Contents of RADIO BEARER RECONFIGURATION message : AM or UM(Packet to CELL_FACH
from •CELL_DCH in PS)

Information Element	Value/remark
Message Type	
Integrity check info	Not Present
- message authentication code	
- RRC message sequence number	
Integrity protection mode info	Not Present
- Integrity protection mode command	
- Downlink integrity protection activation info	
- RRC message sequence number	
- RRC message sequence number	
- Integrity protection algorithm	
- Integrity protection initialisation number	
Ciphering mode info	Not Present(If ciphering is applied, this IE is needed)
- Ciphering mode command	Stop
- Ciphering algorithm	Not Present(Standard UMTS Encryption Algorithm UEA1)
- Activation time for DPCH	Not Present(Used RLC-TM)
- Radio bearer downlink ciphering activation time	Not Present(Used RLC-AM or RLC-UM)
info	
- Radio bearer identity	
- RLC sequence number	
Activation time	$(256 + \text{CFN} - (\text{CFN} \bmod 8 + 8)) \bmod 256$
New U-RNTI	Not Present
New C-RNTI	Not Present
DRX indicator	noDRX
UTRAN DRX cycle length coefficient	Not Present
CN information info	Not Present
- PLMN identity	
- CN common GSM-MAP NAS system information	
- CN domain identity	
- CN domain specific GSM-MAP NAS system	
information	
RB information to reconfigure	(UM DCCH for RRC)
- RB identity	0
- PDCP info	Not Present
- RLC info	Not Present
- Uplink RLC mode	
- Transmission RLC discard	
- SDU discard mode	
- MAX_DAT	
- Downlink RLC mode	
- In-sequence delivery	
- RB mapping info	
- Information for each multiplexing option	
- Number of RLC logical channels	1
- Uplink transport channel type	RACH
- Transport channel identity	1
- Logical channel identity	1
- MAC logical channel priority	2
- Number of RLC logical channels	1
- Downlink transport channel type	FACH
- Transport channel identity	1
- Logical channel identity	1
RB information to reconfigure	(AM DCCH for RRC)
- RB identity	1
- PDCP info	Not Present
- RLC info	Not Present
- Uplink RLC mode	
- Transmission RLC discard	
- SDU discard mode	
- MAX_DAT	
- Transmission window size	
- Timer_RST	
- Max_RST	
- Polling info	
- Timer_poll_prohibit	
- Timer_poll	
- Poll_SDU	
- Last transmission PU poll	
- Last retransmission PU poll	

- Poll_Windows - Downlink RLC mode - In-sequence delivery - Receiving window size - Downlink RLC status info - Timer_status_prohibit - Timer_EPC - Missing PU indicator - RB mapping info - Information for each multiplexing option - Number of RLC logical channels - Uplink transport channel type - Transport channel identity - Logical channel identity - MAC logical channel priority - Number of RLC logical channels - Downlink transport channel type - Transport channel identity - Logical channel identity	1 RACH 1 2 3 1 FACH 1 2 (AM DCCH for NAS_DT High priority) 2 Not Present Not Present
RB information to reconfigure - RB identity - PDCP info - RLC info - Uplink RLC mode - Transmission RLC discard - SDU discard mode - MAX_DAT - Transmission window size - Timer_RST - Max_RST - Polling info - Timer_poll_prohibit - Timer_poll - Poll_SDU - Last transmission PU poll - Last retransmission PU poll - Poll_Windows - Downlink RLC mode - In-sequence delivery - Receiving window size - Downlink RLC status info - Timer_status_prohibit - Timer_EPC - Missing PU indicator - RB mapping info - Information for each multiplexing option - Number of RLC logical channels - Uplink transport channel type - Transport channel identity - Logical channel identity - MAC logical channel priority - Number of RLC logical channels - Downlink transport channel type - Transport channel identity - Logical channel identity	(AM DCCH for NAS_DT High priority) 2 Not Present Not Present
RB information to reconfigure - RB identity - PDCP info - RLC info - Uplink RLC mode - Transmission RLC discard - SDU discard mode - MAX_DAT - Transmission window size - Timer_RST - Max_RST - Polling info - Timer_poll_prohibit - Timer_poll - Poll_SDU - Last transmission PU poll - Last retransmission PU poll	1 RACH 1 3 4 1 FACH 1 3 (AM DCCH for NAS_DT Low priority) 3 Not Present Not Present

- Downlink RLC mode - In-sequence delivery - RB mapping info - Information for each multiplexing option - Number of RLC logical channels - Downlink transport channel type - Transport channel identity - Logical channel identity	TRUE
RB information to reconfigure	1
- RB identity	FACH
- PDCP info	1
- RLC info	5
- Downlink RLC mode	(TM BCCH for RRC)
- In-sequence delivery	7
- RB mapping info	Not Present
- Information for each multiplexing option	TRUE
- Number of RLC logical channels	1
- Downlink transport channel type	FACH
- Transport channel identity	1
- Logical channel identity	6
RB information to reconfigure	(TM PCCH for RRC)
- RB identity	8
- PDCP info	Not Present
- RLC info	TRUE
- Downlink RLC mode	1
- In-sequence delivery	PCH
- RB mapping info	2
- Information for each multiplexing option	1
- Number of RLC logical channels	Not Present
- Downlink transport channel type	
- Transport channel identity	
- Logical channel identity	
RB information to be affected	
- RB identity	
- RB mapping info	
- Information for each multiplexing option	
- Number of RLC logical channels	
- Uplink transport channel type	
- Transport channel identity	
- Logical channel identity	
- MAC logical channel priority	
- Number of RLC logical channels	
- Downlink transport channel type	
- Transport channel identity	
- Logical channel identity	
UL Transport channel information for all transport channels	
- TFC subset	(This IE is repeated for TFC number.)
- Allowed Transport Format combination	0 to MaxTFCValue-1 (MaxTFCValue is refer to TS34.108 clause 6.10 Parameter Set.)
- UL DCH TFCS	Not Present
- Normal	
- TFCI Field 1 information(Explicit TFCS Configuration)	
- Addition	
- TFCS addition	
information(Reconfiguration/Addition information)	
- CTFC information	
- CTFC	
- Gain factor information	
- Gain factor •c	
- Gain factor •d	
- Power offset Pp-m	
Deleted UL TrCH information	
- Transport channel identity	Not Present
Added or Reconfigured UL TrCH information	
- Transport channel identity	1
- TFS	
- Dynamic Transport format information	(This IE is repeated for TFI number)
- Number of Transport blocks	Reference to TS34.108 clause 6.10 Parameter Set
- Bit mode RLC size info	

- Transport block size - Semi-static Transport Format information - Transmission time interval - Type of channel coding - Coding Rate - Rate matching attribute - CRC size	Reference to TS34.108 clause 6.10 Parameter Set
DRAC static information	Reference to TS34.108 clause 6.10 Parameter Set
- Transmission Time Validity - Time duration before retry - DRAC Class identity	Reference to TS34.108 clause 6.10 Parameter Set
DL Transport channel information common for all transport channel	Reference to TS34.108 clause 6.10 Parameter Set
- SCCPCH TFCS - Normal - TFCI Field 1 information(Explicit TFCS Configuration)	Reference to TS34.108 clause 6.10 Parameter Set
- Addition - TFCS addition	Reference to TS34.108 clause 6.10 Parameter Set
information(Reconfiguration/Addition information)	Reference to TS34.108 clause 6.10 Parameter Set
- CTFC information - CTFC	Not Present
- Gain factor information - Gain factor •c - Gain factor •d	0 to MaxTFCValue-1 (MaxTFCValue is refer to TS34.108 clause 6.10 Parameter Set.)
- DL DCH TFCS - Normal - TFCI Field 1 information(Explicit TFCS Configuration)	0
- Addition - TFCS addition	0
information(Reconfiguration/Addition information)	Not Present
- CTFC information - CTFC - Gain factor information - Gain factor •c - Gain factor •d - Power offset Pp-m	
Deleted DL TrCH information	
- Transport channel identity	Not Present
Added or Reconfigured DL TrCH information	
- Transport channel identity - TFS - Dynamic Transport format information - Number of Transport blocks - Bit mode RLC size info - Transport block size - Semi-static Transport Format information - Transmission time interval - Type of channel coding - Coding Rate - Rate matching attribute - CRC size - DCH quality target - BLER Quality value - Transparent mode signalling info	1
Added or Reconfigured DL TrCH information	(This IE is repeated for TFI number)
- Transport channel identity - TFS - Dynamic Transport format information - Number of Transport blocks - Bit mode RLC size info - Transport block size - Semi-static Transport Format information - Transmission time interval - Type of channel coding - Coding Rate - Rate matching attribute - CRC size	Reference to TS34.108 clause 6.10 Parameter Set
Added or Reconfigured DL TrCH information	Reference to TS34.108 clause 6.10 Parameter Set
- Transport channel identity - TFS - Dynamic Transport format information - Number of Transport blocks - Bit mode RLC size info - Transport block size - Semi-static Transport Format information - Transmission time interval - Type of channel coding - Coding Rate - Rate matching attribute - CRC size	Reference to TS34.108 clause 6.10 Parameter Set
Added or Reconfigured DL TrCH information	Reference to TS34.108 clause 6.10 Parameter Set
- Transport channel identity - TFS - Dynamic Transport format information - Number of Transport blocks - Bit mode RLC size info - Transport block size - Semi-static Transport Format information - Transmission time interval - Type of channel coding - Coding Rate - Rate matching attribute - CRC size	Reference to TS34.108 clause 6.10 Parameter Set
Added or Reconfigured DL TrCH information	Reference to TS34.108 clause 6.10 Parameter Set
- Transport channel identity - TFS - Dynamic Transport format information - Number of Transport blocks - Bit mode RLC size info - Transport block size - Semi-static Transport Format information - Transmission time interval - Type of channel coding - Coding Rate - Rate matching attribute - CRC size	Reference to TS34.108 clause 6.10 Parameter Set
Added or Reconfigured DL TrCH information	Reference to TS34.108 clause 6.10 Parameter Set
- Transport channel identity - TFS - Dynamic Transport format information - Number of Transport blocks - Bit mode RLC size info - Transport block size - Semi-static Transport Format information - Transmission time interval - Type of channel coding - Coding Rate - Rate matching attribute - CRC size	Reference to TS34.108 clause 6.10 Parameter Set
Added or Reconfigured DL TrCH information	Reference to TS34.108 clause 6.10 Parameter Set
- Transport channel identity - TFS - Dynamic Transport format information - Number of Transport blocks - Bit mode RLC size info - Transport block size - Semi-static Transport Format information - Transmission time interval - Type of channel coding - Coding Rate - Rate matching attribute - CRC size	Reference to TS34.108 clause 6.10 Parameter Set
Added or Reconfigured DL TrCH information	Reference to TS34.108 clause 6.10 Parameter Set

- DCH quality target	Not Present
- BLER Quality value	Not Present
- Transparent mode signalling info	Not Present
Added or Reconfigured DL TrCH information	
- Transport channel identity	3
- TFS	(This IE is repeated for TFI number)
- Dynamic Transport format information	Reference to TS34.108 clause 6.10 Parameter Set
- Number of Transport blocks	Reference to TS34.108 clause 6.10 Parameter Set
- Bit mode RLC size info	Reference to TS34.108 clause 6.10 Parameter Set
- Transport block size	Reference to TS34.108 clause 6.10 Parameter Set
- Semi-static Transport Format information	Reference to TS34.108 clause 6.10 Parameter Set
- Transmission time interval	Reference to TS34.108 clause 6.10 Parameter Set
- Type of channel coding	Reference to TS34.108 clause 6.10 Parameter Set
- Coding Rate	Reference to TS34.108 clause 6.10 Parameter Set
- Rate matching attribute	Reference to TS34.108 clause 6.10 Parameter Set
- CRC size	Reference to TS34.108 clause 6.10 Parameter Set
- DCH quality target	Not Present
- BLER Quality value	Not Present
- Transparent mode signalling info	Not Present
Added or Reconfigured DL TrCH information	
- Transport channel identity	4
- TFS	(This IE is repeated for TFI number)
- Dynamic Transport format information	Reference to TS34.108 clause 6.10 Parameter Set
- Number of Transport blocks	Reference to TS34.108 clause 6.10 Parameter Set
- Bit mode RLC size info	Reference to TS34.108 clause 6.10 Parameter Set
- Transport block size	Reference to TS34.108 clause 6.10 Parameter Set
- Semi-static Transport Format information	Reference to TS34.108 clause 6.10 Parameter Set
- Transmission time interval	Reference to TS34.108 clause 6.10 Parameter Set
- Type of channel coding	Reference to TS34.108 clause 6.10 Parameter Set
- Coding Rate	Reference to TS34.108 clause 6.10 Parameter Set
- Rate matching attribute	Reference to TS34.108 clause 6.10 Parameter Set
- CRC size	Reference to TS34.108 clause 6.10 Parameter Set
- DCH quality target	Not Present
- BLER Quality value	Not Present
- Transparent mode signalling info	Not Present
Frequency info	
- UARFCN uplink(Nu)	Reference to TS34.108 clause 6.10 Parameter Set
- UARFCN downlink(Nd)	Reference to TS34.108 clause 6.10 Parameter Set
Maximum allowed UL TX power	33dBm
PRACH info	
- Available Signature	0
- Signature	1
- Signature	2
- Signature	3
- Signature	4
- Signature	5
- Signature	6
- Signature	7
- Available SF	Reference to TS34.108 clause 6.10 Parameter Set
- Scrambling code number	0
- Puncturing Limit	Reference to TS34.108 clause 6.10 Parameter Set
- Available Sub Channel number	
- Sub channel number	0
- Sub channel number	1
- Sub channel number	2
- Sub channel number	3
- Sub channel number	4
- Sub channel number	5
- Sub channel number	6
- Sub channel number	7
- Sub channel number	8
- Sub channel number	9
- Sub channel number	10
- Sub channel number	11
Downlink information common for all radio links	Not Present
- Downlink DPCH info common for all RL	
- Downlink DPCH power control information	
- DPC mode	
- Spreading factor	
- Fixed or Flexible Position	
- TFCI existence	

- Number of bits for Pilot bits(SF=128,256)	
- Downlink DPCH Offset Value	
- DPCH compressed mode info	
-TGPSI	1
-TGPS Status Flag	inactive
- <u>Transmission gap pattern sequence configuration parameters</u>	
- TGMP	FDD Measurement
- TGPRC	62
- TGCFN	(Current CFN + (256 – TTI/10msec)) mod 256
- TGSN	8
- TGL1	10
- TGL2	5
- TGD	15
- TGPL1	35
- TGPL2	35
- RPP	Mode 1
- ~~TPRM/TP~~	Mode 1
- UL/DL Mode	DL
- Downlink compressed mode method	SF/2
- Uplink compressed mode method	~~F/2~~ Not Present
- <u>Scrambling code change</u>	<u>No code change</u>
- Downlink frame type	A
- DeltaSIR1	2.0
- DeltaSIRafter1	1.0
- <u>DeltaSIR2</u>	<u>Not Present</u>
- <u>DeltaSIRafter2</u>	<u>Not Present</u>
- TX Diversity mode	None
- SSDT information	<u>Not Present</u>
- S field	
- Code Word Set	
Downlink PDSCH information	Not Present
CPCH SET info	Not Present
Downlink information for each radio links	
- Primary CPICH info	
- Primary scrambling code	100
- PDSCH with SHO DCH info	Not Present
- DSCH radio link identifier	
- TFCI Combining set	
- Radio link identifier	
- Primary CPICH info	
- Primary scrambling code	
- PDSCH code mapping	Not Present
- Downlink DPCH info for each RL	Not Present
- Primary CPICH usage for channel estimation	
- Secondary CPICH info	
- Secondary scrambling code	
- channelisation code	
- DL channelisation code	
- Secondary scrambling code	
- Code number	
- <u>Scrambling code change</u>	
- TPC combination index	
- SSDT Cell Identity	
- Closed loop timing adjustment mode	
- Secondary CCPCH info	
- Primary CPICH usage for channel estimation	Primary CPICH may be used
- Secondary CPICH info	Not Present
- Secondary scrambling code	
- channelisation code	
- Secondary scrambling code	
- SSDT Indicator	1
- Spreading factor	FALSE
- Code number	Reference to TS34.108 clause 6.10 Parameter Set SF-1(SF is reference to TS34.108 clause 6.10 Parameter Set)
- Pilot symbol existence	FALSE
- TFCI existence	TRUE
- Fixed or Flexible Position	Flexible
- Timing offset	0
- TFCS	Not Present
- Normal	
- TFCI Field 1 information(Explicit TFCS	

Configuration)	
- Addition	
- TFCS addition	
information(Reconfiguration/Addtion information)	
- CTFC information	
- CTFC	
- Gain factor information	
- Gain factor •c	
- Gain factor •d	
- FACH/PCH information	Not Present
- TFS	
- Dynamic Transport format information	
- Number of Transport blocks	
- Octet mode RLC size info	
- Transport block size	
- Semi-static Transport Format information	
- Transmission time interval	
- Type of channel coding	
- Coding Rate	
- Rate matching attribute	
- CRC size	
- TFS	
- Dynamic Transport format information	
- Number of Transport blocks	
- Octet mode RLC size info	
- Transport block size	
- Semi-static Transport Format information	
- Transmission time interval	
- Type of channel coding	
- Coding Rate	
- Rate matching attribute	
- CRC size	
- References to system information blocks	Not Present
- Scheduling information	

Contents of RADIO BEARER RECONFIGURATION message : AM or UM(Packet to CELL_FACH
from •CELL_FACH in PS)

Information Element	Value/remark
Message Type	
Integrity check info	Not Present
- message authentication code	
- RRC message sequence number	
Integrity protection mode info	Not Present
- Integrity protection mode command	
- Downlink integrity protection activation info	
- RRC message sequence number	
- RRC message sequence number	
- Integrity protection algorithm	
- Integrity protection initialisation number	
Ciphering mode info	Not Present(If ciphering is applied, this IE is needed)
- Ciphering mode command	Stop
- Ciphering algorithm	Not Present(Standard UMTS Encryption Algorithm UEA1)
- Activation time for DPCH	Not Present(Used RLC-TM)
- Radio bearer downlink ciphering activation time	Not Present(Used RLC-AM or RLC-UM)
info	
- Radio bearer identity	
- RLC sequence number	
Activation time	(256+CFN-(CFN MOD 8 + 8))MOD 256
New U-RNTI	Not Present
New C-RNTI	0000 0000 0000 0010B
DRX indicator	noDRX
UTRAN DRX cycle length coefficient	Not Present
CN information info	Not Present
- PLMN identity	
- CN common GSM-MAP NAS system information	
- CN domain identity	
- CN domain specific GSM-MAP NAS system	
information	
RB information to reconfigure	(UM DCCH for RRC)
- RB identity	0
- PDCP info	Not Present
- RLC info	Not Present
- Uplink RLC mode	
- Transmission RLC discard	
- SDU discard mode	
- MAX_DAT	
- Downlink RLC mode	
- In-sequence delivery	
- RB mapping info	
- Information for each multiplexing option	
- Number of RLC logical channels	1
- Uplink transport channel type	RACH
- Transport channel identity	1
- Logical channel identity	1
- MAC logical channel priority	2
- Number of RLC logical channels	1
- Downlink transport channel type	FACH
- Transport channel identity	1
- Logical channel identity	1
RB information to reconfigure	(AM DCCH for RRC)
- RB identity	1
- PDCP info	Not Present
- RLC info	Not Present
- Uplink RLC mode	
- Transmission RLC discard	
- SDU discard mode	
- MAX_DAT	
- Transmission window size	
- Timer_RST	
- Max_RST	
- Polling info	
- Timer_poll_prohibit	
- Timer_poll	
- Poll_SDU	
- Last transmission PU poll	
- Last retransmission PU poll	

- Poll_Windows - Downlink RLC mode - In-sequence delivery - Receiving window size - Downlink RLC status info - Timer_status_prohibit - Timer_EPC - Missing PU indicator - RB mapping info - Information for each multiplexing option - Number of RLC logical channels - Uplink transport channel type - Transport channel identity - Logical channel identity - MAC logical channel priority - Number of RLC logical channels - Downlink transport channel type - Transport channel identity - Logical channel identity	1 RACH 1 2 3 1 FACH 1 2 (AM DCCH for NAS_DT High priority) 2 Not Present Not Present
RB information to reconfigure - RB identity - PDCP info - RLC info - Uplink RLC mode - Transmission RLC discard - SDU discard mode - MAX_DAT - Transmission window size - Timer_RST - Max_RST - Polling info - Timer_poll_prohibit - Timer_poll - Poll_SDU - Last transmission PU poll - Last retransmission PU poll - Poll_Windows - Downlink RLC mode - In-sequence delivery - Receiving window size - Downlink RLC status info - Timer_status_prohibit - Timer_EPC - Missing PU indicator - RB mapping info - Information for each multiplexing option - Number of RLC logical channels - Uplink transport channel type - Transport channel identity - Logical channel identity - MAC logical channel priority - Number of RLC logical channels - Downlink transport channel type - Transport channel identity - Logical channel identity	(AM DCCH for NAS_DT High priority) 2 Not Present Not Present

Subject: Clarifications for "paging for notification" test cases

Work item:

Category:

F Correction ☒
A Corresponds to a correction in an earlier release ☐
B Addition of feature ☐
C Functional modification of feature ☐
D Editorial modification ☐

(only one category shall be marked with an X)

Release:

Phase 2 ☐
Release 96 ☐
Release 97 ☐
Release 98 ☐
Release 99 ☒
Release 00 ☐

Reason for change:

In CR-304r1 for TS 25.331 V3.2.0, the message transmission sequence on BCCH during a modification of system information was further clarified. Test cases in clause 8.1.1.4 and 8.1.1.5 were further refined accordingly. The following changes were made to both clauses:

1. The values of "BCCH Modification Time" IE, found in PAGING TYPE 1 messages, were changed to 4088.
2. Edited test description and test sequence parts to explicitly state that the new MIB segment is to be sent by SS at the indicated starting time. This is followed by the transmission of the affected SIB message.
3. Both SIB Type 1 and Type 13 can be used, depending on the supported CN types.

Clauses affected: 8.1.1.4, 8.1.1.5

Other specs affected:

Other 3G core specifications ☐
Other GSM core specifications ☐
MS test specifications ☒
BSS test specifications ☐

8. Layer 3

8 Radio Resource Control RRC

8.1 RRC Connection Management Procedure

8.1.1 Paging

8.1.1.1 Paging for Connection in idle mode

8.1.1.1.1 Definition

8.1.1.1.2 Conformance requirement

In idle mode, UE monitors the paging occasions determined using parameters from SYSTEM INFORMATION BLOCK messages. When the UE receives a PAGING TYPE 1 message transmitted on PCCH during one of its assigned paging occasions, it should attempt to establish an RRC connection.

Reference

3GPP TS 25.331 clause 8.1.2, 3GPP TS 25.211 clause 5.3.3.7, 3GPP TS 25.304 clause 8.

8.1.1.1.3 Test purpose

To confirm that the UE establishes an RRC connection after it receives a PAGING TYPE1 message which includes IE "Paging Record"(UE identity) set to the IMSI of the UE.

8.1.1.1.4 Method of test

Initial Condition

System Simulator : 1 cell

UE :Idle state with a CN UE identity (set to IMSI).

Test Procedure

The SS transmits a PAGING TYPE1 message, which includes an unmatched CN UE identity for the UE in the idle state. The UE shall not change its state. The SS transmits a PAGING TYPE1 message, which includes a matched CN UE identity for the UE in the idle state. During transmission of PAGING TYPE 1 messages, SS selects the correct paging indicator on the PICH in order to allow the UE to respond to paging. Then the UE transmits an RRC CONNECTION REQUEST to the SS, the SS transmits an RRC CONNECTION SETUP to the UE. When the UE receives this message, the UE establishes an RRC connection.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	SYSTEM INFORMATION BLOCK TYPE 13	Transmit these messages on the BCCH, in addition to the normal BCCH transmissions. See specific message contents.
2		←	PAGING TYPE1	The SS transmits the message, which includes an unmatched identity (incorrect IMSI), then the UE does not change its state.
3		←	PAGING TYPE1	The SS transmits the message, which includes a matched identity (test-SIM IMSI).
4		→	RRC CONNECTION REQUEST	SS checks the following IEs : "Initial UE identity" – must be the same as test-SIM IMSI. "Establishment Cause – must be "Terminating Call" "Protocol Indicator" – must be FALSE
5		←	RRC CONNECTION SETUP	SS assigns DPCH resources to allow UE to establish an RRC connection.

Specific Message Contents

PAGING TYPE 1 (Step 3)

Information Element	Value/remark
Paging record list Paging record CHOICE Paging originator - Paging cause - CN domain identity - CHOICE UE Identity - IMSI	Only 1 entry CN originator Terminating Call whose kind is supported service (speech,CS Data,PS data,SMS,Unspecified) Supported Domain (PS Domain or CS Domain) IMSI Set to the same octet string as in the IMSI stored in the USIM card

8.1.1.1.5

Test requirement

After step 2 the UE shall not transmit on the uplink CCCH in order to establish a RRC connection.

After step 5 the UE shall have an RRC connection based on dedicated physical channel resources.

8.1.1.2 Paging for Connection in connected mode (CELL_PCH)

8.1.1.2.1 Definition

8.1.1.2.2 Conformance requirement

In CELL_PCH state, a UE can respond to a paging request from UTRAN. In this case, the UTRAN has requested to establish a connection with the UE. The UE should then attempt to perform a cell update procedure and move to CELL_FACH state in order to respond to the paging using uplink CCCH.

Reference

3GPP TS 25.331 clause 8.1.2

8.1.1.2.3 Test purpose

To confirm that the UE enters the CELL_FACH state after it receives a PAGING TYPE1 message which indicates that the paging has originated from UTRAN. To verify that the UE performs cell update procedure after entering the CELL_FACH state.

8.1.1.2.4 Method of test

Initial Condition

System Simulator : 1 cell

UE :CELL_PCH state with a U-RNTI

Test Procedure

The SS transmits a PAGING TYPE1 message, which includes an unmatched U-RNTI in CELL_PCH state . The UE does not change its state. Then SS transmits a PAGING TYPE 1 message with a matched identifier but originates from the CN instead of UTRAN. The UE should not change state after receiving this message. The SS transmits a PAGING TYPE1 message, which includes a matched U-RNTI in the connected state. Then the UE enters the CELL_FACH state and performs the cell updating procedure.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	SYSTEM INFORMATION BLOCK TYPE 13	Transmit these messages on the BCCH, in addition to the normal BCCH transmissions. See specific message contents
2		←	PAGING TYPE1	The SS transmits a message including an unmatched identifier. UE shall not respond to the paging.
3		←	PAGING TYPE1	The SS transmits a message includes a matched identifier but with the originator being the CN, UE shall not respond to the paging.
4		←	PAGING TYPE 1	The SS transmits the message with the UTRAN being the originator and including the UE's assigned U-RNTI
5		→	CELL UPDATE	The UE enters the CELL_FACH state. UE performs cell updating procedure. The CELL UPDATE message shall contain the value "Cell Update Cause" set to "paging response".

Specific Message Contents

PAGING TYPE 1 (Step 2)

Information Element	Value/remark
Paging record list	Only 1 entry
Paging record	
- CHOICE Paging originator	UTRAN originator
- U-RNTI	
- SRNC Identity	Set to an arbitrary 16-bit string which is different from the SRNC identity assigned.
- S-RNTI	Set to an arbitrary 20-bit string which is different from the S-RNTI assigned.

PAGING TYPE 1 (Step 3)

Same as the PAGING TYPE 1 message as in Clause 8.1.1.1.4, with the exception that the "BCCH modification info" IE should be omitted in the message.

PAGING TYPE 1 (Step 4)

Information Element	Value/remark
Paging record list	Only 1 entry
Paging record	
- CHOICE Paging originator	CN originator
- U-RNTI	
- SRNC Identity	Set to the same SRNC identity as previously assigned.
- S-RNTI	Set to the same S-RNTI as previously assigned.

SYSTEM INFORMATION BLOCK TYPE 12

Same as the SYSTEM INFORMATION BLCOK TYPE 13 message used in Clause 8.1.1.1.3.

8.1.1.2.5 Test requirement

After step 2 the UE shall not change its state.

After step 3 the UE shall not change its state.

After step 4 the UE shall enter the CELL FACH state and send a CELL UPDATE message with "Cell Update Cause" IE set to "paging response".

8.1.1.3 Paging for Connection in connected mode(URA_PCH)

8.1.1.3.1 Definition

8.1.1.3.2 Conformance requirement

This procedure is used to transmit a PAGING TYPE 1 message from the network to selected UEs in URA_PCH state using the paging control channel (PCCH). The UE listens to it and then enters the CELL_FACH state.

Reference

3GPP TS 25.331 clause 8.1.2

8.1.1.3.3 Test purpose

To confirm that the UE enters the CELL_FACH state after it receives a PAGING TYPE1 message which includes IE "Paging Record"(U-RNTI) for the UE and which is set to "CN" in IE"paging originator".

8.1.1.3.4 Method of test

Initial Condition

System Simulator : 1 cell

UE :URA_PCH state with a U-RNTI

Test Procedure

The SS transmits a PAGING TYPE1 message, which includes an unmatched U-RNTI in URA_PCH state. The UE does not change its current state. The SS transmits a PAGING TYPE1 message which includes a matched U-RNTI in the connected state. Then the UE listens to it and enters the CELL_FACH state.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PAGING TYPE1	The SS transmits the message includes an unmatched identifier, then the UE does not change its state.
2		←	PAGING TYPE1	The SS transmits the message includes a matched identifier.
3		→	CELL UPDATE	The UE enters the CELL_FACH state.

Specific Message Contents

PAGING TYPE 1 (Step 1)

Information Element	Value/remark
Paging record list	Only 1 entry
Paging record	
- CHOICE Paging originator	UTRAN originator
- U-RNTI	
- SRNC Identity	Set to an unused SRNC identity which is different from the SRNC identity assigned.
- S-RNTI	Set to an arbitrary 20-bit string which is different from the S-RNTI assigned.

PAGING TYPE 1 (Step 2)

Information Element	Value/remark
Paging record list Paging record - CHOICE Paging originator - U-RNTI - SRNC Identity - S-RNTI	Only 1 entry UTRAN originator Set to the previously assigned SRNC identity Set to previously assigned S-RNTI

8.1.1.3.5 Test requirement

After step 1 the UE shall not change its state.

After step 2 the UE shall enter the CELL FACH state, and transmit CELL UPDATE message to initiate the cell updating procedure with the paging cause set to “paging response”.

8.1.1.4 Paging for Notification in idle mode

8.1.1.4.1 Definition

8.1.1.4.2 Conformance requirement

When a system information blocks on the BCCH is modified, the message PAGING TYPE1 can be sent on the PCCH to inform the UE about the changes, which is currently operating in the idle mode. The message includes the IE "BCCH Modification Information".

Reference

3GPP TS 25.331 clause 8.1.1.2

8.1.1.4.3 Test purpose

To confirm that the UE checks the included new value tag of the master information block and reads the updated SYSTEM INFORMATION BLOCK messages after it receives a PAGING TYPE1 message which includes the IE "BCCH Modification Information".

8.1.1.4.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : Idle state with a CN UE identity .

Test Procedure

The UE is in the idle state before it starts to change the SYSTEM INFORMATION BLOCK TYPE 1 or 13 messages. The SS transmits a PAGING TYPE1 message on the paging occasions assigned to the UE. The message shall include the IE "BCCH Modification Information" indicating the starting time when the first modified master BCCH system information block is modified available. Simultaneously Before the stated starting time, SS continuously send broadcast the original MASTER INFORMATION BLOCK and various types of SYSTEM INFORMATION BLOCK on the BCCH mapped to BCH transport channel with the "MIB Value Tag" changed. The modified SYSTEM INFORMATION BLOCK TYPE 1 message shall be transmitted continuously too. SS maintains this status until the SFN which corresponds to the starting time is reached. Then it transmits the new master information block followed by the new SYSTEM INFORMATION BLOCK TYPE 1 or 13 messages. In the new SIB TYPE 1 or 13 messages, the IE "DRX Cycle Length Coefficient" is altered when compared with respect to the IE in the original SIB TYPE 1 or 13 messages. The SS shall wait until the stated starting time. At the next paging occasion, SS and transmits a new PAGING TYPE 1 message. The message shall addresses the UE using its IMSI and the "paging cause" IE set to "a terminating call" type supported by the UE. The UE shall react to the PAGING TYPE 1 message and then send a RRC_CONNECTION_REQUEST message to SS.

Notes: For UEs supporting GSM-MAP CN type only, SYSTEM INFORMATION TYPE 1 messages are to be sent by SS in this test case. On the other hand, SS transmits SYSTEM INFORMATION TYPE 13 messages if the UE under test supports only ANSI-41 CN type.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	MASTER INFORMATION BLOCK SYSTEM INFORMATION BLOCK TYPE <u>1 or 13</u>	SS transmits information on BCCH in order for UE to listen to one of the S-CCPCH physical channel, which carries PAGING TYPE 1 <u>or 13</u> messages on PCCH. Relevant paging parameters are also broadcasted.
2		←	PAGING TYPE 1	SS transmits the message includes the IE "BCCH Modification Information", with the "Value Tag" changed from the "MIB Value Tag" of the current Master Information Block. Also the modification time is set to 408894 radio frame from the current SFN. <u>SS continuously broadcast the same MASTER INFORMATION BLOCK and various types of SYSTEM INFORMATION BLOCK on BCCH for a period stretching 4087 frames.</u>
3		← ←	MASTER INFORMATION BLOCK SYSTEM INFORMATION BLOCK TYPE <u>1 or 13</u>	SS starts to transmit the MIB with the "MIB Value Tag" IE different from the original setting. At the same time, SS starts to transmit the affected ~~modified~~ <u>SIB TYPE 1 or 13</u> messages continuously. The value of IE "DRx Cycle Length Coefficient" is changed in this message. <u>SS starts to monitor the uplink RACH after approximately 4087 SFN from step 2.</u>
4		←	PAGING TYPE 1	SS <u>starts to</u> transmits this message continuously on the PCCH according to the new value of "DRx Cycle Length Coefficient", <u>at the next paging occasion immediately following step 3.</u>
~~5~~				~~SS starts to monitor the uplink RACH after approximately 4096 radio frames from step 2.~~
~~65~~		→	RRC CONNECTION REQUEST	UE transmits a request due to answer to the PAGING TYPE 1 received in step ~~54~~ . The IE "Establishment Cause" should be set to "Terminating Call" supported by the UE and the "Initial UE Identity" set to UE's IMSI.
~~76~~		←	RRC CONNECTION REJECT	UE shall return to idle mode after receiving this message

Specific Message Contents

SYSTEM INFORMATION BLOCK TYPE 1 or 13 (Step 1)

Information Element	Value/remark
CN domain system information list	Only 1 entry
CN domain system information	
- CN domain identity	~~Not Present – Use Default~~
- CHOICE CN Type	~~One of the Supported CN types~~
- CN domain specific NAS system information	~~Not Present – Use Default~~
- CN domain specific DRX cycle length coefficient	12
~~UE Timers and constants in idle mode~~	
~~T300~~	~~Default~~
~~N300~~	~~Default~~
~~T312~~	~~Default~~
~~N312~~	~~Default~~

PAGING TYPE 1 (Step 2)

Information Element	Value/remark
Paging record list	Only 1 entry
Paging record	
- CHOICE Paging originator	UTRAN originator
- U-RNTI	
- SRNC Identity	Arbitrarily selected a SRNC identity which is different from current identity
- S-RNTI Identity	Arbitrarily selected a S-RNTI identity which is different from current identity
BCCH modification info	
MIB Value Tag	2
BCCH Modification time	408894

MASTER INFORMATION BLOCK (Step 3)

Information Element	Value/remark
MIB Value tag	2

SYSTEM INFORMATION BLOCK TYPE 1 or 13 (Step 3)

Information Element	Value/remark
CN domain system information list	Only 1 entry
CN domain system information	
- CN domain identity	~~Not Present – Use Default~~
- CHOICE CN Type	~~One of the Supported CN types~~
- CN domain specific NAS system information	~~Not Present – Use Default~~
- CN domain specific DRX cycle length coefficient	47
~~UE Timers and constants in idle mode~~	
~~T300~~	~~Default~~
~~N300~~	~~Default~~
~~T312~~	~~Default~~
~~N312~~	~~Default~~

PAGING TYPE 1 (Step 4)

Information Element	Value/remark
Paging record list	Only 1 entry
Paging record	
- CHOICE Paging originator	CN originator
- Paging Cause	Terminating Speech Call
- CN Domain Identity	CS Domain
- CHOICE UE Identity	IMSI
- IMSI	Set to the same octet string as in the IMSI value stored in the USIM card

RRC CONNECTION REJECT (Step 7~~6~~)

Information Element	Value/remark
Initial UE identity	
- CHOICE UE id type	IMSI
- IMSI	Set to the same octet string as in the IMSI value stored in the USIM card
Rejection cause	Unspecified
Wait time	0
Redirection info	Not Present

8.1.1.4.5 Test requirement

After step ~~6~~5 the UE shall transmit RRC CONNECTION REQUEST message in response to the PAGING TYPE 1 messages sent starting from step 4.

8.1.1.5 Paging for Notification in connected mode (CELL_PCH)

8.1.1.5.1 Definition

8.1.1.5.2 Conformance requirement

When a system information block on the BCCH is modified, the message PAGING TYPE1 can be sent on the PCCH to inform the UE about this change in the CELL_PCH state. The message shall include the IE"BCCH Modification Information".

Reference

3GPP TS 25.331 clause 8.1.1, 2

8.1.1.5.3 Test purpose

To confirm that the UE enters the CELL_FACH state, checks the included new value tag of the master information block, and read the SYSTEM INFORMATION messages after it receives a PAGING TYPE1 message which includes the IE"BCCH Modification Information",

8.1.1.5.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_PCH state with a U-RNTI.

Test Procedure

~~Identical~~ Test steps 1 to ~~5~~4 under in Clause 8.1.1.4 can be applied to this test. However, the PAGING TYPE 1 messages used in step 2 and step 4 need to be altered. The changes are indicated in the specific message content paragraph under this clause. At step 6, UE shall send the CELL UPDATE message indicating the "cell update cause" to be "paging response". SS then replies with a CELL UPDATE CONFIRM message to allow the UE to transit to CELL_FACH state.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	MASTER INFORMATION BLOCK SYSTEM INFORMATION BLOCK TYPE <u>1 or 13</u>	SS transmits information on BCCH in order for UE to listen to one of the S-CCPCH physical channel, which carries PAGING TYPE 1 <u>or 13</u> messages on PCCH. Relevant paging parameters are also broadcasted.
2		←	PAGING TYPE 1	SS transmits the paging message which comprises IE "BCCH Modification Information", with the "Value Tag" changed from the "MIB Value Tag" of the current Master Information Block. Also the modification time is set to ~~4088~~ 94 radio frame from the current SFN. <u>SS continuously broadcast the same MASTER INFORMATION BLOCK and various types of SYSTEM INFORMATION BLOCK on BCCH for a period stretching 4087 frames.</u>
3		←	MASTER INFORMATION BLOCK SYSTEM INFORMATION BLOCK TYPE <u>1 or 13</u>	SS starts to transmit the MIB with the "MIB Value Tag" IE different from the original setting. At the same time, SS starts to transmit the affected ~~modified~~ -SIB <u>TYPE 1 or 13</u> messages continuously. The value of IE "DRx Cycle Length Coefficient" is changed in this message. <u>SS starts to monitor the uplink RACH after approximately 4087 SFN from step 2.</u>
4		←	PAGING TYPE 1	SS transmits this message continuously on the PCCH according to the new value of "DRx Cycle Length Coefficient", <u>at the next paging occasion immediately following step 3.</u> This message shall page the UE with its U-RNTI and setting the UTRAN as the paging originator.
~~5~~				~~SS starts to monitor the uplink RACH after approximately 4096 radio frames from step 2.~~
~~6~~ 5		→	CELL_UPDATE	The IE "Cell Update Cause" should be set to "Paging Response" and the IE "U-RNTI" shall be similar to the UE's U-RNTI value. The "Protocol Error Indicator" IE shall be set to FALSE.
~~7~~ 6		←	CELL_UPDATE CONFIRM	UE shall transit to CELL_FACH state after receiving this message.

Specific Message Contents

SYSTEM INFORMATION BLOCK TYPE 1 or 13 (Step 1)

The content of this message is the same in the message used in step 1 specified in Clause 8.1.1.4.3.

PAGING TYPE 1 (Step 2)

Information Element	Value/remark
Paging record list	Only 1 entry
Paging record	
- CHOICE Paging originator	UTRAN originator
- U-RNTI	
- SRNC Identity	Set to a different string from currently allocated SRNC identity
- S-RNTI	Set to an arbitrary 20-bits string
BCCH modification info	
- MIB Value Tag	2
- BCCH Modification time	408894

MASTER INFORMATION BLOCK (Step 3) and

SYSTEM INFORMATION BLOCK TYPE 1 or 13 (Step 3)

The content of this message is the same in the message used in step 3 specified in Clause 8.1.1.4.3.

PAGING TYPE 1 (Step 4)

Information Element	Value/remark
Paging record list	Only 1 entry
Paging record	
- CHOICE Paging originator	UTRAN originator
- U-RNTI	Equal to the U-RNTI assigned earlier.
- SRNC Identity	Same as the current SRNC allocated
- S-RNTI	Same as the current S-RNTI allocated
BCCH modification info	Not Present

CELL_UPDATE_CONFIRM (Step 7-6)

Information Element	Value/remark
DRX Indicator	DRx with Cell Updating

8.1.1.5.5 Test requirement

After step 6-5 the UE shall transmit a CELL_UPDATE message with “cell update cause” IE set to “paging response”. Upon receiving CELL_UPDATE_CONFIRM message, the UE shall enter the CELL_FACH state.

8.1.1.6 Paging for Notification in connected mode (URA_PCH)

8.1.1.6.1 Definition

8.1.1.6.2 Conformance requirement

When a system information block on the BCCH is modified, the message PAGING TYPE1 can be sent on the PCCH to inform UE about the changes in the URA_PCH state. The message includes the IE “BCCH Modification Information”.

Reference

3GPP TS 25.331 clause 8.1.1, 2

8.1.1.6.3 Test purpose

To confirm that the UE enters the CELL_FACH state, checks the included new value tag of the master information block, reads the SYSTEM INFORMATION after it receives a PAGING TYPE 1 message which includes the IE “BCCH Modification Information”.

8.1.1.6.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : URA_PCH state with a U-RNTI.

Test Procedure

The UE is in the URA_PCH state before it the SS starts changing SYSTEM INFORMATION BLOCK messages. SS modifies its SYSTEM INFORMATION and updates the "value tag" of both the SYSTEM INFORMATION BLOCK and of the MASTER INFORMATION BLOCK. After a while, the SS transmits a PAGING TYPE 1 message, which includes the IE" BCCH Modification Information". The UE enters the CELL_FACH state and reads the modified SYSTEM INFORMATION BLOCK. The UE shall act according to the modified message. In this testcase, the UE shall adjust it paging occasions and read the new PCCH blocks newly assigned to it under DRX mode.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	SYSTEM INFORMATION	The SS changes the SYSTEM INFORMATION when the UE is in the connected state (URA_PCH).
2		←	PAGING TYPE 1	SS transmits the message includes the IE"BCCH Modification Information".
3				The UE enters the CELL_FACH state and reads the SYSTEM INFORMATION and then the UE follows this message.

Specific Message Contents

None

8.1.1.6.5 Test requirement

After step 2 the UE shall enter the CELL_FACH state and read the SYSTEM INFORMATION message and follow it.

8.1.1.7 Paging for Connection in connected mode (CELL_DCH)

8.1.1.7.1 Definition

8.1.1.7.2 Conformance requirement

This procedure is used to transmit a PAGING TYPE 2 message from the network to selected UEs in CELL_DCH state using the dedicated control channel(DCCH). The UE listens to it and responds to this message accordingly.

Reference

3GPP TS 25.331 clause 8.1.9

8.1.1.7.3 Test purpose

To confirm that the UE responds this message after it receives a PAGING TYPE2 message which includes IE "Paging Record Type Identifier" for the UE.

8.1.1.7.4 Method of test

Initial Condition

System Simulator : 1 cell.

UE : CELL_DCH state

Test Procedure

The SS transmits a PAGING TYPE 2 message which includes a unmatched Paging Record Type Identifier in CELL_DCH state. The UE shall not respond to this message. SS pages the UE again, this time with a matched Paging Record Type Identifier but with the IE"paging cause" set to one of the spare values. UE shall respond by transmitting a RRC STATUS message on the DCCH using RLC-AM mode. Finally, SS transmits a PAGING TYPE 2 message, which includes a matched Paging Record Type Identifier. Then the UE shall responds to this message by the transmission of an upper layer message.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PAGING TYPE 2	The SS transmits the message includes an unmatched identifier, then the UE does not respond.
2		←	PAGING TYPE 2	The SS transmits the message includes a matched identifier.
3		←	RRC STATUS	The UE shall respond by reporting the protocol error to the SS.
4		←	PAGING TYPE 2	The UE shall respond to the paging message in step 2.
5				The UE shall respond to the paging message in step 2.

Specific Message Contents

PAGING TYPE 2 (Step 1)

Information Element	Value/remark
Paging cause	Terminating Call supported by the UE
CN domain identity	Domain supported by the UE
Paging Record Type Identifier	Unsupported IMSI

PAGING TYPE 2 (Step 2)

Information Element	Value/remark
Paging cause	Use one of the 3 spare values
CN domain identity	Domain supported by the UE
Paging Record Type Identifier	Supported IMSI

RRC STATUS (Step 3)

Information Element	Value/remark
Protocol error information	Checked to see if set to "Information element value not comprehended"

PAGING TYPE 2 (Step 4)

Information Element	Values/Remarks
Paging cause	Terminating Call supported by the UE
CN domain identity	Domain supported by the UE
Paging Record Type Identifier	Supported IMSI

8.1.1.7.5 Test requirement

After step 1 the UE shall not respond to the paging message on the DCCH.

After step 2 the UE shall respond to the paging message by transmitting RRC STATUS on the DCCH, stating the protocol error as "Information element value not comprehended".

After step 4 the UE shall respond to the paging message.

8.1.1.8 Paging for Connection in connected mode (CELL_FACH)

8.1.1.8.1 Definition

8.1.1.8.2 Conformance requirement

This procedure is used to transmit a PAGING TYPE 2 message from the network to selected UEs in CELL_FACH state using the dedicated control channel (DCCH). The UE shall listen to it and responds to this message accordingly.

Reference

3GPP TS 25.331 clause 8.1.9

8.1.1.8.3 Test purpose

To confirm that the UE responds this message after it receives a PAGING TYPE 2 message which includes IE "Paging Record Type Identifier" for the UE.

8.1.1.8.4 Method of test

Initial Condition

System Simulator : 1 cell

UE :CELL_FACH state.

Test Procedure

The SS transmits a PAGING TYPE 2 message, which includes an unmatched Paging Record Type Identifier in CELL_FACH state. The UE does not respond to this message. The SS transmits a PAGING TYPE2 message which includes a matched Paging Record Type Identifier. Then the UE responds to this message.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PAGING TYPE2	The SS transmits the message includes a unmatched identifier, then the UE does not respond.
2		←	PAGING TYPE2	The SS transmits the message includes a matched identifier.
3				The UE responds.

Specific Message Content

PAGING TYPE 2 (Step 1)

Use the same message content as in step 1 from 8.1.1.7.4

PAGING TYPE 2 (Step 2)

Use the same message content as in step 4 from 8.1.1.7.4

8.1.1.8.5 Test requirement

After step 1 the UE shall not respond.

After step 2 the UE shall respond.

Annex A. Default RRC Message Contents

This clause contains the default values of RRC messages, other than those specified in TS 34.108 clauses 6 and 9. Unless indicated otherwise in specific test cases, they shall be transmitted by the system simulator in RRC messages, and which are required to be received from the UE under test.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements which are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

In this clause, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

Default SYSTEM INFORMATION:

NOTE 1: SYSTEM INFORMATION BLOCK TYPE 1 (except for PLMN type "GSM-MAP"), SYSTEM INFORMATION BLOCK TYPE 8, SYSTEM INFORMATION BLOCK TYPE 9, SYSTEM INFORMATION BLOCK TYPE 10, SYSTEM INFORMATION BLOCK TYPE 14, SYSTEM INFORMATION BLOCK TYPE 15 and SYSTEM INFORMATION BLOCK TYPE 16 messages are not used.

Reason for change:

In CR-393 for TS 25.331 V3.2.0, the measurement-related changes introduced together with the affected areas in TS 34.123-1 are listed in the following paragraphs:

1. Renaming of "unlisted cells set" to "detected cells set". The default MEASUREMENT CONTROL message in Annex A and clause 8.4.1.X is modified.
2. The need requirement for "Reporting interval" IE in "Periodical reporting criteria" IE was changed from OP to MP. The "Reporting interval" IE found in MEASUREMENT CONTROL message in Annex A is set to 64 seconds – the lowest reporting rate.
3. It was explicitly stated that UE shall not resume any intra-frequency measurement when transiting from CELL_FACH to CELL_DCH state if a cell re-selection occurs whilst out of CELL_DCH state. Extra test steps are inserted into clause 8.4.1.7 to test this requirement.

In addition, some other changes are proposed here:

4. Some messages in the "Specific Message Content" part clause 8.4.1.X were found to be misaligned. These errors are rectified in this CR.

In CR-289r2 for TS 25.331 V3.2.0, "Reporting Threshold" IE was removed from "Intra-frequency measurement reporting criteria" IE as this conflicts with the threshold proposed in another CR (CR-324). The affected clauses of the 4 test cases were revised.

Also, in the case of intra-frequency measurement reporting for event 1e and 1f, "Hysteresis" IE is not necessary. Hence, in clause 8.4.1.1 and 8.4.1.7, this IE was omitted from the MEASUREMENT CONTROL and SIB11 messages.

In CR-415r1 for TS 25.331 V3.2.0, "CFN-SFN observed time difference" IE was made optional for both FDD and TDD mode UEs. This change caused a rearrangement of

the IEs in "Cell measured results" IE. The necessary modifications in TS 34.123-1 V3.0.0 were presented in this CR.

Clauses affected: 8.4.1.X, Annex A

8.4.1 Measurement Control and Report

8.4.1.1 Measurement Control and Report: Intra-frequency measurement for transition from idle mode to CELL_DCH state

8.4.1.1.1 Definition

8.4.1.1.2 Conformance requirement

After a state transition from idle mode to CELL_DCH state, the UE shall continue to monitor the list of neighbouring cells which is specified in the SYSTEM INFORMATION BLOCK TYPE 11 (or 12) messages on BCCH. The UE shall send a MEASUREMENT REPORT message when reporting criteria are satisfied. During CELL_DCH state, if the UE receives a MEASUREMENT CONTROL message, it shall terminate existing monitoring activities for the neighbouring cells previously known from SYSTEM INFORMATION BLOCK TYPE 11 (or 12) messages. It shall perform the measurement and reporting tasks based on the latest MEASUREMENT CONTROL message received.

Reference

3GPP TS 25.331 clause 8.4.1.9

8.4.1.1.3 Test Purpose

To confirm that the UE continue to monitor CPICH RSCP measurement quantity of the neighbour cells after it has entered the CELL_DCH state from idle mode. When the criteria specified in BCCH have been met, it shall report the measurements to the SS using MEASUREMENT REPORT messages. To confirm that in CELL_DCH state, the UE respond to a modification of measurement criteria and adjust its measurement and reporting mechanism accordingly. To confirm that the UE terminates monitoring and measurement activities for the neighbour cells found in SYSTEM INFORMATION BLOCK TYPE 11 (or 12) message, after it has received a MEASUREMENT CONTROL message which specifies the measurement type to be "intra-frequency measurement". To confirm that the UE restart the monitoring and reporting activities based on the last MEASUREMENT CONTROL message received.

8.4.1.1.4 Method of test

Initial Condition

System Simulator : 2 cells – Cell 1 is active and the downlink P-CPICH has a transmission level (RSCP) of – 40 dBm, cell 2 is also active but with a P-CPICH transmission power 10dB below cell 1.

UE : idle state after having successfully camped onto cell 1.

Test Procedure

The UE is initially at idle mode and has selected cell 1 for camping. The SYSTEM BLOCK TYPE 11 message is modified with respect to the default settings to prevent reporting of CFN-SFN difference and also to include cell 2 into the monitored neighbour cell list. The key measurement parameters are as follow: measurement type = "intra-frequency measurement", measurement quantity = "CPICH RSCP", report criteria = "periodic reporting criteria", reporting interval = "12 seconds".

SS pages the UE with the cause "Incoming circuit-switched call". The UE shall transmit a RRC CONNECTION REQUEST message on the CCCH, SS replies with RRC CONNECTION SETUP message and allocates uplink and downlink DPDCH physical resources to the UE. UE then moves to CELL_DCH state. After approximately 12 seconds, the UE shall transmit a MEASUREMENT REPORT message with measurement readings from cell 2. SS waits for 25 seconds after the sending of RRC CONNECTION SETUP message to verify that 2 consecutive MEASUREMENT REPORT messages are received.

Then SS modifies the contents of MASTER INFORMATION BLOCK and SYSTEM INFORMATION BLOCK TYPE 12 messages. The measurement parameters for cell 2 are changed in the following manner: report criteria = "event-trigger", event identity = "1f", reporting threshold = "-65 dBm". SS then begins to decrease the transmission power of P-CPICH in cell 2 progressively at the rate of 0.5dB/sec. SS checks to see that no

MEASUREMENT REPORT messages are sent within the next 12 seconds (which is due to periodic reporting). The UE shall detect this change and discontinue the periodic reporting of RSCP value estimation from cell 2. After approximately 35 seconds later, the UE shall transmit MEASUREMENT REPORT message to indicate that the RSCP of cell 2 has reached the threshold specified. In this message, the correct measurement identity shall be stated. Finally, SS sends a MEASUREMENT CONTROL message to request a periodic reporting of measurement quantity P-CPICH Ec/No from cell 2. The reporting interval is set to 32 seconds. Within the MEASUREMENT CONTROL message, a new measurement identity is assigned. After receiving this message, the UE shall stop reporting quantity P-CPICH RSCP of cell 2. Moreover, the UE shall start to transmit MEASUREMENT REPORT messages with the contents pertaining to new measurement identity on cell 2's P-CPICH Ec/No.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	SYSTEM INFORMATION BLOCK TYPE 11	The UE is idle mode and camped onto cell 1. Cell 2 is also active but the P-CPICH has a RSCP 10dB below that of cell 1. SYSTEM INFORMATION TYPE 12 to be transmitted is different from the default settings (see specific message contents)
2		←	PAGING TYPE 1	SS sends this message to page for the UE.
3		→	RRC CONNECTION REQUEST	
4		→	RRC CONNECTION SETUP	SS allocates DPCH physical channels to UE
5		→	RRC CONNECTION COMPLETE	UE transmits this message to acknowledge the SETUP message and moves to CELL_DCH state.
6		→	MEASUREMENT REPORT	SS waits for 25 seconds. It shall receive 2 consecutive MEASUREMENT REPORT messages
7		←	MASTER INFORMATION BLOCK SYSTEM INFORMATION BLOCK TYPE 12	SS modifies the contents of system information, so that measurement for cell 2 is changed to "event trigger" with "event identity" set to 1f. SS then reduces the transmission power of cell 2's P-CPICH progressively by 0.5dB/sec.
8				SS monitors the DCCH for the next 12 seconds to make sure that no further MEASUREMENT REPORT messages are transmitted.
9		→	MEASUREMENT REPORT	UE shall transmit this message approximately 35 seconds after step 7, as its internal estimation of the RSCP of cell 2 has dropped below the threshold.

10	←	MEASUREMENT CONTROL	A new measurement identity is assigned, with the reporting quantity changed to cell 2's P-CPICH Ec/No
11	→	MEASUREMENT REPORT	SS verifies that UE transmits MEASUREMENT REPORT messages periodically to report the P-CPICH Ec/No value of cell 2.

Specific Message Contents

All messages indicated below shall use the same content as described in default message content, with the following exceptions:

8.4.1.1.5

Test Requirement

After step 5 the UE shall start to transmit MEASUREMENT REPORT message. The measurement quantity "CPICH RSCP" shall be reported to the SS at 12 seconds interval.

After step 7 UE shall not transmit any MEASUREMENT REPORT messages within 12 seconds after SS has modified the MASTER INFORMATION BLOCK and SYSTEM INFORMATION BLOCK TYPE 12 messages.

The UE shall transmit a MEASUREMENT REPORT message roughly 35 seconds after step 7, to report that the RSCP value for cell 2 has dropped below the threshold.

After step 10 the UE shall transmit MEASUREMENT REPORT messages at 32 seconds interval, with the IE "Measurement Identity" set to 3. The message shall also include an estimation of cell 2's P-CPICH Ec/No value.

8.4.1.2 Measurement Control and Report: Inter-frequency measurement for transition from idle mode to CELL_DCH state

8.4.1.2.1 Definition

8.4.1.2.2 Conformance requirement

After entering CELL_DCH state from idle mode, the UE shall discontinue the monitoring of the list of neighbouring cells assigned in the SYSTEM INFORMATION BLOCK TYPE 12 (or 11) messages on BCCH.

Reference

3GPP TS 25.331 clause 8.4.1.9

8.4.1.2.3 Test Purpose

To confirm that the UE terminates the monitoring of the list of neighbouring cell assigned in the IE "inter-frequency cell info" in SYSTEM INFORMATION BLOCK TYPE 12 (or 11) messages, after it enters CELL_DCH state from idle mode.

8.4.1.2.4 Method of test

Initial Condition

System Simulator : 2 cells – Cell 1 is active and has a downlink transmission level (RSCP) of –50 dBm, cell 2 is also active but with a transmission power 20dB below cell 1. The carrier frequency of cell 2 in the uplink direction is 1 UARFCN above that of cell 1, and the downlink carrier is 1 UARFCN below that of cell 1.

UE : idle state by has successfully camped onto cell 1.

Test Procedure

The UE is initially at idle mode and has selected cell 1 for camping. The SYSTEM BLOCK TYPE 12 message is modified with respect to the default settings to prevent reporting of CFN-SFN difference and also to include cell 2 into the monitored neighbour cell list. The key measurement parameters are as follow: measurement type = "inter-frequency measurement", measurement quantity = "CPICH RSCP".

SS pages the UE with the cause "Incoming circuit-switched call". The UE shall transmit a RRC CONNECTION REQUEST message on the CCCH, SS replies with RRC CONNECTION SETUP message and allocate uplink and downlink DPDCH physical resources to the UE. UE then moves to CELL_DCH. The UE shall not transmit any MEASUREMENT REPORT messages, which pertain to measurement readings from cells belonging to the monitored set.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	SYSTEM INFORMATION BLOCK TYPE 12	The UE is idle mode and camped onto cell 1. Cell 2 is also active but has transmission power 20dB below that of cell 1. SYSTEM INFORMATION TYPE 12 to be transmitted is different from the default settings (see specific message contents)
2		←	PAGING TYPE 1	SS sends this message to page for the UE.
3		→	RRC CONNECTION REQUEST	
4		→	RRC CONNECTION SETUP	SS allocates DPDCH physical channels to UE, using compressed mode format
5		→	RRC CONNECTION COMPLETE	UE transmits this message to acknowledge the RRC CONNECTION SETUP message and moves to CELL_DCH state.
6				SS raises the transmission power of cell 2 by 10dB. SS checks to see that no MEASUREMENT REPORT messages are sent from UE to cell 1.

Specific Message Content

All messages indicated below shall use the same content as described in default message content, with the following exceptions:

8.4.1.2.5 Test Requirement

After step 5 the UE shall not transmit any MEASUREMENT REPORT messages pertaining to the measurement of CPICH Ec/No quantity from cell 2.

8.4.1.3 Measurement Control and Report: Intra-frequency measurement for transition from idle mode to CELL_FACH state

8.4.1.3.1 Definition

8.4.1.3.2 Conformance requirement

During a transition from idle mode to CELL_FACH state, the UE shall start to monitor neighbouring cells listed in the IE "Intra-frequency cell info" received in SYSTEM INFORMATION BLOCK TYPE 12 (or 11). If a measurement report criteria is also specified, the UE shall store this information and apply these rules when deciding to transmit MEASUREMENT REPORT messages during a subsequent transition to CELL_DCH state. If reporting during RACH transmissions are dictated by the UTRAN, the UE shall append the relevant measurement information when sending messages on RACH (e.g. RRC CONNECTION REQUEST and CELL UPDATE).

Reference

3GPP TS 25.331, clause 8.4.1.9

8.4.1.3.3 Test Purpose

To confirm that the UE begins to monitor the neighbouring cells in the monitored list after it has entered the CELL_FACH state. The list of neighbouring cell can be known from SYSTEM INFORMATION BLOCK TYPE 12 (or 11) messages. If information regarding the intra-frequency measurement report criteria is also broadcasted, the UE shall save this information and apply the criteria during a subsequent transition to CELL_DCH state. If RACH measurement reporting is dictated in SYSTEM INFORMATION BLOCK TYPE 12 (or 11) messages, the UE shall include these measurements when transmitting on the RACH channel.

