7.2 Connectivity (CN)	31
7.2.1 MCPTT User initiates an on-demand prearranged MCPTT Group Call [CONN- /ONN/GROUP/PREA/ONDEM/NFC/01]	31
7.2.2 MCPTT User initiates an on-demand prearranged MCPTT Group Call: Emergency Group Call [CONN/ONN/GROUP/PREA/ONDEM/NFC/02]	36
7.2.3 MCPTT User initiates an on-demand prearranged MCPTT Group Call: Imminent Peril Group Call [CONN/ONN/GROUP/PREA/ONDEM/NFC/03]	40
7.2.4 MCPTT User initiates an on-demand prearranged MCPTT Group Call: Broadcast Group Call [CONN/ONN/GROUP/PREA/ONDEM/NFC/04]	44
7.2.5 MCPTT User initiates an on-demand prearranged MCPTT Group Call: Upgrade to in-progress emergency or imminent peril [CONN/ONN/GROUP/PREA- /ONDEM/NFC/05]	48
7.2.6 MCPTT User initiates the termination of an on-demand prearranged MCPTT Group Call [CONN/ONN/GROUP/PREA/ONDEM/NFC/06]	52

7.2.7 MCPTT User initiates a prearranged MCPTT Group Call using pre-established session [CONN/ONN/GROUP/PREA/PRE/NFC/01]	54
7.2.8 MCPTT User initiates the termination of a prearranged MCPTT Group Call using pre-established session [CONN/ONN/GROUP/PREA/PRE/NFC/02]	57
7.2.9 MCPTT User initiates an on-demand Chat Group Call [CONN/GROUP/CHAT/ONDEM/NFC/01]	60
7.2.10 MCPTT User upgrades an ongoing on-demand Chat Group Call to emergency call [CONN/GROUP/CHAT/ONDEM/NFC/02]	64
7.2.11 MCPTT User upgrades an ongoing on-demand Chat Group Call to imminent-peril call [CONN/GROUP/CHAT/ONDEM/NFC/03]	68
7.2.12 MCPTT User cancels the emergency condition of an on-demand Chat Group Call [CONN/GROUP/CHAT/ONDEM/NFC/04]	72
7.2.13 MCPTT User cancels the imminent-peril condition of an on-demand Chat Group Call [CONN/GROUP/CHAT/ONDEM/NFC/05]	76
7.2.14 MCPTT User initiates a Chat group Call using pre-established session [CONN/GROUP/CHAT/PRE/NFC/01]	80
7.2.15 MCPTT User initiates an on-demand private MCPTT call in automatic commencement model with floor control [CONN/PRIV/AUTO/ONDEM/WFC/NFC/01]	83
7.2.16 MCPTT User initiates an on-demand private MCPTT call in manual commencement model with floor control [CONN/PRIV/MANUAL/ONDEM/WFC/NFC/01]	86
7.2.17 MCPTT User initiates a pre-established private MCPTT call in automatic commencement model with floor control [CONN/PRIV/AUTO/PRE/WFC/NFC/01]	88
7.2.18 MCPTT User initiates a pre-established private MCPTT call in manual commencement model with floor control [CONN/ONN/PRIV/MANUAL/ONDEM/WFC/NFC/01]	92
7.2.19 MCPTT User initiates an on-demand private MCPTT call in automatic commencement model without floor control [CONN/PRIV/AUTO/ONDEM/WOFC/01]	94
7.2.20 MCPTT User initiates an on-demand private MCPTT call in manual commencement model without floor control [CONN/PRIV/MANUAL/ONDEM/WOFC/01]	97
7.2.21 MCPTT User initiates a pre-established private MCPTT call in automatic commencement model without floor control [CONN/PRIV/AUTO/PRE/WOFC/01]	99
7.2.22 MCPTT User initiates a pre-established private MCPTT call in manual commencement model without floor control [CONN/ONN/PRIV/MANUAL/ONDEM/WOFC/01]	101
7.3 Floor Controlling (FC)	103
7.3.1 Basic FC functionality [FC/BASIC/01]	103
7.3.2 Basic FC functionality. Effect of Priorities. [FC/BASIC/02]	107
7.4 Registration and Service Authorization (RegAuth)	111
7.4.1 MCPTT User authenticates to the IdMS [REGAUTH/IDMSAUTH/01]	111
7.4.2 MCPTT User gets registered and authorized using third-party registration [REGAUTH/3PRTYREG/REGISTER/01]	114
7.4.3 MCPTT User gets authorized using PUBLISH mechanism [REGAUTH/PUBLISH/REGISTER/01]	117
7.5 Policying (PCC)	121

7.5.1	Setup of an Unicast MC Bearer by SIP Core/IMS [PCC/BEARERSETUP/01]	121
7.5.2	Setup of an Unicast MC Bearer by MCPTT Participating AS [PCC/BEARER-SETUP/02]	125
7.5.3	Update of an Unicast MC Bearer by SIP Core/IMS [PCC/BEARERUPDATE/01]	128
7.5.4	Update of an Unicast MC Bearer by MCPTT Participating AS [PCC/BEARER-UPDATE/02]	131
7.6	eMBMS (EMBMS)	134
7.6.1	original test case REMOVED	134
7.6.2	Use of dynamically established MBMS bearers in prearranged MCPTT group calls with pre-allocated TMGIs [EMBMS/ACTIVATEBEARER/WPRETMGI/01]	134
7.6.3	Use of dynamically established MBMS bearers in prearranged MCPTT group calls without pre-allocated TMGIs [EMBMS/ACTIVATEBEARER/WOPRETMGI-01]	142
7.6.4	Use of pre-established MBMS bearers in prearranged group calls with pre-allocated TMGIs [EMBMS/PREBEARER/WPRETMGI/01]	147
7.6.5	Use of pre-established MBMS bearers in prearranged group calls without pre-allocated TMGIs [EMBMS/PREBEARER/WOPRETMGI/01]	153
7.6.6	Modification of MBMS bearers upon reception of emergency upgrade request [EMBMS/MODIFYBEARER/01]	159
7.6.7	Deactivation of MBMS bearers after termination of a prearranged MCPTT group call with TMGI deallocation [EMBMS/DEACTBEARER/WTMGIDEA/01]	162
7.6.8	Deactivation of MBMS bearers after termination of a prearranged MCPTT group call without TMGI deallocation [EMBMS/DEACTBEARER/WOTMGI-DEA/01]	167
7.6.9	Switching to unicast bearer after TMGI expiration [EMBMS/SWITCHTOUNI-TMGIEXP/01]	170
7.7	Affiliation (AFFIL)	173
7.7.1	MCPTT User subscribes to its own affiliation [AFFIL/DET/01]	173
7.7.2	MCPTT User subscribes to the affiliation of another user [AFFIL/DET/02]	177
7.7.3	MCPTT User requests its affiliation to a set of groups [AFFIL/CHANGE/01]	182
7.7.4	MCPTT User requests the affiliation of other User to a set of groups in mandatory mode[AFFIL/CHANGE/02]	188
7.7.5	MCPTT User requests the affiliation of other User to a set of groups in negotiated mode [AFFIL/CHANGE/03]	195
7.8	Location (LOC)	204
7.8.1	MCPTT Client Configuration upon 3rd party register [LOC/3PRTYREG/CONFIG/01]	204
7.8.2	Explicit Location reporting request sent to the MCPTT Client [LOC/REQUEST-01]	207
7.8.3	MCPTT Client Location submitted upon some trigger[LOC/SUBMISSION/01]	210
7.9	OAM procedures (CSC)	213
7.10	QoS support (KPI)	213

1 Scope

The present document represents an interoperability test specification with the purpose of supporting the Mission Critical Push-To-Talk (MCPTT) Plugtests™ events and particularly the first one on June 2017.

The first plugtest will initially aim at testing MCPTT ecosystem signaling and media plane interoperability in different levels. Furthermore, OAM related procedures (i.e. management of identities, affiliation, key, configuration and groups -and related servers- and, in general, those involving CSC reference points) will be tentatively considered but not as a pre-requisite for those tests aimed at evaluating call signaling interoperability among different Functional Elements¹.

Therefore, the following objectives will be considered:

- Group Call (unicast)
- Group Call (eMBMS)
- Emergency Group Call
- Floor Control
- Registration and service authorization
- Affiliation
- Group Management
- Location

The basic structure to be analyzed comprises MCPTT application server(s) -both controlling and participating- and MCPTT UEs deployed over a generic SIP Core/IMS, LTE access network with and without MCPTT required PCC capabilities and native multicast support (i.e. Rel 13 eMBMS). The following figure (Fig. 1) illustrates the basic test infrastructure.

Figure 1: Typical MCPTT scenario to be considered in the plugtest

¹To be discussed, hardcoded/preconfigured alternative possibly considered

The 3GPP has defined a comprehensive set of MCPTT Calls (see Fig.2) in the Rel13 set of TSs. Due to the large number of different cases and technologies involved, on the context of the first plugtest the configurations in Section 5 and Test Cases in Section 7 will be initially analyzed. Definitions of each call are collected from related normative reference in Section 2.1).

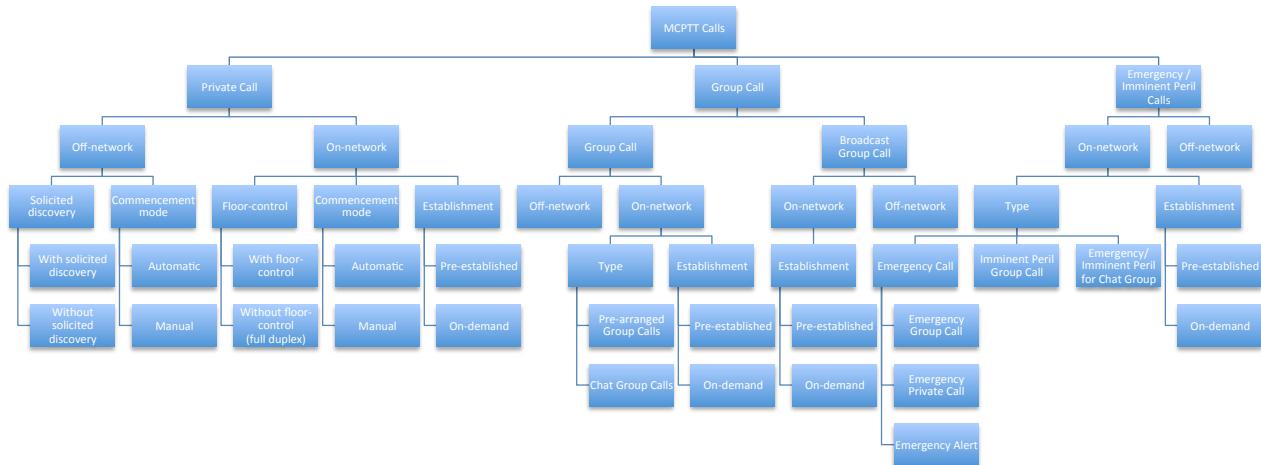

Figure 2: MCPTT call types

Therefore, taking into account such wide range of possible calls the following high level test objectives that are major items to be proven as an outcome of the testing.²

- **Connectivity (CONN):** Tests cover basic connectivity between functional elements at different levels including Access Network (LTE), IP Network, SIP/IMS and MCPTT Application level. At LTE level, unicast and more particularly eMBMS multicast connectivity will be evaluated. IP layers targets pure OTT connectivity regardless the underlying access network. SIP connectivity tests check proper deployment of MCPTT AS over the selected SIP Core/IMS so that all SIP messages are successfully delivered from MCPTT UEs to Participating/Controlling MCPTT Servers and viceversa. Application level refers to e2e signaling, media, floor controlling (and other involved) protocols in use. All CONN tests could be tentatively evaluated over all the different configurations (see Section 5). Additionally, low level configuration-specific details (i.e. MCPTT and eMBMS bearer management) will be considered in the PCC and EMBMS specific objectives.
- **Floor Controlling (FC):** Although basic Floor Controlling procedures will be tentatively evaluated during the tests associated with the first CONN objective, FC will entail comprehensive interoperability analysis of all defined interactions, including prioritization and pre-emptiveness mechanisms.
- **Policying (PCC):** Comprises specific checking proper LTE bearer signaling and allocation.
- **eMBMS (EMBMS):** Comprises checking of eMBMS specific signaling.
- **Registration and authorization (REGAUTH):** Comprises MCPTT Client registration.

²The actual scope of the subsequent plugtests may vary depending on the number and complexity of resulting test cases.

- **Affiliation (affiliation):** Comprises MCPTT Client explicit and implicit affiliation.
- **Location (LOC):** Comprises Location configuration, retrieval and submission procedures.
- **OAM procedures (CSC):** Comprises OAM related IdMS, CMS, GMS and KMS interfacing procedures.
- **QoS support (KPI):** Comprises checking e2e QoS values fulfilling pre-defined thresholds for the defined KPIs.

The following lists collect the test objectives and specific test cases that are further explained in chapter 7.

- **Connectivity [22]:**

CONN/GROUP/PREA/ONDEM/NFC/01 (7.2.1)

On-demand prearranged Group Call (Sections 10.1.1.2.1, 10.1.1.3.1.1 and 10.1.1.4 in [n.5])

CONN/GROUP/PREA/ONDEM/NFC/02 (7.2.2)

On-demand prearranged Group Call (Sections 10.1.1.2.1, 10.1.1.3.1.1 and 10.1.1.4 in [n.5]): Emergency Group Call (6.2.8.1.[1-8][13-17] in [n.5])

CONN/GROUP/PREA/ONDEM/NFC/03 (7.2.3)

On-demand prearranged Group Call (Sections 10.1.1.2.1, 10.1.1.3.1.1 and 10.1.1.4 in [n.5]): Inminent Peril Group Call (6.2.8.1.9-12 in [n.5])

CONN/GROUP/PREA/ONDEM/NFC/04 (7.2.4)

On-demand prearranged Group Call (Sections 10.1.1.2.1, 10.1.1.3.1.1 and 10.1.1.4 in [n.5]): Broadcast Group Call (6.2.8.2 in [n.5])

CONN/GROUP/PREA/ONDEM/NFC/05 (7.2.5)

On-demand prearranged Group Call (Sections 10.1.1.2.1, 10.1.1.3.1.1 and 10.1.1.4 in [n.5]): Upgrade to in-progress emergency or imminent peril (10.1.1.2.1.3, 10.1.2.2.1.4 in [n.5])

CONN/GROUP/PREA/ONDEM/NFC/06 (7.2.6)

Termination of an on-demand prearranged Group Calls (Sections 10.1.1.2.3.1 and 10.1.1.3.3.1 in [n.5])

CONN/GROUP/PREA/PRE/NFC/01 (7.2.7)

Prearranged Group Call using pre-established session (Sections 10.1.1.2.2, 10.1.1.3.1.2 and 10.1.1.4 in [n.5])

CONN/GROUP/PREA/PRE/NFC/02 (7.2.8)

Termination of a prearranged Group Call using pre-established session (Sections 10.1.1.2.3.2 and 10.1.1.3.3.2 in [n.5])

CONN/GROUP/CHAT/ONDEM/NFC/01 (7.2.9)

On-demand Chat Group Call establishment (Sections 10.1.2.2.1.1, 10.1.2.3.1.1, 10.1.2.3.1.3 and 10.1.2.4.1.1 in [n.5])

CONN/GROUP/CHAT/ONDEM/NFC/02 (7.2.10)

Ongoing on-demand Chat Group Call upgraded to emergency call (Sections 10.1.2.2.1.4, 10.1.2.2.1.2, 10.1.2.3.1.2, 10.1.2.3.1.4 and 10.1.2.4.1.2 in [n.5])

CONN/GROUP/CHAT/ONDEM/NFC/03 (7.2.11)

Ongoing on-demand Chat Group Call upgraded to imminent peril (Sections 10.1.2.2.1.4, 10.1.2.2.1.2, 10.1.2.3.1.2, 10.1.2.3.1.4 and 10.1.2.4.1.3 in [n.5])

CONN/GROUP/CHAT/ONDEM/NFC/04 (7.2.12)

Cancellation of the in-progress emergency condition of an on-demand Chat Group Call (Sections 10.1.2.2.1.3, 10.1.2.2.1.2, 10.1.2.3.1.2, 10.1.2.3.1.4 and 10.1.2.4.1.2 in [n.5])

CONN/GROUP/CHAT/ONDEM/NFC/05 (7.2.13)

Cancellation of the in-progress imminent peril condition of an on-demand Chat Group Call (Sections 10.1.2.2.1.5, 10.1.2.2.1.2, 10.1.2.3.1.2, 10.1.2.3.1.4 and 10.1.2.4.1.3 in [n.5])

CONN/GROUP/CHAT/PRE/NFC/01 (7.2.14)

Chat Group Call establishment within a pre-established session (Sections 10.1.2.2.2, 10.1.2.2.1.6, 10.1.2.3.2.1, 10.1.2.3.2.2 and 10.1.2.4.1.1 in [n.5])

CONN/PRIV/AUTO/ONDEM/WFC/NFC/01 (7.2.15)

On-demand private call with floor control (Section 11.1.1.2.1 in [n.5]) and automatic commencement mode (see [n.21])

CONN/PRIV/MAN/ONDEM/WFC/NFC/01 (7.2.16)

On-demand private call with floor control manual mode (Section 11.1.1.2.1 in [n.5]) and manual commencement mode (see [n.21])

CONN/PRIV/AUTO/PRE/WFC/NFC/01 (7.2.17)

Pre-established private call with floor control (Section 11.1.1.2.1 in [n.5]) and automatic commencement mode (see [n.21])

CONN/PRIV/MAN/PRE/WFC/NFC/01 (7.2.18)

Pre-established private call with floor control manual mode (Section 11.1.1.2.1 in [n.5]) and manual commencement mode (see [n.21])

CONN/PRIV/AUTO/ONDEM/WOFC/01 (7.2.19)

On-demand private call without floor control (Section 11.1.1.2.1 in [n.5]) and automatic commencement mode (see [n.21])

CONN/PRIV/MAN/ONDEM/WOFC/01 (7.2.20)

On-demand private call without floor control manual mode (Section 11.1.1.2.1 in [n.5]) and manual commencement mode (see [n.21])

CONN/PRIV/AUTO/PRE/WOFC/01 (7.2.21)

Pre-established private call without floor control (Section 11.1.1.2.1 in [n.5]) and automatic commencement mode (see [n.21])

CONN/PRIV/MAN/PRE/WOFC/01 (7.2.22)

Pre-established private call without floor control manual mode (Section 11.1.1.2.1 in [n.5]) and manual commencement mode (see [n.21])

- **Floor Controlling [2]:**

FC/BASIC/01 (7.3.1)

Basic FC functionality (Section 6 in [n.6])

FC/BASIC/02 (7.3.2)

Basic FC functionality. Effect of Priorities (following A.3.5 example in [n.6]).

• **Floor Controlling [2]:**

FC/BASIC/01 (7.3.1)

Basic FC functionality (Section 6 in [n.6])

FC/BASIC/02 (7.3.2)

Basic FC functionality. Effect of Priorities (following A.3.5 example in [n.6]).

