IE type and reference	Semantics description
Global CN-ID				
>PLMN identity	M		OCTET STRING (SIZE (3))	<ul style="list-style-type: none"> - digits 0 to 9, two digits per octet, - each digit encoded 0000 to 1001, - 1111 used as filler - bit 4 to 1 of octet n encoding digit $2n-1$ - bit 8 to 5 of octet n encoding digit $2n$ <p>-The PLMN identity consists of 3 digits from MCC followed by either -a filler plus 2 digits from MNC (in case of 2 digit MNC) or -3 digits from MNC (in case of a 3 digit MNC).</p>
>CN-ID	M		INTEGER (0..4095)	

9.2.1.x2 Vertical Accuracy Code

This element includes information about the requested vertical accuracy.

IE/Group Name	Presence	Range	IE type and reference	Semantics description
Vertical Accuracy Code				
>Vertical Accuracy Code	M		INTEGER(0..127)	The requested accuracy "v" is derived from the "accuracy code" k by $v = 45 \times (1.025^k - 1)$.

9.2.1.x3 Response Time

This element includes information about the requested response time.

IE/Group Name	Presence	Range	IE type and reference	Semantics description
Response Time				
>Response Time	M		ENUMERATED (Low Delay, Delay Tolerant, ...)	The value refers to [x1].

9.2.1.x4 Positioning Priority

This element includes information about the requested positioning priority.

<u>IE/Group Name</u>	<u>Presence</u>	<u>Range</u>	<u>IE type and reference</u>	<u>Semantics description</u>
Positioning Priority				
>Positioning Priority	M		ENUMERATED(High Priority, Normal Priority, ...)	The value refers to [x1].

9.2.1.x5 Client Type

This element includes information about the client type.

<u>IE/Group Name</u>	<u>Presence</u>	<u>Range</u>	<u>IE type and reference</u>	<u>Semantics description</u>
Client Type				
>Client Type	M		ENUMERATED(Emergency Services, Value Added Services, PLMN Operator Services, Lawful Intercept Services, PLMN Operator - broadcast services, PLMN Operator - O&M, PLMN Operator - anonymous statistics, PLMN Operator - Target MS service support, ...)	Identifies the type of client.

Rel-5	(Release 5)																	
Rel-6	(Release 6)																	

Reason for change: ⌘	<p>During RAN3#32, a RANAP Review ad hoc was held where a new issue was raised (see R3-022277). This issue B.9 was also discussed during an email discussion in order to prepare CRs for RAN3#33.</p> <p>Release 4 support of extended positionning in RANAP was approved at RAN3#23 in CR R3-012626 (revision 7!), based on the email discussion report in R3-012322.</p> <p>This CR introduced some new Rel4 IEs after the ellipsis notation in the SEQUENCE Type Request Type IE in the LOCATION REPORTING CONTROL message. However TR 25.921 in section 10.5.1 recommends that adding New IEs or IE groups should be achieved by using the protocol extension container and not by using the ellipsis notation for adding at the top level of message and adding in the SEQUENCE type.</p> <p>Indeed nothing mandates nor restricts an ASN.1 decoder implementation to behave according to one of the two opposite behaviors in the following scenario:</p> <ul style="list-style-type: none"> - R4 Sept02 CN LOCATION REPORTING CONTROL -> R99 RNC: either skip those unknown Rel4 IEs received after the ellipsis notation (succesfull R99 treatment of the message) or ignore the whole Request Type IE because not fully comprehended (logical error, procedure rejected). <p>Furthermore in the scenario of a R99 CN LOCATION REPORTING CONTROL sent to R4 Sept02 RNC, the RNC will be expecting those Rel4 IEs depending on their conditions and therefore when the conditions are true, we will always have an abstract syntax error that will end up in ignoring the whole Request Type IE (logical error, procedure rejected).</p> <p><u>Revision 3:</u> Moreover,</p> <ol style="list-style-type: none"> 1) There is no reason to get the Client Type as mandatory when the Report Area is Service Area since there is no need for specific formatting in the Location Report for that case: the response is always SAI.
-----------------------------	---

2) The Positioning priority is mandatory for event cases "Direct" and "Change of service area" whereas it should only be optional according to TS23.271 section 5.5.1 which states: "The following generic attributes are identified for the Location Service Request information flow: Priority, if needed". It is also in line with TS08.08 clause 3.2.1.71 that mentions the LCS priority IE as optional.