8.4.1.3.4 Method of test

Initial Condition

System Simulator : 2 cells – both cell 1 and cell 2 are active. Cell 2 is transmitting at 15 dB below cell 1.

UE : idle state and camped onto cell 1.

Test Procedure

The UE is initially at idle mode and has selected cell 1 for camping. The SYSTEM BLOCK TYPE 12 message is modified with respect to the default settings to prevent reporting of CFN-SFN difference and also to include cell 2 into the monitored neighbour cell list. The key measurement parameters are as follow: measurement type = “intra-frequency measurement”, measurement quantity = “CPICH Ec/No”, report criteria = “periodic reporting criteria”, reporting interval = “12 seconds”. In the system information message, reporting of CPICH Ec/No is also required for intra-frequency reporting when transmitting RACH messages to cell 1.

SS pages the UE with the cause “Incoming packet-switched call”. The UE shall transmit a RRC CONNECTION REQUEST message on the CCCH, SS replies with RRC CONNECTION SETUP message and allocates PRACH and S-CCPCH (FACH) physical channels for uplink and downlink use. UE shall then enter CELL_FACH state. SS waits until timer T305 expires, the UE shall send a CELL UPDATE message including the measurement reading of cell 2's CPICH Ec/No values. SS then reply with CELL UPDATE CONFIRM message without changing the physical channel resources.

In the next sequence, SS transmits PHYSICAL CHANNEL RECONFIGURATION message, and allocates DPDCH channels to the UE. The UE shall transit to CELL_DCH state and send a MEASUREMENT REPORT message, correctly stating the measurement identity. The measurement identity indicated shall match the value that was previously broadcasted on SYSTEM INFORMATION BLOCK TYPE 12 (or 11) when the UE was still in idle mode.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	SYSTEM INFORMATION BLOCK TYPE 2, SYSTEM INFORMATION BLOCK TYPE 12	The UE is idle mode and camped onto cell 1. Cell 2 is also active but has transmission power 15dB below that of cell 1. SYSTEM INFORMATION TYPE 2 and 12 to be transmitted are different from the default settings (see specific message contents)
2		←	PAGING TYPE 1	SS sends this message to page for the UE, stating the cause as an incoming packet-switched call.
3		→	RRC CONNECTION REQUEST	The Ec/No value of P-CPICH of Cell 1 should be reported.
4		←	RRC CONNECTION SETUP	SS allocates common physical channels to UE.
5		→	RRC CONNECTION COMPLETE	UE shall enter CELL_FACH state, transmits this message to acknowledge the SETUP message.

6			SS waits for 5 minutes (for the expiry of T305 timer), so that UE will initiate a periodic cell updating procedure.
7	→	CELL UPDATE	This message shall contain measurement readings of CPICH Ec/No for cell 1.
8	←	CELL UPDATE CONFIRM	SS does not change the physical channel allocation.
9	←	PHYSICAL CHANNEL RECONFIGURATION	SS assigns DPCH physical resources to the UE, but keeping parameters for transport channels and RBs unchanged.
10	→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall transit to CELL_DCH state after sending this message.
11	→	MEASUREMENT REPORT	UE shall begin to report cell 2's CPICH Ec/No value periodically at 12 seconds interval. The measurement identity shall match that broadcasted in step 1

8.4.1.3.5 Test Requirement

After step 3 the UE shall send RRC CONNECTION REQUEST message in response to the paging message sent by the SS, which includes reading of the current cell's CPICH Ec/No value.

After step 5 the UE shall not transmit any MEASUREMENT REPORT messages.

After step 6 the UE shall initiate cell updating procedure by transmitting CELL UPDATE message. In this message, the cause shall be set to "periodic cell updating". It shall include measurement readings for the current cell (cell 1) CPICH Ec/No measurement quantity.

After step 10 the UE shall move to CELL_DCH state and transmit MEASUREMENT REPORT messages at 12 seconds interval. In these messages, neighbouring cell 2's CPICH Ec/No value shall be reported. The IE "measurement identity" in this message shall match the IE "Intra-frequency measurement identity" found in SYSTEM INFORMATION BLOCK TYPE 12 messages transmitted in step 1.

8.4.1.4 Measurement Control and Report: Inter-frequency measurement for transition from idle mode to CELL_FACH state

8.4.1.4.1 Definition

8.4.1.4.2 Conformance requirement

After entering CELL_FACH state from idle mode, the UE shall start to monitor the list of "inter-frequency" neighbouring cells assigned in the SYSTEM INFORMATION BLOCK TYPE 12 (or 11) messages on BCCH/FACH.

Reference

3GPP TS 25.331, clause 8.4.1.10

8.4.1.4.3 Test Purpose

To confirm that the UE begins to monitor the list of neighbouring cell assigned in the IE "inter-frequency cell info" in SYSTEM INFORMATION BLOCK TYPE 12 (or 11) messages, after it enters CELL_FACH state from idle mode. However, it shall not transmit any MEASUREMENT REPORT messages to report measured results for inter-frequency cells.

8.4.1.4.3 Method of test

Initial Condition

System Simulator : 2 cells – Cell 1 is active and has a downlink transmission level for CPICH RSCP at -40 dBm, cell 2 is also active but with a transmission power 10dB below cell 1. The carrier frequency of cell 2 in

the uplink direction is 1 UARFCN above that of cell 2, and the downlink carrier is 1 UARFCN below that of cell 1.

UE : idle state and has successfully camped onto cell 1.

Test Procedure

The UE is initially at idle mode and has selected cell 1 for camping. The SYSTEM BLOCK TYPE 12 message is modified with respect to the default settings to prevent reporting of CFN-SFN difference and also to include cell 2 into the monitored neighbour cell list for inter-frequency measurement type. The key measurement parameters are as follow: measurement type = "inter-frequency measurement", measurement quantity = "CPICH Ec/No".

SS pages the UE with the cause "Incoming packet-switched call". The UE shall transmit a RRC CONNECTION REQUEST message on the CCCH, SS replies with RRC CONNECTION SETUP message and allocates PRACH channel in the uplink and S-CCPCH(FACH) channel on the downlink to the UE. UE then moves to CELL_FACH. The UE shall not transmit any MEASUREMENT REPORT messages, which pertain to measurement readings from inter-frequency cells belonging to the monitored set. SS decreases the transmission power of CPICH in cell 1 by 10dB. At the same time, it raises the corresponding downlink transmission power of cell 2 by 10dB. This is expected to trigger a cell reselection in the UE. The UE shall send CELL UPDATE message to report this event. Upon receiving this message, SS replies with the default CELL UPDATE CONFIRM message.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	SYSTEM INFORMATION BLOCK TYPE 12	The UE is idle mode and camped onto cell 1. Cell 2 is also active but has transmission power 10dB below that of cell 1. SYSTEM INFORMATION TYPE 12 to be transmitted is different from the default settings (see specific message contents)
2		←	PAGING TYPE 1	SS sends this message to page for the UE.
3		→	RRC CONNECTION REQUEST	
4		←	RRC CONNECTION SETUP	SS allocates PRACH and S-CCPCH resources to UE
5		→	RRC CONNECTION COMPLETE	UE transmits this message to acknowledge the SETUP message and moves to CELL_FACH state.
6				SS checks to see that no MEASUREMENT REPORT messages are sent from UE to cell 1.
7				SS decreases the transmission power of cell 1 by 10dB and increases cell 2's downlink power by 10dB.
8		→	CELL UPDATE	UE shall detect that cell 2 has become stronger than cell 1. It sends this message after reselecting to cell 2
9		←	CELL UPDATE CONFIRM	Use default message.

Specific Message Content

All messages indicated below shall use the same content as described in default message content, with the following exceptions:

PAGING TYPE 1

For this message, use the same message contents as in step 2 of clause 8. 4.1.3.3.

RRC CONNECTION REQUEST

Information Element	Value/Remarks
Establishment cause	Check to see if set to "Paging Response":
Measured results on RACH	Check to see if this IE is absent

RRC CONNECTION SETUP

Use the message sub-type in default message content defined in TS 34.108 Clause 8, which is marked as "Transition to CELL_FACH".

CELL UPDATE

Information Element	Value/Remarks
U-RNTI	Check to see if same to value as in PAGING TYPE 1 message
Integrity check info	Check to see if it is absent
AM_RLC error indication (for C-plane)	Check to see if it is set to FALSE
AM_RLC error indication (for U-plane)	Check to see if it is set to FALSE
Cell update cause	Check to see if it is set to "Cell Reselection"
Protocol error info	Check to see if it is absent or set to FALSE
Measured results on RACH	Check to see if it is absent
Protocol error information	Check to see if it is absent

CELL UPDATE CONFIRM

Use the message sub-type in default message content defined in TS 34.108 Clause 8.

8.4.1.4.5 Test Requirement

After step 5 the UE shall not transmit any MEASUREMENT REPORT messages pertaining to the measurement of CPICH Ec/No quantity for cell 2.

After step 7 the UE shall reselect to cell 2 and transmit a CELL UPDATE message on the uplink CCCH of cell 2.

8.4.1.5 Measurement Control and Report: Intra-frequency measurement for transition from CELL_DCH to CELL_FACH state

8.4.1.5.1 Definition

8.4.1.5.2 Conformance requirement

After entering CELL_FACH state from CELL_DCH state, the UE shall terminate intra-frequency type measurement reporting originating from a previous MEASUREMENT CONTROL message. If indicated in the system information messages, the UE shall start to monitor neighbouring cells. The UE shall apply the reporting criteria specified in system information during a subsequent return to CELL_DCH state. If requested to perform measurement reporting on RACH channels, the UE shall append the measured results when transmitting uplink RACH messages.

Reference

3GPP TS 25.331, clause 8.4.1.7

8.4.1.5.3 Test Purpose

To confirm that the UE ceases to perform intra-frequency measurement specified in a previously received MEASUREMENT CONTROL message, when it moves from CELL_DCH state to CELL_FACH state. To confirm that the UE read the system information when in CELL_FACH state and starts to monitor the neighbouring cells as indicated in system information messages. To confirm that the UE performs measurements on uplink RACH channel and append the measured results in RACH messages, when requested in the system information messages.

8.4.1.5.4 Method of test

Initial Condition

System Simulator: 3 cells – Cell 1 and cell 2 are active, but the transmitter of cell 3 is switched off. Cell 1 is transmitting its CPICH (RSCP) at 20 dB above cell 2. The downlink UTRA carriers transmission strength for cell 1 is identical to that of cell 2.

UE: idle state and camped onto cell 1.

Test Procedure

The UE is initially in idle mode and has selected cell 1 as the current cell. SYSTEM INFORMATION BLOCK TYPE 12 message is modified from its default message contents, in order to prevent the reporting of CFN-SFN difference. No measurement requirements are specified for the UE in system information block (type 11 and 12) messages.

SS then prompts the test operator to initiate an outgoing call. When UE transmits a RRC CONNECTION REQUEST message on RACH, SS replies with RRC CONNECTION SETUP message. Uplink and downlink DPDCH physical channels are allocated. Upon receiving RRC CONNECTION SETUP message, the UE shall transmit RRC CONNECTION SETUP COMPLETE message on DCCH and then moves to CELL_DCH state. SS then sends a MEASUREMENT CONTROL message to UE. In this message, the SS requests the establishment of an intra-frequency measurement, based on an estimation of cell 2's CPICH Ec/No. At the same time, reporting of cell 2's CPICH is commanded with the reporting criteria set to "periodic reporting" and reporting interval set to 16 seconds. The UE shall start transmitting MEASUREMENT REPORT messages at 16 seconds interval corresponding to the requested reporting event.

SS transmits PHYSICAL CHANNEL RECONFIGURATION message, triggering a switch of transport channels from DCH/DCH to RACH/FACH. After receiving this message, the UE shall reconfigure itself and replies with PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on RACH. SS acknowledges this message and the UE shall move to CELL_FACH state and read the system information messages. SS monitors the uplink to verify that no MEASUREMENT REPORT messages are received. In SYSTEM INFORMATION BLOCK TYPE 12 message, SS includes cell 3 into the neighbour cells monitoring list. IE "Intra-frequency reporting quantity for RACH Reporting" and IE "Maximum number of Reported cells on RACH" are also specified in this message. An event-triggered (event type 1a) reporting criterion is specified for intra-frequency measurements. The transmission strength of CPICH for cell 3 is increased until it exceeds the lower bound of the reporting range specified. SS then pages for the UE using PAGING TYPE 1 message. The UE shall respond with a CELL UPDATE message, which comprises CPICH Ec/No measurements for cell 1 and 3. Upon the receipt of CELL UPDATE message, SS replies with CELL UPDATE CONFIRM message. This message does not change the physical resource nor allocate any new RNTI identities. The UE shall remain in CELL_FACH state. SS transmits PHYSICAL CHANNEL RECONFIGURATION message again, this time specifying dedicated physical resources for both uplink and downlink direction. The UE shall then send PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and return to CELL_DCH state. SS listens to the uplink DCCH for MEASUREMENT REPORT messages. SS verifies that all messages received pertain to the periodic measured value of cell 2's CPICH Ec/No value. UE shall not send any reports containing the measured values of cell 3.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1				UE is initially in idle mode and test operator is asked to make an outgoing call.
2		→	RRC CONNECTION REQUEST	
3		←	RRC CONNECTION SETUP	Uplink and downlink DPCH resources are allocated.
4		→	RRC CONNECTION SETUP COMPLETE	UE shall move to CELL_DCH state.
5		←	MEASUREMENT CONTROL	SS requests for measurement and reporting of cell 2's CPICH Ec/No value.
6		→	MEASUREMENT REPORT	UE shall send periodic report at 16 seconds interval. SS waits for 2 consecutive reports before proceeding to step 7.
7		←	PHYSICAL CHANNEL RECONFIGURATION	SS switches the physical resources to common physical channels.
8		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall reconfigure its uplink and downlink channels before transiting to CELL_FACH state.
9		←	SYSTEM INFORMATION BLOCK TYPE 12	SS includes cell 3 into the monitored neighbour cell list. SS waits for 1 minutes and verifies that no MEASUREMENT REPORT messages are received. Cell 3 is switched on, and SS adjusts the transmission power for CPICH such that its Ec/No falls into the report range specified.
10		←	PAGING TYPE 1	SS pages for UE using the assigned U-RNTI identity.
11		→	CELL UPDATE	UE shall transmit this message with measured results on RACH channels for cell 1 and 3 appended.
12		←	CELL UPDATE CONFIRM	No change in physical resource allocation and RNTI identities.
13		←	PHYSICAL CHANNEL RECONFIGURATION	Allocates dedicated physical channels.
14		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall transit to CELL_DCH state.
15		←	MEASUREMENT REPORT	UE shall continue to report cell 2's CPICH Ec/No value on a periodic basis.

PHYSICAL CHANNEL RECONFIGURATION (Step 13)

Use the same message sub-type found in Clause 8.1 of TS34.108, which is entitled "Packet to CELL_DCH from CELL_FACH in PS)"

MEASUREMENT REPORT (Step 15)

The contents of this message should be the same as in step 6.

8.4.1.5.5 Test Requirement

After step 5, the UE shall start to transmit MEASUREMENT REPORT messages at 16 seconds interval. The message shall contain the measured result of cell 2's CPICH Ec/No value.

After step 8, the UE shall not send any MEASUREMENT REPORT messages which report quantities requested in MEASUREMENT CONTROL messages in step 5.

After step 10, the UE shall respond to the paging and transmit a CELL UPDATE message. In this message, the measured values CPICH Ec/No for cell 1 and cell 3 shall be included.

After step 14, the UE shall revert to the original measurement reporting mechanism and send MEASUREMENT REPORT messages containing estimates for cell 2's CPICH Ec/No value. The UE shall not transmit any MEASUREMENT REPORT messages, which indicate measurement quantities of cell 3.

8.4.1.6 Measurement Control and Report: Inter-frequency measurement for transition from CELL_DCH to CELL_FACH state

8.4.1.6.1 Definition

8.4.1.6.2 Conformance requirement

When transiting from CELL_DCH state to CELL_FACH state, the UE shall terminate all reporting activities related to inter-frequency measurements. After reaching CELL_FACH state, the UE shall begin to monitor neighbouring cells listed in the IE "inter-frequency cell info" of the system information type 12 message.

Reference

3GPP TS 25.331, clause 8.4.1.7

8.4.1.6.3 Test Purpose

To verify that UE ceases to transmit MEASUREMENT REPORT messages when moving from CELL_DCH state to CELL_FACH, even if it has detected that reporting criteria have been satisfied in CELL_FACH state. To verify that the UE extracts information for inter-frequency measurement from system information messages after reaching CELL_FACH state.

8.4.1.6.4 Method of test

Initial Condition

SS: 2 cells – Cell 1 is active while cell 2 is inactive. Cell 2 is allocated a frequency which is 1 UARFCN away from cell 1 in both uplink and downlink directions. The applicable radio conditions for cell 1 and cell 2 are as follow:

	Cell 1	Cell 2
UARFCN (N_u and N_d)	Channel 1	Channel 2
CPICH RSCP	-75 dBm	-85 dBm
$Q_{rxlevmin}$	-90 dBm	-90 dBm
S	15	5

UE: idle state and camped onto cell 1.

Test Procedure

The UE is initially in idle mode. SS pages the UE with the establishment cause set to "Terminating PS Data Call". The SYSTEM INFORMATION TYPE 12 message is modified so that no measurement tasks are to be performed by the UE. The UE shall respond to the paging by sending a RRC CONNECTION REQUEST message on the PRACH. Upon receiving this message, SS allocates dedicated DPDCH physical channels to the UE by transmitting RRC CONNECTION SETUP message. The UE shall reply by transmitting a RRC CONNECTION SETUP COMPLETE message. SS then checks the IE "Measurement Capability" of this message and verifies that the UE is capable of performing inter-frequency measurements under FDD mode. After the confirmation of the UE inter-frequency measurement ability, SS transmits PHYSICAL CHANNEL RECONFIGURATION message. In this message, information related to the radio bearers and uplink/downlink radio resources remain unchanged as compared to the equivalent IEs found in RRC CONNECTION SETUP message. The only difference concerns IE "DPCH compressed mode info", which indicates that the UE shall apply the given parameters for compressed mode operations. The UE shall return PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to acknowledge that compressed mode mechanism can be exercised.

SS then send a MEASUREMENT CONTROL message to the UE, specifying that cell 2 be the measurement object for inter-frequency type measurement. The periodic reporting criterion is selected for this measurement. SS waits for 8 seconds to allow the periodic timer to expire. The UE shall send a MEASUREMENT REPORT message containing measured result of cell 2's reporting quantity (CPICH E_c/N_0). SS transmits PHYSICAL CHANNEL RECONFIGURATION message again, requesting the UE to switch its uplink and downlink DPDCH to common physical channels. The UE shall return PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and then moves to CELL_FACH state. SS waits for another 8 seconds to detect any possible uplink MEASUREMENT REPORT messages as a result of inter-frequency measurements. SS then increases the transmission power of cell 2 by 20 dBm. SS waits for [x] seconds to allow the UE to perform cell re-selection. The UE shall transmit a CELL UPDATE message

on the uplink CCCH of cell 2, specifying the cause as “cell re-selection”. SS replies with CELL UPDATE CONFIRM message.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1				UE is initially in idle mode and camped onto cell 1. SYSTEM INFORMATION BLOCK TYPE 12 is redefined, disabling all measurement and reporting activities.
2		←	PAGING TYPE 1	SS pages UE with cause set to “incoming circuit-switched call”
3		→	RRC CONNECTION REQUEST	
4		←	RRC CONNECTION SETUP	Uplink and downlink DPDCH resources are allocated.
5		→	RRC CONNECTION SETUP COMPLETE	UE shall indicate that it's capable of performing inter-frequency measurement for FDD mode.
6		←	PHYSICAL CHANNEL RECONFIGURATION	SS instructs UE to begin compressed mode operation.
7		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall enter CELL_DCH state.
8		←	MEASUREMENT CONTROL	SS indicates that cell 2 be monitored. SS waits for 8 seconds.
9		→	MEASUREMENT REPORT	UE shall transmit this message to report cell 2's CPICH Ec/No value.
10		←	PHYSICAL CHANNEL RECONFIGURATION	SS changes the physical channel allocation to common channel configuration.
11		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall move to CELL_FACH state.
12				SS waits for 8 seconds to verify that no MEASUREMENT REPORT messages are detected.
13				SS changes SYSTEM INFORMATION BLOCK TYPE 12 message to request that cell 2 be included in neighbour cell list for inter-frequency measurements.
14				SS increases the transmission power of cell 2 by 20 dBm, and then wait for a [x] seconds to allow the UE to re-select to a new cell.
15		→	CELL UPDATE	UE shall detect that cell 2 has become the best cell and then perform cell re-selection procedure.
16		←	CELL UPDATE CONFIRM	SS acknowledges the cell 2 is updated.

Notes:

The value [x] seconds is TBD, after the cell re-selection duration is determined from TS 25.304.

Measured results on RACH	Check to see if it is absent
Protocol error information	Check to see if it is absent

CELL UPDATE CONFIRM

Use the same message sub-type found in Clause 8.1 of TS34.108.

8.4.1.6.5 Test Requirement

After step 4 the UE shall transmit RRC CONNECTION SETUP COMPLETE message with the IE “Measurement capability”, indicating that both uplink and downlink inter-frequency measurements for FDD mode are supported.

After step 8 the UE shall transmit MEASUREMENT REPORT message to report cell 2’s CPICH Ec/No value.

After step 11 the UE shall stop sending MEASUREMENT REPORT messages which contain inter-frequency measured results for cell 2’s CPICH Ec/No value.

After step 14 the UE shall transmit CELL UPDATE message to inform that a cell reselection to cell 2 has occurred.

8.4.1.7 Measurement Control and Report: Intra-frequency measurement for transition from CELL_FACH to CELL_DCH state

8.4.1.7.1 Definition

8.4.1.7.2 Conformance requirement

When transiting from CELL_FACH state to CELL_DCH state, the UE shall resume intra-frequency measurement if it has previously stored such a measurement context in CELL_DCH state. If the measurement context indicates reporting in CELL_DCH state, the UE shall re-start the associated reporting activities. In the case when the UE is not assigned any measurement tasks, it shall monitor the list of neighbouring cells stated in system information messages. It shall transmit MEASUREMENT REPORT messages when the reporting criteria (if specified in system information messages) are met. When in CELL_DCH state, the UE shall override existing measurement and reporting contexts extracted from system information messages, if a MEASUREMENT CONTROL message is received. The UE shall then apply the new measurement and reporting parameters accordingly. If the UE has performed a cell reselection whilst out of CELL_DCH state, the UE shall not re-start intra-frequency measurement previously designated to be resumed in CELL_DCH state.

Reference

3GPP TS 25.331, clause 8.4.1.8

8.4.1.7.3 Test Purpose

To confirm that UE resumes intra-frequency measurement and reporting when it enters CELL_DCH state from CELL_FACH state, if such a condition exists before entering CELL_DCH state. To confirm that the UE continues to monitor the neighbour cells intra-frequency measurement list found in system information messages, if no previous assigned measurement is present. To confirm that the UE transmits MEASUREMENT REPORT messages if reporting conditions stated in system information messages have

been satisfied. To confirm that a subsequent MEASUREMENT CONTROL message received in CELL_DCH state

8.4.1.7.4 Method of test

Initial Condition

System Simulator: 3 cells –All 3 are all active. The transmission power (RSCP) for CPICH of the 3 cells are as follow: cell 1 (-40dBm), cell 2 (-55dBm) and cell 3 (-70dBm).

UE: CELL_FACH in cell 1.

Test Procedure

The UE is brought to CELL_FACH state, after the test operator has successfully initiated a packet-switched data call. The SYSTEM INFORMATION BLOCK TYPE 12 message is changed with respect to the default message contents, specifying that cell 2 is to be included in the neighbouring cell list for intra-frequency measurement. Event 1e is selected in IE"Intra-frequency measurement reporting criteria".

SS send a PHYSICAL CHANNEL RECONFIGURATION message to UE, allocating dedicated physical channels on both uplink and downlink direction. Upon receiving such a message, the UE shall return PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and move to CELL_DCH state. The UE shall send MEASUREMENT REPORT messages to indicate that the measured result of cell 2, as the measurement quantity has exceeded the threshold value in system information message. After receiving this message, SS transmits MEASUREMENT CONTROL message in which it specifies that intra-frequency measurement for cell 3 shall be performed. The reporting criteria are the same as in SYSTEM INFORMATION BLOCK TYPE 12 message, except that the reporting threshold is lowered. After receiving such a message, the UE shall transmit another MEASUREMENT REPORT message. SS verifies that only measurement reading for cell 3 is included and no IEs shall be present, which pertaining to measurement quantity in cell 2.

Next, SS sends PHYSICAL CHANNEL RECONFIGURATION message to UE. In this message, the physical channel resources are switched to common physical channels – PRACH (RACH) for the uplink and S-CCPCH (FACH) for the downlink. UE shall reply with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE and transits to CELL_FACH. SS checks the uplink RACH to confirm that no MEASUREMENT REPORT messages are received. SS then transmits another MEASUREMENT CONTROL message. The key parameters employed are: measurement type = 'intra-frequency measurement', measurement object = 'cell 2', reporting criteria = 'periodic reporting', measurement validity = 'resume', UE state for reporting = 'CELL_DCH'. SS waits for 10 seconds before sending a PHYSICAL CHANNEL RECONFIGURATION message, comprising DPDCH physical channels. UE shall then return to CELL_DCH state, start to monitor the neighbour cell specified by the SS while the UE was in CELL_FACH state. The UE shall resume periodic reporting of cell 2's CPICH RSCP measured results by sending MEASUREMENT REPORT messages. Following the reception of the MEASUREMENT REPORT message, SS commands the UE to stop performing measurements and generation of reports for cell 2. SS then verifies that no MEASUREMENT REPORT messages are detected.

In the next sequence, SS dispatches a PHYSICAL CHANNEL RECONFIGURATION message on the downlink DCCH. In this message, common physical channel resources are assigned to the UE. The UE shall respond with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and then transit to CELL_FACH state. Then SS sends a MEASUREMENT CONTROL message, with the content identical to the previous message of the type transmitted in step 10. This effectively signifies that the UE shall re-start the intra-frequency measurement and reporting activities related to cell 2, when it subsequently manages to return to CELL_DCH state. Following this, SS increases the P-CPICH RSCP of cell 3 to -45dBm and shortly after this, stops the transmission of all downlink physical channel of cell 1. SS then waits for T305 to expire. The UE shall discover a "out-of-service" condition and initiate a cell re-selection procedure. This can be verified by the SS receiving a CELL UPDATE message on the uplink CCCH, with the "cell update cause" IE set to "cell reselection". SS sends a PHYSICAL CHANNEL RECONFIGURATION message on the downlink DCCH, assigning DPCH channel in both uplink and downlink directions. The UE shall respond with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and then return to CELL_FACH state. SS checks that the UE does not generate any MEASUREMENT REPORT messages on the uplink DCCH.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1				UE is initially in CELL_FACH after having successfully connected a packet-switched data call. SYSTEM INFORMATION TYPE BLOCK TYPE 12 message is changed according to the descriptions in Specific Message Contents.
2		←	PHYSICAL CHANNEL RECONFIGURATION	Allocates DPDCH physical channels.
3		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall move to CELL_DCH state.
4		←	MEASUREMENT REPORT	Reports cell 2's RSCP value.
5		→	MEASUREMENT CONTROL	Specifies cell 3 as the measurement object for intra-frequency measurement. The reporting criteria is the same as defined in SYSTEM INFORMATION BLOCK TYPE 12 message, with the exception that threshold for event 1e is lowered.
6		←	MEASUREMENT REPORT	UE shall report the estimated value for cell 3's CPICH RSCP reading only.
7		→	PHYSICAL CHANNEL RECONFIGURATION	Allocates PRACH and S-CCPCH physical channels.
8		←	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall move to CELL_FACH state.
9				SS checks that no MEASUREMENT REPORT messages are sent by UE.
10		→	MEASUREMENT CONTROL	SS indicates that intra-frequency measurement and reporting for cell 2 be resumed if the UE subsequently transits to CELL_DCH state.
11		→	PHYSICAL CHANNEL RECONFIGURATION	SS waits for 10 seconds before sending this message. DPCH physical channels are assigned to the UE in this message.
12		←	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall return to CELL_DCH state.
13		←	MEASUREMENT REPORT	UE begins to report cell 2's measured results again.
14		←	MEASUREMENT CONTROL	<u>Terminate all the intra-frequency measurement activity related to cell 2. SS checks that no more MEASUREMENT REPORT messages are sent by the UE.</u>
15		←	PHYSICAL CHANNEL RECONFIGURATION	Allocates PRACH and S-CCPCH physical channels.
16		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall move to CELL_FACH state.
17		←	MEASUREMENT CONTROL	Message is the same as in <u>step 10</u>
18				<u>SS increases the transmission power of cell 3 (P-CPICH RSCP is raised to -45dBm) and switches off all downlink transmissions for cell 1. SS then waits until T305 expires.</u>
19		→	CELL UPDATE	<u>UE shall re-selects to cell 2 and then perform a cell update procedure.</u>

<u>20</u>	<u>←</u>	<u>CELL UPDATE CONFIRM</u>	<u>UE shall stay in CELL_FACH state.</u>
<u>21</u>	<u>→</u>	<u>PHYSICAL CHANNEL RECONFIGURATION</u>	<u>DPCH physical channels are assigned to the UE in this message.</u>
<u>22</u>	<u>←</u>	<u>PHYSICAL CHANNEL RECONFIGURATION COMPLETE</u>	<u>UE shall return to CELL_DCH state.</u>
<u>23</u>			<u>SS checks that no MEASUREMENT REPORT messages are received on uplink DCCH.</u>

AM_RLC error indicator (for U-plane)	Check to see if set to 'FALSE'
Cell Update Cause	Check to see if set to 'Cell Re-selection'
Protocol error indicator	Check to see if it is absent or set to 'FALSE'
Measured results on RACH	Check to see if it is absent
Protocol error information	Check to see if it is absent

CELL UPDATE (Step 21)

Use the default message content of the same message type in Annex A.

8.4.1.7.5 Test Requirement

After step 3 the UE shall report cell 2's CPICH RSCP value by transmitting a MEASUREMENT REPORT message.

After step 5 the UE shall delete all measurement and reporting contexts obtained from system information messages. However, it shall transmit a MEASUREMENT REPORT message containing measured results of cell 3's CPICH RSCP value only.

After step 8 the UE shall stop intra-frequency measurement reporting assigned previously in the MEASUREMENT CONTROL message received in step 5.

After step 12 the UE shall resume the measurement and reporting activities as specified in MEASUREMENT CONTROL message received in step 10. The UE shall transmit MEASUREMENT REPORT message, containing measured results of cell 2's CPICH RSCP value.

After step 14 the UE shall stop all measurement activities pertaining to cell 2, no MEASUREMENT REPORT messages shall be detected by the SS in the uplink DCCH.

After step 19 the UE shall re-select to cell 3 and initiate a cell update procedure. SS shall receive a CELL UPDATE message on the uplink CCCH of cell 3, with the “cell update cause” IE stated as “cell re-selection”.

After step 22 the UE shall not start to perform measurement for cell 2, no MEASUREMENT REPORT messages shall be detected by the SS in the uplink DCCH.

8.4.1.8 Measurement Control and Report: Inter-frequency measurement for transition from CELL_FACH to CELL_DCH state

8.4.1.8.1 Definition

8.4.1.8.2 Conformance requirement

When transiting from CELL_FACH state to CELL_DCH state, the UE shall stop monitoring the list of inter-frequency neighbour cells indicated in system information messages. If the UE has a previously stored inter-frequency measurement context marked as resume, it shall reinstate the suspended measurement and associated reporting activities after it has entered CELL_DCH state.

Reference

3GPP TS 25.331 clause 8.4.1.8

8.4.1.8.3 Test Purpose

To confirm that the UE erases all inter-frequency measurement contexts used in CELL_FACH state, when it moves to CELL_DCH. To confirm that the UE resumes inter-frequency measurements and reporting, which was assigned prior to CELL_FACH state, after it moves to CELL_DCH state.

8.4.1.8.4 Method of test

Initial Condition

SS: 3 cells – All 3 cells are active and the applicable radio conditions are stated in the table below:

	Cell 1	Cell 2	Cell 3
UARFCN (N_u and N_d)	Channel 1	Channel 2	Channel 2
CPICH RSCP	-60 dBm	-65 dBm	-75 dBm
$Q_{rxlevmin}$	-90 dBm	-90 dBm	-90 dBm
S	30	25	15

UE: CELL_FACH in cell 1 after an incoming packet-switched data call is successfully established.

Test Procedure

The UE is in CELL_FACH state after a successful connection, triggered by an incoming packet-switched data call. SS modifies the content of SYSTEM INFORMATION BLOCK TYPE 12 message, which indicates that cell 2 shall be included in the list of neighbouring cells to be monitored for inter-frequency measurements. Next, SS transmits MEASUREMENT CONTROL message to request the UE to execute an inter-frequency measurement for cell 3. The parameters of the reporting criteria are as follow: event-triggered with event identity = '2c', threshold for non-used frequency = '-80 dBm', hysteresis = '1.0dB', time to trigger = '10 seconds', amount of reporting = '1' and reporting interval = '0'. In the same message, IE "Measurement validity" is set to resume and "UE state for reporting" is assigned the value 'CELL_DCH'.

SS sends PHYSICAL CHANNEL RECONFIGURATION message to allocate dedicated physical channels to the UE. Simultaneously, SS uses this message to command UE to start applying compressed mode mechanism for DPCH. The UE shall reply with PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and then move to CELL_DCH state. SS waits for 10 seconds. The UE shall transmit MEASUREMENT REPORT message, containing the selected frequency quality estimate (in the case CPICH

Ec/No) of cell 3. SS verifies that this message does not contain measured results for cell 2. After sending this message, the UE shall not transmit any more MEASUREMENT REPORT messages.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1				UE is initially in CELL_FACH state after establishing an incoming packet-switched data call. SS modifies SYSTEM INFORMATION BLOCK TYPE 12 to include cell 2 into the neighbour cell list for inter-frequency measurements.
2		←	MEASUREMENT CONTROL	SS specifies inter-frequency measurement and reporting parameters for cell 3.
3		←	PHYSICAL CHANNEL RECONFIGURATION	SS allocates DPCH physical channels and specifies compressed mode parameters
4		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE moves to CELL_DCH state.
5		→	MEASUREMENT REPORT	UE shall resume inter-frequency measurement task for cell 3 and transmit this message to report the measured CPICH Ec/No value

Specific Message Content

- TGD	35
- TGPL1	Mode 1
- TGPL2	Mode 1
- RPP	DL
- ITPRM	F/2
- UL/DL Mode	F/2
- Downlink compressed mode method	No code change
- Uplink compressed mode method	A
- Scrambling code change	2.0
- Downlink frame type	1.0
- DeltaSIR	
- DeltaSIRAfter	

MEASUREMENT REPORT (Step 5)

Information Element	Value/Remarks
Measurement identity number	Check to see if set to 14
Measurement Results	
- CHOICE measurement	Check to see if set to "Inter-frequency measured results list"
- Inter-frequency measurement results	
- Frequency info	
- UARFCN (uplink)	Check to see if set to the UARFCN of the uplink frequency for cell 3
- UARFCN (downlink)	Check to see if set to the UARFCN of the downlink frequency for cell 3
- UTRA carrier RSSI	Check to see if it is absent
- Inter-frequency cell measurement results	
- Cell measured results	
- Cell Identity	Check to see if set to the id of cell 3
- SFN-SFN observed time difference	Check to see if it is absent
- CFN-SFN observed time difference	Check to see if it is absent
- Primary CPICH Info	
- Primary Scrambling Code	Check to see if set to the same code for cell 3
- CPICH Ec/No	Check to see if it is present
- CPICH RSCP	Check to see if it is absent
- Pathloss	Check to see if it is absent
- ~~CFN-SFN observed time difference~~	~~Check to see if it is absent~~
Event Results	
- CHOICE event result	Inter-frequency event results
- Inter-frequency event identity	Check to see if it's set to '2c'
- Inter-frequency cells	
- Frequency Info	
- UARFCN (uplink)	Check to see if set to the UARFCN of the uplink frequency for cell 3
- UARFCN (downlink)	Check to see if set to the UARFCN of the downlink frequency for cell 3
- Non frequency related measurement event results	
- Primary CPICH Info	
- Primary Scrambling Code	Check to see if set to the same code for cell 3

8.4.1.8.5 Test Requirement

After step 4 the UE shall transmit a MEASUREMENT REPORT message, containing the measured results for cell 3's CPICH Ec/No value. The UE shall not transmit any messages pertaining to cell 2's measurements.

8.4.1.9 Measurement Control and Report: Unsupported measurement in the UE

8.4.1.9.1 Definition

8.4.1.9.2 Conformance requirement

If the UTRAN indicates the UE to perform a measurement that is not supported in the UE, the UE shall keep the measurement configuration. Then the UE shall transmit a MEASUREMENT CONTROL FAILURE message on the DCCH using AM RLC.

Reference

3GPP TS25.331 clause 8.4.1.

8.4.1.9.3 Test purpose

To confirm that the UE transmits a MEASUREMENT CONTROL FAILURE message, with the value "unsupported measurement" specified in IE" failure cause" when the SS commanded the UE to perform an unsupported measurement by sending a MEASUREMENT CONTROL message.

8.4.1.9.4

Method of test

Initial Condition

System Simulator : 1cell

UE : CELL_DCH

[Editor's note : It is assumed in this test that the UE under test does not possess any inter-system measurement capability. The mandatory type(s) of measurement capability that should be implemented by the UE is to be discussed]

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a MEASUREMENT CONTROL message which includes parameters (e.g. Measurement identity number : 2 , measurement command : Setup , measurement type: inter-system measurements, measurement reporting mode: unacknowledged and periodical reporting, measurement object: inter-system cell information, measurement quantity: Signal strength, reporting quantity: RSSI on BCCH carrier). As the UE under test does not support inter-system measurement, it shall transmit a MEASUREMENT CONTROL FAILURE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is in the CELL_DCH state.
2		←	MEASUREMENT CONTROL	Including the parameters (e.g. Measurement identity number : 2 , measurement command : Setup , measurement type: inter-system measurements, measurement reporting mode: unacknowledged and periodical reporting, measurement object: inter-system cell information, measurement quantity: Signal strength, reporting quantity: RSSI on BCCH carrier).
3		→	MEASUREMENT CONTROL FAILURE	Which is set to "unsupported measurement" in IE" failure cause".

Specific Message Content

MEASUREMENT CONTROL

Information Element	Value/Remark
Measurement Identity Number	2
Measurement Command	Setup
Measurement Reporting Mode	Unacknowledged mode
Additional measurements list	Not Present
CHOICE measurement type	Inter-system measurement
- Inter-system cell info list	
- Removed inter-system cells	Not Present
- New inter-system cells	1
- Inter-system cell id

- Amount of reporting	Infinity
- Reporting Interval	32 seconds

MEASUREMENT CONTROL FAILURE

Information Element	Value/Remarks
Failure cause	To check if it is set to "Unsupported measurement"

8.4.1.9.4 Test requirement

After step 2 the UE shall identify the unsupported measurement element in the MEASUREMENT CONTROL message and transmit a MEASUREMENT CONTROL FAILURE. In this message, the value "unsupported measurement" shall be specified in IE "failure cause".

8.4.1.10 Measurement Control and Report: Failure (Invalid Message Reception)**8.4.1.10.1 Definition****8.4.1.10.2 Conformance requirement**

When the UE received a MEASUREMENT CONTROL message containing an unexpected conditional IE, it shall reply with a MEASUREMENT CONTROL FAILURE message stating the appropriate protocol error information. It shall maintain the monitoring and measurement reporting mechanism as in before the MEASUREMENT CONTROL message has been received.

Reference

3GPP TS 25.331 clause 8.4.1.9

8.4.1.10.3 Test Purpose

To confirm that the UE does not change its current monitoring and measurement settings after it has received an illegal MEASUREMENT CONTROL message, which contains an unexpected IE error. To confirm that the UE resume its normal measurement reporting operations after transmitting MEASUREMENT CONTROL FAILURE message to the SS.

8.4.1.10.4 Method of test

Initial Condition

System Simulator : 1 cell.

UE : CELL_DCH

Test Procedure

The UE is initially brought to CELL_DCH. SS transmits a MEASUREMENT CONTROL message to the UE, commanding it to start transmitting report messages for the reporting quantity "UE Transmitted Power". SS then waits for the MEASUREMENT RERORT message with the allocated measurement identity to arrive. Then it transmits the MEASUREMENT CONTROL message again. In this message, SS requests that the reporting activities for "UE Transmitted Power" be stopped. At the end of this message, SS appends an unknown information element. When the UE receives this message, it shall reply with MEASURMENT CONTROL FAILURE message as it has detected a protocol error. It shall not cease to report its own transmission power level using MEASUREMENT REPORT messages.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is CELL_DCH state in cell 1.
2		←	MEASUREMENT CONTROL	SS transmits this message on downlink DCCH to instruct UE to start reporting the quantity "UE transmit power".
3		→	MEASUREMENT REPORT	UE shall send this message periodically at 32 seconds interval
4		←	MEASURMENT CONTROL	SS sends a MEASUREMENT CONTROL message to request that UE stop the reporting activity.
5		→	MEASUREMENT CONTROL FAILURE	UE shall maintain its current measurement context and send this message.
6		→	MEASUREMENT REPORT	32 seconds after step 3, UE shall continue to transmit this message to the SS.

Specific Message Content

MEASUREMENT CONTROL (Step 2)

Information Element	Value/Remark
Measurement Identity Number	3
Measurement Command	Setup
Measurement Reporting Mode	Not Present
Additional measurements list	Not Present
CHOICE measurement type	UE internal measurement
- UE internal measurement quantity	
- Measurement quantity	UE Transmitted Power
- Filter coefficient	0
- UE internal reporting quantity	
- UE Transmitted Power	TRUE
- UE Rx-Tx time difference	FALSE
CHOICE report criteria	Periodical reporting criteria

Reason for change:

In CR-379r1 for TS 25.331 V3.2.0, the mechanism for UE to ignore multiple ACTIVE SETUP UPDATE message sent on the UM mode was proposed. Previously, RRC STATUS messages have to be sent every time the UE detects a repeated transmission of ACTIVE SET UPDATE message. This CR provides the necessary corrections to TS 34.123-1 by inserting additional test steps into clause 8.3.4.6.

Beside active set update procedure, RRC STATUS messages specified in clause 8.2.X of TS 25.331 V3.2.0 are to be changed to the appropriate "FAILURE" messages. Hence clauses 8.2.X in TS 34.123-1 V3.0.0 need to be updated.

In CR-410r1 for TS 25.331 V3.2.0, the principle of an "unacceptable" configuration was introduced. This is defined as the case when the UE receives a DPCH compressed mode info, but detects that an overlapping between two or more transmission pattern gap exists. The titles of affected test cases in clause 8.2.X are updated to reflect this type of abnormal events.

Clauses affected: 8.2.X, 8.3.4.6.

8.2 Radio Bearer control procedure

8.2.1 Radio Bearer Establishment

8.2.1.1 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success(Data integrity protection algorithm is not applied)

8.2.1.1.1 Definition

8.2.1.1.2 Conformance requirement

The UE shall correctly set up a radio bearer according to a RADIO BEARER SETUP message and communicate with the UTRAN for its implementation.

(This is the case where data integrity protection algorithm is not applied.)

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.1.3 Test purpose

To confirm that the UE establishes a new radio bearer according to a RADIO BEARER SETUP message received from the SS.

8.2.1.1.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state, after the test operator is prompted to make an out-going call. Before step 1, only signalling radio bearers have been established. The SS transmits a RADIO BEARER SETUP message to the UE after it sets up L1 including the start of tx/rx. This message requests the establishment of RABs for carrying the traffic of the speech call. After the UE receives this message, it configures them and establishes a radio bearer. Finally the UE transmits a RADIO BEARER SETUP COMPLETE message using AM RLC. Then the UE and the SS enters the communicating state.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	This message do not contain IE “integrity check info” and “integrity protection mode info”
2		→	RADIO BEARER SETUP COMPLETE	This message do not contain “integrity check info” and “Uplink integrity activation info”
3				To confirm the communication.

Specific Message Contents

For RADIO BEARER SETUP in step 1, using the message sub-type indicated as “Speech in CS” or “Packet to CELL_DCH from CELL_DCH in PS” found in default message content clause.

8.2.1.1.5 Test requirement

After step2 the UE shall communicate with the SS on the radio bearer for its implementation.

8.2.1.2 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success(Effectuated Data integrity protection algorithm)

8.2.1.2.1 Definition

.

8.2.1.2.2 Conformance requirement

The UE shall correctly set up a radio bearer according to a RADIO BEARER SETUP message, which applies data integrity function, and then communicate with the UTRAN for its implementation.

Reference

3GPP TS 25.331 clause 8.2.1, 8.5.11.

8.2.1.2.3 Test purpose

To confirm that the UE establishes a new radio bearer according to a RADIO BEARER SETUP message which contains IE “Integrity check info” and IE “Integrity protection mode info” received from the SS.

8.2.1.2.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH and data integrity algorithm is not applied

Test Procedure

The UE is in the CELL_DCH state, after the test operator is prompted to make an out-going data call. Before step 1, only signalling radio bearers have been established. The SS transmits a RADIO BEARER SETUP message which is including IE “integrity check info” and “integrity protection mode info” to the UE after it sets up L1 including the start of tx/rx. This message requests the establishment of RABs for carrying the traffic of the call. After the UE receives this message, it configures them and establishes a radio bearer. Finally the UE transmits a RADIO BEARER SETUP COMPLETE message which is including IE “integrity check info” using AM RLC. Then the UE and the SS enters the communicating state.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	This message contain IE "integrity check info" and "integrity protection mode info"
2		→	RADIO BEARER SETUP COMPLETE	This message contain "integrity check info"
3				To confirm the communication.

Specific Message Contents

For RADIO BEARER SETUP in step 1, using the message sub-types indicated as "Speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in default message content clause.

RADIO BEARER SETUP

The contents of RADIO BEARER SETUP message in this test case is identical to identical message sub-type found in TS 34.108 Clause 8, with the following exceptions:

Information Element	Value/remark
Integrity check info	
- Message authentication code	Bit string (32) MAC-I See TS33.102
- RRC Message sequence number	0
Integrity protection mode info	Present
- Integrity protection mode command	"Start"
- Downlink integrity protection activation info	Not present (It is needed only when the IE"Integrity protection mode command" has the value "modify" .)
- integrity protection algorithm	UMTS Integrity Algorithm UIA1
- integrity protection initialisation number	Bit string (32) FRESH See TS33.102

RADIO BEARER SETUP COMPLETE

Information Element	Value/remark
Integrity check info	
- Message authentication code	Not checked(MAC-I See TS33.102)
- RRC Message sequence number	Not checked
Uplink Integrity protection activation info	Not checked

8.2.1.2.5 Test requirement

After step2 the UE shall communicate with the SS on the radio bearer for its implementation. This can be verified by the correct reproduction of the u-plane data transmitted and received between the test operator and SS.

8.2.1.3 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Failure (Unsupported or Unacceptable configuration)

8.2.1.3.1 Definition

8.2.1.3.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER SETUP message which includes unsupported configuration parameters and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to "configuration unacceptable" in IE" failure cause".

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.3.3 Test purpose

To confirm that the UE keeps its configuration and transmits a RADIO BEARER SETUP FAILURE message in case of receiving a RADIO BEARER SETUP message which includes parameters of its unsupported configuration.

8.2.1.3.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER SETUP message as the frequency cannot be supported by the UE. After the UE receives this message, it transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to “configuration unacceptable” in IE” failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	Including the unsupported configuration for the UE.
2		→	RADIO BEARER SETUP FAILURE	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER SETUP

The contents of RADIO BEARER SETUP message in this test case is identical to those in default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Frequency info	
- UARFCN uplink(Nu)	16383.
- UARFCN downlink(Nd)	Not Present.

RADIO BEARER SETUP FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Configuration unacceptable
Other information element	Not checked

8.2.1.3.5 Test requirement

After step1 the UE shall keep its configuration and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to “configuration unacceptable” in IE” failure cause”.

8.2.1.4 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Failure (Physical channel Failure and successful reversion to old configuration)

8.2.1.4.1 Definition

8.2.2.1.4.2 Conformance requirement

The UE shall revert to the old configuration when the UE fails to configure the new radio bearer by the T312 expiry and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to “physical channel failure” in IE” failure cause”.

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.4.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a RADIO BEARER SETUP FAILURE message when the UE fails to configure the new radio bearer following detection of physical channel failure after T312 expiry.

8.2.1.4.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER SETUP message to the UE and does not configure the new radio bearer. Then after T312 expiry, the UE reverts to the old configuration and transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to “physical channel failure” in IE” failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	The SS does not configure the new radio bearer stated in the message.
2				The UE does not configure the new radio bearer and reverts to the old configuration.
3		→	RADIO BEARER SETUP FAILURE	UE shall transmit this message using the old RRC signalling bearer operating in RLC-AM mode.

Specific Message Contents

RADIO BEARER SETUP FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Physical channel failure
Other information element	Not checked

8.2.1.4.5 Test requirement

After step2 the UE shall revert to the old configuration and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to “physical channel failure” in IE” failure cause”.

8.2.1.5 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Failure (Physical channel Failure and reversion failure)

8.2.1.5.1 Definition

8.2.1.5.2 Conformance requirement

The UE shall perform an RRC connection re-establishment procedure when the UE fails to revert to the old configuration after the detection of physical channel failure in the radio bearer establishment procedure.

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.5.3 Test purpose

To confirm that the UE initiates an RRC connection re-establishment procedure when the UE cannot establish the new radio bearer for the L1 configuration and cannot revert to the old configuration.

8.2.1.5.4 Method of test

Initial Condition

System Simulator : 2 cells- Cell 1 is active, Cell 2 is inactive

UE : CELL_DCH in cell No.1

Test Procedure

The UE is in the CELL_DCH state in cell 1. The SS begins to broadcast the BCCH in cell 2, with a power level suitable for camping but lower than that of cell 1. Next, SS transmits a RADIO BEARER SETUP message to the UE. As the SS does not configure the new radio bearer and deletes the old configuration the UE fails to configure L1 and fails to revert to the old configuration. Then the UE shall find cell 2 and transmits to it an RRC CONNECTION RE-ESTABLISHMENT REQUEST message, which includes the IE "U-RNTI" on the uplink CCCH. The SS transmits an RRC CONNECTION RE-ESTABLISHMENT message, which includes a new TFCS according to the new transport channel. After the UE receives an RRC CONNECTION RE-ESTABLISHMENT message, it reconfigures the new radio connection and transmits an RRC CONNECTION RE-ESTABLISHMENT COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	BCCH	The SS transmits a BCCH in cell 2 but with a lower power level than in cell 1.
2		←	RADIO BEARER SETUP	The SS does not configure the new radio bearer and delete the old configuration.
3				The UE shall detect a failure to configure the new radio bearers and also subsequently, cannot revert to old configuration.
4		→	RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE shall detect the presence of cell.2and transmits this message which includes the IE"U-RNTI" it has been assigned to.
5		←	RRC CONNECTION RE-ESTABLISHMENT	Including the new TFCS according to the new transport channel.
6		→	RRC CONNECTION RE-ESTABLISHMENT COMPLETE	

Specific Message Contents

None

8.2.1.5.5 Test requirement

After step3 the UE shall find a new cell 2, enter CELL_FACH state, and transmit RRC CONNECTION RE-ESTABLISHMENT REQUEST message.

After step6 the UE shall re-establish an RRC connection in cell 2.

8.2.1.6 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Failure (Incompatible simultaneous reconfiguration)

8.2.1.6.1 Definition

8.2.1.6.2 Conformance requirement

The UE shall keep its old configuration when the UE receives another RADIO BEARER SETUP message before the UE configures the radio bearer according to a RADIO BEARER SETUP message and the UE shall transmit an RRC STATUS message on the DCCH using AM RLC which is set to "Message not compatible with receiver state" "incompatible simultaneous reconfiguration" in IE "Protocol error cause" "failure cause".

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.6.3 Test purpose

To confirm that the UE keeps its configuration and transmits an RRC STATUS message when the UE receives another RADIO BEARER SETUP message before the UE configures the radio bearer according to a RADIO BEARER SETUP message.

8.2.1.6.4

Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. When the SS transmits a RADIO BEARER SETUP message to the UE before the UE configures the radio bearer the UE keeps the old configuration and transmits an ~~an RRC STATUS~~ RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to ~~“Message not compatible with receiver state”~~ “incompatible simultaneous reconfiguration in IE” ~~“Protocol error cause”~~ “failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	Including IE“Uplink DPCH info”
2		←	RADIO BEARER SETUP	SS send this message before the expiry of activation time specified in RADIO BEARER SETUP message of step 1.
3		→	~~RRC STATUS~~ <u>RADIO BEARER SETUP FAILURE</u>	The UE does not change the configuration.

Specific Message Contents

For RADIO BEARER SETUP in step 1 and step 2, use the message sub-type indicated as “Speech in CS” or “Packet to CELL_DCH from CELL_DCH in PS” found in default message content clause, with the exception of the following Information Elements:

RADIO BEARER SETUP (Step 1)

Information Element	Value/remark
Activation Time	[256+Current CFN-[current CFN mod 8 + 8]]MOD 256

RADIO BEARER SETUP (Step 2)

Information Element	Value/remark
Activation Time	Not Present

~~RRC STATUS~~ RADIO BEARER SETUP FAILURE

Information Element	Value/remark
Message Type	
~~Protocol error information~~ <u>Failure cause</u>	~~Message not compatible with receiver state~~ <u>Incompatible simultaneous reconfiguration</u>
Other information element	Not checked

8.2.1.6.5

Test requirement

After step2 the UE shall keep its configuration and transmit an ~~an RRC STATUS~~ RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to ~~“Message not compatible with receiver state”~~ “incompatible simultaneous reconfiguration in IE” ~~“Protocol error cause”~~ “failure cause”.

8.2.1.7 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Failure (Invalid message reception)

8.2.1.7.1 Definition

8.2.1.7.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER SETUP message, which includes the spare value in the mandatory IE" DRX indicator" and criticality is defined as "Reject". Then it transmits a RADIO BEARER SETUP FAILURE message which is set to "protocol error" in IE" failure cause" and is set to "Information element value not comprehended" in IE" Protocol error cause".

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.7.3 Test purpose

To confirm that the UE transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC if it receives a RADIO BEARER SETUP message which indicates the spare value in the mandatory IE" DRX indicator" whose criticality is defined as "Reject".

8.2.1.7.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER SETUP message to the UE which indicates a spare value in the mandatory IE" DRX indicator" whose criticality is defined as "Reject". The UE keeps the old configuration and transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to "protocol error" in IE" failure cause", and is set to "Information element value not comprehended" in IE" Protocol error cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	
2		→	RADIO BEARER SETUP FAILURE	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER SETUP

The contents of RADIO BEARER SETUP message in this test case is identical to that of default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
DRX indicator	spare value

RADIO BEARER SETUP FAILURE

Information Element	Value/remark
Message Type	
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.1.7.5 Test requirement

After step1 the UE shall keep its old configuration and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to “protocol error” in IE” failure cause” and set to “Information element value not comprehended” in IE” Protocol error cause”.

8.2.1.8 Radio Bearer Establishment for transition from CELL_DCH to CELL_FACH: Success

8.2.1.8.1 Definition

8.2.1.8.2 Conformance requirement

The UE shall correctly set up a radio bearer according to a RADIO BEARER SETUP message and communicate with the UTRAN for its implementation.

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.8.3 Test purpose

To confirm that the UE establishes a new radio bearer according to a RADIO BEARER SETUP message received from the SS.

8.2.1.8.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state, after the test operator is asked to initiate a packet-switched data call. The SS transmits a RADIO BEARER SETUP message to the UE after it sets up L1. After the UE receives this message, it configures them and establishes a radio bearer. Finally the UE transmits a RADIO BEARER SETUP COMPLETE message using AM RLC. Then the UE and the SS enters the communicating state.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	SS requests test operator to make an outgoing packet-switched data call.
2		→	RADIO BEARER SETUP COMPLETE	
3				To confirm the communication between UE and SS, based on the exchange of packets.

Specific Message Contents

For RADIO BEARER SETUP message in step 1, use the message sub-type indicated as “Packet to CELL_DCH from CELL_FACH in PS” found in default message content clause.

8.2.1.8.5 Test requirement

After step2 the UE shall communicate with the SS on the radio bearer for its implementation.

8.2.1.9 Radio Bearer Establishment for transition from CELL_DCH to CELL_FACH: Failure (Unsupported or Unacceptable configuration)

8.2.1.9.1 Definition

8.2.1.9.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER SETUP message, which indicates an unsupported configuration parameters and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to “configuration unacceptable” in IE” failure cause”.

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.9.3 Test purpose

To confirm that the UE keeps its configuration and transmits a RADIO BEARER SETUP FAILURE message in case of receiving a RADIO BEARER SETUP message which includes parameters of unsupported configuration.

8.2.1.9.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER SETUP message specifying a frequency that cannot be supported by the UE. After the UE receives this message, it transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to “configuration unacceptable” in IE” failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	Including the unsupported configuration for the UE.
2		→	RADIO BEARER SETUP FAILURE	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER SETUP

The contents of RADIO BEARER SETUP message in this test case is identical to that of default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Frequency info	
- UARFCN uplink(Nu)	16384.
- UARFCN downlink(Nd)	Not present

RADIO BEARER SETUP FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Configuration unacceptable
Other information element	Not checked

8.2.1.9.5 Test requirement

After step1 the UE shall keep its configuration and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC, setting value “configuration unacceptable” in IE” failure cause”.

8.2.1.10 Radio Bearer Establishment for transition from CELL_DCH to CELL_FACH: Failure (Physical channel Failure)

8.2.1.10.1 Definition

8.2.1.10.2 Conformance requirement

The UE shall initiate the cell update procedure when the UE failed to access the assigned physical channel according to a RADIO BEARER SETUP message when transiting from CELL_DCH state to CELL_FACH state.

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.10.3 Test purpose

To confirm that the UE perform a cell update procedure when the UE cannot use the assigned physical channel according to a RADIO BEARER SETUP message as it transits from CELL_DCH to CELL_FACH.

8.2.1.10.4 Method of test

Initial Condition

System Simulator : 2 cells- Cell 1 is active, Cell 2 is inactive

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state in cell 1. The SS begins to broadcast the BCCH in cell 2 and transmits a RADIO BEARER SETUP message as the transition occurs from CELL_DCH to CELL_FACH. The UE cannot access the assigned physical channel, as the SS does not transmit any data on the downlink common channel in cell 1. Then the UE shall initiate the cell update procedure in cell 2.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	Assigned the transition from CELL_DCH to CELL_FACH
2			BCCH	The SS broadcasts BCCH in cell No.2.
3				The UE cannot use the assigned the physical channel.
4		→	CELL UPDATE	The UE finds a new cell 2 and begins a cell update procedure.
5		←	CELL UPDATE CONFIRM	In the CELL_FACH state

Specific Message Contents

None

8.2.1.10.5 Test requirement

After step3 the UE shall find a new cell No.2 and enter to CELL_FACH state. Then the UE shall initiate a cell update procedure in cell No.2.

8.2.1.11 Radio Bearer Establishment for transition from CELL_DCH to CELL_FACH: Failure (Incompatible simultaneous reconfiguration)

8.2.1.11.1 Definition

8.2.1.11.2 Conformance requirement

The UE shall keep its old configuration when the UE receives another RADIO BEARER SETUP message before the UE configures the radio bearer according to a RADIO BEARER SETUP message. The UE shall transmit an ~~an~~ **RRC STATUS** **a RADIO BEARER SETUP FAILURE** message on the DCCH using AM RLC which is set to ~~“Message not compatible with receiver state”~~ **“incompatible simultaneous reconfiguration in IE”** ~~Protocol error cause”~~ **“failure cause”**.

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.11.3 Test purpose

To confirm that the UE keeps its configuration and transmits an ~~an~~ **RRC STATUS** **a RADIO BEARER SETUP FAILURE** message when the UE receives another RADIO BEARER SETUP message before the UE configures the radio bearer according to a RADIO BEARER SETUP message.

8.2.1.11.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS sends a RADIO BEARER SETUP message to request the UE to perform radio bearer establishment procedure. Before the UE can complete the configuration of the radio bearer, the SS transmits another RADIO BEARER SETUP message. The UE shall keep the old configuration and transmit an RRC STATUS RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to “~~Message not compatible with receiver state~~” “incompatible simultaneous reconfiguration in IE” “~~Protocol error cause~~” “failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	Message includes IE “PRACH info (for RACH)”
2		←	RADIO BEARER SETUP	Message includes the IE “Uplink DPCH info”
3		→	~~RRC STATUS~~ RADIO BEARER SETUP FAILURE	The UE does not change the configuration. UE shall not have access to the DTCH channel indicated in the RADIO BEARER SETUP messages of step 1 and step 2.

Specific Message Contents

RADIO BEARER SETUP (Step 1)

For this message, use the message sub-type entitled “Packet to CELL_FACH from CELL_DCH in PS” in the default message content. Information element(s) to be changed are listed below:

Information Element	Value/remark
Activation Time	Current CFN-[current CFN mod 8 + 8]

RADIO BEARER SETUP (Step 2)

For this message, use the message sub-type entitled “Packet to CELL_DCH from CELL_DCH in PS” in the default message content. Information element(s) to be changed are listed below:

Information Element	Value/remark
Activation Time	Not Present.

