Title: **3 Rel-6 CR 32.642/43/45 Add support for Remote control of Electrical Tilting (RET) antenna**

Document for: **Approval**

Agenda Item: **7.5.3**

Doc-1 st -Level	Doc-2 nd -Level	Spec	CR	Rev	Phase	Subject	Cat	Ver-Cur	Wi
SP-040587	S5-048745	32.642	027	--	Rel-6	Add support for Remote control of Electrical Tilting (RET) antenna	B	6.1.0	OAM-NIM
SP-040587	S5-048756	32.643	016	--	Rel-6	Add support for Remote control of Electrical Tilting (RET) antenna to CORBA IDL and Add Inheritance	B	6.1.0	OAM-NIM
SP-040587	S5-048750	32.645	015	--	Rel-6	Add support for Remote control of Electrical Tilting (RET) antenna to the Bulk CM XSD file	B	6.0.0	OAM-NIM

CHANGE REQUEST

⌘ 32.642 CR 027 ⌘ rev - ⌘ Current version: 6.1.0 ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

Proposed change affects: ⌘ UICC apps ⌘ ME ⌘ Radio Access Network Core Network ⌘

Title:	⌘ Add support for Remote control of Electrical Tilting (RET) antenna	
Source:	⌘ SA5 (islip@lucent.com)	
Work item code:	⌘ OAM-NIM	Date: ⌘ 20/08/2004
Category:	⌘ B	Release: ⌘ Rel-6 Use <u>one</u> of the following releases: F (correction) A (corresponds to a correction in an earlier release) B (addition of feature), C (functional modification of feature) D (editorial modification) Detailed explanations of the above categories can be found in 3GPP TR 21.900 .
		Release: ⌘ Rel-6 (GSM Phase 2) R96 (Release 1996) R97 (Release 1997) R98 (Release 1998) R99 (Release 1999) Rel-4 (Release 4) Rel-5 (Release 5) Rel-6 (Release 6)

Reason for change:	⌘ Inclusion of RET for release 6.
Summary of change:	<ul style="list-style-type: none"> Additional references to TR32.804 and TS 32.652. New definition of Antenna. Add imported classes to align with TS 32.151. Amended class diagram [cardinality 1..* (not 1..n)] and filled in diamonds to align with TS 32.152 and also to add a new antenna class plus relationships. Removal of statement that vsDataConatiner is only appropriate to bulk CM Amendment to phrasing of the title Addition of a referential attribute in utranCell to indicate the zero, one or more antennae supporting the cell. New clause 6.3.7 for Antenna class , and attribute definitions and notifications table. Additional attribute and legal value definitions. A new Annex B describing the antenna class in more detail.
Consequences if not approved:	⌘ The remote electrical tilt control will not be possible.

Clauses affected:	⌘ 2, 3.1, 6.1, 6.2.1, 6.2.2, 6.3.3.2, 6.3.7 (New), 6.5.1, Annex B (New), Annex C								
Other specs affected:	<table border="1" style="display: inline-table; vertical-align: middle;"> <tr> <td>Y</td> <td>N</td> </tr> <tr> <td>⌘ X</td> <td>Other core specifications</td> </tr> <tr> <td>⌘ X</td> <td>Test specifications</td> </tr> <tr> <td>⌘ X</td> <td>O&M Specifications</td> </tr> </table>	Y	N	⌘ X	Other core specifications	⌘ X	Test specifications	⌘ X	O&M Specifications
Y	N								
⌘ X	Other core specifications								
⌘ X	Test specifications								
⌘ X	O&M Specifications								
Other comments:	⌘ Parent to CRs 32.643/645 in S5-048756/750.

End of Change in Clause 2

Change in Clause 3.1

3.1 Definitions

For the purposes of the present document, the following terms and definitions apply. For terms and definitions not found here, please refer to 3GPP TS 32.101 [1], 3GPP TS 32.102 [2] and 3GPP TS 32.600 [14].

Association: In general it is used to model relationships between Managed Objects. Associations can be implemented in several ways, such as:

- (1) name bindings,
- (2) reference attributes, and
- (3) association objects.

This IRP stipulates that containment associations shall be expressed through name bindings, but it does not stipulate the implementation for other types of associations as a general rule. These are specified as separate entities in the object models (UML diagrams).

Managed Element (ME): An instance of the Managed Object Class ManagedElement defined in [16].

Managed Object (MO): In the context of the present document, a Managed Object (MO) is a software object that encapsulates the manageable characteristics and behaviour of a particular Network Resource. The MO is instance of a MO class defined in a MIM/NRM. This class, called **Information Object Class (IOC)** has attributes that provide information used to characterize the objects that belong to the class (the term "attribute" is taken from TMN and corresponds to a "property" according to CIM). Furthermore, the IOC can have operations that represent the behaviour relevant for that class (the term "operation" is taken from TMN and corresponds to a "method" according to CIM). The IOC may support the emission of notifications that provide information about an event occurrence within a network resource.