Revision 4: Finally,

- 1) some ASN.1 mistakes included in the revision 3 remained.
- 2) Considering the whole correction of the LCS RANAP functionality providing by that CR, there is no point of keeping the ellipsis notation in the middle of the list of values for the *Client Type* IE.
- 3) whether or not the *Vertical Accuracy Code* IE is present, the *Accuracy Code* IE always represents horizontal accuracy requirement (even in R99).

Summary of change:

The Rel4 *Vertical Accuracy Code*, *Positioning Priority*, *Response Time* and *Client Type* IEs are moved in the extension container at the top level of the LOCATION REPORTING CONTROL message.

Revision 3: Those IEs are not moved inside one IE group in the extension container at the top level of the LOCATION REPORTING CONTROL message, because if in later release there is a need to introduce a new value for one of those IEs, this new value will force RNCes from previous releases to ignore the whole IE group in the extension container and then handled the request in a release 99 manner.

Revision 3: The Client Type is not anymore mandatory when the Report Area is Service Area: in this case, it shall be included by the CN only if available.
The Positioning priority is not mandatory anymore: it shall be included by the CN only if available.

Revision 4: Finally,

- 1) some ASN.1 mistakes included in the revision 3 are corrected.
- 2) The ellipsis notation is moved at the end of the list of values for the *Client Type* IE.
- 3) whether or not the *Vertical Accuracy Code* IE is present, the *Accuracy Code* IE always represents horizontal accuracy requirement (even in R99). So we could say simply that this is horizontal accuracy (we cannot change the R99 name of the IE).

The procedure text of the Location Reporting Control procedure is completed accordingly.

Finally, as a combined CR, this CR covers also the clarification of the issue B.2 (see R3-022277) and therefore adds the wording "the value refers to [x1]" in the semantic description for the *Positioning Priority* IE and *Response time* IE with [x1] as a new reference to 22.071 in RANAP in order to have a pointer towards the meaning of the values of those IEs.

Impact assessment towards the previous version of the specification (same release):

This CR has isolated impact with the previous version of the specification (same release) because of change in the content (ASN.1) of the LOCATION REPORTING CONTROL message.

The CR has an impact under protocol and functional point of view.

The impact can be considered isolated because the change affects the Location Reporting Control function.

It should be noted that this CR introduces a not backward compatible change compared to previous Rel4 version of RANAP specification, as shown in the following scenarios:

R4 Sept02 CN LOCATION REPORTING CONTROL -> R4 Dec02 RNC: it does not work for ASN.1 decoder implementation not capable of skipping those

		unknown IEs received after the ellipsis notation. It works otherwise in R99 manner. R4 Dec02 CN LOCATION REPORTING CONTROL -> R4 Sept02 RNC: it does not work at all.								
Consequences if not approved:	⌘	If Rel4 CNs and RNCs are not upgraded based on that CR, the R99 Location Reporting Control function does not work at all in the following cases: <ul style="list-style-type: none"> ▪ R99 CN LOCATION REPORTING CONTROL -> R4 Sept02 RNC ▪ R4 Sept02 CN LOCATION REPORTING CONTROL -> R99 RNC for ASN.1 decoder implementation not capable of skipping those unknown IEs received after the ellipsis notation. It should be noted that this CR is not backward compatible change compared to previous Rel4 version of RANAP specification in order to enable forward compatibility with R99 functionality and R99 nodes. <u>Revision 3:</u> Moreover, the Positioning Priority and Client Type would be required from the CN even if not available , and the Client Type would be signalled even when not needed in the RNC.								
Clauses affected:	⌘	2, 8.19.2, 9.1.29, 9.2.1.16, 9.2.1.x2 (new), 9.2.1.x3 (new), 9.2.1.x4 (new), 9.2.1.x5 (new), 9.3.3, 9.3.4 and 9.3.6								
Other specs affected:	⌘	<table border="1" style="display: inline-table; vertical-align: middle;"> <tr> <td>Y</td> <td>N</td> </tr> <tr> <td>X</td> <td>Other core specifications</td> </tr> <tr> <td>X</td> <td>Test specifications</td> </tr> <tr> <td>X</td> <td>O&M Specifications</td> </tr> </table> Initial CR525rev4 25.413 REL-4	Y	N	X	Other core specifications	X	Test specifications	X	O&M Specifications