~~RRC STATUS~~ RADIO BEARER SETUP FAILURE

Information Element	Value/remark
Message Type	
~~Protocol error information~~ Failure cause	~~Message not compatible with receiver state~~ <u>Incompatible simultaneous reconfiguration</u>
Other information element	Not checked

8.2.1.11.5 Test requirement

After step2 the UE shall keep its configuration and not access any of the DTCH traffic channels specified in either of the RADIO BEARER SETUP message. It shall transmit an ~~RRC STATUS~~ RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to “~~Message not compatible with receiver state~~” “incompatible simultaneous reconfiguration in IE” “~~Protocol error cause~~” “failure cause”.

8.2.1.12 Radio Bearer Establishment for transition from CELL_DCH to CELL_FACH: Failure (Invalid message reception)

8.2.1.12.1 Definition

8.2.1.12.2 Conformance requirement

The UE shall keep its old configuration when it receives a RADIO BEARER SETUP message, which includes the spare value in the mandatory IE" DRX indicator" with criticality defined as "Reject". It shall then transmit a RADIO BEARER SETUP FAILURE message which is set to "protocol error" in IE" failure cause" and also contains value "Information element value not comprehended" in IE" Protocol error cause".

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.12.3 Test purpose

To confirm that the UE transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC if the received a RADIO BEARER SETUP message, which includes the spare value in the mandatory IE" DRX indicator" with criticality defined as "Reject".

8.2.1.12.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state, after the test operator makes an outgoing packet-switched data call. The SS transmits a RADIO BEARER SETUP message to the UE which includes the spare value in the mandatory IE" DRX indicator" with criticality defined as "Reject". The UE shall keep the old configuration and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC. The value "protocol error" shall be set in IE" failure cause" and also value "Information element value not comprehended" set in IE" Protocol error cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	SS sends this message which contains an error in the IE"DRX Indicator".
2		→	RADIO BEARER SETUP FAILURE	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER SETUP

The contents of RADIO BEARER SETUP message in this test case is identical the message sub-type indicated by "Packet to CELL_FACH from CELL_DCH in PS" in the default contents clause of layer 3 messages for RRC tests. The following exceptions should be applied:

Information Element	Value/remark
DRX indicator	spare value

RADIO BEARER SETUP FAILURE

Information Element	Value/remark
Message Type	
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.1.12.5 Test requirement

After step1 the UE shall keep its old configuration and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to “protocol error” in IE” failure cause” and is set to “Information element value not comprehended” in IE” Protocol error cause”.

8.2.1.13 Radio Bearer Establishment for transition from CELL_FACH to CELL_DCH: Success

8.2.1.13.1 Definition

8.2.1.13.2 Conformance requirement

The UE shall correctly set up a radio bearer according to a RADIO BEARER SETUP message and communicate with the UTRAN for its implementation.

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.13.3 Test purpose

To confirm that the UE establishes a new radio bearer according to a RADIO BEARER SETUP message received from the SS.

8.2.1.13.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state, after SS prompts the test operator to initiate a packet-switched data call. The SS transmits a RADIO BEARER SETUP message to the UE after it sets up L1 including the start of tx/rx. After the UE receives this message, it configures them and establishes the required radio bearers. Finally the UE transmits a RADIO BEARER SETUP COMPLETE message using AM RLC. Then the UE and the SS enters the communicating state.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	
2		→	RADIO BEARER SETUP COMPLETE	
3				To confirm the communication

Specific Message Contents

RADIO BEARER SETUP

The contents of RADIO BEARER SETUP message in this test case is identical the message sub-type indicated by “Packet to CELL_DCH from CELL_FACH in PS” in the default contents clause of layer 3 messages for RRC tests.

8.2.1.13.5 Test requirement

After step2 the UE shall communicate with the SS using the radio bearer indicated in RADIO BEARER SETUP message. Particularly, SS should be able to receive packet data using a terminal equipment (TE) attached to the UE.,.

8.2.1.14 Radio Bearer Establishment for transition from CELL_FACH to CELL_DCH: Failure (Unsupported or Unacceptable configuration)

8.2.1.14.1 Definition

8.2.1.14.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER SETUP message which includes an unsupported configuration and then transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC, which sets value “configuration unacceptable” in IE” failure cause”.

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.14.3 Test purpose

To confirm that the UE keeps its configuration and transmits a RADIO BEARER SETUP FAILURE message in case of it receiving a RADIO BEARER SETUP message, which includes parameters of an unsupported configuration.

8.2.1.14.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER SETUP message with a stated frequency that cannot be supported by the UE. After the UE receives this message, it shall transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC setting value “configuration unacceptable” in IE” failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	This message includes an unsupported configuration for the UE.
2		→	RADIO BEARER SETUP FAILURE	The UE shall transmit this message using RLC-AM mode and do not change the current configuration.

Specific Message Contents

RADIO BEARER SETUP

The contents of RADIO BEARER SETUP message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Frequency info	
- UARFCN uplink(Nu)	0
- UARFCN downlink(Nd)	Not Present

RADIO BEARER SETUP FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Configuration unacceptable
Other information element	Not checked

8.2.1.14.5 Test requirement

After step1 the UE shall keep its configuration and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to “configuration unacceptable” in IE” failure cause”.

8.2.1.15 Radio Bearer Establishment for transition from CELL_FACH to CELL_DCH: Failure (Physical channel Failure and successful reversion to old configuration)

8.2.1.15.1 Definition

8.2.1.15.2 Conformance requirement

The UE shall attempt to revert to the old configuration when the UE fails to configure the new radio bearer by the T312 expiry. It shall transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC containing value “physical channel failure” in IE” failure cause”.

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.15.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a RADIO BEARER SETUP FAILURE message when the UE fails to configure the new radio bearer when it detects physical channel failure, followed by the T312 expiry.

8.2.1.15.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER SETUP message to the UE and does not configure the new radio bearer. After T312 expiry, the UE shall revert to the old configuration and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC. The content of the message shall indicate “physical channel failure” in IE” failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	The SS does not configure a new radio bearer.
2				The UE does not configure a new radio bearer but reverts to the old configuration.
3		→	RADIO BEARER SETUP FAILURE	

Specific Message Contents

RADIO BEARER SETUP FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Physical channel failure
Other information element	Not checked

8.2.1.15.5 Test requirement

After step2 the UE shall revert to the old configuration and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to “physical channel failure” in IE” failure cause”.

8.2.1.16 Radio Bearer Establishment for transition from CELL_FACH to CELL_DCH: Failure (Physical channel Failure and reversion failure)

8.2.1.16.1 Definition

8.2.1.16.2 Conformance requirement

The UE shall perform an RRC connection re-establishment procedure when the UE fails to revert to the old configuration after the detection of physical channel failure in the radio bearer establishment procedure.

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.16.3 Test purpose

To confirm that the UE initiates an RRC connection re-establishment procedure when the UE cannot establish the new radio bearer for the L1 configuration and subsequently fail to revert to the old configuration.

8.2.1.16.4

Method of test

Initial Condition

System Simulator : 2 cells- Cell 1 is active, Cell 2 is inactive

UE : CELL_FACH in cell 1

Test Procedure

The UE is in the CELL_FACH state in cell 1. The SS begins to broadcast the BCCH in cell 2 but with a transmission level lower than that for cell 1. It then transmits a RADIO BEARER SETUP message to the UE from cell 1. Then the SS deletes the old downlink channel configuration after sending this message. This causes the UE to fail to configure L1 and could not revert to the old configuration. The UE shall find the presence of cell 2 and transmits an RRC CONNECTION RE-ESTABLISHMENT REQUEST message. The message shall include the IE "U-RNTI" and sent on the uplink CCCH. The SS responds with an RRC CONNECTION RE-ESTABLISHMENT message, which includes a new TFCS according to the new transport channel. After the UE receives an RRC CONNECTION RE-ESTABLISHMENT message, it reconfigures the new radio connection and transmits an RRC CONNECTION RE-ESTABLISHMENT COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	BCCH	The SS transmits the BCCH in cell 2, but with a power level lower than that in cell 1.
2		←	RADIO BEARER SETUP	The SS does not configure the new radio bearer and instead delete the old configuration.
3				The UE cannot configure a new radio bearer and cannot revert to old configuration.
4		→	RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE shall find the presence of cell 2. It shall then transmit this message including its assigned U-RNTI in the IE "U-RNTI".
5		←	RRC CONNECTION RE-ESTABLISHMENT	Including the new TFCS according to the new transport channel.
6		→	RRC CONNECTION RE-ESTABLISHMENT COMPLETE	

Specific Message Contents

RADIO BEARER SETUP The contents of RADIO BEARER SETUP message in this test case is identical to the message sub-type "Packet to CELL_DCH from CELL_FACH in PS" found in the default contents of layer 3 messages for RRC tests.

RRC CONNECTION RE-ESTABLISHMENT REQUEST

Information Element	Value/remark
U-RNTI	Set to assigned UE U-RNTI in RRC CONNECTION SETUP message.
Protocol error indication	FALSE

RRC CONNECTION RE-ESTABLISHMENT COMPLETE

Information Element	Value/remark
Radio bearer uplink ciphering activation time info	Not Present
RB with PDCP information list - RB with PDCP information list	Not Present

8.2.1.16.5 Test requirement

After step3 the UE shall find the presence of cell 2, which is suitable for camping. It shall then enter CELL_FACH state and transmit a RRC CONNECTION RE-ESTABLISHMENT REQUEST message to prevent the RRC connection from being lost.

After step6 the UE shall re-establish an RRC connection, using the new TFCS settings specified in RRC CONNECTION RE-ESTABLISHMENT message

8.2.1.17 Radio Bearer Establishment for transition from CELL_FACH to CELL_DCH: Failure (Incompatible simultaneous reconfiguration)

8.2.1.17.1 Definition

8.2.1.17.2 Conformance requirement

The UE shall keep its old configuration, when it receives another RADIO BEARER SETUP message before it can complete the configuration of the radio bearer according to the first RADIO BEARER SETUP message. The UE shall transmit ~~an RRC STATUS~~ a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC with value “~~Message not compatible with receiver state~~” “incompatible simultaneous reconfiguration” set in IE “~~Protocol error cause~~” “failure cause”.

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.17.3 Test purpose

To confirm that the UE keeps its configuration and transmits ~~an RRC STATUS~~ a RADIO BEARER SETUP FAILURE message when the UE receives another RADIO BEARER SETUP message, before the UE configures the radio bearer according to an earlier RADIO BEARER SETUP message.

8.2.1.17.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER SETUP message, requesting the UE to setup radio bearers using DPCH physical channels. The activation time of this event is specified to be 255 frames from the SS's current CFN. However, SS sends another RADIO BEARER SETUP message before 255 frames has passed. The UE shall then abandon its current reconfiguration operation, keep the old configuration, and transmit ~~an RRC STATUS~~ a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC. This message shall contain the value “~~Message not compatible with receiver state~~” “incompatible simultaneous reconfiguration” in IE “~~Protocol error cause~~” “failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	Including IE"Uplink DPCH info"
2		←	RADIO BEARER SETUP	
3		→	~~RRC STATUS~~ RADIO BEARER SETUP FAILURE	The UE does not change the configuration and transmit this message on its uplink DCCH using the same RLC-AM mode radio bearer before step 1.

Specific Message Contents

RADIO BEARER SETUP (for Step 2)

For this message, use the message sub-type entitled "Packet to CELL_DCH from CELL_FACH in PS" in the default message content. Information element(s) to be changed are listed below:

Information Element	Value/remark
Activation Time	Current CFN-[current CFN mod 8 + 8]

~~RRC STATUS~~RADIO BEARER SETUP FAILURE

Information Element	Value/remark
Message Type	
~~Protocol error information~~ Failure cause	~~Message not compatible with receiver state~~ Incompatible simultaneous reconfiguration
Other information element	Not checked

8.2.1.17.5 Test requirement

After step2 the UE shall keep its configuration and transmit an ~~RRC STATUS~~RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to "~~Message not compatible with receiver state~~""incompatible simultaneous reconfiguration" in IE"~~Protocol error cause~~""failure cause".

8.2.1.18 Radio Bearer Establishment for transition from CELL_FACH to CELL_DCH: Failure (Invalid message reception)

8.2.1.18.1 Definition

8.2.1.18.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER SETUP message, which includes the spare value in the mandatory IE" DRX indicator" having criticality defined as "Reject". It shall transmit a RADIO BEARER SETUP FAILURE message which set value "protocol error" in IE" failure cause" and also value "Information element value not comprehended" in IE" Protocol error cause".

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.18.3 Test purpose

To confirm that the UE transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC if it receives a RADIO BEARER SETUP message, with a spare value in the mandatory IE" DRX indicator" and having criticality defined as "Reject".

8.2.118.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in CELL_FACH state. The SS transmits a RADIO BEARER SETUP message to the UE which includes a spare value in the mandatory IE" DRX indicator" with criticality defined as "Reject". The UE keeps the old configuration and transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC. This message shall specify "protocol error" in IE" failure cause" and also set the value "Information element value not comprehended" in IE" Protocol error cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	
2		→	RADIO BEARER SETUP FAILURE	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER SETUP

The contents of RADIO BEARER SETUP message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
DRX indicator	spare value

RADIO BEARER SETUP FAILURE

Information Element	Value/remark
Message Type	
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.1.18.5 Test requirement

After step1 the UE shall keep its old configuration and transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC. The message shall indicate the reason of failure as "protocol error" in IE" failure cause" and set the value "Information element value not comprehended" in IE" Protocol error cause".

8.2.1.19 Radio Bearer Establishment for transition from CELL_FACH to CELL_FACH: Success

8.2.1.19.1 Definition

8.2.1.19.2 Conformance requirement

The UE shall correctly set up a radio bearer according to a RADIO BEARER SETUP message and communicate with the UTRAN for its implementation.

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.19.3 Test purpose

To confirm that the UE establishes a new radio bearer according to a RADIO BEARER SETUP message received from the SS.

8.2.1.19.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state, after the test operator is being prompted to make an outgoing packet-switched call. The SS transmits a RADIO BEARER SETUP message to the UE after it sets up L1 including the start of tx/rx. After the UE receives this message, it configures them and establishes a radio bearer. Finally the UE transmits a RADIO BEARER SETUP COMPLETE message using AM RLC. Then the UE and the SS enters the communicating state.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	
2		→	RADIO BEARER SETUP COMPLETE	
3				To confirm the proper establishment of the new radio bearer by checking the packet data exchanged between the SS and a TE attached to the UE.

Specific Message Contents

RADIO BEARER SETUP

or this message, use the message sub-type entitled “Packet to CELL_FACH from CELL_FACH in PS” in the default message content.

8.2.1.19.5 Test requirement

After step2 the UE shall communicate with the SS using the new radio bearer , this can be confirmed by the exchange of packet data between a terminal equipment (TE) attached to the UE and the SS,

8.2.1.20 Radio Bearer Establishment for transition from CELL_FACH to CELL_FACH: Failure (Unsupported or Unacceptable configuration)

8.2.1.20.1 Definition

8.2.1.20.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER SETUP message which includes an unsupported configuration and it shall transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC setting the value “configuration unacceptable” into IE” failure cause”.

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.20.3 Test purpose

To confirm that the UE keeps its original configuration and transmits a RADIO BEARER SETUP FAILURE message when it receives a RADIO BEARER SETUP message indicating an unsupported configuration.

8.2.1.20.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER SETUP message specifying a frequency which is not supported by the UE. After the UE receives this message, it transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to “configuration unacceptable” in IE” failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	Including the unsupported configuration for the UE.
2		→	RADIO BEARER SETUP FAILURE	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER SETUP

The contents of RADIO BEARER SETUP message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Frequency info	
- UARFCN uplink(Nu)	63947
- UARFCN downlink(Nd)	Not present

RADIO BEARER SETUP FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Configuration unacceptable
Other information element	Not checked

8.2.1.20.5 Test requirement

After step1 the UE shall keep its configuration and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC and set value “configuration unacceptable” in IE” failure cause”.

8.2.1.21 Radio Bearer Establishment for transition from CELL_FACH to CELL_FACH: Failure (Incompatible simultaneous reconfiguration)

8.2.1.21.1 Definition

8.2.1.21.2 Conformance requirement

The UE shall keep its old configuration when the UE receives another RADIO BEARER SETUP message before the UE configures the radio bearer according to a RADIO BEARER SETUP message and the UE shall transmit ~~an RRC STATUS~~ RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to ~~“Message not compatible with receiver state”~~ “incompatible simultaneous reconfiguration” in IE ~~“Protocol error cause”~~ “failure cause”.

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.21.3 Test purpose

To confirm that the UE keeps its configuration and transmits ~~an RRC STATUS~~ RADIO BEARER SETUP FAILURE message when the UE receives another RADIO BEARER SETUP message before the UE configures the radio bearer according to a RADIO BEARER SETUP message.

8.2.1.21.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. When the SS transmits a RADIO BEARER SETUP message to the UE before the UE configures the radio bearer the UE keeps the old configuration and transmits ~~an RRC STATUS~~ RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to ~~“Message not compatible with receiver state”~~ “incompatible simultaneous reconfiguration” in IE ~~“Protocol error cause”~~ “failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	Including IE“Uplink DPCH info”
2		←	RADIO BEARER SETUP	
3		→	~~RRC STATUS~~ <u>RADIO BEARER SETUP FAILURE</u>	The UE does not change the configuration.

Specific Message Contents

~~RRC STATUS~~ RADIO BEARER SETUP FAILURE

Information Element	Value/remark
Message Type	
~~Protocol error information~~ <u>Failure cause</u>	~~Message not compatible with receiver state~~ <u>Incompatible simultaneous reconfiguration</u>
Other information element	Not checked

8.2.1.21.5 Test requirement

After step2 the UE shall keep its configuration and transmit ~~an RRC STATUS~~ RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to ~~“Message not compatible with receiver state”~~ “incompatible simultaneous reconfiguration” in IE ~~“Protocol error cause”~~ “failure cause”.

8.2.1.22 Radio Bearer Establishment for transition from CELL_FACH to CELL_FACH: Failure (Invalid message reception)

8.2.1.22.1 Definition

8.2.1.22.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER SETUP message, which includes a spare value for the mandatory IE "DRX indicator" having criticality defined as "Reject". It shall then transmit a RADIO BEARER SETUP FAILURE message stating the reason "protocol error" in IE "failure cause" and also set value "Information element value not comprehended" in IE "Protocol error cause".

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.22.3 Test purpose

To confirm that the UE transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC if it receives a RADIO BEARER SETUP message specifying a spare value in the mandatory IE "DRX indicator"

8.2.1.22.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER SETUP message to the UE and includes the spare value in the mandatory IE "DRX indicator". The UE shall keep the old configuration and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC, setting the value "protocol error" in IE "failure cause". The error type "Information element value not comprehended" shall also be indicated in IE "Protocol error cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	
2		→	RADIO BEARER SETUP FAILURE	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER SETUP

The contents of RADIO BEARER SETUP message in this test case is identical to the message sub-type "Packet to CELL_FACH from CELL_FACH in PS ", which is found in the default contents clause of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
DRX indicator	spare value

RADIO BEARER SETUP FAILURE

The expected content of RADIO BEARER SETUP FAILURE message is shown below:

Information Element	Value/remark
Message Type	
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.1.22.5 Test requirement

After step1 the UE shall keep its old configuration and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC setting “protocol error” in IE” failure cause” and setting “Information element value not comprehended” in IE” Protocol error cause”.

8.2.2 Radio Bearer Reconfiguration

8.2.2.1 Radio Bearer Reconfiguration(Hard handover) from CELL_DCH to CELL_DCH:Success

8.2.2.1.1 Definition

8.2.2.1.2 Conformance requirementThe UE shall correctly reconfigure a radio bearer or L1 according to a RADIO BEARER RECONFIGURATION message which is communicate with the UTRAN on the new radio bearer.

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.1.3 Test purpose

To confirm that the UE reconfigurer a new radio bearer by following a RADIO BEARER RECONFIGURATION message received from the SS.

8.2.2.1.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE which includes the new transport channel parameter reconfiguret. The UE reconfigures the new transport cannel and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	
2				Reconfiguration of r Physical channel
3		→	RADIO BEARER RECONFIGURATION COMPLETE	

Specific Message Contents

RADIO BEARER RECONFIGURATION

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Frequency info - UARFCN uplink(Nu) - UARFCN downlink(Nd)	Selected value as the UE can support which is different from current frequency. Selected value as the UE can support which is different from current frequency.

8.2.2.1.5 Test requirement

After step1 the UE shall reconfigure the radio links with the SS.

After step3 the UE shall change its physical channel configuration and communicate with the SS on the DCCH and DTCH using the modified physical channel configurations

8.2.2.2 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Failure (Unsupported or Unacceptable configuration)

8.2.2.2.1 Definition

8.2.2.2.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER RECONFIGURATION message which includes unsupported configuration parameters and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to “configuration unacceptable” in IE” failure cause

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.2.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC if the received RADIO BEARER RECONFIGURATION message includes unsupported configuration parameters.

8.2.2.2.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, which includes unsupported configuration parameters for the UE. The UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to “configuration unacceptable” in IE” failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	Including unsupported configuration by the UE
2		→	RADIO BEARER RECONFIGURATION FAILURE	The UE does not change the radio bearer.

Specific Message Contents

RADIO BEARER RECONFIGURATION

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to those in the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Frequency info	
- UARFCN uplink(Nu)	63984.
- UARFCN downlink(Nd)	Not Present

RADIO BEARER RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	“RADIO BEARER RECONFIGURATION FAILURE”
Failure cause	Configuration unacceptable
Other information element	Not checked

8.2.2.2.5 Test requirement

After step2 the UE shall keep its old configuration and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC with the value “configuration unacceptable” set in IE” failure cause”.

8.2.2.3 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Failure (Physical channel failure and reversion to old configuration)

8.2.2.3.1 Definition

8.2.2.3.2 Conformance requirement

The UE shall revert to the old configuration when the UE fails to reconfigure the new physical channel by received RADIO BEARER RECONFIGURATION message and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to “physical channel failure” in IE” failure cause”.

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.3.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC if the UE fails to reconfigure the new radio bearer according to the RADIO BEARER RECONFIGURATION message received previously.

8.2.2.3.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE which includes the new radio bearer parameters but it does not reconfigure L1 according to the settings found in the message. The UE shall revert to the old configuration. Then the UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting value “.physical channel failure” in IE” failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	
2				SS does not reconfigure L1 parameters to reflect the radio bearer reconfigurations specified in the message.
3		→	RADIO BEARER RECONFIGURATION FAILURE	The UE shall detect a failure to reconfigure the new radio bearer, and send this message using the old radio bearer configuration.

Specific Message Contents

RADIO BEARER RECONFIGURATION

RADIO BEARER RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	“RADIO BEARER RECONFIGURATION FAILURE”
Failure cause	Physical channel failure
Other information element	Not checked

8.2.2.3.5 Test requirement

After step2 the UE shall revert to the old configuration and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC setting value “.physical channel failure” in IE” failure cause”.

8.2.2.4 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH : Failure (Physical channel failure and reversion failure)

8.2.2.4.1 Definition

8.2.2.4.2 Conformance requirement

.The UE shall perform an RRC connection re-establishment procedure when the UE fails to revert to the old configuration after the detection of physical channel failure in the radio bearer reconfiguration procedure.

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.4.3 Test purpose

To confirm that the UE initiates an RRC connection re-establishment procedure when the UE cannot reconfigure the new radio bearer, and a subsequent failure to revert to the old configuration.

8.2.2.4.4 Method of test

Initial Condition

System Simulator : 2 cells - Cell 1 is active, Cell 2 is inactive

UE : CELL_DCH in cell 1

Test Procedure

The UE is in the CELL_DCH state in a cell 1. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, which includes the new radio bearer parameters. The SS does not reconfigure L1 in accordance to the settings in the message and delete all radio bearer related contexts in cell 1. At the same time, SS begins to broadcast the BCCH in a cell 2. The UE discovers that it cannot reconfigure the new radio bearer and wants to revert to the old configuration. The UE shall find cell 2 and transmit to it an RRC CONNECTION RE-ESTABLISHMENT REQUEST message which includes the IE "U-RNTI" on the uplink CCCH. The SS transmits an RRC CONNECTION RE-ESTABLISHMENT message which specifies a new TFCS according to the new transport channel allocated. After the UE receives an RRC CONNECTION RE-ESTABLISHMENT message, it reconfigures the new radio connection and transmits an RRC CONNECTION RE-ESTABLISHMENT COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	
2				The SS does not reconfigure the new radio bearer and delete the old configuration in cell 1.
3				The UE fails to reconfigure a new radio bearer.
4		←	BCCH	The SS transmits a BCCH in a cell 2 and delete the old radio bearer.
5		→	RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE finds cell.2 and transmits this message which includes the IE "U-RNTI" it was previously assigned.
6		←	RRC CONNECTION RE-ESTABLISHMENT	This message includes a new TFCS according to the new transport channel indicated in RRC CONNECTION RE-ESTABLISHMENT message.
7		→	RRC CONNECTION RE-ESTABLISHMENT COMPLETE	

Specific Message Contents

None

8.2.2.4.5 Test requirement

After step4 the UE shall detect the presence of cell.2, enters CELL_FACH state, and transmit RRC CONNECTION RE-ESTABLISHMENT to attempt to keep the current RRC connection.

After step7 the UE shall successfully re-establish an RRC connection.

8.2.2.5 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Failure (Incompatible simultaneous reconfiguration)

8.2.2.5.1 Definition

8.2.2.5.2 Conformance requirement

The UE shall keep its old configuration when the UE receives another RADIO BEARER RECONFIGURATION message before the UE can configure the radio bearer according to an earlier RADIO BEARER RECONFIGURATION message. The UE shall transmit an RRC STATUS message on the DCCH using AM RLC setting ~~“Message not compatible with receiver state”~~ “incompatible simultaneous reconfiguration” in IE ~~“Protocol error cause”~~ “failure cause”.

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.5.3 Test purpose

To confirm that the UE keeps its configuration and transmits an ~~RRC STATUS~~ RADIO BEARER RECONFIGURATION FAILURE message when the UE receives another RADIO BEARER RECONFIGURATION message before the UE can complete the configuration of the radio bearer indicated in an earlier RADIO BEARER RECONFIGURATION message.

8.2.2.5.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. When the SS transmits a RADIO BEARER RECONFIGURATION message to the UE before the UE configures the requested radio bearer(s), the UE keeps the old configuration and transmits an ~~RRC STATUS~~ RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC. This messageshall set value ~~“Message not compatible with receiver state”~~ “incompatible simultaneous reconfiguration” in IE ~~“Protocol error cause”~~ “failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	Including IE“Uplink DPCH info”
2		←	RADIO BEARER RECONFIGURATION	Sent before the “activation time” in step 1 has elapsed
3		→	~~RRC STATUS~~ <u>RADIO BEARER RECONFIGURATION FAILURE</u>	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to those in the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Activation Time	Current CFN-[current CFN mod 8 + 8]

RRC STATUS RADIO BEARER RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	<u>"RRC STATUS RADIO BEARER RECONFIGURATION FAILURE"</u>
~~Protocol error information~~ <u>Failure cause</u>	~~Message not compatible with receiver state~~ <u>Incompatible simultaneous reconfiguration</u>
Other information element	Not checked

8.2.2.5.5 Test requirement

After step2 the UE shall keep its configuration and transmit an RRC STATUS RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which contains the value ~~"Message not compatible with receiver state"~~ "incompatible simultaneous reconfiguration" set in IE ~~"Protocol error cause"~~ "failure cause".

8.2.2.6 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Failure (Invalid message reception)

8.2.2.6.1 Definition

8.2.2.6.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER RECONFIGURATION message, which includes the spare value in the mandatory IE "DRX indicator" having criticality defined as "Reject". The UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message which is set to "protocol error" in IE "failure cause" and is set to "Information element value not comprehended" in IE "Protocol error cause".

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.6.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC, if it receives a RADIO BEARER RECONFIGURATION message containing a spare value in the mandatory IE "DRX indicator" with criticality defined as "Reject".

8.2.2.6.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE which includes the spare value in the mandatory IE "DRX indicator" which criticality is defined as "Reject". The UE keeps the old configuration and transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "protocol error" in IE "failure cause" and is set to "Information element value not comprehended" in IE "Protocol error cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	The message contains a illegal error in a mandatory IE.
2		→	RADIO BEARER RECONFIGURATION FAILURE	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER RECONFIGURATION

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to the corresponding message found in the default contents of layer 3 messages for RRC tests, with the following exceptions:

Information Element	Value/remark
DRX indicator	spare value

RADIO BEARER RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	"RADIO BEARER RECONFIGURATION FAILURE"
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.2.6.5 Test requirement

After step1 the UE shall keep its old configuration and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC stating the reason "protocol error" in IE" failure cause". The message shall contain the value "Information element value not comprehended" in IE" Protocol error cause".

8.2.2.7 Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH :Failure (Suspension of signalling bearer)

8.2.2.7.1 Definition

8.2.2.7.2 Conformance requirement

The UE shall revert to the old configuration prior to the reception of RADIO BEARER RECONFIGURATION message, which includes IE"RBSuspend/resume" specified as "Suspend", and transmit a RADIO BEARER RECONFIGURATION FAILURE message to UTRAN

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.7.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC if the UE fails to reconfigure the new radio bearer according to a RADIO BEARER RECONFIGURATION message.

8.2.2.7.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE which specifies the suspension of a signalling radio bearer to be reconfigured. The UE shall revert to the old configuration. Then the UE transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC with the IE "failure cause" set to "configuration unacceptable".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	Specifies a signalling radio bearer to be suspended.
2		→	RADIO BEARER RECONFIGURATION FAILURE	The UE shall revert to the old configuration

Specific Message Contents

RADIO BEARER RECONFIGURATION

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
RB information to reconfigure list RB information to reconfigure l -RB identity -RB suspend/resume	3 "Suspend"

RADIO BEARER RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	"RADIO BEARER RECONFIGURATION FAILURE"
Failure cause	Configuration unacceptable
Other information element	Not checked

8.2.2.7.5 Test requirement

After step2 the UE shall revert to the old configuration and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC specifying the reason "configuration unacceptable " in IE "failure cause".

8.2.2.8 Radio Bearer Reconfiguration from CELL_DCH to CELL_FACH: Success

8.2.2.8.1 Definition

8.2.2.8.2 Conformance requirement

The UE shall correctly reconfigure a radio bearer according to a RADIO BEARER RECONFIGURATION message which is communicate with the UTRAN on the new radio bearer in case of a transition from CELL_DCH to CELL_FACH in the same cell.

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.8.3 Test purpose

To confirm that the UE establishes the reconfigured radio bearer(s) using common physical channel, after a RADIO BEARER RECONFIGURATION message has been received from the SS.

8.2.2.8.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, which includes the new radio bearer parameters and sets up L1 including the start of tx/rx. The UE reconfigures the new radio bearer and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	
2				Reconfiguration of radio bearer
3		→	RADIO BEARER RECONFIGURATION COMPLETE	

Specific Message Contents

None

RADIO BEARER RECONFIGURATION

8.2.2.8.5 Test requirement

After step1 the UE shall reconfigure the radio links with the SS.

After step3 the UE shall change its radio bearer configuration and communicate with the SS on the DCCH and DTCH, using the common physical channel allocated in RADIO BEARER RECONFIGURATION message.

8.2.2.9 Radio Bearer Reconfiguration from CELL_DCH to CELL_FACH: Failure (Unsupported or Unacceptable configuration)

8.2.2.9.1 Definition

8.2.2.9.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER RECONFIGURATION message which includes unsupported configuration parameters and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to “configuration unacceptable” in IE” failure cause

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.9.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC if the received RADIO BEARER RECONFIGURATION message indicates an unsupported configuration parameters.

8.2.2.9.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, which includes unsupported configuration parameters for the UE. The UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to “configuration unacceptable” in IE” failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	Including unsupported configuration by the UE
2		→	RADIO BEARER RECONFIGURATION FAILURE	The UE does not change the radio bearer.

Specific Message Contents

RADIO BEARER RECONFIGURATION

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to the corresponding message found in the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Frequency info	
- UARFCN uplink(Nu)	63984.
- UARFCN downlink(Nd)	Not Present

RADIO BEARER RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	“RADIO BEARER RECONFIGURATION FAILURE”
Failure cause	Configuration unacceptable
Other information element	Not checked

8.2.2.9.5 Test requirement

After step2 the UE shall keep its old configuration and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC, stating the reason “configuration unacceptable” in IE” failure cause”.

8.2.2.10 Radio Bearer Reconfiguration from CELL_DCH to CELL_FACH: Failure (Physical channel failure)

8.2.2.10.1 Definition

8.2.2.10.2 Conformance requirement

The UE shall initiate the cell reselection procedure when the UE cannot use the assigned physical channel according to a RADIO BEARER CHANNEL RECONFIGURATION message, during the transition from CELL_DCH to CELL_FACH.

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.10.3 Test purpose

To confirm that the UE initiate a cell reselection after encountering a physical channel failure, when attempting to transit from CELL_DCH to CELL_FACH state during the execution of radio bearer reconfiguration procedure. The UE is first instructed to select the cell implied in the RADIO BEARER RECONFIGURATION message, but discover a failure as the indicated cell is not present.

8.2.2.10.4 Method of test

Initial Condition

System Simulator : 2 cells – Cell 1 is active and cell 2 is inactive

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. SS starts to transmit the BCCH for cell 2, but with a power level lower that of cell 1. Following this, the SS send a RADIO BEARER RECONFIGURATION message to the UE, which includes relevant information about the target cell's P-CPICH. SS selects an unused primary scrambling code for P-CPICH, which neither matches the code used by cell 1 nor cell 2. This should lead to the detection of a physical channel failure in the UE. The UE shall trigger a cell reselection and initiate a cell update procedure if it is able to access cell 2. When SS receives a CELL UPDATE message in cell 2 on uplink CCCH, it replies with CELL UPDATE CONFIRM message.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				SS begin to broadcast the BCCH data in cell 2, but with a power level lower than in cell 1.
2		←	RADIO BEARER RECONFIGURATION	The message includes IE "Primary CPICH Info" and set the IE "Primary Scrambling Code" to an unknown value (not used by cell 1 or cell 2).
3				UE shall detect a "physical channel failure" condition and then trigger a cell reselection procedure.
4		→	CELL UPDATE	After successfully camping onto cell 2, UE shall initiate a cell update procedure. The updating cause shall be set to "cell reselection"
5		←	CELL UPDATE CONFIRM	Contains cell

Specific Message Contents

RADIO BEARER RECONFIGURATION

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Downlink information for each radio link - Primary CPICH Info - Primary Scrambling Code	Set to an unused code different from the 3 cells defined.

CELL UPDATE

Information Element	Value/remark
U-RNTI	The assigned U-RNTI indicated In RRC CONNECTION SETUP message
Cell Update Cause	Cell Reselection

8.2.2.10.5 Test requirement

After step3, the UE shall discover the presence of cell 2, enter CELL_FACH and then perform a cell updating procedure by the transmission of CELL UPDATE using RLC-TM mode on CCCH. The UE shall transit to CELL_PCH state to monitor the PCCH channel after the reception of CELL UPDATE CONFIRM message.

8.2.2.11 Radio Bearer Reconfigure from CELL_DCH to CELL_FACH: Failure (Incompatible simultaneous reconfiguration)

8.2.2.11.1 Definition

8.2.2.11.2 Conformance requirement

The UE shall keep its old configuration when the UE receives another RADIO BEARER RECONFIGURATION message before it completes the re-configuring the radio bearer according to an earlier RADIO BEARER RECONFIGURATION message. The UE shall transmit an ~~RRC STATUS~~RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting ~~“Message not compatible with receiver state”~~“incompatible simultaneous reconfiguration” in IE ~~“Protocol error cause”~~“failure cause”.

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.11.3 Test purpose

To confirm that the UE keeps its current radio bearer configurations and transmits an ~~RRC STATUS~~RADIO BEARER RECONFIGURATION FAILURE message when the UE receives another RADIO BEARER RECONFIGURATION message before it is able to complete an earlier reconfiguration request.

8.2.2.11.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. When the SS transmits a RADIO BEARER RECONFIGURATION message to the UE before the UE configures the radio bearer the UE keeps the old configuration and transmits an ~~RRC STATUS~~RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to ~~“Message not compatible with receiver state”~~“incompatible simultaneous reconfiguration” in IE ~~“Protocol error cause”~~“failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	Including IE"Uplink DPCH info"
2		←	RADIO BEARER RECONFIGURATION	
3		→	<u>RRC STATUS</u> <u>RADIO BEARER RECONFIGURATION FAILURE</u>	The UE does not change the configuration.

Specific Message Contents

The contents of RADIO BEARER RECONFIGURATION messages in this test case is identical to the corresponding message found in the default contents of layer 3 messages for RRC tests with the following exceptions:

RADIO BEARER RECONFIGURATION (Step 1)

Information Element	Value/remark
Activation Time	Current CFN-[current CFN mod 8 + 8]

RADIO BEARER RECONFIGURATION (Step 2)

Information Element	Value/remark
Activation Time	Not Present

RRC STATUSRADIO BEARER RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	<u>"RRC STATUS</u> <u>RADIO BEARER RECONFIGURATION FAILURE"</u>
~~Protocol error information~~ <u>Failure cause</u>	~~Message not compatible with receiver state~~ <u>Incompatible simultaneous reconfiguration</u>
Other information element	Not checked

8.2.2.11.5 Test requirement

After step2 the UE shall keep its exiting radio bearer configuration and transmit an RRC STATUSRADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RL, with the value ~~"Message not compatible with receiver state"~~"incompatible simultaneous reconfiguration" in IE ~~"Protocol error cause"~~"failure cause".

8.2.2.12 Radio Bearer Reconfiguration from CELL_DCH to CELL_FACH: Failure (Invalid message reception)

8.2.2.12.1 Definition

8.2.2.12.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER RECONFIGURATION message which includes the spare value in the mandatory IE" DRX indicator", possessing a criticality level defined as "Reject". It shall transmit a RADIO BEARER RECONFIGURATION FAILURE message which is set to "protocol error" in IE" failure cause" and is also set to "Information element value not comprehended" in IE" Protocol error cause".

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.12.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC to respond to an earlier RADIO BEARER RECONFIGURATION message, which applies a spare value in the mandatory IE" DRX indicator" having criticality defined as "Reject".

8.2.2.12.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE which includes a spare value in the mandatory IE "DRX indicator". The UE keeps the old configuration and transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting "protocol error" in IE "failure cause" and setting "Information element value not comprehended" in IE "Protocol error cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	
2		→	RADIO BEARER RECONFIGURATION FAILURE	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER RECONFIGURATION

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
DRX indicator	spare value

RADIO BEARER RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	"RADIO BEARER RECONFIGURATION FAILURE"
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.2.12.5 Test requirement

After step1 the UE shall keep its old configuration and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC with "protocol error" specified in IE "failure cause" and also "Information element value not comprehended" specified in IE "Protocol error cause".

8.2.2.13 Radio Bearer Reconfiguration from CELL_DCH to CELL_FACH: Failure (Suspension of signalling bearer)

8.2.2.13.1 Definition

8.2.2.13.2 Conformance requirement

The UE shall revert to the configuration prior to the reception of the RADIO BEARER RECONFIGURATION message which indicates suspension for an existing signalling radio bearer in IE "RB suspend/resume". It shall transmit a RADIO BEARER RECONFIGURATION FAILURE message to UTRAN

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.13.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC if the UE receives RADIO BEARER RECONFIGURATION message asking for the suspension of an existing signalling radio bearer.

8.2.2.13.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE which includes the IE"RB suspend/resume" set to "Suspend" for one signalling radio bearer. The UE shall revert to the old configuration. Then the UE transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "configuration unacceptable" in IE" failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	The message requests for the suspension of a current available signalling radio bearer
2		→	RADIO BEARER RECONFIGURATION FAILURE	The UE shall revert to the old configuration

Specific Message Contents

RADIO BEARER RECONFIGURATION

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to those in the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
RB information to reconfigure list RB information to reconfigure l -RB Identity -RB suspend/resume	3 "Suspend"

RADIO BEARER RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type Failure cause Other information element	"RADIO BEARER RECONFIGURATION FAILURE" configuration unacceptable Not checked

8.2.2.13.5 Test requirement

After step2 the UE shall revert to the old configuration and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC specifying "configuration unacceptable " in IE" failure cause".

8.2.2.14 Radio Bearer Reconfiguration: from CELL_FACH to CELL_DCH: Success

8.2.2.14.1 Definition

8.2.2.14.2 Conformance requirement

The UE shall correctly reconfigure a radio bearer according to a RADIO BEARER RECONFIGURATION message which is communicate with the UTRAN on the new radio bearer in case of a transition from CELL_FACH to CELL_DCH in the same cell.

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.14.3 Test purpose

To confirm that the UE establishes a new radio bearer by following a RADIO BEARER RECONFIGURATION message received from the SS.

8.2.2.14.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE which includes the new radio bearer parameters and sets up L1 including the start of tx/rx. The UE reconfigures the new radio bearer and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	This message includes IE"Uplink DPCH Info"
2				Reconfiguration of radio bearer
3		→	RADIO BEARER RECONFIGURATION COMPLETE	

Specific Message Contents

RADIO BEARER RECONFIGURATION

None

8.2.2.14.5 Test requirement

After step2 the UE shall change its radio bearer configuration and communicate with the SS on the DCCH and DTCH which are being carried by the DPCH physical channel resources.

8.2.2.15 Radio Bearer Reconfiguration from CELL_FACH to CELL_DCH: Failure (Unsupported or Unacceptable configuration)

8.2.2.15.1 Definition

8.2.2.15.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER RECONFIGURATION message which includes unsupported configuration parameters and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "configuration unacceptable" in IE" failure cause

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.15.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC if the RADIO BEARER RECONFIGURATION message received includes unsupported configuration parameters.

8.2.2.15.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE which includes unsupported configuration parameters of the UE. The UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC and set “configuration unacceptable” in IE” failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	The message includes an unsupported configuration for the UE
2		→	RADIO BEARER RECONFIGURATION FAILURE	The UE does not change the radio bearer.

Specific Message Contents

RADIO BEARER RECONFIGURATION

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to those in the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Frequency info	
- UARFCN uplink(Nu)	63984
- UARFCN downlink(Nd)	Not Present

RADIO BEARER RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Configuration unacceptable
Other information element	Not checked

8.2.2.15.5 Test requirement

After step1 the UE shall keep its old configuration and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC stating “configuration unacceptable” in IE” failure cause”.

8.2.2.16 Radio Bearer Reconfiguration from CELL_FACH to CELL_DCH: Failure (Physical channel failure and reversion to old configuration)

8.2.2.16.1 Definition

8.2.2.16.2 Conformance requirement

The UE shall revert to the old configuration when the UE fails to reconfigure the new physical channel by received RADIO BEARER RECONFIGURATION message and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to “physical channel failure” in IE” failure cause”.

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.16.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC if the UE fails to reconfigure the new radio bearer according to a RADIO BEARER RECONFIGURATION message.

8.2.2.16.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, which includes the new radio bearer parameters and does not reconfigure L1. Therefore, the UE cannot reconfigure the new radio bearer and shall attempt to revert to the old configuration. Then the UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC, with the value “physical channel failure” in IE” failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	
2				The SS does not reconfigures L1 including the start of tx/rx
3		→	RADIO BEARER RECONFIGURATION FAILURE	The UE fails to reconfigure a new radio bearer.

Specific Message Contents

RADIO BEARER RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Physical channel failure
Other information element	Not checked

8.2.2.16.5 Test requirement

After step2 the UE shall revert to the old configuration and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting “physical channel failure” in IE” failure cause”.

8.2.2.17 Radio Bearer Reconfiguration from CELL_FACH to CELL_DCH: Failure (Physical channel failure and reversion failure)

8.2.2.17.1 Definition

8.2.2.17.2 Conformance requirement

The UE shall perform an RRC connection re-establishment procedure when the UE fails to revert to the old configuration after the detection of physical channel failure in the radio bearer reconfiguration procedure.

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.17.3 Test purpose

To confirm that the UE initiates an RRC connection re-establishment procedure, when the UE cannot reconfigure the new radio bearer following a failure to configure L1 parameters for the new radio bearer settings and also a reversion failure to the old configuration.

8.2.2.17.4 Method of test

Initial Condition

System Simulator : 2 cells - Cell 1 is active, Cell 2 is inactive

UE : CELL_FACH in cell 1

Test Procedure

The UE is in the CELL_FACH state in cell 1. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, which includes the new radio bearer parameters but does not reconfigure L1 to cater to the new radio bearer settings. The UE cannot reconfigure the new radio bearer and wants to revert to the old configuration. But the SS does not configure the old radio bearer and begins to broadcast the BCCH in a cell 2 and stops broadcasting the BCCH in cell 1. Then the UE finds a new cell 2 and transmits to it an RRC CONNECTION RE-ESTABLISHMENT REQUEST message, which includes the IE"U-RNTI" on the uplink CCCH. The SS replies with an RRC CONNECTION RE-ESTABLISHMENT message, specifying a new TFCS according to the new transport channel. After the UE receives an RRC CONNECTION RE-ESTABLISHMENT message, it reconfigures the new radio connection and transmits an RRC CONNECTION RE-ESTABLISHMENT COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	
2				The SS does not reconfigure the new radio bearer and delete the old configuration.
3				The UE shall detect a failure to reconfigure a new radio bearer, and start to revert to old configuration.
4		←	BCCH	The SS starts to transmit the BCCH in cell 2 and delete the old radio bearer settings in cell 1.
5		→	RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE shall find cell.2 and transmits this message which includes the IE"U-RNTI" it possesses.
6		←	RRC CONNECTION RE-ESTABLISHMENT	Including the new TFCS according to the new transport channel.
7		→	RRC CONNECTION RE-ESTABLISHMENT COMPLETE	

Specific Message Contents

None

8.2.2.17.5 Test requirement

After step4 the UE shall detect the presence of cell 2, enter CELL_FACH state, and attempt to perform RRC connection re-establishment procedure.

After step7 the UE shall successfully re-establish an RRC connection, and be able to access the dedicated physical resources in cell 2.

8.2.2.18 Radio Bearer Reconfigure from CELL_FACH to CELL_DCH: Failure (Incompatible simultaneous reconfiguration)

8.2.2.18.1 Definition

8.2.2.18.2 Conformance requirement

The UE shall keep its old configuration when the UE receives another RADIO BEARER RECONFIGURATION message before it completes the reconfiguration of the new radio bearers specified in RADIO BEARER RECONFIGURATION message. Following this, the UE shall transmit an ~~RRC STATUS~~RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC with value “~~Message not compatible with receiver state~~”“incompatible simultaneous reconfiguration” set in IE “~~Protocol error cause~~”“failure cause”.

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.18.3 Test purpose

To confirm that the UE keeps its configuration and transmits an ~~RRC STATUS~~RADIO BEARER RECONFIGURATION FAILURE message when the UE receives another RADIO BEARER RECONFIGURATION message before the UE configures the radio bearer according to a RADIO BEARER RECONFIGURATION message.

8.2.2.18.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. When the SS transmits a RADIO BEARER RECONFIGURATION message to the UE before the completion of a radio bearer reconfiguration commanded earlier, the UE keeps the old configuration. The UE shall also transmit an ~~RRC STATUS~~RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to “~~Message not compatible with receiver state~~”“incompatible simultaneous reconfiguration” in IE “~~Protocol error cause~~”“failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	Including IE"Uplink DPCH info"
2		←	RADIO BEARER RECONFIGURATION	Sent before the elapse of the "Activation Time" indicated in the previous RADIO BEARER RECONFIGURATION message.
3		→	~~RRC STATUS~~ RADIO BEARER RECONFIGURATION FAILURE	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER RECONFIGURATION

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Activation Time	Current CFN-[current CFN mod 8 + 8]

~~RRC STATUS~~RADIO BEARER RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	~~"RRC STATUS~~ "RADIO BEARER RECONFIGURATION FAILURE"
~~Protocol error information~~ Failure cause	~~Message not compatible with receiver state~~ Incompatible simultaneous reconfiguration
Other information element	Not checked

8.2.2.18.5 Test requirement

After step2 the UE shall keep its configuration and transmit an ~~RRC STATUS~~RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to ~~"Message not compatible with receiver state"~~"incompatible simultaneous reconfiguration" in IE ~~"Protocol error cause"~~"failure cause".

8.2.2.19 Radio Bearer Reconfiguration from CELL_FACH to CELL_DCH: Failure (Invalid message reception)

8.2.2.19.1 Definition

8.2.2.19.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER RECONFIGURATION message, which includes the spare value in the mandatory IE" DRX indicator" with criticality defined as "Reject". Then it shall transmit a RADIO BEARER RECONFIGURATION FAILURE message setting "protocol error" in IE" failure cause" and also setting "Information element value not comprehended" in IE" Protocol error cause".

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.19.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC if it receives a RADIO BEARER RECONFIGURATION message which includes the spare value in the mandatory IE" DRX indicator", with criticality defined as "Reject".

8.2.2.19.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE which includes the spare value in the mandatory IE" DRX indicator". The UE shall keep the old configuration and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC indicating "protocol error" in IE" failure cause" and also set "Information element value not comprehended" in IE" Protocol error cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	
2		→	RADIO BEARER RECONFIGURATION FAILURE	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER RECONFIGURATION

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
DRX indicator	spare value

RADIO BEARER RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	"RADIO BEARER RECONFIGURATION FAILURE"
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.2.19.5 Test requirement

After step1 the UE shall keep its old configuration and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC, which contain the cause "protocol error" in IE" failure cause" and "Information element value not comprehended" in IE" Protocol error cause".

8.2.2.20 Radio Bearer Reconfiguration from CELL_FACH to CELL_DCH: Failure (Suspension of signalling bearer)

8.2.2.20.1 Definition

8.2.2.20.2 Conformance requirement

The UE shall revert to the configuration prior to the reception of the RADIO BEARER RECONFIRGURATION message which specifies the suspension of an existing signalling radio bearer. It shall then transmit a RADIO BEARER RECONFIGURATION FAILURE message to UTRAN

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.20.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC if the UE fails to reconfigure the new radio bearer due to an inappropriate suspension request in RADIO BEARER RECONFIGURATION message.

8.2.2.20.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, which includes the IE"RB suspend/resume" set to "Suspend" for one existing signalling radio bearer. The UE shall revert to the old configuration. Then the UE transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC indicating "configuration unacceptable" in IE" failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	The message includes IE"RB suspend/resume" for one of the signalling radio bearer.
2		→	RADIO BEARER RECONFIGURATION FAILURE	The UE shall revert to the old configuration

Specific Message Contents

RADIO BEARER RECONFIGURATION

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
RB information to reconfigure list	
RB information to reconfigure l	
-RB identity	2
-RB suspend/resume	Set to the"Suspend"

RADIO BEARER RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	"RADIO BEARER RECONFIGURATION FAILURE"
Failure cause	configuration unacceptable
Other information element	Not checked

8.2.2.20.5 Test requirement

After step2 the UE shall revert to the old configuration and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC. This message shall contain the value "configuration unacceptable " in IE" failure cause".

8.2.2.21 Radio Bearer Reconfiguration from CELL_FACH to CELL_FACH:Success

8.2.2.21.1 Definition

8.2.2.21.2 Conformance requirement

The UE shall correctly reconfigure a radio bearer according to a RADIO BEARER RECONFIGURATION message which is communicate with the UTRAN on the new radio bearer and a transition from CELL_FACH to CELL_FACH in the another cell.

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.22.3 Test purpose

To confirm that the UE establishes a new radio bearer by following a RADIO BEARER RECONFIGURATION message received from the SS.

8.2.2.21.4 Method of test

Initial Condition

System Simulator : 2 cells Cell 1 is active, Cell 2 is inactive

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE which includes the new transport channel parameter reconfigure for transit . The UE reconfigures the new transport cannel and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	BCCH	The SS starts to broadcast the BCCH in cell 2.
2		←	RADIO BEARER RECONFIGURATION	including Primary CPICH Info
3				Reconfiguration of Transport channel
4		→	RADIO BEARER RECONFIGURATION COMPLETE	

Specific Message Contents

None

8.2.2.21.5 Test requirement

After step3 the UE shall transit from CELL_FACH to CELL_FACH in the another cell and communicate with the SS on the DCCH and DTCH using the modified transport channel configurations

8.2.2.22 Radio Bearer Reconfiguration from CELL_FACH to CELL_FACH: Failure (Unsupported or Unacceptable configuration)

8.2.2.22.1 Definition

8.2.2.22.2 Conformance requirement

This procedure is used to handle the case of a failure to reconfigure radio bearer(s) or signalling link(s), following a detection of an unsupported configuration by the UE.

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.22.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC if the received RADIO BEARER RECONFIGURATION message includes unsupported configuration parameters.

8.2.2.22.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, which includes unsupported configuration parameters for the UE. The UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to “configuration unacceptable” in IE” failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	Including unsupported configuration by the UE
2		→	RADIO BEARER RECONFIGURATION FAILURE	The UE does not change the radio bearer.

Specific Message Contents

RADIO BEARER RECONFIGURATION

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to those in the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Frequency info	
- UARFCN uplink(Nu)	63984.
- UARFCN downlink(Nd)	Not Present

RADIO BEARER RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	“RADIO BEARER RECONFIGURATION FAILURE”
Failure cause	Configuration unacceptable
Other information element	Not checked

8.2.2.22.5 Test requirement

After step2 the UE shall keep its old configuration and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC with the value “configuration unacceptable” set in IE” failure cause”.

8.2.2.23 Radio Bearer Reconfiguration from CELL_FACH to CELL_FACH: Failure (Physical channel failure)

8.2.2.23.1 Definition

8.2.2.23.2 Conformance requirement

The UE shall initiate the cell reselection procedure when the UE cannot use the assigned physical channel according to a RADIO BEARER RECONFIGURATION message, during the transition from CELL_FACH to CELL_FACH in the another cell.

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.23.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC if the UE fails to reconfigure the new radio bearer according to the RADIO BEARER RECONFIGURATION message received previously.

8.2.2.23.4 Method of test

Initial Condition

System Simulator : 3 cells Cell 1 is active, Cell 2 is inactive, Cell 3 is inactive

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state in cell 1. The SS begins to broadcast the BCCH in cell 2 and then transmits a RADIO BEARER RECONFIGURATION message, resulting in the UE to attempt to transit from CELL_FACH in cell 1 to CELL_FACH in cell 3. The UE is expected to fail to access the assigned physical channel as the SS ceases downlink transmission in cell 3. After the UE successfully camp onto cell 2, it shall initiate the cell update procedure in cell 2. The procedure completes when the SS confirms UE's cell update request.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARE RECONFIGURATION	The message assigns common resources so that the UE is expected to execute a transition from CELL_FACH in cell 1 to CELL_FACH in cell 3
2			BCCH	The SS starts to broadcast the BCCH in cell 2.
3				The UE shall detect a failure to use the assigned common physical channel and try to perform a cell reselection.
4		→	CELL UPDATE	The UE discover the presence of cell 2 and triggers a cell update procedure.
5		←	CELL UPDATE CONFIRM	SS sends this message so that the UE moves to CELL_PCH state.

Specific Message Contents

None

8.2.23.5 Test requirement

After step3 the UE shall discover the presence of cell 2, enter CELL_FACH state, and initiate a cell update procedure in that cell.

8.2.2.24 Radio Bearer Reconfiguration from CELL_FACH to CELL_FACH: Failure (Incompatible simultaneous reconfiguration)

8.2.2.24.1 Definition

8.2.2.24.2 Conformance requirement

The UE shall keep its old configuration when the UE receives another RADIO BEARER RECONFIGURATION message before the UE can configure the radio bearer according to an earlier RADIO BEARER RECONFIGURATION message. The UE shall transmit an ~~RRC STATUS~~RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC setting ~~“Message not compatible with receiver state”~~“incompatible simultaneous reconfiguration” in IE ~~“Protocol error cause”~~“failure cause”.

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.24.3 Test purpose

To confirm that the UE keeps its configuration and transmits an ~~RRC STATUS~~RADIO BEARER RECONFIGURATION FAILURE message when the UE receives another RADIO BEARER RECONFIGURATION message before the UE can complete the configuration of the radio bearer indicated in an earlier RADIO BEARER RECONFIGURATION message.

8.2.2.24.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. When the SS transmits a RADIO BEARER RECONFIGURATION message to the UE before the UE configures the requested radio bearer(s), the UE keeps the old configuration and transmits an ~~RRC STATUS~~RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC. This messageshall set value ~~“Message not compatible with receiver state”~~“incompatible simultaneous reconfiguration” in IE ~~“Protocol error cause”~~“failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	Including IE“Uplink DPCH info”
2		←	RADIO BEARER RECONFIGURATION	Sent before the “activation time” in step 1 has elapsed
3		→	~~RRC STATUS~~ <u>RADIO BEARER RECONFIGURATION FAILURE</u>	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER RECONFIGURATION (Step 1)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to those in the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Activation Time	Current CFN-[current CFN mod 8 + 8]

RC STATUS

Information Element	Value/remark
Message Type	~~“RRC STATUS~~ RADIO BEARER RECONFIGURATION FAILURE
~~Protocol error information~~ Failure cause	~~Message not compatible with receiver state~~ Incompatible simultaneous reconfiguration
Other information element	Not checked

8.2.2.24.5 Test requirement

After step2 the UE shall keep its configuration and transmit an ~~RRC STATUS~~RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which contains the value ~~“Message not compatible with receiver state”~~“incompatible simultaneous reconfiguration” set in IE ~~“Protocol error cause”~~“failure cause”.

8.2.2.25 Radio Bearer Reconfiguration from CELL_FACH to CELL_FACH: Failure (Invalid message reception)

8.2.2.25.1 Definition

8.2.2.25.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER RECONFIGURATION message, which includes the spare value in the mandatory IE “DRX indicator” having criticality defined as “Reject”. The UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message which is set to “protocol error” in IE “failure cause” and is set to “Information element value not comprehended” in IE “Protocol error cause”.

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.25.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC, if it receives a RADIO BEARER RECONFIGURATION message containing a spare value in the mandatory IE “DRX indicator” with criticality defined as “Reject”.

8.2.2.25.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE which includes the spare value in the mandatory IE “DRX indicator” which criticality is defined as “Reject”. The UE keeps the old configuration and transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to “protocol error” in IE “failure cause” and is set to “Information element value not comprehended” in IE “Protocol error cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	The message contains a illegal error in a mandatory IE.
2		→	RADIO BEARER RECONFIGURATION FAILURE	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER RECONFIGURATION

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to the corresponding message found in the default contents of layer 3 messages for RRC tests, with the following exceptions:

Information Element	Value/remark
DRX indicator	spare value

RADIO BEARER RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	"RADIO BEARER RECONFIGURATION FAILURE"
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.2.25.5 Test requirement

After step1 the UE shall keep its old configuration and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC stating the reason "protocol error" in IE" failure cause". The message shall contain the value "Information element value not comprehended" in IE" Protocol error cause".

8.2.2.26 Radio Bearer Reconfiguration from CELL_FACH to CELL_FACH :Failure (Suspension of signalling bearer)

8.2.2.26.1 Definition

8.2.2.26.2 Conformance requirement

The UE shall revert to the old configuration prior to the reception of RADIO BEARER RECONFIGURATION message, which includes IE"RBSuspend/resume" specified as "Suspend", and transmit a RADIO BEARER RECONFIGURATION FAILURE message to UTRAN

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.26.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC if the UE fails to reconfigure the new radio bearer according to a RADIO BEARER RECONFIGURATION message.

8.2.2.26.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE which specifies the suspension of a signalling radio bearer to be reconfigured. The UE shall revert to the old configuration. Then the UE transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC with the IE" failure cause" set to "configuration unacceptable".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	Specifies a signalling radio bearer to be suspended.
2		→	RADIO BEARER RECONFIGURATION FAILURE	The UE shall revert to the old configuration

Specific Message Contents

RADIO BEARER RECONFIGURATION

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
RB information to reconfigure list RB information to reconfigure I -RB identity -RB suspend/resume	3 "Suspend"

RADIO BEARER RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	"RADIO BEARER RECONFIGURATION FAILURE"
Failure cause	Configuration unacceptable
Other information element	Not checked

8.2.2.26.5 Test requirement

After step2 the UE shall revert to the old configuration and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC specifying the reason "configuration unacceptable " in IE" failure cause".

8.2.3 Radio Bearer Release

8.2.3.1 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success

8.2.3.1.1 Definition

8.2.3.1.2 Conformance requirement

The UE shall correctly release a radio bearer according to a RADIO BEARER RELEASE message.

Reference

3GPP TS 25.331 clause 8.2.3

8.2.3.1.3 Test purpose

To confirm that the UE release the existing radio bearer according to a RADIO BEARER RELEASE message received from the SS.

8.2.3.1.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER RELEASE message to the UE. The UE release the radio bearer and transmits a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RELEASE	
2				Release the radio bearer
3		→	RADIO BEARER RELEASE COMPLETE	

Specific Message Contents

None

8.2.3.1.5 Test requirement

After step1 the UE shall release its radio bearers.

