## Title

Virtual Home Environment

## Intended Output

Technical Specification

## Impact on Other Technical Specifications and Technical Reports

ETSI TS 22-21 ( Provision of Services in UMTS - The Virtual Home Environment ) will be used as the basis for this specification. Any other agreed requirements defined by the other partners or individual members will be captured in this specification.

## Technical Scope

This Technical Specification defines the stage one description of the Virtual Home Environment (VHE). Stage one is an overall service description, primarily from the point of view of the User in her Home Environment. The Virtual Home Environment (VHE) is defined as a concept for personalised service portability across network boundaries and between terminals. The concept of the VHE is such that users are consistently presented with the same personalised features, User Interface customisation and services in whatever network and whatever terminal (within the capabilities of the terminal), wherever the user may be located.

## Impact on Other 3GPP Work Items

This specification will define the services and service requirements which the architecture, networks, terminals etc will have to support.