Management Information Model (MIM): Also referred to as NRM – see the definition below.

Network Resource Model (NRM): A model representing the actual managed telecommunications network resources that a System is providing through the subject IRP. An NRM identifies and describes the IOCs, their associations, attributes and operations. The NRM is also referred to as "MIM" (see above), which originates from the ITU-T TMN.

Node B: A logical node responsible for radio transmission/reception in one or more cells to/from the User Equipment. It terminates the Iub interface towards the RNC.

[Antenna: An Antenna is the set of radiating elements involved in the transmission and reception of Radio Frequency energy. Please refer to Annex B for a more detailed explanation.](#)

End of change in Clause 3.1

Change in Clause 6.1

6.1 Information entities imported and local labels

<u>Label reference</u>	<u>Local label</u>
3GPP TS 32.622 [16], information object class, Top	Top
3GPP TS 32.652 [7], information object class, ExternalGsmCell	ExternalGsmCell
3GPP TS 32.652 [7], information object class, GsmCell	GsmCell
3GPP TS 32.652 [7], information object class, GsmRelation	GsmRelation
3GPP TS 32.622 [16], information object class, MeContext	MeContext
3GPP TS 32.622 [16], information object class, Managed Element	Managed Element
3GPP TS 32.622 [16], information object class, Managed Function	Managed Function
3GPP TS 32.622 [16], information object class, MeContext	MeContext
3GPP TS 32.622 [16], information object class, Subnetwork	Subnetwork