After step3 the UE shall stop communicating on the released radio bearers, no uplink transmission shall be observed originating from the released link. The remaining radio bearers shall continue to be operational.

8.2.3.2 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Failure (Unsupported or Unacceptable configuration)

8.2.3.2.1 Definition

8.2.3.2.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER RELEASE message which includes unsupported configuration parameters and transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, setting value "configuration unacceptable" in IE" failure cause".

Reference

3GPP TS 25.331 clause 8.2.3

8.2.3.2.3 Test purpose

To confirm that the UE keeps its current configuration and transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, if the received RADIO BEARER RELEASE message indicates an unsupported configuration parameters for the UE.

8.2.3.2.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER RELAESE message to the UE specifying a frequency which is not supported by the UE. The UE transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC indicating “configuration unacceptable” in IE” failure cause”..

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RELEASE	Including unsupported configuration by the UE
2		→	RADIO BEARER RELAESE FAILURE	The UE does not change the radio bearer.

Specific Message Contents

RADIO BEARER RELEASE

The contents of RADIO BEARER RELEASE message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Frequency info	
- UARFCN uplink(Nu)	63984
- UARFCN downlink(Nd)	Not Present

RADIO BEARER RELEASE FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Configuration unacceptable
Other information element	Not checked

8.2.3.2.5 Test requirement

After step1 the UE shall keep its old configuration and transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLCwith the IE” failure cause” set to “configuration unacceptable”. The UE shall able to continue receiving and sending user data.

8.2.3.3 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Failure (Physical channel failure and reversion to old configuration)

8.2.3.3.1 Definition

8.2.3.3.2 Conformance requirement

The UE shall revert to the old configuration when the UE fails to configure the new radio bearer by timer T312 expiry and transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC which is set to “physical channel failure” in IE” failure cause”.

Reference

3GPP TS 25.331 clause 8.2.3

8.2.3.3.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC if the UE fails to release the radio bearer according to a RADIO BEARER RELEASE message by timer T312 expiry.

8.2.3.3.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER RELEASE message but it does not configure L1 correspondingly. This causes the UE to fail to release the radio bearer, and after T312 expiry the UE reverts to the old configuration. The UE then transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC which specifies “.physical channel failure” in IE” failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RELEASE	
2				The SS does not configure L1 to reflect the release of the indicated bearer.
3		→	RADIO BEARER RELEASE FAILURE	After T312 expiry, the UE finds that it fails to release a radio bearer and reverts to the old configuration.

Specific Message Contents

RADIO BEARER RELEASE FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Physical channel failure
Other information element	Not checked

8.2.3.3.5 Test requirement

After step2 the UE shall revert to the old configuration and transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC which includes the value “.physical channel failure” in IE” failure cause”.

8.2.3.4 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Failure(Physical channel failure and reversion failure)

8.2.3.4.1 Definition

8.2.3.4.2 Conformance requirement

The UE shall perform an RRC connection re-establishment procedure when the UE fails to revert to the old configuration after the detection of physical channel failure in the radio bearer release procedure.

Reference

3GPP TS 25.331 clause 8.2.3

8.2.3.4.3 Test purpose

To confirm that the UE initiates an RRC connection re-establishment procedure when the UE cannot revert to the old configuration after encountering a physical channel failure during the execution of a radio bearer release procedure.

8.2.3.4.4 Method of test

Initial Condition

System Simulator : 2 cells - Cell 1 is active, Cell.2 is inactive

UE : CELL_DCH in cell 1

Test Procedure

The UE is in the CELL_DCH state in cell 1. The SS begins to broadcast the BCCH in cell 2 with a lower power level than for cell 1. At the same time, it transmits a RADIO BEARER RELEASE message to the UE but does not configure L1. As a result, the UE fails to release the radio bearer properly and tries to revert to the old configuration after T312 expiry. But the SS deletes the old radio bearer so the UE shall find the availability of cell 2 and transmits to it an RRC CONNECTION RE-ESTABLISHMENT REQUEST message, which includes the IE "U-RNTI" and sent on the uplink CCCH. The SS transmits an RRC CONNECTION RE-ESTABLISHMENT message, which includes a new TFCS according to the new transport channel. After the UE receives an RRC CONNECTION RE-ESTABLISHMENT message, it reconfigures the new radio connection and transmits an RRC CONNECTION RE-ESTABLISHMENT COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	BCCH	The SS starts to transmit the BCCH for cell 2 but at a lower power level than cell 1.
2		←	RADIO BEARER RELEASE	
3				The SS does not configure L1 and deletes the old configuration. This is expected to cause the UE to fail in the release the radio bearer and can not revert to the old configuration.
4		→	RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE shall find cell 2 and then transmit this message which includes the IE "U-RNTI" set to its assigned connected mode identity.
5		←	RRC CONNECTION RE-ESTABLISHMENT	Including the new TFCS according to the new transport channel.
6		→	RRC CONNECTION RE-ESTABLISHMENT COMPLETE	

Specific Message Contents

None.

8.2.3.4.5 Test requirement

After step 3 the UE shall find the presence of cell 2, enter CELL_FACH state, and transmits RRC CONNECTION RE-ESTABLISHMENT REQUEST message on the uplink CCCH of cell 2.

After step 6 the UE shall successfully re-establish an RRC connection, after sending RRC CONNECTION RE-ESTABLISHMENT COMPLETE message.

8.2.3.5 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Failure (Incompatible simultaneous reconfiguration)

8.2.3.5.1 Definition

8.2.3.5.2 Conformance requirement

The UE shall keep its old configuration when the UE receives another RADIO BEARER RELEASE message before the UE is able to release the indicated radio bearer according to a RADIO BEARER RELEASE message. The UE shall transmit an ~~RRC STATUS~~RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC which is set to ~~“Message not compatible with receiver state”~~“incompatible simultaneous reconfiguration” in IE ~~“Protocol error cause”~~“failure cause”.

Reference

3GPP TS 25.331 clause 8.2.3

8.2.3.5.3 Test purpose

To confirm that the UE keeps its configuration when the UE receives another RADIO BEARER RELEASE message before the UE releases the radio bearer according to the earlier RADIO BEARER RELEASE message.

8.2.3.5.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. When the SS transmits a RADIO BEARER RELEASE message to the UE before the UE releases the radio bearer requested, the UE keeps the old configuration. It shall transmit an ~~RRC STATUS~~RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC which is set to ~~“Message not compatible with receiver state”~~“incompatible simultaneous reconfiguration” in IE ~~“Protocol error cause”~~“failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RELEASE	
2		←	RADIO BEARER RELEASE	Message sent before the “activation time” indicated in the message of step 1 has elapsed.
3		→	~~RRC STATUS~~ <u>RADIO BEARER RELEASE FAILURE</u>	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER RELEASE

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to those found in default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Activation Time	Current CFN-[current CFN mod 8 + 8]

RRC STATUS RADIO BEARER RELEASE FAILURE

Information Element	Value/remark
Message Type	
~~Protocol error information~~ <u>Failure cause</u>	~~Message not compatible with receiver state~~ <u>Incompatible simultaneous reconfiguration</u>
Other information element	Not checked

8.2.3.5.5 Test requirement

After step2 the UE shall keep its old configuration and transmit an **RRC STATUS RADIO BEARER RELEASE FAILURE** message on the DCCH using AM RLC which is set to ~~“Message not compatible with receiver state”~~ “incompatible simultaneous reconfiguration” in IE ~~“Protocol error cause”~~ “failure cause”.

8.2.3.6 Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Failure (Invalid message reception)**8.2.3.6.1 Definition****8.2.3.6.2 Conformance requirement**

The UE shall keep its old configuration when the UE receives a RADIO BEARER RELEASE message which includes the spare value in the mandatory IE “DRX indicator”. It shall transmit a RADIO BEARER RELEASE FAILURE message which contains value “protocol error” in IE “failure cause” and value “Information element value not comprehended” in IE “Protocol error cause”.

Reference

3GPP TS 25.331 clause 8.2.3

8.2.3.6.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC if it receives a RADIO BEARER RELEASE message, which uses a spare value in the mandatory IE “DRX indicator”.

8.2.3.6.4 Method of test**Initial Condition**

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER RELEASE message to the UE which includes the spare value in the mandatory IE “DRX indicator”. The UE keeps the old configuration and transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC. This message shall indicate “protocol error” in IE “failure cause” and also “Information element value not comprehended” in IE “Protocol error cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RELEASE	
2		→	RADIO BEARER RELEASE FAILURE	The UE shall not change the configuration.

Specific Message Contents

RADIO BEARER RELEASE

The contents of RADIO BEARER RELEASE message in this test case is identical to that found in default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
DRX indicator	Spare value

RADIO BEARER RELEASE FAILURE

Information Element	Value/remark
Message Type	
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.3.6.5 Test requirement

After step1 the UE shall keep its old configuration and transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, which is set to “protocol error” in IE” failure cause” and is set to “Information element value not comprehended” in IE” Protocol error cause”.

8.2.3.7 Radio Bearer Release for transition from CELL_DCH to CELL_FACH: Success

8.2.3.7.1 Definition

8.2.3.7.2 Conformance requirement

The UE shall correctly release a radio bearer according to a RADIO BEARER RELEASE message, when the common physical channel are requested to be used for the remaining radio bearers.

Reference

3GPP TS 25.331 clause 8.2.3

8.2.3.7.3 Test purpose

To confirm that the UE release the existing the radio bearer according to a RADIO BEARER RELEASE message received from the SS.

8.2.3.7.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER RELEASE message to the UE. The UE release the radio bearer and transmits a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RELEASE	
2				SS releases the radio bearer in the fashion specified in the message and allocate common channel resources to carry the remaining radio bearers.
3		→	RADIO BEARER RELEASE COMPLETE	UE shall be able to continue communication over the remaining radio bearers using the allocated common control channels.

Specific Message Contents

None

8.2.3.7.5 Test requirement

After step3 the UE shall release the specified radio bearer(s) and cease any further uplink transmission from these radio bearer(s). At the same time, it shall resume the transmission or reception of data for the previously suspended radio bearers.

8.2.3.8 Radio Bearer Release for transition from CELL_DCH to CELL_FACH: Failure (Unsupported or Unacceptable configuration)

8.2.3.8.1 Definition

8.2.3.8.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER RELEASE message, which includes an unsupported configuration parameters and then transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, setting “configuration unacceptable” in IE” failure cause”.

Reference

3GPP TS 25.331 clause 8.2.3

8.2.3.8.3 Test purpose

To confirm that the UE keeps its configuration and transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC if the received RADIO BEARER RELEASE message includes unsupported configuration parameters for the UE.

8.2.3.8.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER RELAESE message to the UE as the frequency cannot be supported by the UE. The UE transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC and set value “configuration unacceptable” in IE” failure cause”..

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RELEASE	The message Includes a configuration unsupported by the UE.
2		→	RADIO BEARER RELAESE FAILURE	The UE does not alter the current radio bearer configuration.

Specific Message Contents

RADIO BEARER RELEASE

The contents of RADIO BEARER RELEASE message in this test case is identical to those in the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Frequency info	
- UARFCN uplink(Nu)	63984
- UARFCN downlink(Nd)	Not present

RADIO BEARER RELEASE FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Configuration unacceptable
Other information element	Not checked

8.2.3.8.5 Test requirement

After step2 the UE shall keep its old configuration and transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC which is set to “configuration unacceptable” in IE” failure cause”.

8.2.3.9 Radio Bearer Release for transition from CELL_DCH to CELL_FACH:
Failure (Physical channel failure)

8.2.3.9.1 Definition

8.2.3.9.2 Conformance requirement

The UE shall initiate the cell update procedure when the UE cannot use the assigned physical channel according to a RADIO BEARER RELEASE message as the transition from CELL_DCH to CELL_FACH.

Reference

3GPP TS 25.331 clause 8.2.3

8.2.3.9.3 Test purpose

To confirm that the UE perform a cell update procedure when the UE cannot use the assigned physical channel according to a RADIO BEARER RELEASE message as the transition from CELL_DCH to CELL_FACH.

8.2.3.9.4 Method of test

Initial Condition

System Simulator : 2 cells □ No.1 is active, No.2 is inactive □

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state in cell No.1. The SS begins to broadcast the BCCH in cell No.2 and transmits a RADIO BEARER RELEASE message as the transition from CELL_DCH to CELL_FACH. The UE cannot use the assigned physical channel as the SS does not transmit any data on the DL common channel in cell No.1. Then the UE initiate the cell update procedure in cell No.2.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RELEASE	Assigned the transition from CELL_DCH to CELL_FACH
2			BCCH	The SS broadcasts BCCH in cell No.2.
3				The UE cannot use the assigned the physical channel.
4		→	CELL UPDATE	The UE finds a new cell •No.2• and begins a cell update procedure.
5		←	CELL UPDATE CONFIRM	In the CELL_FACH state

Specific Message Contents

None

8.2.3.9.5 Test requirement

After step3 the UE shall find a new cell No.2 and enter to CELL_FACH state. Then the UE shall initiate a cell update procedure in cell No.2.

8.2.3.10 Radio Bearer Release for transition from CELL_DCH to CELL_FACH: Failure (Incompatible simultaneous reconfiguration)

8.2.3.10.1 Definition

8.2.3.10.1 Conformance requirement

The UE shall keep its old configuration when the UE receives another RADIO BEARER RELEASE message, before the UE manages to release the radio bearer specified in the RADIO BEARER RELEASE message. The UE shall transmit an ~~RRC STATUS~~ RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC and set value ~~“Message not compatible with receiver state”~~ “incompatible simultaneous reconfiguration” in IE ~~“Protocol error cause”~~ “failure cause”.

Reference

3GPP TS 25.331 clause 8.2.3

8.2.3.10.2 Test purpose

To confirm that the UE keeps its configuration when the UE receives another RADIO BEARER RELEASE message before the UE has completed the release of the radio bearer according to a RADIO BEARER RELEASE message.

8.2.3.10.3 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. When the SS transmits a RADIO BEARER RELEASE message to the UE before the it completes the releases of the requested radio bearer, the UE keeps the old configuration. Thereafter, it transmits an ~~RRC STATUS~~RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC and set ~~“Message not compatible with receiver state”~~“incompatible simultaneous reconfiguration” in IE ~~“Protocol error cause”~~“failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RELEASE	
2		←	RADIO BEARER RELEASE	Sent before the passing of the “activation time” indicated in RADIO BEARER RELEASE message in step 1.
3		→	~~RRC STATUS~~ <u>RADIO BEARER RELEASE FAILURE</u>	The UE shall not change the radio bearer configuration.

Specific Message Contents

RADIO BEARER RELEASE (Step 1)

The contents of RADIO BEARER RELEASE message in this test case is identical to those found in the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Activation Time	Current CFN-[current CFN mod 8 + 8]

~~RRC STATUS~~RADIO BEARER RELEASE FAILURE

Information Element	Value/remark
Message Type	
~~Protocol error information~~ <u>Failure cause</u>	~~Message not compatible with receiver state~~ <u>Incompatible simultaneous reconfiguration</u>
Other information element	Not checked

8.2.3.10.4 Test requirement

After step2 the UE shall keep its old configuration and transmit an ~~RRC STATUS~~RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, setting ~~“Message not compatible with receiver state”~~“incompatible simultaneous reconfiguration” in IE ~~“Protocol error cause”~~“failure cause”.

8.2.3.11 Radio Bearer Release for transition from CELL_DCH to CELL_FACH: Failure (Invalid message reception)

8.2.3.11.1 Definition

8.2.3.11.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER RELEASE message. The message uses a spare value for the mandatory IE “DRX indicator”. Upon receiving this message, the UE shall transmit a RADIO BEARER RELEASE FAILURE message containing the value “protocol error” in IE “failure cause” and also the value “Information element value not comprehended” in IE “Protocol error cause”.

Reference

3GPP TS 25.331 clause 8.2.3

8.2.3.11.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC if it receives a RADIO BEARER RELEASE message which uses a spare value in the mandatory IE" DRX indicator".

8.2.3.11.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a RADIO BEARER RELEASE message to the UE which indicates a spare value in the mandatory IE" DRX indicator". The UE shall keep the old configuration and then transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC. The content of this message shall indicate "protocol error" in IE" failure cause" and also "Information element value not comprehended" in IE" Protocol error cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RELEASE	This message uses a spare value for a mandatory IE.
2		→	RADIO BEARER RELEASE FAILURE	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER RELEASE

The contents of RADIO BEARER RELEASE message in this test case is identical to those found in the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
DRX indicator	Spare value

RADIO BEARER RELEASE FAILURE

Information Element	Value/remark
Message Type	
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.3.11.5 Test requirement

After step1 the UE shall keep its old configuration and transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC which set "protocol error" in IE" failure cause" and also set "Information element value not comprehended" in IE" Protocol error cause".

8.2.3.12 Radio Bearer Release for transition from CELL_FACH to CELL_DCH: Success

8.2.3.12.1 Definition

8.2.3.12.2 Conformance requirement

The UE shall correctly release a radio bearer according to a RADIO BEARER RELEASE message.

Reference

3GPP TS 25.331 clause 8.2.3

8.2.3.12.3 Test purpose

To confirm that the UE release the existing radio bearer(s) according to the RADIO BEARER RELEASE message received from the SS.

8.2.3.12.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER RELEASE message to the UE. The UE shall release the radio bearer and transmits a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RELEASE	
2				Release the radio bearer
3		→	RADIO BEARER RELEASE COMPLETE	

Specific Message Contents

None

8.2.3.12.5 Test requirement

After step3 the UE shall stop communicating on the released radio bearers, and resume all suspended radio bearer using the dedicated physical channel allocated.

8.2.3.13 Radio Bearer Release for transition from CELL_FACH to CELL_DCH: Failure (Unsupported or Unacceptable configuration)

8.2.3.13.1 Definition

8.2.3.13.2 Conformance requirement

The UE shall keep its old configuration when it receives a RADIO BEARER RELEASE message which specifies unsupported configuration parameters for the UE. Then the UE shall transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC which, setting value "configuration unacceptable" in IE" failure cause".

Reference

3GPP TS 25.331 clause 8.2.3

8.2.3.13.3 Test purpose

To confirm that the UE keeps its configuration and transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC if the received RADIO BEARER RELEASE message requests for unsupported configuration parameters for the UE.

8.2.3.13.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER RELEASE message to the UE, referring to a frequency which cannot be supported by the UE. The UE shall transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC and set "configuration unacceptable" in IE "failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RELEASE	The message contains a configuration not supported by the UE
2		→	RADIO BEARER RELEASE FAILURE	The UE shall not change the radio bearer configuration.

Specific Message Contents

RADIO BEARER RELEASE

The contents of RADIO BEARER RELEASE message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Frequency info	
- UARFCN uplink(Nu)	63984
- UARFCN downlink(Nd)	Not Present

RADIO BEARER RELEASE FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Configuration unacceptable
Other information element	Not checked

8.2.3.13.5 Test requirement

After step2 the UE shall keep its old configuration and transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, stating the reason "configuration unacceptable" in IE "failure cause".

8.2.3.14 Radio Bearer Release for transition from CELL_FACH to CELL_DCH: Failure (Physical channel failure and reversion to old configuration)

8.2.3.14.1 Definition

8.2.3.14.2 Conformance requirement

The UE shall revert to the old configuration when the UE fails to configure the new radio bearer before T312 timer expiry. Then it shall transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, setting the value “physical channel failure” in IE” failure cause”.

Reference

3GPP TS 25.331 clause 8.2.3

8.2.3.14.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC if the UE fails to release the radio bearer in accordance the specified settings in RADIO BEARER RELEASE message by T312 timer expiry.

8.2.3.14.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER RELEASE message and does not configure L1. The UE is expected to encounter a failure while releasing the radio bearer. After T312 timer expiry, the UE shall revert to the old radio bearer configuration, so the UE transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC which is set to “physical channel failure” in IE” failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RELEASE	
2				The SS does not configure L1.
3		→	RADIO BEARER RELEASE FAILURE	After T312 expiry the UE fails to release a radio bearer and reverts to the old configuration.

Specific Message Contents

RADIO BEARER RELEASE FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Physical channel failure
Other information element	Not checked

8.2.3.14.5 Test requirement

After step2 the UE shall revert to the old configuration and transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, setting the value “physical channel failure” in IE” failure cause”.

8.2.3.15 Radio Bearer Release for transition from CELL_FACH to CELL_DCH: Failure(Physical channel failure and reversion failure)

8.2.3.15.1 Definition

8.2.3.15.2 Conformance requirement

The UE shall perform an RRC connection re-establishment procedure when the UE fails to revert to the old configuration after the detection of physical channel failure in the radio bearer release procedure.

Reference

3GPP TS 25.331 clause 8.2.3

8.2.3.15.3 Test purpose

To confirm that the UE initiates an RRC connection re-establishment procedure when the UE cannot revert to the old configuration, following a physical channel failure during the radio bearer release.

8.2.3.15.4 Method of test

Initial Condition

System Simulator : 2 cells - Cell.1 is active, Cell 2 is inactive

UE : CELL_FACH in cell No.1

Test Procedure

The UE is in the CELL_FACH state in cell 1. The SS begins to broadcast the BCCH in cell 2 and then transmits a RADIO BEARER RELEASE message to the UE, but it does not configure L1. This is expected to cause the UE to experience a failure to release the radio bearer and it subsequently tries to revert to the old configuration after T312 expiry. The SS deletes the old radio bearer, so the UE shall find cell 2 and transmits to it an RRC CONNECTION RE-ESTABLISHMENT REQUEST message, which includes the IE"U-RNTI" on the uplink CCCH. After receiving this message, the SS transmits an RRC CONNECTION RE-ESTABLISHMENT message which includes a new TFCS according to the new transport channel. After the UE receives an RRC CONNECTION RE-ESTABLISHMENT message, it reconfigures the new radio connection and transmits an RRC CONNECTION RE-ESTABLISHMENT COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	BCCH	The SS starts to transmit the BCCH in a cell 2.
2		←	RADIO BEARER RELEASE	
3				The SS does not configure L1 and deletes the old configuration so the UE cannot release the radio bearer and also fails revert to the old configuration.
4		→	RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE finds a new cell 2 and then transmits this message which includes the IE"U-RNTI" it has been assigned to.
5		←	RRC CONNECTION RE-ESTABLISHMENT	Including the new TFCS according to the new transport channel.
6		→	RRC CONNECTION RE-ESTABLISHMENT COMPLETE	

Specific Message Contents

None.

8.2.3.15.5 Test requirement

After step3 the UE shall find the presence of cell 2, enter CELL_FACH state, and transmit a RRC CONNECTION RE-ESTABLISHMENT REQUEST on the uplink CCCH.

After step6 the UE shall successfully re-establish an RRC connection and access the dedicated physical channels assigned.

8.2.3.16 Radio Bearer Release for transition from CELL_FACH to CELL_DCH: Failure (Incompatible simultaneous reconfiguration)

8.2.3.16.1 Definition

8.2.3.16.2 Conformance requirement

The UE shall keep its old configuration when the UE receives another RADIO BEARER RELEASE message before the UE is able to release the radio bearer according to an earlier RADIO BEARER RELEASE message. The UE shall then transmit an ~~RRC STATUS~~RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, setting value ~~“Message not compatible with receiver state”~~“incompatible simultaneous reconfiguration” in IE ~~“Protocol error cause”~~“failure cause”.

Reference

3GPP TS 25.331 clause 8.2.3

8.2.3.16.3 Test purpose

To confirm that the UE keeps its old configuration when it receives another RADIO BEARER RELEASE message before it releases the radio bearer according to an earlier RADIO BEARER RELEASE message.

8.2.3.16.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. When the SS transmits a RADIO BEARER RELEASE message to the UE before the UE completes the release of the radio bearer, it shall keep the old configuration and transmit an ~~RRC STATUS~~RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC. This message shall specify the reason ~~“Message not compatible with receiver state”~~“incompatible simultaneous reconfiguration” in IE ~~“Protocol error cause”~~“failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RELEASE	
2		←	RADIO BEARER RELEASE	Sent before the expiry stated in IE “Activation Time” of RADIO BEARER RELEASE message in step 1.
3		→	~~RRC STATUS~~ <u>RADIO BEARER RELEASE FAILURE</u>	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER RELEASE (Step 1)

The contents of RADIO BEARER RELEASE message in this test case is identical to those found in default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Activation Time Info	Current CFN-[current CFN mod 8 + 8]
<u>RRC STATUS</u>RADIO BEARER RELEASE FAILURE	
Information Element	Value/remark
Message Type	
~~Protocol error information~~ <u>Failure cause</u>	~~Message not compatible with receiver state~~ <u>Incompatible simultaneous reconfiguration</u>
Other information element	Not checked

8.2.3.16.5 Test requirement

After step2 the UE shall keep its old configuration and transmit an **RRC STATUSRADIO BEARER RELEASE FAILURE** message on the DCCH using AM RLC, and set the value “~~Message not compatible with receiver state~~”“incompatible simultaneous reconfiguration” in IE” ~~Protocol error cause~~”“failure cause”.

8.2.3.17 Radio Bearer Release for transition from CELL_FACH to CELL_DCH: Failure (Invalid message reception)

8.2.3.17.1 Definition

.

8.2.3.17.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER RELEASE message which uses a spare value in the mandatory IE” DRX indicator”. It shall transmit a RADIO BEARER RELEASE FAILURE message which indicate the value “protocol error” in IE” failure cause” and setting “Information element value not comprehended” in IE” Protocol error cause”.

Reference

3GPP TS 25.331 clause 8.2.3

8.2.3.17.3 Test purpose

To confirm that the UE transmits RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC if it receives a RADIO BEARER RELEASE message which uses a spare value in the mandatory IE” DRX indicator”.

8.2.3.17.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER RELAESE message to the UE containing a spare value in the mandatory IE” DRX indicator”. The UE keeps the old configuration and transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, which shall indicate the reason “protocol error” in IE” failure cause” and also “Information element value not comprehended” in IE” Protocol error cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RELEASE	
2		→	RADIO BEARER RELEASE FAILURE	The UE shall not change its current configuration.

Specific Message Contents

RADIO BEARER RELEASE

The contents of RADIO BEARER RELEASE message in this test case is identical to those for the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
DRX indicator	spare value

RADIO BEARER RELEASE FAILURE

Information Element	Value/remark
Message Type	
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.3.17.5 Test requirement

After step1 the UE shall keep its old configuration and transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, setting “protocol error” in IE” failure cause” and also indicating “Information element value not comprehended” in IE” Protocol error cause”.

8.2.3.18 Radio Bearer Release for transition from CELL_FACH to CELL_FACH: Success

8.2.3.18.1 Definition

.

8.2.3.18.2 Conformance requirement

The UE shall correctly release a radio bearer according to the RADIO BEARER RELEASE message received.

Reference

3GPP TS 25.331 clause 8.2.3

8.2.3.18.3 Test purpose

To confirm that the UE release the existing the radio bearer(s) according to the RADIO BEARER RELEASE message received from the SS.

8.2.3.18.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER RELEASE message to the UE. The UE release the radio bearer and transmits a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RELEASE	
2				The UE shall release the requested radio bearer(s), and stop transmitting using these radio bearer(s).
3		→	RADIO BEARER RELEASE COMPLETE	

Specific Message Contents

None

8.2.3.18.5 Test requirement

After step1 the UE shall cease the transmission and reception of the affected radio bearers.

After step3 the UE shall stop communicating on radio bearers to be released.

8.2.3.19 Radio Bearer Release for transition from CELL_FACH to CELL_FACH: Failure (Unsupported or Unacceptable configuration)

8.2.3.19.1 Definition

.

8.2.3.19.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO BEARER RELEASE message that specifies an unsupported configuration. It shall then transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC and setting the cause "configuration unacceptable" in IE "failure cause".

Reference

3GPP TS 25.331 clause 8.2.3

8.2.3.19.3 Test purpose

To confirm that the UE keeps its configuration and transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, if the received RADIO BEARER RELEASE message includes unsupported configuration parameters.

8.2.3.19.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER RELEASE message to the UE specifying a frequency, which cannot be supported by the UE. The UE shall transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, indicating "configuration unacceptable" in IE "failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RELEASE	Including an unsupported configuration for the UE
2		→	RADIO BEARER RELEASE FAILURE	The UE shall not change the radio bearer.

Specific Message Contents

RADIO BEARER RELEASE

The contents of RADIO BEARER RELEASE message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Frequency info	
- UARFCN uplink(Nu)	63984
- UARFCN downlink(Nd)	Not Present

RADIO BEARER RELEASE FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Configuration unacceptable
Other information element	Not checked

8.2.3.19.5 Test requirement

After step2 the UE shall keep its old configuration and transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, and set “configuration unacceptable” in IE” failure cause”.

8.2.3.20 Radio Bearer Release for transition from CELL_FACH to CELL_FACH: Failure (Incompatible simultaneous reconfiguration)

8.2.3.20.1 Definition

.

8.2.3.20.2 Conformance requirement

The UE shall keep its old configuration when the UE receives another RADIO BEARER RELEASE message, before the UE releases the radio bearer according to an earlier RADIO BEARER RELEASE message. The UE shall transmit an ~~RRC STATUS~~ RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, indicating “~~Message not compatible with receiver state~~” “incompatible simultaneous reconfiguration” in IE” ~~Protocol error cause~~” failure cause”.

Reference

3GPP TS 25.331 clause 8.2.3

8.2.3.20.3 Test purpose

To confirm that the UE keeps its configuration when it receives another RADIO BEARER RELEASE message before it manage to release the radio bearer according to a RADIO BEARER RELEASE message.

8.2.3.20.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. When the SS transmits a RADIO BEARER RELEASE message to the UE before it completes the release of the radio bearer, the UE shall keep the old configuration. It then transmits an ~~RRC STATUS~~RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, setting “~~Message not compatible with receiver state~~”“incompatible simultaneous reconfiguration” in IE” ~~Protocol error cause”~~“failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RELEASE	
2		←	RADIO BEARER RELEASE	Sent before the passing of the time indicated in “Activation Time Info” in the RADIO BEARER RELEASE message of step 1.
3		→	~~RRC STATUS~~ <u>RADIO BEARER RELEASE FAILURE</u>	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER RELEASE

The contents of RADIO BEARER RELEASE message in this test case is identical to those found in the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Activation Time Info	Current CFN-[current CFN mod 8 + 8]

~~RRC STATUS~~RADIO BEARER RELEASE FAILURE

Information Element	Value/remark
Message Type	
~~Protocol error information~~ <u>Failure cause</u>	~~Message not compatible with receiver state~~ <u>Incompatible simultaneous reconfiguration</u>
Other information element	Not checked

8.2.3.20.5 Test requirement

After step2 the UE shall keep its old configuration and transmit an ~~RRC STATUS~~RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, and setting “~~Message not compatible with receiver state~~”“incompatible simultaneous reconfiguration” in IE” ~~Protocol error cause”~~“failure cause”.

8.2.3.21 Radio Bearer Release for transition from CELL_FACH to CELL_FACH: Failure (Invalid message reception)

8.2.3.21.1 Definition

.

8.2.3.21.2 Conformance requirement

The UE shall keep its old configuration when it receives a RADIO BEARER RELEASE message, including a spare value in the mandatory IE” DRX indicator”. It shall transmit a RADIO BEARER RELEASE FAILURE message with the cause “protocol error” in IE” failure cause” and also the cause “Information element value not comprehended” set in IE” Protocol error cause”.

Reference

3GPP TS 25.331 clause 8.2.3

8.2.3.21.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, if it receives a RADIO BEARER RELEASE message using a spare value in the mandatory IE” DRX indicator”.

8.2.3.21.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a RADIO BEARER RELEASE message to the UE which includes the use of a spare value in the mandatory IE "DRX indicator". The UE shall keep the old configuration intact and transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC. The message shall state "protocol error" in IE "failure cause", and also indicate "Information element value not comprehended" in IE "Protocol error cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RELEASE	This message contains a mandatory IE error.
2		→	RADIO BEARER RELEASE FAILURE	The UE does not change the configuration.

Specific Message Contents

RADIO BEARER RELEASE

The contents of RADIO BEARER RELEASE message in this test case is identical to those found in the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
DRX indicator	spare value

RADIO BEARER RELEASE FAILURE

Information Element	Value/remark
Message Type	
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.3.21.5 Test requirement

After step1 the UE shall keep its old configuration and transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC. This uplink message shall state the reason "protocol error" in IE "failure cause" and also indicate "Information element value not comprehended" in IE "Protocol error cause".

8.2.4 Transport channel reconfiguration

8.2.4.1 Transport channel reconfiguration from CELL_DCH to CELL_DCH(Hard handover to intra frequency): Success with no transport channel type switching

8.2.4.1.1 Definition

8.2.4.1.2 Conformance requirement

The UE shall correctly reconfigure a radio bearer according to a TRANSPORT CHANNEL RECONFIGURATION message which is communicate with the UTRAN on the new transport channel.

Reference

3GPP TS 25.331 clause 8.2.4

8.2.4.1.3 Test purpose

To confirm that the UE reconfigures a new transport channel according to a TRANSPORT CHANNEL RECONFIGURATION message received from the SS.

8.2.4.1.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE, which includes new transport channel parameters. The UE reconfigures the new transport channel and transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	TRANSPORT CHANNEL RECONGURATION	Including UE information elements("TFS")
2				Reconfiguration of a new transport channel
3		→	TRANSPORT CHANNEL RECONFIGURATION COMPLETE	

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
TrCH Information Elements	
-Uplink transport Channels	
-Added or Reconfigured TrCH information list	Number of Transport blocks = 2
-Downlink transport Channels	
-Added or Reconfigured TrCH information list	Selected value as the UE can support. Number of Transport blocks = 2

8.2.4.1.5 Test requirement

After step1 the UE shall reconfigure the radio links affected by the changes for uplink and downlink DCH. .

After step3 the UE shall continue to communicate with the SS on the DCCH using the new Transport Format Set (TFS) applicable on the existing transport channel.

8.2.4.2 Transport channel reconfiguration from CELL_DCH to CELL_DCH: Failure (Unsupported or Unacceptable configuration)

8.2.4.2.1 Definition

8.2.4.2.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a TRANSPORT CHANNEL RECONFIGURATION message which includes unsupported configuration parameters and transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to “configuration unacceptable” in IE” failure cause

Reference

3GPP TS 25.331 clause 8.2.4

8.2.4.2.3 Test purpose

To confirm that the UE transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if the received TRANSPORT CHANNEL RECONFIGURATION message specifies unsupported configuration parameters.

8.2.4.2.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE, which includes unsupported configuration parameters of the UE. The UE transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, reporting the event “configuration unacceptable” in IE” failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	TRANSPORT CHANNEL RECONGURATION	Including unsupported configuration by the UE
2		→	TRANSPORT CHANNEL RECONFIGURATION FAILURE	The UE shall not change the settings used by the transport channel.

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
TrCH Information Elements	
-Uplink transport Channels	
-Added or Reconfigured TrCH information list	Number of Transport blocks = 4096
-Downlink transport Channels	
-Added or Reconfigured TrCH information list	Selected value as the UE can not support. Number of Transport blocks = 4096

TRANSPORT CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	"TRANSPORT CHANNEL RECONFIGURATION FAILURE"
Failure cause	Configuration unacceptable
Other information element	Not checked

8.2.4.2.5 Test requirement

After step1 the UE shall keep its old configuration and transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, indicating "configuration unacceptable" in IE" failure cause".

8.2.4.3 Transport channel reconfiguration from CELL_DCH to CELL_DCH: Failure (Physical channel failure and reversion to old configuration)

8.2.4.3.1 Definition

8.2.4.3.2 Conformance requirement

The UE shall revert to the old configuration when the UE fails to reconfigure the new physical channel by received TRANSPORT CHANNEL RECONFIGURATION message and transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "physical channel failure" in IE" failure cause".

Reference

3GPP TS 25.331 clause 8.2.4

8.2.4.3.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, if the UE fails to reconfigure the new transport channel according to a TRANSPORT CHANNEL RECONFIGURATION message.

8.2.4.3.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE, which includes new transport channel parameters but it does not reconfigure the new transport channel. Therefore, the UE cannot reconfigure them and have to revert to the old configuration. Then the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting "physical channel failure" in IE" failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	TRANSPORT CHANNEL RECONGURATION	Specifies a change in the TFS of the dedicated transport channel used.
2				The SS does not reconfigure the transport channel, leading to the UE unable to reconfigure the new transport channel.
3		→	TRANSPORT CHANNEL RECONFIGURATION FAILURE	The UE reverts to the old configuration and transmits this message.

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	"TRANSPORT CHANNEL RECONFIGURATION FAILURE"
Failure cause	Physical channel failure
Other information element	Not checked

8.2.4.3.5 Test requirement

After step2 the UE shall revert to the old configuration and transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, and it shall set the value "physical channel failure" in IE" failure cause".

8.2.4.4 Transport channel reconfiguration from CELL_DCH to CELL_DCH: Failure (Physical channel failure and reversion failure)

8.2.4.4.1 Definition

8.2.4.4.2 Conformance requirement

This procedure is used to failure of reconfiguration for a transport channel because of physical channel failure and reversion failure for the transition from CELL_FACH to CELL_FACH in the same cell..

Reference

3GPP TS 25.331 clause 8.2.4

8.2.4.4.3 Test purpose

To confirm that the UE initiates an RRC connection re-establishment procedure when the UE cannot reconfigure the new transport channel due to a failure of L1 configuration, and subsequently fail to revert to the old configuration after T312 expiry.

8.2.4.4.4 Method of test

Initial Condition

System Simulator : 2 cells – Cell 1 is active, Cell 2 is inactive

UE : CELL_DCH in cell 1

Test Procedure

The UE is in the CELL_DCH state in cell 1. SS begins to broadcast the BCCH of cell 2 using a power level lower than that applied for cell 1. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE. The

message specifies a new set of transport channel parameters but the SS does not reconfigure L1 correspondingly. At the same time, SS deletes its current contexts for cell 1. As a result, the UE cannot reconfigure the new transport channel and shall attempt to revert to the old configuration. The UE shall find the presence of cell 2 and then transmit an RRC CONNECTION RE-ESTABLISHMENT REQUEST message which includes the IE "U-RNTI" on the uplink CCCH. The SS transmits an RRC CONNECTION RE-ESTABLISHMENT message, which includes a new TFCS according to the new transport channel assigned. After the UE receives an RRC CONNECTION RE-ESTABLISHMENT message, it reconfigures the new radio connection and transmits an RRC CONNECTION RE-ESTABLISHMENT COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	BCCH	SS begins to transmit the BCCH for cell 2.
2		←	TRANSPORT CHANNEL RECONFIGURATION	Specifies the use of a new setting for transport channel.
3				The SS does not reconfigure L1 and deletes the old configuration present in cell 1..
4				The UE fails to reconfigure a new transport channel.
5		→	RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE detects the presence of cell.2, and then transmits this message which includes the IE "U-RNTI".
6		←	RRC CONNECTION RE-ESTABLISHMENT	Including the new TFCS according to the new transport channel.
7		→	RRC CONNECTION RE-ESTABLISHMENT COMPLETE	

Specific Message Contents

None

8.2.4.4.5 Test requirement

After step4 the UE shall discover cell 2, enter CELL_FACH state, and then transmit a RRC CONNECTION RE-ESTABLISHMENT REQUEST message.

After step7 the UE shall successfully re-establish an RRC connection in cell 2.

8.2.4.5 Transport Channel Reconfiguration from CELL_DCH to CELL_DCH: Failure (Incompatible simultaneous reconfiguration)

8.2.4.5.1 Definition

8.2.4.5.2 Conformance requirement

The UE shall keep its old configuration when the UE receives another TRANSPORT CHANNEL RECONFIGURATION message, before the UE completes the configuration of the transport channel according to a TRANSPORT CHANNEL RECONFIGURATION message received earlier. The UE shall transmit an ~~RRC STATUS~~ TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to ~~"Message not compatible with receiver state"~~ "incompatible simultaneous reconfiguration" in IE ~~"Protocol error cause"~~ "failure cause".

Reference

3GPP TS 25.331 clause 8.2.4

8.2.4.5.3 Test purpose

To confirm that the UE keeps its current configuration, transmits an ~~RRC STATUS~~TRANSPORT CHANNEL RECONFIGURATION FAILURE message when it receives another TRANSPORT CHANNEL RECONFIGURATION message before the completion of an earlier reconfiguration request.

8.2.4.5.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. When the SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE before the UE has successfully configured the transport channel specified in an earlier message, the UE keeps the old configuration. After that, the UE shall transmit an ~~RRC STATUS~~TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, indicating “~~Message not compatible with receiver state~~”“incompatible simultaneous reconfiguration” in IE “~~Protocol error cause~~”“failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	TRANSPORT CHANNEL RECONFIGURATION	Including IE“Uplink DPCH info”
2		←	TRANSPORT CHANNEL RECONFIGURATION	Sent before the time specified in IE“Activation Time Info” of message in step 1 has elapsed.
3		→	~~RRC STATUS~~ TRANSPORT CHANNEL RECONFIGURATION FAILURE	The UE shall not change the configuration.

Specific Message Contents

The contents of TRANSPORT CHANNEL RECONFIGURATION messages in this test case is identical to the corresponding message found in the default contents of layer 3 messages for RRC tests with the following exceptions:

TRANSPORT CHANNEL RECONFIGURATION (Step 1)

Information Element	Value/remark
Activation Time	Current CFN-[current CFN mod 8 + 8]
~~RRC STATUS~~ TRANSPORT CHANNEL RECONFIGURATION FAILURE	
Information Element	Value/remark
Message Type	“ ~~RRC STATUS~~ TRANSPORT CHANNEL RECONFIGURATION FAILURE”
~~Protocol error information~~ Failure cause	~~Message not compatible with receiver state~~ Incompatible simultaneous reconfiguration
Other information element	Not checked

8.2.4.5.5 Test requirement

After step2 the UE shall keep its configuration and transmit an ~~RRC STATUS~~TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, stating the reason “~~Message not compatible with receiver state~~”“incompatible simultaneous reconfiguration” in IE “~~Protocol error cause~~”“failure cause”.

8.2.4.6 Transport channel reconfiguration from CELL_DCH to CELL_DCH: Failure (Invalid message reception)

8.2.4.6.1 Definition

8.2.4.6.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a TRANSPORT CHANNEL RECONFIGURATION message which makes use of a spare value in the mandatory IE" DRX indicator". Then it shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message with the value "protocol error" set in IE" failure cause" and also "Information element value not comprehended" in IE" Protocol error cause".

Reference

3GPP TS 25.331 clause 8.2.4

8.2.4.6.3 Test purpose

To confirm that the UE transmits TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, if the received TRANSPORT CHANNEL RECONFIGURATION message comprises a spare value in the mandatory IE" DRX indicator".

8.2.4.6.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE, which includes a spare value in the mandatory IE" DRX indicator". The UE shall keep the old configuration and transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, specifying "protocol error" in IE" failure cause" and also indicating "Information element value not comprehended" in IE" Protocol error cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	TRANSPORT CHANNEL RECONFIGURATION	Contains an illegal value for a mandatory IE
2		→	TRANSPORT CHANNEL RECONFIGURATION FAILURE	The UE does not change the configuration.

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to those in the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
DRX indicator	spare value

TRANSPORT CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	"TRANSPORT CHANNEL RECONFIGURATION FAILURE"
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.4.6.5 Test requirement

After step1 the UE shall keep its old configuration and transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC. The message shall specify "protocol error" in IE" failure cause" and set value "Information element value not comprehended" in IE" Protocol error cause".

8.2.4.7 Transport channel reconfiguration from CELL_DCH to CELL_FACH:
Success

8.2.4.7.1 Definition

8.2.4.7.2 Conformance requirement

The UE shall correctly reconfigure the transport channels according to TRANSPORT CHANNEL RECONFIGURATION message, after it is requested to perform a transition from CELL_DCH to CELL_FACH in the same cell in conjunction with the transport channel reconfiguration.

Reference

3GPP TS 25.331 clause 8.2.4

8.2.4.7.3 Test purpose

To confirm that the UE reconfigures a new Transport channel according to a TRANSPORT CHANNEL RECONFIGURATION message received from the SS.

8.2.4.7.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits TRANSPORT CHANNEL RECONFIGURATION message to the UE which omits IE" Uplink DPCH info" and IE" Downlink DPCH info" . This should cause the UE to perform a state transition from CELL_DCH to CELL_FACH in the same cell. The UE then reconfigures the new transport channel according to this message and reconfigure the new physical channel according to the system information messages. Finally, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	TRANSPORT CHANNEL RECONFIGURATION	IE"Uplink DPCH Info" and IE"Downlink DPCH Info" are not specified.
2				UE shall perform the reconfiguration of transport channel
3		→	TRANSPORT CHANNEL RECONFIGURATION COMPLETE	

Specific Message Contents

None.

8.2.4.7.5 Test requirement

After step3 the UE shall transit from CELL_DCH to CELL_FACH in the same cell, and then continue to communicate with SS on the new transport channel and common physical channels.

8.2.4.8 Transport channel reconfiguration from CELL_DCH to CELL_FACH: Failure (Unsupported or Unacceptable configuration)

8.2.4.8.1 Definition

8.2.4.8.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a TRANSPORT CHANNEL RECONFIGURATION message which includes unsupported configuration parameters and transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "configuration unacceptable" in IE" failure cause

Reference

3GPP TS 25.331 clause 8.2.4

8.2.4.8.3 Test purpose

To confirm that the UE transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if the received TRANSPORT CHANNEL RECONFIGURATION message includes unsupported configuration parameters.

8.2.4.8.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE, which includes unsupported configuration parameters for the UE. The UE transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "configuration unacceptable" in IE" failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	TRANSPORT CHANNEL RECONGURATION	Including an unsupported transport channel configuration for the UE
2		→	TRANSPORT CHANNEL RECONFIGURATION FAILURE	The UE does not change the transport channel.

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
TrCH Information Elements	
-Uplink transport Channels	
>Added or Reconfigured TrCH information list	Number of transport blocks = 4096
-Downlink transport Channels	
>Added or Reconfigured TrCH information list	Number of transport blocks = 4096

TRANSPORT CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Configuration unacceptable
Other information element	Not checked

8.2.4.8.5 Test requirement

After step1 the UE shall keep its old configuration and transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, which shall contains cause “configuration unacceptable” in IE” failure cause”.

8.2.4.9 Transport channel reconfiguration from CELL_DCH to CELL_FACH: Failure (Physical channel failure and reversion to old configuration)

8.2.4.9.1 Definition

8.2.4.9.2 Conformance requirement

The UE shall revert the old configuration when it fails to reconfigure the new transport channel requested. When reversion is successful, it shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message to UTRAN.

Reference

3GPP TS 25.331 clause 8.2.4

8.2.4.9.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, if the UE fails to reconfigure the new transport channel according to the TRANSPORT CHANNEL RECONFIGURATION message received.

8.2.4.9.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE which includes the new transport channel parameters. However, it does not reconfigure the new transport channel to reflect change. As a result, the UE should encounter difficulties in the reconfigure process and after T312 expiry, it shall revert to its stored old configuration. When the UE manages to return to the old configuration, it transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC and set the reason "physical channel failure" in IE" failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	TRANSPORT CHANNEL RECONGURATION	
2				The SS does not reconfigure the transport channel hence the UE could not access the new transport channel.
3		→	TRANSPORT CHANNEL RECONFIGURATION FAILURE	After T312 expiry, the UE reverts to the old configuration and transmits this message using the original transport channel settings.

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	TRANSPORT CHANNEL RECONFIGURATION FAILURE
Failure cause	Physical channel failure
Other information element	Not checked

8.2.4.9.5 Test requirement

After step2 the UE shall attempt revert to the old configuration and transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC. The failure message shall contain the reason "physical channel failure" in IE" failure cause".

8.2.4.10 Transport channel reconfiguration from CELL_DCH to CELL_FACH: Failure (Physical channel failure and reversion failure)

8.2.4.10.1 Definition

8.2.4.10.2 Conformance requirement

The UE shall initiate a RRC connection re-establishment procedure, after it encounters a physical channel failure followed by an inability to revert to the old transport channel configuration.

Reference

3GPP TS 25.331 clause 8.2.4

8.2.4.10.3 Test purpose

To confirm that the UE initiates an RRC connection re-establishment procedure when the UE fails successively in the following actions: (a) configure the new transport channel according to TRANSPORT CHANNEL RECONFIGURATION message received and (b) revert to the old channel configuration after timer T312 expiry.

8.2.4.10.4 Method of test

Initial Condition

System Simulator : 2 cells - Cell 1 is active, Cell 2 is inactive

UE : CELL_DCH in cell 1

Test Procedure

The UE is in the CELL_DCH state in cell 1. SS begins to transmit the BCCH for cell 2. The SS then transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE, which specifies the new transport channel parameters on common physical channel. But the SS does not reconfigure the L1 parameters and the new transport channel to reflect this change. Consequently, the UE discovers that it cannot reconfigure the new transport channel and try to revert to the old configuration. At this time, SS deletes all context related to the old configuration in cell 1. Then the UE should find cell 2 and transmits an RRC CONNECTION RE-ESTABLISHMENT REQUEST message which includes the IE"U-RNTI" on the uplink CCCH. After the reception of such a message, the SS transmits an RRC CONNECTION RE-ESTABLISHMENT message and includes a new TFCS for the new transport channel in cell 2. After receiving this message, the UE reconfigures the new radio connection and transmits an RRC CONNECTION RE-ESTABLISHMENT COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	BCCH	The SS starts to transmit the BCCH cell 2.
2		←	TRANSPORT CHANNEL RECONGURATION	
3				The SS does not reconfigure L1. At the same time, it deletes the old channel configuration.
4				The UE fails to reconfigure a new transport channel.
5		→	RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE shall discover the presence of cell 2 and transmits this message, which includes the IE"U-RNTI".
6		←	RRC CONNECTION RE-ESTABLISHMENT	A new TFCS is commanded according to the new transport channel.
7		→	RRC CONNECTION RE-ESTABLISHMENT COMPLETE	

Specific Message Contents

None

8.2.4.10.5 Test requirement

After step4 the UE shall find cell 2, enter CELL_FACH state and then initiate RRC connection re-establishment procedure in cell 2.

After step7 the UE shall successfully re-establish an RRC connection in cell 2.

8.2.4.11 Transport Channel Reconfiguration from CELL_DCH to CELL_FACH: Failure (Incompatible simultaneous reconfiguration)

8.2.4.11.1 Definition

8.2.4.11.2 Conformance requirement

The UE shall keep its old configuration when the UE receives another TRANSPORT CHANNEL RECONFIGURATION message before the UE configures the transport channel, according to an earlier TRANSPORT CHANNEL RECONFIGURATION message. The UE shall transmit an ~~RRC STATUS~~ TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which specifies ~~“Message not compatible with receiver state”~~ “incompatible simultaneous reconfiguration” in IE ~~“Protocol error cause”~~ “failure cause”.

Reference

3GPP TS 25.331 clause 8.2.4

8.2.4.11.3 Test purpose

To confirm that the UE keeps its configuration and transmits an ~~RRC STATUS~~ TRANSPORT CHANNEL RECONFIGURATION FAILURE message when the UE receives another TRANSPORT CHANNEL RECONFIGURATION message, before the UE had completed the configuration of the transport channel originating from an earlier TRANSPORT CHANNEL RECONFIGURATION message.

8.2.4.11.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to request for a reconfiguration of the transport channel, leading to a state transition to CELL_FACH. However, before the completion of this process, SS sends a second TRANSPORT CHANNEL RECONFIGURATION message. The UE shall keep the old configuration as if no reconfiguration has occurred and then transmit an ~~RRC STATUS~~ TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC. The status message shall indicate ~~“Message not compatible with receiver state”~~ “incompatible simultaneous reconfiguration” in IE ~~“Protocol error cause”~~ “failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	TRANSPORT CHANNEL RECONFIGURATION	IE “Activation Time Info” is included
2		←	TRANSPORT CHANNEL RECONFIGURATION	Sent before the activation time requested in step 1 has passed.
3		→	~~RRC STATUS~~ <u>TRANSPORT CHANNEL RECONFIGURATION FAILURE</u>	The UE does not change the configuration.

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION (Step 1)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Activation Time Info	Current CFN-[current CFN mod 8 + 8]

RRC STATUS TRANSPORT CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	~~"RRC STATUS TRANSPORT CHANNEL RECONFIGURATION FAILURE"~~
~~Protocol error information~~ Failure cause	~~Message not compatible with receiver state~~ Incompatible simultaneous reconfiguration
Other information element	Not checked

8.2.4.11.5 Test requirement

After step2 the UE shall keep its configuration and then transmit an RRC STATUS message on the DCCH using AM RLC, containing the reason ~~"Message not compatible with receiver state"~~ "incompatible simultaneous reconfiguration" in IE ~~"Protocol error cause"~~ "failure cause".

8.2.4.12 Transport channel reconfiguration from CELL_DCH to CELL_FACH: Failure (Invalid message reception)**8.2.4.12.1 Definition****8.2.4.12.2 Conformance requirement**

The UE shall keep its old configuration when the UE receives a TRANSPORT CHANNEL RECONFIGURATION message which makes use of a spare value in the mandatory IE "DRX indicator". Then it shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message, setting the value "protocol error" in IE "failure cause" and also setting "Information element value not comprehended" in IE "Protocol error cause".

Reference

3GPP TS 25.331 clause 8.2.4

8.2.4.12.3 Test purpose

To confirm that the UE transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if it receives a TRANSPORT CHANNEL RECONFIGURATION message which uses a spare value in the mandatory IE "DRX indicator".

8.2.4.12.4 Method of test**Initial Condition**

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE, and includes a spare value in the mandatory IE "DRX indicator". The UE shall keep the old configuration and transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC. The message shall specify "protocol error" in IE "failure cause" and also "Information element value not comprehended" in IE "Protocol error cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	TRANSPORT CHANNEL RECONFIGURATION	Contains a mandatory IE error.
2		→	TRANSPORT CHANNEL RECONFIGURATION FAILURE	The UE shall not change the configuration.

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
DRX indicator	spare value

TRANSPORT CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	"TRANSPORT CHANNEL RECONFIGURATION FAILURE"
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.4.12.5 Test requirement

After step1 the UE shall keep its old configuration and transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC. The UE shall set "protocol error" in IE" failure cause" and also "Information element value not comprehended" in IE" Protocol error cause".

8.2.4.13 Transport channel reconfiguration from CELL_FACH to CELL_DCH : Success

8.2.4.13.1 Definition

8.2.4.13.2 Conformance requirement

The UE shall correctly reconfigure the transport channels according to TRANSPORT CHANNEL RECONFIGURATION message, which trigger a state transition from CELL_FACH to CELL_DCH in the same cell.

Reference

3GPP TS 25.331 clause 8.2.4

8.2.4.13.3 Test purpose

To confirm that the UE reconfigures a new transport channel using dedicated physical channel according to a TRANSPORT CHANNEL RECONFIGURATION message received from the SS.

8.2.4.13.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE, which includes IE“ Uplink DPCH info” and IE” Downlink DPCH info” leading to a state transition from CELL_FACH to CELL_DCH in the same cell. The UE shall reconfigure the new transport channel according to this message and then reconfigure the new physical channel according to the system information message. Finally, the UE transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	TRANSPORT CHANNEL RECONFIGURATION	Includes both IE“Uplink DPCH Info” and IE”Downlink DPCH Info” in the message.
2				Reconfiguration of transport channel
3		→	TRANSPORT CHANNEL RECONFIGURATION COMPLETE	

Specific Message Contents

None.

8.2.4.13.5 Test requirement

After step3 the UE shall transit from CELL_FACH to CELL_DCH in the same cell, and continue to communicate with SS using the new transport channel configuration based on DPCH physical channels.

8.2.4.14 Transport channel reconfiguration from CELL_FACH to CELL_DCH: Failure (Unsupported or Unacceptable configuration)

8.2.4.14.1 Definition

8.2.4.14.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a TRANSPORT CHANNEL RECONFIGURATION message which includes unsupported configuration parameters and transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to “configuration unacceptable” in IE” failure cause

Reference

3GPP TS 25.331 clause 8.2.4

8.2.4.14.3 Test purpose

To confirm that the UE transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC when it receives a TRANSPORT CHANNEL RECONFIGURATION message which includes unsupported configuration parameters.

8.2.4.14.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE, which includes unsupported configuration parameters for the UE. The UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting “configuration unacceptable” in IE” failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	TRANSPORT CHANNEL RECONGURATION	The message includes unsupported configuration by the UE
2		→	TRANSPORT CHANNEL RECONFIGURATION FAILURE	The UE shall not change the transport channel.

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to those in the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
TrCH Information Elements	
-Uplink transport Channels	
-Added or Reconfigured TrCH information list	Number of transport channels = 4096
-Downlink transport Channels	
-Added or Reconfigured TrCH information list	Number of transport channels = 4096

TRANSPORT CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	“TRANSPORT CHANNEL RECONFIGURATION FAILURE”
Failure cause	Configuration unacceptable
Other information element	Not checked

8.2.4.14.5 Test requirement

After step1 the UE shall keep its old configuration and transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC. The UE shall set “configuration unacceptable” in IE” failure cause” of the message.

8.2.4.15 Transport channel reconfiguration from CELL_FACH to CELL_DCH: Failure (Physical channel failure and reversion to old channel)

8.2.4.15.1 Definition

8.2.4.15.2 Conformance requirement

The UE shall revert to the old configuration when the UE has failed to reconfigure the new transport channel requested, and then transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message to UTRAN.

Reference

3GPP TS 25.331 clause 8.2.4

8.2.4.15.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, if the UE fails to reconfigure the new transport channel according to a TRANSPORT CHANNEL RECONFIGURATION message.

8.2.4.15.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_DCH state. SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE, which includes the new transport channel parameters. However, SS does not reconfigure the new transport channel accordingly. Hence, the UE shall experience a failure in the reconfiguration process. After T312 expiry, the UE shall revert to the old channel configuration. Then the UE transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, stating the reason “physical channel failure” in IE” failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	TRANSPORT CHANNEL RECONGURATION	Message includes IE“Downlink DPCH Info” and IE“Uplink DPCH Info”
2				SS does not reconfigure the transport channel causing the UE to detect a physical channel failure.
3		→	TRANSPORT CHANNEL RECONFIGURATION FAILURE	After T312 expiry the UE shall revert to the old configuration and transmit this message.

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	TRANSPORT CHANNEL RECONFIGURATION FAILURE
Failure cause	Physical channel failure
Other information element	Not checked

8.2.4.15.5 Test requirement

After step2 the UE shall revert to the old configuration and transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting the value “physical channel failure” in IE” failure cause”.

8.2.4.16 Transport channel reconfiguration from CELL_FACH to CELL_DCH: Failure (Physical channel failure and reversion failure)

8.2.4.16.1 Definition

8.2.4.16.2 Conformance requirement

The UE shall initiate a RRC re-establishment procedure when it fails to revert to the old channel configuration, following a physical channel failure in the transport channel reconfiguration procedure.

Reference

3GPP TS 25.331 clause 8.2.4

8.2.4.16.3 Test purpose

To confirm that the UE initiates an RRC connection re-establishment procedure, when the UE cannot reconfigure the new transport channel for the failure of L1 configuration and subsequently fails to revert to the old configuration after T312 expiry.

8.2.4.16.4 Method of test

Initial Condition

System Simulator : 2 cells - Cell 1 is active, Cell 2 is inactive

UE : CELL_FACH in cell 1

Test Procedure

The UE is in the CELL_FACH state in a cell 1. SS begins to broadcast the BCCH of cell 2 at a power level lower than in cell 1, and then it transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE in cell 1. The message includes a new set of transport channel parameters. However, the SS does not reconfigure L1 and the new transport channel accordingly. At the same time, it deletes the current channel configurations in cell 1. As a result, the UE cannot reconfigure the new transport channel and an attempt to revert to the old configuration fails. The UE shall then find that cell 2 is available, camp onto it, and transmits an RRC CONNECTION RE-ESTABLISHMENT REQUEST message. This message shall include the IE "U-RNTI" on the uplink CCCH. When the SS receives this message, it transmits an RRC CONNECTION RE-ESTABLISHMENT message, which specifies a new TFCS according to the new transport channel used. After the UE receives this message, it reconfigures the new radio connection and transmits an RRC CONNECTION RE-ESTABLISHMENT COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	BCCH	The SS starts to transmit BCCH in cell 2
2		←	TRANSPORT CHANNEL RECONGURATION	
3				The SS does not reconfigure L1 and transport channel, it also deletes its current contexts for cell 1.
4				The UE shall experience a failure to reconfigure a new transport channel and also fails to revert to old configuration.
5		→	RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE shall find cell 2, camp onto it, and then transmits this message which includes the IE "U-RNTI".
6		←	RRC CONNECTION RE-ESTABLISHMENT	Including the new TFCS according to the new transport channel.
7		→	RRC CONNECTION RE-ESTABLISHMENT COMPLETE	

Specific Message Contents

None

8.2.4.16.5 Test requirement

After step4 the UE shall find the presence of cell 2, enter CELL_FACH state, and transmit RRC RE-ESTABLISHMENT REQUEST message to attempt to setup the RRC connection in cell 2.