Other comments:	⌘	Suggestions for new numbers: <ul style="list-style-type: none"> - new reference number in Rel4, x1=30 - new section number in Rel4, 9.2.1.x2=9.2.1.46a - new section number in Rel4, 9.2.1.x3=9.2.1.46b - new section number in Rel4, 9.2.1.x4=9.2.1.46c - new section number in Rel4, 9.2.1.x5=9.2.1.46d 								

How to create CRs using this form:

Comprehensive information and tips about how to create CRs can be found at <http://www.3gpp.org/specs/CR.htm>. Below is a brief summary:

- 1) Fill out the above form. The symbols above marked ⌘ contain pop-up help information about the field that they are closest to.
- 2) Obtain the latest version for the release of the specification to which the change is proposed. Use the MS Word "revision marks" feature (also known as "track changes") when making the changes. All 3GPP specifications can be downloaded from the 3GPP server under <ftp://ftp.3gpp.org/specs/> For the latest version, look for the directory name with the latest date e.g. 2001-03 contains the specifications resulting from the March 2001 TSG meetings.
- 3) With "track changes" disabled, paste the entire CR form (use CTRL-A to select it) into the specification just in front of the clause containing the first piece of changed text. Delete those parts of the specification which are not relevant to the change request.

8.19.2 Successful Operation

Figure 21: Location Reporting Control procedure. Successful operation.

The CN shall initiate the procedure by generating a LOCATION REPORTING CONTROL message.

The *Request Type* IE shall indicate to the serving RNC whether:

- to report directly;
- to stop a direct report;
- to report upon change of Service area, or
- to stop reporting at change of Service Area.

If reporting upon change of Service Area is requested, the Serving RNC shall report whenever the UE moves between Service Areas. For this procedure, only Service Areas that are defined for the PS and CS domains shall be considered.

The *Request Type* IE shall also indicate what type of location information the serving RNC shall report. The location information is either of the following types:

- Service Area Identifier, or
- Geographical area, including geographical coordinates with or without requested accuracy. If the Vertical Accuracy Code IE is included, the Accuracy Code IE in the Request Type IE shall be present. The Accuracy Code IE shall be understood as the horizontal accuracy code, response time, priority and the client type.

A request for a direct report can be done in parallel with having an active request to report upon change of Service Area for the same UE. The request to report upon change of Service Area shall not be affected by this.

Any of the Vertical Accuracy Code IE, Response Time IE, Positioning Priority IE or Client Type IE shall be included according to the following rules:

- Vertical Accuracy Code shall be included, if available, in connection with Geographical Area,
- Response time shall be included, if available, in connection with request for start of direct reporting of Geographical Area,
- Client type shall be included in connection with request for start of direct reporting of Geographical Area and, if available, in request for direct reporting of SAI,
- Positioning Priority shall be included, if available, in connection with request for start of direct reporting or in connection with request for start of reporting upon change of Service Area.

When no Positioning Priority IE is included, the RNC shall consider the request as if “Normal Priority” value had been received.

When no Response Time IE is included, the RNC shall consider the request as if “Delay Tolerant” value had been received.

Interaction with Relocation:

The order to perform location reporting at change of Service Area is lost in UTRAN at successful Relocation of SRNS. If the location reporting at change of Service Area shall continue also after the relocation has been performed, the Location Reporting Control procedure shall thus be re-initiated from the CN towards the future SRNC after the Relocation Resource Allocation procedure has been executed successfully.

9.1.29 LOCATION REPORTING CONTROL

This message is sent by the CN to initiate, modify or stop location reporting from the RNC to the CN.

Direction: CN → RNC.

Signalling bearer mode: Connection oriented.

IE/Group Name	Presence	Range	IE type and reference	Semantics description	Criticality	Assigned Criticality
Message Type	M		9.2.1.1		YES	ignore
Request Type	M		9.2.1.16		YES	ignore
Vertical Accuracy Code	O		9.2.1.x2		YES	Ignore
Response Time	O		9.2.1.x3		YES	Ignore
Positioning Priority	O		9.2.1.x4		YES	Ignore
Client Type	O		9.2.1.x5		YES	ignore

9.2.1 Radio Network Layer Related IEs

Lots of unaffected parts in 9.2.1 not shown

9.2.1.16 Request Type

This element indicates the type of UE location to be reported from RNC and it is either a Service Area or Geographical Area.