End of change in Clause 6.1

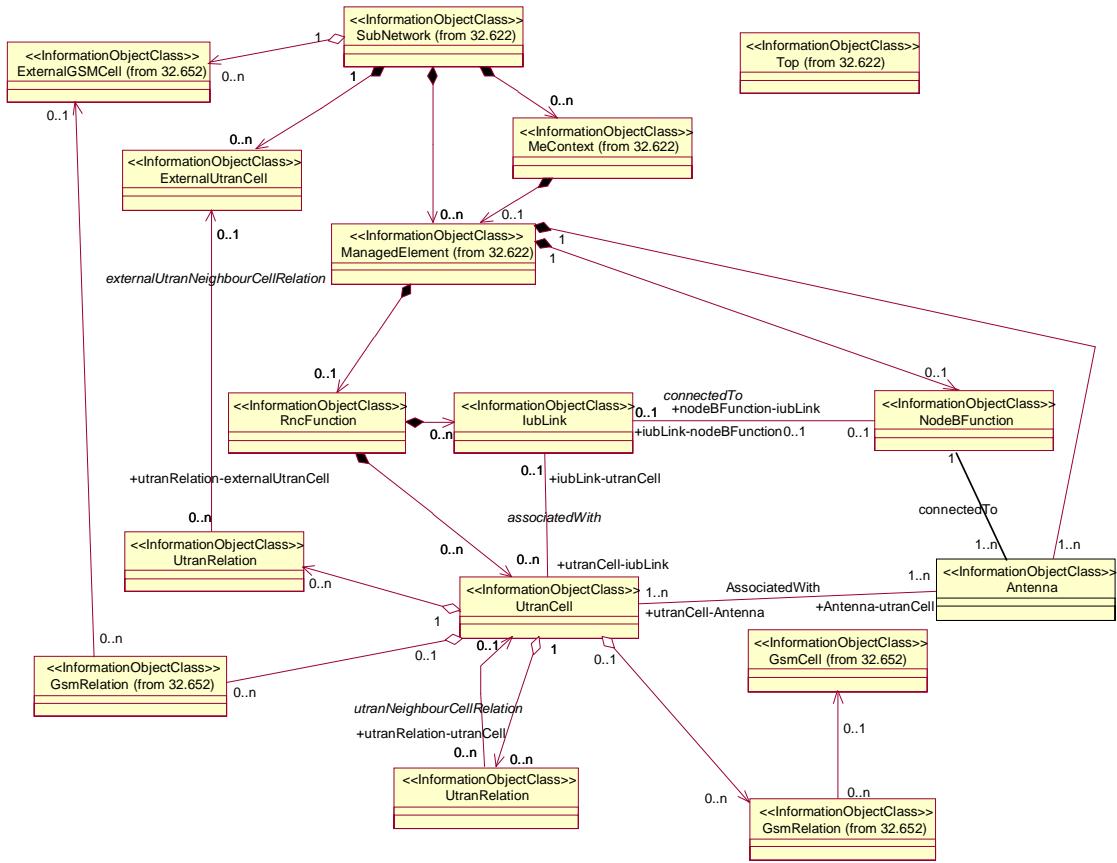

Change in Clause 6.2.1

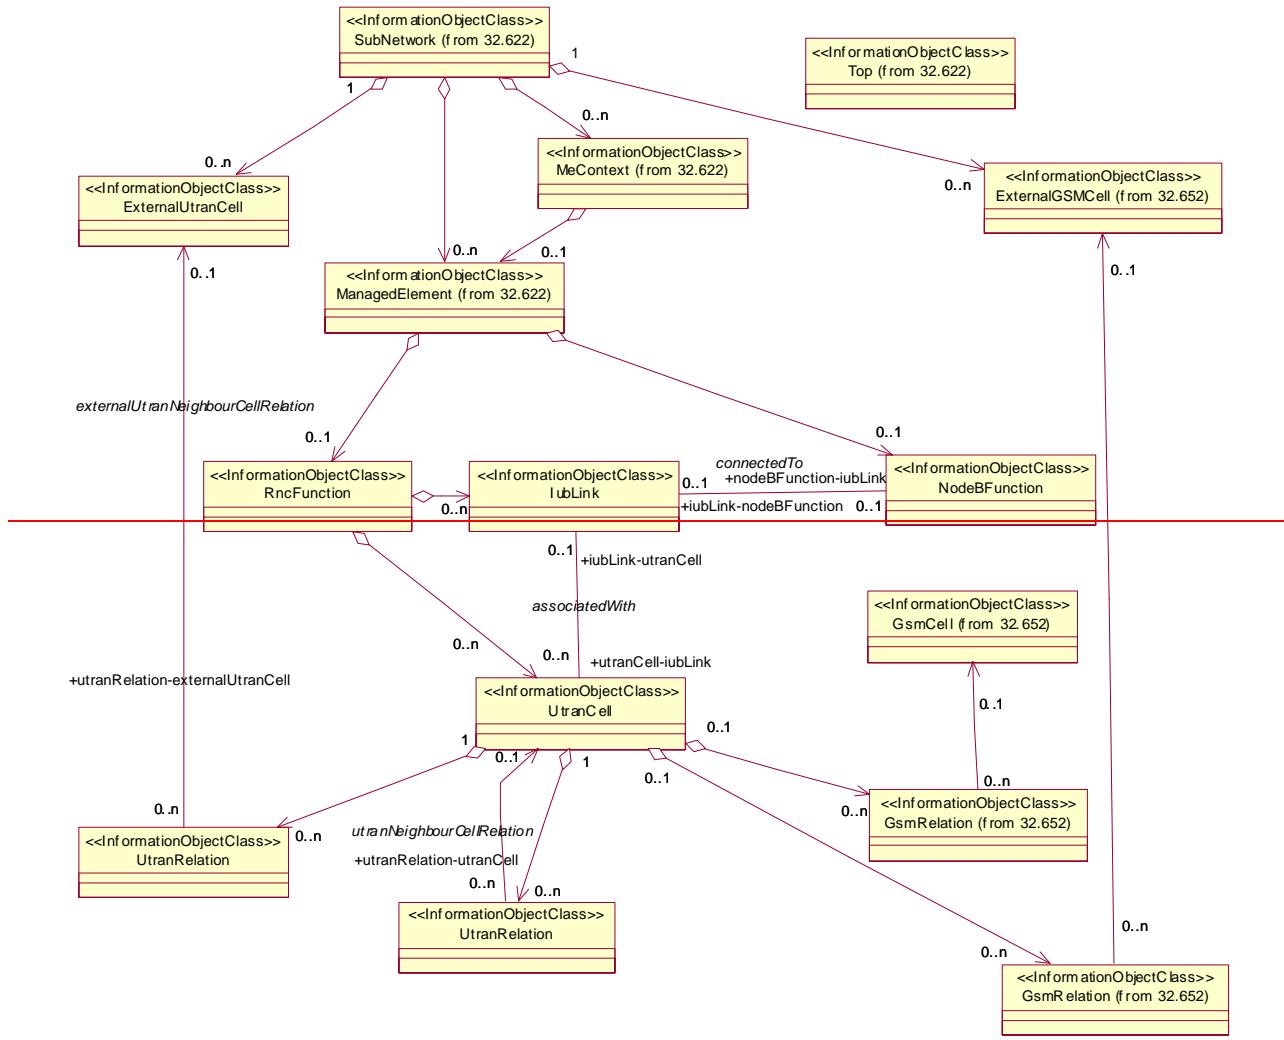

6.2.1 Attributes and relationships

This clause depicts the set of IOCs that encapsulate information relevant for this service. This clause provides the overview of all information object classes in UML. Subsequent clauses provide more detailed specification of various aspects of these information object classes.

Figure 6.1 show the name-containment relation and other types of relations of the UTRAN NRM.

NOTE: The name-containment relations between IOCs are indicated by UML "unidirectional composition aggregation by reference" ("filled in hollow diamonds").

NOTE 1: The listed cardinality numbers represent transient as well as steady state numbers, and reflect all managed object creation and deletion scenarios.

NOTE 2: The relation between **GsmRelation** and **GsmCell** is optional. It may be present if both the **UtranCell** and the **GsmCell** are managed by the same management node.