After step7 the UE shall successfully re-establish the RRC connection in cell 2.

8.2.4.17 Transport Channel Reconfiguration from CELL_FACH to CELL_DCH: Failure (Incompatible simultaneous reconfiguration)

8.2.4.17.1 Definition

8.2.4.17.2 Conformance requirement

The UE shall keep its old configuration when it receives another TRANSPORT CHANNEL RECONFIGURATION message before it can configure the transport channel according to a TRANSPORT CHANNEL RECONFIGURATION message received earlier. The UE shall transmit an ~~RRC STATUS~~TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting ~~“Message not compatible with receiver state”~~“incompatible simultaneous reconfiguration” in IE ~~“Protocol error cause”~~“failure cause”.

Reference

3GPP TS 25.331 clause 8.2.4

8.2.4.17.3 Test purpose

To confirm that the UE keeps its configuration and transmits an ~~RRC STATUS~~TRANSPORT CHANNEL RECONFIGURATION FAILURE message when it receives another TRANSPORT CHANNEL RECONFIGURATION message before the completion of an earlier request for transport channel reconfiguration.

8.2.4.17.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. When the SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE before it has successfully configured the transport channel based on an earlier request. It shall respond by keeping the old configuration and then transmitting an ~~RRC STATUS~~TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC. The content of the failure message shall indicate ~~“Message not compatible with receiver state”~~“incompatible simultaneous reconfiguration” in IE ~~“Protocol error cause”~~“failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	TRANSPORT CHANNEL RECONFIGURATION	Includes the IE“Uplink DPCH info”
2		←	TRANSPORT CHANNEL RECONFIGURATION	Sent before the elapse of the activation time specified in step 1.
3		→	~~RRC STATUS~~ <u>TRANSPORT CHANNEL RECONFIGURATION FAILURE</u>	The UE does not change the configuration.

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION (Step 1)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Activation Time Info	Current CFN-[current CFN mod 8 + 8]

RRC STATUS TRANSPORT CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	~~“RRC STATUS TRANSPORT CHANNEL RECONFIGURATION FAILURE”~~
~~Protocol error information~~ <u>Failure cause</u>	~~Message not compatible with receiver state~~ <u>Incompatible simultaneous reconfiguration</u>
Other information element	Not checked

8.2.4.18.5 Test requirement

After step2 the UE shall keep its configuration and transmit an ~~RRC STATUS TRANSPORT CHANNEL RECONFIGURATION FAILURE~~ message on the DCCH using AM RLC, setting the value to ~~“Message not compatible with receiver state”~~ “incompatible simultaneous reconfiguration” in IE ~~“Protocol error cause”~~ “failure cause”.

8.2.4.18 Transport channel reconfiguration from CELL_FACH to CELL_DCH: Failure (Invalid message reception)**8.2.4.18.1 Definition****8.2.4.18.2 Conformance requirement**

The UE shall keep its old configuration when the UE receives a TRANSPORT CHANNEL RECONFIGURATION message which includes a spare value in the mandatory IE “DRX indicator”. The UE shall then transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message, specifying “protocol error” in IE “failure cause” and also “Information element value not comprehended” in IE “Protocol error cause”.

Reference

3GPP TS 25.331 clause 8.2.4

8.2.4.18.3 Test purpose

To confirm that the UE transmits TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, if it receives a TRANSPORT CHANNEL RECONFIGURATION message which uses a spare value in the mandatory IE “DRX indicator”.

8.2.4.18.4 Method of test**Initial Condition**

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE, which includes a spare value in the mandatory IE “DRX indicator”. The UE shall keep the old configuration and then transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC. This message shall contain the value “protocol error” in IE “failure cause” and also “Information element value not comprehended” in IE “Protocol error cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	TRANSPORT CHANNEL RECONFIGURATION	Contains a error in one of the mandatory IE in the message.
2		→	TRANSPORT CHANNEL RECONFIGURATION FAILURE	The UE does not change the configuration.

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
DRX indicator	spare value

TRANSPORT CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	"TRANSPORT CHANNEL RECONFIGURATION FAILURE"
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.4.18.5 Test requirement

After step1 the UE shall keep its old configuration and transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC. The content of the message shall specify "protocol error" in IE "failure cause" and also "Information element value not comprehended" in IE "Protocol error cause".

8.2.4.19 Transport channel reconfiguration from CELL_FACH to CELL_FACH: Success with no transport channel type switching

8.2.4.19.1 Definition

8.2.4.19.2 Conformance requirement

The UE shall remain in CELL_FACH state and transition from CELL_FACH to CELL_FACH in the another cell requested in the received TRANSPORT CHANNEL RECONFIGURATION message.

Reference

3GPP TS 25.331 clause 8.2.4

8.2.4.19.3 Test purpose

To confirm that the UE reconfigures a new transport channel according to a TRANSPORT CHANNEL RECONFIGURATION message received from the SS.

8.2.4.19.4 Method of test

Initial Condition

System Simulator : 2 cells Cell 1 is active, Cell 2 is inactive

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE, which includes new transport channel parameters for Hand Over. The UE reconfigures the new transport channel and transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	BCCH	The SS starts to broadcast the BCCH in cell 2.
2		←	TRANSPORT CHANNEL RECONGURATION	Including Primary CPICH Info
3				Reconfiguration of a new transport channel
4		→	TRANSPORT CHANNEL RECONFIGURATION COMPLETE	

Specific Message Contents

None

8.2.4.19.5 Test requirement

After step3 the UE shall transit from CELL_FACH to CELL_FACH in the another cell and continue to communicate with the SS on the DCCH using the existing transport channel.

8.2.4.20 Transport channel reconfiguration from CELL_FACH to CELL_FACH: Failure (Unsupported or Unacceptable configuration)

8.2.4.20.1 Definition

8.2.4.20.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a TRANSPORT CHANNEL RECONFIGURATION message which includes unsupported configuration parameters and transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to “configuration unacceptable” in IE” failure cause

Reference

3GPP TS 25.331 clause 8.2.4

8.2.4.20.3 Test purpose

To confirm that the UE transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if the received TRANSPORT CHANNEL RECONFIGURATION message specifies unsupported configuration parameters.

8.2.4.20.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE, which includes unsupported configuration parameters of the UE. The UE transmits a TRANSPORT

CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, reporting the event “configuration unacceptable” in IE” failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	TRANSPORT CHANNEL RECONGURATION	Including unsupported configuration by the UE
2		→	TRANSPORT CHANNEL RECONFIGURATION FAILURE	The UE shall not change the settings used by the transport channel.

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
TrCH Information Elements	
-Uplink transport Channels	
-Added or Reconfigured TrCH information list	Number of Transport blocks = 4096
-Downlink transport Channels	
-Added or Reconfigured TrCH information list	Selected value as the UE can not support. Number of Transport blocks = 4096

TRANSPORT CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	“TRANSPORT CHANNEL RECONFIGURATION FAILURE”
Failure cause	Configuration unacceptable
Other information element	Not checked

8.2.4.20.5 Test requirement

After step1 the UE shall keep its old configuration and transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, indicating “configuration unacceptable” in IE” failure cause”.

8.2.4.21 Transport channel reconfiguration from CELL_FACH to CELL_FACH: Failure (Physical channel failure)

8.2.4.21.1 Definition

8.2.4.21.2 Conformance requirement

The UE shall initiate the cell reselection procedure when the UE cannot use the assigned physical channel according to a TRANSPORT CHANNEL RECONFIGURATION message, during the transition from CELL_FACH to CELL_FACH in the another cell.

Reference

3GPP TS 25.331 clause 8.2.4

8.2.4.21.3 Test purpose

To confirm that the UE perform a cell reselection and cell update procedure when the it fail to access the assigned physical channel, according to a TRANSPORT CHANNEL RECONFIGURATION message, during the transition from CELL_FACH to CELL_FACH in the another cell.

8.2.4.21.4

Method of test

Initial Condition

System Simulator : 3 cells Cell 1 is active, Cell 2 is inactive, Cell 3 is inactive

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state in cell 1. The SS begins to broadcast the BCCH in cell 2 and then transmits a TRANSPORT CHANNEL RECONFIGURATION message, resulting in the UE to attempt to transit from CELL_FACH in cell 1 to CELL_FACH in cell 3. The UE is expected to fail to access the assigned physical channel as the SS ceases downlink transmission in cell 3. After the UE successfully camp onto cell 2, it shall initiate the cell update procedure in cell 2. The procedure completes when the SS confirms UE's cell update request.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	TRANSPORT CHANNEL RECONFIGURATION	The message assigns common resources so that the UE is expected to execute a transition from CELL_FACH in cell 1 to CELL_FACH in cell 3
2			BCCH	The SS starts to broadcast the BCCH in cell 2.
3				The UE shall detect a failure to use the assigned common physical channel and try to perform a cell reselection.
4		→	CELL UPDATE	The UE discover the presence of cell 2 and triggers a cell update procedure.
5		←	CELL UPDATE CONFIRM	SS sends this message so that the UE moves to CELL_PCH state.

Specific Message Contents

None

8.2.4.21.5 Test requirement

After step3 the UE shall discover the presence of cell 2, enter CELL_FACH state, and initiate a cell update procedure in that cell.

8.2.4.22 Transport Channel Reconfiguration from CELL_FACH to CELL_FACH: Failure (Incompatible simultaneous reconfiguration)

8.2.4.22.1

Definition

8.2.4.22.2

Conformance requirement

The UE shall keep its old configuration when the UE receives another TRANSPORT CHANNEL RECONFIGURATION message, before the UE completes the configuration of the transport channel according to a TRANSPORT CHANNEL RECONFIGURATION message received earlier. The UE shall transmit an ~~RRC STATUS~~ TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to ~~“Message not compatible with receiver state”~~ “incompatible simultaneous reconfiguration” in IE ~~“Protocol error cause”~~ “failure cause”.

Reference

3GPP TS 25.331 clause 8.2.4

8.2.4.22.3 Test purpose

To confirm that the UE keeps its current configuration, transmits an ~~RRG STATUS~~TRANSPORT CHANNEL RECONFIGURATION FAILURE message when it receives another TRANSPORT CHANNEL RECONFIGURATION message before the completion of an earlier reconfiguration request.

8.2.4.22.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. When the SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE before the UE has successfully configured the transport channel specified in an earlier message, the UE keeps the old configuration. After that, the UE shall transmit an ~~RRG STATUS~~TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, indicating ~~“Message not compatible with receiver state”~~“incompatible simultaneous reconfiguration” in IE ~~“Protocol error cause”~~“failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	TRANSPORT CHANNEL RECONFIGURATION	Including IE“Uplink DPCH info”
2		←	TRANSPORT CHANNEL RECONFIGURATION	Sent before the time specified in IE“Activation Time Info” of message in step 1 has elapsed.
3		→	~~RRG STATUS~~ <u>TRANSPORT CHANNEL RECONFIGURATION FAILURE</u>	The UE shall not change the configuration.

Specific Message Contents

The contents of TRANSPORT CHANNEL RECONFIGURATION messages in this test case is identical to the corresponding message found in the default contents of layer 3 messages for RRC tests with the following exceptions:

TRANSPORT CHANNEL RECONFIGURATION (Step 1)

Information Element	Value/remark
Activation Time	Current CFN-[current CFN mod 8 + 8]

~~RRG STATUS~~TRANSPORT CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	~~“RRG STATUS~~ <u>TRANSPORT CHANNEL RECONFIGURATION FAILURE</u>
~~Protocol error information~~ <u>Failure cause</u>	~~“Message not compatible with receiver state”~~ <u>Incompatible simultaneous reconfiguration</u>
Other information element	Not checked

8.2.4.22.5 Test requirement

After step2 the UE shall keep its configuration and transmit an ~~RRG STATUS~~TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, stating the reason ~~“Message not compatible with receiver state”~~“incompatible simultaneous reconfiguration” in IE ~~“Protocol error cause”~~“failure cause”.

8.2.4.23 Transport channel reconfiguration from CELL_FACH to CELL_FACH:
Failure (Invalid message reception)

8.2.4.23.1 Definition

8.2.4.23.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a TRANSPORT CHANNEL RECONFIGURATION message which makes use of a spare value in the mandatory IE" DRX indicator". Then it shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message with the value "protocol error" set in IE" failure cause" and also "Information element value not comprehended" in IE" Protocol error cause".

Reference

3GPP TS 25.331 clause 8.2.4

8.2.4.23.3 Test purpose

To confirm that the UE transmits TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, if the received TRANSPORT CHANNEL RECONFIGURATION message comprises a spare value in the mandatory IE" DRX indicator".

8.2.4.23.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE, which includes a spare value in the mandatory IE" DRX indicator". The UE shall keep the old configuration and transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, specifying "protocol error" in IE" failure cause" and also indicating "Information element value not comprehended" in IE" Protocol error cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	TRANSPORT CHANNEL RECONFIGURATION	Contains an illegal value for a mandatory IE
2		→	TRANSPORT CHANNEL RECONFIGURATION FAILURE	The UE does not change the configuration.

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to those in the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
DRX indicator	spare value

TRANSPORT CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	"TRANSPORT CHANNEL RECONFIGURATION FAILURE"
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.4.23.5 Test requirement

After step1 the UE shall keep its old configuration and transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC. The message shall specify "protocol error" in IE" failure cause" and set value "Information element value not comprehended" in IE" Protocol error cause".

8.2.5 Transport format combination control

8.2.5.1 Transport format combination control in CELL_DCH : restriction

8.2.5.1.1 Definition

8.2.5.1.2 Conformance requirement

The UE shall change the subset of allowed transport format combination of uplink when the UE receives TRANSPORT FORMAT COMBINATION CONTROL message.

Reference

3GPP TS 25.331 clause 8.2.5

8.2.5.1.3 Test purpose

To confirm that the UE do not transmit data on the DTCH in the uplink direction, following the reception of TRANSPORT FORMAT COMBINATION CONTROL message sent from the SS, which is set to “zero” in IE” Minimum allowed Transport format combination index”.

8.2.5.1.4 Method of test

Initial Condition

System Simulator : 1cell

UE :CELL_DCH

Test Procedure

The UE establishes a radio access bearer on the DCH for a communication. The SS transmits a TRANSPORT FORMAT COMBINATION CONTROL message, which indicates that only TFC₀ is allowed on the uplink for DCH transport channel. The UE shall reconfigure the TFCS, stop any transmission on DTCH logical channel and then continues the communication on DCCH only.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				UE s in CELL_DCH state with a DTCH logical channel allocated for communication between UE and SS
2		←	TRANSPORT FORMAT COMBINATION CONTROL	Set to “zero” in IE” Minimum allowed Transport format combination index”.
3				The UE shall transmit any data on the DTCH.

Specific Message Contents

TRANSPORT FORMAT COMBINATION CNTROL

Information Element	Value/remark
TrCH information elements -Minimum allowed Transport format combination index	Set to “zero”

8.2.5.1.5 Test requirement

After step2 the UE shall stop transmitting data on the DTCH in the uplink.

8.2.5.2 Transport format combination control in CELL_DCH: release a restriction

8.2.5.2.1 Definition

8.2.5.2.2 Conformance requirement

The UE shall change the subset of allowed transport format combination of uplink when it receives TRANSPORT FORMAT COMBINATION CONTROL message, specifying that an existing restriction for the usage of TFCS be removed.

Reference

GPP TS 25.331 clause 8.2.5

8.2.5.2.3 Test purpose

To confirm that the UE resume transmission of data on the DTCH on the uplink, following the reception of TRANSPORT FORMAT COMBINATION CONTROL message which is set to “one” as the prior used transport format combination number in IE” Minimum allowed Transport format combination index”.

8.2.5.2.4 Method of test

Initial Condition

System Simulator : 1cell

UE : CELL_DCH with DTCH allocated but fully restricted.

Test Procedure

The UE is in CELL_DCH state with DTCH allocated but fully restricted. The UE cannot transmit the data on the DTCH, as a result of the restriction on the transport format combination. Next, the SS transmits a TRANSPORT FORMAT COMBINATION CONTROL message which is set to “one” in IE” Minimum allowed Transport format combination index”

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				No data transmission on the DTCH with a restriction in the uplink direction, following the execution of test 8.1.2.5.1.
2		←	TRANSPORT FORMAT COMBINATION CONTROL	Set to "one" IE" Minimum allowed Transport format combination index".
3				The UE begins to transmit the data on the DTCH.

Specific Message Contents

TRANSPORT FORMAT COMBINATION CONTROL

Information Element	Value/remark
TrCH information elements -Minimum allowed Transport format combination index	Set to "one"

8.2.5.2.5 Test requirement

After step2 the UE shall begin to transmit the data on the DTCH in the uplink.

8.2.5.3 Transport format combination control in CELL_DCH: Failure (Incompatible simultaneous reconfiguration)

8.2.5.3.1 Definition

8.2.5.3.2 Conformance requirement

The UE shall keep its old configuration when the UE receives another TRANSPORT FORMAT COMBINATION CONTROL message before the UE reconfigures the transport channel completely according to a similar message received earlier. The UE shall transmit an TRANSPORT FORMAT COMBINATION CONTROL FAILURE message on the DCCH using AM RLC indicating "~~Message not compatible with receiver state~~" "incompatible simultaneous reconfiguration" in IE "Protocol error cause" "failure cause".

Reference

3GPP TS 25.331 clause 8.2.5

8.2.5.3.3 Test purpose

To confirm after the UE receive TRANSPORT FORMAT COMBINATION CONTROL message, it transmits TRANSPORT FORMAT COMBINATION CONTROL FAILURE message and keep the TFC subset as before the TRANSPORT FORMAT COMBINATION CONTROL message

8.2.5.3.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CELL_DCH

Test Procedure

The UE establishes a radio access bearer on the DCH for to be used for user-data exchange. The SS transmits a TRANSPORT FORMAT COMBINATION CONTROL message, which includes a full restriction of the TFCS used in

the uplink. The UE cannot reconfigures the TFCS, then the UE transmits TRANSPORT FORMAT COMBINATION CONTROL FAILURE message and continues the communication.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				UE is in CELL_DCH connected state With a DTCH logical channel for user-data communication
2		←	TRANSPORT CHANNEL RECONFIGURATION	Requesting for a change in semi-static transport format for DCH carrying the DTCH. The dynamic part remains unchanged.
3		←	TRANSPORT FORMAT COMBINATION CONTROL	Requesting for a full restriction on TFCS for the DCH carrying DTCH.
4		→	TRANSPORT FORMAT COMBINATION CONTROL FAILURE	The UE shall keep the TFC subset as before the TRANSPORT FORMAT COMBINATION CONTROL message was received
5				The UE does not change the configuration of TFC and the UE continues reconfigure the transport channel DCH
6			TRANSPORT CHANNEL RECONFIGURATION COMPLETE	UE shall resume exchange of data over the DTCH logical channel.

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to those in the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
TrCH Information Elements - Uplink transport channels - Added or reconfigured TrCH information list - Transport channel identity - Semi-Static Transport Format Information - Type of channel coding	2 Select a different coding scheme from default message content

TRANSPORT FORMAT COMBINATION CONTROL

Information Element	Value/remark
DPCH TFCS in Uplink - Subset Representation - Allowed TFIs	Restricted TrCH information Not Present (All TFCs are restricted)

TRANSPORT FORMAT COMBINATION CONTROL FAILURE

Information Element	Value/remark
Message Type	"TRANSPORT FORMAT COMBINATION CNTROL FAILURE"
Failure cause	Incompatible simultaneous reconfiguration
Other information element	Not checked

8.2.5.3.5 Test requirement

After step3 the UE continue the transport channel reconfiguration as if no TRANSPORT FORMAT COMBINATION CONTROL message was received. Then it shall transmit a TRANSPORT FORMAT COMBINATION CONTROL FAILURE message on the DCCH using AM RLC, stating the reason "Incompatible simultaneous reconfiguration" in IE" Failure cause".

After step6 the UE shall resume communication with SS on DTCH using the requested channel coding scheme on the transport blocks.

8.2.5.4 Transport format combination control in CELL_DCH: Failure (Invalid message reception)

8.2.5.4.1 Definition

8.2.5.4.2 Conformance requirement

The UE shall keep old configuration when it receives a TRANSPORT FORMAT COMBINATION CONTROL message which using a spare value in the mandatory IE "Minimum allowed Transport format combination index". It shall then transmits a TRANSPORT FORMAT COMBINATION CONTROL FAILURE message, indicating "protocol error" in IE "failure cause" and "Information element value not comprehended" in IE "Protocol error cause".

Reference

GPP TS 25.331 clause 8.2.5

8.2.5.4.3 Test purpose

To confirm after the UE receives an invalid TRANSPORT FORMAT COMBINATION CONTROL message, it transmits TRANSPORT FORMAT COMBINATION CONTROL FAILURE message and keep the TFC subset as if no TRANSPORT FORMAT COMBINATION CONTROL message has been received.

8.2.5.4.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CELL_DCH

Test Procedure

The UE establishes a radio access bearer on the DCH for a communication. The SS transmits a TRANSPORT FORMAT COMBINATION CONTROL message, which uses a spare value in the mandatory IE "Minimum allowed Transport format combination index". The UE shall then transmit TRANSPORT FORMAT COMBINATION CONTROL FAILURE message and continues the communication using the radio access bearer.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				RRC connected state on the DTCH for a communication
2		←	TRANSPORT FORMAT COMBINATION CONTROL	Contains an error in a mandatory IE.
3		→	TRANSPORT FORMAT COMBINATION CONTROL FAILURE	The UE shall not change the configuration

Specific Message Contents

TRANSPORT FORMAT COMBINATION CONTROL

Information Element	Value/remark
DPCH TFCS in uplink - Minimum allowed Transport format combination index	Set to the value "MaxTFCValue"

TRANSPORT FORMAT COMBINATION CONTROL FAILURE

Information Element	Value/remark
Message Type	"TRANSPORT FORMAT COMBINATION CONTROL FAILURE"
Failure cause	"protocol error"
Protocol error information - Protocol error case	Information element value not comprehended
Other information element	Not checked

8.2.5.4.5 Test requirement

After step3 the UE shall keep its configuration before the TRANSPORT FORMAT COMBINATION CONTROL message was received and transmit a TRANSPORT FORMAT COMBINATION CONTROL FAILURE message on the DCCH using AM RLC. The UE shall set the value "protocol error" in IE "Failure cause" and the value "information element not comprehended" in IE "protocol error information". The UE shall continue communicate with SS using the radio access bearer.

8.2.6 Physical channel reconfiguration

8.2.6.1 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency): Success

8.2.6.1.1 Definition

8.2.6.1.2 Conformance requirement

The UE shall correctly reconfigure a physical channel according to the PHYSICAL CHANNEL RECONFIGURATION message received, which is used for hard handover purposes. It shall be able to communicate with the UTRAN on the new frequency subsequently.

Reference

3GPP TS 25.331 clause 8.2.6

8.2.6.1.3 Test purpose

To confirm that the UE reconfigures a new physical channel according to a PHYSICAL CHANNEL RECONFIGURATION message received from the SS.

8.2.6.1.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE which includes a new physical channel parameter specified as the changing of frequency. The UE reconfigures the new physical channel and transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	Including a new frequency information
2				Reconfiguration of physical channel
3		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	

Specific Message Contents

None.

8.2.6.1.5 Test requirement

After step3 the UE shall continue to communicate with SS on the new physical channel.

8.2.6.2 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency): Failure (Unsupported or Unacceptable configuration)

8.2.6.2.1 Definition

8.2.6.2.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a PHYSICAL CHANNEL RECONFIGURATION message which includes an unsupported configuration and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, with the reason “configuration unacceptable” in IE” failure cause”.

Reference

3GPP TS 25.331 clause 8.2.6

8.2.6.2.3 Test purpose

To confirm that the UE keeps its configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if the received PHYSICAL CHANNEL RECONFIGURATION message includes unsupported configuration parameters for the UE.

8.2.6.2.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE which includes unsupported configuration parameters as the frequency cannot be supported by the UE. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to “configuration unacceptable” in IE” failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	Includes an unsupported configuration as the frequency cannot be supported by the UE
2		→	PHYSICAL CHANNEL RECONFIGURATION FAILURE	The UE shall not change the physical channel and continue to communicate using the old configuration.

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Frequency info	
- UARFCN uplink(Nu)	63984
- UARFCN downlink(Nd)	Not Present

PHYSICAL CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Configuration unacceptable
Other information element	Not checked

8.2.6.2.5 Test requirement

After step1 the UE shall keep its old configuration and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC and set “configuration unacceptable” in IE” failure cause”.

8.2.6.3 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency): Failure (Physical channel failure and reversion to old channel)

8.2.6.3.1 Definition

8.2.6.3.2 Conformance requirement

The UE shall revert to the old configuration when the UE fails to reconfigure the new physical channel by the expiry of timer T312, and then transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC indicating “physical channel failure” in IE” failure cause”.

Reference

3GPP TS 25.331 clause 8.2.6

8.2.6.3.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if the UE fails to reconfigure the new

physical channel according to the received PHYSICAL CHANNEL RECONFIGURATION message by timer T312 expiry.

8.2.6.3.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE which includes new frequency parameters. However, the SS does not reconfigure the new physical channel. The UE is expected to encounter a failure to reconfigure the new physical channel and after T312 timer expiry the UE shall revert to the old configuration. Finally, the UE transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC specifies “physical channel failure” in IE” failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	Including a new frequency information
2				The SS does not reconfigure the physical channel so that the UE fails to reconfigure to the new physical channel.
3		→	PHYSICAL CHANNEL RECONFIGURATION FAILURE	After T312 expiry, the UE shall revert to the old configuration and transmits this message.

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Physical channel failure
Other information element	Not checked

8.2.6.3.5 Test requirement

After step2 the UE shall revert to the old configuration and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, with the value “physical channel failure” in IE” failure cause”.

8.2.6.4 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency): Failure (Physical channel failure and reversion failure)

8.2.6.4.1 Definition

8.2.6.4.2 Conformance requirement

The UE shall perform an RRC connection re-establishment procedure when the UE fails to revert to the old configuration, after the detection of physical channel failure during the course of executing a physical channel reconfiguration procedure.

Reference

3GPP TS 25.331 clause 8.2.6

8.2.6.4.3 Test purpose

To confirm that the UE initiates an RRC connection re-establishment procedure when the UE cannot reconfigure the new physical channel for the failure of L1 configuration and for the failure of the reversion to the old configuration.

8.2.6.4.4 Method of test

Initial Condition

System Simulator : 2 cells- Cell 1 is active, Cell 2 is inactive

UE : CELL_DCH in cell 1

Test Procedure

The UE is in the CELL_DCH state in cell 1. The SS begins to broadcast the BCCH in cell 2 and then transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, which includes new uplink and downlink frequency parameters and does not reconfigure L1. The UE is expected to fail to reconfigure the new physical channel and tries to revert to the old configuration after T312 expiry. The SS then deletes the old physical channel so that the UE would perform cell reselection and finds cell 2. It shall then transmit an RRC CONNECTION RE-ESTABLISHMENT REQUEST message which includes the IE "U-RNTI" on the uplink CCCH. The SS transmits an RRC CONNECTION RE-ESTABLISHMENT message which includes a new TFCS according to the new transport channel. After the UE receives an RRC CONNECTION RE-ESTABLISHMENT message, it reconfigures the new radio connection and transmits an RRC CONNECTION RE-ESTABLISHMENT COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	BCCH	The SS transmits the BCCH in cell 2.
2		←	PHYSICAL CHANNEL RECONFIGURATION	The message includes new frequency information
3				SS does not reconfigure the physical channel to reflect the changes in step 2, at the same time, it deletes the old configuration so the UE cannot reconfigure the new physical channel and cannot revert to the old configuration.
4		→	RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE finds a new cell.2 and then transmits this message which includes the IE "U-RNTI" .
5		←	RRC CONNECTION RE-ESTABLISHMENT	This message indicates a new TFCS according to the new transport channel.
6		→	RRC CONNECTION RE-ESTABLISHMENT COMPLETE	

Specific Message Contents

None.

8.2.6.4.5 Test requirement

After step3 the UE shall find the availability of cell 2, enter CELL_FACH state, and transmits RRC CONNECTION RE-ESTABLISHMENT message using RLC-TM mode on the uplink DCCH.

After step6 the UE shall be able to successfully re-establish an RRC connection in cell 2.

8.2.6.5 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency): Failure (Incompatible simultaneous reconfiguration)

8.2.6.5.1 Definition

8.2.6.5.2 Conformance requirement

The UE shall keep its old configuration when the UE receives another PHYSICAL CHANNEL RECONFIGURATION message before it completes the current reconfiguration according to an earlier PHYSICAL CHANNEL RECONFIGURATION message. The UE shall transmit an ~~RRC STATUS~~PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting ~~“Message not compatible with receiver state”~~“incompatible simultaneous reconfiguration” in IE ~~“Protocol error cause”~~“failure cause”.

Reference

3GPP TS 25.331 clause 8.2.6

8.2.6.5.3 Test purpose

To confirm that the UE keeps its current configuration when it receives another PHYSICAL CHANNEL RECONFIGURATION message before the completion of an existing physical channel reconfiguration .

8.2.6.5.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. When the SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE before it reconfigures the physical channel, the UE keeps the old configuration and transmits an ~~RRC STATUS~~PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC. This message shall indicate ~~“Message not compatible with receiver state”~~“incompatible simultaneous reconfiguration” in IE ~~“Protocol error cause”~~“failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	
2		←	PHYSICAL CHANNEL RECONFIGURATION	Sent before the “Activation Time Info” specified in the message in step 1 has elapsed.
3		→	~~RRC STATUS~~ <u>PHYSICAL CHANNEL RECONFIGURATION FAILURE</u>	The UE does not change the configuration.

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Activation Time Info	Current CFN-[current CFN mod 8 + 8]

RRC STATUS PHYSICAL CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	
~~Protocol error information~~ <u>Failure cause</u>	~~Message not compatible with receiver state~~ <u>Incompatible simultaneous reconfiguration</u>
Other information element	Not checked

8.2.6.5.5 Test requirement

After step2 the UE shall keep its old configuration and transmit an **RRC STATUS PHYSICAL CHANNEL RECONFIGURATION FAILURE** message on the DCCH using AM RLC, which shall be set to ~~“Message not compatible with receiver state”~~ “incompatible simultaneous reconfiguration” in IE ~~“Protocol error cause”~~ “failure cause”.

8.2.6.6 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency): Failure (Invalid message reception)**8.2.6.6.1 Definition****8.2.6.6.2 Conformance requirement**

The UE shall keep its old configuration when the UE receives a PHYSICAL CHANNEL RECONFIGURATION message, which includes the spare value in the mandatory IE “DRX indicator”. It shall then transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message which contains the value “protocol error” in IE “failure cause” and also “Information element value not comprehended” in IE “Protocol error cause”.

Reference

3GPP TS 25.331 clause 8.2.6

8.2.6.6.3 Test purpose

To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if it receives a PHYSICAL CHANNEL RECONFIGURATION message which uses a spare value in the mandatory IE “DRX indicator”.

8.2.6.6.4 Method of test**Initial Condition**

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE , with a spare value in the mandatory IE “DRX indicator”. The UE keeps the old configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, with a value “protocol error” in IE “failure cause” and also a value “Information element value not comprehended” in IE “Protocol error cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	This message contains an error in one of the mandatory IEs.
2		→	PHYSICAL CHANNEL RECONFIGURATION FAILURE	The UE does not change the configuration.

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to those found in the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
DRX indicator	spare value

PHYSICAL CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.6.6.5 Test requirement

After step1 the UE shall keep its old configuration and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting value "protocol error" in IE" failure cause" and also setting value "Information element value not comprehended" in IE" Protocol error cause".

8.2.6.7 Physical channel reconfiguration for transition from CELL_DCH to CELL_FACH: Success

8.2.6.7.1 Definition

8.2.6.7.2 Conformance requirement

The UE shall correctly reconfigure a physical channel according to a PHYSICAL CHANNEL RECONFIGURATION message when asked to perform a transition from CELL_DCH to CELL_FACH.

Reference

3GPP TS 25.331 clause 8.2.6

8.2.6.7.3 Test purpose

To confirm that the UE reconfigures a new physical channel according to the PHYSICAL CHANNEL RECONFIGURATION message received from the SS.

8.2.6.7.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE. The UE shall then reconfigure the new physical channel according to this message. Following this, it shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC on the RACH.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	
2				Reconfiguration of physical channel
3		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	

Specific Message Contents

None.

8.2.6.7.5 Test requirement

After step3 the UE shall transit from CELL_DCH to CELL_FACH and continue to communicate with SS on the common physical channel.

8.2.6.8 Physical channel reconfiguration for transition from CELL_DCH to CELL_FACH: Failure (Unsupported or Unacceptable configuration)

8.2.6.8.1 Definition

8.2.6.8.2 Conformance requirement

The UE shall keep its old configuration when it receives a PHYSICAL CHANNEL RECONFIGURATION message which includes unsupported configuration parameters. It shall then transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, with the reason “configuration unacceptable” indicated in IE” failure cause”.

Reference

3GPP TS 25.331 clause 8.2.6

8.2.6.8.3 Test purpose

To confirm that the UE keeps its configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, if the received PHYSICAL CHANNEL RECONFIGURATION message includes unsupported configuration parameters.

8.2.6.8.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, which includes unsupported configuration parameters. Specifically, the frequency cannot be supported by the UE. The UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which and indicating “configuration unacceptable” in IE” failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	The message specifies the usage of an unsupported configuration for the UE
2		→	PHYSICAL CHANNEL RECONFIGURATION FAILURE	The UE does not change the physical channel and continue to communicate with the SS using the original configuration.

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Frequency info	
- UARFCN uplink(Nu)	63984
- UARFCN downlink(Nd)	Not Present

PHYSICAL CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Configuration unacceptable
Other information element	Not checked

8.2.6.8.5 Test requirement

After step1 the UE shall keep its old configuration and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, with the reason “configuration unacceptable” specified in IE” failure cause”.

8.2.6.9 Physical channel reconfiguration for transition from CELL_DCH to CELL_FACH: Failure (Physical channel failure)

8.2.6.9.1 Definition

8.2.6.9.2 Conformance requirement

The UE shall initiate the cell reselection procedure when the UE cannot use the assigned physical channel according to a PHYSICAL CHANNEL RECONFIGURATION message, during the transition from CELL_DCH to CELL_FACH.

Reference

3GPP TS 25.331 clause 8.2.6

8.2.6.9.3 Test purpose

To confirm that the UE perform a cell reselection and cell update procedure when the it fail to access the assigned physical channel, according to a PHYSICAL CHANNEL RECONFIGURATION message, during the transition from CELL_DCH to CELL_FACH.

8.2.6.9.4 Method of test

Initial Condition

System Simulator : 2 cells Cell 1 is active, Cell 2 is inactive

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state in cell 1. The SS begins to broadcast the BCCH in cell 2 and then transmits a PHYSICAL CHANNEL RECONFIGURATION message, resulting in the UE to attempt to transit from CELL_DCH to CELL_FACH. The UE is expected to fail to access the assigned physical channel as the SS ceases downlink transmission in cell 1. After the UE successfully camp onto cell 2, it shall initiate the cell update procedure in cell 2. The procedure completes when the SS confirms UE's cell update request.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	The message assigns common resources so that the UE is expected to execute a transition from CELL_DCH to CELL_FACH
2			BCCH	The SS starts to broadcast the BCCH in cell 2.
3				The UE shall detect a failure to use the assigned common physical channel and try to perform a cell reselection.
4		→	CELL UPDATE	The UE discover the presence of cell 2 and triggers a cell update procedure.
5		←	CELL UPDATE CONFIRM	SS sends this message so that the UE moves to CELL_PCH state.

Specific Message Contents

None

8.2.6.9.5 Test requirement

After step3 the UE shall discover the presence of cell 2, enter CELL_FACH state, and initiate a cell update procedure in that cell.

8.2.6.10 Physical channel reconfiguration for transition from CELL_DCH to CELL_FACH: Failure (Incompatible simultaneous reconfiguration)

8.2.6.10.1 Definition

8.2.6.10.2 Conformance requirement

The UE shall keep its old configuration when it receives another PHYSICAL CHANNEL RECONFIGURATION message before the existing reconfiguration request has been completed. The UE shall transmit an **RRC STATUS** **PHYSICAL CHANNEL RECONFIGURATION FAILURE** message on the DCCH using AM RLC, indicating the reason "~~Message not compatible with receiver state~~" "incompatible simultaneous reconfiguration" in IE "~~Protocol error cause~~" "failure cause".

Reference

3GPP TS 25.331 clause 8.2.6

8.2.6.10.3 Test purpose

To confirm that the UE keeps its original configuration when the UE receives a second PHYSICAL CHANNEL RECONFIGURATION message before it reconfigures the physical channel according to an earlier PHYSICAL CHANNEL RECONFIGURATION message.

8.2.6.10.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. When the SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE before the UE reconfigures the physical channel, the UE shall keep the old configuration and transmits an ~~RRC STATUS~~PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC. This message shall specify value ~~“Message not compatible with receiver state”~~“incompatible simultaneous reconfiguration” in IE “~~Protocol error cause”~~“failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	
2		←	PHYSICAL CHANNEL RECONFIGURATION	Sent before the elapse of the time specified in “Activation Time Info” in the message of step 1.
3		→	~~RRC STATUS~~ PHYSICAL CHANNEL RECONFIGURATION FAILURE	The UE shall not change the configuration.

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Activation Time Info	Current CFN-[current CFN mod 8 + 8]

~~RRC STATUS~~PHYSICAL CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	
~~Protocol error information~~ Failure cause	~~Message not compatible with receiver state~~ Incompatible simultaneous reconfiguration
Other information element	Not checked

8.2.6.10.5 Test requirement

After step2 the UE shall keep its old configuration, transmit an ~~RRC STATUS~~PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, and set the cause ~~“Message not compatible with receiver state”~~“incompatible simultaneous reconfiguration” in IE “~~Protocol error cause”~~“failure cause”.

8.2.6.11 Physical channel reconfiguration for transition from CELL_DCH to CELL_FACH: Failure (Invalid message reception)

8.2.6.11.1 Definition

8.2.6.11.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a PHYSICAL CHANNEL RECONFIGURATION message which includes the spare value in the mandatory IE” DRX indicator” . It shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message, indicating “protocol error” in IE” failure cause” and indicating “Information element value not comprehended” in IE” Protocol error cause”.

Reference

3GPP TS 25.331 clause 8.2.6

8.2.6.11.3 Test purpose

To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, if the received a PHYSICAL CHANNEL RECONFIGURATION message uses a spare value in the mandatory IE" DRX indicator".

8.2.6.11.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE which contains a spare value in the mandatory IE" DRX indicator". The UE keeps the old configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, which comprises the reason "protocol error" in IE" failure cause" and reason "Information element value not comprehended" in IE" Protocol error cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	The message contains a error in one of the mandatory IE.
2		→	PHYSICAL CHANNEL RECONFIGURATION FAILURE	The UE shall not change the configuration.

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
DRX indicator	spare value

PHYSICAL CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.6.11.5 Test requirement

After step1 the UE shall keep its old configuration and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC. The failure message shall specify "protocol error" in IE" failure cause" and include "Information element value not comprehended" in IE" Protocol error cause".

8.2.6.12 Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH: Success

8.2.6.12.1 Definition

8.2.6.12.2 Conformance requirement

The UE shall correctly reconfigure a physical channel according to a PHYSICAL CHANNEL RECONFIGURATION message, which triggers a transition from CELL_FACH to CELL_DCH.

Reference

3GPP TS 25.331 clause 8.2.6

8.2.6.12.3 Test purpose

To confirm that the UE reconfigures a new physical channel according to a PHYSICAL CHANNEL RECONFIGURATION message received from the UTRAN, in the case of an assignment of dedicated physical resource from the common physical channels used previously by the UE.

8.2.6.12.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to start a transition from CELL_FACH to CELL_DCH. The UE shall reconfigure the new physical channel correctly according to this message. To complete this procedure, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	
2				The UE shall reconfigure the physical channel in order to start using the dedicated channels allocated.
3		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	

Specific Message Contents

None.

8.2.6.12.5 Test requirement

After step3 the UE shall transit from CELL_FACH to CELL_DCH and continue to communicate with SS on the dedicated physical channel.

8.2.6.13 Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH: Failure (Unsupported or Unacceptable configuration)

8.2.6.13.1 Definition

8.2.6.13.2 Conformance requirement

The UE shall keep its old configuration when the it receives a PHYSICAL CHANNEL RECONFIGURATION message, which specifies unsupported configuration parameters for the UE. It shall then transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, reporting the cause “configuration unacceptable” in IE” failure cause”.

Reference

3GPP TS 25.331 clause 8.2.6

8.2.6.13.3 Test purpose

To confirm that the UE keeps its configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, if the received PHYSICAL CHANNEL RECONFIGURATION message includes unsupported configuration parameters.

8.2.6.13.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, which includes unsupported frequencies for the UE. The PHYSICAL CHANNEL RECONFIGURATION is structured in such a manner as to trigger a transition from CELL_FACH to CELL_DCH in the UE. The UE shall responds with a PHYSICAL CHANNEL RECONFIGURATION FAILURE message sent on the DCCH using AM RLC, setting “configuration unacceptable” in IE” failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	Includes unsupported frequencies for the UE
2		→	PHYSICAL CHANNEL RECONFIGURATION FAILURE	The UE shall not change the physical channel configuration, this message shall be sent using the original allocated physical resource.

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Frequency info	
- UARFCN uplink(Nu)	63984
- UARFCN downlink(Nd)	Not Present

PHYSICAL CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Configuration unacceptable
Other information element	Not checked

8.2.6.13.5 Test requirement

After step1 the UE shall keep its old configuration and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, the IE" failure cause" shall be set to "configuration unacceptable".

8.2.6.14 Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH: Failure (Physical channel failure and reversion to old configuration)

8.2.6.14.1 Definition

8.2.6.14.2 Conformance requirement

The UE shall revert to the old configuration when the UE fails to reconfigure the new physical channel by timer T312 expiry. It shall report the failure by transmitting a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, indicating "physical channel failure" in IE" failure cause".

Reference

3GPP TS 25.331 clause 8.2.6

8.2.6.14.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if the UE fails to reconfigure the new physical channel according to a PHYSICAL CHANNEL RECONFIGURATION message by the T312 expiry.

8.2.6.14.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, requesting it to transit from CELL_FACH to CELL_DCH due to a switch in physical resource reallocation. However, it does not reconfigure the new physical channel accordingly but continue to use the old configuration. Consequently, the UE shall fail to reconfigure the new physical channel, and after T312 expiry the UE attempt to revert to the old configuration. Then the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which reports "physical channel failure" in IE" failure cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	
2				The SS does not reconfigure the physical channel, hence the UE shall detect a failure to reconfigure to the new physical channel.
3		→	PHYSICAL CHANNEL RECONFIGURATION FAILURE	After T312 expiry the UE reverts to the old configuration and transmits this message.

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Physical channel failure
Other information element	Not checked

8.2.6.14.5 Test requirement

After step2 the UE shall revert to the old configuration and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, specifying “physical channel failure” in IE” failure cause”.

8.2.6.15 Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH: Failure (Physical channel failure and reversion failure)

8.2.6.15.1 Definition

8.2.6.15.2 Conformance requirement

The UE shall perform an RRC connection re-establishment procedure when the UE fails to revert to the old configuration after the detection of physical channel failure in the physical channel reconfiguration procedure.

Reference

3GPP TS 25.331 clause 8.2.6

8.2.6.15.3 Test purpose

To confirm that the UE initiates an RRC connection re-establishment procedure after it fails to reconfigure the new physical channel and experiences a subsequent failure to revert to the old configuration.

8.2.6.15.4 Method of test

Initial Condition

System Simulator : 2 cells- Cell 1 is active, Cell 2 is inactive

UE : CELL_FACH in cell 1

Test Procedure

The UE is in the CELL_FACH state in cell 1. The SS begins to broadcast the BCCH in cell 2 and transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, but it does not reconfigure L1 accordingly. This is expected to cause the UE to fail to reconfigure to the new physical channel. As a result, the UE shall try to revert to the old configuration after timer T312 expiry. However, the SS deletes the old physical channel before timer T312 has expired. Therefore, UE shall reselect to cell 2 and sends an RRC CONNECTION RE-ESTABLISHMENT REQUEST message, which includes its previously assigned U-RNTI on the uplink CCCH. The SS transmits an RRC

CONNECTION RE-ESTABLISHMENT message, which includes a new TFCS according to the new transport channel used. After the UE receives this message, it reconfigures the new radio connection and transmits an RRC CONNECTION RE-ESTABLISHMENT COMPLETE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	BCCH	The SS begins to transmit the BCCH in a cell 2.
2		←	PHYSICAL CHANNEL RECONFIGURATION	
3				The SS does not reconfigure the physical channel and deletes the old configuration. As a result, UE should encounter a failure to reconfigure the new physical channel, then attempt to revert to the old configuration.
4		→	RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE shall find cell 2 and then transmit this message with its U-RNTI included.
5		←	RRC CONNECTION RE-ESTABLISHMENT	This message specifies a new TFCS according to the new transport channel.
6		→	RRC CONNECTION RE-ESTABLISHMENT COMPLETE	UE shall send this message in the cell 2.

Specific Message Contents

None.

8.2.6.15.5 Test requirement

After step3 the UE shall detect the presence of cell 2, camp onto it, and transmit a RRC CONNECTION RE-ESTABLISHMENT REQUEST message.

After step6 the UE shall successfully re-establish the RRC connection in cell 2.

8.2.6.16 Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH: Failure (Incompatible simultaneous reconfiguration)

8.2.6.16.1 Definition

8.2.6.16.2 Conformance requirement

The UE shall keep its old configuration when it receives another PHYSICAL CHANNEL RECONFIGURATION message before the completion of an earlier physical channel reconfiguration procedure. Then the UE shall transmit an ~~RRC STATUS~~ PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC and indicate ~~“Message not compatible with receiver state”~~ “incompatible simultaneous reconfiguration” in IE ~~“Protocol error cause”~~ “failure cause”.

Reference

3GPP TS 25.331 clause 8.2.6

8.2.6.16.3 Test purpose

To confirm that the UE keeps its old configuration, if receives another PHYSICAL CHANNEL RECONFIGURATION message before it manages to complete reconfiguring the physical channel according to an earlier PHYSICAL CHANNEL RECONFIGURATION message.

8.2.6.16.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to command the UE to perform a physical channel reconfiguration. The starting time for this action is specified. However, before the passing of the indicated starting time, SS sends another PHYSICAL CHANNEL RECONFIGURATION message. The UE shall stop the existing reconfiguration, maintains the old configuration, and transmits an ~~RRC STATUS~~PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC indicating “~~Message not compatible with receiver state~~”“incompatible simultaneous reconfiguration” in IE “~~Protocol error cause~~”“failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	
2		←	PHYSICAL CHANNEL RECONFIGURATION	Sent before the elapse of the frame number specified in IE“activation time info” of the message dispatched in step 1.
3		→	~~RRC STATUS~~ PHYSICAL CHANNEL RECONFIGURATION FAILURE	The UE does not change the configuration.

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Activation Time Info	Current CFN-[current CFN mod 8 + 8]

~~RRC STATUS~~PHYSICAL CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	
~~Protocol error information~~ Failure cause	~~Message not compatible with receiver state~~ <u>Incompatible simultaneous reconfiguration</u>
Other information element	Not checked

8.2.6.16.5 Test requirement

After step2 the UE shall keep its old configuration and transmit an ~~RRC STATUS~~PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting the value “~~Message not compatible with receiver state~~”“incompatible simultaneous reconfiguration” in IE “~~Protocol error cause~~”“failure cause”.

8.2.6.17 Physical channel reconfiguration for transition from CELL_FACH to CELL_DCH: Failure (Invalid message reception)

8.2.6.17.1 Definition

8.2.6.17.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a PHYSICAL CHANNEL RECONFIGURATION message containing a spare value in the mandatory IE” DRX indicator”. It shall then transmit a PHYSICAL

CHANNEL RECONFIGURATION FAILURE message, set “protocol error” in IE” failure cause” and also set “Information element value not comprehended” in IE” Protocol error cause”.

Reference

3GPP TS 25.331 clause 8.2.6

8.2.6.17.3 Test purpose

To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if the received message uses a spare value in the mandatory IE” DRX indicator”.

8.2.6.17.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE which comprises a spare value in the mandatory IE” DRX indicator”. The UE keeps the old configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting “protocol error” in IE” failure cause” and also setting “Information element value not comprehended” in IE” Protocol error cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	Contains a mandatory error due to illegal use of spare value
2		→	PHYSICAL CHANNEL RECONFIGURATION FAILURE	The UE does not change the configuration.

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
DRX indicator	spare value

PHYSICAL CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.6.17.5 Test requirement

After step1 the UE shall keep its old configuration, transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC with “protocol error” in IE” failure cause” and also “Information element value not comprehended” in IE” Protocol error cause”.

8.2.6.18 Physical channel reconfiguration for transition from CELL_FACH to CELL_FACH: Success

8.2.6.18.1 Definition

8.2.6.18.2 Conformance requirement

The UE shall correctly reconfigure a physical channel according to a PHYSICAL CHANNEL RECONFIGURATION message when asked to perform a transition from CELL_FACH to CELL_FACH in the another cell.

Reference

3GPP TS 25.331 clause 8.2.6

8.2.6.18.3 Test purpose

To confirm that the UE reconfigures a new physical channel according to the PHYSICAL CHANNEL RECONFIGURATION message received from the SS.

8.2.6.18.4 Method of test

Initial Condition

System Simulator : 2 cells Cell 1 is active, Cell 2 is inactive

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS starts to broadcast the BCCH in cell 2 and transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE. The UE shall then reconfigure the new physical channel according to this message. Following this, it shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC on the RACH.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	BCCH	The SS starts to broadcast the BCCH in cell 2.
2		←	PHYSICAL CHANNEL RECONFIGURATION	
3				Reconfiguration of physical channel
4		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	

Specific Message Contents

None.

8.2.6.18.5 Test requirement

After step3 the UE shall transit from CELL_FACH to CELL_FACH in the another cell and continue to communicate with SS on the common physical channel.

8.2.6.19 Physical channel reconfiguration for transition from CELL_FACH to CELL_FACH: Failure (Unsupported or Unacceptable configuration)

8.2.6.19.1 Definition

8.2.6.19.2 Conformance requirement

The UE shall keep its old configuration when it receives a PHYSICAL CHANNEL RECONFIGURATION message which includes unsupported configuration parameters. It shall then transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, with the reason “configuration unacceptable” indicated in IE” failure cause”.

Reference

3GPP TS 25.331 clause 8.2.6

8.2.6.19.3 Test purpose

To confirm that the UE keeps its configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, if the received PHYSICAL CHANNEL RECONFIGURATION message includes unsupported configuration parameters.

8.2.6.19.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, which includes unsupported configuration parameters. Specifically, the frequency cannot be supported by the UE. The UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which and indicating “configuration unacceptable” in IE” failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	The message specifies the usage of an unsupported configuration for the UE
2		→	PHYSICAL CHANNEL RECONFIGURATION FAILURE	The UE does not change the physical channel and continue to communicate with the SS using the original configuration.

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Frequency info	
- UARFCN uplink(Nu)	63984
- UARFCN downlink(Nd)	Not Present

PHYSICAL CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	
Failure cause	Configuration unacceptable
Other information element	Not checked

8.2.6.19.5 Test requirement

After step1 the UE shall keep its old configuration and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, with the reason “configuration unacceptable” specified in IE” failure cause”.

8.2.6.20 Physical channel reconfiguration for transition from CELL_FACH to CELL_FACH: Failure (Physical channel failure)

8.2.6.20.1 Definition

8.2.6.20.2 Conformance requirement

The UE shall initiate the cell reselection procedure when the UE cannot use the assigned physical channel according to a PHYSICAL CHANNEL RECONFIGURATION message, during the transition from CELL_FACH to CELL_FACH in the another cell.

Reference

3GPP TS 25.331 clause 8.2.6

8.2.6.20.3 Test purpose

To confirm that the UE perform a cell reselection and cell update procedure when the it fail to access the assigned physical channel, according to a PHYSICAL CHANNEL RECONFIGURATION message, during the transition from CELL_FACH to CELL_FACH in the another cell.

8.2.6.20.4 Method of test

Initial Condition

System Simulator : 3 cells Cell 1 is active, Cell 2 is inactive, Cell 3 is inactive

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state in cell 1. The SS begins to broadcast the BCCH in cell 2 and then transmits a PHYSICAL CHANNEL RECONFIGURATION message, resulting in the UE to attempt to transit from CELL_FACH in cell 1 to CELL_FACH in cell 3. The UE is expected to fail to access the assigned physical channel as the SS ceases downlink transmission in cell 3. After the UE successfully camp onto cell 2, it shall initiate the cell update procedure in cell 2. The procedure completes when the SS confirms UE's cell update request.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	The message assigns common resources so that the UE is expected to execute a transition from CELL_FACH in cell 1 to CELL_FACH in cell 3
2			BCCH	The SS starts to broadcast the BCCH in cell 2.
3				The UE shall detect a failure to use the assigned common physical channel and try to perform a cell reselection.
4		→	CELL UPDATE	The UE discover the presence of cell 2 and triggers a cell update procedure.
5		←	CELL UPDATE CONFIRM	SS sends this message so that the UE moves to CELL_PCH state.

Specific Message Contents

None

8.2.6.20.5 Test requirement

After step3 the UE shall discover the presence of cell 2, enter CELL_FACH state, and initiate a cell update procedure in that cell.

8.2.6.21 Physical channel reconfiguration for transition from CELL_FACH to CELL_FACH: Failure (Incompatible simultaneous reconfiguration)

8.2.6.21.1 Definition

8.2.6.21.2 Conformance requirement

The UE shall keep its old configuration when it receives another PHYSICAL CHANNEL RECONFIGURATION message before the existing reconfiguration request has been completed. The UE shall transmit an ~~RRG STATUS~~PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, indicating the reason ~~“Message not compatible with receiver state”~~“incompatible simultaneous reconfiguration” in IE ~~“Protocol error cause”~~“failure cause”.

Reference

3GPP TS 25.331 clause 8.2.6

8.2.6.21.3 Test purpose

To confirm that the UE keeps its original configuration when the UE receives a second PHYSICAL CHANNEL RECONFIGURATION message before it reconfigures the physical channel according to an earlier PHYSICAL CHANNEL RECONFIGURATION message.

8.2.6.21.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. When the SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE before the UE reconfigures the physical channel, the UE shall keep the old configuration and transmits an ~~RRC STATUS~~PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC. This message shall specify value “~~Message not compatible with receiver state~~”“incompatible simultaneous reconfiguration” in IE “~~Protocol error cause~~”“failure cause”.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	
2		←	PHYSICAL CHANNEL RECONFIGURATION	Sent before the elapse of the time specified in “Activation Time Info” in the message of step 1.
3		→	~~RRC STATUS~~ PHYSICAL CHANNEL RECONFIGURATION FAILURE	The UE shall not change the configuration.

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Activation Time Info	Current CFN-[current CFN mod 8 + 8]

~~RRC STATUS~~PHYSICAL CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	
~~Protocol error information~~ Failure cause	~~Message not compatible with receiver state~~ <u>Incompatible simultaneous reconfiguration</u>
Other information element	Not checked

8.2.6.21.5 Test requirement

After step2 the UE shall keep its old configuration, transmit an ~~RRC STATUS~~PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, and set the cause “~~Message not compatible with receiver state~~”“incompatible simultaneous reconfiguration” in IE “~~Protocol error cause~~”“failure cause”.

8.2.6.22 Physical channel reconfiguration for transition from CELL_FACH to CELL_FACH: Failure (Invalid message reception)

8.2.6.22.1 Definition

8.2.6.22.2 Conformance requirement

The UE shall keep its old configuration when the UE receives a PHYSICAL CHANNEL RECONFIGURATION message which includes the spare value in the mandatory IE “DRX indicator” . It shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message, indicating “protocol error” in IE “failure cause” and indicating “Information element value not comprehended” in IE “Protocol error cause”.

Reference

3GPP TS 25.331 clause 8.2.6

8.2.6.22.3 Test purpose

To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, if the received a PHYSICAL CHANNEL RECONFIGURATION message uses a spare value in the mandatory IE" DRX indicator".

8.2.6.22.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_FACH

Test Procedure

The UE is in the CELL_FACH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE which contains a spare value in the mandatory IE" DRX indicator". The UE keeps the old configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, which comprises the reason "protocol error" in IE" failure cause" and reason "Information element value not comprehended" in IE" Protocol error cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	The message contains a error in one of the mandatory IE.
2		→	PHYSICAL CHANNEL RECONFIGURATION FAILURE	The UE shall not change the configuration.

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
DRX indicator	spare value

PHYSICAL CHANNEL RECONFIGURATION FAILURE

Information Element	Value/remark
Message Type	
Failure cause	
- Failure cause	Protocol error
- Protocol error information	
- Protocol error cause	Information element value not comprehended
Other information element	Not checked

8.2.6.22.5 Test requirement

After step1 the UE shall keep its old configuration and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC. The failure message shall specify "protocol error" in IE" failure cause" and include "Information element value not comprehended" in IE" Protocol error cause".

8.2.7 Physical Shared Channel Allocation[TDD only]

[Editor's note : This message is not included in Release99 so this is FFS.]

8.2.8 PUSCH capacity request[TDD only]

[Editor's note : This message is not included in Release99 so this is FFS.]

8.2.9 Downlink outer loop control

8.2.9.1 Downlink outer loop control: Increase is Disallowed

8.2.9.1.1 Definition

8.2.9.1.2 Conformance requirement

The UE shall maintain its existing internal target SIR value after it has received DOWNLINK OUTER LOOP CONTROL message which forbids further adjustment of SIR target. This restriction shall be observed even if the UE has detect that the current SIR target is not sufficient to achieve the downlink quality demanded by the UTRAN.

Reference

3GPP TS 25.331 clause 8.2.9

8.2.9.1.3 Test purpose

To confirm that the UE keeps its target SIR value after it receives a DOWNLINK OUTER LOOP CONTROL message with the IE "Downlink Outer Loop Control" set to "TRUE".

8.2.9.1.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH state with the no restriction by the DL outer loop power control

Test Procedure

The UE is in the CELL_DCH state and the SS adjusts its transmission power as the current SIR estimation by the UE has reached the same target SIR value determined autonomously by the UE. This condition can be observed when the TPC command bits on the DPCCH physical channel has stabilized (consistently alternating between values 0 and 1). The SS transmits the DOWNLINK OUTER LOOP CONTROL message, which is set to "TRUE" in IE "Downlink Outer Loop Control". When the SS generates some error frames, this is expected to cause the measured BLER in the UE to fall below that of that specified in IE "BLER Quality Value" of the RRC CONNECTION SETUP message received earlier. The UE shall detect this change but it maintains the current SIR target value and does not request that SS increases downlink transmission power by setting TPC in DPCCH to "1".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The SS adjusts its transmission power as such that the measured value of SIR in the UE is the same as the SIR target value determined by the UE. The target SIR value is chosen by the UE in order that the target BLER value requested by SS is achieved.
2		←	DOWNLINK OUTER LOOP CONTROL	Set value "TRUE" in IE "Downlink Outer Loop Control".
3				The SS starts to generate some error frames. The current SIR target in the UE cannot guarantee target BLER value specified earlier.
4				The UE shall keep the existing SIR target value and it shall not request that the DL transmission power be increased using TPC bits in DPCH physical channel.

Specific Message Content

DOWNLINK OUTER POWER CONTROL

Information Element	Value/remark
Integrity check info	Not Present
Downlink Outer Loop Control	
- DL Outer loop control	Increased not allowed
Downlink DPCH power control information	
- DPC Mode	Single

8.2.9.1.5 Test requirement

After step3 the SS shall keep the target SIR value as same as step1 and it shall not request for the downlink transmission power be increased by setting TPC bits to "1".

8.2.9.2 Downlink outer loop control: Increase is Allowed

8.2.9.2.1 Definition

8.2.9.2.2 Conformance requirement

The downlink power control procedure is used to control the downlink outer loop power control running in the UE. If the UE receives the DOWNLINK OUTER LOOP CONTROL message with value "FALSE" in IE "Downlink Outer Loop Control", it shall remove any existing restriction of DL outer loop power control. The UE shall begin to increase its DL target SIR value and make the DL transmission power increase until the desired BLER value for the DPCH transport channel has been attained.

Reference

3GPP TS 25.331 clause 8.2.9

8.1.2.9.2.3 Test purpose

To confirm that the UE begins to exercise DL outer loop power control, in order to increase the target SIR value, after it had received a DOWNLINK OUTER LOOP CONTROL message specifying "FALSE" in IE "Downlink Outer Loop Control".

8.2.9.2.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH state with the restriction by the DL outer loop power control Test Procedure

The UE is in the CELL_DCH state with the restriction by the DL outer loop power control. The internal SIR target value determined by the UE is expected to be insufficient to allow the UE to achieve target BLER figure. The SS transmits the DOWNLINK OUTER LOOP CONTROL message, setting the value "FALSE" in IE "Downlink Outer Loop Control". Then the UE shall update its SIR target value and make the DL transmission power increase.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is brought to the same state as the end of step 4 in Clause 8.1.2.9.1.3.
2		←	DOWNLINK OUTER LOOP CONTROL	Set the value "FALSE" in IE "Downlink Outer Loop Control".
3				The UE shall begin to request that the DL transmission power be increased. This is done by setting the TPC field to "1" in DPCCH.