• **Registration & Authorization [3]:**

REGAUTH/IDMSAUTH/01 (7.4.1)

MCPTT Client authentication and tokens retrieval using IdMS [n.8]

REGAUTH/3PRTYREG/REGISTER/01 (7.4.2)

MCPTT Client registration using 3rd party register (Sections 7.2.1 and 7.3.2 in [n.5])

REGAUTH/PUBLISH/REGISTER/01 (7.4.3)

MCPTT Client registration using SIP PUBLISH (Sections 7.2.2 and 7.3.3 in [n.5])

• **Policing [4]:**

PCC/BEARERSETUP/01 (7.5.1)

Unicast MC Bearer Setup by SIP Core/IMS (Sections 4.4.1 and 4.4.2 in [n.14])

PCC/BEARERSETUP/02 (7.5.2)

Unicast MC Bearer Setup by MCPTT Participating AS (Sections 4.4.1 and 4.4.2 in [n.14])

PCC/BEARERUPDATE/01 (7.5.3)

Unicast MC Bearer Update by SIP Core/IMS due to a change in the Call characteristics (i.e. upgrade to emergency call as in Section 7.2.5)

PCC/BEARERUPDATE/02 (7.5.4)

Unicast MC Bearer Update by MCPTT Participating AS due to a change in the Call characteristics (i.e. upgrade to emergency call as in Section 7.2.5)

- **EMBMS [8]:**

EMBMS/ACTIVATEBEARER/WPRETMGI/01 ([7.6.2](#))

Use of dynamically established MBMS bearers in prearranged MCPTT group calls with pre-allocated TMGIs (Sections 5.2.1 and 5.3.2 in [[n.16](#)])

EMBMS/ACTIVATEBEARER/WOPRETMGI/01 ([7.6.3](#))

Use of dynamically established MBMS bearers in prearranged MCPTT group calls without pre-allocated TMGIs

EMBMS/PREBEARER/WPRETMGI/01 ([7.6.4](#))

Use of pre-established MBMS bearers in prearranged group calls with pre-allocated TMGIs

EMBMS/PREBEARER/WOPRETMGI/01 ([7.6.5](#))

Use of pre-established MBMS bearers in prearranged group calls without pre-allocated TMGIs

EMBMS/MODIFYBEARER/01 ([7.6.6](#))

Modification of MBMS bearers upon reception of emergency upgrade request

EMBMS/DEACTIVBEARER/WTMGIDEA/01 ([7.6.7](#))

Deactivation of MBMS bearers after termination of a prearranged MCPTT group call with TMGI deallocation

EMBMS/DEACTIVBEARER/WOTMGIDEA/01 ([7.6.8](#))

Deactivation of MBMS bearers after termination of a prearranged MCPTT group call without TMGI deallocation

EMBMS/SWITCHTOUNITMGIEXP/01 ([7.6.9](#))

Switching to unicast bearer after TMGI expiration

- **Affiliations (AFFIL) [5]:**

AFFIL/DET/01 ([7.7.1](#))

Determining self affiliation (Sections 9.2.1.3 and 9.2.2.2.4 in [[n.5](#)])

AFFIL/DET/02 ([7.7.2](#))

Determining affiliation status of another user (Sections 9.2.1.3 and 9.2.2.2.4 in [[n.5](#)])

AFFIL/CHANGE/01 ([7.7.3](#))

Affiliation status change triggered by the MCPTT User itself (Sections 9.2.1.2 and 9.2.2.2.3 in [[n.5](#)])

AFFIL/CHANGE/02 ([7.7.4](#))

Affiliation status change triggered by another MCPTT User in mandatory mode (Sections 9.2.1.2, 9.2.2.3.3 in [[n.5](#)])

AFFIL/CHANGE/03 ([7.7.5](#))

Affiliation status change triggered by another MCPTT User in negotiated mode (Sections 9.2.1.4 and 9.2.1.5 in [[n.5](#)])

- **Location [3]:**

LOC/3PRTYREG/CONFIG/01 ([7.8.1](#))

MCPTT Client Configuration upon 3rd party register (Sections 13.2.2 and 13.3.2 in [[n.5](#)])

LOC/REQUEST/01 ([7.8.1](#))

Request for Location Report to the MCPTT Client (Sections 13.2.3 ad 13.3.3 in [[n.5](#)]))

LOC/SUBMISSION/01 ([7.8.3](#))

MCPTT Client Sends location upon trigger (Section 13.3.4 in [[n.5](#)]))

- **OAM (CSC) [0]:**

- **QoS support (KPI) [0]:**

4 Conventions

4.1 Test Description Proforma

A Test Description (TD) is a detailed description of the process that needs to be followed to test one or more inter operable functionalities between two or more vendor implementations. A TD should include as a minimum the following elements: The following different types are defined:

Interoperability Test Description			
Identifier	<i>a unique test description identifier should follow a well-defined naming convention, e.g.: TD/AB/XX/00</i>		
Test Objective	<i>a concise summary of the test, which should reflect its purpose and allow readers to easily distinguish this test from any other test in the document</i>		
Configuration(s)	<i>- list of all the required equipment for running this test, possibly also including a (reference to) an illustration of a test architecture or test configuration</i>		
References	<i>- list of references to the base specification section(s), use case(s), requirement(s), etc. which are either used in the test or define the functionality being tested</i>		
Applicability	<i>- list of features and capabilities in the IFS which are required to be supported by the SUT in order to execute this test (e.g. if this list contains an optional feature to be supported, then the test is optional)</i>		
Pre-test conditions	<i>- list of test specific pre-conditions that need to be met by the SUT including information about equipment configuration, i.e. precise description of the initial state of the SUT prior to start executing the test sequence</i>		
Test Sequence	Step	Type	Description
	1	<type>	<i>step description</i>
	2		
	3		
Notes	<i>- optional list of explanatory notes</i>		

- A **stimulus** corresponds to an event that triggers an EUT to proceed with a specific protocol action, like sending a message for instance.
- A **check** step consists of verifying that the EUT behaves according to the expected behaviour (for instance the EUT behaviour shows that it receives the expected message).
- A **configure** corresponds to an action to modify the EUT configuration.
- A **verify** step consists of verifying that the tested scenario provides expected results (for instance an emergency call is received at the correct PSAP and media is transmitted).

Each check step consists of the receipt of protocol messages on reference points, with valid content. The check should be performed using a trace created by a monitor tool.

4.2 Interoperable Functions Statement

The "Interoperable Functions Statement" (IFS) identifies the standardised functions of a DUT. These functions can be mandatory, optional or conditional (depending on other functions), and depend on the role played by the DUT. The IFS can also be used as a proforma by a vendor to identify the functions that its DUT will support when interoperating with corresponding functions from other vendors.

5 Configurations

5.1 Common remarks

Depending on the Functional Connectivity Modes collected in Section 5.3.2 of [n.5] and depending on the DUT, each one of the tests could be later split to cover the following possibilities:

- A) Functions of the MCPTT server in the primary MCPTT system
- B) The non-controlling function operating in the primary MCPTT system
- C) Mutual aid relationship between the primary MCPTT system and a partner MCPTT system with the controlling MCPTT function in the primary MCPTT system
- D) Mutual aid relationship between the primary MCPTT system and a partner MCPTT system with the controlling MCPTT function in the partner MCPTT system
- E) Mutual aid relationship between the primary MCPTT system and a partner MCPTT system involving the use of a non-controlling MCPTT function of an MCPTT group in the partner MCPTT system
- F) Mutual aid relationship between the primary MCPTT system and more than one partner MCPTT system

Regardless whether a single or multiple vendors provide both originating and terminating participating servers first connectivity mode only will be considered ³.

Figure 3: Functional connectivity modes (Figures 5.3.2-[1-3] in [n.5])

³To be discussed, other functional modes could be tested in future plugtests and/or when Rel'14 is frozen

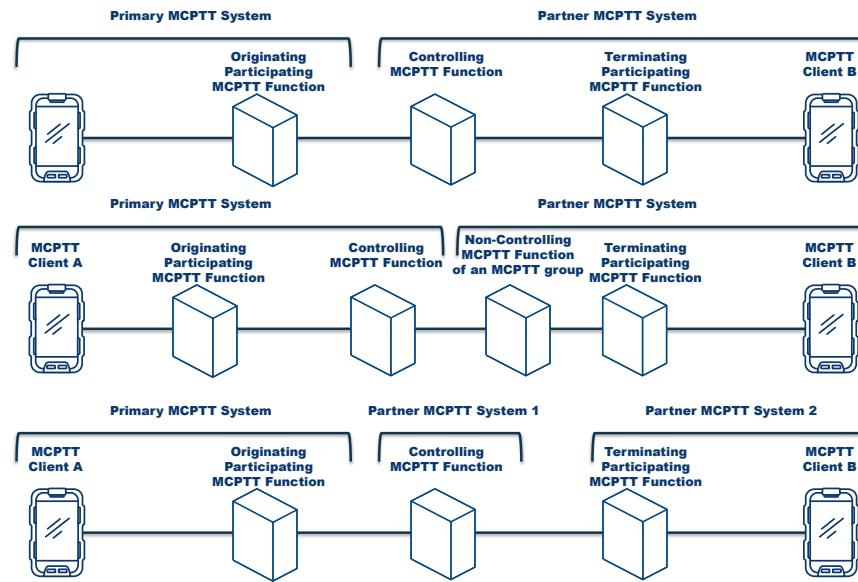

Figure 4: Functional connectivity modes (Figures 5.3.2-[4-6] in [n.5])

5.2 CFG_ONN_OTT-1

CFG_ONN_OTT-1 is shown in Fig. 5.

Figure 5: CFG_ONN_OTT-1 Scheme

MCPTT UEs, SIP Core/IMS and MCPTT Server(s) are required. It will be used for On Network Calls (ONN) with a pure Over-The-Top (OTT) approach. Therefore, any underlying network (i.e. commercial LTE or even UMTS, WiFi or Ethernet) will provide a bit-pipe type only access with no QoS/prioritization enforcement neither access-layer multi/broadcasting capabilities (i.e. nor unicast PCC support or multicast mechanisms in LTE). It can be also referred as a configuration comprised of “non-3GPP access connections” only.

This configuration, although not usable in a real Mission Critical (MC) environment (only by dis-

patchers as suggested in Section 4 in [n.1]), will be used for basic connectivity tests and does not require any binding between the SIP Core and the underlying LTE infrastructure (no Rx interface, plain OTT as in Fig. 5).

Additionally, Fig. 6 defines the different Interfaces in the Application plane considered in the configuration CFG_ONN_OTT-1 for the simplest unicast media handling and floor controlling case.

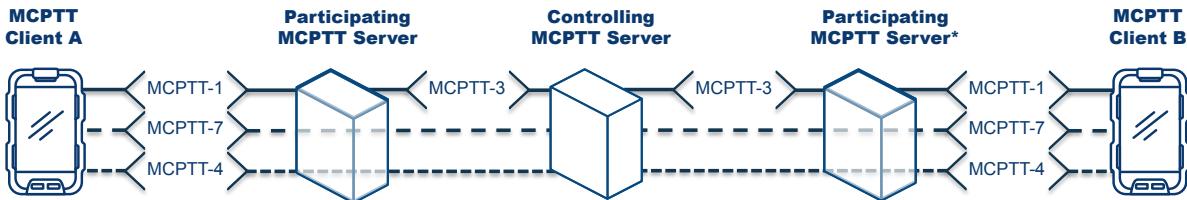

Figure 6: CFG_ONN_OTT-1 Interfaces for the unicast case

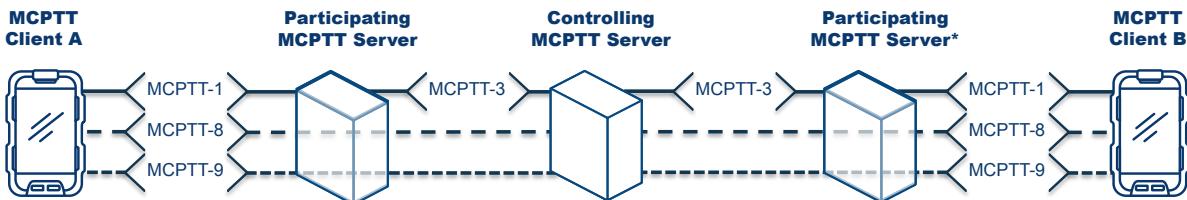

Figure 7: CFG_ONN_OTT-1 Interfaces for the multicast case

Finally, Fig. 7 defines the different Interfaces in the Application plane considered in the configuration CFG_ONN_OTT-1 for the multicast media handling and floor controlling case.

5.3 CFG_ONN_UNI-MC-LTE-1

In this configuration LTE will have PCC capabilities and therefore will enforce QoS policies in terms of prioritization and pre-emptiveness in unicast bearers including new Public Safety QCI 65/69 (but still no Rel. 13 eMBMS capabilities). Therefore, a Rx interface will be exposed and related reference points and signaling mechanisms will be tested.

As depicted in Fig. 8 and defined in [n.2] Section 5.2.9.3 and 9.2.2.3.2-3 either the SIP Core or the MCPTT Server itself could signal the PCC mechanisms related to Unicast Bearer (MCPTT-5, Rx interface).

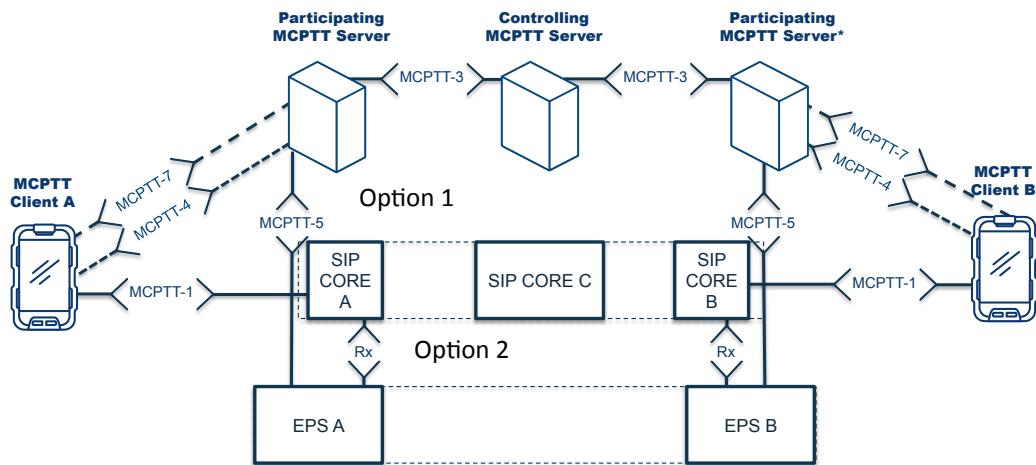

Figure 8: CFG_ONN_UNI-MC-LTE-1 Application plane interfaces

5.4 CFG_ONN_MULTI-MC-LTE-1

In this configuration LTE will have full MCPTT supporting capabilities (i.e. Rel. 13 LTE-A Pro eMBMS + needed interfaces).

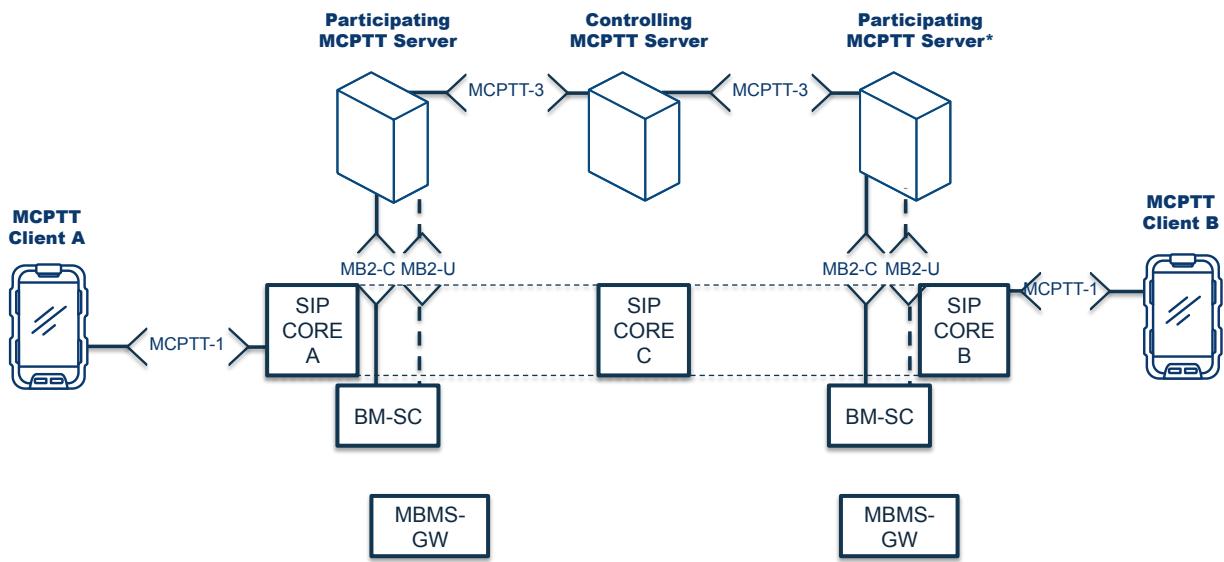

Figure 9: CFG_ONN_MULTI-MC-LTE-1 Application plane interfaces

5.5 CFG_OFFN_OTT-1

TBA in further plugtests ⁴..

⁴To be discussed, the lack of ProSE chipsets may prevent realistic testing in the first plugtest

6 Interoperable Functions Statement (IFS)

6.1 Entities

Table 11: Entities

Item	Which entity do you support?	Status	Support
1	UE		
2	MCPTT Client		
3	IMS

6.2 UE Features

Table 12: UE features

Item	Feature	ID	Ref	Status	Support
1	Does the UE support Mission Critical APNs and QCLs?	UE_MC-APN	[n.2]		
2	Does the UE support EM-BMS?	UE_EMBMS	[n.12]		

6.3 MCPTT Client Features

Table 13: MCPTT Client features

Item	Feature	ID	Ref	Status	Support
1	Does MCPTT-Client support Authentication and ID retrieval from IDMS?	MCPTT-Client_IDMS	[n.8]		
2	Does MCPTT-Client support PUBLISH Based Registration?	MCPTT-Client_PUBREG	[n.5]		
3	Does MCPTT-Client support REGISTER Based Registration?	MCPTT-Client_REGREG	[n.5]		
4	Does MCPTT-Client support On-Network MCPTT private and group calling?	MCPTT-Client_ONN-MCPTT-CALL	[n.5]		
5	Does MCPTT-Client support On-Network MCPTT floor controlling?	MCPTT-Client_ONN-MCPTT-FC	[n.6]		
6	Does MCPTT-Client support AMR-WB codec?	MCPTT-Client_AMR-WB	[n.11]		
7	Does MCPTT-Client support EVS codec?	MCPTT-Client_EVS	[n.11]		
8	Does MCPTT-Client support Configuration retrieval from CMS?	MCPTT-Client_CMS	[n.10]		
9	Does MCPTT-Client support Key retrieval from KMS?	MCPTT-Client_KMS	[n.17]		
10	Does MCPTT-Client support Mission Critical APNs and QCIs?	MCPTT-Client_MC-APN	[n.2]		
11	Does MCPTT-Client support EMBMS?	MCPTT-Client_EMBMS	[n.12]		
12	Does MCPTT-Client support Location configuration and submission?	MCPTT-Client_LOC	[n.5]		

6.4 IMS Features

Table 14: IMS features

Item	Feature	ID	Ref	Status	Support
1	Does the IMS support 3rd Party REGISTER?	IMS_3RDPARTYREG	[n.5]		
2	Does the IMS support MCPTT compatible Rx Interface in the PCSCF?	IMS_RX	[n.14]		

6.5 MCPTT-Participating AS Features

Table 15: MCPTT-Participating AS features

Item	Feature	ID	Ref	Status	Support
1	Does the MCPTT-Part support REGISTER+PUBLISH Based Service Authorization?	MCPTT-Part_PUBAUTH	[n.5]		
2	Does the MCPTT-Part support REGISTER Based Authorization?	MCPTT-Part_REGAUTH	[n.5]		
3	Does the MCPTT-Part support On-Network MCPTT private and group calling?	MCPTT-Part_ONN-MCPTT-CALL	[n.5]		
4	Does the MCPTT-Part support On-Network MCPTT floor controlling?	MCPTT-Part_ONN-MCPTT-FC	[n.6]		
5	Does the MCPTT-Part support Location?	MCPTT-Part_LOC	[n.5]		
6	Does the MCPTT-Part support Affiliation Procedures?	MCPTT-Part_AFFIL	[n.5]		
7	Does the MCPTT-Part support MCPTT compatible MCPTT-5 (Rx) Interface?	MCPTT-Part_RX	[n.14]		
8	Does the MCPTT-Part support MB2-C and MB2-U interfaces?	MCPTT-Part_GCSE	[n.16]		

6.6 MCPTT-Controlling AS Features

Table 16: MCPTT-Controlling AS features

Item	Feature	ID	Ref	Status	Support
1	Does the MCPTT-Ctrl support On-Network MCPTT private and group calling?	MCPTT-Ctrl_ONN-MCPTT-CALL	[n.5]		
2	Does the MCPTT-Ctrl support On-Network MCPTT floor controlling?	MCPTT-Ctrl_ONN-MCPTT-FC	[n.6]		
3	Does the MCPTT-Ctrl support Location Configuration?	MCPTT-Ctrl_LOC	[n.5]		
4	Does the MCPTT-Ctrl support Group composition retrieval from GMS?	MCPTT-Ctrl_GMS	[n.7]		

6.7 BM-SC Features

Table 17: BM-SC features

Item	Feature	ID	Ref	Status	Support
1	Does the BM-SC support MB2-C and MB2-U interfaces?	BM-SC_GCSE	[n.16]		

6.8 EPS Features

Table 18: EPS (LTE eUTRAN + EPC) features

Item	Feature	ID	Ref	Status	Support
1	Does the EPS support Mission Critical APNs and QCIs?	EPS_MC-APN	[n.2]		
2	Does the EPS support MCPTT compatible Gx interface with the PCRF?	EPS_GX	[n.13]		
3	Does the EPS support EMBMS capable EU-TRAN+EPC?	EPS_EMBMS	[n.12]		

6.9 PCRF Features

Table 19: PCRF features

Item	Feature	ID	Ref	Status	Support
1	Does the PCRF support MCPTT compatible RX interface?	PCRF_RX	[n.14]		

7 Test Descriptions

7.1 Common Remarks

In the first plugtest the interactions with the support servers (i.e. particularly Group Management Server and Identity Management Server) will be analyzed in separated tests and not necessarily in every e2e call procedure.

Similarly, unless otherwise specified, no security mechanism will be applied (including interaction with KMS and ciphering of different parts of both signaling and media streams). On the same hand, all users will be pre-configured at the different Functional Elements. Those users will be considered as allowed to actually carry out the involved procedures.

Furthermore, the composition of groups will be circulated among the plugtest participants in an agreed format in order to share the same configuration. During the tests every MCPTT Controlling server will take care of the group composition retrieval procedures on its own way.

Similarly MCPTT-specific MCPTT Client authentication, registration, and affiliation mechanisms would be considered as optional, so that the configuration would allow MCPTT Participating and Controlling servers to consider agreed clients as registered, authenticated and also affiliated members of the groups considered in the tests⁵.

Note that in all the sequence diagrams in the following subsections the flows between the MCPTT Functional Elements and the SIP/IMS Core are not shown unless otherwise specified. Therefore, some headers that should be included by SIP/IMS Core may not be explicitly mentioned in the sequence diagrams or messages (i.e. P-Asserted-Identity by P-CSCF).

In fact, both sequence diagrams and sample messages are provided for illustration purposes only. As a result, most of the headers (even MCPTT-ones) and some of the signaling messages have been removed. Normative references in Section 2.1 should be checked for details of all the procedures required.

7.2 Connectivity (CN)

7.2.1 MCPTT User initiates an on-demand prearranged MCPTT Group Call [CONN/ONN-GROUP/PREA/ONDEM/NFC/01]

This test comprises the establishment an on-demand prearranged Group Call. Initially, pure SIP signaling will be evaluated (then, no floor control -NFC- mechanisms will be specifically considered apart from the simplest case for verifying e2e communications).⁶

Note that in this test case and following diagrams we do not consider the triggering and possible effects of (un)successful implicit affiliation in the MCPTT participating server for the case when the calling is not affiliated to the group identified in the “SIP INVITE request for originating participating MCPTT function” as determined by subclause 9.2.2.2.11 in n.5.

Similarly, no emergency or imminent peril conditions will be signaled.

⁵ Affiliation and group retrieval mechanism support in different elements to be agreed

⁶ The floor control related procedures will be jointly evaluated in a later stage for all the Group Calling associated test cases.

Interoperability Test Description

Table 20: CONN/ONN/GROUP/PREA/ONDEM/NFC/01

Interoperability Test Description			
Identifier	CONN/ONN/GROUP/PREA/ONDEM/NFC/01		
Test Objective	Verify IP connectivity, SIP core/IMS configuration and proper routing and SIP signaling of a pre-arranged on demand Group Call		
Configuration(s)	<ul style="list-style-type: none"> - CFG_ONN_OTT-1 (5.2) - CFG_ONN_UNI-MC-LTE-1 (5.3) - CFG_ONN_MULTI-MC-LTE-1 (5.4) 		
References	<ul style="list-style-type: none"> - SIP (see [n.4] and other references in [n.5]) - MCPT (see [n.6] and other references in [n.5]) - RTP (see [n.4] and other references in [n.5]) 		
Applicability	<ul style="list-style-type: none"> - MCPTT-Client_ONN-MCPTT-CALL, MCPTT-Client_AMR-WB, MCPTT-Client_AFFIL, MCPTT-Client_MCPTT-FC (6.2) - MCPTT-Part_ONN-MCPTT-CALL, MCPTT-Part_AFFIL (see NOTE), MCPTT-Part_MCPTT-FC, MCPTT-Part_RX (CFG_ONN_UNI-MC-LTE-1 only), MCPTT-Part_GCSE (CFG_ONN_MULTI-MC-LTE-1 only), (6.5) - MCPTT-Ctrl_ONN-MCPTT-CALL, MCPTT-Ctrl_AFFIL (see NOTE) (6.6) 		
Pre-test conditions	<ul style="list-style-type: none"> - IP connectivity among all elements of the specific scenario - Proper configuration of the SIP core/IMS to forward the signaling to the specific controlling and participating servers - UEs properly registered to the SIP core/IMS and MCPTT system - Calling user is affiliated to the called group 		
Test Sequence	Step	Type	Description
	1	stimulus	User 1 (mcptt_id_clientA@example.com) calls mcptt-group-A
	2	check	Dialog creating INVITE received at the MCPTT participating server of mcptt_id_clientA@example.com after traversing SIP core/IMS
	3	check	INVITE received at the MCPTT controlling server
	4	check	The MCPTT controlling server loads the affiliated members of the mcptt-group-A (either pre-configured or retrieved from the GMS) and creates an INVITE per each of the "n" members
	5	check	"n" INVITEs received at the MCPTT participating servers of each mcptt_id_clientX (where X:1..n)
	6	check	"n" INVITEs received at the affiliated mcptt_id_clientX
	7	check	"n" SIP dialogs established
	8	verify	Call connected and multiple media flows exchanged

7.2.2 MCPTT User initiates an on-demand prearranged MCPTT Group Call: Emergency Group Call [CONN/ONN/GROUP/PREA/ONDEM/NFC/02]

The test is equivalent to CONN/ONN/GROUP/PREA/ONDEM/NFC/01 (Section 7.2.1) but the calling user indicates that this is an Emergency Group Call.

Sections 6.2.8.1.[1-8][13-17] in [n.5] describe the mechanisms involved in an Emergency Group Call handling including additional headers and elements (i.e. <mcptt-Params> in the <mcptt-info> element in the application/vnd.3gpp.mcptt-info+xml MIME body).

Furthermore, Emergency Group Call requests and answers trigger changes to the emergency call state (i.e. from MEGC 2: emergency-call-requested to MEGC 3: emergency-call-granted) and the emergency alert state (i.e. MEA 3: emergency-alert-initiated), internal states of the MCPTT client (and also groups) that are not shown in the diagrams and messages below.

Interoperability Test Description

Table 21: CONN/ONN/GROUP/PREA/ONDEM/NFC/02

Interoperability Test Description			
Identifier	CONN/ONN/GROUP/PREA/ONDEM/NFC/02		
Test Objective	Verify IP connectivity, SIP core/IMS configuration and proper routing, SIP signaling of a pre-arranged on demand emergency Group Call		
Configuration(s)	<ul style="list-style-type: none"> - CFG_ONN_OTT-1 (5.2) - CFG_ONN_UNI-MC-LTE-1 (5.3) - CFG_ONN_MULTI-MC-LTE-1 (5.4) 		
References	<ul style="list-style-type: none"> - SIP (see [n.4] and other references in [n.5]) - MCPT (see [n.6] and other references in [n.5]) - RTP (see [n.4] and other references in [n.5]) 		
Applicability	<ul style="list-style-type: none"> - MCPTT-Client_ONN-MCPTT-CALL, MCPTT-Client_AMR-WB, MCPTT-Client_AFFIL, MCPTT-Client_MCPTT-FC (6.2) - MCPTT-Part_ONN-MCPTT-CALL, MCPTT-Part_AFFIL (see NOTE), MCPTT-Part_MCPTT-FC, MCPTT-Part_RX (CFG_ONN_UNI-MC-LTE-1 only), MCPTT-Part_GCSE (CFG_ONN_MULTI-MC-LTE-1 only), (6.5) - MCPTT-Ctrl_ONN-MCPTT-CALL, MCPTT-Ctrl_AFFIL (see NOTE) (6.6) 		
Pre-test conditions	<ul style="list-style-type: none"> - IP connectivity among all elements of the specific scenario - Proper configuration of the SIP core/IMS to forward the signaling to the specific controlling and participating servers - UEs properly registered to the SIP core/IMS and MCPTT system - Calling user is affiliated to the called group 		
Test Sequence	Step	Type	Description
	1	stimulus	User 1 (mcptt_id_clientA@example.com) initiates an emergency Group Call to mcptt-group-A by setting the proper elements in the mcptt-info MIME body
	2	check	Dialog creating INVITE received at the MCPTT participating server of mcptt_id_clientA@example.com after traversing SIP core/IMS
	3	check	INVITE received at the MCPTT controlling server
	4	check	The MCPTT controlling server loads the affiliated members of the mcptt-group-A (either pre-configured or retrieved from the GMS) and creates an INVITE per each of the "n" members
	5	check	"n" INVITES received at the MCPTT participating servers of each mcptt_id_clientX (where X:1..n)
	6	check	"n" INVITES received at mcptt_id_clientX
	7	check	"n" SIP dialogs established
	8	verify	Call connected and multiple media flows exchanged

7.2.3 MCPTT User initiates an on-demand prearranged MCPTT Group Call: Imminent Peril Group Call [CONN/ONN/GROUP/PREA/ONDEM/NFC/03]

The test is equivalent to CONN/ONN/GROUP/PREA/ONDEM/NFC/01 (Section 7.2.1 but the calling user indicates that this is an Imminent Peril Group Call.

Sections 6.2.8.1.9-12 in [n.5] indicate the mechanisms involved in an Imminent Peril Group Call. Initially, the MCPTT Client sets the <imminentperil-ind> element in the MIME mcptt-info body (within the mcptt-Params element) to "true". Furthermore, Imminent Peril Group Call requests and answers trigger changes to the imminent Peril Group Call state (i.e. from MIGC 2: imminent-peril-call-requested to MIGC 3:imminent-peril-call-granted).

Interoperability Test Description

Table 22: CONN/ONN/GROUP/PREA/ONDEM/NFC/03

Interoperability Test Description			
Identifier	CONN/ONN/GROUP/PREA/ONDEM/NFC/03		
Test Objective	Verify IP connectivity, SIP core/IMS configuration and proper routing, SIP signaling of an Imminent Peril pre-arranged on demand Group Call		
Configuration(s)	<ul style="list-style-type: none"> - CFG_ONN_OTT-1 (5.2) - CFG_ONN_UNI-MC-LTE-1 (5.3) - CFG_ONN_MULTI-MC-LTE-1 (5.4) 		
References	<ul style="list-style-type: none"> - SIP (see [n.4] and other references in [n.5]) - MCPT (see [n.6] and other references in [n.5]) - RTP (see [n.4] and other references in [n.5]) 		
Applicability	<ul style="list-style-type: none"> - MCPTT-Client_ONN-MCPTT-CALL, MCPTT-Client_AMR-WB, MCPTT-Client_AFFIL, MCPTT-Client_MCPTT-FC (6.2) - MCPTT-Part_ONN-MCPTT-CALL, MCPTT-Part_AFFIL (see NOTE), MCPTT-Part_MCPTT-FC, MCPTT-Part_RX (CFG_ONN_UNI-MC-LTE-1 only), MCPTT-Part_GCSE (CFG_ONN_MULTI-MC-LTE-1 only), (6.5) - MCPTT-Ctrl_ONN-MCPTT-CALL, MCPTT-Ctrl_AFFIL (see NOTE) (6.6) 		
Pre-test conditions	<ul style="list-style-type: none"> - IP connectivity among all elements of the specific scenario - Proper configuration of the SIP core/IMS to forward the signaling to the specific controlling and participating servers - UEs properly registered to the SIP core/IMS and MCPTT system - Calling user is affiliated to the called group 		
Test Sequence	Step	Type	Description
	1	stimulus	User 1 (mcptt_id_clientA@example.com) initiates an Imminent Peril Group Call to mcptt-group-A by setting the proper elements in the mcptt-info MIME body
	2	check	Dialog creating INVITE received at the MCPTT participating server of mcptt_id_clientA@example.com after traversing SIP core/IMS
	3	check	INVITE received at the MCPTT controlling server
	4	check	The MCPTT controlling server loads the affiliated members of the mcptt-group-A (either pre-configured or retrieved from the GMS) and creates an INVITE per each of the "n" members
	5	check	"n" INVITEs received at the MCPTT participating servers of each mcptt_id_clientX (where X:1..n)
	6	check	"n" INVITEs received at mcptt_id_clientX
	7	check	"n" SIP dialogs established
	8	verify	Call connected and multiple media flows exchanged

7.2.4 MCPTT User initiates an on-demand prearranged MCPTT Group Call: Broadcast Group Call [CONN/ONN/GROUP/PREA/ONDEM/NFC/04]

The test is equivalent to CONN/ONN/GROUP/PREA/ONDEM/NFC/01 (Section 7.2.1 but the calling user indicates that this is Broadcast Group Call).

Section 6.2.8.2 in [n.5] indicates the mechanisms involved in a Broadcast Group Call. Initially, the MCPTT Client sets the <broadcast-ind> element in the MIME mcptt-info body (within the mcptt-Params element in the mcpttinfo XML) set to "true". The handling of the call is basically the same as other Group Call but only the call originating MCPTT user is allowed to transmit media and if the media transmission from call originating MCPTT user is complete, the broadcast Group Call is released (see Section 10.6.2.5 in [n.2] for more details).

Pre-test conditions	<ul style="list-style-type: none"> - IP connectivity among all elements of the specific scenario - Proper configuration of the SIP core/IMS to forward the signaling to the specific controlling and participating servers - UEs properly registered to the SIP core/IMS and MCPTT system - Calling user is affiliated to the called group 		
Test Sequence	Step	Type	Description
	1	stimulus	User 1 (mcptt_id_clientA@example.com) initiates a broadcast Group Call to mcptt-group-A by setting the proper elements in the mcptt-info MIME body
	2	check	Dialog creating INVITE received at the MCPTT participating server of mcptt_id_clientA@example.com after traversing SIP core/IMS
	3	check	INVITE received at the MCPTT controlling server
	4	check	The MCPTT controlling server loads the affiliated members of the mcptt-group-A (either pre-configured or retrieved from the GMS) and creates an INVITE per each of the "n" members
	5	check	"n" INVITEs received at the MCPTT participating servers of each mcptt_id_clientX (where X:1..n)
	6	check	"n" INVITEs received at mcptt_id_clientX
	7	check	"n" SIP dialogs established
	8	verify	Call connected and multiple media flows exchanged

7.2.5 MCPTT User initiates an on-demand prearranged MCPTT Group Call: Upgrade to in-progress emergency or imminent peril [CONN/ONN/GROUP/PREA/ONDEM/NFC/05]

This test covers the upgrade to either emergency or imminent peril Group Call during an in-progress Group Call as defined in CONN/ONN/GROUP/PREA/ONDEM/NFC/01 (Section 7.2.1).

There, the initial steps are totally equivalent but, upon a new risk or incident the MCPTT User triggers the emergency or imminent peril upgrade mechanism according to Sections 10.1.1.2.1.3 and 10.1.2.2.1.4 in [n.5]). In both cases, a re-INVITE is triggered with the new <emergency-ind> or <imminentperil-ind> elements (see 7.2.2 and 7.2.3 respectively for more info).