NOTE 3: The **UtranRelation** and **GsmRelation** can be name-contained under IOCs defined in other NRMs.

[NOTE 4: For a description and clarification of the Antenna class, please refer to Annex B.](#)

Figure 6.1: UTRAN NRM Containment/Naming and Association diagram

Each IOC is identified with a Distinguished Name (DN) according to 3GPP TS 32.300 [13] that expresses its containment hierarchy. As an example, the DN of an IOC representing a cell could have a format like:

SubNetwork=Sweden,MeContext=MEC-Gbg-1,ManagedElement=RNC-Gbg-1, RncFunction=RF-1,UtranCell=Gbg-1.

End of change in Clause 6.2.1

Change in Clause 6.2.2

6.2.2 Inheritance

This clause depicts the inheritance relationships that exist between IOCs.

Figure 6.2 shows the inheritance hierarchy for the UTRAN NRM.

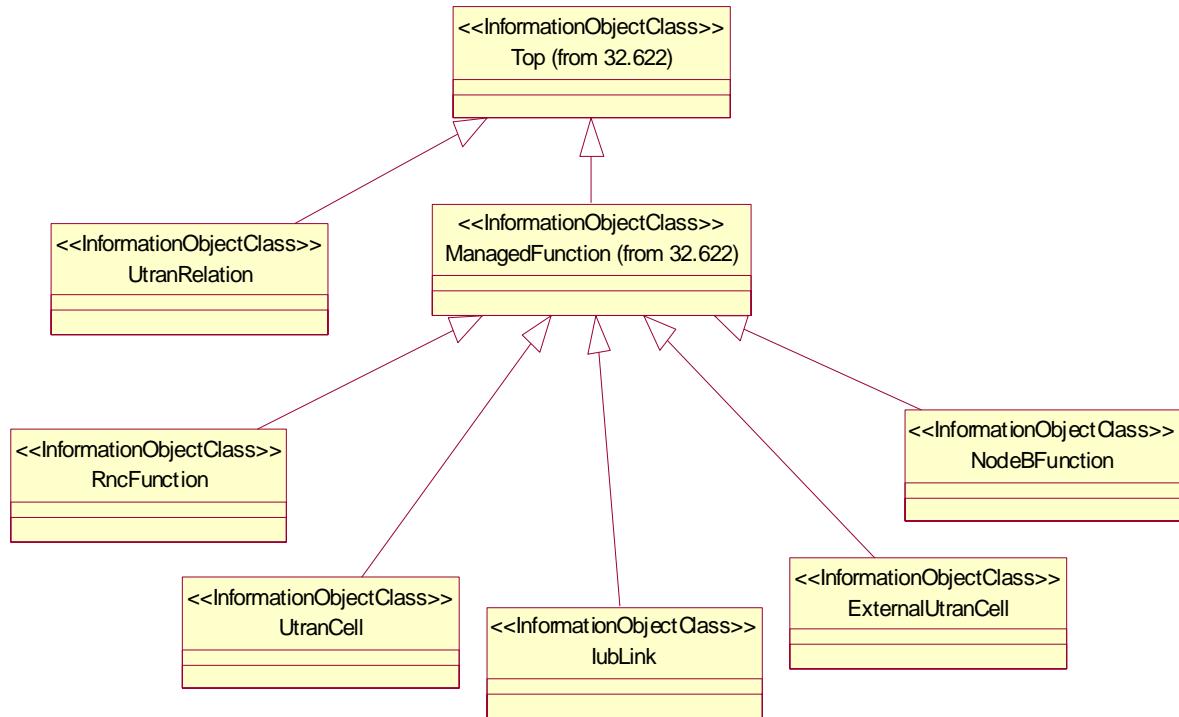

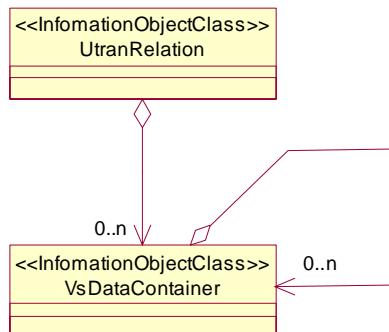

Figure 6.2: UTRAN NRM Inheritance Hierarchy

NOTE 1: The listed cardinality numbers represent transient as well as steady state numbers, and reflect all managed object creation and deletion scenarios.

NOTE 2: Each instance of the vsDataContainer shall only be contained under one IOC. The vsDataContainer can be contained under IOCs defined in other NRMs.

Figure 6.3: vsDataContainer Containment/Naming and Association in UTRAN NRM diagram

The vsDataContainer is only used for the Bulk CM IRP.

End of change in Clause 6.2.2 Change in Clause 6.3.3.2

End of change in clause 6.3.7

Change in Clause 6.5.1

6.5.1 Definition and legal values

Table 6.18 defines the attributes that are present in several Information Object Classes (IOCs) of the present document.