8.2.9.2.5 Test requirement

After step 3 the SS shall increase the DL transmission power more than step 1.

8.2.9.3 Downlink outer loop control: Failure (Invalid message reception)

8.2.9.3.1 Definition

8.2.9.3.2 Conformance requirement

The UE shall correctly handle an erroneous DOWNLINK OUTER LOOP CONTROL message, and perform the appropriate error-handling procedure. Specifically, it shall not alter the downlink power control mechanism, which is currently being applied. It shall also transmit a RRC STATUS message using RLC-AM mode on the DCCH channel, state the appropriate failure cause.

Reference

3GPP TS 25.331 clause 8.2.9

8.2.9.3.3 Test purpose

To confirm that the UE transmits an RRC STATUS message on the DCCH using AM RLC when it receives a DOWNLINK OUTER LOOP CONTROL message, containing an invalid conditional IE with respect to the state of the UE.

8.2.9.3.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH and the integrity protection algorithm is not applied.

Test Procedure

The UE is in CELL_DCH state. Next, the SS transmits another DOWNLINK OUTER LOOP CONTROL message, removing the power increase restriction, and at the same time includes the conditional IE "Integrity Check Info". The UE shall not request for an increase in the downlink transmission power through the TPC command field in DPCCH. It shall transmit RRC STATUS message stating the value "Message extension not comprehended" in IE "protocol cause".

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				Executes step 1 to step 3 in Clause 8.1.2.9.1.3.
2			DOWNLINK OUTER LOOP CONTROL	Contains an unexpected information element "Integrity Check Info" in the message. See specific message content.
3		→	RRC STATUS	The UE shall request for an increase in downlink transmission power. The message shall specify cause "Message extension is not comprehended" in IE "Protocol Error Information"
4				The UE shall not request for an increase in downlink transmission power. SS verifies the value of TPC field in DPCCH.

Specific Message Content

DOWNLINK OUTER LOOP CONTROL (Step 1)

The contents of DOWNLINK OUTER LOOP CONTROL message in this test case is identical to those of the default contents of layer 3 messages for RRC tests with the following exceptions:

Information Element	Value/remark
Integrity Check Info	Present
- Message authentication code	An arbitrary 32-bits string
- RRC Message Sequence	An arbitrarily chosen integer from range (0....15)

RRC STATUS

Information Element	Value/remark
Message Type	
Protocol error information	Information element value not comprehended
Other information element	Not checked

8.2.9.3.5 Test requirement

After step4 the UE shall keep its restriction for increase in downlink transmission power and not set TPC command fields in DPCCH to "1". It shall transmit an RRC STATUS message on the DCCH using AM RLC, indicating "Information element value not comprehended" in IE "Protocol error cause".

8.3.4.6 Active set update in soft handover: Subsequent reception of ACTIVE SET UPDATE message / Incompatible simultaneous reconfiguration

8.3.4.6.1 Definition

8.3.4.6.2 Conformance Requirements

The UE shall ~~keep its old configuration, when it receives~~ ignore an subsequent ACTIVE SET UPDATE message, before while it is still processing ~~can complete~~ an existing active set update procedure. It shall continue to configure itself in accordance to the first ACTIVE SET UPDATE message received. When encountering a “simultaneous reconfiguration” situation, the UE shall then transmit an RRC STATUS ACTIVE SET FAILURE message on the DCCH using AM RLC with value “Message not compatible with receiver state incompatible simultaneous reconfiguration” set in IE_” ~~Protocol error/failure~~ cause”. Then the UE shall continue to ~~update its active set~~ execute the ordered reconfiguration (for example due to a radio bearer reconfiguration) as if the ~~second~~ ACTIVE SET UPDATE message has not been received.

Reference

3GPP TS 25.331 clause 8.3.4

8.3.4.6.3 Test Purpose

To confirm that the UE ~~resumes~~ continue to execute the prior active set update request, when it receives a subsequent ACTIVE SET UPDATE message before it has completely executed the first update procedure. To confirm that the UE transmits an ~~RRC STATUS ACTIVE SET FAILURE~~ message to report the detection of a “incompatible simultaneous reconfiguration” condition, when an ACTIVE SET UPDATE message was received before the UE can complete an on-going radio bearer reconfiguration procedure.

Method of test

Initial Condition

System Simulator : 2 cells – both cell 1 and cell 2 are active

UE : CELL_DCH in cell 1 and cell 2

8.3.4.6.4 Test Procedure

The UE establishes a radio access bearer in CELL_DCH state in cell 1 and cell 2. SS transmits an ACTIVE SET UPDATE message to request for the removal of cell 1 from the active list. When the UE sends an acknowledgement for this message from its RLC entity, SS immediately transmits a second ACTIVE SET UPDATE message, which specifies ~~that~~ cell 1 to be added into the active list. SS verifies that the UE ceases transmission on the radio link associated with cell 1 when the activation time indicated in the first ACTIVE SET UPDATE message is reached. Next, SS sends a RADIO BEARER RELEASE message using AM-RLC on the DCCH. In this message, SS requests the release of the radio access bearer. When RLC acknowledgement has been received from the UE, SS immediately sends an ACTIVE SET UPDATE message. In this message, SS commands the UE to add cell 1 into its active list with the activation time set to “now”. The UE shall react by transmitting RRC STATUS ACTIVE SET UPDATE FAILURE message on the DCCH using AM-RLC mode. In this message, the IE_” ~~Protocol error/failure~~ cause” shall be set to “Message not incompatible with receiver state simultaneous reception”. Subsequently When the activation time stated in RADIO BEARER RELEASE message has elapsed, the UE shall transmit the ACTIVE SET UPDATERADIO BEARER RELEASE COMPLETE message when the reconfiguration from the earlier active set update is completed to inform that the radio assigned access bearer is released. When SS receives this message, it verifies that UE continues to communicate with the SS on the radio link in associated with cell 2 only, and that no user data are exchanged on the previously available radio access bearer.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is CELL_DCH state in both cell 1 and cell 2.
2		←	ACTIVE SET UPDATE	The SS transmits this message on downlink DCCH using AM RLC, requesting for cell 1 to be removed from the active set.
3		←	ACTIVE SET UPDATE	Immediately after UE acknowledges the message in step 2, SS transmits this message. This message specifies that cell 1 be added into the active set.
4	→		~~RRC STATUS~~	~~UE shall transmit this message with the IE "Protocol Error Cause" set to "Message not compatible with receiver state". SS waits until the activation time stated in step 2 has elapsed, and verifies that the UE stops transmitting on the radio link of cell 1.~~
5		→	ACTIVE SET UPDATE COMPLETE	UE shall transmit this message to signal the completion of the active set update procedure triggered in step 2.
6		←	<u>RADIO BEARER RELEASE</u>	~~UE shall cease all communication with cell 1 and continue to communicate with cell 2 only. SS checks that UE stops all uplink activities on the radio link associated with cell 1. SS requests that the radio access bearer allocated to the UE be released.~~
<u>7</u>		←	<u>ACTIVE SET UPDATE</u>	SS indicates that the UE shall <u>reinstate cell 1 into its active set, immediately after RLC acknowledgement is received for the message sent in step</u>
<u>8</u>	→		<u>ACTIVE SET UPDATE FAILURE</u>	In IE "failure cause", the reason <u>"incompatible simultaneous reconfiguration"</u> shall be stated.
<u>9</u>	→		<u>RADIO BEARER RELEASE COMPLETE</u>	The UE shall send this message when the activation time specified in step 6 is reached. Upon reception of this message, SS verifies that there is no more uplink user traffic on the radio access bearer.

Specific Message Contents

ACTIVE SET UPDATE (Step 2)

Use ~~The default message for this type found in Annex A~~ to be used in this test is defined in the default message content clause, with the following exceptions:

Information Element	Value/remark
Radio link addition information	Not Present.
Radio link removal information	
- Primary CPICH info	
- Primary scrambling code	Set to the P-CPICH scrambling code assigned to cell 1.

ACTIVE SET UPDATE (Step 3)

Use the default message for this type found in Annex A, with the following exceptions:

Information Element	Value/remark
Radio link addition information	
- Primary CPICH Info	
- Primary Scrambling Code	Set to same code as assigned for cell 1
- Downlink DPCH info for each RL	
- Primary CPICH usage for channel estimation	P-CPICH can be used.
- Secondary CPICH info	Not Present
- DL channelisation code	This IE is repeated for all existing downlink DPCHs allocated to the UE
- Secondary scrambling code	Not Present
- CHOICE Spreading Factor	512
- Code Number	For each DPCH, assign the same code number in the current code given in cell 1.
- TPC Combination Index	Not Present
- SSDT Cell Identity	Not Present
- Close loop timing adjustment mode	Not Present
- TFCI Combining Indicator	Not Present
- Secondary CCPCH Info	Not Present
- TFCS	Not Present
- FACH/PCH information	Not Present
- Reference to other system information blocks	Not Present
Radio link removal information	Not Present

RRC STATUS

Information Element	Value/remark
Protocol Error Cause	Check if it's set to 'Message not compatible with receiver state'

ACTIVE SET UPDATE COMPLETE (Step 5)

Only the message type for this message is checked.

RADIO BEARER RELEASE (Step 6)

Use the same message sub-type titled "AM or UM (The others of speech in CS)" found in Annex A.

ACTIVE SET UPDATE (Step 7)

Use the same message as in that for step 3, with the following exception:

Information Element	Value/remark
Activation Time	Not Present – use default

ACTIVE SET UPDATE FAILURE (Step 8)

Information Element	Value/remark
Failure Cause	Check to see if set to "Incompatible simultaneous reconfiguration"

RADIO BEARER RELEASE COMPLETE (Step 9)

Information Element	Value/remark
Integrity check Info	Not checked
Uplink integrity protection activation info	Not checked
Radio bearer uplink ciphering activation time info	Not checked

8.3.4.6.5

Test Requirement

After step 5 the UE shall ignore the second ACTIVE SET UPDATE message received, terminate the radio link in relation to cell 1, and transmit ACTIVE SET UPDATE COMPLETE using AM-RLC on the uplink DCCH of cell 2.

After step ~~3-7~~ the UE shall report the “incompatible simultaneous reconfiguration” error by transmitting ~~RRC STATUS~~ ACTIVE SET UPDATE FAILURE message on the DCCH. ~~In this message, the value “Message not compatible with receiver state” shall be set in IE “Protocol error cause”.~~

~~After step 4 the UE shall transmit ACTIVE SET UPDATE COMPLETE message on the uplink DCCH of cell 2.~~

~~After step 5 the UE shall continue to communicate normally with the SS using the radio link from cell 2.~~

~~After step 8 the UE shall send RADIO BEARER RELEASE COMPLETE message to cell 2 on the uplink DCCH, using AM-RLC mode. The UE shall stop all transmissions of user traffic on the radio access bearer assigned.~~

Reason for change:

In CR 298r2 for TS 25.331 V3.2.0, several changes were proposed and agreed for TFCS IE. In conjunction to these changes, the following modifications are suggested to the affected messages found in clauses 8.3.1.14 and Annex A of TS 34.123-1 V3.0.0:

1. "CHOICE CTFC Size" statement lines are added, and they explicitly states that the number of bits used must be sufficient to cover all possibilities of CTFC. "x bits CTFC" statement in clause 8.3.1.14 is deleted.
2. "Gain factor information" IEs are renamed to "Power offset information" IEs.
3. Explicitly state that the method to indicate power offset is "Signalled Gain Factor".
4. "Reference TFC ID" IE was found to be missing in all instances of "Power offset information" IE. This error is corrected in this CR.
5. Since the need requirement of "Power offset information" IE is essential only when the transport channel of interest is either RACH or uplink DCH, occurrences of this IE in TFCS IE of other transport channel are marked as "Not Present".

8.3.1.14 Cell Update: Radio Bearer Control for Transition from CELL_DCH to CELL_FACH

8.3.1.14.1 Definition

8.3.1.14.2 Conformance Requirement

During a transition from CELL_DCH state to CELL_FACH state arising from the execution of radio bearer control procedure, the UE might be requested to re-select to an unknown cell. The UE shall select a cell and perform cell updating procedure. In order to distinguish the 2 cases of cell updating: (i) due to UE mobility and (ii) due to radio bearer control procedure, the update cause in CELL UPDATE message shall be different for these case. When the UTRAN receives this message, it is able to decide whether to initiate RNC reallocation and the establishment of new configuration in the target RNC.

8.3.1.14.3 Test Purpose

To confirm that the UE perform a cell update procedure after being instructed to move from CELL_DCH to CELL_FACH state as a result of radio bearer control procedure. To confirm that the UE indicates cause "RB Control" when transmitting a CELL UPDATE message to the selected cell. To confirm that the UE transmit a compatible response to conclude the radio bearer control procedure.

8.3.1.14.4 Method of Test

Initial Condition

System Simulator: 2 cells – both cell 1 and cell 2 are active, with cell 1 having a stronger transmission power.

UE: CELL_DCH in cell 1

Test Procedure

The UE is brought to CELL_DCH state in cell 1, after the UE has successfully performed the RRC connection establishment procedure and been allocated dedicated physical resources. Next SS send RADIO BEARER SETUP message to the UE on downlink DCCH. In this message, a DTCH channel is assigned to the UE. The UE shall reconfigure its channel resources and then return a RADIO BEARER SETUP COMPLETE message. Following this sequence, the UE sends RADIO BEARER RELEASE message to request that all radio bearers carried on dedicated physical channel be released. However, this message does not contain information about the target cell to select when transiting to CELL_FACH state. The UE shall perform a cell reselection and it shall detect the presence of cell 2. The UE shall send a CELL UPDATE message with cause set to "RB Control" on the CCCH carried by PRACH physical channel, specified in cell 2's system information message. SS replies with CELL UPDATE CONFIRM message, specifying the IE "PRACH Info" and "Secondary CCPCH Info". To complete this procedure, the UE shall transmit RADIO BEARER RELEASE COMPLETE message on the DCCH, which is carried on the PRACH specified in system information messages broadcasted in cell 2.

Expected Test Sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is in the CELL_DCH state after completing a successful RRC connection establishment procedure.
2		←	RADIO BEARER SETUP	Establishes DTCH logical channel.
3		→	RADIO BEARER SETUP COMPLETE	
4		←	RADIO BEARER RELEASE	Information on target cell is not specified.
5		→	CELL UPDATE	UE shall send this message on CCCH of cell 2. IE"Cell update cause" should be set to "RB Control". IE"DRX Indicator" set to "No DRX".
6		←	CELL UPDATE CONFIRM	IE"PRACH Info" and IE"Secondary CCPCH Info" are included in this message.
7		→	RADIO BEARER RELEASE COMPLETE	Sent on the PRACH given in system information messages.

Specific Message Contents

RADIO BEARER SETUP (Step 2)

Use the same message sub-type entitled "Packet to CELL_DCH from CELL_DCH in PS" found in Clause 8.1 of TS34.108, with the following exceptions:

Information Element	Value/remark
RAB information to setup list

Not Present.

CELL UPDATE (Step 5)

<u>Information Element</u>	<u>Value/remark</u>
U-RNTI - SRNC Identity - S-RNTI Integrity check info AM_RLC error indicator (for C-plane) AM_RLC error indicator (for U-plane) Cell Update Cause Protocol error indicator Measured results on RACH Protocol error information	Check to see if set to '0000 0000 0001' Check to see if set to '0000 0000 0000 0000 0001' Not checked Check to see if set to 'FALSE' Check to see if set to 'FALSE' Check to see if set to 'RB Control' Check to see if it is absent or set to 'FALSE' Check to see if it is absent Check to see if it is absent

CELL UPDATE CONFIRM (Step 6)

Use the same message sub-type found in Clause 8.1 of TS34.108.

RADIO BEARER RELEASE COMPLETE (Step 7)

Only the message type is checked in this message.

8.3.1.14.5 Test Requirement

After step 4 the UE shall reselect to cell 2, perform a cell update procedure by transmitting CELL UPDATE message. In this message, the IE “Cell Update Cause” shall be set to “RB Control”.

After step 6 the UE shall send RADIO BEARER RELEASE COMPLETE message on the DCCH carried by the PRACH channel broadcasted on the system information message in cell 2.

Annex A. Default RRC Message Contents

This clause contains the default values of RRC messages, other than those specified in TS 34.108 clauses 6 and 9. Unless indicated otherwise in specific test cases, they shall be transmitted by the system simulator in RRC messages, and which are required to be received from the UE under test.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements which are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

In this clause, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

Default SYSTEM INFORMATION:

NOTE 1: SYSTEM INFORMATION BLOCK TYPE 1 (except for PLMN type "GSM-MAP"), SYSTEM INFORMATION BLOCK TYPE 8, SYSTEM INFORMATION BLOCK TYPE 9, SYSTEM INFORMATION BLOCK TYPE 10, SYSTEM INFORMATION BLOCK TYPE 14, SYSTEM INFORMATION BLOCK TYPE 15 and SYSTEM INFORMATION BLOCK TYPE 16 messages are not used.

Contents of ACTIVE SET UPDATE message: AM

Information Element	Value/remark
Message Type	
Integrity check info	Not Present
- message authentication code	
- RRC message sequence number	
Integrity protection mode info	Not Present
- Integrity protection mode command	
- Downlink integrity protection activation info	
- RRC message sequence number	
- RRC message sequence number	
- Integrity protection algorithm	
- Integrity protection initialisation number	
Ciphering mode info	Not Present(If ciphering is applied, this IE is needed)
- Ciphering mode command	stop
- Ciphering algorithm	Not Present(Standard UMTS Encryption Algorithm UEA1)
- Activation time for DPCH	Not Present(Used RLC-TM)
- Radio bearer downlink ciphering activation time	Not Present(Used RLC-AM or RLC-UM)
info	
- Radio bearer identity	
- RLC sequence number	
Activation time	(256+CFN-(CFN MOD 8 + 8))MOD 256
New U-RNTI	Not Present
CN information info	Not Present
- PLMN identity	
- CN common GSM-MAP NAS system information	
- CN domain identity	
- CN domain specific GSM-MAP NAS system information	
RB with PDCP information	Not Present
- RB identity	
- PDCP SN info	
Maximum allowed UL TX power	33dBm
Radio link addition information	(This IE is repeated for addition RL number.)
- Primary CPICH info	
- Primary scrambling code	The value is for additional cell
- Downlink DPCH info for each RL	
- Primary CPICH usage for channel estimation	Primary CPICH may be used
- Secondary CPICH info	Not Present
- Secondary scrambling code	
- channelisation code	
- DL channelisation code	
- Secondary scrambling code	
- Code number	1
- TPC combination index	SF-1(SF is reference to TS34.108 clause 6.10 Parameter Set)
- SSDT Cell Identity	0
- Closed loop timing adjustment mode	-a
- TFCI combining indicator	Not Present
- Secondary CCPCH info	TRUE
- Primary CPICH usage for channel estimation	Primary CPICH may be used
- Secondary CPICH info	Not Present
- Secondary scrambling code	
- channelisation code	
- Secondary scrambling code	
- SSDT Indicator	1
- Spreading factor	FALSE
- Code number	Reference to TS34.108 clause 6.10 Parameter Set
- Pilot symbol existence	SF-1(SF is reference to TS34.108 clause 6.10 Parameter Set)
- TFCI existence	FALSE
- Fixed or Flexible Position	TRUE
- Timing offset	Flexible
- TFCS	0
- Normal	(This IE is repeated for TFC number for PCH and FACH.)
- TFCI Field 1 information (Explicit TFCS Configuration)	
- Addition CHOICE TFCS representation	<u>Addition</u>
- TFCS addition information (Reconfiguration/Addition information)	
- CTFC information CHOICE CTFC Size	Number of bits used must be enough to cover all

- CTFC information	combinations of CTFC from clause 6.10.
- Gain factor β_c	0 to MaxTFCValue-1 (MaxTFCValue is referred to TS34.108 clause 6.10 Parameter Set.)
- Gain factor β_e	Not Present
- Gain factor β_d	0
- FACH/PCH information	0
- TFS	(PCH)
- Dynamic Transport format information	(This IE is repeated for TFI number.)
- Number of Transport blocks	Reference to TS34.108 clause 6.10 Parameter Set
- Octet mode RLC size info	Reference to TS34.108 clause 6.10 Parameter Set
- Transport block size	Reference to TS34.108 clause 6.10 Parameter Set
- Semi-static Transport Format information	Reference to TS34.108 clause 6.10 Parameter Set
- Transmission time interval	Reference to TS34.108 clause 6.10 Parameter Set
- Type of channel coding	Reference to TS34.108 clause 6.10 Parameter Set
- Coding Rate	Reference to TS34.108 clause 6.10 Parameter Set
- Rate matching attribute	Reference to TS34.108 clause 6.10 Parameter Set
- CRC size	Reference to TS34.108 clause 6.10 Parameter Set
- TFS	(FACH)
- Dynamic Transport format information	(This IE is repeated for TFI number.)
- Number of Transport blocks	Reference to TS34.108 clause 6.10 Parameter Set
- Octet mode RLC size info	Reference to TS34.108 clause 6.10 Parameter Set
- Transport block size	Reference to TS34.108 clause 6.10 Parameter Set
- Semi-static Transport Format information	Reference to TS34.108 clause 6.10 Parameter Set
- Transmission time interval	Reference to TS34.108 clause 6.10 Parameter Set
- Type of channel coding	Reference to TS34.108 clause 6.10 Parameter Set
- Coding Rate	Reference to TS34.108 clause 6.10 Parameter Set
- Rate matching attribute	Reference to TS34.108 clause 6.10 Parameter Set
- CRC size	Reference to TS34.108 clause 6.10 Parameter Set
- References to system information blocks	Not Present
- Scheduling information	Not Present
Radio link removal information	(This IE is repeated for removal RL number.)
- Primary CPICH info	The value is for removal cell
- Primary scrambling code	None
TX Diversity Mode	None
SSDT information	Not Present

Release 99 ☒
Release 00 ☐

Reason for change:

In CR-385 for TS 25.331 V3.2.0, it was proposed that the offset between the beginning of P-CCPCH frame and the beginning of DPCH frame to be included into "Downlink DPCH info for each RL" IE. Accordingly, this CR highlights the resultant changes required for TS 34.123-1 V3.0.0. All offsets were set to 0 chips at this moment.

Clauses affected:

8.3.4.1, 8.3.4.3, 8.3.4.5, 8.3.4.6, Annex A

8.3.4.1 Active set update in soft handover: Radio Link addition

8.3.4.1.1 Definition

8.3.4.1.2 Conformance requirement

Radio link addition is triggered in the network's RRC layer. The RRC entity in the network first configures the new radio link. Transmission and reception then begin immediately. This procedure is to update the active set of the connection between the UE and UTRAN. The UTRAN then transmits an ACTIVE SET UPDATE message to the UE. The UE configures layer 1 to begin reception for the additional radio link. After the UE receives confirmation from the physical layer in the UE, an ACTIVE SET UPDATE COMPLETE message is sent to the UTRAN.

Reference

3GPP TS 25.331 clause 8.3.4

8.3.4.1.3 Test purpose

To confirm that the UE continues to communicate with the SS on both the additional radio link and an already existing radio link after the radio link addition.

8.3.4.1.4 Method of test

Initial Condition

System Simulator : 2cells - Cell 1 is active ,Cell 2 is active

UE : CELL_DCH in cell 1

Test Procedure

Initially, the UE establishes a radio access bearer in the CELL_DCH state in cell 1. The SS begins to configure the new radio link to be added from cell 2. Then the SS transmits to the UE an ACTIVE SET UPDATE message in cell 1 on DCCH using AM RLC which includes the IE "Radio Link Addition Information". (e.g. Downlink DPCH information and other optional parameters relevant for the additional radio links with Primary CPICH info used for the reference ID). When the UE receives this message, the UE shall configure layer 1 to begin reception without affecting the current uplink and downlink activities of existing radio links. After the UE confirms the synchronization with the new radio link from cell 2, the UE shall transmit an ACTIVE SET UPDATE COMPLETE message to the SS on the uplink DCCH using AM RLC. The UE continues to communicate with the SS on the both radio links. To test this condition, SS ceases the operations of all uplink and downlink DPCH from cell 1. SS shall observe that the data communication for both DCCH and DTCH channels continue as per normal using cell 2, as if cell 1 is still operational.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is brought to CELL_DCH state in cell 1, after the successful establishment of a radio access bearer service.
2				The SS configures an additional radio link in the downlink direction from cell 2.
3		←	ACTIVE SET UPDATE	SS transmits this message in cell 1 on downlink DCCH using AM RLC. The message includes IE" Radio Link Addition Information". (e.g. Downlink DPCH information and other optional parameters relevant for the additional radio links with Primary CPICH info used for the reference ID in cell 2)
4		→	ACTIVE SET UPDATE COMPLETE	The UE shall configure a new radio link to cell 2, without interfering with existing connections on the radio link in cell 1. SS ceases all Tx and Rx activities in cell 1. But it shall be able to communicate with UE through cell 2.

Specific Message Content

ACTIVE SET UPDATE

The message to be used in this test is defined in the default message content clause, with the following exceptions:

Information Element	Value/remark
Radio link addition information	
- Primary CPICH Info	Set to same code as assigned for cell 2
- Primary Scrambling Code	
- Downlink DPCH info for each RL	
- Primary CPICH usage for channel estimation	P-CPICH can be used.
- DPCH frame offset	<u>0 chips</u>
- Secondary CPICH info	Not Present
- DL channelisation code	This IE is repeated for all existing downlink DPCHs allocated to the UE
- Secondary scrambling code	Not Present
- CHOICE Spreading factor	512
- Code Number	For each DPCH, assign the same code number in the current code given in cell 1.
- TPC Combination Index	Not Present
- SSDT Cell Identity	Not Present
- Close loop timing adjustment mode	Not Present
- TFCI Combining Indicator	Not Present
- Secondary CCPCH Info	Not Present
- TFCS	Not Present
- FACH/PCH Information	Not Present
- Reference to other system information blocks	Not Present
Radio link removal information	Not Present

8.3.4.1.5 Test requirement

After step 3 the UE shall configure a new radio link to cell.2, with the connection on the old radio link in cell 1 remaining operational and unaffected. It shall transmit an ACTIVE SET UPDATE COMPLETE message on the uplink DCCH using AM RLC to acknowledge the completion of the active set additional procedure.

After step 4 the SS shall continue to communicate with the UE using the radio links added to the UE from cell 2.

8.3.4.3 Active set update in soft handover: Combined radio link addition and removal (active set is not full)

8.3.4.3.1 Definition

8.3.4.3.2 Conformance requirement

When radio links are to be replaced, the UTRAN RRC first configures the UTRAN L1 to activate the radio link(s) that are being added. The UTRAN RRC then transmits an ACTIVE SET UPDATE message to the UE RRC, which shall configure the UE L1 to terminate transmission and reception on the removed radio link(s) and begin transmission and reception on the added radio link(s). At the completion of the reconfiguration of radio links, the UE shall acknowledge the replacement with an ACTIVE SET UPDATE COMPLETE message.

Reference

3GPP TS 25.331 clause 8.3.4

8.3.4.3.3 Test purpose

To confirm that the UE continues to communicate with the SS on the added radio link and removes radio link which exists prior to the execution of active set update procedure.

8.3.4.3.4 Method of test

Initial Condition

System Simulator : 2cells- Both Cell 1 and Cell 2 are active

UE :CELL_DCH in cell 1 [Active set is not full.]

Test Procedure

The UE establishes a radio access bearer in the CELL_DCH state in cell 1. SS begin to configure the new radio link in cell 2. Then the SS transmits to the UE an ACTIVE SET UPDATE message in cell 1 on DCCH using AM RLC. The message includes IE" Radio Link Addition Information". and IE" Radio Link Removal Information", indicating the removal of cell 1 and addition of cell 2 into the active set. When the UE receives this message, the UE RRC shall terminate the transmission and reception of the removed radio link in cell 1 and then configures layer 1 to begin transmission and reception in cell 2. After the UE received confirmations from the physical layer regarding the update of active set, it transmits an ACTIVE SET UPDATE COMPLETE message on the uplink DCCH to the SS. The UE shall continue to communicate with the SS on the added radio link in cell 2. When SS receives ACTIVE SET UPDATE COMPLETE message, it verifies that the UE has ceased any uplink transmission in cell 1.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is in the CELL_DCH state in cell 1
2				The SS configures an additional radio link in cell 2, starting the transmission and reception of data in cell 2. Clause
3		←	ACTIVE SET UPDATE	The SS transmit this message on downlink DCCH using AM RLC which includes IE" Radio Link Addition Information" for cell 2 and IE" Radio Link Removal Information" for cell 1.
4		→	ACTIVE SET UPDATE COMPLETE	The UE shall configure a new radio link in cell 2 and removes the old radio link in cell 1.
5				The SS removes the radio link from cell 1 and the UE shall continue to communicate on the added radio link in cell 2, and not transmit any data in cell 1.

Specific Message Content

ACTIVE SET UPDATE

The message to be used in this test is defined in the default message content clause, with the following exceptions:

Information Element	Value/remark
Radio link addition information	
- Primary CPICH Info	Set to same code as assigned for cell 2
- Primary Scrambling Code	
- Downlink DPCH info for each RL	P-CPICH can be used.
- Primary CPICH usage for channel estimation	<u>0 chips</u>
- DPCH frame offset	Not Present
- Secondary CPICH info	This IE is repeated for all existing downlink DPCHs allocated to the UE
- DL channelisation code	Not Present
- Secondary scrambling code	512
- CHOICE Spreading factor	For each DPCH, assign the same code number in the current code given in cell 2.
- Code Number	Not Present
- TPC Combination Index	Not Present
- SSDT Cell Identity	Not Present
- Close loop timing adjustment mode	Not Present
- TFCI Combining Indicator	Not Present
- Secondary CCPCH Info	Not Present
- TFCS	Not Present
- FACH/PCH Information	Not Present
- Reference to other system information blocks	Not Present
Radio link removal information	
- Primary CPICH Info	
- Primary Scrambling Code	Set to same code assigned as for cell 1

8.3.4.3.5 Test requirement

After step 3 the UE shall remove the radio link in cell 1 and add the radio link in cell 2. Then the UE shall transmit an ACTIVE SET UPDATE COMPLETE message the uplink DCCH.

After step 4 the UE shall continue to communicate on the added radio link in cell 2. SS monitors the uplink direction to confirm that no data are designated for reception in cell 1.

8.3.4.5 Active set update in soft handover: Combined radio link addition and removal (active set is full)

8.3.4.5.1 Definition

8.3.4.5.2 Conformance requirement

When the UE active set is full, the UE shall first remove the old radio link and then add the new radio link, after it receives an ACTIVE SET UPDATE message for the combined radio link addition and removal.

Reference

3GPP TS 25.331 clause 8.3.4

8.3.4.5.3 Test purpose

To confirm that the UE removes one of existing radio links, which is indicated in an ACTIVE SET UPDATE message and continues to communicate on the added radio link.

8.3.4.5.4 Method of test

Initial Condition

System Simulator : 3 cells - Cell 1 , Cell 2, and Cell 3 are all active

UE :CELL_DCH in cell 1, cell 2 (The assumed maximum number for active set is 2.)

[Editor's Note] The maximum number of radio link (i.e. MaxRL) specified in CR328 of TS 25.331 is 8. However, if the UE capability is more inferior in this aspect, can the assumption above still stands?

Test Procedure

The UE establishes a radio access bearer in the CELL_DCH state in cell 1 and cell 2. The SS configures the new radio link in cell 3 and sends an ACTIVE SET UPDATE message on DCCH using AM. This message includes IE" Radio Link Addition Information" indicating cell 3 to be added into the active set, and IE" Radio Link Removal Information" indicating the removal of cell 1 from the active set. When the UE receives this message, it shall not report a failure but firstly removes the indicated radio link and then adds the new radio link. Then the UE transmits an ACTIVE SET UPDATE COMPLETE message on the DCCH using AM RLC to the SS and continues to communicate with the SS on the added radio link and the remaining old radio link.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is in the CELL_DCH state in cell 1 and cell 2.
2				The SS configures an additional radio link in for cell 3, and starts reception and transmission using cell 3.
3		←	ACTIVE SET UPDATE	The SS transmit this message on downlink DCCH using AM RLC which includes IE" Radio Link Addition Information" and IE" Radio Link Removal Information". The contents of the IE dictate the addition of cell 3 into the active set and removal of cell 1 from it.
4		→	ACTIVE SET UPDATE COMPLETE	The UE shall configure a new radio link in cell 3 and removes the old radio link in cell 1.
5				The SS removes the radio link in cell 1. The UE shall continue to communicate on the added radio link in cell 3 and also the existing radio link in cell 2.

Specific Message Content

ACTIVE SET UPDATE

The message to be used in this test case is identical to the same message sub-type found in TS 34.108 Clause 8clause, with the following exceptions:

Information Element	Value/remark
Radio link addition information	
- Primary CPICH Info	Set to same code as assigned for cell 3
- Primary Scrambling Code	
- Downlink DPCH info for each RL	
- Primary CPICH usage for channel estimation	P-CPICH can be used.
- DPCH frame offset	0 chips
- Secondary CPICH info	Not Present
- DL channelisation code	This IE is repeated for all existing downlink DPCHs allocated to the UE
- Secondary scrambling code	Not Present
- CHOICE Spreading factor	512
- Code Number	For each DPCH, assign the same code number in the current code given in cell3.
- TPC Combination Index	Not Present
- SSDT Cell Identity	Not Present
- Close loop timing adjustment mode	Not Present
- TFCI Combining Indicator	Not Present
- Secondary CCPCH Info	Not Present
- TFCS	Not Present
- FACH/PCH Information	Not Present
- Reference to other system information blocks	Not Present
Radio link removal information	
- Primary CPICH Info	
- Primary Scrambling Code	Set to same code assigned as for cell 1

8.3.4.5.5

Test requirement

After step 3 the UE shall remove the radio link in cell 1 and add the radio link in cell 3. Then the UE shall transmit an ACTIVE SET UPDATE COMPLETE message on the uplink DCCH.

After step 4 the UE shall continue to communicate on the added radio link in cell 3 and on the existing old radio link in cell 2. It shall cease all transmission to cell 1.

8.3.4.6 Active set update in soft handover: Incompatible simultaneous reconfiguration

8.3.4.6.1 Definition

8.3.4.6.2 Conformance Requirements

The UE shall keep its old configuration, when it receives an ACTIVE SET UPDATE message before it can complete an existing active set update procedure. The UE shall then transmit an RRC STATUS message on the DCCH using AM RLC with value “Message not compatible with receiver state” set in IE” Protocol error cause”. Then the UE shall continue to update its active set as if the second ACTIVE SET UPDATE message has not been received.

Reference

3GPP TS 25.331 clause 8.3.4

8.3.4.6.3 Test Purpose

To confirm that the UE resumes the prior active set update request, when it receives a subsequent ACTIVE SET UPDATE before it has completely executed the first update procedure. To confirm that the UE transmits a RRC STATUS message to report the detection of “incompatible simultaneous reconfiguration” condition.

Method of test

Initial Condition

System Simulator : 2 cells – both cell 1 and cell 2 are active

UE : CELL_DCH in cell 1 and cell 2

8.3.4.6.4 Test Procedure

The UE establishes a radio access bearer in CELL_DCH state in cell 1 and cell 2. SS transmits an ACTIVE SET UPDATE message to request for the removal of cell 1 from the active list. When the UE sends an acknowledgement for this message from its RLC entity, SS immediately transmits a second ACTIVE SET UPDATE message, which specifies that cell 1 to be added into the active list. The UE shall react by transmitting RRC STATUS message on the DCCH using AM-RLC mode. In this message, the IE”Protocol error cause” shall be set to “Message not compatible with receiver state”. Subsequently, the UE shall transmit the ACTIVE SET UPDATE COMPLETE message when the reconfiguration from the earlier active set update is completed. When SS receives this message, it verifies that UE continues to communicate with the SS on the radio link in cell 2.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is CELL_DCH state in both cell 1 and cell 2.
2		←	ACTIVE SET UPDATE	The SS transmits this message on downlink DCCH using AM RLC, requesting for cell 1 to be removed from the active set.
3		←	ACTIVE SET UPDATE	Immediately after UE acknowledges the message in step 2, SS transmits this message. This message specifies that cell 1 be added into the active set.
4		→	RRC STATUS	UE shall transmit this message with the IE "Protocol Error Cause" set to "Message not compatible with receiver state"
5		→	ACTIVE SET UPDATE COMPLETE	UE shall transmit this message to signal the completion of the active set update.
6				UE shall cease all communication with cell 1 and continue to communicate with cell 2 only.

Specific Message Contents

ACTIVE SET UPDATE (Step 2)

The message to be used in this test is defined in the default message content clause, with the following exceptions:

Information Element	Value/remark
Radio link addition information	Not Present.
Radio link removal information	
- Primary CPICH info	
- Primary scrambling code	Set to the P-CPICH scrambling code assigned to cell 1.

ACTIVE SET UPDATE (Step 3)

Information Element	Value/remark
Radio link addition information	
- Primary CPICH Info	Set to same code as assigned for cell 1
- Primary Scrambling Code	
- Downlink DPCH info for each RL	P-CPICH can be used.
- Primary CPICH usage for channel estimation	<u>0 chips</u>
- DPCH frame offset	Not Present
- Secondary CPICH info	This IE is repeated for all existing downlink DPCHs allocated to the UE
- DL channelisation code	Not Present
- Secondary scrambling code	512
- CHOICE Spreading Factor	For each DPCH, assign the same code number in the current code given in cell 1.
- Code Number	Not Present
- TPC Combination Index	Not Present
- SSDT Cell Identity	Not Present
- Close loop timing adjustment mode	Not Present
- TFCI Combining Indicator	Not Present
- Secondary CCPCH Info	Not Present
- TFCS	Not Present
- FACH/PCH information	Not Present
- Reference to other system information blocks	Not Present
Radio link removal information	Not Present

RRC STATUS

Information Element	Value/remark
Protocol Error Cause	Check if it's set to 'Message not compatible with receiver state'

8.3.4.6.5 Test Requirement

After step 3 the UE shall report the “incompatible simultaneous reconfiguration” error by transmitting RRC STATUS message on the DCCH. In this message, the value “Message not compatible with receiver state” shall be set in IE”Protocol error cause”.

After step 4 the UE shall transmit ACTIVE SET UPDATE COMPLETE message on the uplink DCCH of cell 2.

After step 5 the UE shall continue to communicate normally with the SS using the radio link from cell 2.

Annex A. Default RRC Message Contents

This clause contains the default values of RRC messages, other than those specified in TS 34.108 clauses 6 and 9. Unless indicated otherwise in specific test cases, they shall be transmitted by the system simulator in RRC messages, and which are required to be received from the UE under test.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements which are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

In this clause, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

Default SYSTEM INFORMATION:

NOTE 1: SYSTEM INFORMATION BLOCK TYPE 1 (except for PLMN type "GSM-MAP"), SYSTEM INFORMATION BLOCK TYPE 8, SYSTEM INFORMATION BLOCK TYPE 9, SYSTEM INFORMATION BLOCK TYPE 10, SYSTEM INFORMATION BLOCK TYPE 14, SYSTEM INFORMATION BLOCK TYPE 15 and SYSTEM INFORMATION BLOCK TYPE 16 messages are not used.

Source: **Matsushita Communication Industry Co.,Ltd**

Date: **28/08/2000**

Subject: **Usage of Re-Establishment Timers**

Work item:

Category:

(only one category shall be marked with an X)

- F Correction ☐
A Corresponds to a correction in an earlier release ☐
B Addition of feature ☐
C Functional modification of feature ☒
D Editorial modification ☐

Release:

- Phase 2 ☐
Release 96 ☐
Release 97 ☐
Release 98 ☐
Release 99 ☒
Release 00 ☐

Reason for change:

A concept for the usage of re-establishment timers (T314 and T315) was introduced in CR-285r1 for TS 25.331 V3.2.0. Originally, T314 was used for UM and TM RABs while T315 was used for AM RABs). The arrangement now is to attach one of the 2 timers to the RABs. This CR presents the affected clauses for TS 34.123-1 V3.0.0. Some text modifications were made to clarify the test requirement and test procedure.

Clauses affected: **8.1.4.9, 8.1.4.10, 8.3.1.14**

8.1.4.9 RRC Connection Re-Establishment: Failure_(T314 is timeout and T315=0)

8.1.4.9.1 Definition

8.1.4.9.2 Conformance requirement

RRC connection re-establishment is needed, when a UE loses the radio connection due to e.g. radio link failure in CELL_DCH state. When the UE ~~shall~~ could not find a new cell ~~until before timer T314 is timeout expires~~, The the UE must shall enter to idle mode.

Reference

3GPP TS 25.331 clause 8.1.5

8.1.4.9.3 Test purpose

To confirm that the UE enters ~~to~~ idle mode, after T314 ~~is~~ timeout following a radio link failure.

8.1.4.9.4 Method of test

Initial Condition

System Simulator : 1 cell

UE: CELL_DCH state

Test Procedure

The UE is brought to CELL_DCH state- after a successful ~~outgoing call RRC connection establishment attempt~~. After the ~~call~~ DTCH has been established using radio bearer establishment procedure, the SS stops transmitting and receiving the DPCH and DPDCH on the radio link ~~except PCCPCH~~. ~~The UE should all detect a radio link failure. Until~~ Before T314 is timeout, the UE shall continue to find search for a new cell, and During this period, SS transmits a PAGING TYPE1 message on the PCCH to confirm that the UE is has not in entered the idle state, by This is confirmed when no response from UE is received before T314 is timeout. After T314 ~~is~~ timeout ~~then~~, the UE shall enter ~~to~~ idle mode. The SS transmits a PAGING TYPE1 message on the PCCH again to confirm that the UE is in idle state. ~~The UE shall respond by transmitting an RRC CONNECTION REQUEST message on the uplink CCCH.~~

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	T314=20 seconds
2		→	RADIO BEARER SETUP COMPLETE	
3				The UE is brought to CELL_DCH state, after making a successful outgoing call.
4				The SS stops transmitting and receiving the DPCCCH and DPDCH on the radio link ~~except for the PCCPCH.~~
5		←	PAGING TYPE1	The SS transmits this message, which includes a matched identity (<u>set to the test-USIM IMSI</u>) before T314 is timeout.
6				The SS confirms that the UE does not transmit a response ~~for~~ in the next 20 seconds.
7		←	PAGING TYPE1	The SS transmits the message, which includes a matched identity (<u>set to the test-USIM IMSI</u>).
8		→	RRC CONNECTION REQUEST	SS checks the following IEs : "Initial UE identity" – must be the same as test-SIM IMSI. "Establishment Cause – must "Terminating Call" "Protocol Indicator" – must be FALSE
9		←	RRC CONNECTION SETUP	SS assigns DPCH resources to allow UE to establish a RRC connection.

Specific Message Contents

SYSTEM INFORMATION TYPE 2

- Information for each multiplexing option	
- Number of RLC logical channels	1
- Uplink transport channel type	DCH
- Transport channel identity	2
- Logical channel identity	1
- MAC logical channel priority	1
- Number of RLC logical channels	1
- Downlink transport channel type	DCH
- Transport channel identity	2
- Logical channel identity	1

PAGING TYPE 1 (Step 5 and 7)

Information Element	Value/remark
Paging record list	Only 1 entry
Paging record	
CHOICE Paging originator	CN originator
- Paging cause	Terminating Call whose kind is supported service (speech,CS Data,PS data,SMS,Unspecified)
- CN domain identity	Supported Domain (PS Domain or CS Domain)
- CHOICE UE Identity	IMSI
- IMSI	Set to the same octet string as in the IMSI stored in the USIM card

RRC CONNECTION SETUP (Step 9)

Use the default message found in Section 9 of TS 34.108.

8.1.4.9.5 Test requirement

After step 5 the UE shall not transmits an RRC CONNECTION REQUEST message.

After step 9 the UE shall have an RRC connection based on dedicated physical channel resources.

8.1.4.10 RRC Connection Re-Establishment: Failure_(T315 is timeout and T314=0)

8.1.4.10.1 Definition

8.1.4.10.2 Conformance requirement

RRC connection re-establishment is needed, when a UE loses the radio connection due to e.g. radio link failure in CELL_DCH state. When the UE ~~shall~~ could not find a new cell ~~until before timer T315 is timeout expires~~, The UE ~~must~~ shall enter to idle mode-.

Reference

3GPP TS 25.331 clause 8.1.5

8.1.4.10.3 Test purpose

To confirm that the UE enters to idle mode, after T315 ~~is timeout expires~~ following a radio link failure.

Initial Condition

System Simulator : 1 cell

UE: CELL_DCH state

Test Procedure

The UE is brought to CELL_DCH state -after a successful RRC connection establishment~~outgoing call attempt~~. After the ~~call has been~~DTCH has been established using the radio bearer establishment procedure, the SS stops transmitting and receiving the DPCCH and DPDCH on the radio link ~~except PCCPCH~~. The UE should~~all~~ detect a radio link failure. ~~Until~~Before T315 is timeout, the UE shall continue to ~~find~~search for a new cell. During this period, and~~SS~~ transmits a PAGING TYPE1 message on the PCCH to confirm that the UE ~~has not~~has not entered the idle state. This is confirmed by~~when no response from the UE is received before T315 is timeout~~. After T315 is timeout, ~~then~~ the UE shall enter ~~to~~ idle mode. The SS transmits a PAGING TYPE1 message on the PCCH again to confirm that the UE is in idle state. ~~The UE shall respond by~~transmitting an RRC CONNECTION REQUEST message on the uplink CCCH.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	T315=30 seconds
2		→	RADIO BEARER SETUP COMPLETE	
3				The UE is brought to CELL_DCH state, after making a successful outgoing call.
4				The SS stops transmitting and receiving the <u>DPCCH and DPDCH</u> on the radio link ~~except the PCCPCH~~ .
5		←	PAGING TYPE1	The SS transmits ~~this~~ message, which includes a matched identity (<u>set to the test-USIM IMSI</u>) before T315 ~~is~~ timeout.
6				The SS confirms that the UE does not transmit a response ~~for in the next~~ 30 seconds.
7		←	PAGING TYPE1	The SS transmits the message, which includes a matched identity (<u>set to the test-USIM IMSI</u>).
8		→	RRC CONNECTION REQUEST	SS checks the following IEs : "Initial UE identity" – must be the same as test-SIM IMSI. "Establishment Cause – must "Terminating Call" "Protocol Indicator" – must be FALSE
9		←	RRC CONNECTION SETUP	SS assigns DPCH resources to allow UE to establish a RRC connection.

PAGING TYPE 1 (Step 5 and 7)

Information Element	Value/remark
Paging record list	Only 1 entry
Paging record	
CHOICE Paging originator	CN originator
- Paging cause	Terminating Call whose kind is supported service (speech,CS Data,PS data,SMS,Unspecified)
- CN domain identity	Supported Domain (PS Domain or CS Domain)
- CHOICE UE Identity	IMSI
- IMSI	Set to the same octet string as in the IMSI stored in the USIM card

RRC CONNECTION SETUP (Step 9)

Use the default message found in Section 9 of TS 34.108.

8.1.4.10.5 Test requirement

After step 5 the UE shall not transmits an RRC CONNECTION REQUEST message.

After step 9 the UE shall have an RRC connection based on dedicated physical channel resources.

8.3.1.14 Cell Update: Radio Bearer Control for Transition from CELL_DCH to CELL_FACH

8.3.1.14.1 Definition

8.3.1.14.2 Conformance Requirement

During a transition from CELL_DCH state to CELL_FACH state arising from the execution of radio bearer control procedure, the UE might be requested to re-select to an unknown cell. The UE shall select a cell and perform cell updating procedure. In order to distinguish the 2 cases of cell updating: (i) due to UE mobility and (ii) due to radio bearer control procedure, the update cause in CELL UPDATE message shall be different for these case. When the UTRAN receives this message, it is then able to decide whether to initiate RNC reallocation and the establishment of new configuration in the target RNC.

8.3.1.14.3 Test Purpose

To confirm that the UE perform a cell update procedure after being instructed to move from CELL_DCH to CELL_FACH state as a result of radio bearer control procedure. To confirm that the UE indicates cause “RB Control” when transmitting a CELL UPDATE message to the selected cell. To confirm that the UE transmit a compatible response to conclude the radio bearer control procedure.

8.3.1.14.4 Method of Test

Initial Condition

System Simulator: 2 cells – both cell 1 and cell 2 are active and suitable for camping, but with cell 1 having a stronger transmission power.

UE: CELL_DCH in cell 1

Test Procedure

The UE is brought to CELL_DCH state in cell 1, after the UE has successfully performed the RRC connection establishment procedure and ~~been~~ was allocated dedicated physical resources. Next SS send RADIO BEARER SETUP message to the UE on downlink DCCH. In this message, a DTCH channel is assigned to the UE. The UE shall reconfigure its channel resources and then return a RADIO BEARER SETUP COMPLETE message. Following this sequence, the UE sends RADIO BEARER RELEASE message to request that all radio bearers carried on dedicated physical channel to be released. However, this message does not contain information about the target cell to select when UE ~~transitions~~ to CELL_FACH state. The UE shall perform a cell reselection and it shall detect the presence of cell 2. The UE shall send a CELL UPDATE message with cause set to “RB Control” on the uplink CCCH carried by PRACH physical channel, specified in cell 2’s system information message. SS replies with CELL UPDATE CONFIRM message, specifying the IE “PRACH Info” and “Secondary CCPCH Info”. To complete this procedure, the UE shall transmit RADIO BEARER RELEASE COMPLETE message on the DCCH, which is carried on the PRACH specified in system information messages broadcasted in cell 2.

Expected Test Sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is in the CELL_DCH state after completing a successful RRC connection establishment procedure.
2		←	RADIO BEARER SETUP	Establishes DTCH logical channel.
3		→	RADIO BEARER SETUP COMPLETE	
4		←	RADIO BEARER RELEASE	Information on target cell is not specified.
5		→	CELL UPDATE	UE shall send this message on CCCH of cell 2. IE"Cell update cause" should be set to "RB Control". ~~IE"DRX Indicator" set to "No DRX".~~
6		←	CELL UPDATE CONFIRM	IE"PRACH Info" and IE"Secondary CCPCH Info" are included in this message. ~~IE"DRX Indicator" set to "No DRX".~~
7		→	RADIO BEARER RELEASE COMPLETE	Sent on the PRACH given in system information messages.

Release:

Phase 2 ☐
Release 96 ☐
Release 97 ☐
Release 98 ☐
Release 99 ☒
Release 00 ☐

Reason for change:

Hard handover test cases require more than 1 cell for execution. Existing hard handover test cases in TS 34.123-1 V3.0.0 are wrongly drafted as they employ only 1 cell. Also, hard handover can have 2 variants – (1) with change of UARFCN, (2) same UARFCN but with different scrambling or channelization codes. The hard handover type to be used by the SS has to be explicitly specified. This CR proposes to insert the necessary text descriptions to the affected clauses. Several editorial corrections are also made.

Clauses affected:

8.2.2.1, 8.2.4.1, 8.2.6.1

8.2.2.1 Radio Bearer Reconfiguration_(Hard handover) from CELL_DCH to CELL_DCH: Success

8.2.2.1.1 Definition

8.2.2.1.2 Conformance requirement

The UE shall correctly reconfigure a radio bearer ~~or~~ and L1 according to a the RADIO BEARER RECONFIGURATION- message, which specifies a hard handover to another radio frequency. After executing the reconfiguration, the UE shall be able to is-communicate with the UTRAN on the newly configured radio bearer.

Reference

3GPP TS 25.331 clause 8.2.2

8.2.2.1.3 Test purpose

To confirm that the UE ~~-reconfigures~~ a new radio bearer by following a RADIO -BEARER RECONFIGURATION message, ~~received from the SS, which indicates a hard handover to another radio frequency.~~

8.2.2.1.4 Method of test

Initial Condition

System Simulator : ~~1-2 cells – cell 1 and cell 46 are active. The CPICH Ec/No and CPICH RSCP of cell 4 are improved to –15dB and –70dBm respectively.~~The $Q_{rxlevmin}$ and $Q_{rxqualmin}$ values in SYSTEM INFORMATION BLOCK TYPE 3 and 4 messages of cell 6 is changed to –90dBm and –20dB respectively

UE : CELL_DCH in cell 1

Test Procedure

The UE is in the CELL_DCH state in cell 1. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, ~~-which commands that hard handover to cell 46 be performed, includes the new transport channel parameter reconfigure.~~ The UE reconfigures the new ~~transport physical channel parameters~~ and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER RECONFIGURATION	Hard handover to cell 46.
2				UE shall suspend all uplink transmissions to cell 1 and start to ~~Reconfigure~~ <u>Reconfigure</u> ~~ation of r~~ physical channel parameters to that of cell 46.
3		→	RADIO -BEARER RECONFIGURATION COMPLETE	

Specific Message Contents

RADIO BEARER RECONFIGURATION

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to ~~those of the default contents of layer 3 messages for RRC tests~~ the message sub-type titled "Packet to CELL_DCH from CELL_DCH in PS" in Annex A, with the following exceptions:

Information Element	Value/remark
Frequency info - UARFCN uplink(Nu) - UARFCN downlink(Nd)	~~Selected value as the UE can support which is different from current frequency.~~ Same uplink UARFCN as used for cell 46 ~~Selected value as the UE can support which is different from current frequency.~~ Same downlink UARFCN as used for cell 46
Downlink information for each radio links - Primary CPICH info - Primary Scrambling Code	Same downlink UARFCN as used for cell 46 2350

8.2.2.1.5 Test requirement

After step1 the UE shall reconfigure the radio links with the SS.

After step3 the UE shall change its -physical channel configuration and communicate with the SS on the DCCH and DTCH of cell 46. ~~using the modified physical channel configurations~~

8.1.2.4.1 Transport channel reconfiguration from CELL_DCH to CELL_DCH (Hard handover to intra-same radio frequency): Success with no transport channel type switching

8.2.4.1.1 Definition

8.2.4.1.2 Conformance requirement

The UE shall correctly reconfigure a radio bearer according to ~~a~~ the TRANSPORT CHANNEL RECONFIGURATION- message, which specifies a hard handover to another cell. After the completion of this procedure, the UE shall be able to ~~is~~ communicate with the UTRAN on the new transport channel.

Reference

3GPP TS 25.331 clause 8.2.4

8.2.4.1.3 Test purpose

To confirm that the UE reconfigures a new transport channel according to a TRANSPORT CHANNEL RECONFIGURATION message, ~~received from the SS. which also specifies that a hard handover to another cell be performed simultaneously.~~

8.2.4.1.4 Method of test

Initial Condition

System Simulator : ~~1-2~~ cells – cell 1 and cell 2 are both active

UE : CELL_DCH in cell 1

Test Procedure

The UE is in the CELL_DCH state in cell 1. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE, which includes new transport channel parameters to be applied in cell 2. The UE shall reconfigures the new transport channel and then transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH of cell 2 using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	TRANSPORT CHANNEL RECONGURATION	Hard handover to cell 2. Including UE information elements("TFS")
2				<u>UE shall suspend all uplink transmissions and Reconfigure</u> <u>ation of itself to use the new</u> <u>transport channel parameters.</u>
3		→	TRANSPORT CHANNEL RECONFIGURATION COMPLETE	

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to ~~those of the default contents of layer 3 messages for RRC tests~~ the message sub-type titled "Packet to CELL_DCH from CELL_DCH in PS" in Annex A, with the following exceptions:

Information Element	Value/remark
TrCH Information Elements -Uplink transport Channels -Added or Reconfigured TrCH information list	Number of Transport blocks = 2
-Downlink transport Channels -Added or Reconfigured TrCH information list	~~Selected value as the UE can support.~~ Number of Transport blocks = 2
<u>Downlink information for each radio links</u> - Primary CPICH info	<u>Same downlink UARFCN as used for cell 2</u>
- Primary Scrambling Code	<u>150</u>

8.2.4.1.5 Test requirement

After step1 the UE shall reconfigure the radio links affected by the changes for uplink and downlink DCH. The UE shall stop transmitting on the uplink of cell 1.

After step3 the UE shall continue to communicate with the SS on the DCCH of cell 2, using the new Transport Format Set (TFS) applicable on the existing transport channel.

8.2.6.1 Physical channel reconfiguration for transition from CELL_DCH to CELL_DCH (Hard handover to another frequency): Success

8.2.6.1.1 Definition

8.2.6.1.2 Conformance requirement

The UE shall correctly reconfigure a physical channel according to the PHYSICAL CHANNEL RECONFIGURATION- message received, which is used for hard handover purposes. It shall be able to communicate with the UTRAN on the new frequency subsequently.

Reference

3GPP TS 25.331 clause 8.2.6

8.2.6.1.3 Test purpose

To confirm that the UE reconfigures ~~a new~~ the physical channel parameters according to a PHYSICAL CHANNEL RECONFIGURATION message received from the SS. After the reconfiguration, the UE shall resume normal transmission and reception operations.

Initial Condition

System Simulator : 1-2 cells – cell 1 and cell 46 are active. ~~The CPICH Ec/No and CPICH RSCP of cell 4 are improved to –15dB and –70dBm respectively. The $Q_{rxlevmin}$ and $Q_{rxqualmin}$ values in SYSTEM INFORMATION BLOCK TYPE 3 and 4 messages of cell 6 is changed to –90dBm and –20dB respectively~~

UE : CELL_DCH in cell 1

Test Procedure

The UE is in the CELL_DCH state in cell 1. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, which includes a new physical channel parameter specified as the changing of the "Frequency Info" IE. The UE shall reconfigures itself and tune to the new physical channel and transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH of cell 46 using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PHYSICAL CHANNEL RECONFIGURATION	Including a new frequency information.
2				UE shall suspend uplink activities to cell 1 and begin to reconfigure the physical channel parameters.
3		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	

Specific Message Contents

~~None.~~ The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled "Packet to CELL_DCH from CELL_DCH in PS" in Annex A, with the following exceptions:

Information Element	Value/remark
Frequency info	
- UARFCN uplink(Nu)	Same uplink UARFCN as used for cell 46
- UARFCN downlink(Nd)	Same downlink UARFCN as used for cell 46
Downlink information for each radio links	Same downlink UARFCN as used for cell 46
- Primary CPICH info	
- Primary Scrambling Code	2350

After step 32 the UE shall send PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH of cell 46, and then continue to communicate with SS on the new physical channel.

9.2 Authentication

The purpose of this procedure is to verify the user identity. A correct response is essential to guarantee the establishment of the connection. If not, the connection will drop.

The SS shall be able to handle vectors of AUTN, RAND, CK, IK, AUTS and XRES ~~Ke, RAND, and SRES~~ in a similar way as the MSC/BSS entities. The SS shall incorporate a test algorithm for generating RESSRES and CK, IK ~~Ke~~ from RAND, AUTN and IKK ~~Ke~~ which operates as described in annex 4.

9.2.1 Authentication accepted

9.2.1.1 Definition

9.2.1.1.21 Conformance requirement

- 1) A UE ~~User Equipment~~ shall correctly respond to an AUTHENTICATION REQUEST ~~Authentication Request~~ message by sending an AUTHENTICATION RESPONSE ~~Authentication Response~~ message with the RESSRES information field set to the same value as the one produced by the authentication algorithm in the network.
- 2) A UE ~~User Equipment~~ shall indicate in a PAGING RESPONSE ~~Paging Response~~ message the ciphering key sequence number which was allocated to it through the authentication procedure.

Reference(s)

TS 24.008 Clause 4.3.2a.

9.2.1.1.32 Test purpose

- 1) To check that a User Equipment ~~UE~~ correctly responds to an Authentication Request ~~AUTHENTICATION REQUEST~~ message by sending an Authentication Response ~~AUTHENTICATION RESPONSE~~ message with the SRES information field set to the same value as the one produced by the authentication algorithm in the network.
- 2) To check that a User Equipment ~~UE~~ indicates in a Paging Response ~~PAGING RESPONSE~~ message the ciphering key sequence number which was allocated to it through the authentication procedure.

9.2.1.1.43 Method of test

Initial conditions

- System Simulator:
 - 1 cell, default parameters.
- User Equipment:
 - the UE has valid TMSI, CKSN (CKSN1), Ke ~~CK, IK~~. It is "idle updated" on the cell.

Related ICS/IXIT statement(s)

None.

Foreseen final state of the UE

The UE has valid TMSI, CKSN and Ke ~~CK, IK~~. It is "idle updated" on the cell.

Test Procedure

The UE is paged. After the UE has sent a PAGING RESPONSE message to the SS, the SS initiates an authentication procedure and checks the value ~~RESSRES~~ sent by the UE in the AUTHENTICATION RESPONSE message. The RRC CONNECTION is released. The UE is paged and the SS checks the value of the ciphering key sequence number sent by the UE in the PAGING RESPONSE message.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		Mobile terminated establishment of Radio Resource Connection ~~MOBILE TERMINATED ESTABLISHMENT OF RRC CONNECTION~~	See TS 34.108 clause 7.1.2 Establishment Cause: Answer to paging. ~~Establishment Cause: Answer to paging.~~
2	→		PAGING RESPONSE	CKSN = CKSN1
3	←		AUTHENTICATION REQUEST	The SS initiates authentication with CKSN2 different from CKSN1.
4	→		AUTHENTICATION RESPONSE	"Auth. parameter ~~SRESRES~~ " IE shall be bit exact with the value as produced by the authentication algorithm.
5	←		RRC CONNECTION RELEASE	After the sending of this message, the SS waits for the disconnection of the main signalling link. The SS waits an amount of time which is enough to guarantee that the UE is in service.
6	←		Mobile terminated establishment of Radio Resource Connection ~~MOBILE TERMINATED ESTABLISHMENT OF RRC CONNECTION~~	See TS 34.108 clause 7.1.2 Establishment Cause: Answer to paging. ~~Establishment Cause: Answer to paging.~~
7	→		PAGING RESPONSE	"Ciphering key sequence number" shall be the same as the value that was sent in the last AUTHENTICATION REQUEST message (= CKSN2).
8	←		RRC CONNECTION RELEASE	After the sending of this message, the SS waits for the disconnection of the main signalling link.

