**From:** S3  
**To:** SMG9  
**CC:** SMG  
**Title:** **Draft LS on Rejection of non ciphered calls for GPRS**

---

S3 wants to thank SMG9 for their answer on the subject of rejection of non ciphered calls for GPRS and for the work they have produced in order to support this feature.

Unfortunately, S3 has not been able to reach a consensus on a stable mechanism to implement this feature, and it has therefore been decided to continue the work on this topic in release 00. A work item description has been drafted and is intended to be presented for approval at the next SA plenary in June. The work item includes this feature for both GPRS and 3GPP systems.

S3 expects to reach a decision in the next meeting in Oslo (August 1-4) in order to be able to provide involved groups with a complete mechanism to implement this feature.