Table 6.18: Attributes

Attribute Name	Definition	Legal Values
adjacentCell	It carries the DN of the UtranCell or the ExternalUtranCell.	
antennald	An attribute whose "name+value" can be used as an RDN (according to the rules in TS 32.300 [13] when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance	
bchPower	The power of the broadcast channel in the FDD mode cell (Ref. 3GPP TS 25.433 [5]).	Type: Numeric value Range: (-35..+15 dB) Steps of 0.1dB
cellMode	An attribute that identifies the cell mode.	Type: Enumerated value Range: (iFDD mode, 11.28McpsTDD mode, 13.84McpsTDD mode)
cellParameterId	For IOCs UtranCell and ExternalUtranCell , this attribute identifies unambiguously the TDD mode cell (see ref. TS 25.433 [5]): <ul style="list-style-type: none"> • 3.84 Mcps TDD - Code Groups, Scrambling Codes, Midamblers and Toffset • 1.28 Mcps TDD - SYNC-DL and SYNC-UL sequences, the scrambling codes and the midamble codes For IOC UtranRelation , this parameter will be broadcast in the system information of associated cell. The associated cell can be: <ul style="list-style-type: none"> • another UTRAN TDD cell (1.28 Mcps TDD or 3.84 Mcps TDD) • the external UTRAN TDD cell (1.28 Mcps TDD or 3.84 Mcps TDD). 	Type: Integral numeric value Range: (0..127)
compassDirection	The compass direction in degrees (magnetic) that the antenna is pointing in. This attribute is used mainly for planning purposes. The value of this attribute, when combined with a few others, helps in plotting a coverage map on planning tools for the particular utranCell(s). When the coverage needs to be changed, the tilt value is adjusted. Also, when a cell site fails, it becomes much easier to determine the area where there is a loss of service.	A single integral value corresponding to an angle in degrees between 0 and 360.
cid	The attribute is the identifier of a cell in one RNC (Ref. 3GPP TS 25.401 [4]), 3GPP TS 25.433 [5]).	Type: Integral numeric value Range: (0..65535)
dwpchPower	DwPCH Power is the power that shall be used for transmitting the DwPCH in a 1.28 Mcps TDD cell. (Ref. 3 GPP TS 25.433 [5]).	Type: Numeric value Range: (-15..+40 dBm) Steps of 0.1dB
externalUtranCellId	An attribute whose "name+value" can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
height	The height of an antenna above sea level. Planning permission (for a cell site) is normally granted on the antenna height. This parameter also determines the site coverage and feeds into the planning tool.	An integral value representing a number of whole metres
iubLinkId	An attribute whose "name+value" can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
lac	IOCs UtranCell and ExternalUtranCell : Location Area Code, LAC (Ref. 3GPP TS 23.003 [3]). IOC UtranRelation : Location Area Code, LAC (Ref. 3GPP TS 23.003 [3]), for another UTRAN cell or the external UTRAN Cell that is broadcast in the system information in the Cell.	Type: Integral numeric value Range: (1.. 65533, 65535)
localCellId	Local Cell id is used to uniquely identify the set of resources defined in a Node B to support a cell (as defined by a Cid Ref. 3GPP TS 25.401 [4], 3GPP TS 25.433 [5]). It must be unique in Node B at a minimum, but may be unique in UTRAN. It can be used to tie the cell in the RNC to a specific set of resources in the Node B.	Type: Integral numeric value Range: (0..268435455)