Specific message contents

None.

9.2.1.5 Test requirement

FFS

9.2.2 Authentication rejected by the network

9.2.2.1 Definition

9.2.2.1 Conformance requirement

1) After reception of an Authentication Reject message the ~~User Equipment~~ UE shall:

- 1.1 not perform normal location updating;
- 1.2 not perform periodic location updating;
- 1.3 not respond to paging with TMSI;

1.4 reject any request from CM entity for MM connection except for emergency call;

1.5 not perform IMSI detach if deactivated.

2) After reception of an Authentication Reject message the ~~User Equipment~~UE, if it supports speech, shall accept a request for an emergency call by sending a RRC CONNECTION REQUEST message with the establishment cause set to "emergency call" and include an IMEI as mobile identity in the CM SERVICE REQUEST message.

3) After reception of an Authentication Reject message the ~~User Equipment~~UE shall delete the stored LAI, CKSN and TMSI.

Reference(s)

TS 24.008 Clause 4.3.2.5.

9.2.2.32 Test purpose

1) To check that ,after reception of an Authentication Reject message, the ~~User Equipment~~UE:

1.1 does not perform normal location updating;

1.2 does not perform periodic location updating;

1.3 does not respond to paging with TMSI;

1.4 rejects any request from CM entity for MM connection except for emergency call;

1.5 does not perform IMSI detach if deactivated.

2) To check that, after reception of an Authentication Reject message the ~~User Equipment~~UE, if it supports speech, accepts a request for an emergency call by sending a RRC CONNECTION REQUEST message with the establishment cause set to "emergency call" and includes an IMEI as mobile identity in the CM SERVICE REQUEST message.

3) To check that, after reception of an Authentication Reject message and after having been deactivated and reactivated, the UE performs location updating using its IMSI as mobile identity and indicates deleted LAI and CKSN.

9.2.2.43 Method of test

Initial conditions

- System Simulator:
 - two cells: A and B, belonging to different location areas a and b;
 - IMSI attach/detach is allowed in both cells;
 - the T3212 time-out value is 1/10 hour in both cells.
- User Equipment:
 - the UE has valid TMSI, CKSN (CKSN2), ~~CK and IK~~and Ke. It is "idle updated" on cell B.

Related ICS/IXIT statement(s)

~~SIM~~ ~~USIM~~ removal possible while UE is powered Yes/No.

Switch off on button Yes/No.

Support of speech Yes/No.

Foreseen final state of the UE

The UE has valid TMSI, CKSN (CKSN1), CK and IK and ~~Ke~~. It is "idle updated" on cell A.

Test procedure

The SS rejects an authentication. The RRC CONNECTION is released. The SS checks that the UE has entered the state MM IDLE substate NO IMSI, i.e. does not perform normal location updating, does not perform periodic updating, does not respond to paging, rejects any requests from CM entities except emergency calls and does not perform IMSI detach if SIM-USIM detachment is performed, switch off is performed, or the power is removed, depending on the UE (see ICS/IXIT).

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
The following messages are sent and shall be received on cell B				
1	←		<u>Mobile terminated establishment of Radio Resouorce Connection</u> ~~MOBILE TERMINATED ESTABLISHMENT OF RRC CONNECTION~~	<u>See TS 34.108 clause 7.1.2</u> <u>Establishment Cause: Answer to paging.</u>
	→			~~Establishment Cause: Answer to paging.~~
2	→		PAGING RESPONSE	"Ciphering key sequence number" shall be the same as the value that was sent in the last AUTHENTICATION REQUEST message (= CKSN2).
3	←		AUTHENTICATION REQUEST	
4	→		AUTHENTICATION RESPONSE	
5	←		AUTHENTICATION REJECT	
6	←		RRC CONNECTION RELEASE	After the sending of this message, the SS waits for the disconnection of the main signalling link.
9	←		<u>Mobile terminated establishment of Radio Resouorce Connection</u> ~~MOBILE TERMINATED ESTABLISHMENT OF RRC CONNECTION~~	<u>See TS 34.108 clause 7.1.2</u> The UE is paged in cell B. "Mobile identity" IE contains TMSI.
10	UE			The UE shall ignore this message. This is verified during 3 seconds.
11	SS			The SS waits for at least for 15 s.
12	UE			A MO CM connection is attempted.
13	UE			The UE shall not initiate an RRC connection establishment on cell A or cell B. This is checked during 3 seconds.
14	UE			If the UE supports speech (see ICS), an emergency call is attempted.
<u>15</u>	→		<u>RRC CONNECTION REQUEST</u>	"Establishment cause": Emergency call.
<u>16</u>	←		<u>RRC CONNECTION SETUP</u>	
<u>17</u>	→		<u>RRC CONNECTION COMLETE</u>	
~~18~~	→		CM SERVICE REQUEST	"CM service type": Emergency call establishment. "Mobile identity": type of identity is set to IMEI.
~~19~~	←		CM SERVICE ACCEPT	
~~20~~	→		EMERGENCY SETUP	
~~21~~	←		RELEASE COMPLETE	"Cause" = unassigned number.
~~22~~	←		RRC CONNECTION RELEASE	After the sending of this message, the SS waits for the disconnection of the main signalling link.
The following messages are sent and shall be received on cell A.				
~~23~~	SS			The RF levels are changed to make the UE reselect the cell A.
~~24~~	UE			The UE performs cell reselection according to procedure as specified in (this however is not checked until step 29). The UE shall not initiate an RRC connection establishment on cell A or on cell B.
~~25~~	SS			The SS waits at least 7 minutes for a possible periodic updating.
~~26~~	UE			The UE shall not initiate an RRC connection establishment on cell A or on cell B.
~~27~~	UE			If possible (see ICS) ~~SIM-USIM~~ detachment is performed. Otherwise if possible (see ICS) switch off is performed. Otherwise the power is removed.
~~28~~	UE			The UE shall not initiate an RRC connection establishment on cell A or on cell B. This is checked during 3 seconds.
~~29~~	UE			Depending on what has been performed in step 26 the UE is brought back to operation.
~~30~~	→		RRC CONNECTION REQUEST	"Establishment cause": Location updating.
~~31~~	←		RRC CONNECTION SETUP	
~~32~~	→		RRC CONNECTION COMLETE	

<u>2933</u>	→	LOCATION UPDATING REQUEST	"location updating type" = normal, "CKSN" = no key available, "Mobile Identity" = IMSI, "LAI" = deleted LAI (the MCC and MNC hold the previous values, the LAC is coded FFFE).
<u>3034</u>	←	AUTHENTICATION REQUEST	"CKSN" = CKSN1.
<u>3135</u>	→	AUTHENTICATION RESPONSE	
<u>3236</u>	←	LOCATION UPDATING ACCEPT	"Mobile Identity" = TMSI.
<u>3337</u>	→	TMSI REALLOCATION COMPLETE	
<u>3438</u>	←	RRC CONNECTION RELEASE	After the sending of this message, the SS waits for the disconnection of the main signalling link.

Specific message contents

None.

9.2.2.5 Test requirement

FFS

9.2.3 Authentication rejected by the UE (MAC code failure)

9.2.3.1 Definition

Following a UMTS authentication challenge, the MS may reject the core network, on the grounds of an incorrect AUTN parameter (see TS 33.102).

If the MS considers the MAC code (supplied by the core network in the AUTN parameter) to be invalid, it shall send a AUTHENTICATION FAILURE message to the network, with the failure cause 'MAC failure' (see 33.102).

9.2.3.2 Conformance requirement

A UE shall correctly respond to an AUTHENTICATION REQUEST message with the failure cause 'MAC failure' by sending an AUTHENTICATION FAILURE message.

Reference(s)

TS 24.008 Clause 4.3.2.5.1, 4.3.2.6

9.2.3.3 Test purpose

To check that a UE shall correctly respond to an AUTHENTICATION REQUEST message with the failure cause 'MAC failure' by sending an AUTHENTICATION FAILURE message.

9.2.3.4 Method of test

Initial conditions

- System Simulator:
 - 1 cell, default parameters.
- User Equipment:
 - the UE has valid TMSI, CKSN (CKSN1), CK, IK. It is "idle updated" on the cell.

Related ICS/IXIT statement(s)

None.

Test procedure

The UE rejects an authentication. The AUTHENTICATION FAILURE is sent by UE. Upon receipt of the AUTHENTICATION FAILURE message, the network stops the timer T3260. In MAC failure case, the procedural behaviour is ffs.

Expected sequence

<u>Step</u>	<u>Direction</u>		<u>Message</u>	<u>Comments</u>
	<u>UE</u>	<u>SS</u>		
<u>1</u>			Mobile terminated establishment of Radio Resource Connection	See TS 34.108 clause 7.1.2
<u>2</u>	→		PAGING RESPONSE	CKSN = CKSN1
<u>3</u>	←		AUTHENTICATION REQUEST	with the failure cause 'MAC code failure'
<u>4</u>	→		AUTHENTICATION FAILURE	with reject cause "MAC failure"
<u>5</u>	←		IDENTITY REQUEST	
<u>6</u>	→		IDENTITY RESPONSE(IMS)	
<u>7</u>	←		AUTHENTICATION REQUEST	with the failure cause 'MAC code failure'
<u>8</u>	→		AUTHENTICATION FAILURE	with reject cause "MAC failure"

Specific message contents

None.

9.2.3.5 Test requirement

FFS

9.2.4 Authentication rejected by the UE (SQN failure)9.2.4.1 Definition

Following a UMTS authentication challenge, the MS may reject the core network, on the grounds of an incorrect AUTN parameter (see TS 33.102).

If the MS considers the SQN (supplied by the core network in the AUTN parameter) to be out of range, it shall send a AUTHENTICATION FAILURE message to the network, with the failure cause 'Synch failure' and parameter(AUTS) provided by the USIM (see TS 33.102)

9.2.4.2 Conformance requirement

A UE shall correctly respond to an AUTHENTICATION REQUEST message with the failure cause 'Synch failure' and parameter(AUTS) provided by the USIM (see TS 33.102) by sending an AUTHENTICATION FAILURE message.

Reference(s)

TS 24.008 Clause 4.3.2.5.1, 4.3.2.6

9.2.4.3 Test purpose

To check that a UE shall correctly respond to an AUTHENTICATION REQUEST message with the failure cause 'Synch failure' and parameter(AUTS) provided by the USIM (see TS 33.102) by sending an AUTHENTICATION FAILURE message.

9.2.4.4 Method of testInitial conditions

- System Simulator:

- 1 cell, default parameters.
- User Equipment:
 - the UE has valid TMSI, CKSN (CKSN1), CK, IK. It is "idle updated" on the cell.

Related ICS/IXIT statement(s)

None.

Test procedure

The UE rejects an authentication. The AUTHENTICATION FAILURE is sended by UE.

Upon receipt of the AUTHENTICATION FAILURE message, the network stops the timer T3260. In Synch failure case, the core network may renegotiate with the HLR/AuC and provide the MS with new authentication parameters.

Expected sequence

<u>Step</u>	<u>Direction</u>		<u>Message</u>	<u>Comments</u>
	<u>UE</u>	<u>SS</u>		
<u>1</u>			<u>Mobile terminated establishment of Radio Resouorce Connection</u>	<u>See TS 34.108 clause 7.1.2</u>
<u>2</u>	<u>→</u>		<u>PAGING RESPONSE</u>	<u>CKSN = CKSN1</u>
<u>3</u>	<u>←</u>		<u>AUTHENTICATION REQUEST</u>	<u>with the failure cause 'Synch failure'</u>
<u>4</u>	<u>→</u>		<u>AUTHENTICATION FAILURE</u>	<u>"Auth. parameter RES" IE shall be bit exact with the value as produced by the authentication algorithm.</u>
<u>5</u>	<u>←</u>		<u>AUTHENTICATION REQUEST</u>	<u>with the failure cause 'Synch failure'</u>
<u>6</u>	<u>→</u>		<u>AUTHENTICATION FAILURE</u>	<u>"Auth. parameter RES" IE shall be bit exact with the value as produced by the authentication algorithm.</u>

Specific message contents

C Functional modification of feature ☒
D Editorial modification ☐

Release:

- Phase 2 ☐
Release 96 ☐
Release 97 ☐
Release 98 ☐
Release 99 ☒
Release 00 ☐

Reason for change:

- Corrections related to usage of LLC SAPI information element in GSM and in UMTS. LLC SAPI information element is used in GSM in Logical Link Control protocol (LLC), and is not needed in UMTS, since LLC was removed from the protocol stack. In PDP messages for UMTS though, LLC SAPI still exists for handover between UMTS and GSM. Difference between GSM and UMTS mode for the UE is that, in GSM, UE shall perform logical link establishment procedure if there is no logical link for LLC SAPI indicated by the network, during the procedure of PDP context activation initiated by the UE. In UMTS, the UE shall take no action with regards to LLC SAPI.
- Addition of test cases for Secondary PDP activation procedures. Clause 11.1.4 is describing test cases for secondary PDP procedures initiated by the UE. All test cases are completely new, since secondary PDP procedures are added in the R99 of core specification.
Secondary PDP activation procedures initiated by the UE are similar to PDP activation procedures initiated by the UE, hence added test cases are similar to existing test cases for PDP activation procedures initiated by the UE.

Clauses affected:

**11.1.1.1, 11.1.1.2.1.
11.1.4**

Other specs affected:

11 Session Management Procedures

11.1 PDP context activation

11.1.1 Initiated by the UE

11.1.1.1 Attach initiated by context activation/QoS Offered by Network is the QoS Requested

11.1.1.1.1 Definition

11.1.1.1.2 Conformance requirement

PDP context activation shall initiate PS Attach by the UE to establish a GMM context, when the UE is PS Detached.

In order to request a PDP context activation, the UE sends an ACTIVATE PDP CONTEXT REQUEST message to the network, enters the state PDP-ACTIVE-PENDING and starts timer T3380. The message contains the selected NSAPI, PDP type, requested QoS and, if the UE requests a static address, the PDP address.

If the QoS offered by the network is the same as the QoS requested by the UE, then upon receipt of the message ACTIVATE PDP CONTEXT ACCEPT the UE shall stop timer T3380 ~~and shall initiate establishment of the logical link with the offered QoS.~~

In GSM, the MS shall initiate establishment of the logical link for the LLC SAPI indicated by the network with the offered QoS and selected radio priority level if no logical link has been already established for that SAPI.

In UMTS, both the network and the MS shall store the LLC SAPI and the radio priority in the PDP context. If a UMTS to GSM system change is performed, the new SGSN shall initiate establishment of the logical link using the negotiated QoS profile, the negotiated LLC SAPI, and selected radio priority level stored in the PDP context as in a GSM to GSM Routing Area Update.

An MS, which is capable of operating in both GSM and UMTS, shall use a valid LLC SAPI, while an MS which is capable of operating only in UMTS shall indicate the LLC SAPI value as "LLC SAPI not assigned" in order to avoid unnecessary value range checking and any other possible confusion in the network.

NOTE: The radio priority level and the LLC SAPI parameters, though not used in UMTS, shall be included in the messages, in order to support handover between UMTS and GSM networks.

Reference

3G TS 24.008 subclauses 6.1.3.1 and 6.1.3.1.1.

11.1.1.1.3 Test purpose

To check the UE initiates a PS attach if one is not already active.

To test the behaviour of the UE when SS responds to a PDP context activation request with the requested QoS.

11.1.1.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE and is in GMM-state "GMM-DEREGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- PS Supported yes/no
- Method of context activation

Test procedure

If the UE is attached a detach request is sent from the SS. UE replies with DETACH ACCEPT. A PDP context activation is then requested by the user. The PS attach (ATTACH REQUEST) is then indirectly caused by a requested PDP context activation. The SS returns the ATTACH ACCEPT message to the UE. Now session management can proceed with PDP context activation.

On receipt of the ACTIVATE PDP CONTEXT REQUEST message an ACTIVATE PDP CONTEXT ACCEPT is returned by the SS with the same requested QoS. The contents of the ACTIVATE PDP CONTEXT REQUEST message shall then be checked. The SS then waits for T3380seconds to ensure T3380 has been stopped and no more ACTIVATE PDP CONREXT REQUEST messages are sent by the UE. The SS then sends a MODIFY PDP CONTEXT REQUEST message to which the UE shall reply with a MODIFY PDP CONTEXT ACCEPT message to ensure the context has been set up.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		DETACH REQUEST	Only sent if the UE attaches at power-up, if not go to step 3.
2	→		DETACH ACCEPT	UE accepts the detach
3	UE			Initiate a context activation
4	→		ATTACH REQUEST	Request attach
5	←		ATTACH ACCEPT	Accept attach
6	→		ACTIVATE PDP CONTEXT REQUEST	Request a PDP context activation
7	←		ACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context activation
8	SS			Wait for T3380 seconds to ensure no further activate request messages come from the UE
9	←		MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION)	SS sends a modify request to UE for the activated context
10	→		MODIFY PDP CONTEXT ACCEPT (UE TO NETWORK DIRECTION)	UE accepts the modification request from the network to show context is activated

Specific message contents

None.

11.1.1.1.5 Test requirements

To pass the test UE has to:

- initiate a PS ATTACH if one is not already active
- when the network responds to a PDP context activation request, initiated by the UE, with the requested QoS, the UE has to complete the PDP context activation procedure. To check if the PDP context activation was successful, SS shall request PDP context modification and UE shall accept it.

11.1.1.2 QoS offered by the network is a lower QoS

11.1.1.2.1 QoS accepted by UE

11.1.1.2.1.1 Definition

11.1.1.2.1.2 Conformance requirement

In order to request a PDP context activation, the UE sends an ACTIVATE PDP CONTEXT REQUEST message to the network enters the state PDP-ACTIVE-PENDING and starts timer T3380. If the QoS offered by the network is acceptable to UE, then upon receipt of the message ACTIVATE PDP CONTEXT ACCEPT the UE shall stop timer T3380 ~~initiate establishment of the logical link with the offered QoS~~.

In GSM, the MS shall initiate establishment of the logical link for the LLC SAPI indicated by the network with the offered QoS and selected radio priority level if no logical link has been already established for that SAPI.

In UMTS, both the network and the MS shall store the LLC SAPI and the radio priority in the PDP context.

Reference

3G TS 24.008 subclause 6.1.3.1.1.

11.1.1.2.1.3 Test purpose

To test the behaviour of the UE when the SS responds to a PDP context activation request with a lower QoS than that requested.

11.1.1.2.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- PS Supported yes/no
- User setting of Minimum QoS supported yes/no
- Method of setting minimum QoS
- Method of context activation

Test procedure

The requested QoS and Minimum QoS are set. A context activation is requested by the user. On receipt of the ACTIVATE PDP CONTEXT REQUEST message an ACTIVATE PDP CONTEXT ACCEPT is returned by the SS with a QoS lower than the requested but higher than or equal to the minimum. The SS then sends a MODIFY PDP CONTEXT REQUEST message and the UE shall respond with a MODIFY PDP CONTEXT ACCEPT message to confirm the context is active.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		UE		Initiate a context activation
2	→		ACTIVATE PDP CONTEXT REQUEST	Request a PDP context activation
3		←	ACTIVATE PDP CONTEXT ACCEPT	Accept a PDP context activation
4		←	MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION)	Send a modify request to UE for the activated context
5	→		MODIFY PDP CONTEXT ACCEPT (UE TO NETWORK DIRECTION)	Accept the modification request from network to show context is activated

Specific message contents

None.

11.1.1.2.1.5 Test requirements

To pass the test UE shall:- when the network responds to a PDP context activation request, initiated by the UE, with the QoS lower than the requested but higher than or equal to the minimum, the UE has to complete the PDP context activation procedure. To see if the PDP context activation was successful, SS shall request PDP context modification and UE shall accept it.

11.1.1.2.2 QoS rejected by UE

11.1.1.2.2.1 Definition

11.1.1.2.2.2 Conformance requirement

In order to request a PDP context activation, the UE sends an ACTIVATE PDP CONTEXT REQUEST message to the network.

Upon receipt of the message ACTIVATE PDP CONTEXT ACCEPT offering a QoS which is not acceptable to the UE, the UE shall initiate the PDP context deactivation procedure.

Reference

3G TS 24.008 subclause 6.1.3.1.1.

11.1.1.2.2.3 Test purpose

To test the behaviour of the UE when the QoS offered by SS in response to a PDP context activation request is not acceptable to the UE.

11.1.1.2.2.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- PS Supported yes/no
 - User setting of Minimum QoS supported yes/no
 - Method of setting minimum QoS
- Method of context activation

Test procedure

The requested QoS and Minimum QoS are set. A context activation is requested by the user. On receipt of the ACTIVATE PDP CONTEXT REQUEST message an ACTIVATE PDP CONTEXT ACCEPT message is returned by the SS with a QoS lower than the minimum. The UE shall then send a DEACTIVATE PDP CONTEXT REQUEST message. A DEACTIVATE PDP CONTEXT ACCEPT message will be sent in return by the SS.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		UE		Initiate a context activation
2	→		ACTIVATE PDP CONTEXT REQUEST	Request a PDP context activation
3	←		ACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context activation
4	→		DEACTIVATE PDP CONTEXT REQUEST	Deactivate the PDP context
5	←		DEACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context deactivation

Specific message contents

None.

11.1.1.2.2.5 Test requirements

The UE shall reject the QoS offered by the network in response to a PDP context activation request, if the QoS is not acceptable to the UE.

11.1.2 PDP context activation requested by the network, successful and unsuccessful

11.1.2.1 Definition

This test needs to take into account the number of active PDP contexts supported simultaneously by the UE, to be able to test the response when all contexts are activated and the network tries to initiate a new context.

11.1.2.2 Conformance requirement

1) Upon receipt of a REQUEST PDP CONTEXT ACTIVATION message:

- If the UE accepts the request the UE shall then initiate the PDP context activation procedure.
- If the UE rejects the request, the UE shall send a REQUEST PDP CONTEXT ACTIVATION REJECT message with one of the following causes:

#26: insufficient resources;

#31: activation rejected, unspecified;

#40: feature not supported; or

#95 – 111: protocol errors.

2) The UE shall not ignore the request.

3) If the UE accepts the request, the ACTIVATE PDP CONTEXT REQUEST message sent by the UE shall contain the parameters requested by the network in the REQUEST PDP CONTEXT ACTIVATION message, except for the offered QoS which may be changed by the UE.

4) Whenever a REQUEST PDP CONTEXT ACTIVATION message is received by the UE specifying a transaction identifier relating to a PDP context not in state PDP-INACTIVE, the UE shall locally deactivate the old PDP context relating to the received transaction identifier. Furthermore, the UE shall continue with the activation procedure of a new PDP context as indicated in the received message.

Reference

3G TS 24.008 clauses 6.1.3.1.2, 6.1.3.1.4 and 8.3.2.f)

3G TS 27.060 clause 7.3.3.

11.1.2.3 Test purpose

To test the behaviour of the UE upon receipt of a context activation request from the SS.

11.1.2.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- PS Supported yes/no
- Network requested PDP context activation supported yes/no
- Number of network initiated PDP contexts supported

Case 1

For an UE that supports PDP context activation requested by the network.

Test procedure

A REQUEST PDP CONTEXT ACTIVATION message is sent by the SS. On receipt of the ACTIVATE PDP CONTEXT REQUEST message an ACTIVATE PDP CONTEXT ACCEPT message is returned by the SS. If all 7 contexts are supported then steps 5, 6 and 7 should not be performed. This is continued until the maximum number of contexts the UE supports are activated. When one more context is activated the UE shall return a REQUEST PDP CONTEXT ACTIVATION REJECT message with cause set to 'insufficient resources'. A REQUEST PDP CONTEXT ACTIVATION message is then sent using a currently activated context transaction identifier. The UE shall activate this context in place of the previous context.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		REQUEST PDP CONTEXT ACTIVATION	SS sends Request a PDP context activation to UE
2	→		ACTIVATE PDP CONTEXT REQUEST	UE replies with a Request PDP context activation
3	←		ACTIVATE PDP CONTEXT ACCEPT	SS accepts the PDP context activation
4		SS		Steps 1-3 are repeated for the number of Network Initiated contexts supported NOTE: If all 7 contexts are supported steps 5, 6 and 7 should not be performed SS requests a PDP context activation
5	←		REQUEST PDP CONTEXT ACTIVATION	The context activation request is rejected with cause 'insufficient resources'. SS requests a PDP context activation for an existing context
6	→		REQUEST PDP CONTEXT ACTIVATION REJECT	
7	←		REQUEST PDP CONTEXT ACTIVATION	
8	→		ACTIVATE PDP CONTEXT REQUEST	UE requests a PDP context activation to replace the existing context
9	←		ACTIVATE PDP CONTEXT ACCEPT	SS accepts the PDP context activation

Case 2

For an UE that does not support PDP context activation requested by the network.

Test procedure

A REQUEST PDP CONTEXT ACTIVATION message is sent by the SS. The UE shall then send an REQUEST PDP CONTEXT ACTIVATION REJECT message.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		REQUEST PDP CONTEXT ACTIVATION	Request a PDP context activation
2	→		REQUEST PDP CONTEXT ACTIVATION REJECT	Reject the PDP context activation request with cause 'insufficient resources' or 'feature not supported'.

Specific message contents

None.

11.1.2.5 Test requirements

An UE that is configured to support one or more PDP contexts simultaneously, with a number of active contexts lower than the maximum, shall accept PDP context activation initiated by the network.

The UE that does not support PDP Context Activation (a number of active contexts supported by the UE is equal to maximum or UE does not support PDP context) shall reject PDP context activation initiated by the network.

11.1.3 Abnormal Cases

11.1.3.1 T3380 Expiry

11.1.3.1.1 Definition

11.1.3.1.2 Conformance requirement

- 1) On the first expiry of the timer T3380, the UE shall re-send the PDP CONTEXT ACTIVATION REQUEST
- 2) On the second expiry of the timer T3380, the UE shall re-send the PDP CONTEXT ACTIVATION REQUEST
- 3) On the third expiry of the timer T3380, the UE shall re-send the PDP CONTEXT ACTIVATION REQUEST
- 4) On the fourth expiry of the timer T3380, the UE shall re-send the PDP CONTEXT ACTIVATION REQUEST
- 5) On the fifth expiry of the timer T3380, the UE shall release all resources possibly allocated for this invocation and shall abort the procedure; no automatic PDP context activation re-attempt shall be performed.

Reference

3G TS 24.008 subclause 6.1.3.1.5 a).

11.1.3.1.3 Test purpose

To test the behaviour of the UE when the SS does not reply to PDP CONTEXT ACTIVATION REQUEST.

11.1.3.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- PS Supported yes/no
- Method of activating a context

Test procedure

A context activation is requested by the user. The UE shall send the ACTIVATE PDP CONTEXT REQUEST message five times with T3380 seconds between each message. After this no further ACTIVATE PDP CONTEXT REQUEST messages shall be sent by the UE.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			Initiate a context activation
2	→		ACTIVATE PDP CONTEXT REQUEST	Request a PDP context activation
3		SS		T3380 seconds
4	→		ACTIVATE PDP CONTEXT REQUEST	Request a PDP context activation
5		SS		T3380 seconds
6	→		ACTIVATE PDP CONTEXT REQUEST	Request a PDP context activation
7		SS		T3380 seconds
8	→		ACTIVATE PDP CONTEXT REQUEST	Request a PDP context activation
9		SS		T3380 seconds
10	→		ACTIVATE PDP CONTEXT REQUEST	Request a PDP context activation
11		SS		Wait for T3380 seconds to ensure no further ACTIVATE PDP CONTEXT REQUEST messages are sent by the UE

Specific message contents

None.

11.1.3.1.5 Test requirements

UE shall resend the ACTIVATE PDP CONTEXT REQUEST to SS five times in order to initiate PDP context, with expiry of timer T3380 between messages. After fifth try, UE shall send no more ACTIVATE PDP CONTEXT REQUEST to SS.

11.1.3.2 Collision of UE initiated and network requested PDP context activation

11.1.3.2.1 Definition

This test needs to take into account the number of PDP contexts supported by the UE, to be able to test the response when the network tries to initiate a new context.

11.1.3.2.2 Conformance requirement

A collision of an MS initiated and a network requested PDP context activation procedure is identified by the MS if a REQUEST PDP CONTEXT ACTIVATION message is received from the network after the MS has sent an ACTIVATE PDP CONTEXT REQUEST message, and the MS has not yet received an ACTIVATE PDP CONTEXT ACCEPT or ACTIVATE PDP CONTEXT REJECT message.

Reference

3G TS 24.008 subclause 6.1.3.1.5 b), case: Static PDP address collision detected within the UE.

11.1.3.2.3 Test purpose

To test the behaviour of the UE when there is a collision between an UE initiated and SS requested PDP context activation detected by the UE.

11.1.3.2.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- PS Supported yes/no
- Method of PDP context activation

Case 1

For an UE that supports PDP context activation requested by the network.

Test procedure

A context activation is requested by the user. After receipt of the ACTIVATE PDP CONTEXT REQUEST message the SS sends a REQUEST PDP CONTEXT ACTIVATION message followed by an ACTIVATE PDP CONTEXT ACCEPT message in a time less than T3380 (Use T3380/2). The UE shall send no messages within this time.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			Initiate a context activation
2	→		ACTIVATE PDP CONTEXT REQUEST	Request a PDP context activation
3	←		REQUEST PDP CONTEXT ACTIVATION	Request a PDP context activation request
4		SS		Wait for T3380/2 seconds to ensure UE does not resend ACTIVATE PDP CONTEXT REQUEST
5	←		ACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context activation

Case 2

For an UE that does not support PDP context activation requested by the network.

Test procedure

A context activation is requested by the user. After receipt of the ACTIVATE PDP CONTEXT REQUEST message the SS sends a REQUEST PDP CONTEXT ACTIVATION message. The UE shall send a REQUEST PDP CONTEXT ACTIVATION REJECT message with cause set to 'insufficient resources' or 'feature not supported'. The SS then sends an ACTIVATE PDP CONTEXT ACCEPT.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		UE		Initiate a context activation
2	→		ACTIVATE PDP CONTEXT REQUEST	Request a PDP context activation
3	←		REQUEST PDP CONTEXT ACTIVATION	Request a PDP context activation request
4	→		REQUEST PDP CONTEXT ACTIVATION REJECT	Cause set to 'insufficient resources' or 'feature not supported'.
5	←		ACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context activation

Specific message contents

None.

11.1.3.2.5 Test requirements

In the case of such collision,

- the UE that supports PDP context activation requested by the network shall discard the REQUEST PDP CONTEXT ACTIVATION message from SS and wait for an ACTIVATE PDP CONTEXT ACCEPT message.
- the UE that does not support PDP context activation requested by the network shall reject PDP context activation initiated by the SS.

11.1.4 Secondary PDP context activation procedures ~~(FFS)~~

~~11.1.4.1 Secondary PDP context activation procedure, successful and unsuccessful~~

11.1.4.1 Successful Secondary PDP Context Activation Procedure Initiated by the UE

11.1.4.1.1 QoS Offered by Network is the QoS Requested

11.1.4.1.1.1 Definition

11.1.4.1.1.2 Conformance requirement

In order to request a secondary PDP context activation, the UE sends an ACTIVATE SECONDARY PDP CONTEXT REQUEST message to the network, enters the state PDP-ACTIVE-PENDING and starts timer T3380. The message contains the selected NSAPI, a QoS profile, a requested LLC SAPI and the linked TI.

If the QoS offered by the network is the same as the QoS requested by the UE, then upon receipt of the message ACTIVATE SECONDARY PDP CONTEXT ACCEPT, the UE shall stop timer T3380.

In GSM the UE shall initiate establishment of the logical link for the LLC SAPI indicated by the network, with the offered QoS and selected radio priority level, if no logical link has been already established for that SAPI.

Although not used in UMTS, LLC SAPI shall be included in the messages, in order to support handover between UMTS and GSM networks.

Reference

3G TS 24.008 subclauses 6.1.3.2 and 6.1.3.2.1.

11.1.4.1.1.3 Test purpose

To test the behaviour of the UE when SS responds to a Secondary PDP context activation request with the requested QoS.

11.1.4.1.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE and is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- PS Supported yes/no
- Method of context activation

Test procedure

On receipt of the ACTIVATE SECONDARY PDP CONTEXT REQUEST message an ACTIVATE SECONDARY PDP CONTEXT ACCEPT is returned by the SS with the same requested QoS. The SS then waits for T3380 seconds to ensure T3380 has been stopped and no more ACTIVATE SECONDARY PDP CONREXT REQUEST messages are

sent by the UE. The SS then sends a MODIFY PDP CONTEXT REQUEST message to which the UE shall reply with a MODIFY PDP CONTEXT ACCEPT message to ensure the context has been set up.

Expected sequence

<u>Step</u>	<u>Direction</u>		<u>Message</u>	<u>Comments</u>
	<u>UE</u>	<u>SS</u>		
<u>1</u>	→		ACTIVATE SECONDARY PDP CONTEXT REQUEST	Request a Secondary PDP context activation
<u>2</u>	←		ACTIVATE SECONDARY PDP CONTEXT ACCEPT	Accept the Secondary PDP context activation
<u>3</u>		SS		Wait for T3380 seconds to ensure no further activate request messages come from the UE
<u>4</u>	←		MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION)	SS sends a modify request to UE for the activated context
<u>5</u>	→		MODIFY PDP CONTEXT ACCEPT (UE TO NETWORK DIRECTION)	UE accepts the modification request from the network to show context is activated

Specific message contents

None.

11.1.4.1.1.5 Test requirements

To pass the test the UE has to:

- when the network responds to a Secondary PDP context activation request initiated by the UE, with the requested QoS, the UE shall complete the Secondary PDP context activation procedure. To check if the Secondary PDP context activation was successful, SS shall request PDP context modification and UE shall accept it.

11.1.4.1.2 QoS Offered by Network is a lower QoS

11.1.4.1.2.1 QoS accepted by UE

11.1.4.1.2.1.1 Definition

11.1.4.1.2.1.2 Conformance requirement

In order to request a Secondary PDP context activation, the UE sends an ACTIVATE SECONDARY PDP CONTEXT REQUEST message to the network, enters the state PDP-ACTIVE-PENDING and starts timer T3380. If the QoS offered by the network is acceptable to UE, then upon receipt of the message ACTIVATE SECONDARY PDP CONTEXT ACCEPT the UE shall stop timer T3380.

In GSM the UE shall initiate establishment of the logical link for the LLC SAPI indicated by the network, with the offered QoS and selected radio priority level, if no logical link has been already established for that SAPI.

Reference

3G TS 24.008 subclauses 6.1.3.2 and 6.1.3.2.1.

11.1.4.1.2.1.3 Test purpose

To test the behaviour of the UE when the SS responds to a Secondary PDP context activation request with a lower QoS than that requested.

11.1.4.1.2.1.4 Method of testInitial conditionsSystem Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- PS Supported yes/no
- User setting of Minimum QoS supported yes/no
- Method of setting minimum QoS
- Method of context activation

Test procedure

The requested QoS and Minimum QoS are set. A secondary context activation is requested by the user. On receipt of the ACTIVATE SECONDARY PDP CONTEXT REQUEST message an ACTIVATE SECONDARY PDP CONTEXT ACCEPT is returned by the SS with a QoS lower than the requested but higher than or equal to the minimum. The SS then sends a MODIFY PDP CONTEXT REQUEST message and the UE shall respond with a MODIFY PDP CONTEXT ACCEPT message to confirm the context is active.

Expected sequence

<u>Step</u>	<u>Direction</u>		<u>Message</u>	<u>Comments</u>
	<u>UE</u>	<u>SS</u>		
<u>1</u>	<u>UE</u>			<u>Initiate a context activation</u>
<u>2</u>	<u>→</u>		<u>ACTIVATE SECONDARY PDP CONTEXT REQUEST</u>	<u>Request a Secondary PDP context activation</u>
<u>3</u>		<u>←</u>	<u>ACTIVATE SECONDARY PDP CONTEXT ACCEPT</u>	<u>Accept a Secondary PDP context activation</u>
<u>4</u>		<u>←</u>	<u>MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION)</u>	<u>Send a modify request to UE for the activated context</u>
<u>5</u>	<u>→</u>		<u>MODIFY PDP CONTEXT ACCEPT (UE TO NETWORK DIRECTION)</u>	<u>Accept the modification request from network to show context is activated</u>

Specific message contents

None.

11.1.4.1.2.1.5 Test requirements

To pass the test UE shall:

- when the network responds to a Secondary PDP context activation request, initiated by the UE, with the QoS lower than the requested but higher than or equal to the minimum, the UE shall complete the Secondary PDP context activation procedure. To see if the PDP context activation was successful, SS shall request PDP context modification and UE shall accept it.

11.1.4.1.2.2 QoS rejected by UE

11.1.4.1.2.2.1 Definition

11.1.4.1.2.2.2 Conformance requirement

In order to request a Secondary PDP context activation, the UE sends an ACTIVATE SECONDARY PDP CONTEXT REQUEST message to the network.

Upon receipt of the message ACTIVATE SECONDARY PDP CONTEXT ACCEPT offering a QoS which is not acceptable to the UE, the UE shall initiate the PDP context deactivation procedure.

Reference

3G TS 24.008 subclauses 6.1.3.2 and 6.1.3.2.1.

11.1.4.1.2.2.3 Test purpose

To test the behaviour of the UE when the QoS offered by SS in response to a Secondary PDP context activation request is not acceptable to the UE.

11.1.4.1.2.2.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- PS Supported yes/no
- User setting of Minimum QoS supported yes/no
- Method of setting minimum QoS
 - Method of context activation

Test procedure

The requested QoS and Minimum QoS are set. A context activation is requested by the user. On receipt of the ACTIVATE SECONDARY PDP CONTEXT REQUEST message an ACTIVATE SECONDARY PDP CONTEXT ACCEPT message is returned by the SS with a QoS lower than the minimum. The UE shall then send a DEACTIVATE PDP CONTEXT REQUEST message for the secondary PDP context. A DEACTIVATE PDP CONTEXT ACCEPT message will be sent in return by the SS.

Expected sequence

<u>Step</u>	<u>Direction</u>		<u>Message</u>	<u>Comments</u>
	<u>UE</u>	<u>SS</u>		
<u>1</u>	<u>UE</u>			<u>Initiate a secondary context activation</u>
<u>2</u>	<u>→</u>		<u>ACTIVATE SECONDARY PDP CONTEXT REQUEST</u>	<u>Request a Secondary PDP context activation</u>
<u>3</u>		<u>←</u>	<u>ACTIVATE SECONDARY PDP CONTEXT ACCEPT</u>	<u>Accept the Secondary PDP context activation with QoS lower than Minimum QoS</u>
<u>4</u>	<u>→</u>		<u>DEACTIVATE PDP CONTEXT REQUEST</u>	<u>Request deactivation of the secondary PDP context</u>
<u>5</u>		<u>←</u>	<u>DEACTIVATE PDP CONTEXT ACCEPT</u>	<u>Accept the PDP context deactivation</u>

Specific message contents

Tear down indicator IE shall not be included in the DEACTIVATE PDP CONTEXT REQUEST message because only the PDP context for this specific TI shall be deactivated.

11.1.4.1.2.2.5 Test requirements

The UE shall reject the QoS offered by the network in response to a Secondary PDP context activation request, if the QoS is not acceptable to the UE.

11.1.4.2 Abnormal cases11.1.4.2.1 Expiry of timers

(The same tests shall apply as for UE initiated PDP context activation 8.4.1.3.1 and 8.4.1.3.2.)

11.1.4.2.1 T3380 Expiry11.1.4.2.1.1 Definition11.1.4.2.1.2 Conformance requirement

- 1) On the first expiry of the timer T3380, the UE shall re-send the ACTIVATE SECONDARY PDP CONTEXT REQUEST
- 2) On the second expiry of the timer T3380, the UE shall re-send the ACTIVATE SECONDARY PDP CONTEXT REQUEST
- 3) On the third expiry of the timer T3380, the UE shall re-send the ACTIVATE SECONDARY PDP CONTEXT REQUEST
- 4) On the fourth expiry of the timer T3380, the UE shall re-send the ACTIVATE SECONDARY PDP CONTEXT REQUEST
- 5) On the fifth expiry of the timer T3380, the UE shall release all resources possibly allocated for this invocation and shall abort the procedure; no automatic secondary PDP context activation re-attempt shall be performed.

Reference

3G TS 24.008 subclause 6.1.3.2.3 a).

11.1.4.2.1.3 Test purpose

To test the behaviour of the UE when the SS does not reply to ACTIVATE SECONDARY PDP CONTEXT REQUEST message.

11.1.4.2.1.4 Method of testInitial conditionsSystem Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- PS Supported yes/no
- Method of activating a context

Test procedure

A secondary PDP context activation is requested by the user. The UE shall send ACTIVATE SECONDARY PDP CONTEXT REQUEST message five times with T3380 seconds between each message. After this no further ACTIVATE SECONDARY PDP CONTEXT REQUEST messages shall be sent by the UE.

Expected sequence

<u>Step</u>	<u>Direction</u>		<u>Message</u>	<u>Comments</u>
	<u>UE</u>	<u>SS</u>		
<u>1</u>	<u>UE</u>			<u>Initiate a context activation</u>
<u>2</u>	<u>→</u>		<u>ACTIVATE SECONDARY PDP CONTEXT REQUEST</u>	<u>Request a Secondary PDP context activation</u>
<u>3</u>		<u>SS</u>		<u>T3380 seconds</u>

<u>11</u>		<u>SS</u>		<u>Wait for T3380 seconds to ensure no further ACTIVATE SECONDARY PDP CONTEXT REQUEST messages are sent by the UE</u>

Specific message contents

None.

11.1.4.2.1.5 Test requirements

UE shall resend the ACTIVATE SECONDARY PDP CONTEXT REQUEST to SS five times in order to initiate a Secondary PDP context, with expiry of timer T3380 between messages. After fifth try, UE shall send no more ACTIVATE SECONDARY PDP CONTEXT REQUEST messages to SS.

~~11.1.4.2.2 UE initiated secondary PDP context activation for an already activated secondary PDP context (on the network side)~~

Editor's note: This heading is deleted because it is related to the network function.

11.2 PDP context modification procedure

11.2.1 Network initiated PDP context modification

11.2.1.1 Definition

This test can only be performed if minimum QoS can be set by the user.

11.2.1.2 Conformance requirement

1) Upon receipt of a MODIFY PDP CONTEXT REQUEST message

- If the UE can accept the modification requested, the UE shall reply with the MODIFY PDP CONTEXT ACCEPT message.
- If the UE is unable to accept the modification requested, the UE shall initiate the PDP context deactivation procedure for the NSAPI that has been indicated in the message MODIFY PDP CONTEXT REQUEST - the reject cause IE value of the DEACTIVATE PDP CONTEXT REQUEST message shall indicate "QoS not accepted".

2) The UE shall either accept the modification request or deactivate the PDP context, it shall not ignore the modification request.

Reference

3G TS 24.008 subclauses 6.1.3.3 and 6.1.3.3.1.

11.2.1.3 Test purpose

To test the behaviour of the UE upon receipt of a MODIFY PDP CONTEXT REQUEST message from SS.

11.2.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- PS Supported yes/no
- User setting of Minimum QoS supported yes/no

- Method of setting minimum QoS
- Method of activating a PDP context

Test procedure

A PDP context is activated by the user and accepted by the SS. A MODIFY PDP CONTEXT REQUEST message is then sent to the UE with a QoS that is acceptable to the UE (higher than or equal to the minimum QoS set in the UE). The UE shall send a MODIFY PDP CONTEXT ACCEPT message in return. A MODIFY PDP CONTEXT REQUEST message is then sent to the UE with a QoS that is not acceptable to the UE (lower than the minimum QoS set in the UE). The UE shall send a DEACTIVATE PDP CONTEXT REQUEST message in return.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			Initiate a context activation
2	→		ACTIVATE PDP CONTEXT REQUEST	Activate a PDP context
3	←		ACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context
4	←		MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION)	Request the modification of a PDP context, with QoS higher than or equal to the minimum QoS set in the UE
5	→		MODIFY PDP CONTEXT ACCEPT (UE TO NETWORK DIRECTION)	Accept the PDP context modification
6	←		MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION)	Request the modification of a PDP context, QoS lower than the minimum QoS set in the UE
7	→		DEACTIVATE PDP CONTEXT REQUEST	Reject the PDP context modification by deactivating the PDP context. Cause set to 'QoS not acceptable'
8	←		DEACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context deactivation

Specific message contents

None.

11.2.1.5 Test requirements

The UE shall:

- Accept PDP context modification initiated by the SS if QoS is higher than or equal to the minimum QoS set in the UE
- Reject PDP context modification initiated by the SS if QoS is lower than the minimum QoS set in the UE.

11.2.2 UE initiated PDP context modification (FFS)

11.3.1.3 Test purpose

To test the behaviour of the UE upon receipt of a DEACTIVATE PDP CONTEXT ACCEPT message from the SS in PDP context deactivation procedure initiated by the UE.

11.3.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

- PS Supported yes/no

- Method of activating a PDP context
- Method of deactivating the PDP context

Test procedure

A PDP context is activated by the user and accepted by the SS. The context deactivation is then requested by the user. The UE shall send a DEACTIVATE PDP CONTEXT REQUEST message to the SS. The SS shall then reply with a DEACTIVATE PDP CONTEXT ACCEPT message. The SS shall then wait for T3390 seconds to ensure T3390 has been stopped and that no further messages are sent from the UE. The SS shall then send a MODIFY PDP CONTEXT REQUEST for the deactivated context and the UE shall reply with an SM STATUS message with cause #81 'transaction identifier not known'.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			Initiate a context activation
2	→		ACTIVATE PDP CONTEXT REQUEST	Activate a PDP context
3	←		ACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context
4	UE			Initiate a context deactivation
5	→		DEACTIVATE PDP CONTEXT REQUEST	Request a deactivation of a PDP context
6	←		DEACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context deactivation
7	SS			Wait for T3390 seconds to ensure no further deactivate request messages are sent
8	←		MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION)	Send a modify request to UE for the deactivated context.
9	→		SM STATUS	Cause set to #81

Specific message contents

None.

11.3.1.5 Test requirements

In PDP context deactivation procedure initiated by the UE, upon receipt of a DEACTIVATE PDP CONTEXT ACCEPT message from the SS, the UE shall deactivate PDP context associated with given PDP address and TI.

Then, upon modification procedure initiated by the network, for deactivated PDP context, UE shall reply with SM STATUS message with cause #81.

11.3.2 PDP context deactivation initiated by the network

11.3.2.1 Definition

11.3.2.2 Conformance requirement

The DEACTIVATE PDP CONTEXT REQUEST message sent by SS contains the transaction identifier in use for the PDP context to be deactivated and a cause code that typically indicates one of the following causes:

- # 25: LLC or SNDCP failure (GSM only);
- # 36: regular PDP context deactivation;
- # 38: network failure; or
- # 39: reactivation requested.

The UE shall, upon receipt of the DEACTIVATE PDP CONTEXT REQUEST message from network, reply with a DEACTIVATE PDP CONTEXT ACCEPT message.

- Whenever any session management message except REQUEST PDP CONTEXT ACTIVATION or SM-STATUS is received by the UE specifying a transaction identifier which is not recognised as relating to an active context or to a context that is in the process of activation or deactivation or has been [recently] deactivated, the UE shall send a SM-STATUS message with cause #81 "invalid transaction identifier value" using the received transaction identifier value and remain in the PDP-INACTIVE state.

14	SS			Wait T3390 seconds
15	←		MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION)	Try to modify the deactivated context.
16	→		SM STATUS	Cause set to #81

Specific message contents

None.

11.3.3.1.5 Test requirements

If network does not reply to UE initiated PDP context deactivation procedure, the UE shall retransmit a DEACTIVATE PDP CONTEXT REQUEST five times, with T3390 timer expiry between the successive messages, before releasing resources allocated to the PDP context and deleting PDP context related data.

11.3.3.2 Collision of UE and network initiated PDP context deactivation requests

11.3.3.2.1 Definition

11.3.3.2.2 Conformance requirement

If the UE and the network initiated PDP context deactivation requests collide, the UE and the network shall each reply with the message DEACTIVATE PDP CONTEXT ACCEPT and shall stop timer T3390 and T3395, respectively.

Reference

3G TS 24.008 subclause 6.1.3.4.3 b).

11.3.3.2.3 Test purpose

To test the behaviour of the UE when there is a collision between an UE initiated and SS initiated context deactivation.

11.3.3.2.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN

Related ICS/IXIT statements

- PS Supported yes/no
- Method of activating a PDP context
- Method of deactivating a PDP context

Test procedure

A PDP context is activated by the user and accepted by the SS. A context deactivation is then requested by the user. Upon receipt of the DEACTIVATE PDP CONTEXT REQUEST message the SS sends a DEACTIVATE PDP CONTEXT REQUEST message. The UE shall reply with only one DEACTIVATE PDP CONTEXT ACCEPT message. Upon receipt of this message the SS sends a DEACTIVATE PDP CONTEXT ACCEPT message.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	UE			Initiate a context activation
2	→		ACTIVATE PDP CONTEXT REQUEST	Activate a PDP context
3	←		ACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context
4	UE			Initiate a context deactivation
5	→		DEACTIVATE PDP CONTEXT REQUEST	Request a deactivation of a PDP context
6	←		DEACTIVATE PDP CONTEXT REQUEST	Request a deactivation of a PDP context
7	→		DEACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context deactivation
8	←		DEACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context deactivation

Specific message contents

None.

11.3.3.2.5 Test requirements

When UE and SS initiates PDP context deactivation requests collide, the UE shall reply with DEACTIVATE PDP CONTEXT ACCEPT to SS.

11.4 Unknown or Unforeseen Transaction Identifier/Non-semantic Mandatory Information Element Errors

11.4.1 Error cases

11.4.1.1 Definition

11.4.1.2 Conformance requirement

The mobile station shall ignore a session management message with TI EXT bit = 0. Otherwise, the following procedures shall apply:

- Whenever any session management message, except REQUEST PDP CONTEXT ACTIVATION or SM-STATUS, is received by the UE specifying a transaction identifier which is not recognized as relating to an active context or to a context that is in the process of activation or deactivation or has been [recently] deactivated, the UE shall send a SM-STATUS message with cause #81 “invalid transaction identifier value” using the received transaction identifier value including the extension octet and remain in the PDP-INACTIVE state.
- When a REQUEST PDP CONTEXT ACTIVATION message is received with a transaction identifier flag set to “1”, this message shall be ignored.

When on receipt of a message,

- an “imperative message part” error; or
- a “missing mandatory IE” error

is diagnosed or when a message containing:

- a syntactically incorrect mandatory IE; or
- an IE unknown in the message, but encoded as “comprehension required” or
- an out of sequence IE encoded as “comprehension required”

is received, the UE shall proceed as follows:

If the message was a SM message the SM-STATUS message with cause # 96 “invalid mandatory information” shall be returned.

If a mobile station receives a GMM message or SM message with message type not defined for the PD or not implemented by the receiver, it shall return a status message (GMM STATUS or SM STATUS depending on the protocol discriminator) with cause #97 ‘message type non-existent or not implemented’.

If the mobile station receives a message not compatible with the protocol state, the mobile station shall ignore the message except for the fact that when the message was a SM message the SM-STATUS message with cause #98 ‘Message type not compatible with protocol state’ shall be returned.

Other syntactic errors

This section applies to the analysis of the value part of an information element. It defines the following terminology:

- An IE is defined to be syntactically incorrect in a message if it contains at least one value defined as ‘reserved’, or if its value part violates syntactic rules given in the specification of the value part. However it is not a syntactical error that a type 4 standard IE specifies in its length indicator a greater length than possible according to the value part specification : extra bits are ignored.

Reference

3G TS 24.008 clauses 8.3.2 and 8.5 and 3G TS 24.007 clause 11.4.2.

11.4.1.3 Test purpose

To test the behaviour of the UE when messages with unknown or unforeseen transaction identifiers or non-semantical mandatory information element errors occur.

11.4.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters.

User Equipment:

The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

Related ICS/IXIT statements

-

Test procedure

A PDP context activation is requested by the SS with the transaction identifier set to '1'. The UE shall not respond to this request.

A PDP context is then activated from the UE. Two invalid accept messages are then sent by the SS with T3380 seconds between them. After a further T3380 seconds a valid accept message is sent by the SS.

A deactivate message is then sent from the SS with the transaction identifier set to '111'. The UE shall reply with a SM STATUS message with transaction identifier set to '111'.

A deactivate message is then sent from the SS with a different transaction identifier to the one used in the activate request message sent by the UE. The UE shall reply with a SM STATUS message with cause #81 'invalid transaction identifier value'.

Three invalid modification messages are then sent to the UE in turn. The UE shall respond each time with a SM-STATUS message with cause # 96 "invalid mandatory information".

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		REQUEST PDP CONTEXT ACTIVATION	Request the activation of a PDP context with the transaction identifier flag set to "1"
2		SS		Wait 30 seconds to ensure UE does not request context activation
3	UE			Initiate a context request
4	→		ACTIVATE PDP CONTEXT REQUEST	Activate a PDP context from the UE
5	←		ACTIVATE PDP CONTEXT ACCEPT	Unknown IE encoded as 'comprehension required'
6	→		SM STATUS	Cause set to #96
7		SS		Wait T3380 seconds
8	→		ACTIVATE PDP CONTEXT REQUEST	Activate a PDP context from the UE (auto-generated)
9	←		ACTIVATE PDP CONTEXT ACCEPT	Out of sequence IE encoded as 'comprehension required'
10	→		SM STATUS	Cause set to #96
11		SS		Wait T3380 seconds
12	→		ACTIVATE PDP CONTEXT REQUEST	Activate a PDP context from the UE (auto-generated)
13	←		ACTIVATE PDP CONTEXT ACCEPT	Accept the PDP context
16	←		DEACTIVATE PDP CONTEXT REQUEST	Try to deactivate the context with a different transaction identifier to that used to activate the context
17	→		SM STATUS	Cause set to # 81
18	←		MODIFY PDP CONTEXT REQUEST(NETWORK TO UE DIRECTION)	Request the modification of the PDP context
19	→		SM STATUS	Cause set to # 96
20	←		MODIFY PDP CONTEXT REQUEST(NETWORK TO UE DIRECTION)	Request the modification of the PDP context
21	→		SM STATUS	Cause set to # 96
22	←		MODIFY PDP CONTEXT REQUEST(NETWORK TO UE DIRECTION)	Request the modification of the PDP context
23	→		SM STATUS	Cause set to # 96

11.4.1.5

Test requirements

TBD.

12.6.1.2 Authentication rejected by the network

12.6.1.2.1 Definition

12.6.1.2.2 Conformance requirement

- 1) After reception of an Authentication Reject message the User Equipment UE shall:
 - 1.1 not perform normal routing area updating
 - 1.2 not perform periodic routing area updating
 - 1.3 not perform PS detach if switched off
- 2) The User Equipment UE shall delete the stored RAI, PS-CKSN P-TMSI and P-TMSI signature. USIM shall be considered invalid until power is switched off or USIM is removed.

Reference

3G TS 24.008 clauses 4.7.7

12.6.1.2.3 Test purpose

To test the behaviour of the UE if the network rejects the authentication and ciphering procedure.

12.6.1.2.4 Method of test

Initial condition

System Simulator:

Two cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1, cell B in MCC1/MNC1/LAC1/RAC2.
Both cells are operating in network operation mode II.

User Equipment:

The UE has a valid IMSI.

Related ICS/IXIT statements

Support of PS service	Yes/No
UE operation mode A	Yes/No
UE operation mode C	Yes/No
Switch off on button	Yes/No
Automatic PS attach procedure at switch on or power on	Yes/No

Test procedure

A PS attach is performed, and the SS rejects the authentication and ciphering procedure.

The SS checks that the UE does not perform normal routing area updating, does not perform periodic routing area updating and does not perform PS detach if switched off.

T3312; set to 10 minutes.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1		SS	ATTACH REQUEST	The following messages are sent and shall be received on cell A. The SS activates cell A.
2	UE			The UE is set in UE operation mode C (see ICS). If UE operation mode C not supported, goto step 14.
3	UE			The UE is powered up or switched on and initiates an attach (see ICS).
4	->			Attach type = 'PS attach' Mobile identity = IMSI
5	<-			Request authentication.
6	->			Set PS-CKSN-1
7	<-			Mobile identity = IMSI
8	UE			Paging order is for TBF establishment. No response from the UE to the request. This is checked for 10 seconds.
9		SS		The following messages are sent and shall be received on cell B. Activate cell B with a lower signal strength than cell A The RF level of cell A is lowered until cell B is preferred by the UE.
10	UE			No ROUTING AREA UPDATING REQUEST sent to the SS (SS waits 30 seconds).
11	UE			No periodic ROUTING AREA UPDATING REQUEST sent to the SS (SS waits T3310).
12	UE			The UE is switched off (see ICS).
13	SS			No DETACH REQUEST sent to the SS (SS waits 30 seconds).
14	UE			The UE is set in UE operation mode A (see ICS) and the test is repeated from step 1 to step 13.

12.6.1.2.5 Test requirements

UE shall:

- initiate a PS attach procedure with information elements specified in the above Expected Sequence when UE is powered on or switched on.

After UE sends the AUTHENTICATION AND CIPHERING REJECT message, UE shall:

- not perform normal routing area updating when the RF level of the attached cell is lower than the RF level of the new cell.
- not perform a periodic routing area updating when the timer T3312 expires.
- not perform PS detach when UE is switched off.
- delete the stored RAI, PS-CKSN, P-TMSI and P-TMSI signature.
- consider the USIM as invalid until power is switched off or USIM is removed.

12.6.1.3 Authentication rejected by the UE

12.6.1.3.1 GMM cause 'MAC failure'

12.6.1.3.1.1 Definition

12.6.1.3.1.2 Conformance requirement

If the UE considers the MAC code (supplied by the core network in the AUTN parameter) to be invalid, the UE shall send AUTHENTICATION AND CIPHERING FAILURE message with the reject cause 'MAC failure' to the System Simulator.

Reference

3G TS 24.008 clause 4.7.7

12.6.1.3.1.3 Test purpose

To test the behaviors of the UE, when the UE considers the MAC code (supplied by the core network in the AUTN parameter) to be invalid.

12.6.1.3.1.4 Method of test

Initial condition

System Simulator:

Two cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1, cell B in MCC1/MNC1/LAC1/RAC2.
Both cells are operating in network operation mode II.

The MAC (Message Authentication Code) code, which is included in AUTHENTICATION AND CIPHERING REQUEST, is invalid value.

User Equipment:

The UE has a valid IMSI.

Related ICS/IXIT statements

<u>Support of PS service</u>	<u>Yes/No</u>
<u>UE operation mode A</u>	<u>Yes/No</u>
<u>UE operation mode C</u>	<u>Yes/No</u>
<u>Switch off on button</u>	<u>Yes/No</u>
<u>Automatic PS attach procedure at switch on or power on</u>	<u>Yes/No</u>

Test procedure

A PS attach is performed, and the SS initiates an authentication and ciphering procedure.

The UE sends AUTHENTICATION AND CIPHERING FAILURE message with reject cause 'MAC failure' to the SS and starts timer T3214.

The SS initiates an identification procedure, upon receipt of a failure message with reject cause 'MAC failure'.

After the identification procedure is complete, the SS re-initiates an authentication and ciphering procedure.

T3360; set to 6 seconds.

T3318; set to 5 seconds.

T3319; set to 15 seconds.

Expected Sequence

<u>Step</u>	<u>Direction</u>		<u>Message</u>	<u>Comments</u>
	<u>UE</u>	<u>SS</u>		
<u>1</u> <u>2</u>	<u>SS</u> <u>UE</u>			The following messages are sent and shall be received on cell A. The SS activates cell A. The UE is set in UE operation mode C (see ICS). If UE operation mode C is not supported, goto step 25.
<u>3</u> <u>4</u>	<u>UE</u>			The following messages are sent and shall be received on cell A.
<u>5</u>	<u>UE</u>			The UE is powered up or switched on and initiates an attach (see ICS).
<u>6</u>	<u>-></u>		<u>ATTACH REQUEST</u>	Attach type = 'PS attach' Mobility identity = IMSI
<u>7</u>	<u><-</u>		<u>AUTHENTICATION AND CIPHERING REQUEST</u>	Request authentication. Invalid Message Authentication Code (MAC).
<u>8</u> <u>9</u>	<u>SS</u> <u>-></u>		<u>AUTHENTICATION AND CIPHERING FAILURE</u>	The SS starts the timer T3360 GMM cause='MAC failure'
<u>10</u> <u>11</u> <u>12</u>	<u><-</u> <u>-></u> <u>SS</u>		<u>IDENTITY REQUEST</u> <u>IDENTITY RESPONSE</u>	Identity type = IMSI Mobile identity = IMSI
				The SS checks that the P-TMSI originally used in the authentication challenge corresponded to the correct IMSI.
<u>13</u>	<u><-</u>		<u>AUTHENTICATION AND CIPHERING REQUEST</u>	Request authentication.
<u>14</u>	<u>-></u>		<u>AUTHENTICATION AND CIPHERING RESPONSE</u>	RES

<u>23</u>	<u>UE</u>			The UE is switched off or power is removed (see ICS).
<u>24</u>	<u>-></u>		<u>DETACH REQUEST</u>	Message is not sent if power is removed. Detach type = 'power switched off, PS detach'
<u>25</u>	<u>UE</u>			The UE is set in UE operation mode A (see ICS) and the test is repeated from step 1 to step 24.

