Subject

CEPT/ECC developments in the 410 – 470 MHz band

Dear Mr Bertenyi, Mr Zhou, Mr Butscheidt,

Following on from the LS sent by ECC WGFM at its 92nd meeting, the ECC at its 50th meeting in March 2019 in Brighton is pleased to inform the standardisation community that the two ECC Decisions as listed below have now been approved for publication alongside the newly approved [ECC Report 292](#):

- Revised [ECC Decision \(16\)02](#) on BB-PPDR that also includes provisions in the frequency range 410-417 MHz / 420-427 MHz for radio interfaces with 1.4 MHz, 3 MHz and 5 MHz, and
- The new [ECC Decision \(19\)02](#) for land mobile systems including PMR/PAMR that includes provisions now covering the frequency range 410-430 MHz and 450-470 MHz for radio interfaces with 1.4 MHz, 3 MHz and 5 MHz, as well as for M2M/IoT possibilities within the two 400 MHz blocks.

As such, we hope that 3GPP RAN4 is able to facilitate standards development to support this initiative.

Yours sincerely,

Chris Woolford
ECC Chairman