IE/Group Name	Presence	Range	IE type and reference	Semantics description
Request Type				
>Event	M		ENUMERATED(Stop Change of service area, Direct, Change of service area, ..., Stop Direct)	
>Report Area	M		ENUMERATED(Service Area, Geographical Area, ...)	When the Event IE is set to "Stop Change of service area" or to "Stop Direct", the value of the Report area IE shall be the same as in the LOCATION REPORTING CONTROL message that initiated the location reporting.
>Horizontal-Accuracy Code	O		INTEGER(0..127)	The requested accuracy "r" is derived from the "accuracy code" k by $r = 10 \times (1.1^k - 1)$. <u>The Accuracy Code IE</u> shall be understood as the horizontal accuracy code.
>Vertical Accuracy Code	O		INTEGER(0..127)	The requested accuracy "v" is derived from the "accuracy code" k by $v = 45 \times (1.025^k - 1)$.
>Response time	C— ifDirect&G eoAreaRep ortArea		ENUMERATED (Low Delay, Delay Tolerant, ...)	
>Positioning Priority	C— ifDirect&Ch angeArea		ENUMERATED(High Priority, Normal Priority, ...)	
>Client type	C— ifDirect		ENUMERATED(Emergency Services, Value Added Services, PLMN Operator Services, Lawful Intercept Services, ..., PLMN Operator broadcast services, PLMN Operator O&M, PLMN Operator anonymous statistics, PLMN Operator Target MS service support)	Identifies the type of client

Condition	Explanation
#Direct&GeoAreaReportArea	This IE shall be present if the <i>Event</i> IE is set to 'Direct' and the <i>Report Area</i> IE is set to 'Geographical Area'.
#Direct	This IE shall be present if the <i>Event</i> IE is set to 'Direct'.
#Direct&ChangeArea	This IE shall be present if the <i>Event</i> IE is set to 'Direct' or "Change of Service Area".

Lots of unaffected parts in 9.2.1 not shown

9.2.1.46 Global CN-ID

Global CN-ID is used to globally identify a CN node.

IE/Group Name	Presence	Range	IE type and reference	Semantics description
Global CN-ID				
>PLMN identity	M		OCTET STRING (SIZE (3))	<ul style="list-style-type: none"> - digits 0 to 9, two digits per octet, - each digit encoded 0000 to 1001, - 1111 used as filler - bit 4 to 1 of octet n encoding digit $2n-1$ - bit 8 to 5 of octet n encoding digit $2n$ <p>-The PLMN identity consists of 3 digits from MCC followed by either -a filler plus 2 digits from MNC (in case of 2 digit MNC) or -3 digits from MNC (in case of a 3 digit MNC).</p>
>CN-ID	M		INTEGER (0..4095)	

9.2.1.x2 Vertical Accuracy Code

This element includes information about the requested vertical accuracy.

IE/Group Name	Presence	Range	IE type and reference	Semantics description
Vertical Accuracy Code				
>Vertical Accuracy Code	M		INTEGER(0..127)	The requested accuracy "v" is derived from the "accuracy code" k by $v = 45x(1.025^k - 1)$.

9.2.1.x3 Response Time

This element includes information about the requested response time.

IE/Group Name	Presence	Range	IE type and reference	Semantics description
Response Time				
>Response Time	M		ENUMERATED (Low Delay, Delay Tolerant, ...)	The value refers to [x1].

9.2.1.x4 Positioning Priority

This element includes information about the requested positioning priority.

<u>IE/Group Name</u>	<u>Presence</u>	<u>Range</u>	<u>IE type and reference</u>	<u>Semantics description</u>
Positioning Priority				
>Positioning Priority	M		ENUMERATED(High Priority, Normal Priority, ...)	The value refers to [x1].

9.2.1.x5 Client Type

This element includes information about the client type.

<u>IE/Group Name</u>	<u>Presence</u>	<u>Range</u>	<u>IE type and reference</u>	<u>Semantics description</u>
Client Type				
>Client Type	M		ENUMERATED(Emergency Services, Value Added Services, PLMN Operator Services, Lawful Intercept Services, PLMN Operator - broadcast services, PLMN Operator - O&M, PLMN Operator - anonymous statistics, PLMN Operator - Target MS service support, ...)	Identifies the type of client.

9.2.1.47 New BSS to Old BSS Information

The coding of this element is described in [11].

<u>IE/Group Name</u>	<u>Presence</u>	<u>Range</u>	<u>IE type and reference</u>	<u>Semantics description</u>
New BSS To Old BSS Information	M		OCTET STRING	Contents defined in [11].