Applicability	<ul style="list-style-type: none"> - MCPTT-Client_ONN-MCPTT-CALL, MCPTT-Client_AMR-WB, MCPTT-Client_AFFIL, MCPTT-Client_MCPTT-FC (6.2) - MCPTT-Part_ONN-MCPTT-CALL, MCPTT-Part_AFFIL (see NOTE), MCPTT-Part_MCPTT-FC, MCPTT-Part_RX (CFG_ONN_UNI-MC-LTE-1 only), MCPTT-Part_GCSE (CFG_ONN_MULTI-MC-LTE-1 only), (6.5) - MCPTT-Ctrl_ONN-MCPTT-CALL, MCPTT-Ctrl_AFFIL (see NOTE) (6.6) 		
Pre-test conditions	<ul style="list-style-type: none"> - IP connectivity among all elements of the specific scenario - Proper configuration of the SIP core/IMS to forward the signaling to the specific controlling and participating servers - UEs properly registered to the SIP core/IMS and MCPTT system - Calling user is affiliated to the called group - Group Call properly established 		
Test Sequence	Step	Type	Description
	1	stimulus	User 1 (mcptt_id_clientA@example.com) initiates a regular Group Call to mcptt-group-A
	2	check	The initial Group Call is properly established
	3	stimulus	Calling user upgrades the call to a Imminent Peril/Emergency one with a new INVITE with the proper elements in the mcptt-info
	4	check	reINVITE received at the MCPTT participating server of mcptt_id_clientA@example.com after traversing SIP core/IMS
	5	check	reINVITE received at the MCPTT controlling server
	6	check	"n" reINVITEs received at mcptt_id_clientX
	7	verify	New status of the Group Call agreed

7.2.6 MCPTT User initiates the termination of an on-demand prearranged MCPTT Group Call [CONN/ONN/GROUP/PREA/ONDEM/NFC/06]

This test covers the termination by the Calling User of an in-progress prearranged MCPTT Group Call (Sections 10.1.1.2.3.1 and 10.1.1.3.3.1 in [n.5]). It therefore comprises checking the correct termination of the Group Call by the classical BYE procedure in Section 6.2.4.1 in [n.5]. Note that in every BYE the MCPTT Session Identity to leave shall be set as Request-URI.

Interoperability Test Description

Table 25: CONN/ONN/GROUP/PREA/ONDEM/NFC/06

Interoperability Test Description			
Identifier	CONN/ONN/GROUP/PREA/ONDEM/NFC/06		
Test Objective	Verify IP connectivity, SIP core/IMS configuration and proper routing, SIP signaling needed to terminate an ongoing Chat Group Cal.		
Configuration(s)	<ul style="list-style-type: none"> - CFG_ONN_OTT-1 (5.2) - CFG_ONN_UNI-MC-LTE-1 (5.3) - CFG_ONN_MULTI-MC-LTE-1 (5.4) 		
References	<ul style="list-style-type: none"> - SIP (see [n.4] and other references in [n.5]) - MCPT (see [n.6] and other references in [n.5]) - RTP (see [n.4] and other references in [n.5]) 		
Applicability	<ul style="list-style-type: none"> - MCPTT-Client_ONN-MCPTT-CALL, MCPTT-Client_AMR-WB, MCPTT-Client_AFFIL, MCPTT-Client_MCPTT-FC (6.2) - MCPTT-Part_ONN-MCPTT-CALL, MCPTT-Part_AFFIL (see NOTE), MCPTT-Part_MCPTT-FC, MCPTT-Part_RX (CFG_ONN_UNI-MC-LTE-1 only), MCPTT-Part_GCSE (CFG_ONN_MULTI-MC-LTE-1 only), (6.5) - MCPTT-Ctrl_ONN-MCPTT-CALL, MCPTT-Ctrl_AFFIL (see NOTE) (6.6) 		
Pre-test conditions	<ul style="list-style-type: none"> - IP connectivity among all elements of the specific scenario - Proper configuration of the SIP core/IMS to forward the signaling to the specific controlling and participating servers - UEs properly registered to the SIP core/IMS and MCPTT system - Calling user is affiliated to the called group - Ongoing Group Call 		
Test Sequence	Step	Type	Description
	1	stimulus	User 1 (mcptt_id_clientA@example.com) initiates an emergency Group Call to mcptt-group-A
	2	check	The initial Group Call is properly established
	3	stimulus	Calling user triggers the termination of the call by sending a BYE message
	4	verify	Group call properly terminated

7.2.7 MCPTT User initiates a prearranged MCPTT Group Call using pre-established session [CONN/ONN/GROUP/PREA/PRE/NFC/01]

This test is equivalent to the on-demand case (see Section 7.2.1) but using pre-established sessions.

Therefore, after a successful pre-establishment procedure by all users, the originating client initiates a prearranged Group Call by generating a REFER request as specified in [n.18] and updated by [n.22] and [n.23].

For simplicity purposes we consider that all the clients involved in the Group Call have already carried out the pre-establishment procedure. Hybrid situations could be also considered (i.e. mixing pre-established and on-demand terminating clients of the group) but the diagram illustrates the pre-established case only. For the pre-established sessions each participating function will use floor control based signaling (MCPC) to notify the new session to originating and terminating Clients.

Interoperability Test Description			
Identifier	CONN/ONN/GROUP/PREA/PRE/NFC/01		
Test Objective	Verify IP connectivity, SIP core/IMS configuration and proper routing, SIP signaling for a prearranged Group Call using pre-established session		
Configuration(s)	<ul style="list-style-type: none"> - CFG_ONN_OTT-1 (5.2) - CFG_ONN_UNI-MC-LTE-1 (5.3) - CFG_ONN_MULTI-MC-LTE-1 (5.4) 		
References	<ul style="list-style-type: none"> - SIP (see [n.4] and other references in [n.5]) - MCPT (see [n.6] and other references in [n.5]) - RTP (see [n.4] and other references in [n.5]) 		
Applicability	<ul style="list-style-type: none"> - MCPTT-Client_ONN-MCPTT-CALL, MCPTT-Client_AMR-WB, MCPTT-Client_AFFIL, MCPTT-Client_MCPTT-FC (6.2) - MCPTT-Part_ONN-MCPTT-CALL, MCPTT-Part_AFFIL (see NOTE), MCPTT-Part_MCPTT-FC, MCPTT-Part_RX (CFG_ONN_UNI-MC-LTE-1 only), MCPTT-Part_GCSE (CFG_ONN_MULTI-MC-LTE-1 only), (6.5) - MCPTT-Ctrl_ONN-MCPTT-CALL, MCPTT-Ctrl_AFFIL (see NOTE) (6.6) 		
Pre-test conditions	<ul style="list-style-type: none"> - IP connectivity among all elements of the specific scenario - Proper configuration of the SIP core/IMS to forward the signaling to the specific controlling and participating servers - UEs properly registered to the SIP core/IMS - Calling user is affiliated to the called group - Pre-established sessions and prearranged Group Call already established 		
Test Sequence	Step	Type	Description
	1	stimulus	Calling user terminates the ongoing call by sending a REFER
	2	check	REFER received at the MCPTT participating server of <code>mcptt_id_clientA@example.com</code> after traversing SIP core/IMS
	3	check	BYE received at the MCPTT controlling server
	4	check	"n" INVITEs received at the respective MCPTT participating servers
	5	check	"n" MCPC procedures to signal the new call to every <code>mcptt_id_clientX</code>
	6	verify	Group call established

7.2.8 MCPTT User initiates the termination of a prearranged MCPTT Group Call using pre-established session [CONN/ONN/GROUP/PREA/PRE/NFC/02]

This test is equivalent to the on-demand case (see Section 7.2.6) but using pre-established sessions.

Therefore, the Calling User of an on-going Group Call using a pre-established session sends an out-of-dialog REFER as described in Section 6.2.4.2 in [n.5] including the "method" SIP URI parameter with the value "BYE" in the URI in the Refer-To header field.

After that initial REFER the Group Call terminating procedure follows the same mechanisms as in Section 7.2.6 till the terminating participating server. As defined in Section 6.3.2.2.8.2 in [n.5] the participating MCPTT function shall then interact with the media plane resources towards the MCPTT client as specified in [n.6] and maintain the pre-established session towards the MCPTT client.

Test Sequence	Step	Type	Description
	1	stimulus	Users initiates the termination of the ongoing pre-arranged Group Call
	2	check	Out-of-dialog REFER received at the MCPTT participating server of mcptt_id_clientA@example.com after traversing SIP core/IMS
	3	check	BYE received at the MCPTT controlling server
	4	check	"n" BYEs with the proper Session Identities sent to all the respective MCPTT participating servers
	5	check	"n" MCPC Disconnect sent to all the users
	6	verify	Group call terminated

7.2.9 MCPTT User initiates an on-demand Chat Group Call [CONN/GROUP/CHAT/ONDEM-/NFC/01]

This test comprises an on-demand chat Group Call. As in Section 7.2.1 pure SIP signaling will be evaluated (then, no floor control -NFC- mechanisms will be specifically considered apart from the simplest case for verifying e2e communications).

Similarly, in this test case and following diagrams we do not consider the triggering and possible effects of (un)successful implicit affiliation in the MCPTT participating server for the case when the calling is not affiliated to the group identified in the “SIP INVITE request for originating participating MCPTT function”.

Furthermore, for simplicity purposes no emergency/imminent peril condition will be signaled either by the initial INVITE or the subsequent ones (one per user joining). Therefore most of the associated clauses indicated in the Sections 10.1.2.2.1.1, 10.1.2.3.1.1, 10.1.2.3.1.3 and 10.1.2.4.1.1 in [n.5] will not take effect. The status of the ongoing chat Group Call will therefore be always no-emergency/imminent peril status will be considered. As a result, the MCPTT controlling will NOT send INVITE requests to the affiliated but not joined members of the chat MCPTT group neither re-INVITE to the affiliated and joined ones.

The effect of (un)successful implicit affiliation, limitation on maximum number of users or ongoing sessions will not be considered.

Interoperability Test Description

Table 28: CONN/GROUP/CHAT/ONDEM/NFC/01

Interoperability Test Description			
Identifier	CONN/GROUP/CHAT/ONDEM/NFC/01		
Test Objective	Verify IP connectivity, SIP core/IMS configuration and proper routing, SIP signaling of an on-demand Chat Group Call		
Configuration(s)	<ul style="list-style-type: none"> - CFG_ONN_OTT-1 (5.2) - CFG_ONN_UNI-MC-LTE-1 (5.3) - CFG_ONN_MULTI-MC-LTE-1 (5.4) 		
References	<ul style="list-style-type: none"> - SIP (see [n.4] and other references in [n.5]) - MCPTT (see [n.6] and other references in [n.5]) - RTP (see [n.4] and other references in [n.5]) 		
Applicability	<ul style="list-style-type: none"> - MCPTT-Client_ONN-MCPTT-CALL, MCPTT-Client_AMR-WB, MCPTT-Client_AFFIL, MCPTT-Client_MCPTT-FC (6.2) - MCPTT-Part_ONN-MCPTT-CALL, MCPTT-Part_AFFIL (see NOTE), MCPTT-Part_MCPTT-FC, MCPTT-Part_RX (CFG_ONN_UNI-MC-LTE-1 only), MCPTT-Part_GCSE (CFG_ONN_MULTI-MC-LTE-1 only), (6.5) - MCPTT-Ctrl_ONN-MCPTT-CALL, MCPTT-Ctrl_AFFIL (see NOTE) (6.6) 		
Pre-test conditions	<ul style="list-style-type: none"> - IP connectivity among all elements of the specific scenario - Proper configuration of the SIP core/IMS to forward the signaling to the specific controlling and participating servers - UEs properly registered to the SIP core/IMS and MCPTT system and users properly affiliated to the called chat group 		
Test Sequence	Step	Type	Description
	1	stimulus	User 1 (mcptt_id_clientA@example.com) calls mcptt-chat-group-A
	2	check	Dialog creating INVITE received at the MCPTT participating server of mcptt_id_clientA@example.com after traversing SIP core/IMS
	3	check	INVITE received at the MCPTT controlling server
	4	check	The MCPTT controlling server loads the affiliated members of the mcptt-chat-group-A (either pre-configured or retrieved from the GMS), creates the session and returns a 200 OK to the callee. Upon no specific emergency/imminent peril indicator no (re)INVITE will sent to the other joined/not-joined affiliated members
	5	check	Users 2 and 3 repeat the same procedure
	6	verify	Call connected and multiple media flows exchanged

7.2.10 MCPTT User upgrades an ongoing on-demand Chat Group Call to emergency call [CONN/GROUP/CHAT/ONDEM/NFC/02]

This test covers the upgrade to emergency chat Group Call during an in-progress chat Group Call as defined in CONN/ONN/GROUP/CHAT/ONDEM/NFC/01 (Section 7.2.9).

There, the initial steps are totally equivalent but, upon a new risk or incident the MCPTT User triggers the emergency upgrade mechanism according to Sections 10.1.2.2.1.4, 10.1.2.2.1.2, 10.1.2.3.1.2, 10.1.2.3.1.4 and 10.1.2.4.1.2 in [n.5].

A re-INVITE is triggered with the <emergency-ind> element (see 7.2.2 for more info) but with the proper <session-type> chat element.

The re-INVITE will be sent from the controlling function to all affiliated and joined members. Additionally in case there are affiliated but not joined members of the group, the controlling function will send a new INVITE to them so that they are requested to join the group.

Test Objective	Verify IP connectivity, SIP core/IMS configuration and proper routing, SIP signaling of the upgrade of an on-demand chat Group Call to emergency Call		
Configuration(s)	<ul style="list-style-type: none"> - CFG_ONN_OTT-1 (5.2) - CFG_ONN_UNI-MC-LTE-1 (5.3) - CFG_ONN_MULTI-MC-LTE-1 (5.4) 		
References	<ul style="list-style-type: none"> - SIP (see [n.4] and other references in [n.5]) - MCPT (see [n.6] and other references in [n.5]) - RTP (see [n.4] and other references in [n.5]) 		
Applicability	<ul style="list-style-type: none"> - MCPTT-Client_ONN-MCPTT-CALL, MCPTT-Client_AMR-WB, MCPTT-Client_AFFIL, MCPTT-Client_MCPTT-FC (6.2) - MCPTT-Part_ONN-MCPTT-CALL, MCPTT-Part_AFFIL (see NOTE), MCPTT-Part_MCPTT-FC, MCPTT-Part_RX (CFG_ONN_UNI-MC-LTE-1 only), MCPTT-Part_GCSE (CFG_ONN_MULTI-MC-LTE-1 only), (6.5) - MCPTT-Ctrl_ONN-MCPTT-CALL, MCPTT-Ctrl_AFFIL (see NOTE) (6.6) 		
Pre-test conditions	<ul style="list-style-type: none"> - IP connectivity among all elements of the specific scenario - Proper configuration of the SIP core/IMS to forward the signaling to the specific controlling and participating servers - UEs properly registered to the SIP core/IMS and MCPTT system and users properly affiliated to the called chat group - Ongoing on-demand chat Group Call where Clients A, B and C have joined (as in 7.2.9) while D has not 		
Test Sequence	Step	Type	Description
	1	stimulus	User 1 (mcptt_id_clientA@example.com) sends a re-INVITE to notify a emergency condition
	2	check	re-INVITE received at the MCPTT participating server of mcptt_id_clientA@example.com after traversing SIP core/IMS
	3	check	re-INVITE received at the MCPTT controlling server
	4	check	The MCPTT controlling server loads the affiliated members of the mcptt-chat-group-A (either pre-configured or retrieved from the GMS) and, upon emergency indicator, sends re-INVITE to joined users (B and C) and a new INVITE to D
	5	verify	Call still connected and emergency state set in all elements

7.2.11 MCPTT User upgrades an ongoing on-demand Chat Group Call to imminent-peril call [CONN/GROUP/CHAT/ONDEM/NFC/03]

This test covers the upgrade to imminent-peril chat Group Call during an in-progress chat Group Call as defined in CONN/ONN/GROUP/CHAT/ONDEM/NFC/01 (Section 7.2.9).

There, the initial steps are also equivalent to Section 7.2.10 but, upon a new risk or incident the MCPTT User triggers the imminent-peril upgrade mechanism according to Sections 10.1.2.2.1.4, 10.1.2.2.1.2, 10.1.2.3.1.2, 10.1.2.3.1.4 and 10.1.2.4.1.3 in [n.5].

A re-INVITE is triggered with the <imminentperil-ind> element (see 7.2.3 for more info) with the proper <session-type> chat element. The controlling function will update the group state according to the new condition. Later, the re-INVITE will be sent from the controlling function to all joined affiliated members.

Additionally, in case there are affiliated but not joined members of the group, the controlling function will send a new INVITE to them so that they are requested to join the group.

	5	verify	Call still connected and imminent-peril state set in all elements

7.2.12 MCPTT User cancels the emergency condition of an on-demand Chat Group Call [CONN/GROUP/CHAT/ONDEM/NFC/04]

This test covers the cancellation by an User of the in-progress emergency condition of a Chat Group Call.

Upon receiving such a request the MCPTT client shall set the group state to the proper states (MEG 1: no-emergency and MEGC 1: emergency-gc-capable) and generate a SIP re-INVITE request with the new indicators in the mcptt-info XML body according to Section 10.1.2.2.1.3 in [n.5].

The controlling function will forward the re-INVITE to all the affiliated and joined members of the group and send a MESSAGE to any possible affiliated but not joined members.

Configuration(s)	<ul style="list-style-type: none"> - CFG_ONN_OTT-1 (5.2) - CFG_ONN_UNI-MC-LTE-1 (5.3) - CFG_ONN_MULTI-MC-LTE-1 (5.4) 		
References	<ul style="list-style-type: none"> - SIP (see [n.4] and other references in [n.5]) - MCPT (see [n.6] and other references in [n.5]) - RTP (see [n.4] and other references in [n.5]) 		
Applicability	<ul style="list-style-type: none"> - MCPTT-Client_ONN-MCPTT-CALL, MCPTT-Client_AMR-WB, MCPTT-Client_AFFIL, MCPTT-Client_MCPTT-FC (6.2) - MCPTT-Part_ONN-MCPTT-CALL, MCPTT-Part_AFFIL (see NOTE), MCPTT-Part_MCPTT-FC, MCPTT-Part_RX (CFG_ONN_UNI-MC-LTE-1 only), MCPTT-Part_GCSE (CFG_ONN_MULTI-MC-LTE-1 only), (6.5) - MCPTT-Ctrl_ONN-MCPTT-CALL, MCPTT-Ctrl_AFFIL (see NOTE) (6.6) 		
Pre-test conditions	<ul style="list-style-type: none"> - IP connectivity among all elements of the specific scenario - Proper configuration of the SIP core/IMS to forward the signaling to the specific controlling and participating servers - UEs properly registered to the SIP core/IMS and MCPTT system and users properly affiliated to the called chat group - Ongoing on-demand imminent-peril chat Group Call 		
Test Sequence	Step	Type	Description
	1	stimulus	User 1 (mcptt_id_clientA@example.com) sends a re-INVITE to notify the ongoing chat Group Call losing the emergency conditions
	2	check	re-INVITE received at the MCPTT participating server of mcptt_id_clientA@example.com after traversing SIP core/IMS
	3	check	re-INVITE received at the MCPTT controlling server
	4	check	The MCPTT controlling server loads the joined members of the mcptt-chat-group-A and sends re-INVITE to all of them
	5	check	The MCPTT controlling server sends a SIP MESSAGE to affiliated but not joined members
	6	verify	Call still connected and imminent-peril state “removed” in all elements

7.2.14 MCPTT User initiates a Chat group Call using pre-established session [CONN/GROUP-CHAT/PRE/NFC/01]

This test case comprises the establishment of a “regular” Chat Group Call (i.e. neither emergency nor imminent-peril Chat Group Call) using pre-established session. The procedures are analog to those in Section 7.2.7 but using specific Chat Group Call elements in the signaling as explained in Sections 10.1.2.2.2, 10.1.2.2.1.6, 10.1.2.3.2.1, 10.1.2.3.2.2 and 10.1.2.4.1.1 in [n.5].

Therefore, after a successful establishment of all the sessions of the members the originating MCPTT User will send a SIP REFER with the Request URI that of the session identity of the pre-established session. In the application/resource-lists MIME body a single <entry> element containing a "uri" attribute set to the chat group identity, extended with an hname "body" URI header field populated with the data to be transferred to the Chat Group INVITE to be sent to the Controlling (i.e. an application/sdp MIME body containing an SDP offer if the session parameters of the pre-established session require modification or if implicit floor control is required and an application/vnd.3gpp.mcptt-info MIME body with the <session-type> element set to a value of "chat"; and the <mcptt-client-id> element set to the MCPTT client ID of the originating MCPTT client).

Later, the participating function will create the INVITE to be forwarded to the controlling that will handle it following the same procedures as in Section 7.2.9.

If other affiliated members of the group want to use their pre-established sessions to join the Chat Group Call they will repeat the procedure.

Interoperability Test Description			
Identifier	CONN/GROUP/CHAT/PRE/NFC/01		
Test Objective	Verify IP connectivity, SIP core/IMS configuration and proper routing, SIP signaling of a Chat Group Call using pre-established sessions		
Configuration(s)	<ul style="list-style-type: none"> - CFG_ONN_OTT-1 (5.2) - CFG_ONN_UNI-MC-LTE-1 (5.3) - CFG_ONN_MULTI-MC-LTE-1 (5.4) 		
References	<ul style="list-style-type: none"> - SIP (see [n.4] and other references in [n.5]) - MCPT (see [n.6] and other references in [n.5]) - RTP (see [n.4] and other references in [n.5]) 		
Applicability	<ul style="list-style-type: none"> - MCPTT-Client_ONN-MCPTT-CALL, MCPTT-Client_AMR-WB, MCPTT-Client_AFFIL, MCPTT-Client_MCPTT-FC (6.2) - MCPTT-Part_ONN-MCPTT-CALL, MCPTT-Part_AFFIL (see NOTE), MCPTT-Part_MCPTT-FC, MCPTT-Part_RX (CFG_ONN_UNI-MC-LTE-1 only), MCPTT-Part_GCSE (CFG_ONN_MULTI-MC-LTE-1 only), (6.5) - MCPTT-Ctrl_ONN-MCPTT-CALL, MCPTT-Ctrl_AFFIL (see NOTE) (6.6) 		
Pre-test conditions	<ul style="list-style-type: none"> - IP connectivity among all elements of the specific scenario - Proper configuration of the SIP core/IMS to forward the signaling to the specific controlling and participating servers - UEs properly registered to the SIP core/IMS and MCPTT system and users properly affiliated to the called chat group 		
Test Sequence	Step	Type	Description
	1	stimulus	User 1 (mcptt_id_clientA@example.com) pre-establishes a session
	2	check	Pre-established session is established
	3	check	The rest of affiliated Users successfully complete the pre-establishment of their sessions
	4	stimulus	User 1 (mcptt_id_clientA@example.com) calls mcptt-chat-group-A using his/her pre-established session
	5	check	The REFER arrives at the participating which forwards the associated reINVITE to the controlling function. The latter activates the Chat Group Call
	6	check	Users 2 and 3 repeat the same procedure
	7	verify	Call connected and multiple media flows exchanged

7.2.15 MCPTT User initiates an on-demand private MCPTT call in automatic commencement model with floor control [CONN/PRIV/AUTO/ONDEM/WFC/NFC/01]

This test shall verify a pure private automatic on-demand call with floor control and MCPTT users in the same MCPTT system as defined in section 10.7.2.2.1 in [n.2]. Specific procedures for private calls with floor control are defined in section 11.1.1 in [n.5].

NOTE that WFC stands for “with floor control” and NFC “no floor control”. We are referring to floor control (half-duplex) calls but to the fact that SIP connectivity only will be tested. Additionally, unless explicitly indicated, the audio flow related arrows simply depicts the later half/full duplex conversation, therefore FC mechanisms will be omitted.

The automatic commencement model indicates the terminating Client will take the call without interacting with the User (see [n.21] for the message format in the originating User -specially Answer-Mode header- and procedures in the terminating User in Section 6.2.3.1.1 in [n.5]).

Interoperability Test Description

Table 34: CONN/PRIV/AUTO/ONDEM/WFC/NFC/01

Interoperability Test Description			
Identifier	CONN/PRIV/AUTO/ONDEM/WFC/NFC/01		
Test Objective	Verify IP connectivity, SIP core/IMS configuration and proper routing, SIP signaling of a private call with automatic commencement mode		
Configuration(s)	<ul style="list-style-type: none"> - CFG_ONN_OTT-1 (5.2) - CFG_ONN_UNI-MC-LTE-1 (5.3) - CFG_ONN_MULTI-MC-LTE-1 (5.4) 		
References	<ul style="list-style-type: none"> - SIP (see [n.4] and other references in [n.5]) - MCPTT (see [n.6] and other references in [n.5]) - RTP (see [n.4] and other references in [n.5]) 		
Applicability	<ul style="list-style-type: none"> - MCPTT-Client_ONN-MCPTT-CALL, MCPTT-Client_AMR-WB, MCPTT-Client_AFFIL, MCPTT-Client_MCPTT-FC (6.2) - MCPTT-Part_ONN-MCPTT-CALL, MCPTT-Part_AFFIL (see NOTE), MCPTT-Part_MCPTT-FC, MCPTT-Part_RX (CFG_ONN_UNI-MC-LTE-1 only), (6.5) - MCPTT-Ctrl_ONN-MCPTT-CALL, MCPTT-Ctrl_AFFIL (see NOTE) (6.6) 		
Pre-test conditions	<ul style="list-style-type: none"> - IP connectivity among all elements of the specific scenario - Proper configuration of the SIP core/IMS to forward the signaling to the specific controlling and participating servers - UEs properly registered to the SIP core/IMS and MCPTT system 		
Test Sequence	Step	Type	Description
	1	stimulus	User 1 (mcptt_id_clientA@example.com) calls User 2 (mcptt_id_clientB@example.com)
	2	check	Dialog creating INVITE received at the MCPTT participating server of User1
	3	check	The participating server adapts the mcptt-info accordingly and creates an INVITE to the controlling server
	4	check	The controlling server check permissions and forward the INVITE to the participating server of the callee
	5	check	Upon arrival of the INVITE adapted by the terminating participating function at User 2 the call is automatically taken
	6	verify	Call connected and media flows exchanged

7.2.16 MCPTT User initiates an on-demand private MCPTT call in manual commencement model with floor control [CONN/PRIV/MANUAL/ONDEM/WFC/NFC/01]

This test covers the Manual commencement mode of the private call. Therefore the INVITE should include an Answer-Mode header field with the value “Manual” according to the rules and procedures of [n.21] while in test CONN/ONN_OTT/PRIV/AUTO/ONDEM/WFC/NFC/01 covered in Section 7.2.15 the value of the header should be “Auto”. The resulting procedure is quite equivalent but 180 Ringing packet is now generated and forwarded to the inviting MCPTT user.

Message Sequence Diagram

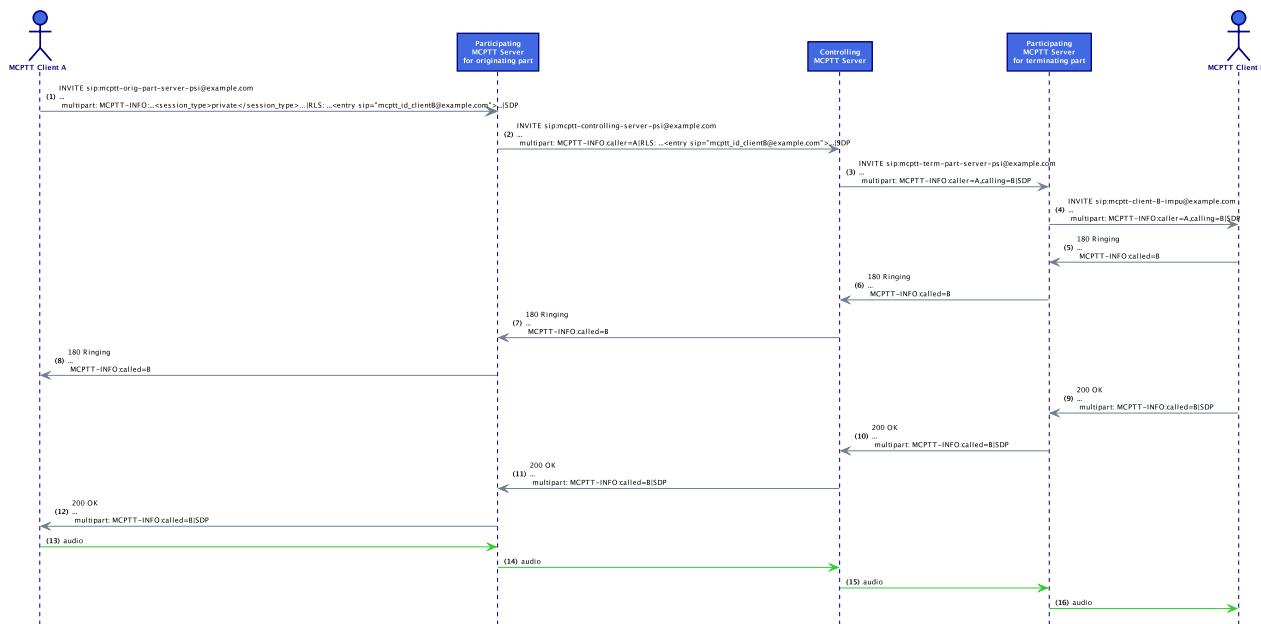

Figure 25: CONN/PRIV/MANUAL/ONDEM/WFC/NFC/01 Message Sequence

Message Details

The initial **INVITE** would be equivalent to that in Section 8.2.1 but with the header: **Answer-Mode: Manual**

Interoperability Test Description

Configuration(s)	<ul style="list-style-type: none"> - CFG_ONN_OTT-1 (5.2) - CFG_ONN_UNI-MC-LTE-1 (5.3) - CFG_ONN_MULTI-MC-LTE-1 (5.4) 		
References	<ul style="list-style-type: none"> - SIP (see [n.4] and other references in [n.5]) - MCPTT (see [n.6] and other references in [n.5]) - RTP (see [n.4] and other references in [n.5]) 		
Applicability	<ul style="list-style-type: none"> - MCPTT-Client_ONN-MCPTT-CALL, MCPTT-Client_AMR-WB, MCPTT-Client_AFFIL, MCPTT-Client_MCPTT-FC (6.2) - MCPTT-Part_ONN-MCPTT-CALL, MCPTT-Part_AFFIL (see NOTE), MCPTT-Part_MCPTT-FC, MCPTT-Part_RX (CFG_ONN_UNI-MC-LTE-1 only), (6.5) - MCPTT-Ctrl_ONN-MCPTT-CALL, MCPTT-Ctrl_AFFIL (see NOTE) (6.6) 		
Pre-test conditions	<ul style="list-style-type: none"> - IP connectivity among all elements of the specific scenario - Proper configuration of the SIP core/IMS to forward the signaling to the specific controlling and participating servers - UEs properly registered to the SIP core/IMS and MCPTT system 		
Test Sequence	Step	Type	Description
	1	stimulus	User 1 (mcptt_id_clientA@example.com) calls User 2 (mcptt_id_clientB@example.com)
	2	check	Dialog creating INVITE received at the MCPTT participating server of User1
	3	check	The participating server adapts the mcptt-info accordingly and creates an INVITE to the controlling server
	4	check	The controlling server check permissions and forward the INVITE to the participating server of the callee
	5	check	Upon arrival of the INVITE adapted by the terminating participating function to the terminating Client User 2 is notified
	6	check	User 2 accepts the private call and all the signaling is completed
	7	verify	Call connected and media flows exchanged

7.2.17 MCPTT User initiates a pre-established private MCPTT call in automatic commencement model with floor control [CONN/PRIV/AUTO/PRE/WFC/NFC/01]

This test shall verify a pure private automatic pre-established call with floor control and MCPTT users in the same MCPTT system as defined in section 10.7.2 in [n.2]. Most procedures are described in Section 8 (for pre-establishment) 11.1.1.2.2 (for private call) in [n.5] and Section 9 in [n.6] (for Floor Controlling mechanisms).

According to Section 10.5 in [n.2] a MCPTT client establishes one or more pre-established sessions to an MCPTT server after SIP registration, and prior to initiating any of the above procedures to other MCPTT users. When establishing a pre-established session, the MCPTT client negotiates the media parameters to reduce call setup delay by avoiding the need to negotiate media parameters and reserving bearer resources during the MCPTT call. In fact after the pre-established session is established, the media bearer carrying the floor control messages is always active. Additionally, the MCPTT client is able to activate the media bearer carrying the voice whenever needed:

- Immediately after the pre-established session procedure; or
- Using SIP signaling when an MCPTT call is initiated.

Considering that both the originating and terminating user may/may not have a pre-established session, the procedure will vary according to those combinations.

For an incoming MCPTT call setup for a private call using a pre-established session, an MCPTT UE is notified of the start of the MCPTT call control using SIP procedures in manual commencement mode and using floor control procedures in automatic commencement mode. Therefore sequence diagrams in Section 7.2.17 and 7.2.18 will differ in the notification to the callee.

On-Network pre-established sessions in both cases demand:

- MCPTT client: procedures specified in subclause 8.2.1, subclause 8.3.1, subclause 8.4.1 in [n.5], and the procedures specified in [n.6].
- MCPTT server: procedures specified in subclause 8.2.2, subclause 8.3.2, subclause 8.4.2 in [n.5], and the procedures specified in [n.6]

Interoperability Test Description			
Identifier	CONN/PRIV/AUTO/PRE/WFC/NFC/01		
Test Objective	Verify IP connectivity, SIP core/IMS configuration and proper routing, SIP signaling of a private call with automatic commencement mode using pre-established sessions		
Configuration(s)	<ul style="list-style-type: none"> - CFG_ONN_OTT-1 (5.2) - CFG_ONN_UNI-MC-LTE-1 (5.3) - CFG_ONN_MULTI-MC-LTE-1 (5.4) 		
References	<ul style="list-style-type: none"> - SIP (see [n.4] and other references in [n.5]) - MCPT (see [n.6] and other references in [n.5]) - RTP (see [n.4] and other references in [n.5]) 		
Applicability	<ul style="list-style-type: none"> - MCPTT-Client_ONN-MCPTT-CALL, MCPTT-Client_AMR-WB, MCPTT-Client_AFFIL, MCPTT-Client_MCPTT-FC (6.2) - MCPTT-Part_ONN-MCPTT-CALL, MCPTT-Part_AFFIL (see NOTE), MCPTT-Part_MCPTT-FC, MCPTT-Part_RX (CFG_ONN_UNI-MC-LTE-1 only), (6.5) - MCPTT-Ctrl_ONN-MCPTT-CALL, MCPTT-Ctrl_AFFIL (see NOTE) (6.6) 		
Pre-test conditions	<ul style="list-style-type: none"> - IP connectivity among all elements of the specific scenario - Proper configuration of the SIP core/IMS to forward the signaling to the specific controlling and participating servers - UEs properly registered to the SIP core/IMS and MCPTT system 		
Test Sequence	Step	Type	Description
	1	stimulus	The MCPTT clients of User 1 (mcptt_id_clientA@example.com) and User 2 (mcptt_id_clientB@example.com) pre-establish their respective session to the proper participating Sessions pre-established
	2	check	User 1 calls User 2 using pre-established session
	3	stimulus	REFER is created and sent to the participating server of User 1
	4	check	The participating server creates the proper INVITE with the data embedded in the REFER and forwards it to the controlling
	5	check	The controlling server forwards the INVITE to the participating server of the callee and sends a 200 back to the participating of the caller
	6	check	The participating of the caller notifies him/her using MCPC (Floor Control) Connect message
	7	check	Similarly Client User 2 is notified with MCPC Connect and Call automatically accepted
	8	check	Call connected and media flows exchanged
	9	verify	

7.2.18 MCPTT User initiates a pre-established private MCPTT call in manual commencement model with floor control [CONN/ONN/PRI/PRIVATE/MANUAL/ONDEM/WFC/NFC/01]

As specified in Section 6.3.2.2.6.3 of [n.5] the procedure is equivalent to the Automatic mode but includes a new SIP signaling procedure in the terminating part and upon receiving a SIP 200 (OK) response to the SIP re-INVITE request, the participating MCPTT function sends a MCPC Connect message, in order to give MCPTT session identity to the terminating MCPTT client. The MCPTT client B accepts the invitation and sends an MCPC Acknowledge message as described in [n.6] annex A.

Message Sequence Diagram

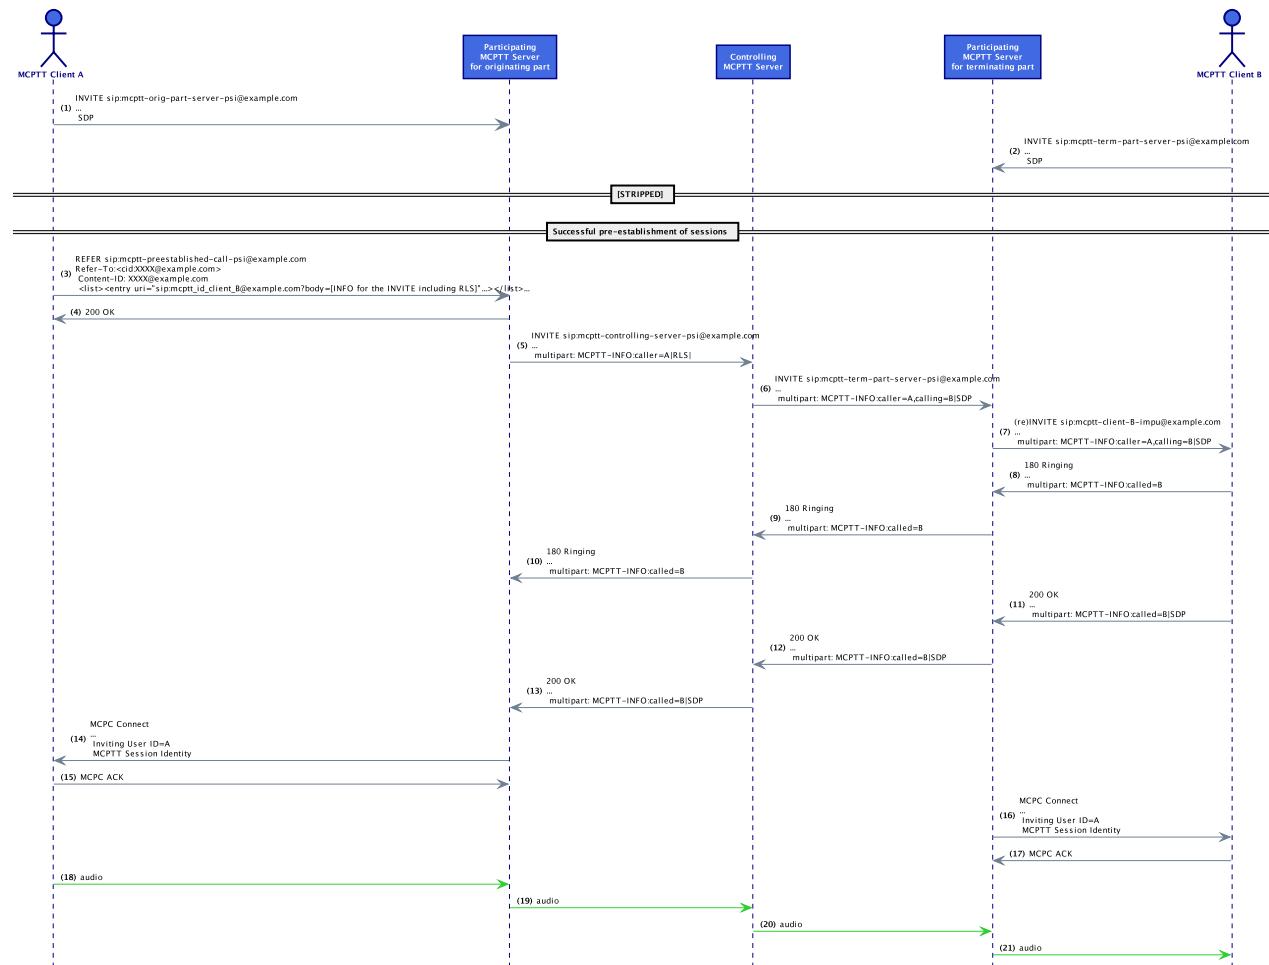

Figure 27: CONN/ONN/PRI/PRIVATE/MANUAL/ONDEM/WFC/NFC/01 Message Sequence

Message Details

Equivalent to that in **Auto** Mode (Section 8.2.3) but with the header **Answer-Mode=Manual** in the body header of the URI attribute of the **<entry>** element in the application/resource-lists MIME body of the **REFER** message.

Interoperability Test Description

	4	check	The participating server creates the proper INVITE with the data embedded in the REFER and forwards it to the controlling
	5	check	The controlling server forwards the INVITE to the participating server of the callee and sends a 200 ok back to the participating of the caller
	6	check	The participating of the caller notifies him/her by sending a (re)INVITE with the SDP of the callee
	7	check	User 2 answers the call and MCPC Connect messages are triggered by both participating servers
	8	check	Call connected and media flows exchanged
	9	verify	

7.2.19 MCPTT User initiates an on-demand private MCPTT call in automatic commencement model without floor control [CONN/PRIV/AUTO/ONDEM/WOFC/01]

This test shall verify a pure private automatic on-demand call without floor control and MCPTT users in the same MCPTT system as defined in section 10.7.2.2.1 in [n.2]. Specific procedures for private calls without floor control are defined in section 11.1.2 in [n.5].

More specifically, when the MCPTT user wants to make an on-demand private call without floor control, the MCPTT client shall follow the procedures in subclause 11.1.1.2.1.1 (those shown in Section 7.2.15) but not including any Implicit floor control mechanism and removing the media-level section for the media floor control entity.

	6	check	The participating of the caller notifies him/her by sending a (re)INVITE with the SDP of the callee
	7	check	User 2 answers the call and MCPC Connect messages are triggered by both participating servers
	8	check	Call connected and simultaneous bidirectional media flows exchanged
	9	verify	

7.3 Floor Controlling (FC)

7.3.1 Basic FC functionality [FC/BASIC/01]

This test shall verify the basic Floor Controlling functionality as defined by [n.6]. In order to do so, after a successful establishment of a prearranged on-demand Group Call different users will request the Token and Floor Control server capabilities on the controlling server will be tested. For the test we assume no Implicit Floor Control request has been included or that the token has been released previously, so that “Floor idle” state is considered as pre-condition.

Note that since MCPTT Floor Control protocol uses binary RTCP-based signalling, in the sequence diagram and message details the decoded meaning of (some of) the selected values for different meaning fields are displayed.

Message Sequence Diagram

Interoperability Test Description

Table 42: FC/BASIC/01

Interoperability Test Description			
Identifier	FC/BASIC/01		
Test Objective	Verify IP connectivity, SIP core/IMS configuration and proper routing, SIP signaling and MCPTT Floor Controlling capabilities in Clients and controlling		
Configuration(s)	<ul style="list-style-type: none"> - CFG_ONN_OTT-1 (5.2) - CFG_ONN_UNI-MC-LTE-1 (5.3) - CFG_ONN_MULTI-MC-LTE-1 (5.4) 		
References	<ul style="list-style-type: none"> - SIP (see [n.4] and other references in [n.5]) - MCPT (see [n.6] and other references in [n.5]) - RTP (see [n.4] and other references in [n.5]) 		
Applicability	<ul style="list-style-type: none"> - MCPTT-Client_ONN-MCPTT-CALL, MCPTT-Client_AMR-WB, MCPTT-Client_AFFIL, MCPTT-Client_MCPTT-FC (6.2) - MCPTT-Part_ONN-MCPTT-CALL, MCPTT-Part_AFFIL (see NOTE), MCPTT-Part_MCPTT-FC, MCPTT-Part_RX (CFG_ONN_UNI-MC-LTE-1 only), MCPTT-Part_GCSE (CFG_ONN_MULTI-MC-LTE-1 only), (6.5) - MCPTT-Ctrl_ONN-MCPTT-CALL, MCPTT-Ctrl_AFFIL (see NOTE) (6.6) 		
Pre-test conditions	<ul style="list-style-type: none"> - IP connectivity among all elements of the specific scenario - Proper configuration of the SIP core/IMS to forward the signaling to the specific controlling and participating servers - UEs properly registered to the SIP core/IMS - UEs properly registered to the SIP core/IMS and MCPTT system - On-demand pre-arranged Group Call properly established and in Floor-Idle state 		
Test Sequence	Step	Type	Description
	1	stimulus	User 1 (mcptt_id_clientA@example.com) pushes the PTT button
	2	check	RTCP App based MCPT Floor Request is sent to the participating
	3	check	Floor Request sent to the controlling
	4	check	Floor Granted (30s) sent back to User 1 and Floor Taken sent to Users 2 and 3
	5	verify	Uni-directional flow from User 1 to Users 2 and 3
	6	stimulus	User 1 releases the PTT button
	7	check	RTCP App based MCPT Floor Release is sent to the participating
	8	check	Floor Release sent to the controlling
	9	check	Floor Idle sent back to Users 1, 2 and 3
	10	verify	Floor available for further request

7.3.2 Basic FC functionality. Effect of Priorities. [FC/BASIC/02]

This test case extends the previous basic one in Section 7.3.1 by showing the preemptiveness capabilities in the Floor Control when a user with higher priority requests the Token already granted to another lower-priority one. In fact as defined in Section 4.1.1.2 in [n.6] whenever a new request with higher priority than the ongoing talk burst arrives, the floor control server revokes the current talk burst by sending a Floor Revoke message to the current talker. The current talker is interrupted and the current media burst is ended by the current floor participant by sending a Floor Release message. Then the floor control server sends a Floor Granted message to the revoking user and send Floor Taken message to other group members.

Therefore, A.3.5 example in [n.6] will be followed. Note that, although the whole Annex A is informative (not normative), it is referenced here in order to better illustrate the test case. Similarly A.3.3-4 show other examples of “advanced” floor controlling mechanisms. However, these are considered FFS in following plugtests. Note that the max floor priority that can be requested in a Floor Request message is negotiated between the MCPTT client and the controlling MCPTT function using the “mc_priority” fmp parameter. In the following sequence diagrams and messages we assume values 5 and 10 are compatible with the negotiated maximum value.

Message Sequence Diagram

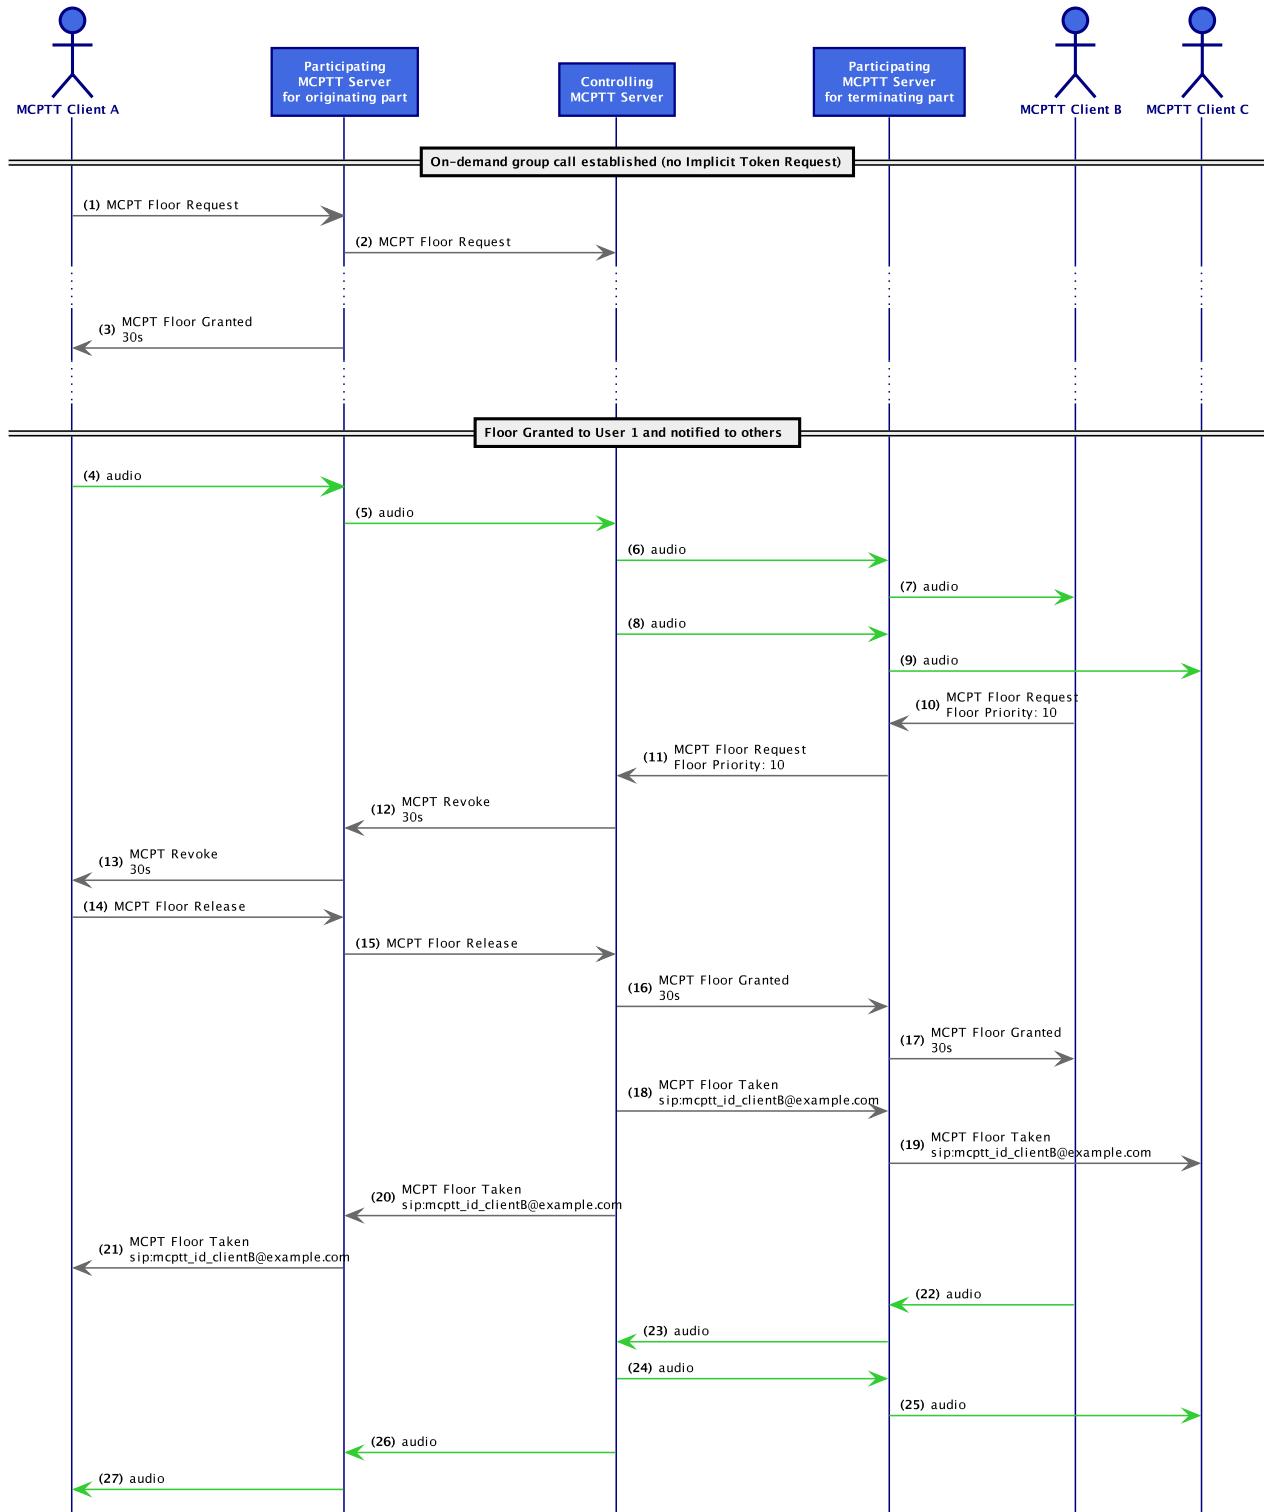

Figure 30: FC/BASIC/02 Message Sequence

Message Details

[10] MCPTT Floor Request Caller/UE --> MCPTT Participating

Real-time Transport Control Protocol (Application specific)

Interoperability Test Description

Table 44: REGAUTH/IDMSAUTH/01

Interoperability Test Description			
Identifier	REGAUTH/IDMSAUTH/01		
Test Objective	Verify IP connectivity, proper access from the MCPTT Client to the IdMS and successful authentication mechanism		
Configuration(s)	<ul style="list-style-type: none"> - CFG_ONN_OTT-1 (5.2) - CFG_ONN_UNI-MC-LTE-1 (5.3) - CFG_ONN_MULTI-MC-LTE-1 (5.4) 		
References	<ul style="list-style-type: none"> - OpenID Connect Core 1.0 (see [n.8])) 		
Applicability	<ul style="list-style-type: none"> - MCPTT-Client_IDMS 		
Pre-test conditions	<ul style="list-style-type: none"> - IP connectivity among all elements of the specific scenario, access to the IdMS via the proper APN and tunneling mechanism -if any- 		
Test Sequence	Step	Type	Description
	1	stimulus	User 1 either using CMS URL or hardcoded ones access the IdMS
	2	check	Initial Authentication Request
	3	check	User properly authenticate using web based user & password
	4	check	User requests requests all the token associated to the relevant scopes
	5	verify	User 1 correctly authenticated and data and identity tokens correctly received

7.4.2 MCPTT User gets registered and authorized using third-party registration [REGAUTH-3PRTYREG/REGISTER/01]

Assuming an IMS Core, the MCPTT Client registers and the S-CSCF sends a third-party registration. In this test case and associated diagram and message details we assume the MCPTT User has previously authenticated with the IdMS and got the mcptt_id and needed Access Token, so that it would be included in the mcptt-info body in the original REGISTER (see Sections 7.2.1 and 7.3.2 in[n.5]). If this is not the case, the 3rd party register will not be used for Service Authorization and later PUBLISH including not only poc-settings but also needed credentials will be mandatory.

Identifier	REGAUTH/3PRTYREG/REGISTER/01		
Test Objective	Verify IP connectivity, SIP core/IMS configuration and proper routing and 3rd party registration to the MCPTT Participating		
Configuration(s)	<ul style="list-style-type: none"> - CFG_ONN_OTT-1 (5.2) - CFG_ONN_UNI-MC-LTE-1 (5.3) - CFG_ONN_MULTI-MC-LTE-1 (5.4) 		
References	<ul style="list-style-type: none"> - SIP (see [n.4] and other references in [n.5]) 		
Applicability	<ul style="list-style-type: none"> - MCPTT-Client_ONN-MCPTT-CALL - MCPTT-Part_ONN-MCPTT-CALL, MCPTT-Part_REGAUTH - IMS_3RDPARTYREGISTER 		
Pre-test conditions	<ul style="list-style-type: none"> - IP connectivity among all elements of the specific scenario - Proper configuration of the SIP core/IMS to forward the signaling to the specific controlling and participating servers - Client previously authenticated in the IdMS -or the Identity and Access Token have been received by other mean- 		
Test Sequence	Step	Type	Description
	1	stimulus	User 1 (mcptt_id_clientA@example.com) registers with its IMPU and MCPTT specific info mcptt-info REGISTER sent to the P-CSCF with mcptt-info body
	2	check	REGISTER sent to the S-CSCF
	3	check	S-CSCF creates a 3rd Party Register towards the participating and embeds the original REGISTER as body
	4	check	
	5	verify	User 1 correctly registered to the IMS Core and MCPTT participating. IMPU vs. mcptt_id binding and service authorization completed.

7.4.3 MCPTT User gets authorized using PUBLISH mechanism [REGAUTH/PUBLISH/REGISTER/01]

If the User was not authenticated with the IdMS prior to the IMS REGISTER, it will need to submit later the MCPTT User credentials for proper Service Authorization and binding between IMPU and mcptt_id. Following Section 7.3.3 in [n.5] the MCPTT server shall support obtaining service authorization specific information from a SIP PUBLISH request for both MCPTT server settings (using an Event header field set to the "poc-settings" and an application/poc-settings+xml MIME body) and Service Authorization by an additional application/vnd.3gpp.mcptt-info+xml MIME body containing an <mcptt-access-token> element and an <mcptt-client-id> element.

Interoperability Test Description

Table 46: REGAUTH/PUBLISH/REGISTER/01

Interoperability Test Description			
Identifier	REGAUTH/PUBLISH/REGISTER/01		
Test Objective	Verify IP connectivity, SIP core/IMS configuration and proper routing, 3rd party registration to the MCPTT Participating and SIP PUBLISH based service authorization mechanism		
Configuration(s)	<ul style="list-style-type: none"> - CFG_ONN_OTT-1 (5.2) - CFG_ONN_UNI-MC-LTE-1 (5.3) - CFG_ONN_MULTI-MC-LTE-1 (5.4) 		
References	<ul style="list-style-type: none"> - SIP (see [n.4] and other references in [n.5]) 		
Applicability	<ul style="list-style-type: none"> - MCPTT-Client_ONN-MCPTT-CALL - MCPTT-Part_ONN-MCPTT-CALL, MCPTT-Part_PUBAUTH - IMS_3RDPARTYREGISTER 		
Pre-test conditions	<ul style="list-style-type: none"> - IP connectivity among all elements of the specific scenario - Proper configuration of the SIP core/IMS to forward the signaling to the specific controlling and participating servers - Proper configuration of PCC related Functional elements (P-CSCF and PCRF) 		
Test Sequence	Step	Type	Description
	1	stimulus	User 1 (mcptt_id_clientA@example.com) registers with its IMPU
	2	check	REGISTER sent to the P-CSCF without mcptt-info body
	3	check	REGISTER sent to the S-CSCF
	4	check	S-CSCF creates a 3rd Party Register towards the participating and embeds the original REGISTER as body
	5	check	Upon successful user authentication to the IdMS the Client sends a PUBLISH including poc-settings and mcptt_info with the credentials
	6	verify	User 1 correctly registered to the IMS Core and MCPTT participating. IMPU vs. mcptt_id binding and service authorization completed.

7.5 Policying (PCC)

7.5.1 Setup of an Unicast MC Bearer by SIP Core/IMS [PCC/BEARERSETUP/01]

A SIP/Core IMS compatible with MCPTT specific RX interface definition shall be able to signal required QoS . The overall procedure is defined in Sections 5.2.9.3, 9.2.2.3.1, 9.2.2.3.2, 10.11.2 and 10.11.3 in Stage 2 [n.2].

In order to evaluate the interface an on-demand private call will be used.

References	<ul style="list-style-type: none"> - SIP (see [n.4] and other references in [n.5]) - MCPTT (see [n.6] and other references in [n.5]) - RTP (see [n.4] and other references in [n.5]) 		
Applicability	<ul style="list-style-type: none"> - MCPTT-Client_ONN-MCPTT-CALL, MCPTT-Client_AMR-WB, MCPTT-Client_AFFIL, MCPTT-Client_MCPTT-FC (6.2) - MCPTT-Part_ONN-MCPTT-CALL, MCPTT-Part_AFFIL (see NOTE), MCPTT-Part_RX, MCPTT-Part_MCPTT-FC (6.5) - MCPTT-Ctrl_ONN-MCPTT-CALL, MCPTT-Ctrl_AFFIL (see NOTE) (6.6) 		
Pre-test conditions	<ul style="list-style-type: none"> - IP connectivity among all elements of the specific scenario - Proper configuration of the SIP core/IMS to forward the signaling to the specific controlling and participating servers - UEs properly registered to the SIP core/IMS and MCPTT system - Ongoing private call between User 1 and User 2 with certain bearer conditions 		
Test Sequence	Step	Type	Description
	1	stimulus	Change in the conditions of the ongoing call
	2	check	The reINVITE traverses the IMS Core without triggering any PCC mechanism
	3	check	reINVITE received at the MCPTT participating server of User1
	4	check	The participating signals via DIAMETER the updated QoS requirement to the PCRF
	5	verify	Call ongoing, unicast MC bearer updated

7.6 eMBMS (EMBMS)

7.6.1 original test case REMOVED

7.6.2 Use of dynamically established MBMS bearers in prearranged MCPTT group calls with pre-allocated TMGIs [EMBMS/ACTIVATEBEARER/WPRETMGI/01]

In an on-going prearranged MCPTT group call the MCPTT Participating server uses the MB2-C interface to the BM-SC to allocate a TMGI using the GCS-Action-Request message and procedures described in Section 5.2.1 in [n.16]. Later, it uses the allocated TMGI to request the activation of a MBMS bearer by using the GCS-Action-Request with the MBMS StartStop Indication AVP set to "START" as described in Section 5.3.2 in [n.16]. Upon successful activation the MCPTT Participating can send the multicast data flow to the MB2-U endpoint (unicast IP and Port in the BM-SC).

Then, the Participating notifies client(s) using a SIP MESSAGE request as described in Section 14.2.2.2 in [n.5] that a new MBMS bearer is available in the service area. This message includes the TMGI, the port of the general purpose subchannel and the multicast IP. When the client enters the MBMS service area and starts listening to the general purpose subchannel, it notifies the Participating server about this event with a SIP MESSAGE as described in Section 14.3.3 in [n.5]. After receiving this message the Participating server can start sending Map-Group-To-Bearer messages to the BM-SC IP and port received in MB2-C procedures (MB2-U interface). These messages include the MCPTT group identity and the media / floor control subchannel ports. The BM-SC is in charge of delivering these messages to the MCPTT clients using the MBMS bearer. When the clients receive this information, they will send another SIP MESSAGE to notify that they are able to listen to audio and floor control subchannels through MBMS. When the Participating server receives this message, it will start sending RTP audio packets and floor control TAKEN and IDLE messages via MB2-U interface.

NOTE: In all eMBMS sequence diagrams the MCCP term is used for the MBMS signaling protocol. In newer versions (i.e. March 2017) of the TS MCMC is used but the old notation is kept in this test case document to respect the alignment with December 2016 3GPP TSs.

Interoperability Test Description

Table 51: EMBMS/ACTIVATEBEARER/WPRETMGI/01

Interoperability Test Description			
Identifier	EMBMS/ACTIVATEBEARER/WPRETMGI/01		
Test Objective	Verify IP connectivity, SIP core/IMS configuration and proper routing, SIP signaling, eMBMS signaling using SIP to the clients and MB2-C/U interfaces to the BM-SC		
Configuration(s)	<ul style="list-style-type: none"> - CFG_ONN_OTT-1 (5.2) - CFG_ONN_MULTI-MC-LTE-1 (5.4) 		
References	<ul style="list-style-type: none"> - SIP (see [n.4] and other references in [n.5]) - MCPT (see [n.6] and other references in [n.5]) - RTP (see [n.4] and other references in [n.5]) - Diameter in MB2-C (see [n.16]) 		
Applicability	<ul style="list-style-type: none"> - MCPTT-Client_ONN-MCPTT-CALL, MCPTT-Client_AMR-WB, MCPTT-Client_AFFIL, MCPTT-Client_MCPTT-FC, MCPTT-Client_EMBMS (6.2) - MCPTT-Part_ONN-MCPTT-CALL, MCPTT-Part_AFFIL (see NOTE), MCPTT-Part_MCPTT-FC, MCPTT-Part_GCSE (6.5) - MCPTT-Ctrl_ONN-MCPTT-CALL, MCPTT-Ctrl_AFFIL (see NOTE) (6.6) 		
Pre-test conditions	<ul style="list-style-type: none"> - IP connectivity among all elements of the specific scenario - Proper configuration of the SIP core/IMS to forward the signaling to the specific controlling and participating servers - UEs properly registered to the SIP core/IMS - Static/dynamic mapping of the SIP identity (i.e. IMPU) vs. mcptt_id - Ongoing prearranged group call 		
Test Sequence	Step	Type	Description
	1	stimulus	MCPTT Participating requests the allocation of a TMGI
	2	stimulus	Upon successful TMGI allocation MCPTT participating requests the activation of a MBMS bearer
	3	stimulus	Upon successful MBMS bearer activation MCPTT participating notifies users using SIP MESSAGE the general purpose subchannel port where the multicast signaling will be sent to
	4	stimulus	Users notify using SIP MESSAGE that they are listening to the general purpose subchannel
	5	stimulus	Participating uses Map Group To Bearer to start sending Floor Control/Audio packets over multicast
	6	check	Users successfully listening to multicast group call

7.6.3 Use of dynamically established MBMS bearers in prearranged MCPTT group calls without pre-allocated TMGIs [EMBMS/ACTIVATEBEARER/WOPRETMGI/01]

The procedure is equivalent to that in Section 7.6.2 but no TMGI is explicitly pre-allocated. Instead, the BM-SC will provide the TMGI (i.e. by previous signaling or preprovisioning) and no TMGI is signaled in the GCS-Action-Request message.

	3	stimulus	Users notify using SIP MESSAGE that they are listening to the general purpose subchannel
	4	stimulus	Participating uses Map Group To Bearer to start sending Floor Control/Audio packets over multicast
	5	check	Users successfully listening to multicast group call

7.6.4 Use of pre-established MBMS bearers in prearranged group calls with pre-allocated TMGIs [EMBMS/PREBEARER/WPRETMGI/01]

This test case is equivalent to that in Section 7.6.2 but all the MBMS bearer activation and signaling procedures is carried out before the Group Call setup is carried out (instead of dynamic embms bearer activation on an ongoing group call).

Following high level description in Stage 2 TS [n.2] Sections 10.10.2 and 10.10.4.2.1 and, more specifically, the flow diagram in Figure 10.10.2.2-1, the Activation and Announcement of the EM-BMS bearer would be prior to the Call Setup procedure. Then, the Map Group To Bearer messages will notify EMBMS users about the new session.

Interoperability Test Description

Table 53: EMBMS/PREBEARER/WPRETMGI/01

Interoperability Test Description			
Identifier	EMBMS/PREBEARER/WPRETMGI/01		
Test Objective	Verify IP connectivity, SIP core/IMS configuration and proper routing, SIP signaling, eMBMS signaling using SIP to the clients and MB2-C/U interfaces to the BM-SC		
Configuration(s)	<ul style="list-style-type: none"> - CFG_ONN_OTT-1 (5.2) - CFG_ONN_MULTI-MC-LTE-1 (5.4) 		
References	<ul style="list-style-type: none"> - SIP (see [n.4] and other references in [n.5]) - MCPT (see [n.6] and other references in [n.5]) - RTP (see [n.4] and other references in [n.5]) - Diameter in MB2-C (see [n.16]) 		
Applicability	<ul style="list-style-type: none"> - MCPTT-Client_ONN-MCPTT-CALL, MCPTT-Client_AMR-WB, MCPTT-Client_AFFIL, MCPTT-Client_MCPTT-FC, MCPTT-Client_EMBMS (6.2) - MCPTT-Part_ONN-MCPTT-CALL, MCPTT-Part_AFFIL (see NOTE), MCPTT-Part_MCPTT-FC, MCPTT-Part_GCSE (6.5) - MCPTT-Ctrl_ONN-MCPTT-CALL, MCPTT-Ctrl_AFFIL (see NOTE) (6.6) 		
Pre-test conditions	<ul style="list-style-type: none"> - IP connectivity among all elements of the specific scenario - Proper configuration of the SIP core/IMS to forward the signaling to the specific controlling and participating servers - UEs properly registered to the SIP core/IMS - Static/dynamic mapping of the SIP identity (i.e. IMPU) vs. mcptt_id 		
Test Sequence	Step	Type	Description
	1	stimulus	MCPTT Participating requests the allocation of a TMGI and activation of MBMS bearer following procedures in Section 7.6.2
	2	stimulus	Users notify the participating about their status (listening to general purpose subchannel) using SIP MESSAGE
	3	stimulus	Users notify using SIP MESSAGE that they are listening to the general purpose subchannel
	4	stimulus	User initiates the Group Call using traditional SIP signalling
	5	stimulus	Participating uses Map Group To Bearer to all participants
	6	stimulus	Upon reception of proper listening to the new MBMS bearer and MCPTT participating starts sending audio/FC over MBMS
	7	check	Users successfully listening to multicast group call

7.6.5 Use of pre-established MBMS bearers in prearranged group calls without pre-allocated TMGIs [EMBMS/PREBEARER/WOPRETMGI/01]

This test case is equivalent to that in Section 7.6.3 but all the MBMS bearer activation and signaling procedures is carried out before the Group Call setup is carried out (instead of dynamic embms bearer activation on an ongoing group call).

Following high level description in Stage 2 TS [n.2] Sections 10.10.2 and 10.10.4.2.1 and, more specifically, the flow diagram in Figure 10.10.2.2-1, the Activation and Announcement of the EM-BMS bearer would be prior to the Call Setup procedure. Then, the Map Group To Bearer messages will notify EMBMS users about the new session.

Interoperability Test Description			
Identifier	EMBMS/PREBEARER/WOPRETMGI/01		
Test Objective	Verify IP connectivity, SIP core/IMS configuration and proper routing, SIP signaling, eMBMS signaling using SIP to the clients and MB2-C/U interfaces to the BM-SC		
Configuration(s)	<ul style="list-style-type: none"> - CFG_ONN_OTT-1 (5.2) - CFG_ONN_MULTI-MC-LTE-1 (5.4) 		
References	<ul style="list-style-type: none"> - SIP (see [n.4] and other references in [n.5]) - MCPT (see [n.6] and other references in [n.5]) - RTP (see [n.4] and other references in [n.5]) - Diameter in MB2-C (see [n.16]) 		
Applicability	<ul style="list-style-type: none"> - MCPTT-Client_ONN-MCPTT-CALL, MCPTT-Client_AMR-WB, MCPTT-Client_AFFIL, MCPTT-Client_MCPTT-FC, MCPTT-Client_EMBMS (6.2) - MCPTT-Part_ONN-MCPTT-CALL, MCPTT-Part_AFFIL (see NOTE), MCPTT-Part_MCPTT-FC, MCPTT-Part_GCSE (6.5) - MCPTT-Ctrl_ONN-MCPTT-CALL, MCPTT-Ctrl_AFFIL (see NOTE) (6.6) 		
Pre-test conditions	<ul style="list-style-type: none"> - IP connectivity among all elements of the specific scenario - Proper configuration of the SIP core/IMS to forward the signaling to the specific controlling and participating servers - UEs properly registered to the SIP core/IMS - Static/dynamic mapping of the SIP identity (i.e. IMPU) vs. mcptt_id 		
Test Sequence	Step	Type	Description
	1	stimulus	MCPTT Participating requests the activation of MBMS bearer following procedures in Section 7.6.3
	2	stimulus	Users notify the participating about their status (listening to general purpose subchannel) using SIP MESSAGE
	3	stimulus	Users notify using SIP MESSAGE that they are listening to the general purpose subchannel
	4	stimulus	User initiates the Group Call using traditional SIP signalling
	5	stimulus	Participating uses Map Group To Bearer to all participants
	6	stimulus	Upon reception of proper listening to the new MBMS bearer and MCPTT participating starts sending audio/FC over MBMS
	7	check	Users successfully listening to multicast group call

7.6.6 Modification of MBMS bearers upon reception of emergency upgrade request [EMBMS-MODIFYBEARER/01]

This test covers the upgrade to emergency state of an on-going prearranged MCPTT group call. The MCPTT Participating server uses the MB2-C interface to the BM-SC to update a previously activated eMBMS bearer, which was set following any of the procedures described in Section 7.6.2, Section 7.6.3, Section 7.6.4 or Section 7.6.5 of this specification. The MCPTT Participating server will send a GCS-Action-Request with the MBMS-StartStop-Indication AVP set to "UPDATE" value as described in Section 5.3.4 in [n.16]. In the reINVITE request the MCPTT Client includes a new Resource-Priority header set to a high priority value, which corresponds with the emergency state. The MCPTT Participating server will need to set the Allocation-Retention-Priority AVP of the MBMS-Bearer-Request accordingly.

Interoperability Test Description			
Identifier	EMBMS/MODIFYBEARER/01		
Test Objective	Verify IP connectivity, SIP core/IMS configuration and proper routing, SIP signaling, eMBMS signaling using SIP to the clients and MB2-C/U interfaces to the BM-SC to update an existing MBMS bearer		
Configuration(s)	<ul style="list-style-type: none"> - CFG_ONN_OTT-1 (5.2) - CFG_ONN_MULTI-MC-LTE-1 (5.4) 		
References	<ul style="list-style-type: none"> - SIP (see [n.4] and other references in [n.5]) - MCPT (see [n.6] and other references in [n.5]) - RTP (see [n.4] and other references in [n.5]) - Diameter in MB2-C (see [n.16]) 		
Applicability	<ul style="list-style-type: none"> - MCPTT-Client_ONN-MCPTT-CALL, MCPTT-Client_AMR-WB, MCPTT-Client_AFFIL, MCPTT-Client_MCPTT-FC, MCPTT-Client_EMBMS (6.2) - MCPTT-Part_ONN-MCPTT-CALL, MCPTT-Part_AFFIL (see NOTE), MCPTT-Part_MCPTT-FC, MCPTT-Part_GCSE (6.5) - MCPTT-Ctrl_ONN-MCPTT-CALL, MCPTT-Ctrl_AFFIL (see NOTE) (6.6) 		
Pre-test conditions	<ul style="list-style-type: none"> - IP connectivity among all elements of the specific scenario - Proper configuration of the SIP core/IMS to forward the signaling to the specific controlling and participating servers - UEs properly registered to the SIP core/IMS - Static/dynamic mapping of the SIP identity (i.e. IMPU) vs. mcptt_id - Ongoing group call and MBMS bearer established 		
Test Sequence	Step	Type	Description
	1	stimulus	MCPTT User reINVITEs to notify the new emergency call condition using proper <emergency-ind>
	2	stimulus	Participating sends a GCS-Action-Request to the BM-SC to UPDATE the bearer
	3	stimulus	BM-SC modifies the bearer according and sends a response back
	4	check	MBMS bearer updated with emergency associated QoS Information

7.6.7 Deactivation of MBMS bearers after termination of a prearranged MCPTT group call with TMGI deallocation [EMBMS/DEACTBEARER/WTMGIDEA/01]

When the Participating MCPTT server receives a BYE request for the last user left in an on-going prearranged MCPTT group session which uses eMBMS, it will first send an Unmap Group to Bearer request over MB2-U channel. If configured to do so, the Participating MCPTT server will also deactivate the eMBMS bearer and the TMGI which was allocated for the eMBMS activation. This test case comprises the deactivation of an eMBMS bearer after the termination of a MCPTT session and also the deallocation of the TMGI.

The Participating MCPTT server will deactivate the eMBMS bearer by sending a GCS-Action-Request with the MBMS-StartStop-Indication AVP set to "STOP" value as described in Section 5.3.3 in [n.16]. After deactivating the eMBMS bearer, the Participating MCPTT server will also deallocate the TMGI which was allocated for the MCPTT session. The Participating MCPTT server will follow the procedures described in Section 5.2.2 of [n.16]. It will send another GCS-Action-Request with a TMGI-Deallocation-Request AVP, which includes the TMGI to be deallocated.

 MBMS-Bearer-Result: 0x00000001 (Success)

Supported-Features:

 Vendor-Id: 3GPP (10415)
 Feature-List-ID: 1
 Feature-List:
 x - Heartbeat support
 x. - MBMS cell list support

Interoperability Test Description

Table 57: EMBMS/DEACTBEARER/WOTMGIDEA/01

Interoperability Test Description			
Identifier	EMBMS/DEACTBEARER/WOTMGIDEA/01		
Test Objective	Verify IP connectivity, SIP core/IMS configuration and proper routing, SIP signaling, eMBMS signaling using SIP to the clients and MB2-C/U interfaces to the BM-SC to deactivate a MBMS bearer		
Configuration(s)	<ul style="list-style-type: none"> - CFG_ONN_OTT-1 (5.2) - CFG_ONN_MULTI-MC-LTE-1 (5.4) 		
References	<ul style="list-style-type: none"> - SIP (see [n.4] and other references in [n.5]) - MCPT (see [n.6] and other references in [n.5]) - RTP (see [n.4] and other references in [n.5]) - Diameter in MB2-C (see [n.16]) 		
Applicability	<ul style="list-style-type: none"> - MCPTT-Client_ONN-MCPTT-CALL, MCPTT-Client_AMR-WB, MCPTT-Client_AFFIL, MCPTT-Client_MCPTT-FC, MCPTT-Client_EMBMS (6.2) - MCPTT-Part_ONN-MCPTT-CALL, MCPTT-Part_AFFIL (see NOTE), MCPTT-Part_MCPTT-FC, MCPTT-Part_GCSE (6.5) - MCPTT-Ctrl_ONN-MCPTT-CALL, MCPTT-Ctrl_AFFIL (see NOTE) (6.6) 		
Pre-test conditions	<ul style="list-style-type: none"> - IP connectivity among all elements of the specific scenario - Proper configuration of the SIP core/IMS to forward the signaling to the specific controlling and participating servers - UEs properly registered to the SIP core/IMS - Static/dynamic mapping of the SIP identity (i.e. IMPU) vs. mcptt_id - Ongoing group call and MBMS bearer established 		
Test Sequence	Step	Type	Description
	1	stimulus	Participating receives the BYE from the last user therefore group call is terminated
	2	stimulus	Participating sends an Unmap Group to Bearer request over MB2-U channel
	3	stimulus	Participating sends a GCS-Action-Request with the MBMS-StartStop-Indication AVP set to "STOP"
	4	check	MBMS bearer deactivated

7.6.9 Switching to unicast bearer after TMGI expiration [EMBMS/SWITCHTOUNITMGIEXP-01]

If a TMGI expires during an on-going MCPTT session which uses eMBMS bearers, the BM-SC will need to notify the MCPTT server that the MBMS is no longer available, so that the MCPTT server can continue with the MCPTT session but sending the media over unicast bearers. The BM-SC will send a GCS-Notification-Request which includes a TMGI-Expiry AVP and a MBMS-Bearer-Event AVP with the Bearer Terminated bit set within a MBMS-Bearer-Event-Notification AVP in accordance with the procedures described in Section 5.2.3 in [n.16].

Interoperability Test Description

Table 58: EMBMS/SWITCHTOUNITMGIEXP/01

Interoperability Test Description			
Identifier	EMBMS/SWITCHTOUNITMGIEXP/01		
Test Objective	Verify IP connectivity, SIP core/IMS configuration and proper routing, SIP signaling, eMBMS signaling using SIP to the clients and MB2-C/U interfaces to the BM-SC to switch to unicast		
Configuration(s)	<ul style="list-style-type: none"> - CFG_ONN_OTT-1 (5.2) - CFG_ONN_MULTI-MC-LTE-1 (5.4) 		
References	<ul style="list-style-type: none"> - SIP (see [n.4] and other references in [n.5]) - MCPT (see [n.6] and other references in [n.5]) - RTP (see [n.4] and other references in [n.5]) - Diameter in MB2-C (see [n.16]) 		
Applicability	<ul style="list-style-type: none"> - MCPTT-Client_ONN-MCPTT-CALL, MCPTT-Client_AMR-WB, MCPTT-Client_AFFIL, MCPTT-Client_MCPTT-FC, MCPTT-Client_EMBMS (6.2) - MCPTT-Part_ONN-MCPTT-CALL, MCPTT-Part_AFFIL (see NOTE), MCPTT-Part_MCPTT-FC, MCPTT-Part_GCSE (6.5) - MCPTT-Ctrl_ONN-MCPTT-CALL, MCPTT-Ctrl_AFFIL (see NOTE) (6.6) 		
Pre-test conditions	<ul style="list-style-type: none"> - IP connectivity among all elements of the specific scenario - Proper configuration of the SIP core/IMS to forward the signaling to the specific controlling and participating servers - UEs properly registered to the SIP core/IMS - Static/dynamic mapping of the SIP identity (i.e. IMPU) vs. mcptt_id - Ongoing group call and MBMS bearer established 		
Test Sequence	Step	Type	Description
	1	stimulus	BM-SC notifies the Participating about TMGI expiration
	2	stimulus	Participating notifies "n" users in the group call previously using eMBMS about the expiration
	3	check	Group call continues using multi-unicast flows

7.7 Affiliation (AFFIL)

7.7.1 MCPTT User subscribes to its own affiliation [AFFIL/DET/01]

A registered MCPTT User subscribes to its affiliation by following Sections 9.2.1.3 and 9.2.2.2.4 in [n.5]. Regardless it is its own or other user's affiliation the procedure is rather equivalent. The MCPTT Client sends a SIP SUBSCRIBE message setting as Request-URI the public service identity identifying the originating participating MCPTT function serving the MCPTT user and an application/vnd.3gpp.mcptt-info+xml MIME body. In the application/vnd.3gpp.mcptt-info+xml MIME body, the <mcptt-request-uri> element is set to the MCPTT ID of the targeted MCPTT user (himself or other). The Expires header is set to its maximum value.

That subscription is forwarded to the MCPTT Controlling server.

Once the subscription is confirmed the originating participating MCPTT server will create SIP NOTIFY requests based on the information received from the MCPTT Controlling server according to 3GPP TS 24.229 [n.4], IETF RFC 3856 [n.19], and IETF RFC 6665 [n.22] containing an application/pidf+xml MIME body indicating per-user affiliation information.

Interoperability Test Description

Table 60: AFFIL/DET/02

Interoperability Test Description			
Identifier	AFFIL/DET/02		
Test Objective	Verify IP connectivity, SIP core/IMS configuration and proper routing, SIP signaling and proper affiliation information retrieval		
Configuration(s)	<ul style="list-style-type: none"> - CFG_ONN_OTT-1 (5.2) - CFG_ONN_UNI-MC-LTE-1 (5.3) - CFG_ONN_MULTI-MC-LTE-1 (5.4) 		
References	<ul style="list-style-type: none"> - SIP (see [n.4] and other references in [n.5]) 		
Applicability	<ul style="list-style-type: none"> - MCPTT-Client_ONN-MCPTT-CALL, MCPTT-Client_AFFIL (6.2) - MCPTT-Part_AFFIL (6.5) - MCPTT-Ctrl_AFFIL(6.6) 		
Pre-test conditions	<ul style="list-style-type: none"> - Proper configuration of the SIP core/IMS to forward the signaling to the specific controlling and participating servers - UEs properly registered to the SIP core/IMS - Static/dynamic mapping of the SIP identity (i.e. IMPU) vs. mcptt_id 		
Test Sequence	Step	Type	Description
	1	stimulus	User 1 (mcptt_id_clientA@example.com) sends an affiliation subscription (SIP SUBSCRIBE) request to its MCPTT originating participating server with the targeted user's mcptt_id (mcptt_id_clientA@example.com) in the <mcptt-request-uri> element
	2	stimulus	The MCPTT originating participating server forwards the SUBSCRIBE to the controlling
	3	stimulus	The MCPTT controlling forwards the SUBSCRIBE to the targeted user (terminating) participating server
	4	stimulus	The terminating MCPTT participating server updates the affiliation status by sending "n" NOTIFY(es) to the controlling
	5	stimulus	The MCPTT controlling server sends a NOTIFY related to the subscription to the participating
	6	check	Affiliation information is correctly received at the MCPTT Client upon proper NOTIFY forwarding by its participating

7.7.3 MCPTT User requests its affiliation to a set of groups [AFFIL/CHANGE/01]

The MCPTT Client submits an affiliation status change triggered by the MCPTT User itself (Sections 9.2.1.2 and 9.2.2.2.3 in [n.5]).

In order to do so it will create a SIP PUBLISH request including both an mcptt-info MIME body with the targeted mcptt_id and an application/pidf+xml MIME body indicating per-user affiliation information.

To refresh the affiliation subscription information different Expires header values will be used following IETF RFC 3903 [n.20]: 4294967295 if the targeted MCPTT user is interested in at least one MCPTT group at the targeted MCPTT client or 0 if the targeted MCPTT user is no longer interested in any MCPTT group at the targeted MCPTT client.

The participating server will inform the client about the status of the affiliation change request (e.g. affiliating or affiliated) with NOTIFY messages which contain per-user affiliation status information.

Interoperability Test Description

Table 61: AFFIL/CHANGE/01

Interoperability Test Description			
Identifier	AFFIL/CHANGE/01		
Test Objective	Verify IP connectivity, SIP core/IMS configuration and proper routing, SIP signaling and affiliation status properly changed		
Configuration(s)	<ul style="list-style-type: none"> - CFG_ONN_OTT-1 (5.2) - CFG_ONN_UNI-MC-LTE-1 (5.3) - CFG_ONN_MULTI-MC-LTE-1 (5.4) 		
References	<ul style="list-style-type: none"> - SIP (see [n.4] and other references in [n.5]) 		
Applicability	<ul style="list-style-type: none"> - MCPTT-Client_ONN-MCPTT-CALL, MCPTT-Client_AFFIL (6.2) - MCPTT-Part_AFFIL (6.5) - MCPTT-Ctrl_AFFIL(6.6) 		
Pre-test conditions	<ul style="list-style-type: none"> - Proper configuration of the SIP core/IMS to forward the signaling to the specific controlling and participating servers - UEs properly registered to the SIP core/IMS - Static/dynamic mapping of the SIP identity (i.e. IMPU) vs. mcptt_id 		
Test Sequence	Step	Type	Description
	1	stimulus	User 1 (mcptt_id_clientA@example.com) sends an affiliation change (SIP PUBLISH) request to its MCPTT originating participating server with the targeted user's mcptt_id in the <mcptt-request-uri> field
	2	stimulus	The MCPTT originating participating server SUBSCRIBES to the controlling for the request group
	3	stimulus	The MCPTT controlling server NOTIFYes user's current status
	4	stimulus	The MCPTT participating server PUBLISHes the new affiliation status to the request (and already) subscribed group
	5	stimulus	The MCPTT controlling server sends a NOTIFY related to the subscription to the participating
	6	check	Affiliation information is correctly received at the MCPTT Client upon proper NOTIFY forwarding by its participating

7.7.4 MCPTT User requests the affiliation of other User to a set of groups in mandatory mode[AFFIL/CHANGE/02]

The procedure is equivalent to that in Section 7.7.3 but using the proper targeted user's mcptt_id in the different requests.

The originating participant server shall forward the PUBLISH to the participating server serving the targeted user.

In mandatory mode, no confirmation of the user is requested. It will be informed of the affiliation changes with NOTIFY requests by its participating server if subscribed to this event.

It is assumed that MCPTT Client A is subscribed to the affiliation information of MCPTT Client B as described in Section (7.7.2) and that MCPTT Client B is subscribed to its own affiliation as described in Section (7.7.1) in the procedures included here.

Interoperability Test Description

Table 62: AFFIL/CHANGE/02

Interoperability Test Description			
Identifier	AFFIL/CHANGE/02		
Test Objective	Verify IP connectivity, SIP core/IMS configuration and proper routing, SIP signaling and proper affiliation information change		
Configuration(s)	<ul style="list-style-type: none"> - CFG_ONN_OTT-1 (5.2) - CFG_ONN_UNI-MC-LTE-1 (5.3) - CFG_ONN_MULTI-MC-LTE-1 (5.4) 		
References	<ul style="list-style-type: none"> - SIP (see [n.4] and other references in [n.5]) 		
Applicability	<ul style="list-style-type: none"> - MCPTT-Client_ONN-MCPTT-CALL, MCPTT-Client_AFFIL (6.2) - MCPTT-Part_AFFIL (6.5) - MCPTT-Ctrl_AFFIL(6.6) 		
Pre-test conditions	<ul style="list-style-type: none"> - Proper configuration of the SIP core/IMS to forward the signaling to the specific controlling and participating servers - UEs properly registered to the SIP core/IMS - Static/dynamic mapping of the SIP identity (i.e. IMPU) vs. mcptt_id 		
Test Sequence	Step	Type	Description
	1	stimulus	User 1 (mcptt_id_clientA@example.com) sends an affiliation change (SIP PUBLISH) request to its MCPTT originating participating server with the targeted user's mcptt_id (mcptt_id_clientB@example.com) in the <mcptt-request-uri> element of the mcptt-info body
	2	stimulus	The MCPTT originating participating server forwards the PUBLISH to the controlling
	3	stimulus	The MCPTT controlling SUBSCRIBEs to the targeted user (terminating) participating server
	4	stimulus	The MCPTT controlling sends the PUBLISH to the targeted user (terminating) participating server
	5	stimulus	The terminating MCPTT participating server acknowledges the affiliation request and later updates the affiliation status by sending "n" NOTIFY(es) to the controlling
	6	stimulus	The MCPTT controlling server sends "n"+1 NOTIFY related to the subscription to the participating
	7	check	Affiliation information is correctly received at the MCPTT Client upon proper NOTIFY forwarding by its participating

7.7.5 MCPTT User requests the affiliation of other User to a set of groups in negotiated mode [AFFIL/CHANGE/03]

When a user wants to affiliate another user to a certain group in negotiated mode, it shall send a SIP MESSAGE request with application/vnd.3gpp.mcptt-affiliation-command+xml content indicating the groups the target user shall affiliate to or de-affiliate from.

The originating participant server shall forward the MESSAGE request to the participating server serving the targeted user.

In negotiated mode, a confirmation of the user concerning the new affiliation modifications is requested. In fact, it will need to affiliate itself using the procedures described in Section (7.7.3).

It is assumed that MCPTT Client A is subscribed to the affiliation information of MCPTT Client B as described in Section (7.7.2) and that MCPTT Client B is subscribed to its own affiliation as described in Section (7.7.1) in the procedures included here.

Interoperability Test Description

Table 63: AFFIL/CHANGE/03

Interoperability Test Description			
Identifier	AFFIL/CHANGE/03		
Test Objective	Verify IP connectivity, SIP core/IMS configuration and proper routing, SIP signaling and proper affiliation information change on behalf of other user on negotiated mode		
Configuration(s)	<ul style="list-style-type: none"> - CFG_ONN_OTT-1 (5.2) - CFG_ONN_UNI-MC-LTE-1 (5.3) - CFG_ONN_MULTI-MC-LTE-1 (5.4) 		
References	<ul style="list-style-type: none"> - SIP (see [n.4] and other references in [n.5]) 		
Applicability	<ul style="list-style-type: none"> - MCPTT-Client_ONN-MCPTT-CALL, MCPTT-Client_AFFIL (6.2) - MCPTT-Part_AFFIL (6.5) - MCPTT-Ctrl_AFFIL(6.6) 		
Pre-test conditions	<ul style="list-style-type: none"> - Proper configuration of the SIP core/IMS to forward the signaling to the specific controlling and participating servers - UEs properly registered to the SIP core/IMS - Static/dynamic mapping of the SIP identity (i.e. IMPU) vs. mcptt_id 		
Test Sequence	Step	Type	Description
	1	stimulus	User 1 (mcptt_id_clientA@example.com) sends an affiliation change of another user in negotiated mode by creating and submitting a SIP MESSAGE request with proper format to its participating
	2	stimulus	The MCPTT originating participating server forwards the MESSAGE to the terminating participating of the targeted user
	3	stimulus	The MCPTT terminating participating forwards the MESSAGE to the targeted user, which acknowledges and PUBLISHes its new affiliation
	4	stimulus	The MCPTT terminating participating sends a SUBSCRIBE if needed and PUBLISHes the new affiliation to the controlling
	5	stimulus	The MCPTT controlling sends the NOTIFY back to both the targeted user and the originating one - through its participating-
	6	check	Affiliation information is correctly changed and notified to both requester and targeted users

7.8 Location (LOC)

7.8.1 MCPTT Client Configuration upon 3rd party register [LOC/3PRTYREG/CONFIG/01]

Upon a successful IMS registration and 3rd party REGISTER arriving at the Participating a new Location Reporting Configuration message will be created following the procedures in Section 13.2.2 in [n.5].

Pre-test conditions	<ul style="list-style-type: none"> - IP connectivity among all elements of the specific scenario - Proper configuration of the SIP core/IMS to forward the signaling to the specific controlling and participating servers 		
Test Sequence	Step	Type	Description
	1	stimulus	User 1 (mcptt_id_clientA@example.com) registers to IMS/MCPTT
	2	check	Participating sending location reporting configuration MESSAGE to the MCPTT Client
	3	verify	Location (including different triggers) properly configured in the MCPTT Client

7.8.2 Explicit Location reporting request sent to the MCPTT Client [LOC/REQUEST/01]

The participating MCPTT function may need to request the MCPTT client to report its location. In that case, the participating MCPTT functions shall generate a SIP MESSAGE request in accordance as described in Section 13.2.3 in [n.5]. Upon its reception, the MCPTT Client shall send a location report as specified in Section 13.3.4; and reset the reporting timer.

Test Objective	Verify IP connectivity, SIP core/IMS configuration and proper routing, SIP signaling and the procedures for submitting a location report		
Configuration(s)	<ul style="list-style-type: none"> - CFG_ONN_OTT-1 (5.2) - CFG_ONN_UNI-MC-LTE-1 (5.3) - CFG_ONN_MULTI-MC-LTE-1 (5.4) 		
References	<ul style="list-style-type: none"> - SIP (see [n.4] and other references in [n.5]) - MCPTT (see [n.6] and other references in [n.5]) - RTP (see [n.4] and other references in [n.5]) 		
Applicability	<ul style="list-style-type: none"> - MCPTT-Client_ONN-MCPTT-CALL, MCPTT-Client_LOC - MCPTT-Part_ONN-MCPTT-CALL, MCPTT-Part_AFFIL (see NOTE), MCPTT-Part_LOC (6.5) 		
Pre-test conditions	<ul style="list-style-type: none"> - IP connectivity among all elements of the specific scenario - Proper configuration of the SIP core/IMS to forward the signaling to the specific controlling and participating servers - MCPTT Client Location reporting mechanism properly configured 		
Test Sequence	Step	Type	Description
	1	stimulus	Any of the Location triggers is activated
	2	check	The MCPTT Client generates a report upon the reception of the request
	3	check	The MCPTT Client sends a SIP MESSAGE with the report
	4	verify	Location properly received and decoded in the MCPTT participating server

7.9 OAM procedures (CSC)

TBA

7.10 QoS support (KPI)

TBA

Document Revision History

Rev.	Date	Section(s)	Cause of Change	Implemented
0.1	2017-01-05	all	new doc	F. Liberal
0.2	2017-01-16	all	Added Uni and Multi MC-LTE confs	F. Liberal
0.3	2017-02-02	all	Updated 3GPP references and new test cases	F. Liberal
0.4	2017-02-06	all	Initial released beta draft	F. Liberal
0.5	2017-02-19	all	Format fixing	F. Liberal
0.6	2017-03-22	all	Fig. 2 completed Common remarks in Section 7.1 clarified Chat group call 01-06 Private call without floor control Removed duplicated location configuration test case Fixed most pending diagrams Affiliation test case added eMBMS test cases skeletons added	F. Liberal
0.7	2017-04-06	all	Affiliation test-cases reordered and edited New eMBMS test cases (description pending) IdMS authentication and token retrieval	F. Liberal
0.8	2017-05-04	all	eMBMS cases major revision Former 7.6.1 removed Completion of 7.6.X	F. Liberal
0.9	2017-08-28	all	resource-list anyURI type entry fixed	F. Liberal