maximumTransmis onPower	The maximum transmission power of a cell. It is the maximum power for all downlink channels added together, that is allowed to be used simultaneously in a cell. (Ref. 3GPP TS 25.433 [5]).	Type: Numeric value Range: (0...50 dBm) Steps of 0.1 dB
maxTiltVal ue	The maximum amount of tilt the RET system can support. This helps in preventing the user from entering any unrealistic value for <getTiltValue> and hence prevents the motors on the RET unit from getting jammed / burnt out.	A single integral value corresponding to an angle in degrees between 0 and 360 In 0.1 degree increments (see section 7.7.5.11 RET TR.25.802)
mcc	Mobile Country Code, MCC (part of the PLMN Id, Ref. 3GPP TS 23.003 [3]).	
mechanica lOffset	This is a value representing a non-adjustable tilt value, which is imparted to the antenna due to the physical installation. The actual tilt at any point in time is the summation of "mechanicalOffset" and "retTiltValue"	A single integral value corresponding to an angle in degrees between 0 and 360 with a resolution of 0.1 degrees, see note 1.
minTiltVal ue	The minimum amount of tilt the RET system can support. This helps in preventing the user from entering any unrealistic value for <getTiltValue> and hence prevents the motors on the RET unit from getting jammed / burnt out.	A single integral value corresponding to an angle in degrees between 0 and 360 with a resolution of 0.1 degrees, see note 1. (also see section 7.7.5.11 RET TR.25.802 Note 1)
mnc	Mobile Network Code, MNC (part of the PLMN Id, Ref. 3GPP TS 23.003 [3]).	
primaryCc pchPower	IOCs UtranCell and ExternalUtranCell: The power of the primary CCPCH channel in the TDD cell (Ref. 3 GPP TS 25.433 [5]). IOC UtranRelation: The power of the primary CCPCH channel in the TDD cell (Ref. 3 GPP TS 25.433 [5]), for another UTRAN TDD cell or the external UTRAN TDD Cell that is broadcast in the system information in the Cell.	Type: Numeric value Range: (-15...+40 dBm) Steps of 0.1dB
nodeBFun ctionId	An attribute whose "name+value" can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
primaryCpi chPower	IOCs UtranCell and ExternalUtranCell: The power of the primary CPICH channel in the FDD mode cell (Ref. 3GPP TS 25.433 [5]). IOC UtranRelation: The power of the primary CPICH channel in the FDD mode cell (Ref. 3GPP TS 25.433 [5]), for another UTRAN FDD mode cell or the external UTRAN FDD mode cell that is broadcast in the system information in the cell.	Type: Numeric value Range: (-10...50 dBm) Steps of 0.1 dB
primarySc hPower	The power of the primary synchronisation channel in the FDD mode cell, DL Power (Ref. 3GPP TS 25.433 [5]).	Type: Numeric value Range: (-35...+15 dB) Steps of 0.1dB
primaryScr amblingCo de	IOCs UtranCell and ExternalUtranCell: The primary DL scrambling code used by the FDD mode cell (Ref. 3GPP TS 25.433 [5]). IOC UtranRelation: The primary DL scrambling code used by the FDD mode cell (Ref. 3GPP TS 25.433 [5]), for another UTRAN FDD mode cell or the external UTRAN FDD mode cell that is broadcast in the system information in the cell.	Type: Integral numeric value Range: (0 ï 511)
rac	Routing Area Code, RAC (Ref. 3GPP TS 23.003 [3]).	Type: Integral numeric value Range: (0..255)
retAntenna List	This is a referential attribute to list the DNs of Antennas that support the UtranCell.	A list of DNs
retGroupN ame	The group name is a textual, alphanumeric string to define a logical grouping of antennas that may be in different cells. This attribute permits the definition of a logical grouping of the antennas. This may be defined either at installation time, or by management activity to provisioning the group name via the Ift-N.	Type: string bounded to 80 characters.

retTiltValue	Gives you the tilt value of the antenna that has been made using electrical means (i.e. using RET). This attribute gives the operator an indication of the current setting of the antenna and is at the centre of the RET feature.	A single integral value corresponding to an angle in degrees between 0 and 360 In 0.1 degree increments (see section 7.7.5.11 RET TR.25.802)
retUtranCellList	This is a list of utranCell DNs to record the relationship between the antenna instance and the utran cells which are supported by the antenna.	A list of DNs
rncFunctionId	An attribute whose "name+value" can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
rncId	IOC ExternalUtranCell: Unique RNC ID for the associated RNC (Ref. 3GPP TS 23.003 [3]). IOC RncFunction: Unique RNC ID (Ref. 3GPP TS 23.003 [3]).	
sac	Service Area Code, SAC (Ref. 3GPP TS 23.003 [3]).	Type: Integral numeric value Range: (0.. 65535)
schPower	The power of the synchronisation channel in 3.84 Mcps TDD cell (Ref. 3GPP TS 25.433 [5]).	Type: Numeric Value Range: (-35Ö 15 dB) Steps of 0.1dB
secondarySchPower	The power of the secondary synchronisation channel in the cell, DL Power (Ref. 3GPP TS 25.433 [5]).	Type: Numeric value Range: (-35..+15 dB) Steps of 0.1dB
timeSlotList	This attribute defines the time slot configuration information in the TDD cell. It is a list which contains 7 (for 1.28 Mcps TDD cell) or 15 (for 3.84 Mcps TDD cell) items. Within each item there are three parts: timeSlotId, timeSlotDirection, timeSlotStatus (Ref. 3GPP TS 25.433 [5]).	timeSlotId: when applied to 1.28 Mcps TDD cell: Type: Integral numeric value Range: (0Ö 6); when applied to 3.84 Mcps TDD cell: Type: Integral numeric value Rang: (0Ö 14); timeSlotDirection: Type: Enumerated value Range: (Ul, Dl); timeSlotStatus: Type: Enumerated value Range: (Active, Not active)
uarfcn	IOC UtranCell and ExternalUtranCell: The UTRA absolute Radio Frequency Channel number for TDD mode cell, UARFCN (ref. 3 GPP TS 25.433 [5]). IOC UtranRelation: The UTRA absolute Radio Frequency Channel number for TDD mode cell, UARFCN (ref. 3 GPP TS 25.433 [5]), for another UTRAN TDD mode cell or the external UTRAN TDD mode Cell that is broadcast in the system information in the Cell.	Type : Integral numeric Value (0 - 16383)
uarfcnDI	IOC UtranCell and ExternalUtranCell: The DL UTRA absolute Radio Frequency Channel number for FDD mode cell, UARFCN (Ref. 3GPP TS 25.433 [5]). IOC UtranRelation: The DL UTRA absolute Radio Frequency Channel number for FDD mode cell, UARFCN (Ref. 3GPP TS 25.433 [5]), for another UTRAN FDD mode cell or the external UTRAN FDD mode cell that is broadcast in the system information in the Cell.	Type: Integral numeric value Range: (0 - 16383)
uarfcnUI	IOC UtranCell and ExternalUtranCell: The UL UTRA absolute Radio Frequency Channel number for FDD mode cell, UARFCN (Ref. 3GPP TS 25.433 [5]). IOC UtranRelation: The UL UTRA absolute Radio Frequency Channel number for FDD mode cell, UARFCN (Ref. 3GPP TS 25.433 [5]) for another UTRAN FDD mode cell or the external UTRAN FDD mode cell, that is broadcast in the system information in the Cell.	Type: Integral numeric value Range: (0 - 16383)

uraList	A list of UTRAN Registration Area, URA (Ref. 3GPP TS 25.331 (subclause 10.3.10)[9]), that a UtranCell can belong to.	Type: A list of Integral numeric values Range: (0..65535) for each integral numeric value.
userLabel	A user-friendly (and user assigned) name of the associated object. Inherited from ManagedFunction.	
utranCellId	An attribute whose "name+value" can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
utranRelatid	An attribute whose "name+value" can be used as an RDN when naming an instance of the object class. This RDN uniquely identifies the object instance within the scope of its containing (parent) object instance.	
Note 1.	If an antenna vendor can only support a granularity of tilt value in 5 degree increments, it means that the value of tilt over the Itf-N would be 0, 50, 100, 150 etc, corresponding to an integral number of 0.1 degree values.	

End of Change in Clause 6.5.1

Change in Clause Annex B (NEW ANNEX)

Annex B (informative): RET Control Architecture

[The Itf-N provides an abstraction of resources to allow the monitor and control of physical resource from the network level management systems. For RET, the Antenna tilt is controlled via a control unit which is located within the NodeB \(from a management perspective\). The control unit sends ASIG commands to actuators located at the tower top, in order to read, and to adjust antenna tilt values.](#)

[The Antenna class will report failures and malfunctions of either the control unit, or the tilt. The full set of notifications is as defined in table 6.1.5. There are several configurations of antennae. Some support the transmission of several frequencies from a single radome while others are deployed as an array in order to provide effective coverage.](#)

[Hence in the UTRAN model there is an N:M relationship between utranCell's and the Antenna class, permitting the model to support all possibilities. The figure B.1 below illustrates the RET architecture](#)

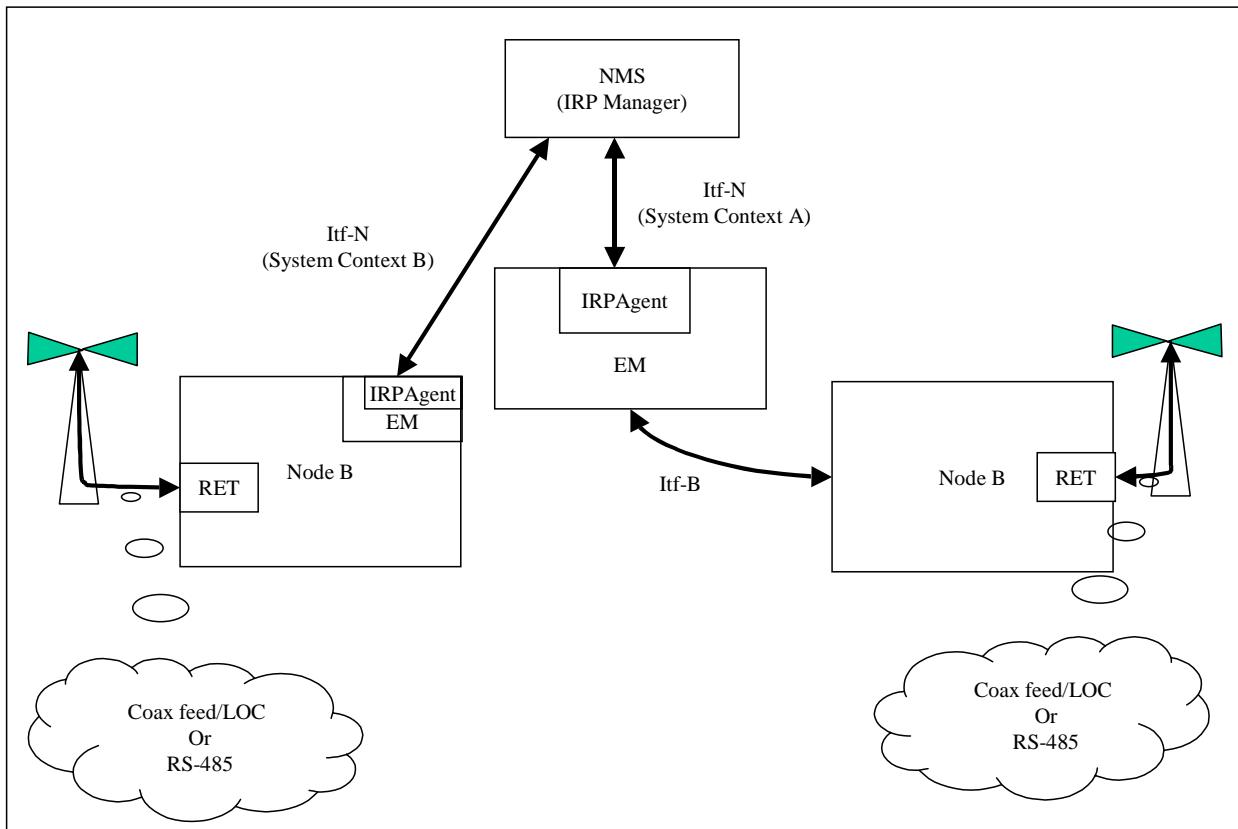

Figure B.1 Overall RET architecture

CHANGE REQUEST

⌘ 32.643 CR 016 ⌘ rev - ⌘ Current version: 6.1.0 ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

Proposed change affects: UICC apps ⌘ ME Radio Access Network Core Network

Title:	⌘ Add support for Remote control of Electrical Tilting (RET) antenna to CORBA IDL and Add Inheritance	
Source:	⌘ SA5 (islip@lucent.com)	
Work item code:	⌘ OAM-NIM	Date: ⌘ 20/08/2004
Category:	⌘ B Use <u>one</u> of the following categories: F (correction) A (corresponds to a correction in an earlier release) B (addition of feature), C (functional modification of feature) D (editorial modification) Detailed explanations of the above categories can be found in 3GPP TR 21.900 .	Release: ⌘ Rel-6 Use <u>one</u> of the following releases: 2 (GSM Phase 2) R96 (Release 1996) R97 (Release 1997) R98 (Release 1998) R99 (Release 1999) Rel-4 (Release 4) Rel-5 (Release 5) Rel-6 (Release 6)

Reason for change:	⌘ Inclusion of RET for release 6 to align with new additions to UTRAN NRM TS 32.642. In addition, IDL inheritance to reflect the IOC inheritance specified by the corresponding IRP IS. In subclause iGeneral mappingsi, delete the statement about DN mapping and AttributeValueChange notifications, plus the addition of antenna class and associated attributes for RET.
Summary of change:	⌘ Add IDL inheritance to reflect the IOC inheritance specified by the corresponding IRP IS. In subclause iGeneral mappingsi, delete the statement about DN mapping and AttributeValueChange notifications, plus the addition of antenna class and associated attributes for RET.
Consequences if not approved:	⌘ The MOC IDL definitions copy and paste what they have iinheritedi, and that is an incorrect way of defining these items which is error-prone and does not follow common O-O practices. The remote control of electrical downtilt control is not possible.

Clauses affected:	⌘ 5.1, 5.2.2, New clause 5.2.7, Annex A1		
Other specs affected:	⌘ <table border="1" style="display: inline-table; vertical-align: middle;"><tr><td>Y</td><td>N</td></tr></table> Other core specifications ⌘ <input checked="" type="checkbox"/> Test specifications <input checked="" type="checkbox"/> O&M Specifications	Y	N
Y	N		
Other comments:	⌘ Parent CR 32.642 in S5-048745. Related CRs 32.623/33/53 (Add Inheritance in CORBA IDL) in S5-048738/53/55.		

How to create CRs using this form:

Change in 5.1

5.1 General mappings

~~The IS parameter name managedObjectInstance is mapped into DN.~~

Attributes modelling associations as defined in the NRM (here also called «reference attributes») are in this SS mapped to attributes. The names of the reference attributes in the NRM are mapped to the corresponding attribute names in the MOC. When the cardinality for an association is 0..1 or 1..1 the datatype for the reference attribute is defined as an MOReference. The value of an MO reference contains the distinguished name of the associated MO. When the cardinality for an association allows more than one referred MO, the reference attribute will be of type MOReferenceSet, which contains a sequence of MO references.

~~If a reference attribute is changed, an AttributeValueChange notification is emitted.~~

End of Change in 5.1

Change in Clause 5.2.2

5.2.2 IOC UtranCell

Table 5.2: Mapping from NRM IOC UtranCell attributes and associations to SS equivalent MOC UtranCell attributes

NRM Associations/Attributes of IOC UtranCell in 3GPP TS 32.642 [4]	SS Attributes	SS Type	Support Qualifier	Read	Write