12.6.1.3.1.5 Test requirements

UE shall:

- initiate a PS attach procedure with information element specified in the above Expected Sequence when UE is powered on or switched on.
- send an AUTHENTICATION AND CIPHERING FAILURE message with GMM cause 'MAC failure' to the SS
- start timer T3318.

After UE receives the IDENTITY REQUEST message from SS, UE shall:

- stop timer T3318, if running.
- send the IDENTITY RESPONSE message to SS
- start the timer T3319.

After UE receives the second AUTHENTICATION AND CIPHERING REQUEST message (containing a valid MAC) from SS, UE shall:

- send the AUTHENTICATION AND CIPHERING RESPONSE message to SS
- resume any retransmission timers (i.e. T3310, T3321, T3330 or T3317), if they are not already running.

12.6.1.3.2 GMM cause 'Synch failure'

12.6.1.3.2.1 Definition

12.6.1.3.2.2 Conformance requirement

If the UE considers the SQN (supplied by the core network in the AUTN parameter) to be out of range, the UE shall send AUTHENTICATION AND CIPHERING FAILURE message with the reject cause 'Synch failure' to the System Simulator.

Reference

3G TS 24.008 clause 4.7.7

12.6.1.3.2.3 Test purpose

To test the behaviors of the UE, when the UE considers the SQN (supplied by the core network in the AUTN parameter) to be out of range.

12.6.1.3.2.4 Method of test

Initial condition

System Simulator:

Two cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1, cell B in MCC1/MNC1/LAC1/RAC2.
Both cells are operating in network operation mode II.

User Equipment:

The UE has a valid IMSI.

Related ICS/IXIT statements

Support of PS service Yes/No

UE operation mode A Yes/No

UE operation mode C Yes/No

Switch off on button Yes/No

Automatic PS attach procedure at switch on or power on Yes/No

Test procedure

A PS attach is performed, and the SS initiates an authentication and ciphering procedure.

UE sends AUTHENTICATION AND CIPHERING FAILURE message with reject cause 'synch failure' to the SS and starts timer T3214.

SS re-initiates an authentication and ciphering procedure.

T3360; set to 6 seconds.

T3320; set to 15 seconds.

Expected Sequence

<u>Step</u>	<u>Direction</u>		<u>Message</u>	<u>Comments</u>
	<u>UE</u>	<u>SS</u>		
<u>1</u> <u>2</u>	<u>SS</u> <u>UE</u>			The following messages are sent and shall be received on cell A. The SS activates cell A. The UE is set in UE operation mode C (see ICS). If UE operation mode C is not supported, goto step 21. The following messages are sent and shall be received on cell A.

12.4.1.5 Routing area updating / abnormal cases / attempt counter check / miscellaneous reject causes

12.4.1.5.1 Definition

12.4.1.5.2 Conformance requirement

- 1) When a routing area updating procedure is rejected with the attempt counter less than five, the ~~User Equipment~~UE shall repeat the routing area updating procedure after T3330 timeout.
- 2) When a T3330 timeout has occurred during a routing area updating procedure with the attempt counter five, the ~~User Equipment~~UE shall start timer T3302.
- 3) When the T3302 expire, a new routing area updating procedure shall be initiated.

GMM cause codes that can be selected are:

‘IMSI unknown in HLR’

‘IMEI not accepted’

‘Illegal ME’

‘UE identity cannot be derived by the network’

‘Network failure’

‘Congestion’

‘retry upon entry into a new cell’

‘Semantically incorrect message’

‘Invalid mandatory information’

‘Message type non-existent or not implemented’

‘Message type not compatible with the protocol state’

‘Information element non-existent or not implemented’

‘Conditional IE error’

‘Message not compatible with the protocol state’

‘Protocol error, unspecified’

Reference

3G TS 24.008 clause 4.7.5.1

12.4.1.5.3 Test purpose

To test the behaviour of the UE with respect to the attempt counter.

12.4.1.5.4 Method of test

Initial condition

System Simulator:

Two cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1, cell B in MCC1/MNC1/LAC1/RAC2.

Both cells are operating in network operation mode II (in case of UE operation mode A), or in network operation mode III (in case of UE operation mode C).

User Equipment:

The UE has a valid P-TMSI-1, P-TMSI-1 signature and RAI-1.

Related ICS/IXIT statements

Support of PS service	Yes/No
UE operation mode C	Yes/No
UE operation mode A	Yes/No (only if mode C not supported)
Switch off on button	Yes/No
Automatic PS attach procedure at switch on or power on	Yes/No

Test procedure

The UE initiates a routing area updating procedure (attempt counter zero).

The SS rejects the routing area updating procedure with a random cause code.

The UE initiates a new routing area updating procedure (attempt counter one) after T3311 expires.

The SS rejects the routing area updating procedure with a random cause code.

The UE initiates a new routing area updating procedure (attempt counter two) after T3311 expires.

The SS rejects the routing area updating procedure with a random cause code.

The UE initiates a new routing area updating procedure (attempt counter three) after T3311 expires.

The SS rejects the routing area updating procedure with a random cause code.

The UE initiates a new routing area updating procedure (attempt counter four) after T3311 expires.

The SS rejects the routing area updating procedure with a random cause code.

The UE initiates a new routing area updating procedure with attempt counter five (after T3311 expires).

The SS rejects the routing area updating procedure with a random cause code.

The UE shall not perform a new successful routing area updating procedure after T3311 seconds.

The UE initiates a routing area updating procedure with attempt counter zero after T3302 expires with the stored P-TMSI, P-TMSI signature, PS CKSN and RAI.

T3302; set to 10 minutes.

T3330; 15 seconds.

Expected Sequence

Step	Direction		Message	Comments
	UE	SS		
1	SS			The following messages are sent and shall be received on cell A. The UE is set in UE operation mode C or B (see ICS). The SS is set in network operation mode II or III and activates cell A. The UE is powered up or switched on and initiates an attach (see ICS). Cell A is preferred by the UE. Attach type = 'PS attach' Mobile identity = P-TMSI-1 P-TMSI-1 signature Routing area identity = RAI-1 No new mobile identity assigned. P-TMSI not included. <u>2728</u>	->	DETACH REQUEST	Message not sent if power is removed. Detach type = 'power switched off, PS detach'

12.4.1.5.5 Test requirements

UE shall:

- initiate a PS attach procedure with the information elements specified in the above Expected Sequence when UE is powered up or switched on.

After completing the PS attach procedure, UE shall :

- perform the following actions depending on the conditions described below.

Case 1) A routing area updating procedure is rejected from SS with the attempt counter less than five

UE shall:

- repeat the routing area updating procedure after T3330 timeout

Case2) A timer T3330 timeout has occurred during a routing area updating procedure with the attempt counter five

UE shall:

- start timer T3302

Case3) The T3302 expires

UE shall:

- initiate a new routing area updating procedure

Reason for change:

TS 34.108 have been updated based on GSMA ISG document "Typical Radio Interface Parameter Sets" version1.3.

The present CR updates the radio bearer test cases according to the changes introduced in TS 34.108.

The present CR also adds details to test cases used for testing of "Streaming/unknown" reference radio bearer configurations (test cases 14.2.15 to 14.2.22)

Clauses affected: 14.2.4 to 14.2.55, 14.3.1 to 14.3.6, 14.4.2, 14.4.3 and 14.5.1

14 Radio Bearer Services

14.1 General information for radio bearer tests

The role of radio bearer services is to cover all aspects of the radio interface transport. TS 34.108, clause 6.10 specifies reference radio bearer configurations to be tested.

The applicability of radio bearer tests is dependent on the UE uplink and downlink radio access capabilities and UE support tele- and bearer-services. See TS 34.123-2, Annex B for applicability of the specific test cases.

14.1.1 UE radio bearer test mode activation procedure

The Radio Bearer Test Mode Activation procedure is used to get UE in the state for radio bearer testing using the radio bearer setup configurations as specified in TS 34.108, clause 6.10.

Initial conditions

UE in idle mode

Test procedure

Sub test 1:

- The SS setup the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.4 using the generic procedure for UE radio bearer test mode activation according to clause 14.1.1.
- The SS limits the UE allowed uplink transport format combinations to {UL TFC0, UL TFC1, UL TFC3} {(TF0,TF0),(TF1,TF1)} for RAB subflow#1, RAB subflow#2 and RAB subflow#3 using the RRC transport format combination control procedure.
- The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 3984 bits for RAB subflow#1, 103 bits for RAB subflow#2 and to 60 bits for RAB subflow#3.
- The SS transmits an RLC SDU of size 3984 bits on RAB subflow#1 using transport format TF1, an RLC SDU of size 103 bits on RAB subflow#2 using transport format TF1 and an RLC SDU of size 60 bits on RAB subflow#3 using transport format combination DL TFC1. No data is transmitted on RAB subflow#2 and RAB subflow#3.
- The SS checks that the content of the received RLC SDUs returned in uplink on RAB subflow#1, RAB subflow#2 and RAB subflow#3 have has the correct content and is are received having the correct transport format. The SS checks that no data is received on RAB subflow#2 or RAB subflow#3.

f) The SS open the UE test loop.

Sub test 2:

- g) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC2, UL_TFC5}, {(TF0,TF0),(TF2,TF2)} for RAB subflow#1 using the RRC transport format combination control procedure.
- h) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 8139 bits for RAB subflow#1, 103 bits for RAB subflow#2 and to 60 bits for RAB subflow#3.
- i) The SS transmits an RLC SDU of size 8139 bits on RAB subflow#1, an RLC SDU of size 103 bits on RAB subflow#2 and an RLC SDU of size 60 bits on RAB subflow#3 using transport format combination DL_TFC2~~TF4~~.
- j) The SS checks that the content of the received RLC SDUs returned in uplink on RAB subflow#1, RAB subflow#2 and RAB subflow#3 ~~has~~have the correct content and ~~are~~is received having the correct transport format.
- k) The SS may optionally open the UE test loop.
- l) The SS may optionally release the radio bearer.

14.2.4.4 Test requirements

- At step 1 the UE shall send RADIO BEARER SETUP COMPLETE.
- At step 6 the UE transmitted transport format shall be
 - TF1 (1x~~3984~~) for RAB subflow#1; and
 - TF1 (1x103) for RAB subflow#2; and
 - TF1 (1x60) for RAB subflow#3.

3. At step 6 the UE shall return

- an RLC SDU on RAB subflow#1 with the same content as sent by SS; and
- no data shall be received on RAB subflow#2 or RAB subflow#3.
- ~~— an RLC SDU on RAB subflow#2 with the same content as sent by SS; and~~
- ~~— an RLC SDU on RAB subflow#3 with the same content as sent by SS.~~

4. At step 13 the UE transmitted transport format shall be

- TF2 (1x8139) for RAB subflow#1; and
- TF1 (1x103) for RAB subflow#2; and
- TF1 (1x60) for RAB subflow#3.

5. At step 13 the UE shall return

- an RLC SDU on RAB subflow#1 with the same content as sent by SS; and
- an RLC SDU on RAB subflow#2 with the same content as sent by SS; and
- an RLC SDU on RAB subflow#3 with the same content as sent by SS.

Initial conditions

UE in idle mode

Test procedureSub test 1:

- a) The SS setup the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.5 using the generic procedure for UE radio bearer test mode activation according to clause 14.1.1.
- b) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC3} using the RRC transport format combination control procedure.
- c) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 39 bits for RAB subflow#1, 99 bits for RAB subflow#2 and to 40 bits for RAB subflow#3.
- d) The SS transmits an RLC SDU of size 39 bits on RAB subflow#1, using transport format combination DL_TFC1. No data is transmitted on RAB subflow#2 and RAB subflow#3.
- e) The SS checks that the content of the received RLC SDU returned in uplink on RAB subflow#1 has the correct content and is received having the correct transport format. The SS checks that no data is received on RAB subflow#2 or RAB subflow#3.
- f) The SS open the UE test loop.

Sub test 2:

- g) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC2, UL_TFC5} using the RRC transport format combination control procedure.
- h) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 65 bits for RAB subflow#1, 99 bits for RAB subflow#2 and to 40 bits for RAB subflow#3.
- i) The SS transmits an RLC SDU of size 65 bits on RAB subflow#1, an RLC SDU of size 99 bits on RAB subflow#2 and an RLC SDU of size 40 bits on RAB subflow#3 using transport format combination DL_TFC2.

- j) The SS checks that the content of the received RLC SDUs returned in uplink on RAB subflow#1, RAB subflow#2 and RAB subflow#3 have the correct content and are received having the correct transport format.
- k) The SS may optionally open the UE test loop.
- l) The SS may optionally release the radio bearer.
- ~~a) The SS setup the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.5 using the generic procedure for UE radio bearer test mode activation according to clause 14.1.1.~~
- ~~b) The SS limits the UE allowed uplink transport format combinations to {(TF0,TF0),(TF1,TF1)} for RAB subflow#1, RAB subflow#2 and RAB subflow#3 using the RRC transport format combination control procedure.~~
- ~~c) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 65 bits for RAB subflow#1, 99 bits for RAB subflow#2 and to 40 bits for RAB subflow#3.~~
- ~~d) The SS transmits an RLC SDU of size 65 bits on RAB subflow#1 using transport format TF1, an RLC SDU of size 99 bits on RAB subflow#2 using transport format TF1 and an RLC SDU of size 40 bits on RAB subflow#3.~~
- ~~e) The SS checks that the content of the received RLC SDUs returned in uplink on RAB subflow#1, RAB subflow#2 and RAB subflow#3 have the correct content and are received having the correct transport format.~~
- ~~f) The SS open the UE test loop.~~
- ~~g) The SS limits the UE allowed uplink transport format combinations to {(TF0,TF0),(TF2,TF2)} for RAB subflow#1 using the RRC transport format combination control procedure.~~
- ~~h) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 39 bits for RAB subflow#1.~~
- ~~i) The SS transmits an RLC SDU of size 39 bits on RAB subflow#1 using transport format TF1.~~
- ~~j) The SS checks that the content of the received RLC SDUs returned in uplink on RAB subflow#1 has the correct content and is received having the correct transport format.~~
- ~~k) The SS may optionally release the radio bearer.~~

14.2.5.4 Test requirements

1. At step 1 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 6 the UE transmitted transport format shall be
 - TF1 (1x39) for RAB subflow#1.
3. At step 6 the UE shall return
 - an RLC SDU on RAB subflow#1 with the same content as sent by SS; and
 - no data shall be received on RAB subflow#2 or RAB subflow#3.
4. At step 13 the UE transmitted transport format shall be
 - TF2 (1x65) for RAB subflow#1; and
 - TF1 (1x99) for RAB subflow#2; and
 - TF1 (1x40) for RAB subflow#3.
5. At step 13 the UE shall return
 - an RLC SDU on RAB subflow#1 with the same content as sent by SS; and
 - an RLC SDU on RAB subflow#2 with the same content as sent by SS; and
 - an RLC SDU on RAB subflow#3 with the same content as sent by SS.
- ~~2. At step 6 the UE transmitted transport format shall be~~
 - ~~— TF1 (1x65) for RAB subflow#1; and~~
 - ~~— TF1 (1x99) for RAB subflow#2; and~~
 - ~~— TF1 (1x40) for RAB subflow#3.~~
- ~~3. At step 6 the UE shall return~~

Initial conditions

UE in idle mode

Test procedure

Sub test 1:

- a) The SS setup the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.6 using the generic procedure for UE radio bearer test mode activation according to clause 14.1.1.
- b) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC3} using the RRC transport format combination control procedure.

- c) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 39 bits for RAB subflow#1 and 84 bits for RAB subflow#2.
- d) The SS transmits an RLC SDU of size 39 bits on RAB subflow#1, using transport format combination DL TFC1. No data is transmitted on RAB subflow#2.
- e) The SS checks that the content of the received RLC SDU returned in uplink on RAB subflow#1 has the correct content and is received having the correct transport format. The SS checks that no data is received on RAB subflow#2.
- f) The SS open the UE test loop.

Sub test 2:

- g) The SS limits the UE allowed uplink transport format combinations to {UL TFC0, UL TFC2, UL TFC5} using the RRC transport format combination control procedure.
- h) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 75 bits for RAB subflow#1 and 84 bits for RAB subflow#2.
- i) The SS transmits an RLC SDU of size 75 bits on RAB subflow#1 and an RLC SDU of size 84 bits on RAB subflow#2 using transport format combination DL TFC2.
- j) The SS checks that the content of the received RLC SDUs returned in uplink on RAB subflow#1 and RAB subflow#2 have the correct content and are received having the correct transport format.
- k) The SS may optionally open the UE test loop.
- l) The SS may optionally release the radio bearer.
- ~~a) The SS setup the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.6 using the generic procedure for UE radio bearer test mode activation according to clause 14.1.1.~~
- ~~b) The SS limits the UE allowed uplink transport format combinations to {(TF0,TF0),(TF1,TF1)} for RAB subflow#1 and RAB subflow#2 using the RRC transport format combination control procedure.~~
- ~~c) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 75 bits for RAB subflow#1 and to 84 bits for RAB subflow#2.~~
- ~~d) The SS transmits an RLC SDU of size 75 bits on RAB subflow#1 using transport format TF1 and an RLC SDU of size 84 bits using transport format TF1.~~
- ~~e) The SS checks that the content of the received RLC SDUs returned in uplink on RAB subflow#1 and RAB subflow#2 have the correct content and are received having the correct transport format.~~
- ~~f) The SS open the UE test loop.~~
- ~~g) The SS limits the UE allowed uplink transport format combinations to {(TF0,TF0),(TF2,TF2)} for RAB subflow#1 using the RRC transport format combination control procedure.~~
- ~~h) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 39 bits for RAB subflow#1.~~
- ~~i) The SS transmits an RLC SDU of size 39 bits on RAB subflow#1 using transport format TF1.~~
- ~~j) The SS checks that the content of the received RLC SDUs returned in uplink on RAB subflow#1 has the correct content and is received having the correct transport format.~~
- ~~k) The SS may optionally release the radio bearer.~~

14.2.7.4 Test requirements

1. At step 1 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 6 the UE transmitted transport format shall be

- TF1 (1x39) for RAB subflow#1.

3. At step 6 the UE shall return

- an RLC SDU on RAB subflow#1 with the same content as sent by SS; and
- no data shall be received on RAB subflow#2.

4. At step 13 the UE transmitted transport format shall be

- TF2 (1x61) for RAB subflow#1; and
- TF1 (1x87) for RAB subflow#2.

5. At step 13 the UE shall return

- an RLC SDU on RAB subflow#1 with the same content as sent by SS; and
- an RLC SDU on RAB subflow#2 with the same content as sent by SS.

~~2. At step 6 the UE transmitted transport format shall be~~

- ~~— TF1 (1x61) for RAB subflow#1; and~~
- ~~— TF1 (1x87) for RAB subflow#2.~~

~~3. At step 6 the UE shall return~~

- ~~— an RLC SDU on RAB subflow#1 with the same content as sent by SS; and~~
- ~~— an RLC SDU on RAB subflow#2 with the same content as sent by SS.~~

~~4. At step 13 the UE transmitted transport format shall TF2 (1x39) for RAB subflow#1.~~

~~5. At step 13 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.~~

Initial conditions

UE in idle mode

Test procedure

Sub test 1:

- a) The SS setup the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.8 using the generic procedure for UE radio bearer test mode activation according to clause 14.1.1.
- b) The SS limits the UE allowed uplink transport format combinations to {UL TFC0, UL TFC1, UL TFC3} using the RRC transport format combination control procedure.
- c) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 39 bits for RAB subflow#1 and 76 bits for RAB subflow#2.
- d) The SS transmits an RLC SDU of size 39 bits on RAB subflow#1, using transport format combination DL TFC1. No data is transmitted on RAB subflow#2.
- e) The SS checks that the content of the received RLC SDU returned in uplink on RAB subflow#1 has the correct content and is received having the correct transport format. The SS checks that no data is received on RAB subflow#2.
- f) The SS open the UE test loop.

Sub test 2:

- g) The SS limits the UE allowed uplink transport format combinations to {UL TFC0, UL TFC2, UL TFC5} using the RRC transport format combination control procedure.
- h) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 58 bits for RAB subflow#1 and 76 bits for RAB subflow#2.
- i) The SS transmits an RLC SDU of size 58 bits on RAB subflow#1 and an RLC SDU of size 76 bits on RAB subflow#2 using transport format combination DL TFC2.
- j) The SS checks that the content of the received RLC SDUs returned in uplink on RAB subflow#1 and RAB subflow#2 have the correct content and are received having the correct transport format.
- k) The SS may optionally open the UE test loop.
- l) The SS may optionally release the radio bearer.
- ~~a) The SS setup the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.8 using the generic procedure for UE radio bearer test mode activation according to clause 14.1.1.~~
- ~~b) The SS limits the UE allowed uplink transport format combinations to {(TF0,TF0),(TF1,TF1)} for RAB subflow#1 and RAB subflow#2 using the RRC transport format combination control procedure.~~
- ~~c) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 58 bits for RAB subflow#1 and to 76 bits for RAB subflow#2.~~
- ~~d) The SS transmits an RLC SDU of size 58 bits on RAB subflow#1 using transport format TF1 and an RLC SDU of size 76 bits using transport format TF1.~~
- ~~e) The SS checks that the content of the received RLC SDUs returned in uplink on RAB subflow#1 and RAB subflow#2 have the correct content and are received having the correct transport format.~~
- ~~f) The SS open the UE test loop.~~
- ~~g) The SS limits the UE allowed uplink transport format combinations to {(TF0,TF0),(TF2,TF2)} for RAB subflow#1 using the RRC transport format combination control procedure.~~
- ~~h) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 39 bits for RAB subflow#1.~~
- ~~i) The SS transmits an RLC SDU of size 39 bits on RAB subflow#1 using transport format TF1.~~
- ~~j) The SS checks that the content of the received RLC SDUs returned in uplink on RAB subflow#1 has the correct content and is received having the correct transport format.~~
- ~~k) The SS may optionally release the radio bearer.~~

Initial conditions

UE in idle mode

Test procedure

Sub test 1:

- a) The SS setup the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.10 using the generic procedure for UE radio bearer test mode activation according to clause 14.1.1.
- b) The SS limits the UE allowed uplink transport format combinations to {UL TFC0, UL TFC1, UL TFC3} using the RRC transport format combination control procedure.
- c) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 39 bits for RAB subflow#1 and 54 bits for RAB subflow#2.
- d) The SS transmits an RLC SDU of size 39 bits on RAB subflow#1, using transport format combination DL TFC1. No data is transmitted on RAB subflow#2.
- e) The SS checks that the content of the received RLC SDU returned in uplink on RAB subflow#1 has the correct content and is received having the correct transport format. The SS checks that no data is received on RAB subflow#2.
- f) The SS open the UE test loop.

Sub test 2:

- g) The SS limits the UE allowed uplink transport format combinations to {UL TFC0, UL TFC2, UL TFC5} using the RRC transport format combination control procedure.
- h) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 49 bits for RAB subflow#1 and 54 bits for RAB subflow#2.
- i) The SS transmits an RLC SDU of size 49 bits on RAB subflow#1 and an RLC SDU of size 54 bits on RAB subflow#2 using transport format combination DL TFC2.
- j) The SS checks that the content of the received RLC SDUs returned in uplink on RAB subflow#1 and RAB subflow#2 have the correct content and are received having the correct transport format.
- k) The SS may optionally open the UE test loop.
- l) The SS may optionally release the radio bearer.
- ~~a) The SS setup the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.10 using the generic procedure for UE radio bearer test mode activation according to clause 14.1.1.~~
- ~~b) The SS limits the UE allowed uplink transport format combinations to {(TF0,TF0),(TF1,TF1)} for RAB subflow#1 and RAB subflow#2 using the RRC transport format combination control procedure.~~
- ~~c) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 49 bits for RAB subflow#1 and to 54 bits for RAB subflow#2.~~
- ~~d) The SS transmits an RLC SDU of size 49 bits on RAB subflow#1 using transport format TF1 and an RLC SDU of size 54 bits using transport format TF1.~~
- ~~e) The SS checks that the content of the received RLC SDUs returned in uplink on RAB subflow#1 and RAB subflow#2 have the correct content and are received having the correct transport format.~~
- ~~f) The SS open the UE test loop.~~
- ~~g) The SS limits the UE allowed uplink transport format combinations to {(TF0,TF0),(TF2,TF2)} for RAB subflow#1 using the RRC transport format combination control procedure.~~
- ~~h) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 39 bits for RAB subflow#1.~~
- ~~i) The SS transmits an RLC SDU of size 39 bits on RAB subflow#1 using transport format TF1.~~
- ~~j) The SS checks that the content of the received RLC SDUs returned in uplink on RAB subflow#1 has the correct content and is received having the correct transport format.~~
- ~~k) The SS may optionally release the radio bearer.~~

14.2.10.4 Test requirements

1. At step 1 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 6 the UE transmitted transport format shall be

- TF1 (1x39) for RAB subflow#1.

3. At step 6 the UE shall return

- an RLC SDU on RAB subflow#1 with the same content as sent by SS; and
- no data shall be received on RAB subflow#2.

4. At step 13 the UE transmitted transport format shall be

- TF2 (1x49) for RAB subflow#1; and
- TF1 (1x54) for RAB subflow#2.

5. At step 13 the UE shall return

- an RLC SDU on RAB subflow#1 with the same content as sent by SS; and
- an RLC SDU on RAB subflow#2 with the same content as sent by SS.

~~2. At step 6 the UE transmitted transport format shall be~~

- ~~— TF1 (1x49) for RAB subflow#1; and~~
- ~~— TF1 (1x54) for RAB subflow#2.~~

~~3. At step 6 the UE shall return~~

- ~~— an RLC SDU on RAB subflow#1 with the same content as sent by SS; and~~
- ~~— an RLC SDU on RAB subflow#2 with the same content as sent by SS.~~

~~4. At step 13 the UE transmitted transport format shall TF2 (1x39) for RAB subflow#1.~~

~~5. At step 13 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.~~

Initial conditions

UE in idle mode

Test procedure

- a) The SS setup the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.132 for the 20 ms TTI case using the generic procedure for UE radio bearer test mode activation according to clause 14.1.1.
- b) The SS limits the UE allowed uplink transport format combinations to {(TF0,TF0),(TF1,TF1)} for RAB subflow#1 using the RRC transport format combination control procedure.
- be) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 1280 bits for RAB subflow#1 if configuration having TTI=20ms is used or 2560 bits if configuration having TTI=40ms is used.
- cd) The SS transmits an RLC SDU of size 1280 bits if configuration having TTI=20 ms is used; or RLC SDU of size 2560 bits if configuration having TTI=40 ms is used on RAB subflow#1 using transport format combination DL_TFC1
- de) The SS checks that the content of the received RLC SDUs returned in uplink on RAB subflow#1 and ~~RAB subflow#2~~ have has the correct content and is ~~are~~ received having the correct transport format.
- ef) The SS may optionally open the UE test loop.
- fg) The SS may optionally release the radio bearer.

Initial conditions

UE in idle mode

Test procedure

Sub-test 1:

- a) The SS setup the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.175 using the generic procedure for UE radio bearer test mode activation according to clause 14.1.1.
- b) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC5, UL_TFC6} ~~{(TF0,TF0),(TF1,TF1)}~~ for RAB subflow#1 using the RRC transport format combination control procedure.
- c) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 576 bits for RAB subflow#1.
- d) The SS transmits an RLC- SDU of size 576 bits using transport format combination DL_TFC1 (1x576).
- e) The SS checks that the content of the received RLC SDUs returned in uplink on RAB subflow#1 ~~is~~ has correct content and ~~is~~ are received having the correct transport format.
- f) The SS open the UE test loop.

Sub-test 2:

- g) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC2, UL_TFC5, UL_TFC7} ~~{(TF0,TF0),(TF2,TF2)}~~ for RAB subflow#1 using the RRC transport format combination control procedure.
- h) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 1152 bits for RAB subflow#1.
- i) The SS transmits an RLC- SDU of size 1152 bits using transport format combination DL_TFC2 (2x576).
- j) The SS checks that the content of the received RLC SDUs returned in uplink on RAB subflow#1 ~~is~~ has correct content and ~~is~~ are received having the correct transport format.
- k) The SS open the UE test loop.

Sub-test 3:

- l) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC3, UL_TFC5, UL_TFC8} ~~{(TF0,TF0),(TF3,TF3)}~~ for RAB subflow#1 using the RRC transport format combination control procedure.
- m) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 1728 bits for RAB subflow#1.
- n) The SS transmits an RLC- SDU of size 1728 bits using transport format combination DL_TFC3 (3x576).
- o) The SS checks that the content of the received RLC SDUs returned in uplink on RAB subflow#1 ~~has~~ is correct content and ~~is~~ are received having the correct transport format.
- p) The SS open the UE test loop.
- q) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC4, UL_TFC5, UL_TFC9} ~~{(TF0,TF0),(TF4,TF4)}~~ for RAB subflow#1 using the RRC transport format combination control procedure.
- r) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 2304 bits for RAB subflow#1.
- s) The SS transmits an RLC- SDU of size 2304 bits using transport format combination DL_TFC4 (4x576).
- t) The SS checks that the content of the received RLC SDUs returned in uplink on RAB subflow#1 ~~has~~ is correct content and ~~is~~ are received having the correct transport format.

- u) The SS may optionally open the UE test loop.
- v) The SS may optionally release the radio bearer.

14.2.175.4 Test requirements

1. At step 1 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 6 the UE transmitted transport format on RAB subflow#1 shall be TF1 (1x576).
3. At step 6 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.
4. At step 13 the UE transmitted transport format on RAB subflow#1 shall be TF2 (2x576).
5. At step 13 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.
6. At step 20 the UE transmitted transport format on RAB subflow#1 shall be TF3 (3x576).
7. At step 20 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.
8. At step 27 the UE transmitted transport format on RAB subflow#1 shall be TF4 (4x576).
9. At step 27 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.

Initial conditions

UE in idle mode

Test procedure

Sub-test 1:

- a) The SS setup the radio bearer using the generic procedure for UE radio bearer test mode activation according to clause 14.1.1. In downlink the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.18 shall be used; and in uplink the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.12 shall be used.
- b) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.
- c) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 320 bits for RAB subflow#1.
- d) The SS transmits an RLC SDU of size 320 bits using transport format combination DL_TFC1 (1x320).
- e) The SS checks the content of the received RLC SDU.
- f) The SS open the UE test loop.

Sub-test 2:

g) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.

h) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 640 bits for RAB subflow#1.

i) The SS transmits an RLC SDU of size 640 bits using transport format combination DL_TFC2 (2x320).

j) The SS checks the content of the received RLC SDU.

k) The SS open the UE test loop.

Sub-test 3:

l) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.

m) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 1280 bits for RAB subflow#1.

n) The SS transmits an RLC SDU of size 1280 bits using transport format combination DL_TFC3 (4x320).

o) The SS checks the content of the received RLC SDU.

p) The SS open the UE test loop.

Sub-test 4:

q) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.

r) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 2560 bits for RAB subflow#1.

s) The SS transmits an RLC SDU of size 2560 bits using transport format combination DL_TFC4 (8x320).

t) The SS checks the content of the received RLC SDU.

u) The SS may optionally open the UE test loop.

v) The SS may optionally release the radio bearer.

UE in idle mode

Test procedure

Sub-test 1:

- a) The SS setup the radio bearer using the generic procedure for UE radio bearer test mode activation according to clause 14.1.1. In uplink the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.19 shall be used; and in downlink the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.12 shall be used.
- b) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC5, UL_TFC6} for RAB subflow#1 using the RRC transport format combination control procedure.
- c) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 320 bits for RAB subflow#1.
- d) The SS transmits an RLC SDU of size 576 bits using transport format combination DL_TFC1 (1x576).
- e) The SS checks the content of the received RLC SDU and that it is received by the correct transport format.
- f) The SS open the UE test loop.

Sub-test 2:

- g) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC2, UL_TFC5, UL_TFC7} for RAB subflow#1 using the RRC transport format combination control procedure.
- h) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 640 bits for RAB subflow#1.
- i) The SS transmits an RLC SDU of size 640 bits using transport format combination DL_TFC1 (1x576).
- j) The SS checks the content of the received RLC SDU and that it is received by the correct transport format.
- k) The SS open the UE test loop.

Sub-test 3:

- l) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC3, UL_TFC5, UL_TFC8} for RAB subflow#1 using the RRC transport format combination control procedure.

- m) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 1280 bits for RAB subflow#1.
- n) The SS transmits an RLC SDU of size 1280 bits using transport format combination DL_TFC1 (1x576).
- o) The SS checks the content of the received RLC SDU and that it is received by the correct transport format.
- p) The SS open the UE test loop.

Sub-test 4:

- q) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC4, UL_TFC5, UL_TFC9} for RAB subflow#1 using the RRC transport format combination control procedure.
- r) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 2560 bits for RAB subflow#1.
- s) The SS transmits an RLC SDU of size 2560 bits using transport format combination DL_TFC1 (1x576).
- t) The SS checks the content of the received RLC SDU and that it is received by the correct transport format.
- u) The SS may optionally open the UE test loop.
- v) The SS may optionally release the radio bearer.

14.2.19.4 Test requirements

1. At step 1 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 6 the UE transmitted transport format on RAB subflow#1 shall be TF1 (1x320).
3. At step 6 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.

4. At step 13 the UE transmitted transport format on RAB subflow#1 shall be TF2 (2x320).
5. At step 13 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.
6. At step 20 the UE transmitted transport format on RAB subflow#1 shall be TF3 (4x320).
7. At step 20 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.
8. At step 27 the UE transmitted transport format on RAB subflow#1 shall be TF4 (8x320).
9. At step 27 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.

14.2.20.1 Conformance requirement

See 14.2.4.1.

14.2.20.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.2018.

To be able to test the downlink radio bearer using the UE loopback function for the reference radio bearer UL:0 DL:128 kbps., the reference radio bearer configuration according to TS 34.108, clause 6.10.2.4.1.12 (Conversational/unknown/UL:28.8 kbps) is used in uplink. For all sub-tests UL TFC1 is used.

Initial conditionsUE in idle modeTest procedureSub-test 1:

- a) The SS setup the radio bearer using the generic procedure for UE radio bearer test mode activation according to clause 14.1.1. In downlink the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.20 shall be used; and in uplink the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.12 shall be used.
- b) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.
- c) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 320 bits for RAB subflow#1.
- d) The SS transmits an RLC SDU of size 320 bits using transport format combination DL_TFC1 (1x320).
- e) The SS checks the content of the received RLC SDU.
- f) The SS open the UE test loop.

Sub-test 2:

- g) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.
- h) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 640 bits for RAB subflow#1.
- i) The SS transmits an RLC SDU of size 640 bits using transport format combination DL_TFC2 (2x320).

j) The SS checks the content of the received RLC SDU.

k) The SS open the UE test loop.

Sub-test 3:

l) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.

m) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 1280 bits for RAB subflow#1.

n) The SS transmits an RLC SDU of size 1280 bits using transport format combination DL_TFC3 (4x320).

o) The SS checks the content of the received RLC SDU.

p) The SS open the UE test loop.

Sub-test 4:

q) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.

r) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 2560 bits for RAB subflow#1.

s) The SS transmits an RLC SDU of size 2560 bits using transport format combination DL_TFC4 (8x320).

t) The SS checks the content of the received RLC SDU.

u) The SS open the UE test loop.

Sub-test 5:

v) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.

x) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 5120 bits for RAB subflow#1.

y) The SS transmits an RLC SDU of size 5120 bits using transport format combination DL_TFC5 (16x320).

z) The SS checks the content of the received RLC SDU.

aa) The SS may optionally open the UE test loop.

bb) The SS may optionally release the radio bearer.

Initial conditionsUE in idle modeTest procedureSub-test 1:

- a) The SS setup the radio bearer using the generic procedure for UE radio bearer test mode activation according to clause 14.1.1. In uplink the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.21 shall be used; and in downlink the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.12 shall be used.
- b) The SS limits the UE allowed uplink transport format combinations to {UL TFC0, UL TFC1, UL TFC6, UL TFC7} for RAB subflow#1 using the RRC transport format combination control procedure.

- c) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 320 bits for RAB subflow#1.
- d) The SS transmits an RLC SDU of size 576 bits using transport format combination DL TFC1 (1x576).
- e) The SS checks the content of the received RLC SDU and that it is received by the correct transport format.
- f) The SS open the UE test loop.

Sub-test 2:

- g) The SS limits the UE allowed uplink transport format combinations to {UL TFC0, UL TFC2, UL TFC6, UL TFC8} for RAB subflow#1 using the RRC transport format combination control procedure.
- h) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 640 bits for RAB subflow#1.
- i) The SS transmits an RLC SDU of size 640 bits using transport format combination DL TFC1 (1x576).
- j) The SS checks the content of the received RLC SDU and that it is received by the correct transport format.
- k) The SS open the UE test loop.

Sub-test 3:

- l) The SS limits the UE allowed uplink transport format combinations to {UL TFC0, UL TFC3, UL TFC6, UL TFC9} for RAB subflow#1 using the RRC transport format combination control procedure.
- m) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 1280 bits for RAB subflow#1.
- n) The SS transmits an RLC SDU of size 1280 bits using transport format combination DL TFC1 (1x576).
- o) The SS checks the content of the received RLC SDU and that it is received by the correct transport format.
- p) The SS open the UE test loop.

Sub-test 4:

- q) The SS limits the UE allowed uplink transport format combinations to {UL TFC0, UL TFC4, UL TFC6, UL TFC10} for RAB subflow#1 using the RRC transport format combination control procedure.
- r) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 2560 bits for RAB subflow#1.
- s) The SS transmits an RLC SDU of size 2560 bits using transport format combination DL TFC1 (1x576).
- t) The SS checks the content of the received RLC SDU and that it is received by the correct transport format.
- u) The SS open the UE test loop.

Sub-test 5:

- v) The SS limits the UE allowed uplink transport format combinations to {UL TFC0, UL TFC5, UL TFC6, UL TFC11} for RAB subflow#1 using the RRC transport format combination control procedure.
- x) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 5120 bits for RAB subflow#1.
- y) The SS transmits an RLC SDU of size 5120 bits using transport format combination DL TFC1 (1x576).
- z) The SS checks the content of the received RLC SDU and that it is received by the correct transport format.
- aa) The SS may optionally open the UE test loop.
- bb) The SS may optionally release the radio bearer.

14.2.21.4 Test requirements

1. At step 1 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 6 the UE transmitted transport format on RAB subflow#1 shall be TF1 (1x320).
3. At step 6 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.
4. At step 13 the UE transmitted transport format on RAB subflow#1 shall be TF2 (2x320).
5. At step 13 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.
6. At step 20 the UE transmitted transport format on RAB subflow#1 shall be TF3 (4x320).
7. At step 20 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.
8. At step 27 the UE transmitted transport format on RAB subflow#1 shall be TF4 (8x320).
9. At step 27 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.
10. At step 34 the UE transmitted transport format on RAB subflow#1 shall be TF5 (16x320).
11. At step 34 the UE shall return an RLC SDU on RAB subflow#1 with the same content as sent by SS.

14.2.22 Streaming / unknown / UL:0 DL:384 kbps / CS or PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

14.2.22.1 Conformance requirement

See 14.2.4.1.

14.2.22.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.20.

To be able to test the downlink radio bearer using the UE loopback function for the reference radio bearer UL:0 DL: 128 kbps., the reference radio bearer configuration according to TS 34.108, clause 6.10.2.4.1.12 (Conversational/unknown/UL:28.8 kbps) is used in uplink. For all sub-tests UL TFC1 is used.

14.2.22.3 Method of test

Uplink TFS:

	<u>TFI</u>	<u>RAB subflow #1</u>	<u>DCCH</u>
<u>TFS</u>	<u>TF0, bits</u>	<u>0x576</u>	<u>0x148</u>
	<u>TF1, bits</u>	<u>1x576</u>	<u>0x148</u>
	<u>TF2, bits</u>	<u>2x576</u>	<u>N/A</u>

Uplink TFCS:

<u>TFCI</u>	<u>(RAB subflow#1, DCCH)</u>
<u>UL_TFC0</u>	<u>(TF0, TF0)</u>
<u>UL_TFC1</u>	<u>(TF1, TF0)</u>
<u>UL_TFC2</u>	<u>(TF2, TF0)</u>
<u>UL_TFC3</u>	<u>(TF0, TF1)</u>
<u>UL_TFC4</u>	<u>(TF1, TF1)</u>
<u>UL_TFC5</u>	<u>(TF2, TF1)</u>

Downlink TFS:

	<u>TFI</u>	<u>RAB subflow #1</u>	<u>DCCH</u>
<u>TFS</u>	<u>TF0, bits</u>	<u>0x320</u>	<u>0x148</u>
	<u>TF1, bits</u>	<u>1x320</u>	<u>0x148</u>

<u>7</u>	<u>DL_TFC5</u>	<u>UL_TFC1</u>	<u>DL_TFC0, DL_TFC8, DL_TFC15</u>

Initial conditionsUE in idle mode

Test procedureSub-test 1:

- a) The SS setup the radio bearer using the generic procedure for UE radio bearer test mode activation according to clause 14.1.1. In downlink the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.22 shall be used; and in uplink the reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.12 shall be used.
- b) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.
- c) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 320 bits for RAB subflow#1.
- d) The SS transmits an RLC SDU of size 320 bits using transport format combination DL_TFC1 (1x320).
- e) The SS checks the content of the received RLC SDU.
- f) The SS open the UE test loop.

Sub-test 2:

- g) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.
- h) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 640 bits for RAB subflow#1.
- i) The SS transmits an RLC SDU of size 640 bits using transport format combination DL_TFC2 (2x320).
- j) The SS checks the content of the received RLC SDU.
- k) The SS open the UE test loop.

Sub-test 3:

- l) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.
- m) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 1280 bits for RAB subflow#1.
- n) The SS transmits an RLC SDU of size 1280 bits using transport format combination DL_TFC3 (4x320).
- o) The SS checks the content of the received RLC SDU.
- p) The SS open the UE test loop.

Sub-test 4:

- q) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.
- r) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 2560 bits for RAB subflow#1.
- s) The SS transmits an RLC SDU of size 2560 bits using transport format combination DL_TFC4 (8x320).
- t) The SS checks the content of the received RLC SDU.
- u) The SS open the UE test loop.

Sub-test 5:

- v) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.
- x) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 5120 bits for RAB subflow#1.

y) The SS transmits an RLC SDU of size 5120 bits using transport format combination DL_TFC5 (16x320).

z) The SS checks the content of the received RLC SDU.

aa) The SS open the UE test loop.

Sub-test 6:

bb) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.

cc) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 10240 bits for RAB subflow#1.

dd) The SS transmits an RLC SDU of size 5120 bits using transport format combination DL_TFC6 (32x320).

ee) The SS checks the content of the received RLC SDU.

ff) The SS open the UE test loop.

Sub-test 7:

gg) The SS limits the UE allowed uplink transport format combinations to {UL_TFC0, UL_TFC1, UL_TFC4} for RAB subflow#1 using the RRC transport format combination control procedure.

hh) The SS close the test loop using UE test loop mode 1 setting UL RLC SDU size to 15360 bits for RAB subflow#1.

ii) The SS transmits an RLC SDU of size 5120 bits using transport format combination DL_TFC5 (48x320).

kk) The SS checks the content of the received RLC SDU.

ll) The SS may optionally open the UE test loop.

mm) The SS may optionally release the radio bearer.

The following test cases are added:

7.1.8.1 DCCH mapped to RACH/FACH

7.1.8.2 DTCH or DCCH mapped to DSCH or USCH

7.1.8.3 DTCH or DCCH mapped to CPCH

7.1.8.4 DTCH or DCCH mapped to DCH

7.1.8.5 CCCH mapped to RACH/FACH

7.1.8.6 DTCH mapped to RACH/FACH

7.1.9.1 Selection of Transport Format depending on instantaneous source rate

7.1.10.1 Priority handling between data flows of one UE

7.1.11.1 Ciphering for transparent RLC

7.1.12.1 Access Service Class selection for RACH and CPCH transmission

7.1.12.2 Control of RACH transmissions for FDD mode

7.1.13.1 Control of CPCH transmissions for FDD mode

7 Layer 2

7.1 MAC

General

If not otherwise mentioned, the same procedures as used in RRC test specification (TS 34.123-1) or in the Generic procedure (TS 34.108) applies to reach Initial conditions for MAC testing.

If not explicitly described, the same message contents and settings are applied as described in the RRC test description default settings.

7.1.8 Mapping between logical channels and transport channels

~~For the test cases where is a which need to send data block(s) to the UE and a need to read loop back data block(s) from the UE, it is necessary for the SS to send a RLC_CONFIG_REQ primitive to set up a RLC entity of the System Simulator in transparent mode, and it sends a CMAC_MAC_HEADER_REQ primitive with disable_mac_header to set the MAC entity of the system simulator as transparent mode, and the data block header information is defined in the TTCN to ensure that it is interpreted correctly by the UE. The SS receives or sends data block(s) with the RLC/MAC header (if applied) from RLC_PCO.~~

~~This same test method is applied for to the MAC test cases as described in 7.1.9 to 7.1.13.~~

7.1.8.1 DCCH mapped to RACH/FACH

7.1.8.1.1 Definition and applicability

~~All UE.~~

7.1.8.1.2 Conformance requirement

TCTF field, C/T field, UE-Id type field and UE-Id are included in the MAC header.

Reference(s)

TS 25.321 clause 9.2.1.1.

7.1.8.1.3 Test purpose

To verify that the TCTF field, C/T field, UT-Id type and UE-Id field are correctly applied when a DCCH is mapped to the RACH/FACH

7.1.8.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The UE shall operate under normal test conditions, Ciphering Off.

The Test-USIM shall be inserted.

The UE is in Connected mode and a connection is established as described in the RRC connection establishment procedure is completed as specified in TS 34.108, clause 7.1.2.

~~RRC connection establishment procedure is completed as specified in TS34.108 7.1.2.~~

Related ICS/IXIT Statement(s)

TBD

Foreseen Final State of the UE

TBD

Test procedure

- a) After having performed a packet switched connection establishment the SS sets up a Radio Bearer – The SS transmits a RADIO BEARER SET UP message to establish a signalling radio bearer with DCCH mapping to RACH.
- b) The SS receives RADIO BEARER COMPLETE. The UE shall confirm the Radio Bearer configurations.
- c) The SS sends RNTI REALLOCATION to assign a new C_RNTI. The SS starts the Reallocation procedure to assign a new C_RNTI.
- d) The SS receives RNTI REALLOCATION COMPLETE from DCCH, SS checks the MAC header. After having received the newly assigned C_RNTI parameter, the UE shall confirm the completion of this procedure.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1	←		RADIO BEARER SETUP	Establish Signalling Radio Bearer.
2	→		RADIO BEARER SETUP COMPLETE	
3	←		RNTI REALLOCATION	Assign an new C_RNTI.
4	→		RNTI REALLOCATION COMPLETE	<u>This message shall be send on the DCCH.</u> ~~The SS checks the MAC header.~~

Specific Message Contents

RADIO BEARER SET UP:

Information Element	Value/remark
RB mapping info	
- Number of Logical channels	1
- Transport channel type	RACH.

7.1.8.1.5 Test Requirement

The UE shall confirm reallocation procedure by sending the RNTI REALLOCATION COMPLETE message. The message shall be returned on the configured channel on MAC level. This shall verify, that the mapped channels are used as configured.

The SS checks the MAC Header of RNTI REALLOCATION COMPLETE, CTCF shall be "DCCH or DTCH over RACH", C/T field shall exist, UE ID type and UE ID shall correspond to step 3.

7.1.8.2 DTCH or DCCH mapped to DSCH or USCH

7.1.8.2.1 Definition and applicability

Applicable for if mode TDD only or FDD only is supported.

7.1.8.2.2 Conformance requirement

The TCTF field is included in the MAC header for TDD only. The UE-Id type and UE-Id are included in the MAC header for FDD only. The C/T field is included if multiplexing on MAC is applied.

Reference(s)

TS 25.321 clause 9.2.1.1.

7.1.8.2.3 Test purpose

To verify when DTCH or DCCH is mapped to DSCH or USCH, the TCTF field is applied for TDD only, the UE-Id type and UE-Id are applied for FDD only. If multiplexing on MAC is applied, C/T field is included, otherwise, the C/T field is not included in the MAC header.

7.1.8.2.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters. Ciphering Off.

User Equipment:

The UE shall operate under normal test conditions, Ciphering Off.

The Test-USIM shall be inserted.

The UE is in Connected mode and a connection is established as described in the TS 34.123-1, 7.3 PDCCP testing, clause "Setup a UE originated PS session using IP Header compression in AM RLC (using Loop back test mode 1). RRC connection establishment procedure is completed as specified in TS34.108 7.1.2.

Related ICS/IXIT Statement(s)

TBD

Foreseen Final State of the UE

Test procedure

~~a) The SS sends RADIO BEARER SETUP message to set up a downlink Radio Bearer with DTCH mapping to DSCH and an uplink Radio Bearer with DTCH mapping to USCH.~~

~~e) The SS receives the uplink message RADIO BEARER SETUP COMPLETE. The SS sends CLOSE UE TEST LOOP.~~

~~d) The SS receives CLOSE UE TEST LOOP COMPLETE.~~

~~e) The SS sends C-MAC-REQ with disable_mac_header via C-MAC-PCO, and C-RLC-CONFIG-REQ with RLC mode as "Transparent Mode" via C-RLC-PCO.~~

~~f) a) The SS sends a certain data block to the UE, via downlink Radio Bearer with MAC header, set TCTF as "DCCH or DTCH over USCH or DSCH" for TDD only, set UE-Id type as "C-RNTI", and UE-Id as C-RNTI of UE for FDD only.~~

- b) After having received the data block via configured mapped channels, the UE forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its MAC configuration to the SS.
- ~~g)c)~~ The SS receives the ~~loop-back returned~~ data block and checks its MAC header whether the TCTF is applied for TDD only, or the UE-Id type and UE-Id are applied for FDD only, and the C/T field shall not be isn't applied.
- d) The SS configures the RLC
- ~~h)~~ The SS sends CMAC_MAC_HEADER_REQ with enable_mac_header via CMAC_PCO, and CRLC_CONFIG_REQ with RLC mode as "AM mode" via CRLC_PCO.
- ~~i)e)~~ The SS starts a Radio Bearer Reconfiguration procedure to be connected in RLC transparent mode and configures the Radio Bearer for ~~sends RADIO BEARER RECONFIGURE message to reconfigure uplink and downlink radio bearer as~~ multiplexing.
- ~~j)f)~~ The SS receives RADIO BEARER RECONFIGURE COMPLETE.
- ~~k)~~ The SS sends CMAC_MAC_HEADER_REQ with disable_mac_header via CMAC_PCO, and CRLC_CONFIG_REQ with RLC mode as "Transparent Mode" via CRLC_PCO.
- ~~l)g)~~ The SS sends a certain data block to the UE, via downlink Radio Bearer and sets MAC header TCTF as "DCCH or DTCH over USCH or DSCH" for TDD only, or sets UE-Id type as "C-RNTI", and UE-Id as C-RNTI of UE for FDD only and C/T field is included.
- ~~h)~~ After having received the data block via configured mapped channels, the UE forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its MAC configuration to the SS.
- ~~m)i)~~ The SS receives the returned loop-back data block via uplink Radio Bearer and check its MAC header whether the TCTF is applied for TDD only, or the UE-Id type and UE-Id are applied for FDD only and the C/T field is applied.
- i) The SS reconfigures its RLC mode to be in AM.
- ~~n)~~ The SS sends CMAC_MAC_HEADER_REQ with enable_mac_header via CMAC_PCO, and CRLC_CONFIG_REQ with RLC mode as "AM mode" via CRLC_PCO.
- ~~o)~~ The SS sends RADIO BEARER RELEASE to release the established uplink and downlink RBs.
- ~~p)~~ The SS receives RADIO BEARER RELEASE COMPLETE.

Expected sequence

Step	Direction		Message	Comments
	UE	SS		
1		←	RADIO BEARER SETUP	Set up a Downlink Radio Bearer with DTCH mapped to DSCH and set up an uplink radio bearer with DTCH mapped to USCH.
2		→	RADIO BEARER SETUP COMPLETE	
3		←	CLOSE UE TEST LOOP	
4		→	CLOSE UE TEST LOOP COMPLETE	
5				SS sends CMAC_MAC_HEADER_REQ with disable_mac_header and CRLC_CONFIG_REQ with RLC mode as "Transparent mode".
16		←	DATA BLOCK	The SS sends one data block with MAC header, sets TCTF as "DCCH or DTCH over USCH or DSCH" for TDD only, or sets UE-Id type as "C-RNTI", and UE-Id as C-RNTI of UE for FDD only.
27		→	LOOP BACK DATA BLOCK	SS receives the loop back data block from the Uplink RB and checks the MAC header.
38				SS sends CMAC_MAC_HEADER_REQ with enable_mac_header and CRLC_CONFIG_REQ with RLC mode as "AM mode".
49		←	RADIO BEARER RECONFIGURE	Reconfigures the downlink and uplink radio bearer as multiplexing .
150		→	RADIO BEARER RECONFIGURATION COMPLETE	
116				SS sends CMAC_MAC_HEADER_REQ with disable_mac_header and CRLC_CONFIG_REQ with RLC mode as "Transparent mode".
127		←	DATA BLOCK	The SS sends one data block with MAC header, sets TCTF as "DCCH or DTCH over USCH or DSCH" for TDD only, or sets UE-Id type as "C-RNTI", and UE-Id as C-RNTI of UE for FDD only and C/T field is included.
138		→	LOOP BACK DATA BLOCK	SS receives the loop back data block from the Uplink RB and checks the MAC header.
149				SS sends CMAC_MAC_HEADER_REQ with enable_mac_header and CRLC_CONFIG_REQ with RLC mode as "AM mode".
15		←	RADIO BEARER RELEASE	To release the uplink and downlink radio bearers.
16		→	RADIO BEARER RELEASE COMPLETE

7.1.8.2.5 Test requirements

TCTF field in the MAC header of loop back data block is "DTCH or DCCH over DSCH or USCH" for TDD only. The UE-ID type and UE-Id are applied in the MAC header for FDD only. If multiplexing on MAC is applied, C/T field is included, otherwise, C/T field is not included.

7.1.8.3 DTCH or DCCH mapped to CPCH

7.1.8.3.1 Definition and applicability

All UE.

7.1.8.3.2 Conformance requirement

UE-Id type field and UE-Id are included in the MAC header. The C/T field is included in the MAC header if multiplexing on MAC is applied.

Reference(s)

TS 25.321 subclause 9.2.1.1.

7.1.8.3.3 Test purpose

To verify when DTCH or DCCH mapped to CPCH, UE-Id type field and UE-Id are included in the MAC header. if multiplexing on MAC is applied, the C/T field is included in the MAC header, otherwise, C/T field is not included.

7.1.8.3.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

User Equipment:

The UE shall operate under normal test conditions, Ciphering Off.

The Test-USIM shall be inserted.

~~RRC connection establishment procedure is completed as specified in TS34.108 7.1.2. The UE is in Connected mode and a connection is established as described in the TS 34.123-1, 7.3 PDCP testing, clause "Setup a UE originated PS session using IP Header compression in UM RLC (using Loop back test mode 1).~~

7.1.10.1.5 Test requirements

The high bit rate TF is applied to high MAC logical channel priority Radio Bearer. That is, the bit rate of TF in RB4 should be not less than RB2.

7.1.11 Ciphering for transparent RLC

7.1.11.1 Ciphering

7.1.11.1.1 Definition and applicability

All UE.

7.1.11.1.2 Conformance requirement

Ciphering is performed in the MAC layer for transparent RLC mode.

Reference(s)

TS 25.301 subclause 5.3.1.2.

7.1.11.1.3 Test purpose

To verify that the ciphering is performed in the MAC layer for transparent RLC mode.

7.1.11.1.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters. Transparent Mode, Ciphering On.

User Equipment:

The UE shall operate under normal test conditions, Ciphering On.

The Test-USIM shall be inserted.

The UE is in Connected mode and a connection is established as described in the TS 34.123-1, 7.3 PDCP testing, clause "Setup a UE originated PS session using IP Header compression in AM RLC (using Loop back test mode 1). RRC Connection establishment procedure is completed as specified in TS34.108 7.1.2.

Related ICS/IXIT Statement(s)

TBD

Foreseen Final State of the UE

Test procedure

- a) ~~The SS sends RADIO BEARER SETUP to establish a downlink radio access bearer and an uplink radio access bearer with ciphering mode command as "Start", DTCH mapping to DCH and without multiplexing.~~
- b) ~~The UE response the RADIO BEARER SET UP COMPLETE.~~
- c) ~~SS sends CLOSE UE TEST LOOP.~~
- d) ~~b) The SS receives CLOSE UE TEST LOOP COMPLETE.~~

~~e)c)~~ The MAC entity of SS was configured as Ciphering mode as "Start" with CMAC_CONFIG-REQ primitive.

~~f)d)~~ SS configures its RLC entity sends CMAC_MAC_HEADER_REQ with disable_mac_header from CMAC_PCO and CRLC_CONFIG_REQ with RLC mode as "Transparent mode" from CRLC_PCO.

~~g)~~ The SS sends a DATA BLOCK from RLC PCO without MAC header.

~~e)~~ After having received the data block via configured mapped channels, the UE forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its MAC configuration to the SS.

~~h)f)~~ The SS checks the returned loop back data blocks and compare it with the data block asw sent before out data.

~~i)~~ SS sends CMAC_MAC_HEADER_REQ with enable_mac_header from CMAC_PCO and CRLC_CONFIG_REQ with RLC mode as "AM mode" from CRLC_PCO.

~~m)~~ The SS sends to release the established uplink and downlink RBs.

~~n)~~ The SS receives RADIO BEARER RELEASE COMPLETE.

~~14~~	→		~~RADIO BEARER RELEASE COMPLETE~~	
~~915~~			Repeat Step ~~14~~ to step ~~813~~ shall be repeated 3 times with MAC Priority set as 3, 2, 1 and the ASC of SS set as 3, 2, 1 accordingly	

7.1.12.1.5 Test requirements

When the ASC in SS side match with the MAC priority, SS can receive the loop back data blocks, otherwise, The SS can't receive the loop back data blocks. This requirement applies to the different MAC priority.

7.1.12.2 Control of RACH transmissions for FDD mode

7.1.12.2.1 Definition and applicability

All UE.

7.1.12.2.2 Conformance requirement

MAC receives the following RACH transmission control parameters from RRC with the CMAC-Config-REQ primitive: maximum number of preamble ramping cycles Mmax.

When preamble transmission counter M larger than Mmax, then the procedure will stop and enter Error handling procedure.

Reference(s) TS25.321 11.2.2, TS25.321 Figure 11.2.2.1

7.1.12.2.3 Test purpose

To verify that the MAC entity controls RACH transmission correctly.

7.1.12.2.4 Method of test

Initial conditions

System Simulator:

1 cell, default parameters, Ciphering Off.

SS broadcast System Information 5 with Mmax in RACH transmission parameters set as 0.

User Equipment:

The UE shall operate under normal test conditions, Ciphering Off.

The Test-USIM shall be inserted.

~~RRC connection establishment procedure is completed as specified in TS34.108 7.1.2. The UE is in Connected mode and a connection is established as described in the TS 34.123-1, 7.3 PDCP testing, clause "Setup a UE originated PS session using IP Header compression in AM RLC (using Loop back test mode 1).~~

Related ICS/IXIT Statement(s)

TBD

Foreseen Final State of the UE

The same as the initial conditions.

Test procedure

- ~~a) The SS sends RADIO BEARER SETUP to set up a downlink Radio Bearer with DTCH mapping to FACH and an uplink Radio Bearer with DTCH mapping to RACH.~~
- ~~b) The SS receives RADIO BEARER SETUP COMPLETE.~~
- ~~c) The SS sends CLOSE UE TEST LOOP.~~
- ~~d) The SS receives CLOSE UE TEST LOOP COMPLETE.~~
- ~~e) a) The SS configures its RLC entity for sends CMAC_MAC_HEADER_REQ with disable_mac_header via CMAC_PCO, and CRLC_CONFIG_REQ with RLC mode as "Transparent Mode" via CRLC_PCO.~~
- ~~f) b) The SS sends certain DATA BLOCKS.~~
- ~~g) c) The SS can't shall not receive any LOOP BACK DATA BLOCKS in within 30s.~~
- ~~h) The SS sends RADIO BEARER RELEASE.~~
- ~~i) The SS receives RADIO BEARER RELEASE COMPLETE.~~

Expected sequence:
