X

 UTRAN / Radio Core Network
(at least one should be marked with an X)

Source:

Matsushita Communication Industry Co.,Ltd

Date:

28/08/2000

Subject:

Updates to transport channel parameters

Work item:

Category:	F Correction	Release:	Phase 2
(only one category shall be marked with an X)	A Corresponds to a correction in an earlier release		Release 96
	B Addition of feature		Release 97
	C Functional modification of feature X		Release 98
	D Editorial modification		Release 99 X

Reason for change:

“Added or Reconfigured DL TrCH information” and “DL Transport channel information common for all transport channel” IE were revised according to CR-360r1 for TS25.331V3.2.0. The default contents of the affected messages in Annex A are revised.

In clause 8.3.1.14, the absence of “DL TrCH information list” IE and “DL Transport channel information common for all transport channels” IE were not indicated in the specific message content part. These omissions were corrected.

Clauses affected:

8.3.1.14, Annex A

8.3.1.14 Cell Update: Radio Bearer Control for Transition from CELL_DCH to CELL_FACH

8.3.1.14.1 Definition

8.3.1.14.2 Conformance Requirement

During a transition from CELL_DCH state to CELL_FACH state arising from the execution of radio bearer control procedure, the UE might be requested to re-select to an unknown cell. The UE shall select a cell and perform cell updating procedure. In order to distinguish the 2 cases of cell updating: (i) due to UE mobility and (ii) due to radio bearer control procedure, the update cause in CELL UPDATE message shall be different for these case. When the UTRAN receives this message, it is able to decide whether to initiate RNC reallocation and the establishment of new configuration in the target RNC.

8.3.1.14.3 Test Purpose

To confirm that the UE perform a cell update procedure after being instructed to move from CELL_DCH to CELL_FACH state as a result of radio bearer control procedure. To confirm that the UE indicates cause "RB Control" when transmitting a CELL UPDATE message to the selected cell. To confirm that the UE transmit a compatible response to conclude the radio bearer control procedure.

8.3.1.14.4 Method of Test

Initial Condition

System Simulator: 2 cells – both cell 1 and cell 2 are active, with cell 1 having a stronger transmission power.

UE: CELL_DCH in cell 1

Test Procedure

The UE is brought to CELL_DCH state in cell 1, after the UE has successfully performed the RRC connection establishment procedure and been allocated dedicated physical resources. Next SS send RADIO BEARER SETUP message to the UE on downlink DCCH. In this message, a DTCH channel is assigned to the UE. The UE shall reconfigure its channel resources and then return a RADIO BEARER SETUP COMPLETE message. Following this sequence, the UE sends RADIO BEARER RELEASE message to request that all radio bearers carried on dedicated physical channel be released. However, this message does not contain information about the target cell to select when transiting to CELL_FACH state. The UE shall perform a cell reselection and it shall detect the presence of cell 2. The UE shall send a CELL UPDATE message with cause set to "RB Control" on the CCCH carried by PRACH physical channel, specified in cell 2's system information message. SS replies with CELL UPDATE CONFIRM message, specifying the IE "PRACH Info" and "Secondary CCPCH Info". To complete this procedure, the UE shall transmit RADIO BEARER RELEASE COMPLETE message on the DCCH, which is carried on the PRACH specified in system information messages broadcasted in cell 2.

Expected Test Sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is in the CELL_DCH state after completing a successful RRC connection establishment procedure.
2		←	RADIO BEARER SETUP	Establishes DTCH logical channel.
3		→	RADIO BEARER SETUP COMPLETE	
4		←	RADIO BEARER RELEASE	Information on target cell is not specified.
5		→	CELL UPDATE	UE shall send this message on CCCH of cell 2. IE"Cell update cause" should be set to "RB Control". IE"DRX Indicator" set to "No DRX".
6		←	CELL UPDATE CONFIRM	IE"PRACH Info" and IE"Secondary CCPCH Info" are included in this message.
7		→	RADIO BEARER RELEASE COMPLETE	Sent on the PRACH given in system information messages.

Specific Message Contents

RADIO BEARER SETUP (Step 2)

Use the same message sub-type entitled "Packet to CELL_DCH from CELL_DCH in PS" found in Clause 8.1 of TS34.108, with the following exceptions:

RB to be affected list UL Transport Channel information common to all transport channels - TFC Subset - CHOICE Mode - UL DCH TFCS - CHOICE TFCI Signalling - TFCI Field 1 Information - CHOICE TFCS representation - TFCS addition information - CHOICE CTFC Size - CTFC Information - x bit CTFC - Gain factor information - Gain factor β_c - Gain factor β_d	Not Present – use default value, all TFCs are allowed. FDD Normal Addition Refer to TS 34.108 – This IE is repeated for the maximum number TFC to be added as specified in TS 34.108 for a selected transport channel
Deleted TrCH information list (uplink) Added or Reconfigured TrCH information list - Added or Reconfigured UL TrCH information - Transport channel identity - TFS - CHOICE Transport channel type - Dynamic Transport Format Information - Number of Transport blocks - CHOICE RLC mode - Octet mode RLC size info type 1 - CHOICE Octet mode RLC size - Size part 1 - Semi-static Transport Format - Transmission time interval - Type of channel coding - Coding Rate - Rate matching attribute - CRC size	2 Dedicated transport channels 1 Octet Mode RLC size info type 1 Size type 1 16 Use the same settings as in TS 34.108
DL Transport Channel information common to all transport channels Deleted TrCH information list (downlink) Added or Reconfigured TrCH information list - Added or Reconfigured DL TrCH information - Transport channel identity - TFS	<u>Not Present</u> <u>Not Present</u> Not Present- 2 Same as the TFS used in the uplink specified in this message. Not Present – use the existing frequency information Not Present – use the allowable UL TX power as specified by the UE's RF power class.
Frequency info Maximum allow UL TX power CHOICE Channel requirement Downlink information common for all radio links Downlink information per radio link list	Not Present. Not Present. Not Present.

RADIO BEARER SETUP COMPLETE (Step 3)

Only the message type is checked for this message.

RADIO BEARER RELEASE (Step 4)

Use the same message sub-type entitled “Packet to CELL_DCH from CELL_DCH in PS” found in Clause 8.1 of TS34.108, with the following exceptions:

Information Element	Value/remark

RAB information to release list	4
- RB Identity	
RB information to be affected list	DCCH for RRC (UM)
- RB information to be affected	0
- RB identity	
- RB mapping info	
- Information for each multiplexing option	1
- Number of RLC logical channels	RACH
- Uplink transport channel type	1
- Transport channel identity	1
- Logical channel identity	2
- MAC logical channel priority	1
- Number of RLC logical channels	FACH
- Downlink transport channel type	1
- Transport channel identity	1
- Logical channel identity	1
- RB information to be affected	DCCH for RRC (AM)
- RB identity	1
- RB mapping info	
- Information for each multiplexing option	
- Number of RLC logical channels	1
- Uplink transport channel type	RACH
- Transport channel identity	1
- Logical channel identity	2
- MAC logical channel priority	3
- Number of RLC logical channels	1
- Downlink transport channel type	FACH
- Transport channel identity	1
- Logical channel identity	2
- RB information to be affected	DCCH for NAS_DT-AM High Priority
- RB identity	2
- RB mapping info	
- Information for each multiplexing option	
- Number of RLC logical channels	1
- Uplink transport channel type	RACH
- Transport channel identity	1
- Logical channel identity	3
- MAC logical channel priority	4
- Number of RLC logical channels	1
- Downlink transport channel type	FACH
- Transport channel identity	1
- Logical channel identity	3
- RB information to be affected	DCCH for NAS_DT-AM Low Priority
- RB identity	3
- RB mapping info	
- Information for each multiplexing option	
- Number of RLC logical channels	1
- Uplink transport channel type	RACH
- Transport channel identity	1
- Logical channel identity	4
- MAC logical channel priority	5
- Number of RLC logical channels	1
- Downlink transport channel type	FACH
- Transport channel identity	1
- Logical channel identity	4
UL Transport Channel information common to all transport channels	
- TFC Subset	Not Present – use default value, all TFCs are allowed.
- CHOICE Mode	FDD
- UL DCH TFCS	Use the same TFCS as in IE “RACH TFCS” found in system information block type 5 messages of cell 2.
Deleted TrCH information list (uplink)	Not Present.
Added or Reconfigured TrCH information list	
- Added or Reconfigured UL TrCH information	
- Transport channel identity	1
- TFS	Use the same TFS as in IE “RACH TFS” found in system information block type 5 messages of cell 2.
DL Transport Channel information common to all transport channels	
- SCCPCH TFCS	Use the same TFCS as in IE “TFCS” (for FACH) in IE “Secondary CCPCH system information” found in system information block type 5 messages of cell 2.
- DL DCH TFCS	Not Present.
Deleted TrCH information list (downlink)	<u>Not Present</u>
Added or Reconfigured TrCH information list	Not Present.
Added or Reconfigured DL TrCH information	

CELL UPDATE (Step 5)

Information Element	Value/remark
U-RNTI	Check to see if set to '0000 0000 0001'
- SRNC Identity	Check to see if set to '0000 0000 0000 0000 0001'
- S-RNTI	Not checked
Integrity check info	Check to see if set to 'FALSE'
AM_RLC error indicator (for C-plane)	Check to see if set to 'FALSE'
AM_RLC error indicator (for U-plane)	Check to see if set to 'RB Control'
Cell Update Cause	Check to see if it is absent or set to 'FALSE'
Protocol error indicator	Check to see if it is absent
Measured results on RACH	Check to see if it is absent
Protocol error information	Check to see if it is absent

CELL UPDATE CONFIRM (Step 6)

Use the same message sub-type found in Clause 8.1 of TS34.108.

RADIO BEARER RELEASE COMPLETE (Step 7)

Only the message type is checked in this message.

8.3.1.14.5 Test Requirement

After step 4 the UE shall reselect to cell 2, perform a cell update procedure by transmitting CELL UPDATE message. In this message, the IE"Cell Update Cause" shall be set to "RB Control".

After step 6 the UE shall send RADIO BEARER RELEASE COMPLETE message on the DCCH carried by the PRACH channel broadcasted on the system information message in cell 2.

8.4.1.6 Measurement Control and Report: Inter-frequency measurement for transition from CELL_DCH to CELL_FACH state

8.4.1.6.1 Definition

8.4.1.6.2 Conformance requirement

When transiting from CELL_DCH state to CELL_FACH state, the UE shall terminate all reporting activities related to inter-frequency measurements. After reaching CELL_FACH state, the UE shall begin to monitor neighbouring cells listed in the IE “inter-frequency cell info” of the system information type 12 message.

Reference

3GPP TS 25.331, clause 8.4.1.7

8.4.1.6.3 Test Purpose

To verify that UE ceases to transmit MEASUREMENT REPORT messages when moving from CELL_DCH state to CELL_FACH, even if it has detected that reporting criteria have been satisfied in CELL_FACH state. To verify that the UE extracts information for inter-frequency measurement from system information messages after reaching CELL_FACH state.

8.4.1.6.4 Method of test

Initial Condition

SS: 2 cells – Cell 1 is active while cell 2 is inactive. Cell 2 is allocated a frequency which is 1 UARFCN away from cell 1 in both uplink and downlink directions. The applicable radio conditions for cell 1 and cell 2 are as follow:

	Cell 1	Cell 2
UARFCN (N_u and N_d)	Channel 1	Channel 2
CPICH RSCP	-75 dBm	-85 dBm
$Q_{rxlevmin}$	-90 dBm	-90 dBm
S	15	5

UE: idle state and camped onto cell 1.

Test Procedure

The UE is initially in idle mode. SS pages the UE with the establishment cause set to “Terminating PS Data Call”. The SYSTEM INFORMATION TYPE 12 message is modified so that no measurement tasks are to be performed by the UE. The UE shall respond to the paging by sending a RRC CONNECTION REQUEST message on the PRACH. Upon receiving this message, SS allocates dedicated DPDCH physical channels to the UE by transmitting RRC CONNECTION SETUP message. The UE shall reply by transmitting a RRC CONNECTION SETUP COMPLETE message. SS then checks the IE “Measurement Capability” of this message and verifies that the UE is capable of performing inter-frequency measurements under FDD mode. After the confirmation of the UE inter-frequency measurement ability, SS transmits PHYSICAL CHANNEL RECONFIGURATION message. In this message, information related to the radio bearers and uplink/downlink radio resources remain unchanged as compared to the equivalent IEs found in RRC CONNECTION SETUP message. The only difference concerns IE “DPCH compressed mode info”, which indicates that the UE shall apply the given parameters for compressed mode operations. The UE shall return PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to acknowledge that compressed mode mechanism can be exercised.

SS then send a MEASUREMENT CONTROL message to the UE, specifying that cell 2 be the measurement object for inter-frequency type measurement. The periodic reporting criterion is selected for this measurement. SS waits for 8 seconds to allow the periodic timer to expire. The UE shall send a MEASUREMENT REPORT message containing measured result of cell 2’s reporting quantity (CPICH Ec/No). SS transmits PHYSICAL CHANNEL RECONFIGURATION message again, requesting the UE to switch its uplink and downlink DPDCH to common

physical channels. The UE shall return PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and then moves to CELL_FACH state. SS waits for another 8 seconds to detect any possible uplink MEASUREMENT REPORT messages as a result of inter-frequency measurements. SS then increases the transmission power of cell 2 by 20 dBm. SS waits for [x] seconds to allow the UE to perform cell re-selection. The UE shall transmit a CELL UPDATE message on the uplink CCCH of cell 2, specifying the cause as “cell re-selection”. SS replies with CELL UPDATE CONFIRM message.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1				UE is initially in idle mode and camped onto cell 1. SYSTEM INFORMATION BLOCK TYPE 12 is redefined, disabling all measurement and reporting activities.
2		←	PAGING TYPE 1	SS pages UE with cause set to “incoming circuit-switched call”
3		→	RRC CONNECTION REQUEST	
4		←	RRC CONNECTION SETUP	Uplink and downlink DPDCH resources are allocated.
5		→	RRC CONNECTION SETUP COMPLETE	UE shall indicate that it's capable of performing inter-frequency measurement for FDD mode.
6		←	PHYSICAL CHANNEL RECONFIGURATION	SS instructs UE to begin compressed mode operation.
7		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall enter CELL_DCH state.
8		←	MEASUREMENT CONTROL	SS indicates that cell 2 be monitored. SS waits for 8 seconds.
9		→	MEASUREMENT REPORT	UE shall transmit this message to report cell 2's CPICH Ec/No value.
10		←	PHYSICAL CHANNEL RECONFIGURATION	SS changes the physical channel allocation to common channel configuration.
11		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall move to CELL_FACH state.
12				SS waits for 8 seconds to verify that no MEASUREMENT REPORT messages are detected.
13				SS changes SYSTEM INFORMATION BLOCK TYPE 12 message to request that cell 2 be included in neighbour cell list for inter-frequency measurements.
14				SS increases the transmission power of cell 2 by 20 dBm, and then wait for a [x] seconds to allow the UE to re-select to a new cell.
15		→	CELL UPDATE	UE shall detect that cell 2 has become the best cell and then perform cell re-selection procedure.
16		←	CELL UPDATE CONFIRM	SS acknowledges the cell 2 is updated.

Notes:

The value [x] seconds is TBD, after the cell re-selection duration is determined from TS 25.304.

- TGD	35
- TGPL1	Mode 1
- TGPL2	Mode 1
- RPP	DL
- ITPRM	F/2
- UL/DL Mode	F/2
- Downlink compressed mode method	No code change
- Uplink compressed mode method	A
- Scrambling code change	2.0
- Downlink frame type	1.0
- DeltaSIR	
- DeltaSIRAfter	

MEASUREMENT CONTROL (Step 8)

Information Element	Value/Remark
Measurement Identity Number	15
Measurement Command	Setup
Measurement Reporting Mode	Not Present
Additional measurements list	Not Present
CHOICE measurement type	Inter-frequency measurement
- Inter-frequency cell info list	
- Removed inter-frequency info list	Not Present
- New inter-frequency info list	
- Inter-frequency cell id	Set to id of cell 2
- Frequency info	
- UARFCN uplink (Nu)	UARFCN of the uplink frequency for cell 2
- UARFCN downlink (Nd)	UARFCN of the downlink frequency for cell 2
- Cell info	
- Cell individual offset	0 dB
- Reference time difference to cell	0 chips
- Primary CPICH Info	
- Primary Scrambling Code	Set to same code as used for cell 2
- Primary CPICH TX power	Not Present
- Read SFN Indicator	FALSE
- TX Diversity Indicator	FALSE
- Inter-frequency measurement quantity	
- CHOICE reporting criteria	Inter-frequency reporting criteria
- Filter Coefficient	0
- Measurement quantity for frequency quality estimate	CPICH Ec/No
- Inter-frequency reporting quantity	
- UTRA Carrier RSSI	FALSE
- Frequency quality estimate	TRUE
- Non frequency related cell reporting quantities	
- SFN-SFN observed time difference	No report
- Cell Identity	FALSE
- CPICH Ec/No	FALSE
- CPICH RSCP	FALSE
- Pathloss	FALSE
- CFN-SFN observed time difference	FALSE
- Reporting cell status	Not present
- Measurement validity	Not present
- Inter-frequency set update	Not present
- CHOICE report criteria	Periodic reporting criteria
- Amount of reporting	Infinity
- Reporting interval	8 seconds

MEASUREMENT REPORT (Step 9)

Information Element	Value/Remarks
Measurement identity number	Check to see if set to 15
Measurement Results	
- CHOICE measurement	Check to see if set to "Inter-frequency measured results list"
- Inter-frequency measurement results	
- Frequency info	
- UARFCN (uplink)	Check to see if set to the UARFCN of the uplink frequency for cell 2
- UARFCN (downlink)	Check to see if set to the UARFCN of the downlink frequency for cell 2
- UTRA carrier RSSI	Check to see if it is absent
- Inter-frequency cell measurement results	
- Cell measured results	
- Cell Identity	Check to see if set to the id of cell 2
- SFN-SFN observed time difference	Check to see if it is absent
- Primary CPICH Info	
- Primary Scrambling Code	Check to see if set to the same code for cell 2
- CPICH Ec/No	Check to see if it is present
- CPICH RSCP	Check to see if it is absent
- Pathloss	Check to see if it is absent
- CFN-SFN observed time difference	Check to see if it is absent
Event Results	Check to see if it is absent

PHYSICAL CHANNEL RECONFIGURATION (Step 10)

Use the same message sub-type found in Clause 8.1 of TS34.108, which is entitled “(Packet to CELL_FACH from CELL_DCH in PS”.

CELL UPDATE

Information Element	Value/Remarks
U-RNTI	Check to see if same to value as in RRC CONNECTION SETUP message
Integrity check info	Check to see if it is absent
AM_RLC error indication (for C-plane)	Check to see if it is set to FALSE
AM_RLC error indication (for U-plane)	Check to see if it is set to FALSE
Cell update cause	Check to see if it is set to “Cell Reselection”
Protocol error info	Check to see if it is absent or set to FALSE
Measured results on RACH	Check to see if it is absent
Protocol error information	Check to see if it is absent

CELL UPDATE CONFIRM

Use the same message sub-type found in Clause 8.1 of TS34.108.

8.4.1.6.5 Test Requirement

After step 4 the UE shall transmit RRC CONNECTION SETUP COMPLETE message with the IE “Measurement capability”, indicating that both uplink and downlink inter-frequency measurements for FDD mode are supported.

After step 8 the UE shall transmit MEASUREMENT REPORT message to report cell 2’s CPICH Ec/No value.

After step 11 the UE shall stop sending MEASUREMENT REPORT messages which contain inter-frequency measured results for cell 2’s CPICH Ec/No value.

After step 14 the UE shall transmit CELL UPDATE message to inform that a cell reselection to cell 2 has occurred.

Contents of UE CAPABILITY INFORMATION message : AM or UM

Information Element	Value/remark
Message Type Integrity check info UE radio access capability <u>Conformance test compliance</u> <u>ICS Version</u> - PDCP Capability - RLC Capability - Transport channel capability - RF Capability - Physical channel capability - UE multi-mode/multi-RAT capability - Security Capability - LCS Capability - Measurement capability UE system specific capability	Not checked Value will be checked. Reason for change:

In CR-354 for TS 25.331 V3.2.0, it was explained that the identity of a RB mapped to a common transport channel (RACH and FACH) cannot be uniquely identified. This is due to functional split between MAC-d and MAC-c/sh at the Iur interface as defined by RAN3. As result, in the case of RB multiplexing onto a common transport channel, the channel identity need not be known to the UE. RAN2 therefore explicitly forbid the possibility to state that a RB will appear on a certain RACH/FACH in CR-354. This CR proposes the removal of "Transport channel" IE in "RB mapping info" IE when common transport channels are involved.

In CR 355r2 for TS 25.331 V3.2.0, several modifications were adopted by RAN#8. The relevant changes affect "RB mapping info" IE in TS 34.123-1 in the following ways:

1. "Logical channel max loss" IE is added.
2. "MAC logical channel priority" IE is made mandatory.
3. For uplink TM RLC, it's possible to use timer discard without explicit signalling. In all uplink RB using transparent mode, it's specified that "Transmission RLC Discard" IE is not present.

For some bi-directional RBs, uplink parameters are found to be missing. The necessary modifications are reflected in this CR.

8.3.1.14 Cell Update: Radio Bearer Control for Transition from CELL_DCH to CELL_FACH

8.3.1.14.1 Definition

8.3.1.14.2 Conformance Requirement

During a transition from CELL_DCH state to CELL_FACH state arising from the execution of radio bearer control procedure, the UE might be requested to re-select to an unknown cell. The UE shall select a cell and perform cell updating procedure. In order to distinguish the 2 cases of cell updating: (i) due to UE mobility and (ii) due to radio bearer control procedure, the update cause in CELL UPDATE message shall be different for these 2 cases. When the UTRAN receives this message, it is able to decide whether to initiate RNC reallocation and the establishment of new configuration in the target RNC.

8.3.1.14.3 Test Purpose

To confirm that the UE perform a cell update procedure after being instructed to move from CELL_DCH to CELL_FACH state as a result of radio bearer control procedure. To confirm that the UE indicates cause “RB Control” when transmitting a CELL UPDATE message to the selected cell. To confirm that the UE transmit a compatible response to conclude the radio bearer control procedure.

8.3.1.14.4 Method of Test

Initial Condition

System Simulator: 2 cells – both cell 1 and cell 2 are active and suitable for camping, with cell 1 having a stronger transmission power.

UE: CELL_DCH in cell 1

Test Procedure

The UE is brought to CELL_DCH state in cell 1, after the UE has successfully performed the RRC connection establishment procedure and ~~been~~was allocated dedicated physical resources. Next SS sends RADIO BEARER SETUP message to the UE on downlink DCCH. In this message, a DTCH channel is assigned to the UE. The UE shall reconfigure its channel resources and then return a RADIO BEARER SETUP COMPLETE message. Following this sequence, the UE sends RADIO BEARER RELEASE message to request that all radio bearers carried on dedicated physical channel be released. However, this message does not contain information about the target cell to select when transiting to CELL_FACH state. The UE shall perform a cell reselection and it shall detect the presence of cell 2. The UE shall send a CELL UPDATE message with cause set to “RB Control” on the CCCH carried by PRACH physical channel, specified in cell 2’s system information message. SS replies with CELL UPDATE CONFIRM message, specifying the IE’s “PRACH Info” and “Secondary CCPCH Info”. To complete this procedure, the UE shall transmit RADIO BEARER RELEASE COMPLETE message on the DCCH, which is carried on the PRACH physical channel specified in system information messages broadcasted in cell 2.

Expected Test Sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is in the CELL_DCH state after completing a successful RRC connection establishment procedure.
2		←	RADIO BEARER SETUP	Establishes DTCH logical channel.
3		→	RADIO BEARER SETUP COMPLETE	
4		←	RADIO BEARER RELEASE	Information on target cell is not specified.
5		→	CELL UPDATE	UE shall send this message on the uplink CCCH of cell 2. IE "Cell update cause" should be set to "RB Control". ~~IE "DRX Indicator" set to "No DRX".~~
6		←	CELL UPDATE CONFIRM	IEs "PRACH Info" and IE "Secondary CCPCH Info" are included in this message.
7		→	RADIO BEARER RELEASE COMPLETE	Sent on the PRACH given in system information messages.

Specific Message Contents

RADIO BEARER SETUP (Step 2)

Use the same message sub-type entitled "Packet to CELL_DCH from CELL_DCH in PS" found in Clause 8.4.9 of TS34.108, with the following exceptions:

Information Element	Value/remark
RAB information to setup list - RAB information for setup - RAB Info - RAB Identity - CN Domain Identity - RB Info to setup list - RB Info to setup - RB Identity - PDCP Info - RLC Info - RB Mapping Info	4 PS 4 Not Present. Use the same RLC configuration as in TS 34.108. Use the same RLC multiplexing scheme as in TS 34.108. Not Present.
RB to be affected list UL Transport Channel information common to all transport channels - TFC Subset - CHOICE Mode - UL DCH TFCS - CHOICE TFCI Signalling - TFCI Field 1 Information - CHOICE TFCS representation - TFCS addition information - CHOICE CTFC Size - CTFC Information - x bit CTFC - Gain factor information - Gain factor β_c - Gain factor β_d	Not Present – use default value, all TFCs are allowed. FDD Normal Addition Refer to TS 34.108 – This IE is repeated for the maximum number TFC to be added as specified in TS 34.108 for a selected transport channel
Deleted TrCH information list (uplink) Added or Reconfigured TrCH information list - Added or Reconfigured UL TrCH information - Transport channel identity - TFS - CHOICE Transport channel type - Dynamic Transport Format Information - Number of Transport blocks - CHOICE RLC mode - Octet mode RLC size info type 1 - CHOICE Octet mode RLC size - Size part 1 - Semi-static Transport Format - Transmission time interval - Type of channel coding - Coding Rate - Rate matching attribute - CRC size	2 Dedicated transport channels 1 Octet Mode RLC size info type 1 Size type 1 16 Use the same settings as in TS 34.108
DL Transport Channel information common to all transport channels Deleted TrCH information list (downlink) Added or Reconfigured TrCH information list - Added or Reconfigured DL TrCH information - Transport channel identity - TFS	Not Present. 2 Same as the TFS used in the uplink specified in this message.
Frequency info Maximum allow UL TX power	Not Present – use the existing frequency information Not Present – use the allowable UL TX power as specified by the UE's RF power class.
CHOICE Channel requirement Downlink information common for all radio links Downlink information per radio link list	Not Present. Not Present. Not Present.

RADIO BEARER SETUP COMPLETE (Step 3)

Only the message type is checked for this message.

RADIO BEARER RELEASE (Step 4)

Use the same message sub-type entitled “Packet to CELL_DCH from CELL_DCH in PS” found in Clause 8.49 of TS 34.108, with the following exceptions:

Information Element	Value/remark

RAB information to release list	4
- RB Identity

- Number of RLC logical channels	1
- Downlink transport channel type	FACH
- ~~Transport channel identity~~	1
- Logical channel identity	3
- RB information to be affected	DCCH for NAS_DT-AM Low Priority
- RB identity	3
- RB mapping info	
- Information for each multiplexing option	
- Number of RLC logical channels	1
- Uplink transport channel type	RACH
- ~~Transport channel identity~~	1
- Logical channel identity	4
- MAC logical channel priority	5
- ~~Logical channel max loss~~	<u>Not Present – Use default</u>
- Number of RLC logical channels	1
- Downlink transport channel type	FACH
- Transport channel identity	1
- Logical channel identity	4
UL Transport Channel information common to all transport channels	
- TFC Subset	Not Present – use default value, all TFCs are allowed.
- CHOICE Mode	FDD
- UL DCH TFCS	Use the same TFCS as in IE “RACH TFCS” found in system information block type 5 messages of cell 2.
Deleted TrCH information list (uplink)	Not Present.
Added or Reconfigured TrCH information list	
- Added or Reconfigured UL TrCH information	
- Transport channel identity	1
- TFS	Use the same TFS as in IE “RACH TFS” found in system information block type 5 messages of cell 2.
DL Transport Channel information common to all transport channels	
- SCCPCH TFCS	Use the same TFCS as in IE “TFCS” (for FACH) in IE “Secondary CCPCH system information” found in system information block type 5 messages of cell 2.

CELL UPDATE (Step 5)

Information Element	Value/remark
U-RNTI	Check to see if set to '0000 0000 0001'
- SRNC Identity	Check to see if set to '0000 0000 0000 0000 0001'
- S-RNTI	Not checked
Integrity check info	Check to see if set to 'FALSE'
AM_RLC error indicator (for C-plane)	Check to see if set to 'FALSE'
AM_RLC error indicator (for U-plane)	Check to see if set to 'RB Control'
Cell Update Cause	Check to see if it is absent or set to 'FALSE'
Protocol error indicator	Check to see if it is absent
Measured results on RACH	Check to see if it is absent
Protocol error information	Check to see if it is absent

CELL UPDATE CONFIRM (Step 6)

Use the same message sub-type found in Clause ~~8.4.9~~ of TS34.108.

RADIO BEARER RELEASE COMPLETE (Step 7)

Only the message type is checked in this message.

8.3.1.14.5 Test Requirement

After step 4 the UE shall reselect to cell 2, perform a cell update procedure by transmitting CELL UPDATE message. In this message, the IE "Cell Update Cause" shall be set to "RB Control".

After step 6 the UE shall send RADIO BEARER RELEASE COMPLETE message on the DCCH carried by the PRACH channel broadcasted on the system information message in cell 2.

Annex A. Default RRC Message Contents

This clause contains the default values of RRC messages, other than those specified in TS 34.108 clauses 6 and 9. Unless indicated otherwise in specific test cases, they shall be transmitted by the system simulator in RRC messages, and which are required to be received from the UE under test.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements which are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

In this clause, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

Default SYSTEM INFORMATION:

NOTE 1: SYSTEM INFORMATION BLOCK TYPE 1 (except for PLMN type "GSM-MAP"), SYSTEM INFORMATION BLOCK TYPE 8, SYSTEM INFORMATION BLOCK TYPE 9, SYSTEM INFORMATION BLOCK TYPE 10, SYSTEM INFORMATION BLOCK TYPE 14, SYSTEM INFORMATION BLOCK TYPE 15 and SYSTEM INFORMATION BLOCK TYPE 16 messages are not used.

Contents of ACTIVE SET UPDATE message: AM

Information Element	Value/remark
Message Type	
Integrity check info	Not Present
- message authentication code	
- RRC message sequence number	
Integrity protection mode info	Not Present
- Integrity protection mode command	
- Downlink integrity protection activation info	
- RRC message sequence number	
- RRC message sequence number	
- Integrity protection algorithm	
- Integrity protection initialisation number	
Ciphering mode info	Not Present(If ciphering is applied, this IE is needed)
- Ciphering mode command	stop
- Ciphering algorithm	Not Present(Standard UMTS Encryption Algorithm UEA1)
- Activation time for DPCH	Not Present(Used RLC-TM)
- Radio bearer downlink ciphering activation time	Not Present(Used RLC-AM or RLC-UM)
info	
- Radio bearer identity	
- RLC sequence number	
Activation time	$(256 + CFN - (CFN \text{ MOD } 8 + 8)) \text{ MOD } 256$
New U-RNTI	Not Present
CN information info	Not Present
- PLMN identity	
- CN common GSM-MAP NAS system information	
- CN domain identity	
- CN domain specific GSM-MAP NAS system information	
RB with PDCP information	Not Present
- RB identity	
- PDCP SN info	
Maximum allowed UL TX power	33dBm
Radio link addition information	(This IE is repeated for addition RL number.)
- Primary CPICH info	
- Primary scrambling code	The value is for additional cell
- Downlink DPCH info for each RL	
- Primary CPICH usage for channel estimation	Primary CPICH may be used
- Secondary CPICH info	Not Present
- Secondary scrambling code	
- channelisation code	
- DL channelisation code	
- Secondary scrambling code	
- Code number	1
- TPC combination index	SF-1(SF is reference to TS34.108 clause 6.10 Parameter Set)
- SSDT Cell Identity	0
- Closed loop timing adjustment mode	-a
- TFCI combining indicator	Not Present
- Secondary CCPCH info	TRUE
- Primary CPICH usage for channel estimation	Primary CPICH may be used
- Secondary CPICH info	Not Present
- Secondary scrambling code	
- channelisation code	
- Secondary scrambling code	
- SSDT Indicator	1
- Spreading factor	FALSE
- Code number	Reference to TS34.108 clause 6.10 Parameter Set
- Pilot symbol existence	SF-1(SF is reference to TS34.108 clause 6.10 Parameter Set)
- TFCI existence	FALSE
- Fixed or Flexible Position	TRUE
- Timing offset	Flexible
- TFCS	0
- Normal	(This IE is repeated for TFC number for PCH and FACH.)
- TFCI Field 1 information(Explicit TFCS Configuration)	
- Addition	
- TFCS addition	
information(Reconfiguration/Addition information)	
- CTFC information	

- CTFC	0 to MaxTFCValue-1 (MaxTFCValue is refer to TS34.108 clause 6.10 Parameter Set.)
- Gain factor information	
- Gain factor β_c	0
- Gain factor β_d	0
- FACH/PCH information	
- TFS	(PCH)
- Dynamic Transport format information	(This IE is repeated for TFI number.)
- Number of Transport blocks	Reference to TS34.108 clause 6.10 Parameter Set
- Octet mode RLC size info	
- Transport block size	Reference to TS34.108 clause 6.10 Parameter Set
- Semi-static Transport Format information	
- Transmission time interval	Reference to TS34.108 clause 6.10 Parameter Set
- Type of channel coding	Reference to TS34.108 clause 6.10 Parameter Set
- Coding Rate	Reference to TS34.108 clause 6.10 Parameter Set
- Rate matching attribute	Reference to TS34.108 clause 6.10 Parameter Set
- CRC size	Reference to TS34.108 clause 6.10 Parameter Set
- TFS	(FACH)
- Dynamic Transport format information	(This IE is repeated for TFI number.)
- Number of Transport blocks	Reference to TS34.108 clause 6.10 Parameter Set
- Octet mode RLC size info	
- Transport block size	Reference to TS34.108 clause 6.10 Parameter Set
- Semi-static Transport Format information	
- Transmission time interval	Reference to TS34.108 clause 6.10 Parameter Set
- Type of channel coding	Reference to TS34.108 clause 6.10 Parameter Set
- Coding Rate	Reference to TS34.108 clause 6.10 Parameter Set
- Rate matching attribute	Reference to TS34.108 clause 6.10 Parameter Set
- CRC size	Reference to TS34.108 clause 6.10 Parameter Set
- References to system information blocks	Not Present
- Scheduling information	
Radio link removal information	(This IE is repeated for removal RL number.)
- Primary CPICH info	
- Primary scrambling code	The value is for removal cell
TX Diversity Mode	None
SSDT information	Not Present

Subject: Updates to paging cause values and paging-related parameters

Work item:

Category:

(only one category
shall be marked
with an X)

- F Correction ☐
A Corresponds to a correction in an earlier release ☐
B Addition of feature ☐
C Functional modification of feature ☒
D Editorial modification ☐

Release:

- Phase 2 ☐
Release 96 ☐
Release 97 ☐
Release 98 ☐
Release 99 ☒
Release 00 ☐

Reason for change:

1. "Paging cause" in PAGING TYPE 1 messages and "establishment cause" in RRC CONNECTION REQUEST messages were modified according to CR-353r3. The affected RRC test cases were revised to use the new cause values.
2. PAGING TYPE 1 messages were changed to allow UEs supporting GSM-MAP CN types as well as ANSI-41 CN types.
3. For clause 8.3.1.15 "Cell Update: Acknowledged Mode RLC Reset", several modifications were made on the test procedure. The objective of the test case is to check that the UE is able to detect an unrecoverable RLC AM error, executes the RLC reset using cell update procedure and then resumes normal operations on the affected SRB (in this case SRB for RRC AM) after the reset. Previously, the test case requires the UE to transmit UPLINK DIRECT TRANSFER message (sent using the SRB for NAS AM). However, receiving such a message does not confirm that the RRC AM SRB is successfully re-initialized. New test steps were written to address this flaw.
4. The "paging cause" IE PAGING TYPE 2 message in Annex A is also updated.
5. The values for "CN Domain DRX cycle length" IE and "UTRAN DRX cycle length coefficient" IE in SIB messages are revised according to CR-313r2.

Other changes are carried out:

4. For clauses 8.1.1.4, 8.1.1.5 and 8.1.1.6, SYSTEM INFORMATION TYPE 1 messages are added into relevant test steps. This is done to enable these test cases to be applicable to that UEs supporting GSM-MAP or ANSI-MAP CN types.
5. SYSTEM INFORMATION TYPE 13 messages are modified to cater to both CS-only and PS-only UEs.
6. Editorial mistakes were corrected.

Clauses affected: 8.1.1.X, 8.1.4.6, 8.1.4.9, 8.1.4.10, 8.3.1.10, 8.3.1.15, 8.4.1.2, 8.4.1.3, 8.4.1.6,

Annex A.

8. Layer 3

8 Radio Resource Control RRC

8.1 RRC Connection Management Procedure

8.1.1 Paging

8.1.1.1 _____Paging for Connection in idle mode

8.1.1.1.1 Definition

8.1.1.1.2 Conformance requirement

In idle mode, UE monitors the paging occasions determined using parameters from SYSTEM INFORMATION BLOCK messages. When the UE receives a PAGING TYPE 1 message transmitted on PCCH during one of its assigned paging occasions, it should attempt to establish an RRC connection.

Reference

3GPP TS 25.331 clause 8.1.2, 3GPP TS 25.211 clause 5.3.3.7, 3GPP TS 25.304 clause 8.

8.1.1.1.3 Test purpose

To confirm that the UE establishes an RRC connection after it receives a PAGING TYPE1 message which includes IE "Paging Record"(UE identity) set to the IMSI of the UE.

8.1.1.1.4 Method of test

Initial Condition

System Simulator : 1 cell

UE :Idle state with a CN UE identity (set to IMSI).

Test Procedure

The SS transmits a PAGING TYPE1 message, which includes an unmatched CN UE identity for the UE in the idle state. The UE shall not change its state. The SS transmits a PAGING TYPE1 message, which includes a matched CN UE identity for the UE in the idle state. During transmission of PAGING TYPE 1 messages, SS selects the correct paging indicator on the PICH in order to allow the UE to respond to paging. Then the UE transmits an RRC CONNECTION REQUEST to the SS, the SS transmits an RRC CONNECTION SETUP to the UE. When the UE receives this message, the UE establishes an RRC connection.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	SYSTEM INFORMATION BLOCK TYPE 13	Transmit these messages on the BCCH, in addition to the normal BCCH transmissions. See specific message contents.
2		←	PAGING TYPE1	The SS transmits the message, which includes an unmatched identity (incorrect IMSI), then the UE does not change its state.
3		←	PAGING TYPE1	The SS transmits the message, which includes a matched identity (test-SIM IMSI).
4		→	RRC CONNECTION REQUEST	SS checks the following IEs: ~~“Initial UE identity” must be the same as test-SIM IMSI.~~ ~~“Establishment Cause” must “Terminating Call”~~ ~~“Protocol Indicator” must be FALSE~~
5		←	RRC CONNECTION SETUP	SS assigns DPCH resources to allow UE to establish an RRC connection.

Specific Message Contents

SYSTEM INFORMATION TYPE13

Information Element	Value/remark
CN domain system information list	Only 1 entry
CN domain system information	
- CN domain identity	Supported Domain (PS Domain or CS Domain)
- CHOICE CN Type	Supported CN type
- CN domain specific NAS system information	Default
- CN domain specific DRX cycle length coefficient	26
UE Timers and constants in idle mode	
- T300	5 sec.
- N300	3
- T312	10 sec
- N312	200

PAGING TYPE 1 (Step 2)

Information Element	Value/remark
Paging record list	Only 1 entry
Paging record	
CHOICE Paging originator	CN originator
- Paging cause	Terminating Call ~~whose kind is with one of the supported services (Conversational Call, Streaming Call, Interactive Call, Background Call, SMS)speech,CS Data,PS data,SMS,Unspecified)~~
- CN domain identity	Supported Domain (PS Domain or CS Domain)
- CHOICE UE Identity	IMSI
- IMSI	Set to an arbitrary octet string of length 7 bytes which is different from the IMSI value stored in the USIM card.

PAGING TYPE 1 (Step 3)

Information Element	Value/remark
Paging record list	Only 1 entry
Paging record	
CHOICE Paging originator	CN originator
- Paging cause	Terminating Call ~~whose kind is with one of the supported services (speech,CS Data,PS data,SMS,Unspecified)Conversational Call, Streaming Call, Interactive Call, Background Call, SMS)~~
- CN domain identity	Supported Domain (PS Domain or CS Domain)
- CHOICE UE Identity	IMSI
- IMSI	Set to the same octet string as in the IMSI stored in the USIM card

RRC CONNECTION REQUEST (Step 4)

Information Element	Value/remark
<u>Initial UE identity</u>	<u>Same as the IMSI stored in the USIM card, or the registered TMSI or P-TMSI</u>
<u>Establishment Cause</u>	<u>Check to see if it is set to the same value as "Paging Cause" IE in the PAGING TYPE 1 message transmitted on step 3.</u>
<u>Protocol Error Indicator</u>	<u>Check to see if it is set to FALSE</u>
<u>Measured results on RACH</u>	<u>Not checked.</u>

8.1.1.1.5 Test requirement

After step 2 the UE shall not transmit on the uplink CCCH in order to establish a RRC connection.

After step 5 the UE shall have an RRC connection based on dedicated physical channel resources.

8.1.1.2 _____ Paging for Connection in connected mode (CELL_PCH)

8.1.1.2.1 Definition

8.1.1.2.2 Conformance requirement

In CELL_PCH state, a UE can respond to a paging request from UTRAN. In this case, the UTRAN has requested to establish a connection with the UE. The UE should then attempt to perform a cell update procedure and move to CELL_FACH state in order to respond to the paging using uplink CCCH.

Reference

3GPP TS 25.331 clause 8.1.2

8.1.1.2.3 Test purpose

To confirm that the UE enters the CELL_FACH state after it receives a PAGING TYPE1 message which indicates that the paging has originated from UTRAN. To verify that the UE performs cell update procedure after entering the CELL_FACH state.

8.1.1.2.4 Method of test

Initial Condition

System Simulator : 1 cell

UE :CELL_PCH state with a valid U-RNTI already assigned by the SS

Test Procedure

The SS transmits a PAGING TYPE1 message, which includes an unmatched U-RNTI in CELL_PCH state . The UE does not change its state. Then SS transmits a PAGING TYPE 1 message with a matched identifier but originates from the CN instead of UTRAN. The UE should not change state after receiving this message. The SS transmits a PAGING TYPE1 message, which includes a matched U-RNTI in the connected state. Then the UE enters the CELL_FACH state and performs the cell updating procedure.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	SYSTEM INFORMATION BLOCK TYPE 13	Transmit these messages on the BCCH, in addition to the normal BCCH transmissions. See specific message contents
2		←	PAGING TYPE1	The SS transmits a message including an unmatched identifier. UE shall not respond to the paging.
3		←	PAGING TYPE1	The SS transmits a message includes a matched identifier but with the originator being the CN, UE shall not respond to the paging.
4		←	PAGING TYPE 1	The SS transmits the message with the UTRAN being the originator and including the UE's assigned U-RNTI
5		→	CELL UPDATE	The UE enters the CELL_FACH state. UE performs cell updating procedure. The CELL UPDATE message shall contain the value "Cell Update Cause" set to "paging response".

Specific Message Contents

PAGING TYPE 1 (Step 2)

Information Element	Value/remark
Paging record list	Only 1 entry
Paging record	
- CHOICE Paging originator	UTRAN originator
- U-RNTI	
- SRNC Identity	Set to an arbitrary 16-bit string which is different from the SRNC identity assigned.
- S-RNTI	Set to an arbitrary 20-bit string which is different from the S-RNTI assigned.

PAGING TYPE 1 (Step 3)

Same as the PAGING TYPE 1 message as in Clause 8.1.1.1.4, with the exception that the "BCCH modification info" IE should be omitted in the message.

PAGING TYPE 1 (Step 4)

Information Element	Value/remark
Paging record list	Only 1 entry
Paging record	
- CHOICE Paging originator	CN originator
- U-RNTI	
- SRNC Identity	Set to the same SRNC identity as previously assigned.
- S-RNTI	Set to the same S-RNTI as previously assigned.

SYSTEM INFORMATION BLOCK TYPE 12

Same as the SYSTEM INFORMATION BLCOK TYPE 13 message used in Clause 8.1.1.1.3.

8.1.1.2.5 Test requirement

After step 2 the UE shall not ~~change its state~~ respond to the PAGING TYPE 1 message sent in step 2.

After step 3 the UE shall not ~~change its state~~ respond to the PAGING TYPE 1 message sent in step 3.

After step 4 the UE shall enter the CELL FACH state and send a CELL UPDATE message with "Cell Update Cause" IE set to "paging response".

8.1.1.3 mode(URA_PCH) Paging for Connection in connected

8.1.1.3.1 Definition

8.1.1.3.2 Conformance requirement

This procedure is used to transmit a PAGING TYPE 1 message from the network to selected UEs in URA_PCH state using the paging control channel (PCCH). The UE listens to it and then enters the CELL_FACH state.

Reference

3GPP TS 25.331 clause 8.1.2

8.1.1.3.3 Test purpose

To confirm that the UE enters the CELL_FACH state after it receives a PAGING TYPE1 message which includes IE "Paging Record"(U-RNTI) for the UE and which is set to "CN" in IE"paging originator".

8.1.1.3.4 Method of test

Initial Condition

System Simulator : 1 cell

UE :URA_PCH state with a valid U-RNTI assigned by the SS

Test Procedure

The SS transmits a PAGING TYPE1 message, which includes an unmatched U-RNTI in URA_PCH state. The UE does not change its current state. The SS transmits a PAGING TYPE1 message which includes a matched U-RNTI in the connected state. Then the UE listens to it and enters the CELL_FACH state.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PAGING TYPE1	The SS transmits the message <u>that</u> includes an unmatched identifier, then the UE does not change its state.
2		←	PAGING TYPE1	The SS transmits the message <u>that</u> includes a matched identifier.
3		→	CELL UPDATE	The UE enters the CELL_FACH state.

Specific Message Contents

PAGING TYPE 1 (Step 1)

Information Element	Value/remark
Paging record list	Only 1 entry
Paging record	
- CHOICE Paging originator	UTRAN originator
- U-RNTI	Set to an unused SRNC identity which is different from the SRNC identity assigned.
- SRNC Identity	
- S-RNTI	Set to an arbitrary 20-bit string which is different from the S-RNTI assigned.

PAGING TYPE 1 (Step 2)

Information Element	Value/remark
Paging record list	Only 1 entry
Paging record	
- CHOICE Paging originator	UTRAN originator
- U-RNTI	
- SRNC Identity	Set to the previously assigned SRNC identity
- S-RNTI	Set to previously assigned S-RNTI

8.1.1.3.5 Test requirement

After step 1 the UE shall not respond to the paging ~~change its state~~.

After step 2 the UE shall enter the CELL FACH state, and transmit CELL UPDATE message to initiate the cell updating procedure with the paging cause set to “paging response”.

8.1.1.4 _____ Paging for Notification in idle mode

8.1.1.4.1 Definition

8.1.1.4.2 Conformance requirement

When a system information blocks on the BCCH is modified, the ~~message~~ PAGING TYPE 1 message can be sent on the PCCH to inform the UE about the changes which ~~is are~~ currently ~~operating taking place~~ in the idle mode. The PAGING TYPE 1 message includes the IE "BCCH Modification Information". Upon receiving this notification from the UTRAN, the UE shall read the relevant MIB and/or SIB(s) subsequently during idle mode.

Reference

3GPP TS 25.331 clause 8.1.1.2

8.1.1.4.3 Test purpose

To confirm that the UE checks the included new value tag of the master information block and read the SYSTEM INFORMATION₁ after it receives a PAGING TYPE1 message which includes the IE "BCCH Modification Information".

8.1.1.4.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : Idle state with a CN UE identity .

Test Procedure

The UE is in the idle state before SS starts changing SYSTEM INFORMATION BLOCK TYPE 1 or TYPE 13 message, depending on the CN type supported by the UE. The SS transmits a PAGING TYPE1 message on the paging occasions assigned to the UE. The message shall include the IE "BCCH Modification Information" indicating the starting time when the BCCH system information is modified. Simultaneously, SS continuously send MASTER INFORMATION BLOCK with the "MIB Value Tag" changed. The modified SYSTEM INFORMATION BLOCK TYPE 1 or TYPE 13 message shall be transmitted continuously too. The IE "DRX Cycle Length Coefficient" is altered with respect to the original IE. The SS shall wait until the stated starting time and then transmit the PAGING TYPE 1 message. The message shall address the UE using its IMSI and set the "paging cause" IE ~~set to~~ a compatible "terminating call" type that is supported by the UE. The UE shall react to the PAGING TYPE 1 message and send a RRC_CONNECTION_REQUEST message to SS.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	SYSTEM INFORMATION BLOCK TYPE 1 or SYSTEM INFORMATION BLOCK TYPE 13	SS transmits information on BCCH in order for UE to listen to one of the S-CCPCH physical channel, which carries PAGING TYPE 1 messages on PCCH. Relevant paging parameters are also broadcasted.
2		←	PAGING TYPE 1	SS transmits the message includes the IE "BCCH Modification Information", with the "Value Tag" changed from the "MIB Value Tag" of the current Master Information Block. Also the modification time is set to 4094 radio frame from the current SFN.
3		←	MASTER INFORMATION BLOCK	SS starts to transmit the MIB with the "MIB Value Tag" IE different from the original setting.
		←	SYSTEM INFORMATION BLOCK TYPE 1 or SYSTEM INFORMATION BLOCK TYPE 13	At the same time, SS starts to transmit the affected modified message continuously. The value of IE "DRx Cycle Length Coefficient" is changed in this message.
4		←	PAGING TYPE 1	SS transmits this message continuously on the PCCH according to the new value of "DRx Cycle Length Coefficient".
5				SS starts to monitor the uplink RACH after approximately 4096 radio frames from step 2.
6		→	RRC CONNECTION REQUEST	UE transmits a request due to answer to the PAGING TYPE 1 received in step 5. The IE "Establishment Cause" should be set to "Terminating Call" supported by the UE and the "Initial UE Identity" set to UE's IMSI.
7		←	RRC CONNECTION REJECT	UE shall return to idle mode after receiving this message

Specific Message Contents

SYSTEM INFORMATION BLOCK TYPE 1 (Step 1) – for UEs supporting GSM-MAP core networks

Information Element	Value/remark

Redirection info	Not Present

8.1.1.4.5 Test requirement

After step 6 the UE shall transmit RRC CONNECTION REQUEST message in response to the PAGING TYPE 1 message.

8.1.1.5 _____ Paging for Notification in connected mode
(CELL_PCH)

8.1.1.5.1 Definition

8.1.1.5.2 Conformance requirement

When a system information block on the BCCH is modified, the message PAGING TYPE1 can be sent on the PCCH to inform the UE about this change in the CELL_PCH state. ~~The This message shall include the IE "BCCH Modification Information".~~ Upon receiving this notification from the UTRAN, the UE shall read the relevant MIB and/or SIB(s) subsequently while in CELL_PCH state.

Reference

3GPP TS 25.331 clause 8.1.1.5.2

8.1.1.5.3 Test purpose

To confirm that the UE enters the CELL_FACH state, checks the ~~included~~ new value tag of the master information block, and read the SYSTEM INFORMATION messages after it receives a PAGING TYPE1 message which includes the IE "BCCH Modification Information";

8.1.1.5.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_PCH state with a valid U-RNTI assigned to it.

Test Procedure

Test steps 1 to 5 under Clause 8.1.1.4 can be applied to this test. However, the PAGING TYPE 1 messages used in step 2 and step 4 need to be altered. The changes are indicated in the specific message content paragraph under this clause. At step 6, UE shall send the CELL UPDATE message indicating the “cell update cause” to be “paging response”. SS then replies with a CELL UPDATE CONFIRM message to allow the UE to transit to CELL_FACH state.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	<u>SYSTEM INFORMATION BLOCK TYPE 1</u> or SYSTEM INFORMATION BLOCK TYPE 13	SS transmits information on BCCH in order for UE to listen to one of the S-CCPCH physical channel, which carries PAGING TYPE 1 messages on PCCH. Relevant paging parameters are also broadcasted.
2		←	PAGING TYPE 1	SS transmits the paging message which comprises IE “BCCH Modification Information”, with the “Value Tag” changed from the “MIB Value Tag” of the current Master Information Block. Also the modification time is set to 4094 radio frame from the current SFN.
3		←	MASTER INFORMATION BLOCK	SS starts to transmit the MIB with the “MIB Value Tag” IE different from the original setting.
		←	<u>SYSTEM INFORMATION BLOCK TYPE 1</u> or SYSTEM INFORMATION BLOCK TYPE 13	At the same time, SS starts to transmit the affected modified message continuously. The value of IE “DRx Cycle Length Coefficient” is changed in this message.
4		←	PAGING TYPE 1	SS transmits this message continuously on the PCCH according to the new value of “DRx Cycle Length Coefficient”. This message shall page the UE with its U-RNTI and setting the UTRAN as the paging originator.
5				SS starts to monitor the uplink RACH after approximately 4096 radio frames from step 2.
6		→	CELL_UPDATE	The IE “Cell Update Cause” should be set to “Paging Response” and the IE “U-RNTI” shall be similar to the UE’s U-RNTI value. The “Protocol Error Indicator” IE shall be set to FALSE.
7		←	CELL_UPDATE CONFIRM	UE shall transit to CELL_FACH state after receiving this message.

Specific Message Contents

SYSTEM INFORMATION BLOCK TYPE 1 or TYPE 13 (Step 1)

The content of this message is the same in the message used in step 1 specified in Clause 8.1.1.4.3.

PAGING TYPE 1 (Step 2)

8.1.1.6.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : URA_PCH state with a valid U-RNTIassigned.

Test Procedure

The UE is in the URA_PCH state before the SS starts changing SYSTEM INFORMATION BLOCK messages. SS modifies its SYSTEM INFORMATION and updates the “value tag” of both the SYSTEM INFORMATION BLOCK and of the MASTER INFORMATION BLOCK. After a while, the SS transmits a PAGING TYPE 1 message, which includes the IE” BCCH Modification Information”. The UE enters the CELL_FACH state and reads the modified SYSTEM INFORMATION BLOCK. The UE shall act according to the modified message. In this testcase, the UE shall adjust it paging occasions and read the new PCCH blocks newly assigned to it under DRX mode.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	SYSTEM INFORMATION	The SS changes the SYSTEM INFORMATION when the UE is in the connected state (URA_PCH).
2		←	PAGING TYPE 1	SS transmits the message includes the IE”BCCH Modification Information”.
3				The UE enters the CELL_FACH state and reads the SYSTEM INFORMATION and then the UE follows this message.

Specific Message Contents

None

8.1.1.6.5 Test requirement

After step 2 the UE shall enter the CELL_FACH state and read the SYSTEM INFORMATION message and follow it.

8.1.1.7 _____ Paging for Connection in connected mode
(CELL_DCH)

8.1.1.7.1 Definition

8.1.1.7.2 Conformance requirement

This procedure is used to transmit a PAGING TYPE 2 message from the network to selected UEs in CELL_DCH state using the dedicated control channel(DCCH). The UE listens to it and responds to this message accordingly.

Reference

3GPP TS 25.331 clause 8.1.9

8.1.1.7.3 Test purpose

To confirm that the UE responds this message after it receives a PAGING TYPE2 message which includes IE ”Paging Record Type Identifier” for the UE.

8.1.1.7.4 Method of test

Initial Condition

System Simulator : 1 cell.

UE : CELL_DCH state, but neither a valid TMSI nor P-TMSI is assigned to the UE

Test Procedure

The SS transmits a PAGING TYPE 2 message which includes a unmatched Paging Record Type Identifier in CELL_DCH state. The UE shall not respond to this message. SS pages the UE again, this time with a matched Paging Record Type Identifier but with the IE"paging cause" set to one of the spare values. UE shall respond by transmitting a RRC STATUS message on the DCCH using RLC-AM mode. Finally, SS transmits a PAGING TYPE 2 message, which includes a matched Paging Record Type Identifier. Then the UE shall responds to this message by the transmission of an upper layer message.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	PAGING TYPE 2	The SS transmits the message includes an unmatched identifier, then the UE does not respond.
2		←	PAGING TYPE 2	The SS transmits the message includes a matched identifier.
3	↔		RRC STATUS	The UE shall respond by reporting the protocol error to the SS.
4		←	PAGING TYPE 2	The UE shall respond to the paging message in step 2.
5				The UE shall respond to the paging message in step 2.

Specific Message Contents

PAGING TYPE 2 (Step 1)

Information Element	Value/remark
Paging cause	Terminating Call supported by the UE
CN domain identity	Domain supported by the UE
Paging Record Type Identifier	~~Unsupported~~ Set to "TMSI" or "P-TMSI"

PAGING TYPE 2 (Step 2)

Information Element	Value/remark
Paging cause	Use one of the 3-spare values
CN domain identity	Domain supported by the UE
Paging Record Type Identifier	~~Supported IMSI~~ Set to "IMSI (GSM-MAP)" for UEs supporting GSM-MAP core network type or "IMSI (DS-41)" for UEs supporting ANSI-41 core network type.

RRC STATUS (Step 3)

Information Element	Value/remark
Protocol error information	Checked to see if set to "Information element value not comprehended"

PAGING TYPE 2 (Step 4)

Information Element	Values/Remarks
Paging cause	Terminating Call supported by the UE
CN domain identity	Domain supported by the UE
Paging Record Type Identifier	~~Supported IMSI~~ Set to "IMSI (GSM-MAP)" for UEs supporting GSM-MAP core network type or "IMSI (DS-41)" for UEs supporting ANSI-41 core network type.

8.1.1.7.5 Test requirement

After step 1 the UE shall not respond to the paging message on the DCCH.

8.1.1.8.5 Test requirement

After step 1 the UE shall not respond.

After step 2 the UE shall respond.

8.1.4.6 RRC Connection Re-Establishment: Failure(T315=0,T314=0)

8.1.4.6.1 Definition

8.1.4.6.2 Conformance requirement

RRC connection re-establishment is needed, when a UE loses the radio connection due to e.g. radio link failure in CELL_DCH state. However the UE must enter to idle mode when T314 is set to 0 in RADIO BEARER SETUP message and also T315 is set to 0 in SYSTEM INFORMATION message.

Reference

3GPP TS 25.331 clause 8.1.5

8.1.4.6.3 Test purpose

To confirm that the UE enters to idle mode, after detecting that a radio link failure has occurred.

8.1.4.6.4 Method of test

Initial Condition

System Simulator : 1 cell

UE: CELL_DCH state

Test Procedure

The UE is brought to CELL_DCH state after making an successful outgoing call attempt. After the call has been established, the SS stops transmitting and receiving on the radio link except PCCPCH, the UE should detect a radio link failure . Then the UE shall enter to idle mode as both T314 and T315 are set to 0. The SS transmits a PAGING TYPE1 message on the PCCH to confirm that the UE is in idle state., the UE transmits an RRC CONNECTION REQUEST message on the uplink CCCH.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	T314=0
2		→	RADIO BEARER SETUP COMPLETE	
3				The UE is brought to CELL_DCH state, after making a successful outgoing call.
4				The SS stops transmitting and receiving on the radio link except the PCCPCH.
5				The UE should enter to idle mode after it detects the radio link failure and SS confirms that the UE does not transmit any RRC CONNECTION RE-ESTABLISHMENT REQUEST messages for 20 seconds.
6		←	PAGING TYPE1	SS resumes transmission and reception on radio links suspended in step 4. SS pages the UE using a matched identity (test-SIM IMSI).
7		→	RRC CONNECTION REQUEST	SS checks the following IEs : "Initial UE identity" – must be the same as test-SIM IMSI. "Establishment Cause" – must "Terminating Call" "Protocol Indicator" – must be FALSE
8		←	RRC CONNECTION SETUP	SS assigns DPCH resources to allow UE to establish a RRC connection.

Specific Message Contents

- CN domain identity	Supported Domain (PS Domain or CS Domain)
- CHOICE UE Identity	IMSI
- IMSI	Set to the same octet string as in the IMSI stored in the USIM card

8.1.4.6.5 Test requirement

After step 4 the UE shall not transmits an RRC CONNECTION RE-ESTABLISHMENT REQUEST message.

After step 8 the UE shall have an RRC connection based on dedicated physical channel resources.

8.1.4.9 RRC Connection Re-Establishment: Failure(T314 is timeout and T315=0)

8.1.4.9.1 Definition

8.1.4.9.2 Conformance requirement

RRC connection re-establishment is needed, when a UE loses the radio connection due to e.g. radio link failure in CELL_DCH state. When the UE shall not find a new cell until T314 is timeout The UE must enter to idle mode .

Reference

3GPP TS 25.331 clause 8.1.5

8.1.4.9.3 Test purpose

To confirm that the UE enters to idle mode, after T314 is timeout.

8.1.4.9.4 Method of test

Initial Condition

System Simulator : 1 cell

UE: CELL_DCH state

Test Procedure

The UE is brought to CELL_DCH state after a successful outgoing call attempt. After the call has been established, the SS stops transmitting and receiving on the radio link except PCCPCH, the UE should detect a radio link failure . Until T314 is timeout the UE shall continue to find a new cell and SS transmits a PAGING TYPE1 message on the PCCH to confirm that the UE is not in idle state by no response before T314 is timeout After T314 is timeout then the UE shall enter to idle mode The SS transmits a PAGING TYPE1 message on the PCCH to confirm that the UE is in idle state., the UE transmits an RRC CONNECTION REQUEST message on the uplink CCCH.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	T314=20 seconds
2		→	RADIO BEARER SETUP COMPLETE	
3				The UE is brought to CELL_DCH state, after making a successful outgoing call.
4				The SS stops transmitting and receiving on the radio link except •for the PCCPCH.
5		←	PAGING TYPE1	The SS transmits the message, which includes a matched identity (test- SIM IMSI) before T314 is timeout.
6				The SS confirms that the UE does not transmit a response for 20 seconds.
7		←	PAGING TYPE1	The SS transmits the message, which includes a matched identity (test- SIM IMSI).
8		→	RRC CONNECTION REQUEST	SS checks the following IEs : “Initial UE identity” – must be the same as test-SIM IMSI. “Establishment Cause – must “Terminating Call” “Protocol Indicator” – must be FALSE

8.3.1.10 Cell Update: expiry of T307 after T305 expiry and being out of service area

8.3.1.10.1 Definition

8.3.1.10.2 Conformance requirement

This procedure is required to cater for the case of a failure to update UTRAN with the current cell, after the expiry of T307. In this case, the UE shall return to idle mode and perform cell reselection if possible.

Reference

3GPP TS 25.331 clause 8.3.1

8.3.1.10.3 Test purpose

To confirm that the UE moves to idle mode after the expiry of T307, indicating that it is out of service area when attempting to perform a periodic cell updating procedure.

8.3.1.10.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CELL_PCH

Test Procedure

The UE is in CELL_PCH state at the start of the test. Before the expiry of periodic cell updating timer T305, SS starts to decrease the downlink transmission power such that the UE discovers that the cell is no longer suitable for camping and this results in a “out of service area” condition. The SS continues to listen to the uplink channel to detect possible attempts to perform a cell updating procedure. The UE shall not send CELL UPDATE message on the uplink DCCH, instead it triggers timer T307. After the expiry of timer T307 the UE shall enter idle state. This is confirmed by the SS₁ when it sends a PAGING TYPE 1 message to the UE using its U-RNTI identity, and the UE does not respond to the page. SS then attempts to page for the UE again, this time using PAGING TYPE 2 message sent on downlink DCCH. Likewise, the UE shall not respond to this page.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is brought to CELL_FAPCH state.
2				SS starts to decrease the transmission power until the cell is no longer suitable for camping. The UE shall detect that it is out of service area and refrains from transmitting CELL UPDATE message due to periodic cell updating.
3				The UE detects the expiry of timer T305 and it searches for other cells to camp on. ~~(T307 timer starts)~~ . After the expiry of timer T307, the UE ~~The UE~~ shall ~~enters to the idle state~~ mode.
4		←	PAGING TYPE 1	SS pages the UE at its assigned paging occasion using the allocated U-RNTI value. The UE shall not respond to this page as it has already entered the idle mode.
5		←	PAGING TYPE 2	SS pages the UE on the downlink DCCH. The UE shall not respond to this page.

Specific Message Contents

Paging Type 1 (Step 4)

Information Element	Value/remark
Page record list - Paging record - CHOICE Paging originator - U-RNTI - SRNC Identity - S-RNTI BCCH Modification info	UTRAN Originator Check to see if set to '0000 0000 0001' Check to see if set to '0000 0000 0000 0000 1111' Not Present.

Information Element	Value/remark
Integrity check info Paging cause CN domain identity Paging Record Type Identifier	Not Present ~~Terminating PS Data Call~~ Set to a cause corresponding to one radio access bearer services supported by the UE. CS-Domain IMSI- ~~(DS-41)~~

8.3.1.10.5 Test requirement

After step 4 the UE shall remain in the idle mode and not respond to the paging message sent on PCCH.

After step 5 the UE shall remain in the idle mode and not respond to the paging message addressed to it on the DCCH.

8.3.1.15 Cell Update: Acknowledged Mode RLC Reset

8.3.1.15.1 Definition

8.3.1.15.2

Conformance Requirement

In CELL_FACH, the UE shall ensure that all AM RLC entities (for both signalling links and u-plane links) are operational. In the event that an unrecoverable error has occurred (~~detectable when the amount of retransmissions of RESET_PDU reaches the value of MAX_DAT and the UE fails to receive any acknowledgements~~), the UE shall trigger cell update procedure to report this event. The UE shall send CELL UPDATE message on the uplink CCCH and set the appropriate AM_RLC error indicator IE(s) to TRUE. After receiving the CELL UPDATE CONFIRM message, the UE shall reset the affected AM RLC entities and then resume transmission and reception activities.

8.3.1.15.3

Test Purpose

To confirm that the UE reports the occurrence of an unrecoverable error in a C-plane AM RLC entity by initiating a cell update procedure. To confirm that the UE is able to resume normal C-plane data transmission and reception after the completion of cell update procedure.

8.3.1.15.4

Method of Test

Initial Condition

System Simulator: 1 cell

UE: Idle Mode

Test Procedure

The UE is initially in idle mode and camped onto cell 1. SS pages the UE using the IMSI identity stored in the test USIM card, with stating the cause stated as "Terminating PS Data Call" a terminating call with one of the traffic classes supported by the UE. The UE shall respond by transmitting the RRC CONNECTION REQUEST message on the uplink CCCH, triggering the start of RRC connection establishment procedure. SS assigns common physical resources to the UE by sending RRC CONNECTION SETUP message. The UE shall reply with RRC CONNECTION SETUP COMPLETE on the DCCH before transiting to CELL_FACH state. Next, SS sends RADIO BEARER SETUP message on the DCCH using AM mode to establish a DTCH logical channel for u-plane packet data transfer. The UE shall reply with a RADIO BEARER SETUP COMPLETE message, sent using AM RLC on the DCCH. Then it activates the associated DTCH logical channel for user data transmission and reception. SS does not acknowledge the RADIO BEARER SETUP COMPLETE message. The UE shall continue to transmit the AM PDU carrying RADIO BEARER COMPLETE message until the maximum re-transmission count is reached. Thereafter, the UE shall start sending RESET PDUs to request that the AM RLC entity for RRC signalling be re-initialized. SS ignores the requests and wait for a duration equivalent to ~~the period equivalent to~~ (MAX_RST+1) times expiry of Timer_RST. This figure is specified in IE"RLC info" of RADIO BEARER SETUP message in step 6. At this point, the UE shall initiate a cell update procedure by transmitting CELL UPDATE message on the uplink CCCH. The CELL UPDATE message shall specify the value "TRUE" in IE"-AM_RLC error indicator (for C-plane)". SS replies with CELL UPDATE CONFIRM message using the default message content. SS then attempts to perform a local authentication by transmitting a COUNTER CHECK ~~pages the UE using PAGING TYPE 2 message using AM RLC on DCCH~~. The UE shall respond by sending an UPLINK DIRECT TRANSFER COUNTER RESPONSE message on the uplink DCCH, ~~which shall be embedded in an PDU originating from the AM RLC entity for RRC signalling verifying that the AM RLC entity for RRC signalling was successfully reset~~.

Expected Test Sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is initially in idle mode.
2		←	PAGING TYPE 1	SS pages the UE, citing the reason <u>“Terminating PS data call”</u> cause as a terminating call with one of the supported traffic classes in the PAGING TYPE 1 message.
3		→	RRC CONNECTION REQUEST	Sent on CCCH using transparent mode.
4		←	RRC CONNECTION SETUP	Allocate common physical resources for signalling RBs.
5		→	RRC CONNECTION SETUP COMPLETE	Sent on CCCH using transparent mode.
6		←	RADIO BEARER SETUP	Establishes a DTCH logical channel operating in AM mode.
7		→	RADIO BEARER SETUP COMPLETE	UE shall stay in CELL_FACH state. SS does not acknowledge this AM PDU. The UE shall re-transmit this AM PDU until the maximum number has been reached.
8				UE shall start to transmit RESET PDU using AM RLC on the DCCH. SS does not respond to any PDU frames originating from the UE, and it waits for a period equivalent to (MAX_RST+1) times expiry of Timer_RST. This figure is specified in IE“RLC info” of RADIO BEARER SETUP message in step 6.
9		→	CELL UPDATE	UE shall send this message on CCCH. IE“AM_RLC Error Indication (for C-plane)” shall be set to ‘TRUE’
10		←	CELL UPDATE CONFIRM	“DRX Indicator” set to “No DRX”. UE shall transit to CELL_FACH state.
11		←	~~PAGING TYPE 2~~ COUNTER CHECK	~~SS pages the UE requests for a local authentication of the amount of data sent/received during the lifetime of the RRC connection.~~
12		→	~~UPLINK DIRECT TRANSFER~~ COUNTER RESPONSE	This message shall be transmitted using AM RLC for RRC signalling on the uplink DCCH.

Specific Message Contents

PAGING TYPE 1 (Step 2)

Use the same message sub-type entitled “TM (Packet in PS)” found in Clause 9 of TS34.108.

RRC CONNECTION REQUEST (Step 3)

Information Element	Value/remark
Initial UE Identity	Check to see if set to same value as the IMSI identity stored in the test USIM card.
Initial UE Capability	Check to see if set to '4 to 8' or '16 to 32'.
- Maximum number of AM entities	Check to see if set to 'Terminating PS-Call of a supported traffic class'.
Establishment Cause	Check to see if set to 'FALSE'.
Protocol Error Indicator	Not checked.
Measured Results on RACH	

RRC CONNECTION SETUP (Step 4)

Use the same message sub-type entitled "Transition to CELL_FACH" found in Clause 9 of TS34.108.

RRC CONNECTION SETUP COMPLETE (Step 5)

Only the message type IE is checked in this message.

RADIO BEARER SETUP (Step 6)

Use the same message sub-type entitled "Packet to CELL_FACH from CELL_FACH in PS" found in Clause 9 of TS34.108.

RADIO BEARER SETUP COMPLETE (Step 7)

Only the message type IE is checked for this message.

CELL UPDATE (Step 9)

Information Element	Value/remark
U-RNTI	Check to see if set to '0000 0000 0001'
- SRNC Identity	Check to see if set to '0000 0000 0000 0000 0001'
- S-RNTI	Not checked
Integrity check info	Check to see if set to 'FALSE'
AM_RLC error indicator (for C-plane)	Check to see if set to 'TRUE'
AM_RLC error indicator (for U-plane)	Not checked
Cell Update Cause	Check to see if it is absent or set to 'FALSE'
Protocol error indicator	Check to see if it is absent
Measured results on RACH	Check to see if it is absent
Protocol error information	

CELL UPDATE CONFIRM (Step 10)

Use the same message sub-type found in Clause 9 of TS34.108.

~~PAGING TYPE 2~~COUNTER CHECK (Step 11)

~~- COUNT-C-downlink~~	

8.3.1.15.5 Test Requirement

After step 8 the UE shall transmit a CELL UPDATE message on the uplink CCCH to report the occurrence of an unrecoverable error in AM RLC entity for C-plane data.

After step 11 the UE shall send a ~~UPLINK DIRECT TRANSFER~~ COUNTER CHECK RESPONSE message on the uplink DCCH. This message shall be sent using the AM RLC entity for RRC signalling.

8.4.1.1 Measurement Control and Report: Intra-frequency measurement for transition from idle mode to CELL_DCH state

8.4.1.1.1 Definition

8.4.1.1.2 Conformance requirement

After a state transition from idle mode to CELL_DCH state, the UE shall continue to monitor the list of neighbouring cells which is specified in the SYSTEM INFORMATION BLOCK TYPE 11 (or 12) messages on BCCH. The UE shall send a MEASUREMENT REPORT message when reporting criteria are satisfied. During CELL_DCH state, if the UE receives a MEASUREMENT CONTROL message, it shall terminate existing monitoring activities for the neighbouring cells previously known from SYSTEM INFORMATION BLOCK TYPE 11 (or 12) messages. It shall perform the measurement and reporting tasks based on the latest MEASUREMENT CONTROL message received.

Reference

3GPP TS 25.331 clause 8.4.1.9

8.4.1.1.3 Test Purpose

To confirm that the UE continue to monitor CPICH RSCP measurement quantity of the neighbour cells after it has entered the CELL_DCH state from idle mode. When the criteria specified in BCCH have been met, it shall report the measurements to the SS using MEASUREMENT REPORT messages. To confirm that in CELL_DCH state, the UE respond to a modification of measurement criteria and adjust its measurement and reporting mechanism accordingly. To confirm that the UE terminates monitoring and measurement activities for the neighbour cells found in SYSTEM INFORMATION BLOCK TYPE 11 (or 12) message, after it has received a MEASUREMENT CONTROL message which specifies the measurement type to be "intra-frequency measurement". To confirm that the UE restart the monitoring and reporting activities based on the last MEASUREMENT CONTROL message received.

8.4.1.1.4 Method of test

Initial Condition

System Simulator : 2 cells – Cell 1 is active and the downlink P-CPICH has a transmission level (RSCP) of – 40 dBm, cell 2 is also active but with a P-CPICH transmission power 10dB below cell 1.

UE : idle state after having successfully camped onto cell 1.

Test Procedure

The UE is initially at idle mode and has selected cell 1 for camping. The SYSTEM BLOCK TYPE 11 message is modified with respect to the default settings to prevent reporting of CFN-SFN difference and also to include cell 2 into the monitored neighbour cell list. The key measurement parameters are as follow: measurement type = "intra-frequency measurement", measurement quantity = "CPICH RSCP", report criteria = "periodic reporting criteria", reporting interval = "12 seconds".

SS pages the UE with the cause ~~set to "Incoming circuit-switched terminating call"~~ of a supported traffic class. The UE shall transmit a RRC CONNECTION REQUEST message on the CCCH, SS replies with RRC CONNECTION SETUP message and allocates uplink and downlink DPDCH physical resources to the UE. UE then moves to CELL_DCH state. After approximately 12 seconds, the UE shall transmit a

MEASUREMENT REPORT message with measurement readings from cell 2. SS waits for 25 seconds after the sending of RRC CONNECTION SETUP message to verify that 2 consecutive MEASUREMENT REPORT messages are received.

Then SS modifies the contents of MASTER INFORMATION BLOCK and SYSTEM INFORMATION BLOCK TYPE 12 messages. The measurement parameters for cell 2 are changed in the following manner: report criteria = "event-trigger", event identity = "1f", reporting threshold = "-65 dBm". SS then begins to decrease the transmission power of P-CPICH in cell 2 progressively at the rate of 0.5dB/sec. SS checks to see that no MEASUREMENT REPORT messages are sent within the next 12 seconds (which is due to periodic reporting). The UE shall detect this change and discontinue the periodic reporting of RSCP value estimation from cell 2. After approximately 35 seconds later, the UE shall transmit MEASUREMENT REPORT message to indicate that the RSCP of cell 2 has reached the threshold specified. In this message, the correct measurement identity shall be stated. Finally, SS sends a MEASUREMENT CONTROL message to request a periodic reporting of measurement quantity P-CPICH Ec/No from cell 2. The reporting interval is set to 32 seconds. Within the MEASUREMENT CONTROL message, a new measurement identity is assigned. After receiving this message, the UE shall stop reporting quantity P-CPICH RSCP of cell 2. Moreover, the UE shall start to transmit MEASUREMENT REPORT messages with the contents pertaining to new measurement identity on cell 2's P-CPICH Ec/No.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	SYSTEM INFORMATION BLOCK TYPE 11	The UE is idle mode and camped onto cell 1. Cell 2 is also active but the P-CPICH has a RSCP 10dB below that of cell 1. SYSTEM INFORMATION TYPE 12 to be transmitted is different from the default settings (see specific message contents)
2		←	PAGING TYPE 1	SS sends this message to page for the UE.
3		→	RRC CONNECTION REQUEST	
4		→	RRC CONNECTION SETUP	SS allocates DPCH physical channels to UE
5		→	RRC CONNECTION COMPLETE	UE transmits this message to acknowledge the SETUP message and moves to CELL_DCH state.
6		→	MEASUREMENT REPORT	SS waits for 25 seconds. It shall receive 2 consecutive MEASUREMENT REPORT messages
7		←	MASTER INFORMATION BLOCK SYSTEM INFORMATION BLOCK TYPE 12	SS modifies the contents of system information, so that measurement for cell 2 is changed to "event trigger" with "event identity" set to 1f. SS then reduces the transmission power of cell 2's P-CPICH progressively by 0.5dB/sec.
8				SS monitors the DCCH for the next 12 seconds to make sure that no further MEASUREMENT REPORT messages are transmitted.

9	→	MEASUREMENT REPORT	UE shall transmit this message approximately 35 seconds after step 7, as its internal estimation of the RSCP of cell 2 has dropped below the threshold.
10	←	MEASUREMENT CONTROL	A new measurement identity is assigned, with the reporting quantity changed to cell 2's P-CPICH Ec/No
11	→	MEASUREMENT REPORT	SS verifies that UE transmits MEASUREMENT REPORT messages periodically to report the P-CPICH Ec/No value of cell 2.

8.4.1.1.5

Test Requirement

After step 5 the UE shall start to transmit MEASUREMENT REPORT message. The measurement quantity "CPICH RSCP" shall be reported to the SS at 12 seconds interval.

After step 7 UE shall not transmit any MEASUREMENT REPORT messages within 12 seconds after SS has modified the MASTER INFORMATION BLOCK and SYSTEM INFORMATION BLOCK TYPE 12 messages.

The UE shall transmit a MEASUREMENT REPORT message roughly 35 seconds after step 7, to report that the RSCP value for cell 2 has dropped below the threshold.

After step 10 the UE shall transmit MEASUREMENT REPORT messages at 32 seconds interval, with the IE "Measurement Identity" set to 3. The message shall also include an estimation of cell 2's P-CPICH Ec/No value.

8.4.1.2 Measurement Control and Report: Inter-frequency measurement for transition from idle mode to CELL_DCH state

8.4.1.2.1 Definition

8.4.1.2.2 Conformance requirement

After entering CELL_DCH state from idle mode, the UE shall discontinue the monitoring of the list of neighbouring cells assigned in the SYSTEM INFORMATION BLOCK TYPE 12 (or 11) messages on BCCH.

Reference

3GPP TS 25.331 clause 8.4.1.9

8.4.1.2.3 Test Purpose

To confirm that the UE terminates the monitoring activities of the list of neighbouring cell assigned in the IE "inter-frequency cell info" in SYSTEM INFORMATION BLOCK TYPE 12 (or 11) messages, after it enters CELL_DCH state from idle mode.

8.4.1.2.4 Method of test

Initial Condition

System Simulator : 2 cells – Cell 1 is active and has a ~~downlink~~ transmission level (RSCP) of –50 dBm for P-CPICH, cell 2 is also active but with a transmission power 20dB below cell 1. The carrier frequency of cell ~~2~~ 1 in the uplink direction is 1 UARFCN above that of cell 2, and in the downlink direction cell 1 carrier is 1 UARFCN ~~below~~ above that of cell ~~2~~.

UE : idle state ~~by~~ has ~~after it has~~ successfully camped onto cell 1.

Test Procedure

The UE is initially at idle mode and has selected cell 1 for camping. The SYSTEM BLOCK TYPE 12 message is modified with respect to the default settings to prevent reporting of CFN-SFN difference and also to include cell 2 into the monitored neighbour cell list. The key measurement parameters are as follow: measurement type = "inter-frequency measurement", measurement quantity = "CPICH RSCP".

SS pages the UE ~~with~~, stating the paging cause as terminating call for one of the traffic classes supported by the UE ~~"Incoming circuit switched call"~~. The UE shall transmit a RRC CONNECTION REQUEST message on the CCCH, SS replies with RRC CONNECTION SETUP message and allocates uplink and downlink DPDCH physical resources to the UE. UE then moves to CELL_DCH. The UE shall not transmit any MEASUREMENT REPORT messages, which pertain to measurement readings from cells belonging to the monitored set.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	SYSTEM INFORMATION BLOCK TYPE 12	The UE is idle mode and camped onto cell 1. Cell 2 is also active but ~~has its~~ transmission power is 20dB below that of cell 1. The SYSTEM INFORMATION BLOCK TYPE 12 to be transmitted is different from the default settings (see specific message contents)
2		←	PAGING TYPE 1	SS sends this message to page for the UE.
3		→	RRC CONNECTION REQUEST	
4		↔	RRC CONNECTION SETUP	SS allocates DPDCH physical channels to UE, using compressed mode format
5		→	RRC CONNECTION COMPLETE	UE transmits this message to acknowledge the RRC CONNECTION SETUP message and moves to CELL_DCH state.
6				SS raises the transmission power of cell 2 by 10dB. SS checks to see that no MEASUREMENT REPORT messages are sent from UE to cell 1.

8.4.1.2.5 Test Requirement

After step 5 the UE shall not transmit any MEASUREMENT REPORT messages pertaining to the measurement of CPICH Ec/No quantity ~~from~~ of cell 2.

8.4.1.3 Measurement Control and Report: Intra-frequency measurement for transition from idle mode to CELL_FACH state

8.4.1.3.1 Definition

8.4.1.3.2 Conformance requirement

During a transition from idle mode to CELL_FACH state, the UE shall start to monitor neighbouring cells listed in the IE “Intra-frequency cell info” received in SYSTEM INFORMATION BLOCK TYPE 12 (or 11). If a measurement report criteria is also specified, the UE shall store this information and apply these rules when deciding to transmit MEASUREMENT REPORT messages during a subsequent transition to CELL_DCH state. If reporting during RACH transmissions ~~are is~~ dictated by the UTRAN, the UE shall append the relevant measurement information when sending messages on RACH (e.g. RRC CONNECTION REQUEST and CELL UPDATE).

Reference

3GPP TS 25.331, clause 8.4.1.9

8.4.1.3.3 Test Purpose

To confirm that the UE begins to monitor the neighbouring cells in the monitored list after it has entered the CELL_FACH state. The list of neighbouring cell can be known from SYSTEM INFORMATION BLOCK TYPE 12 (or 11) messages. If information regarding the intra-frequency measurement reporting criteria is also broadcasted, the UE shall save this information and apply the criteria during a subsequent transition to CELL_DCH state. If RACH measurement reporting is dictated in SYSTEM INFORMATION BLOCK TYPE 12 (or 11) messages, the UE shall include these measurements when transmitting on the RACH channel.

8.4.1.3.4 Method of test

Initial Condition

System Simulator : 2 cells – both cell 1 and cell 2 are active. Cell 2 is transmitting at 15 dB below cell 1.

UE : idle state and camped onto cell 1.

Test Procedure

The UE is initially at idle mode and has selected cell 1 for camping. The SYSTEM BLOCK TYPE 12 message is modified with respect to the default settings to prevent reporting of CFN-SFN difference and also to include cell 2 into the monitored neighbour cell list. The key measurement parameters are as follow: measurement type = “intra-frequency measurement”, measurement quantity = “CPICH Ec/No”, report criteria = “periodic reporting criteria”, reporting interval = “12 seconds”. In the system information message, reporting of CPICH Ec/No is also required for intra-frequency reporting when transmitting RACH messages to cell 1.

SS pages the UE with the cause ~~“Incoming packet-switched call”~~ specified as terminating call of one of the traffic classes supported by the UE. The UE shall transmit a RRC CONNECTION REQUEST message on the CCCH, SS replies with RRC CONNECTION SETUP message and allocates PRACH and S-CCPCH (FACH) physical channels for uplink and downlink use. UE shall then enter CELL_FACH state. SS waits until timer T305 expires, the UE shall send a CELL UPDATE message including the measurement reading of cell 2’s CPICH Ec/No values. SS then reply with CELL UPDATE CONFIRM message without changing the physical channel resources.

In the next sequence, SS transmits PHYSICAL CHANNEL RECONFIGURATION message, and allocates DPDCH channels to the UE. The UE shall transit to CELL_DCH state and send a MEASUREMENT REPORT message, correctly stating the measurement identity. The measurement identity indicated shall match the value that was previously broadcasted on SYSTEM INFORMATION BLOCK TYPE 12 (or 11) when the UE was still in idle mode.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	SYSTEM INFORMATION BLOCK TYPE 2, SYSTEM INFORMATION BLOCK TYPE 12	The UE is idle mode and camped onto cell 1. Cell 2 is also active but has transmission power 15dB below that of cell 1. SYSTEM INFORMATION TYPE 2 and 12 to be transmitted are different from the default settings (see specific message contents)
2		←	PAGING TYPE 1	SS sends this message to page for the UE, ~~stating the cause as an incoming packet-switched call.~~
3		→	RRC CONNECTION REQUEST	The Ec/No value of P-CPICH of Cell 1 should be reported.
4		←	RRC CONNECTION SETUP	SS allocates common physical channels to UE.
5		→	RRC CONNECTION COMPLETE	UE shall enter CELL_FACH state, <u>and</u> transmits this message to acknowledge the SETUP message.

6			SS waits for 5 minutes (for the expiry of T305 timer), so that UE will initiate a periodic cell updating procedure.
7	→	CELL UPDATE	This message shall contain measurement readings of CPICH Ec/No for cell 1.
8	←	CELL UPDATE CONFIRM	SS does not change the physical channel allocation.
9	←	PHYSICAL CHANNEL RECONFIGURATION	SS assigns DPCH physical resources to the UE, but keeping the parameters for transport channels and RBs unchanged.
10	→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall transit to CELL_DCH state after sending this message.
11	→	MEASUREMENT REPORT	UE shall begin to report cell 2's CPICH Ec/No value periodically at 12 seconds interval. The measurement identity shall match that broadcasted in step 1

PAGING TYPE 1

Information Element	Value/Remarks
Paging record list - Paging Record - CHOICE Paging originator - Paging cause - CN domain identity - CHOICE UE identity - IMSI (DS-41) <u>or IMSI (GSM-MAP)</u>	CN Originator Terminating ~~PS Data Call~~ , <u>for one of the supported traffic classes</u> PS Domain IMSI (DS-41) <u>or IMSI (GSM-MAP)</u> Set to the same IMSI (DS-41) <u>or IMSI (GSM-MAP)</u> digits found in the test USIM.

RRC CONNECTION REQUEST

Information Element	Value/Remarks
Initial UE Identity	Check to see if it is the same as in PAGING TYPE 1 message
Establishment cause	Check to see if set to <u>terminating call of one of the traffic classes supported</u> "Paging Response"
Measured results on RACH - Measured result for current cell - CHOICE measurement quantity - CPICH Ec/No - Measured results for monitored cells	Check to see if value is present Check to see if this IE is absent

RRC CONNECTION SETUP

Use the same message sub-type found in Clause 8.4.9 of TS34.108, which is entitled "Transition to CELL_FACH".

CELL UPDATE

Information Element	Value/Remarks
U-RNTI	Check to see if set to same U-RNTI value assigned in RRC CONNECTION SETUP message.
Integrity check info	Not checked
AM_RLC error indicator (for C-plane)	Check to see if set to 'FALSE'
AM_RLC error indicator (for U-plane)	Check to see if set to 'FALSE'
Cell update cause	Check to see if set to 'Periodic cell updating'
Protocol error indicator	Check to see if set to 'FALSE'
Measured results on RACH - Measurement result for current cell - CHOICE measurement quantity - CPICH Ec/No - Measurement results for monitored cells	CPICH Ec/No Checked to see if set to within an acceptable range. Checked to see if this IE is not present.
Protocol error information	Check to see if set to 'FALSE'

PHYSICAL CHANNEL RECONFIGURATION

Use the same message sub-type found in Clause 8.4.9 of TS34.108, which is entitled "Packet to CELL_DCH from CELL_FACH".

MEASUREMENT REPORT

Information Element	Value/Remarks
Measurement identity number	Check to see if set to 5
Measurement Results	Check to see if set to "Intra-frequency measured results list"
- CHOICE measurement	
- Intra-frequency measured results	
- Cell measured results	
- Cell Identity	Check to see if set to the id of cell 2
- SFN-SFN observed time difference	Check to see if this IE is absent
- Primary CPICH Info	
- Primary Scrambling Code	Check to see if it's the same code for cell 2
- CPICH Ec/No	Check to see if this IE is within acceptable range
- CPICH RSCP	Check to see if this IE is absent
- Pathloss	Check to see if this IE is absent
- CFN-SFN observed time difference	Check to see if this IE is absent
Event Results	Check to see if this IE is absent

8.4.1.3.5 Test Requirement

After step 3 the UE shall send RRC CONNECTION REQUEST message in response to the paging message sent by the SS, which includes reading of the current cell's CPICH Ec/No value.

After step 5 the UE shall not transmit any MEASUREMENT REPORT messages.

After step 6 the UE shall initiate cell updating procedure by transmitting CELL UPDATE message. In this message, the cause shall be set to "periodic cell updating". It shall include measurement readings for the current cell (cell 1) CPICH Ec/No measurement quantity.

After step 10 the UE shall move to CELL_DCH state and transmit MEASUREMENT REPORT messages at 12 seconds interval. In these messages, neighbouring cell 2's CPICH Ec/No value shall be reported. The IE "measurement identity" in this message shall match the IE "Intra-frequency measurement identity" found in SYSTEM INFORMATION BLOCK TYPE 12 messages transmitted in step 1.

8.4.1.4 Measurement Control and Report: Inter-frequency measurement for transition from idle mode to CELL_FACH state

8.4.1.4.1 Definition

8.4.1.4.2 Conformance requirement

After entering CELL_FACH state from idle mode, the UE shall start to monitor the list of "inter-frequency" neighbouring cells assigned in the SYSTEM INFORMATION BLOCK TYPE 12 (or 11) messages on BCCH/FACH.

Reference

3GPP TS 25.331, clause 8.4.1.10

8.4.1.4.3 Test Purpose

To confirm that the UE begins to monitor the list of neighbouring cell assigned in the IE "inter-frequency cell info" in SYSTEM INFORMATION BLOCK TYPE 12 (or 11) messages, after it enters CELL_FACH state from idle mode. However, it shall not transmit any MEASUREMENT REPORT messages to report measured results for inter-frequency cells.

8.4.1.4.3

Method of test

Initial Condition

System Simulator : 2 cells – Cell 1 is active and has a downlink transmission level for CPICH RSCP at -40 dBm, cell 2 is also active but with a transmission power 10dB below cell 1. The carrier frequency of cell 2 in the uplink direction is 1 UARFCN above that of cell 1, and the downlink carrier is 1 UARFCN below that of cell 1.

UE : idle state and has successfully camped onto cell 1.

Test Procedure

The UE is initially at idle mode and has selected cell 1 for camping. The SYSTEM BLOCK TYPE 12 message is modified with respect to the default settings to prevent reporting of CFN-SFN difference and also to include cell 2 into the monitored neighbour cell list for inter-frequency measurement type. The key measurement parameters are as follow: measurement type = "inter-frequency measurement", measurement quantity = "CPICH Ec/No".

SS pages the UE with the cause "~~Incoming packet-switched set to terminating call~~" of a supported traffic class. The UE shall transmit a RRC CONNECTION REQUEST message on the CCCH, SS replies with RRC CONNECTION SETUP message and allocates PRACH channel in the uplink and S-CCPCH(FACH) channel on the downlink to the UE. UE then moves to CELL_FACH. The UE shall not transmit any MEASUREMENT REPORT messages, which pertain to measurement readings from inter-frequency cells belonging to the monitored set. SS decreases the transmission power of CPICH in cell 1 by 10dB. At the same time, it raises the corresponding downlink transmission power of cell 2 by 10dB. This is expected to trigger a cell reselection in the UE. The UE shall send CELL UPDATE message to report this event. Upon receiving this message, SS replies with the default CELL UPDATE CONFIRM message.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	SYSTEM INFORMATION BLOCK TYPE 12	The UE is idle mode and camped onto cell 1. Cell 2 is also active but has transmission power 10dB below that of cell 1. SYSTEM INFORMATION TYPE 12 to be transmitted is different from the default settings (see specific message contents)
2		←	PAGING TYPE 1	SS sends this message to page for the UE.
3		→	RRC CONNECTION REQUEST	
4		←	RRC CONNECTION SETUP	SS allocates PRACH and S-CCPCH resources to UE
5		→	RRC CONNECTION COMPLETE	UE transmits this message to acknowledge the SETUP message and moves to CELL_FACH state.
6				SS checks to see that no MEASUREMENT REPORT messages are sent from UE to cell 1.
7				SS decreases the transmission power of cell 1 by 10dB and increases cell 2's downlink power by 10dB.
8		→	CELL UPDATE	UE shall detect that cell 2 has become stronger than cell 1. It sends this message after reselecting to cell 2

9	←	CELL UPDATE CONFIRM	Use default message.

Specific Message Content

All messages indicated below shall use the same content as described in default message content, with the following exceptions:

SYSTEM INFORMATION BLOCK TYPE 12

- W non-used frequency	0
- Inter-system measurement system information	Not Present
- Traffic volume measurement system information	Not Present
- UE internal measurement system information	Not Present

PAGING TYPE 1

For this message, use the same message contents as in step 2 of clause 8. 4.1.3.3.

RRC CONNECTION REQUEST

Information Element	Value/Remarks
Establishment cause	Check to see if set to <u>terminating call of a supported traffic class</u> ~~"Paging Response"~~ .
Measured results on RACH	Check to see if this IE is absent

RRC CONNECTION SETUP

Use the message sub-type in default message content defined in TS 34.108 Clause 8, which is marked as "Transition to CELL_FACH".

CELL UPDATE

Information Element	Value/Remarks
U-RNTI	Check to see if same to value as in PAGING TYPE 1 message
Integrity check info	Check to see if it is absent
AM_RLC error indication (for C-plane)	Check to see if it is set to FALSE
AM_RLC error indication (for U-plane)	Check to see if it is set to FALSE
Cell update cause	Check to see if it is set to "Cell Reselection"
Protocol error info	Check to see if it is absent or set to FALSE
Measured results on RACH	Check to see if it is absent
Protocol error information	Check to see if it is absent

CELL UPDATE CONFIRM

Use the message sub-type in default message content defined in TS 34.108 Clause 8.

8.4.1.4.5 Test Requirement

After step 5 the UE shall not transmit any MEASUREMENT REPORT messages pertaining to the measurement of CPICH Ec/No quantity for cell 2.

After step 7 the UE shall reselect to cell 2 and transmit a CELL UPDATE message on the uplink CCCH of cell 2.

8.4.1.6 Measurement Control and Report: Inter-frequency measurement for transition from CELL_DCH to CELL_FACH state

8.4.1.6.1 Definition

8.4.1.6.2 Conformance requirement

When transiting from CELL_DCH state to CELL_FACH state, the UE shall terminate all reporting activities related to inter-frequency measurements. After reaching CELL_FACH state, the UE shall begin to monitor neighbouring cells listed in the IE "inter-frequency cell info" of the system information type 12 message.

Reference

3GPP TS 25.331, clause 8.4.1.7

8.4.1.6.3 Test Purpose

To verify that UE ceases to transmit MEASUREMENT REPORT messages when moving from CELL_DCH state to CELL_FACH, even if it has detected that reporting criteria have been satisfied in CELL_FACH state. To verify that the UE extracts information for inter-frequency measurement from system information messages after reaching CELL_FACH state.

8.4.1.6.4 Method of test

Initial Condition

SS: 2 cells – Cell 1 is active while cell 2 is inactive. Cell 2 is allocated a frequency which is 1 UARFCN away from cell 1 in both uplink and downlink directions. The applicable radio conditions for cell 1 and cell 2 are as follow:

	Cell 1	Cell 2
UARFCN (N_u and N_d)	Channel 1	Channel 2

CPICH RSCP	-75 dBm	-85 dBm
$Q_{rxlevmin}$	-90 dBm	-90 dBm
S	15	5

UE: idle state and camped onto cell 1.

Test Procedure

The UE is initially in idle mode. SS pages the UE with the establishment cause set to “Terminating PS Data Call” for one of the supported traffic classes. The SYSTEM INFORMATION TYPE 12 message is modified so that no measurement tasks are to be performed by the UE. The UE shall respond to the paging by sending a RRC CONNECTION REQUEST message on the PRACH. Upon receiving this message, SS allocates dedicated DPCH physical channels to the UE by transmitting RRC CONNECTION SETUP message. The UE shall reply by transmitting a RRC CONNECTION SETUP COMPLETE message. SS then checks the IE “Measurement Capability” of this message and verifies that the UE is capable of performing inter-frequency measurements under FDD mode. After the confirmation of the UE inter-frequency measurement ability, SS transmits PHYSICAL CHANNEL RECONFIGURATION message. In this message, information related to the radio bearers and uplink/downlink radio resources remain unchanged as compared to the equivalent IEs found in RRC CONNECTION SETUP message. The only difference concerns IE “DPCH compressed mode info”, which indicates that the UE shall apply the given parameters for compressed mode operations. The UE shall return PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to acknowledge that compressed mode mechanism can be exercised.

SS then sends a MEASUREMENT CONTROL message to the UE, specifying that cell 2 be the measurement object for inter-frequency type measurement. The periodic reporting criterion is selected for this measurement. SS waits for 8 seconds to allow the periodic timer to expire. The UE shall send a MEASUREMENT REPORT message containing measured result of cell 2’s reporting quantity (CPICH Ec/No). SS transmits PHYSICAL CHANNEL RECONFIGURATION message again, requesting the UE to switch its uplink and downlink DPCH to common physical channels. The UE shall return PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and then moves to CELL_FACH state. SS waits for another 8 seconds to detect any possible uplink MEASUREMENT REPORT messages as a result of inter-frequency measurements. SS then increases the transmission power of cell 2 by 20 dBm. SS waits for [x] seconds to allow the UE to perform cell re-selection. The UE shall transmit a CELL UPDATE message on the uplink CCCH of cell 2, specifying the cause as “cell re-selection”. SS replies with CELL UPDATE CONFIRM message.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1				UE is initially in idle mode and camped onto cell 1. SYSTEM INFORMATION BLOCK TYPE 12 is redefined, disabling all measurement and reporting activities.
2		←	PAGING TYPE 1	SS pages UE with cause set to ~~“incoming circuit-switched terminating call”~~ of a supported traffic class.
3		→	RRC CONNECTION REQUEST	
4		←	RRC CONNECTION SETUP	Uplink and downlink DPDCH resources are allocated.
5		→	RRC CONNECTION SETUP COMPLETE	UE shall indicate that it's capable of performing inter-frequency measurement for FDD mode.
6		←	PHYSICAL CHANNEL RECONFIGURATION	SS instructs UE to begin compressed mode operation.
7		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall enter CELL_DCH state.
8		←	MEASUREMENT CONTROL	SS indicates that cell 2 be monitored. SS waits for 8 seconds.
9		→	MEASUREMENT REPORT	UE shall transmit this message to report cell 2's CPICH Ec/No value.
10		←	PHYSICAL CHANNEL RECONFIGURATION	SS changes the physical channel allocation to common channel configuration.
11		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall moves to CELL_FACH state.
12				SS waits for 8 seconds to verify that no MEASUREMENT REPORT messages are detected.
13				SS changes SYSTEM INFORMATION BLOCK TYPE 12 message to request that cell 2 be included in neighbour cell list for inter-frequency measurements.
14				SS increases the transmission power of cell 2 by 20 dBm, and then waits for a [x] seconds to allow the UE to re-select to a new cell.
15		→	CELL UPDATE	UE shall detect that cell 2 has become the best cell and then perform cell re-selection procedure.
16		←	CELL UPDATE CONFIRM	SS acknowledges the cell 2 is updated.

Notes:

The value [x] seconds is TBD, after the cell re-selection duration is determined from TS 25.304.

Measurement identity number	Check to see if set to 15
Measurement Results	
- CHOICE measurement	Check to see if set to "Inter-frequency measured results list"
- Inter-frequency measurement results	
- Frequency info	
- UARFCN (uplink)	Check to see if set to the UARFCN of the uplink frequency for cell 2
- UARFCN (downlink)	Check to see if set to the UARFCN of the downlink frequency for cell 2
- UTRA carrier RSSI	Check to see if it is absent
- Inter-frequency cell measurement results	
- Cell measured results	
- Cell Identity	Check to see if set to the id of cell 2
- SFN-SFN observed time difference	Check to see if it is absent
- Primary CPICH Info	
- Primary Scrambling Code	Check to see if set to the same code for cell 2
- CPICH Ec/No	Check to see if it is present
- CPICH RSCP	Check to see if it is absent
- Pathloss	Check to see if it is absent
- CFN-SFN observed time difference	Check to see if it is absent
Event Results	Check to see if it is absent

PHYSICAL CHANNEL RECONFIGURATION (Step 10)

Use the same message sub-type found in Clause 8.49 of TS34.108, which is entitled "(Packet to CELL_FACH from CELL_DCH in PS)".

CELL UPDATE

Information Element	Value/Remarks
U-RNTI	Check to see if same to value as in RRC CONNECTION SETUP message
Integrity check info	Check to see if it is absent
AM_RLC error indication (for C-plane)	Check to see if it is set to FALSE
AM_RLC error indication (for U-plane)	Check to see if it is set to FALSE
Cell update cause	Check to see if it is set to "Cell Reselection"
Protocol error info	Check to see if it is absent or set to FALSE
Measured results on RACH	Check to see if it is absent
Protocol error information	Check to see if it is absent

CELL UPDATE CONFIRM

Use the same message sub-type found in Clause ~~8.4.9~~ of TS34.108.

8.4.1.6.5 Test Requirement

After step 4 the UE shall transmit RRC CONNECTION SETUP COMPLETE message with the IE "Measurement capability", indicating that both uplink and downlink inter-frequency measurements for FDD mode are supported.

After step 8 the UE shall transmit MEASUREMENT REPORT message to report cell 2's CPICH Ec/No value.

After step 11 the UE shall stop sending MEASUREMENT REPORT messages, which contain inter-frequency measured results for cell 2's CPICH Ec/No value.

After step 14 the UE shall transmit CELL UPDATE message to inform that a cell reselection to cell 2 has occurred.

Annex A. Default RRC Message Contents

Contents of PAGING TYPE2 message: AM (Speech in CS)

8.1.4.5 RRC Connection Re-Establishment: Failure (Release)

8.1.4.5.1 Definition

8.1.4.5.2 Conformance requirement

RRC connection re-establishment is needed, when a UE loses the radio connection due to e.g. radio link failure in CELL_DCH state. After the completion of cell re-selection and transiting to CELL_FACH state, the UE transmits an RRC CONNECTION RE-ESTABLISHMENT REQUEST message which includes the IE "U-RNTI" on the uplink CCCH to request for re-establishment of an RRC connection. The UTRAN transmits an RRC CONNECTION RELEASE message signifying that it is not able to accept the request, so the UE shall transmit an RRC CONNECTION RELEASE COMPLETE message to the UTRAN and goes back to idle mode.

Reference

3GPP TS 25.331 clause 8.1.5

8.1.4.5.3 Test purpose

To confirm that the UE transmits an RRC CONNECTION RELEASE COMPLETE message and goes back to idle mode after its request to re-establish an RRC connection was rejected by the SS in the new cell. The request to re-establish should be made with an RRC CONNECTION RE-ESTABLISHMENT REQUEST message which includes the IE "U-RNTI".

8.1.4.5.4 Method of test

Initial Condition

System Simulator : 2 cells • Cell 1 is active, Cell 2 is inactive •

UE: CELL_DCH state in cell 1

Test Procedure

The UE starts from CELL_DCH state in cell 1 after making a successful outgoing call. When the SS stops transmitting and receiving in a cell 1 and begins to broadcast the BCCH in a cell 2, the UE finds a should detect radio link failure and the presence of cell 2. It then enters CELL_FACH state and transmits an RRC CONNECTION RE-ESTABLISHMENT REQUEST message, which includes the IE "U-RNTI" on the uplink CCCH. The SS replies with a RRC CONNECTION RELEASE message on the downlink CCCH using transport mode operation. After the UE receives an the RRC CONNECTION RELEASE message, it shall transmits an RRC CONNECTION RELEASE COMPLETE message on the uplink CCCH using RLC-TM. Finally, and it goes back to idle mode.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is in the CELL_DCH state in a-cell 1 after completing a successful outgoing call setup.
2		←	BCCH	The SS transmits BCCH in a-cell 2
3				The SS stops transmitting and receiving in cell 1.
4		→	RRC CONNECTION RE-ESTABLISHMENT REQUEST	The UE finds a new cell 2 and transmits this message which includes the IE "U-RNTI".
5		←	RRC CONNECTION RELEASE	SS rejects the re-establishment request. <u>Sent on downlink CCCH using RLC-TM.</u>
6		→	RRC CONNECTION RELEASE COMPLETE	<u>This message shall be received on the uplink CCCH using RLC-TM.</u> The UE goes back to idle mode after sending this message.

None

8.1.4.5.5 Test requirement

After step_3 the UE shall find ~~a~~the new cell 2 and transmits RRC CONNECTION RE-ESTABLISHMENT REQUEST to ask for re-connection of the radio link.

After step_5 the UE shall not transmit RRC CONNECTION RE-ESTABLISHMENT REQUEST message, instead it sends RRC CONNECTION RELEASE COMPLETE message on the uplink CCCH (transparent mode) and goes back to idle mode.

Reason for change:

Signalling connection release request procedure was added into the TS25.331V3.3.0. A new test case in Section 8.1.9 is proposed for TS34.123-1 version 3.0.0. The addition was motivated by the need to for the UE to recover from abnormal situation due to events such as failed location update (or routing update).

8.1.9 Signalling Connection Release Request

8.1.9.1 Definition

8.1.9.2 Conformance requirement

~~In case of an locationn update procedure, if the UE does not receive any response from UTRAN after it transmits a LOCATION UPDATING REQUEST message~~
The UE shall initiate the signalling connection release procedure when the higher layer entities in the UE request to release one or more signalling session (one example of such case is location update failure). In this case, the UE shall transmit a SIGNALLING CONNECTION RELEASE REQUEST message which includes the flow identifier of the signalling flow to be released. Then RRC connection release procedure is initiated.

Reference

3GPP TS 25.331 clause 8.1.14

8.1.9.3 Test purpose

~~To confirm that the UE transmits a SIGNALLING CONNECTION RELEASE REQUEST message after the UE does not it fails to receive the a response for the LOCATION UPDATING REQUEST message.~~

8.1.9.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : SwitchedPower off

Test Procedure

~~The UE is turneds on and the UEit shall find a suitable cell which should be to camped on. The UE shall initiate a location updating procedure. The UE shall establish thean RRC connection and transmits a LOCATION UPDATING REQUEST message using the INITIAL DIRECT TRANSFER message. As tThe SS does not respond to this message, and the UE shall send transmits a SIGNALLING CONNECTION RELEASE REQUEST message which includes the flow identifier aswith the same value as that in the INITIAL DIRECT TRANSFER message to initiate the RRC connection release procedure.~~

Expected sequence

<u>Step</u>	<u>Direction</u>		<u>Message</u>	<u>Comment</u>
	<u>UE</u>	<u>SS</u>		
<u>1</u>				<u>The UE turns is powered on.</u>
<u>2</u>	→		<u>RRC CONNECTION REQUEST</u>	<u>UE shall initiate the location updating procedure.</u>
<u>3</u>	←		<u>RRC CONNECTION SETUP</u>	<u>This message is not addressed to the UE.</u>
<u>4</u>	→		<u>RRC CONNECTION REQUEST</u>	<u>UE shall re-transmit the request message again after receiving a setup message not addressed to itself.</u>
<u>53</u>	←		<u>RRC CONNECTION SETUP</u>	
<u>64</u>				<u>The UE configures the layer 2 and layer 1 .</u>
<u>75</u>	→		<u>RRC CONNECTION SETUP COMPLETE</u>	
<u>86</u>	→		<u>INITIAL DIRECT TRANSFER (LOCATION UPDATING REQUEST)</u>	<u>LOCATION UPDATE REQUEST is embedded in this message transmission.</u>
<u>97</u>				<u>The SS does not respond and waits until the timer for location update procedure expires.</u>
<u>108</u>	→		<u>SIGNALLING CONNECTION RELEASE REQUEST</u>	

Specific Message ContentSIGNALLING CONNECTION RELEASE REQUEST (Step 108)

<u>Information Element</u>	<u>Value/remark</u>
<u>Flow Identifier</u>	<u>Check to see if this value is the as same as in the uplink INITIAL DIRECT TRANSFER message.</u>

8.1.9.5 Test requirement

After step 1 the UE shall initiate the LOCATION UPDATING procedure and establish an RRC connection.

After step 97 the UE shall transmit a SIGNALLING CONNECTION RELEASE REQUEST message which includes the same flow identifier as that found in the INITIAL DIRECT TRANSFER message.

Reason for change:

- Following the comments from T1SIG #11 meeting, ciphering mechanism is activated for RRC test cases. Messages in Annex A are modified to enable ciphering during RRC radio bearer control and RRC connection re-establishment procedures.
- For section 8.1.7, the following modifications were made:
 - Corrections of message names: SECURITY MODE CONTROL COMMAND, SECURITY MODE CONTROL COMPLETE.
 - "Radio bearer downlink ciphering activation time info" IE should be found in SECURITY MODE COMMAND message, while "Radio bearer uplink ciphering activation time info" IE is present in SECURITY MODE COMPLETE message.
 - SECURITY MODE COMMAND message was updated to reflect approved changes in CR-311r2 ("Security Capability" IE) for TS 25.331 v3.2.0.
 - Some editorial changes.
- For the case of integrity mode protection, clause 8.2.1.1 needs to be revised with respect to CR-311r2 ("Security Capability" IE) for TS 25.331 v3.2.0 as well:
 - Value of "Integrity protection algorithm" IE in RADIO BEARER SETUP message is updated.
 - "Hyper Frame Number" IE in RADIO BEARER SETUP COMPLETE message was found to be missing. This IE is added to the message.

8.1.7 Security mode control

8.1.7.1 Definition

8.1.7.2 Conformance requirement

1. This procedure is used to trigger the start of ciphering or to commands ~~the a~~ change of the cipher key, both for the signalling link and for a user plane connection. ~~The ciphering is configured in both directions.~~
2. The SRNC transmits a SECURITY MODE CONTROL-COMMAND message to the UE, which indicates the ~~uplink-downlink Activation Time~~ when the ciphering shall start to be applied in uplink. The UE shall apply the old ciphering configuration before the stated downlink activation time. It shall ~~SRNC~~ starts to decipher using the new ciphering configuration at the uplink-downlink Activation Time.
3. ~~When~~ After the UE ~~receives~~ transmits the SECURITY MODE CONTROL-COMPLETEMAND message, it starts ~~to ciphering~~ transmission in the uplink using the new configuration at the uplink Activation Time. It shall transmits a SECURITY MODE CONTROL-COMPLETE message, which includes a ~~down~~uplink Activation Time, and ~~starts configure the downlink reception to receives in the~~ using new ciphering configuration at that the beginning of downlink Activation Time. ~~When the SRNC receives the SECURITY MODE CONTROL-COMPLETE, it starts ciphering transmission in the new configuration at the downlink Activation Time.~~

Reference

3GPP TS 25.331 clause 8.1.912

8.1.7.3 Test purpose

To confirm that the UE correctly communicates to the SS ~~UTRAN using each and~~ activates the new ciphering functions configuration after the stated each Activation Time time. To confirm that ~~when after~~ the UE receives a SECURITY MODE CONTROL-COMMAND message, which includes the uplink Activation Time and it transmits a SECURITY MODE CONTROL-COMPLETE message to the UTRAN using the old ciphering configuration which includes the downlink Activation Time.

8.1.7.4 Method of test

Initial Condition

System Simulator : 1_cell

UE : CELL_DCH

Test Procedure

The UE is in the RRC connected state ~~on the DCCELL_DCH~~. The SS transmits a SECURITY MODE COMMAND message in which ciphering is requested to be activated, but the IE "Ciphering algorithm" is set to an unknown value. The UE shall not trigger any ciphering algorithm and it shall respond by sending SECURITY MODE FAILURE message on the DCCH. Next, The SS transmits a valid SECURITY MODE CONTROL-COMMAND message which includes the ~~uplink-downlink Activation Time~~ for RB 23 and RB 34. Then the UE shall start to configure ciphering in updownlink after the Activation Time and transmits a SECURITY MODE CONTROL-COMPLETE message which ~~includes~~ contains the ~~downlink-uplink Activation Time~~ for RB 23 and RB 34. The UE starts to cipher in downlink after the Activation Time. Finally the UE ~~correctly communicates using each ciphering functions~~. The UE shall be able to communicate with the SS in the downlink direction after the downlink activation time has passed. Moreover, it shall apply the ciphering algorithm in the uplink direction.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				RRC connected state on DCCH
2		←	SECURITY MODE ~~CONTROL~~ COMMAND	IE "Ciphering Algorithm" is set to an ~~spare~~ invalid value
3		→	SECURITY MODE FAILURE	IE "Failure Cause" should be set to "Protocol Error" and IE "Protocol Error Information" should be set to "Information element value not comprehended".
4		←	SECURITY MODE ~~CONTROL~~ COMMAND	See specific message contents. ~~For uplink transmissions, new ciphering configuration should be active after 255 frames from current CFN. SS checks to see~~
5		→	SECURITY MODE ~~CONTROL~~ COMPLETE	~~After the downlink Activation Time the downlink ciphering function is active.. SS starts to verify that this message is sent unciphered.~~
46				~~Both Ciphering functions is active so the communication is done correctly.. In uplink direction, SS checks that all data from RB 23 and RB 34 are ciphered. In the downlink direction, SS verifies that data are ciphered only after the RLC sequence numbers indicated in step 4 have elapsed.~~

Specific Message Contents

SECURITY MODE COMMAND (Step 2)

Information Element	Value/remark
<u>Ciphering mode info</u>	
<u>Ciphering mode command</u>	<u>Start</u>
<u>Ciphering algorithm</u>	1 of the 15 spare values
<u>Security capability</u>	<u>Not Present</u>

~~Ciphering algorithm~~ Security capability	~~Standard UMTS Encryption Algorithm UEA1~~
Ciphering algorithm capability	0000000000000001B(UEA1)
~~Integrity protection algorithm capability~~	~~0000000000000001B(UEA1)~~
Activation time for DPCH	Not present
Activation time	Current CFN-[current CFN mod 8 + 8]
Radio bearer downlink ciphering activation time info	
Radio bearer activation time	2 RBs
RB identity ₁	23
RLC sequence number ₁	Current RLC SN+2
RB identity ₂	Current downlink RLC Sequence Number for RB3
RLC sequence number ₂	34
	Current RLC SN+2
	Current downlink RLC Sequence Number for RB4

8.1.7.5 Test requirement

After step 2 the UE shall transmit a SECURITY MODE FAILURE message to report protocol error detected in the earlier SECURITY MODE ~~CONTROL~~-COMMAND message. The UE shall be able to communicate normally with the SS, with all ~~user or~~ control data unciphered.

After step 4 the UE shall RLC-acknowledge the receipt of the SECURITY MODE ~~CONTROL~~-COMMAND message using unciphered mode. SS checks that the SECURITY MODE ~~CONTROL~~-COMPLETE message is received unciphered.

After step 5 SS verifies that downlink control data from RB 23 and RB 34 are ciphered using UEA1 algorithm, after the RLC sequence numbers as a downlink activation time stated in step 4 have elapsed. In the uplink direction, the UE shall start to cipher on the uplink after the RLC sequence number as an uplink activation time stated in step 5 has elapsed.

8.2.1.1 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success(Data integrity protection algorithm is not applied)

8.2.1.1.1 Definition

8.2.1.1.2 Conformance requirement

The UE shall correctly set up a radio bearer according to a RADIO BEARER SETUP message and communicate with the UTRAN for its implementation.

(This is the case where data integrity protection algorithm is not applied.)

Reference

3GPP TS 25.331 clause 8.2.1

8.2.1.1.3 Test purpose

To confirm that the UE establishes a new radio bearer according to a RADIO BEARER SETUP message received from the SS.

8.2.1.1.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH

Test Procedure

The UE is in the CELL_DCH state, after the test operator is prompted to make an out-going call. Before step 1, only signalling radio bearers have been established. The SS transmits a RADIO BEARER SETUP message to the UE after it sets up L1 including the start of tx/rx. This message requests the establishment of RABs for carrying the traffic of the speech call. After the UE receives this message, it configures them and establishes a radio bearer. Finally the UE transmits a RADIO BEARER SETUP COMPLETE message using AM RLC. Then the UE and the SS enters the communicating state.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	This message do not contain IE "integrity check info" and "integrity protection mode info"
2		→	RADIO BEARER SETUP COMPLETE	This message do not contain "integrity check info" and "Uplink integrity activation info"
3				To confirm the communication.

Specific Message Contents

For RADIO BEARER SETUP in step 1, using the message sub-type indicated as "Speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" found in default message content clause.

8.2.1.1.5 Test requirement

After step2 the UE shall communicate with the SS on the radio bearer for its implementation.

8.2.1.2 Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: Success(Effectuated Data integrity protection algorithm)

8.2.1.2.1 Definition

.

8.2.1.2.2 Conformance requirement

The UE shall correctly set up a radio bearer according to a RADIO BEARER SETUP message, which applies data integrity function, and then communicate with the UTRAN for its implementation.

Reference

3GPP TS 25.331 clause 8.2.1, 8.5.11.

8.2.1.2.3 Test purpose

To confirm that the UE establishes a new radio bearer according to a RADIO BEARER SETUP message which contains IE "Integrity check info" and IE "Integrity protection mode info" received from the SS.

8.2.1.2.4 Method of test

Initial Condition

System Simulator : 1 cell

UE : CELL_DCH and data integrity algorithm is not applied

Test Procedure

The UE is in the CELL_DCH state, after the test operator is prompted to make an out-going data call. Before step 1, only signalling radio bearers have been established. The SS transmits a RADIO BEARER SETUP message which is including IE "integrity check info" and "integrity protection mode info" to the UE after it sets up L1 including the start of tx/rx. This message requests the establishment of RABs for carrying the traffic of the call. After the UE receives this message, it configures them and establishes a radio bearer. Finally the UE transmits a RADIO BEARER SETUP COMPLETE message which is including IE "integrity check info" using AM RLC. Then the UE and the SS enters the communicating state.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	RADIO BEARER SETUP	This message contain IE "integrity check info" and "integrity protection mode info"
2		→	RADIO BEARER SETUP COMPLETE	This message contain "integrity check info"
3				To confirm the communication.

Specific Message Contents

For RADIO BEARER SETUP in step 1, using the message sub-types indicated as "Speech in CS" or "Packet to CELL_DCH from CELL_DCH in PS" as found in default message content clause.

RADIO BEARER SETUP

The contents of RADIO BEARER SETUP message in this test case is identical to identical message sub-type found in TS 34.108 Clause 8, with the following exceptions:

Information Element	Value/remark
Integrity check info	
- Message authentication code	Bit string (32) MAC-I See TS33.102
- RRC Message sequence number	0
Integrity protection mode info	Present
- Integrity protection mode command	"Start"
- Downlink integrity protection activation info	Not present (It is needed only when the IE "Integrity protection mode command" has the value "modify" .)
- integrity protection algorithm	UMTS Integrity Algorithm UIA1 "0001 ₂ "; UIA1, Kasumi
- integrity protection initialisation number	Bit string (32) FRESH See TS33.102

RADIO BEARER SETUP COMPLETE

Information Element	Value/remark
Integrity check info	
- Message authentication code	Not checked (MAC-I See TS33.102)
- RRC Message sequence number	Not checked
Uplink Integrity protection activation info	Not checked
Hyper Frame Number	Not checked

8.2.1.2.5 Test requirement

After step2 the UE shall communicate with the SS on the radio bearer for its implementation. This can be verified by the correct reproduction of the u-plane data transmitted and received between the test operator and SS.

Annex A. Default RRC Message Contents

This clause contains the default values of RRC messages, other than those specified in TS 34.108 clauses 6 and 9. Unless indicated otherwise in specific test cases, they shall be transmitted by the system simulator in RRC messages, and which are required to be received from the UE under test.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements which are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

In this clause, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

Default SYSTEM INFORMATION:

NOTE 1: SYSTEM INFORMATION BLOCK TYPE 1 (except for PLMN type "GSM-MAP"), SYSTEM INFORMATION BLOCK TYPE 8, SYSTEM INFORMATION BLOCK TYPE 9, SYSTEM INFORMATION BLOCK TYPE 10, SYSTEM INFORMATION BLOCK TYPE 14, SYSTEM INFORMATION BLOCK TYPE 15 and SYSTEM INFORMATION BLOCK TYPE 16 messages are not used.

Phase 2 ☐
Release 96 ☐
Release 97 ☐
Release 98 ☐
Release 99 ☒
Release 00 ☐

Reason for change:

A new RRC procedure called Counter Check was added into the TS25.331, as proposed by CR-309r2 for V3.2.0. A test case was added into TS 34.123-1. 3 test scenarios: invalid message reception, COUNT-C match and COUNT-C mismatch were created to check this elementary procedure.

8.1.8 Counter check

8.1.8.1 Definition

8.1.8.2 Conformance requirement

1. When the UE receives a COUNTER CHECK message that includes matched COUNT-C MSB values, the UE shall transmit a COUNTER CHECK RESPONSE message on the uplink DCCH and omitting “RB COUNT-C information” IE in this message.
2. When the UE receives a COUNTER CHECK message that includes any mismatched COUNT-C MSB values, the UE shall transmit a COUNTER CHECK RESPONSE message on the uplink DCCH and specifies the current COUNT-C information of the RAB(s) with mismatched values.

Reference

3GPP TS 25.331 clause 8.1.15

8.1.8.3 Test purpose

To confirm that the UE transmits a COUNTER CHECK RESPONSE message after it receives a COUNTER CHECK message from the SS. To confirm that the UE responds to the reception of an invalid downlink COUNTER CHECK message by transmitting a RRC STATUS message on the uplink DCCH, stating the correct error cause value in message.

8.1.8.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: CELL_DCH state

Test Procedure

The UE is brought to the CELL_DCH state after a successful outgoing call attempt. The SS transmits an erroneous COUNTER CHECK message. The content of this message is a concatenation of the message type IE and an arbitrary 32-bits string. The UE shall detect a protocol error and send RRC STATUS message to report this event. Next, the SS transmits a COUNTER CHECK message that includes the current COUNT-C MSB information in each radio access bearer. The UE shall react by sending a COUNTER CHECK RESPONSE message on the uplink DCCH, which does not include “RB COUNT-C information” IE. The SS transmits a COUNTER CHECK message which includes the current COUNT-C MSB information reversed all the bits in each radio bearer. The UE shall send a COUNTER CHECK RESPONSE message on the uplink DCCH, specifying the current COUNT-C information for each radio access bearer established.

Expected sequence

<u>Step</u>	<u>Direction</u>		<u>Message</u>	<u>Comment</u>
	<u>UE</u>	<u>SS</u>		
<u>1</u>				The UE is brought to CELL_DCH state after an outgoing call has been established successfully.
<u>2</u>		←	<u>COUNTER CHECK</u>	This message contains an arbitrary 32-bits pattern, following the IE "Message Type"
<u>3</u>		→	<u>RRC STATUS</u>	UE shall detect a protocol error and then transmit this message.
<u>4</u>		←	<u>COUNTER CHECK</u>	See specific message content.
<u>5</u>		→	<u>COUNTER CHECK RESPONSE</u>	The message shall not include the IE "RB COUNT-C information".
<u>6</u>		←	<u>COUNTER CHECK</u>	See specific message content.
<u>7</u>		→	<u>COUNTER CHECK RESPONSE</u>	The message shall include the IE "RB COUNT-C information".

Specific Message Contents

COUNTER CHECK (Step 2)

<u>Information Element</u>	<u>Value/remark</u>
<u>Unknown bit pattern</u>	An arbitrary 32-bits string

RRC STATUS (Step 3)

<u>Information Element</u>	<u>Value/remark</u>
<u>Protocol Error Information</u> - Protocol Error Cause	Checked to see if set to "ASN.1 violation or encoding" or "conditional information element error"

COUNTER CHECK (Step 4)

<u>Information Element</u>	<u>Value/remark</u>
Integrity check info RB COUNT-C MSB information - RB identity - COUNT-C MSB uplink - COUNT-C MSB downlink	Calculated value 5 Current COUNT-C MSB for RB#5 in uplink Current COUNT-C MSB for RB#5 in downlink

COUNTER CHECK RESPONSE (Step 5)

<u>Information Element</u>	<u>Value/remark</u>
Integrity check info RB COUNT-C information - RB identity - COUNT-C uplink - COUNT-C downlink	Not checked Check to if this IE is absent

COUNTER CHECK (Step 6)

<u>Information Element</u>	<u>Value/remark</u>
RB COUNT-C MSB information - RB identity - COUNT-C MSB uplink - COUNT-C MSB downlink	Check to see if set to 4 Toggle all bits of the current COUNT-C MSB in uplink for RB#5 Toggle all bits of the current COUNT-C MSB in downlink for RB#5

COUNTER CHECK RESPONSE (Step 7)

<u>Information Element</u>	<u>Value/remark</u>
Integrity check info RB COUNT-C information - RB identity - COUNT-C uplink - COUNT-C downlink	Not checked Check to see if set to 5 Check to see if set to Current COUNT-C for RB#5 in uplink Check to see if set to COUNT-C for RB#5 in downlink

8.1.8.5 Test requirement

After step 2, the UE shall transmit a RRC STATUS message on the uplink DCCH. The protocol error cause shall be set to “ASN.1 violation or encoding” or “conditional information element error”.

After step 4 the UE shall transmit a COUNTER CHECK RESPONSE message which does not includes the IE”RB COUNT-C information” to indicates that a matched comparison result is obtained.

After step 6, the UE shall transmit a COUNTER CHECK RESPONSE message which includes the IE”RB COUNT-C information” to report that a mismatch in COUNT-C value is detected in RB#5.

3GPP/TSG T1/SIG Meeting#12
Finland, Finland, 28-30 August 2000

C Functional modification of feature ☒
D Editorial modification ☐

Release:

- Phase 2 ☐
Release 96 ☐
Release 97 ☐
Release 98 ☐
Release 99 ☒
Release 00 ☐

Reason for change:

In RRC CONNECTION SETUP message, RRC CONNECTION RE-ESTABLISHMENT message, RADIO BEARER SETUP message, RADIO BEARER RECONFIGURATION message and RADIO BEARER RELEASE message, "RLC info" IE was revised according to according to CR-296r3 for TS 25.331. 2 major changes were made to sub-IEs found in "RLC info":
1. Deleted IE "In-sequence delivery" when downlink UM or TM RBs are use.
2. Inserted IEs "Timer_MRW" and "MaxMRW" when uplink AM RB are used.

Contents of RADIO BEARER RECONFIGURATION message : AM or UM (Packet to CELL_DCH from
CELL_FACH in PS)

Information Element	Value/remark
Message Type	
Integrity check info	Not Present
- message authentication code	
- RRC message sequence number	
Integrity protection mode info	Not Present
- Integrity protection mode command	
- Downlink integrity protection activation info	
- RRC message sequence number	
- RRC message sequence number	
- Integrity protection algorithm	
- Integrity protection initialisation number	
Ciphering mode info	Not Present(If ciphering is applied, this IE is needed)
- Ciphering mode command	Stop
- Ciphering algorithm	Not Present(Standard UMTS Encryption Algorithm UEA1)
- Activation time for DPCH	Not Present(Used RLC-TM)
- Radio bearer downlink ciphering activation time	Not Present(Used RLC-AM or RLC-UM)
info	
- Radio bearer identity	
- RLC sequence number	
Activation time	(256+CFN-(CFN MOD 8 + 8))MOD 256
New U-RNTI	Not Present
New C-RNTI	Not Present
DRX indicator	noDRX
UTRAN DRX cycle length coefficient	Not Present
CN information info	Not Present
- PLMN identity	
- CN common GSM-MAP NAS system information	
- CN domain identity	
- CN domain specific GSM-MAP NAS system	
information	
RB information to reconfigure	(UM DCCH for RRC)
- RB identity	0

Source: Matsushita Communication Industry Co.,Ltd **Date:** 28/08/2000

Subject: Updates to "DPCH Compressed Mode Info" IE

Work item:

Category:	F Correction	☐	Release:	Phase 2	☐
(only one category shall be marked with an X)	A Corresponds to a correction in an earlier release	☐		Release 96	☐
	B Addition of feature	☐		Release 97	☐
	C Functional modification of feature	☒		Release 98	☐
	D Editorial modification	☐		Release 99	☒
				Release 00	☐

Reason for change:

In CR-228r5 for TS 25.331 V3.2.0, "DeltaSIR2" and "DeltaSIRafter2" IEs were added to "DPCH Compressed Mode Info". These IEs specify the Δ SIR target values to be applied during the compressed frames corresponding to the second transmission gap in the transmission gap pattern. The affected clauses in TS 34.123-1 V3.0.0 were changed accordingly. Some editorial errors were found in 8.4.1.2, 8.4.1.6 and 8.4.1.8 and then corrected. Several IEs in Annex A were found to have missing values. Suitable values were assigned to these IEs.

In CR-307r3 for TS 25.331 V3.2.0, "Scrambling Code Change" IE was removed from "DPCH Compressed Mode Info" IE. This is because scrambling code change mechanism is applied individually for each radio link. However, "DPCH Compressed Mode Info" IE is common to all radio links. In the same CR, TGPS L1 configuration parameters were made optional by encapsulating them into a simple structure called "Transmission gap pattern sequence configuration parameters". Annex A was updated so as to align to these modifications in RRC core specification.

In CR-410r1 for TS 25.331 V3.2.0, 2 proposals were made:

1. Addition of "DPCH compressed mode info status" IE into MEASUREMENT CONTROL message. This IE can be used activate/de-activate compressed mode pattern sequences, which are used to effect inter-frequency/inter-system measurements.
2. Addition of "Scrambling Code Change" IE into "Downlink DPCH info for each RL" IE.

All affected messages under clause 8.4.1.X and Annex A were revised according to the changes. In clause 8.4.1.8, test steps 6 to 11 were inserted to check the new condition introduced in item 1 above.

Clauses affected: 8.3.4.1, 8.3.4.3, 8.3.4.5, 8.3.4.6, 8.4.1.X, Annex A

8.3.4.1 Active set update in soft handover: Radio Link addition

8.3.4.1.1 Definition

8.3.4.1.2 Conformance requirement

Radio link addition is triggered in the network's RRC layer. The RRC entity in the network first configures the new radio link. Transmission and reception then begin immediately. This procedure is to update the active set of the connection between the UE and UTRAN. The UTRAN then transmits an ACTIVE SET UPDATE message to the UE. The UE configures layer 1 to begin reception for the additional radio link. After the UE receives confirmation from the physical layer in the UE, an ACTIVE SET UPDATE COMPLETE message is sent to the UTRAN.

Reference

3GPP TS 25.331 clause 8.3.4

8.3.4.1.3 Test purpose

To confirm that the UE continues to communicate with the SS on both the additional radio link and an already existing radio link after the radio link addition.

8.3.4.1.4 Method of test

Initial Condition

System Simulator : 2cells - Cell 1 is active ,Cell 2 is active

UE : CELL_DCH in cell 1

Test Procedure

Initially, the UE establishes a radio access bearer in the CELL_DCH state in cell 1. The SS begins to configure the new radio link to be added from cell 2. Then the SS transmits to the UE an ACTIVE SET UPDATE message in cell 1 on DCCH using AM RLC which includes the IE "Radio Link Addition Information".(e.g.Downlink DPCH information and other optional parameters relevant for the additional radio links with Primary CPICH info used for the reference ID). When the UE receives this message, the UE shall configure layer 1 to begin reception without affecting the current uplink and downlink activities of existing radio links. After the UE confirms the synchronization with the new radio link from cell 2, the UE shall transmit an ACTIVE SET UPDATE COMPLETE message to the SS on the uplink DCCH using AM RLC. The UE continues to communicate with the SS on the both radio links. To test this condition, SS ceases the operations of all uplink and downlink DPCH from cell 1. SS shall observe that the data communication for both DCCH and DTCH channels continue as per normal using cell 2, as if cell 1 is still operational.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is brought to CELL_DCH state in cell 1, after the successful establishment of a radio access bearer service.
2				The SS configures an additional radio link in the downlink direction from cell 2.
3		←	ACTIVE SET UPDATE	SS transmits this message in cell 1 on downlink DCCH using AM RLC. The message includes IE" Radio Link Addition Information". (e.g. Downlink DPCH information and other optional parameters relevant for the additional radio links with Primary CPICH info used for the reference ID in cell 2)
4		→	ACTIVE SET UPDATE COMPLETE	The UE shall configure a new radio link to cell 2, without interfering with existing connections on the radio link in cell 1. SS ceases all Tx and Rx activities in cell 1. But it shall be able to communicate with UE through cell 2.

Specific Message Content

ACTIVE SET UPDATE

The message to be used in this test is defined in the default message content clause, with the following exceptions:

Information Element	Value/remark
Radio link addition information	
- Primary CPICH Info	Set to same code as assigned for cell 2
- Primary Scrambling Code	
- Downlink DPCH info for each RL	
- Primary CPICH usage for channel estimation	P-CPICH can be used.
- Secondary CPICH info	Not Present
- DL channelisation code	This IE is repeated for all existing downlink DPCHs allocated to the UE
- Secondary scrambling code	Not Present
- CHOICE Spreading factor	512
- Code Number	For each DPCH, assign the same code number in the current code given in cell 1.
- Scrambling code change	Not Present
- TPC Combination Index	Not Present
- SSDT Cell Identity	Not Present
- Close loop timing adjustment mode	Not Present
- TFCI Combining Indicator	Not Present
- Secondary CCPCH Info	Not Present
- TFCS	Not Present
- FACH/PCH Information	Not Present
- Reference to other system information blocks	Not Present
Radio link removal information	Not Present

8.3.4.1.5

Test requirement

After step 3 the UE shall configure a new radio link to cell.2, with the connection on the old radio link in cell 1 remaining operational and unaffected. It shall transmit an ACTIVE SET UPDATE COMPLETE message on the uplink DCCH using AM RLC to acknowledge the completion of the active set additional procedure.

After step 4 the SS shall continue to communicate with the UE using the radio links added to the UE from cell 2.

8.3.4.3 Active set update in soft handover: Combined radio link addition and removal (active set is not full)

8.3.4.3.1 Definition

8.3.4.3.2 Conformance requirement

When radio links are to be replaced, the UTRAN RRC first configures the UTRAN L1 to activate the radio link(s) that are being added. The UTRAN RRC then transmits an ACTIVE SET UPDATE message to the UE RRC, which shall configure the UE L1 to terminate transmission and reception on the removed radio link(s) and begin transmission and reception on the added radio link(s). At the completion of the reconfiguration of radio links, the UE shall acknowledge the replacement with an ACTIVE SET UPDATE COMPLETE message.

Reference

3GPP TS 25.331 clause 8.3.4

8.3.4.3.3 Test purpose

To confirm that the UE continues to communicate with the SS on the added radio link and removes radio link which exists prior to the execution of active set update procedure.

8.3.4.3.4 Method of test

Initial Condition

System Simulator : 2cells- Both Cell 1 and Cell 2 are active

UE :CELL_DCH in cell 1 [Active set is not full.]

Test Procedure

The UE establishes a radio access bearer in the CELL_DCH state in cell 1. SS begin to configure the new radio link in cell 2. Then the SS transmits to the UE an ACTIVE SET UPDATE message in cell 1 on DCCH using AM RLC. The message includes IE" Radio Link Addition Information". and IE" Radio Link Removal Information", indicating the removal of cell 1 and addition of cell 2 into the active set. When the UE receives this message, the UE RRC shall terminate the transmission and reception of the removed radio link in cell 1 and then configures layer 1 to begin transmission and reception in cell 2. After the UE received confirmations from the physical layer regarding the update of active set, it transmits an ACTIVE SET UPDATE COMPLETE message on the uplink DCCH to the SS. The UE shall continue to communicate with the SS on the added radio link in cell 2. When SS receives ACTIVE SET UPDATE COMPLETE message, it verifies that the UE has ceased any uplink transmission in cell 1.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is in the CELL_DCH state in cell 1
2				The SS configures an additional radio link in cell 2, starting the transmission and reception of data in cell 2. Clause
3		←	ACTIVE SET UPDATE	The SS transmit this message on downlink DCCH using AM RLC which includes IE" Radio Link Addition Information" for cell 2 and IE" Radio Link Removal Information" for cell 1.
4		→	ACTIVE SET UPDATE COMPLETE	The UE shall configure a new radio link in cell 2 and removes the old radio link in cell 1.
5				The SS removes the radio link from cell 1 and the UE shall continue to communicate on the added radio link in cell 2, and not transmit any data in cell 1.

Specific Message Content

ACTIVE SET UPDATE

The message to be used in this test is defined in the default message content clause, with the following exceptions:

Information Element	Value/remark
Radio link addition information - Primary CPICH Info - Primary Scrambling Code - Downlink DPCH info for each RL - Primary CPICH usage for channel estimation - Secondary CPICH info - DL channelisation code - Secondary scrambling code - CHOICE Spreading factor - Code Number	Set to same code as assigned for cell 2 P-CPICH can be used. Not Present This IE is repeated for all existing downlink DPCHs allocated to the UE Not Present 512 For each DPCH, assign the same code number in the current code given in cell 2. <u>Not Present</u>
- Scrambling code change - TPC Combination Index - SSDT Cell Identity - Close loop timing adjustment mode - TFCI Combining Indicator - Secondary CCPCH Info - TFCS - FACH/PCH Information - Reference to other system information blocks	Not Present Not Present Not Present Not Present Not Present Not Present Not Present Not Present
Radio link removal information - Primary CPICH Info - Primary Scrambling Code	Set to same code assigned as for cell 1

8.3.4.3.5 Test requirement

After step 3 the UE shall remove the radio link in cell 1 and add the radio link in cell 2. Then the UE shall transmit an ACTIVE SET UPDATE COMPLETE message the uplink DCCH.

After step 4 the UE shall continue to communicate on the added radio link in cell 2. SS monitors the uplink direction to confirm that no data are designated for reception in cell 1.

8.3.4.5 Active set update in soft handover: Combined radio link addition and removal (active set is full)

8.3.4.5.1 Definition

8.3.4.5.2 Conformance requirement

When the UE active set is full, the UE shall first remove the old radio link and then add the new radio link, after it receives an ACTIVE SET UPDATE message for the combined radio link addition and removal.

Reference

3GPP TS 25.331 clause 8.3.4

8.3.4.5.3 Test purpose

To confirm that the UE removes one of existing radio links, which is indicated in an ACTIVE SET UPDATE message and continues to communicate on the added radio link.

8.3.4.5.4 Method of test

Initial Condition

System Simulator : 3 cells - Cell 1 , Cell 2, and Cell 3 are all active

UE :CELL_DCH in cell 1, cell 2 (The assumed maximum number for active set is 2.)

[Editor's Note] The maximum number of radio link (i.e. MaxRL) specified in CR328 of TS 25.331 is 8. However, if the UE capability is more inferior in this aspect, can the assumption above still stands?

Test Procedure

The UE establishes a radio access bearer in the CELL_DCH state in cell 1 and cell 2. The SS configures the new radio link in cell 3 and sends an ACTIVE SET UPDATE message on DCCH using AM. This message includes IE" Radio Link Addition Information" indicating cell 3 to be added into the active set, and IE" Radio Link Removal Information" indicating the removal of cell 1 from the active set. When the UE receives this message, it shall not report a failure but firstly removes the indicated radio link and then adds the new radio link. Then the UE transmits an ACTIVE SET UPDATE COMPLETE message on the DCCH using AM RLC to the SS and continues to communicate with the SS on the added radio link and the remaining old radio link.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is in the CELL_DCH state in cell 1 and cell 2.
2				The SS configures an additional radio link in for cell 3, and starts reception and transmission using cell 3.
3		←	ACTIVE SET UPDATE	The SS transmit this message on downlink DCCH using AM RLC which includes IE" Radio Link Addition Information" and IE" Radio Link Removal Information". The contents of the IE dictate the addition of cell 3 into the active set and removal of cell 1 from it.
4		→	ACTIVE SET UPDATE COMPLETE	The UE shall configure a new radio link in cell 3 and removes the old radio link in cell 1.
5				The SS removes the radio link in cell 1. The UE shall continue to communicate on the added radio link in cell 3 and also the existing radio link in cell 2.

Specific Message Content

ACTIVE SET UPDATE

The message to be used in this test case is identical to the same message sub-type found in TS 34.108 Clause 8clause, with the following exceptions:

Information Element	Value/remark
Radio link addition information	
- Primary CPICH Info	Set to same code as assigned for cell 3
- Primary Scrambling Code	
- Downlink DPCH info for each RL	
- Primary CPICH usage for channel estimation	P-CPICH can be used.
- Secondary CPICH info	Not Present
- DL channelisation code	This IE is repeated for all existing downlink DPCHs allocated to the UE
	Not Present
- Secondary scrambling code	512
- CHOICE Spreading factor	For each DPCH, assign the same code number in the current code given in cell3.
- Code Number	Not Present
- <u>Scrambling code change</u>	Not Present
- TPC Combination Index	Not Present
- SSDT Cell Identity	Not Present
- Close loop timing adjustment mode	Not Present
- TFCI Combining Indicator	Not Present
- Secondary CCPCH Info	Not Present
- TFCS	Not Present
- FACH/PCH Information	Not Present
- Reference to other system information blocks	Not Present
Radio link removal information	
- Primary CPICH Info	
- Primary Scrambling Code	Set to same code assigned as for cell 1

8.3.4.5.5 Test requirement

After step 3 the UE shall remove the radio link in cell 1 and add the radio link in cell 3. Then the UE shall transmit an ACTIVE SET UPDATE COMPLETE message on the uplink DCCH.

After step 4 the UE shall continue to communicate on the added radio link in cell 3 and on the existing old radio link in cell 2. It shall cease all transmission to cell 1.

8.3.4.6 Active set update in soft handover: Incompatible simultaneous reconfiguration

8.3.4.6.1 Definition

8.3.4.6.2 Conformance Requirements

The UE shall keep its old configuration, when it receives an ACTIVE SET UPDATE message before it can complete an existing active set update procedure. The UE shall then transmit an RRC STATUS message on the DCCH using AM RLC with value "Message not compatible with receiver state" set in IE "Protocol error cause". Then the UE shall continue to update its active set as if the second ACTIVE SET UPDATE message has not been received.

Reference

3GPP TS 25.331 clause 8.3.4

8.3.4.6.3 Test Purpose

To confirm that the UE resumes the prior active set update request, when it receives a subsequent ACTIVE SET UPDATE before it has completely executed the first update procedure. To confirm that the UE transmits a RRC STATUS message to report the detection of "incompatible simultaneous reconfiguration" condition.

Method of test

Initial Condition

System Simulator : 2 cells – both cell 1 and cell 2 are active

UE : CELL_DCH in cell 1 and cell 2

8.3.4.6.4 Test Procedure

The UE establishes a radio access bearer in CELL_DCH state in cell 1 and cell 2. SS transmits an ACTIVE SET UPDATE message to request for the removal of cell 1 from the active list. When the UE sends an acknowledgement for this message from its RLC entity, SS immediately transmits a second ACTIVE SET UPDATE message, which specifies that cell 1 to be added into the active list. The UE shall react by transmitting RRC STATUS message on the DCCH using AM-RLC mode. In this message, the IE "Protocol error cause" shall be set to "Message not compatible with receiver state". Subsequently, the UE shall transmit the ACTIVE SET UPDATE COMPLETE message when the reconfiguration from the earlier active set update is completed. When SS receives this message, it verifies that UE continues to communicate with the SS on the radio link in cell 2.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is CELL_DCH state in both cell 1 and cell 2.
2		←	ACTIVE SET UPDATE	The SS transmits this message on downlink DCCH using AM RLC, requesting for cell 1 to be removed from the active set.
3		←	ACTIVE SET UPDATE	Immediately after UE acknowledges the message in step 2, SS transmits this message. This message specifies that cell 1 be added into the active set.
4		→	RRC STATUS	UE shall transmit this message with the IE "Protocol Error Cause" set to "Message not compatible with receiver state"
5		→	ACTIVE SET UPDATE COMPLETE	UE shall transmit this message to signal the completion of the active set update.
6				UE shall cease all communication with cell 1 and continue to communicate with cell 2 only.

Specific Message Contents

ACTIVE SET UPDATE (Step 2)

The message to be used in this test is defined in the default message content clause, with the following exceptions:

Information Element	Value/remark
Radio link addition information	Not Present.
Radio link removal information	
- Primary CPICH info	
- Primary scrambling code	Set to the P-CPICH scrambling code assigned to cell 1.

ACTIVE SET UPDATE (Step 3)

Information Element	Value/remark
Radio link addition information	
- Primary CPICH Info	Set to same code as assigned for cell 1
- Primary Scrambling Code	
- Downlink DPCH info for each RL	P-CPICH can be used.
- Primary CPICH usage for channel estimation	Not Present
- Secondary CPICH info	This IE is repeated for all existing downlink DPCHs allocated to the UE
- DL channelisation code	Not Present
- Secondary scrambling code	512
- CHOICE Spreading Factor	For each DPCH, assign the same code number in the current code given in cell 1.
- Code Number	Not Present
- Scrambling code change	Not Present
- TPC Combination Index	Not Present
- SSDT Cell Identity	Not Present
- Close loop timing adjustment mode	Not Present
- TFCI Combining Indicator	Not Present
- Secondary CCPCH Info	Not Present
- TFCS	Not Present
- FACH/PCH information	Not Present
- Reference to other system information blocks	Not Present
Radio link removal information	Not Present

RRC STATUS

Information Element	Value/remark
Protocol Error Cause	Check if it's set to 'Message not compatible with receiver state'

8.3.4.6.5 Test Requirement

After step 3 the UE shall report the “incompatible simultaneous reconfiguration” error by transmitting RRC STATUS message on the DCCH. In this message, the value “Message not compatible with receiver state” shall be set in IE “Protocol error cause”.

After step 4 the UE shall transmit ACTIVE SET UPDATE COMPLETE message on the uplink DCCH of cell 2.

After step 5 the UE shall continue to communicate normally with the SS using the radio link from cell 2.

8.4.1.1 Measurement Control and Report: Intra-frequency measurement for transition from idle mode to CELL_DCH state

8.4.1.1.1 Definition

8.4.1.1.2 Conformance requirement

After a state transition from idle mode to CELL_DCH state, the UE shall continue to monitor the list of neighbouring cells which is specified in the SYSTEM INFORMATION BLOCK TYPE 11 (or 12) messages on BCCH. The UE shall send a MEASUREMENT REPORT message when reporting criteria are satisfied. During CELL_DCH state, if the UE receives a MEASUREMENT CONTROL message, it shall terminate existing monitoring activities for the neighbouring cells previously known from SYSTEM INFORMATION BLOCK TYPE 11 (or 12) messages. It shall perform the measurement and reporting tasks based on the latest MEASUREMENT CONTROL message received.

Reference

3GPP TS 25.331 clause 8.4.1.9

8.4.1.1.3 Test Purpose

To confirm that the UE continue to monitor CPICH RSCP measurement quantity of the neighbour cells after it has entered the CELL_DCH state from idle mode. When the criteria specified in BCCH have been met, it

shall report the measurements to the SS using MEASUREMENT REPORT messages. To confirm that in CELL_DCH state, the UE respond to a modification of measurement criteria and adjust its measurement and reporting mechanism accordingly. To confirm that the UE terminates monitoring and measurement activities for the neighbour cells found in SYSTEM INFORMATION BLOCK TYPE 11 (or 12) message, after it has received a MEASUREMENT CONTROL message which specifies the measurement type to be “intra-frequency measurement”. To confirm that the UE restart the monitoring and reporting activities based on the last MEASUREMENT CONTROL message received.

8.4.1.1.4 Method of test

Initial Condition

System Simulator : 2 cells – Cell 1 is active and the downlink P-CPICH has a transmission level (RSCP) of – 40 dBm, cell 2 is also active but with a P-CPICH transmission power 10dB below cell 1.

UE : idle state after having successfully camped onto cell 1.

Test Procedure

The UE is initially at idle mode and has selected cell 1 for camping. The SYSTEM BLOCK TYPE 11 message is modified with respect to the default settings to prevent reporting of CFN-SFN difference and also to include cell 2 into the monitored neighbour cell list. The key measurement parameters are as follow: measurement type = “intra-frequency measurement”, measurement quantity = “CPICH RSCP”, report criteria = “periodic reporting criteria”, reporting interval = “12 seconds”.

SS pages the UE with the cause “Incoming circuit-switched call”. The UE shall transmit a RRC CONNECTION REQUEST message on the CCCH, SS replies with RRC CONNECTION SETUP message and allocates uplink and downlink DPDCH physical resources to the UE. UE then moves to CELL_DCH state. After approximately 12 seconds, the UE shall transmit a MEASUREMENT REPORT message with measurement readings from cell 2. SS waits for 25 seconds after the sending of RRC CONNECTION SETUP message to verify that 2 consecutive MEASUREMENT REPORT messages are received.

Then SS modifies the contents of MASTER INFORMATION BLOCK and SYSTEM INFORMATION BLOCK TYPE 12 messages. The measurement parameters for cell 2 are changed in the following manner: report criteria = “event-trigger”, event identity = “1f”, reporting threshold = “-65 dBm”. SS then begins to decrease the transmission power of P-CPICH in cell 2 progressively at the rate of 0.5dB/sec. SS checks to see that no MEASUREMENT REPORT messages are sent within the next 12 seconds (which is due to periodic reporting). The UE shall detect this change and discontinue the periodic reporting of RSCP value estimation from cell 2. After approximately 35 seconds later, the UE shall transmit MEASUREMENT REPORT message to indicate that the RSCP of cell 2 has reached the threshold specified. In this message, the correct measurement identity shall be stated. Finally, SS sends a MEASUREMENT CONTROL message to request a periodic reporting of measurement quantity P-CPICH Ec/No from cell 2. The reporting interval is set to 32 seconds. Within the MEASUREMENT CONTROL message, a new measurement identity is assigned. After receiving this message, the UE shall stop reporting quantity P-CPICH RSCP of cell 2. Moreover, the UE shall start to transmit MEASUREMENT REPORT messages with the contents pertaining to new measurement identity on cell 2's P-CPICH Ec/No.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	SYSTEM INFORMATION BLOCK TYPE 11	The UE is idle mode and camped onto cell 1. Cell 2 is also active but the P-CPICH has a RSCP 10dB below that of cell 1. SYSTEM INFORMATION TYPE 12 to be transmitted is different from the default settings (see specific message contents)
2		←	PAGING TYPE 1	SS sends this message to page for the UE.
3		→	RRC CONNECTION REQUEST	
4		→	RRC CONNECTION SETUP	SS allocates DPCH physical channels to UE

5	→	RRC CONNECTION COMPLETE	UE transmits this message to acknowledge the SETUP message and moves to CELL_DCH state.
6	→	MEASUREMENT REPORT	SS waits for 25 seconds. It shall receive 2 consecutive MEASUREMENT REPORT messages
7	←	MASTER INFORMATION BLOCK SYSTEM INFORMATION BLOCK TYPE 12	SS modifies the contents of system information, so that measurement for cell 2 is changed to "event trigger" with "event identity" set to 1f. SS then reduces the transmission power of cell 2's P-CPICH progressively by 0.5dB/sec.
8			SS monitors the DCCH for the next 12 seconds to make sure that no further MEASUREMENT REPORT messages are transmitted.
9	→	MEASUREMENT REPORT	UE shall transmit this message approximately 35 seconds after step 7, as its internal estimation of the RSCP of cell 2 has dropped below the threshold.
10	←	MEASUREMENT CONTROL	A new measurement identity is assigned, with the reporting quantity changed to cell 2's P-CPICH Ec/No
11	→	MEASUREMENT REPORT	SS verifies that UE transmits MEASUREMENT REPORT messages periodically to report the P-CPICH Ec/No value of cell 2.

Specific Message Contents

All messages indicated below shall use the same content as described in default message content, with the following exceptions:

SYSTEM INFORMATION BLOCK TYPE 11 (Step 1)

Event Results	Check to see if this IE is absent

8.4.1.1.5 Test Requirement

After step 5 the UE shall start to transmit MEASUREMENT REPORT message. The measurement quantity "CPICH RSCP" shall be reported to the SS at 12 seconds interval.

After step 7 UE shall not transmit any MEASUREMENT REPORT messages within 12 seconds after SS has modified the MASTER INFORMATION BLOCK and SYSTEM INFORMATION BLOCK TYPE 12 messages.

The UE shall transmit a MEASUREMENT REPORT message roughly 35 seconds after step 7, to report that the RSCP value for cell 2 has dropped below the threshold.

After step 10 the UE shall transmit MEASUREMENT REPORT messages at 32 seconds interval, with the IE "Measurement Identity" set to 3. The message shall also include an estimation of cell 2's P-CPICH Ec/No value.

8.4.1.2 Measurement Control and Report: Inter-frequency measurement for transition from idle mode to CELL_DCH state

8.4.1.2.1 Definition

8.4.1.2.2 Conformance requirement

After entering CELL_DCH state from idle mode, the UE shall discontinue the monitoring of the list of neighbouring cells assigned in the SYSTEM INFORMATION BLOCK TYPE 12 (or 11) messages on BCCH.

Reference

3GPP TS 25.331 clause 8.4.1.9

8.4.1.2.3 Test Purpose

To confirm that the UE terminates the monitoring of the list of neighbouring cell assigned in the IE "inter-frequency cell info" in SYSTEM INFORMATION BLOCK TYPE 12 (or 11) messages, after it enters CELL_DCH state from idle mode.

8.4.1.2.4 Method of test

Initial Condition

System Simulator:- 2 cells – Cell 1 is active and has a downlink transmission level (CPICH RSCP) of –50 dBm, cell 2 is also active but with a transmission power 20dB below cell 1. The carrier frequency of cell 2 in the uplink direction is 1 UARFCN above that of cell 1, and the downlink carrier is 1 UARFCN below that of cell 1.

UE:- idle state ~~by has successfully and~~ camped onto cell 1.

Test Procedure

The UE is initially at idle mode and has selected cell 1 for camping. The SYSTEM INFORMATION BLOCK TYPE 12 message is modified with respect to the default settings to prevent reporting of CFN-SFN difference, and also to include cell 2 into the monitored neighbour cells list. The key measurement parameters are as follow: measurement type = "inter-frequency measurement", measurement quantity = "CPICH RSCP".

SS pages the UE with the cause "Incoming circuit-switched call". The UE shall transmit a RRC CONNECTION REQUEST message on the CCCH, SS replies with RRC CONNECTION SETUP message and allocates uplink and downlink ~~DDCH~~ dedicated physical resources to the UE. UE then moves to CELL_DCH. The UE shall not transmit any MEASUREMENT REPORT messages, which pertain to measurement readings from cells belonging to the monitored set.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	SYSTEM INFORMATION BLOCK TYPE 12	The UE is idle mode and camped onto cell 1. Cell 2 is also active but has transmission power 20dB below that of cell 1. SYSTEM INFORMATION BLOCK TYPE 12 to be transmitted is different from the default settings (see specific message contents)
2		←	PAGING TYPE 1	SS sends this message to page for the UE.
3		→	RRC CONNECTION REQUEST	
4		→	RRC CONNECTION SETUP	SS allocates ~~DPDCH~~ dedicated physical channels to UE, using compressed mode format
5		→	RRC CONNECTION <u>SETUP</u> COMPLETE	UE transmits this message to acknowledge the RRC CONNECTION SETUP message and moves to CELL_DCH state.
6				SS raises the transmission power of cell 2 by 10dB. SS checks to see that no MEASUREMENT REPORT messages are sent from UE to cell 1.

Specific Message Content

All messages indicated below shall use the same content as described in default message content, with the following exceptions:

8.4.1.2.5 Test Requirement

After step 5 the UE shall not transmit any MEASUREMENT REPORT messages pertaining to the measurement of CPICH Ec/No quantity from cell 2.

8.4.1.3 Measurement Control and Report: Intra-frequency measurement for transition from idle mode to CELL_FACH state

8.4.1.3.1 Definition

8.4.1.3.2 Conformance requirement

During a transition from idle mode to CELL_FACH state, the UE shall start to monitor neighbouring cells listed in the IE “Intra-frequency cell info” received in SYSTEM INFORMATION BLOCK TYPE 12 (or 11). If a measurement report criteria is also specified, the UE shall store this information and apply these rules when deciding to transmit MEASUREMENT REPORT messages during a subsequent transition to CELL_DCH state. If reporting during RACH transmissions are dictated by the UTRAN, the UE shall append the relevant measurement information when sending messages on RACH (e.g. RRC CONNECTION REQUEST and CELL UPDATE).

Reference

3GPP TS 25.331, clause 8.4.1.9

8.4.1.3.3 Test Purpose

To confirm that the UE begins to monitor the neighbouring cells in the monitored list after it has entered the CELL_FACH state. The list of neighbouring cell can be known from SYSTEM INFORMATION BLOCK TYPE 12 (or 11) messages. If information regarding the intra-frequency measurement report criteria is also broadcasted, the UE shall save this information and apply the criteria during a subsequent transition to CELL_DCH state. If RACH measurement reporting is dictated in SYSTEM INFORMATION BLOCK TYPE 12 (or 11) messages, the UE shall include these measurements when transmitting on the RACH channel.

8.4.1.3.4 Method of test

Initial Condition

System Simulator : 2 cells – both cell 1 and cell 2 are active. Cell 2 is transmitting at 15 dB below cell 1.

UE : idle state and camped onto cell 1.

Test Procedure

The UE is initially at idle mode and has selected cell 1 for camping. The SYSTEM BLOCK TYPE 12 message is modified with respect to the default settings to prevent reporting of CFN-SFN difference and also to include cell 2 into the monitored neighbour cell list. The key measurement parameters are as follow: measurement type = "intra-frequency measurement", measurement quantity = "CPICH Ec/No", report criteria = "periodic reporting criteria", reporting interval = "12 seconds". In the system information message, reporting of CPICH Ec/No is also required for intra-frequency reporting when transmitting RACH messages to cell 1.

SS pages the UE with the cause "Incoming packet-switched call". The UE shall transmit a RRC CONNECTION REQUEST message on the CCCH, SS replies with RRC CONNECTION SETUP message and allocates PRACH and S-CCPCH (FACH) physical channels for uplink and downlink use. UE shall then enter CELL_FACH state. SS waits until timer T305 expires, the UE shall send a CELL UPDATE message including the measurement reading of cell 2's CPICH Ec/No values. SS then reply with CELL UPDATE CONFIRM message without changing the physical channel resources.

In the next sequence, SS transmits PHYSICAL CHANNEL RECONFIGURATION message, and allocates DPDCH channels to the UE. The UE shall transit to CELL_DCH state and send a MEASUREMENT REPORT message, correctly stating the measurement identity. The measurement identity indicated shall match the value that was previously broadcasted on SYSTEM INFORMATION BLOCK TYPE 12 (or 11) when the UE was still in idle mode.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	SYSTEM INFORMATION BLOCK TYPE 2, SYSTEM INFORMATION BLOCK TYPE 12	The UE is idle mode and camped onto cell 1. Cell 2 is also active but has transmission power 15dB below that of cell 1. SYSTEM INFORMATION TYPE 2 and 12 to be transmitted are different from the default settings (see specific message contents)
2		←	PAGING TYPE 1	SS sends this message to page for the UE, stating the cause as an incoming packet-switched call.
3		→	RRC CONNECTION REQUEST	The Ec/No value of P-CPICH of Cell 1 should be reported.
4		←	RRC CONNECTION SETUP	SS allocates common physical channels to UE.

5	→	RRC CONNECTION COMPLETE	UE shall enter CELL_FACH state, transmits this message to acknowledge the SETUP message.
6			SS waits for 5 minutes (for the expiry of T305 timer), so that UE will initiate a periodic cell updating procedure.
7	→	CELL UPDATE	This message shall contain measurement readings of CPICH Ec/No for cell 1.
8	←	CELL UPDATE CONFIRM	SS does not change the physical channel allocation.
9	←	PHYSICAL CHANNEL RECONFIGURATION	SS assigns DPCH physical resources to the UE, but keeping parameters for transport channels and RBs unchanged.
10	→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall transit to CELL_DCH state after sending this message.
11	→	MEASUREMENT REPORT	UE shall begin to report cell 2's CPICH Ec/No value periodically at 12 seconds interval. The measurement identity shall match that broadcasted in step 1

8.4.1.3.5 Test Requirement

After step 3 the UE shall send RRC CONNECTION REQUEST message in response to the paging message sent by the SS, which includes reading of the current cell's CPICH Ec/No value.

After step 5 the UE shall not transmit any MEASUREMENT REPORT messages.

After step 6 the UE shall initiate cell updating procedure by transmitting CELL UPDATE message. In this message, the cause shall be set to "periodic cell updating". It shall include measurement readings for the current cell (cell 1) CPICH Ec/No measurement quantity.

After step 10 the UE shall move to CELL_DCH state and transmit MEASUREMENT REPORT messages at 12 seconds interval. In these messages, neighbouring cell 2's CPICH Ec/No value shall be reported. The IE "measurement identity" in this message shall match the IE "Intra-frequency measurement identity" found in SYSTEM INFORMATION BLOCK TYPE 12 messages transmitted in step 1.

8.4.1.4 Measurement Control and Report: Inter-frequency measurement for transition from idle mode to CELL_FACH state

8.4.1.4.1 Definition

8.4.1.4.2 Conformance requirement

After entering CELL_FACH state from idle mode, the UE shall start to monitor the list of "inter-frequency" neighbouring cells assigned in the SYSTEM INFORMATION BLOCK TYPE 12 (or 11) messages on BCCH/FACH.

Reference

3GPP TS 25.331, clause 8.4.1.10

8.4.1.4.3 Test Purpose

To confirm that the UE begins to monitor the list of neighbouring cell assigned in the IE "inter-frequency cell info" in SYSTEM INFORMATION BLOCK TYPE 12 (or 11) messages, after it enters CELL_FACH state from idle mode. However, it shall not transmit any MEASUREMENT REPORT messages to report measured results for inter-frequency cells.

8.4.1.4.3 Method of test

Initial Condition

System Simulator : 2 cells – Cell 1 is active and has a downlink transmission level for CPICH RSCP at -40 dBm, cell 2 is also active but with a transmission power 10dB below cell 1. The carrier frequency of cell 2 in

the uplink direction is 1 UARFCN above that of cell 2, and the downlink carrier is 1 UARFCN below that of cell 1.

UE : idle state and has successfully camped onto cell 1.

Test Procedure

The UE is initially at idle mode and has selected cell 1 for camping. The SYSTEM BLOCK TYPE 12 message is modified with respect to the default settings to prevent reporting of CFN-SFN difference and also to include cell 2 into the monitored neighbour cell list for inter-frequency measurement type. The key measurement parameters are as follow: measurement type = "inter-frequency measurement", measurement quantity = "CPICH Ec/No".

SS pages the UE with the cause "Incoming packet-switched call". The UE shall transmit a RRC CONNECTION REQUEST message on the CCCH, SS replies with RRC CONNECTION SETUP message and allocates PRACH channel in the uplink and S-CCPCH(FACH) channel on the downlink to the UE. UE then moves to CELL_FACH. The UE shall not transmit any MEASUREMENT REPORT messages, which pertain to measurement readings from inter-frequency cells belonging to the monitored set. SS decreases the transmission power of CPICH in cell 1 by 10dB. At the same time, it raises the corresponding downlink transmission power of cell 2 by 10dB. This is expected to trigger a cell reselection in the UE. The UE shall send CELL UPDATE message to report this event. Upon receiving this message, SS replies with the default CELL UPDATE CONFIRM message.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1		←	SYSTEM INFORMATION BLOCK TYPE 12	The UE is idle mode and camped onto cell 1. Cell 2 is also active but has transmission power 10dB below that of cell 1. SYSTEM INFORMATION TYPE 12 to be transmitted is different from the default settings (see specific message contents)
2		←	PAGING TYPE 1	SS sends this message to page for the UE.
3		→	RRC CONNECTION REQUEST	
4		←	RRC CONNECTION SETUP	SS allocates PRACH and S-CCPCH resources to UE
5		→	RRC CONNECTION COMPLETE	UE transmits this message to acknowledge the SETUP message and moves to CELL_FACH state.
6				SS checks to see that no MEASUREMENT REPORT messages are sent from UE to cell 1.
7				SS decreases the transmission power of cell 1 by 10dB and increases cell 2's downlink power by 10dB.
8		→	CELL UPDATE	UE shall detect that cell 2 has become stronger than cell 1. It sends this message after reselecting to cell 2
9		←	CELL UPDATE CONFIRM	Use default message.

Specific Message Content

All messages indicated below shall use the same content as described in default message content, with the following exceptions:

CELL UPDATE CONFIRM

Use the message sub-type in default message content defined in TS 34.108 Clause 8.

8.4.1.4.5 Test Requirement

After step 5 the UE shall not transmit any MEASUREMENT REPORT messages pertaining to the measurement of CPICH Ec/No quantity for cell 2.

After step 7 the UE shall reselect to cell 2 and transmit a CELL UPDATE message on the uplink CCCH of cell 2.

8.4.1.5 Measurement Control and Report: Intra-frequency measurement for transition from CELL_DCH to CELL_FACH state

8.4.1.5.1 Definition

8.4.1.5.2 Conformance requirement

After entering CELL_FACH state from CELL_DCH state, the UE shall terminate intra-frequency type measurement reporting originating from a previous MEASUREMENT CONTROL message. If indicated in the system information messages, the UE shall start to monitor neighbouring cells. The UE shall apply the reporting criteria specified in system information during a subsequent return to CELL_DCH state. If requested to perform measurement reporting on RACH channels, the UE shall append the measured results when transmitting uplink RACH messages.

Reference

3GPP TS 25.331, clause 8.4.1.7

8.4.1.5.3 Test Purpose

To confirm that the UE ceases to perform intra-frequency measurement specified in a previously received MEASUREMENT CONTROL message, when it moves from CELL_DCH state to CELL_FACH state. To confirm that the UE read the system information when in CELL_FACH state and starts to monitor the neighbouring cells as indicated in system information messages. To confirm that the UE performs measurements on uplink RACH channel and append the measured results in RACH messages, when requested in the system information messages.

8.4.1.5.4 Method of test

Initial Condition

System Simulator: 3 cells – Cell 1 and cell 2 are active, but the transmitter of cell 3 is switched off. Cell 1 is transmitting its CPICH (RSCP) at 20 dB above cell 2. The downlink UTRA carriers transmission strength for cell 1 is identical to that of cell 2.

UE: idle state and camped onto cell 1.

Test Procedure

The UE is initially in idle mode and has selected cell 1 as the current cell. SYSTEM INFORMATION BLOCK TYPE 12 message is modified from its default message contents, in order to prevent the reporting of CFN-SFN difference. No measurement requirements are specified for the UE in system information block (type 11 and 12) messages.

SS then prompts the test operator to initiate an outgoing call. When UE transmits a RRC CONNECTION REQUEST message on RACH, SS replies with RRC CONNECTION SETUP message. Uplink and downlink DPDCH physical channels are allocated. Upon receiving RRC CONNECTION SETUP message, the UE shall transmit RRC CONNECTION SETUP COMPLETE message on DCCH and then moves to CELL_DCH state. SS then sends a MEASUREMENT CONTROL message to UE. In this message, the SS requests the establishment of an intra-frequency measurement, based on an estimation of cell 2's CPICH Ec/No. At the same time, reporting of cell 2's CPICH is commanded with the reporting criteria set to "periodic reporting" and reporting interval set to 16 seconds. The UE shall start transmitting MEASUREMENT REPORT messages at 16 seconds interval corresponding to the requested reporting event.

SS transmits PHYSICAL CHANNEL RECONFIGURATION message, triggering a switch of transport channels from DCH/DCH to RACH/FACH. After receiving this message, the UE shall reconfigure itself and replies with PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on RACH. SS acknowledges this message and the UE shall move to CELL_FACH state and read the system information messages. SS monitors the uplink to verify that no MEASUREMENT REPORT messages are received. In SYSTEM INFORMATION BLOCK TYPE 12 message, SS includes cell 3 into the neighbour cells monitoring list. IE "Intra-frequency reporting quantity for RACH Reporting" and IE "Maximum number of Reported cells on RACH" are also specified in this message. An event-triggered (event type 1a) reporting criterion is specified for intra-frequency measurements. The transmission strength of CPICH for cell 3 is increased until it exceeds the lower bound of the reporting range specified. SS then pages for the UE using PAGING TYPE 1 message. The UE shall respond with a CELL UPDATE message, which comprises CPICH Ec/No measurements for cell 1 and 3. Upon the receipt of CELL UPDATE message, SS replies with CELL UPDATE CONFIRM message. This message does not change the physical resource nor allocate any new RNTI identities. The UE shall remain in CELL_FACH state. SS transmits PHYSICAL CHANNEL RECONFIGURATION message again, this time specifying dedicated physical resources for both uplink and downlink direction. The UE shall then send PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and return to CELL_DCH state. SS listens to the uplink DCCH for MEASUREMENT REPORT messages. SS verifies that all messages received pertain to the periodic measured value of cell 2's CPICH Ec/No value. UE shall not send any reports containing the measured values of cell 3.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1				UE is initially in idle mode and test operator is asked to make an outgoing call.
2		→	RRC CONNECTION REQUEST	
3		←	RRC CONNECTION SETUP	Uplink and downlink DPCH resources are allocated.
4		→	RRC CONNECTION SETUP COMPLETE	UE shall move to CELL_DCH state.
5		←	MEASUREMENT CONTROL	SS requests for measurement and reporting of cell 2's CPICH Ec/No value.
6		→	MEASUREMENT REPORT	UE shall send periodic report at 16 seconds interval. SS waits for 2 consecutive reports before proceeding to step 7.
7		←	PHYSICAL CHANNEL RECONFIGURATION	SS switches the physical resources to common physical channels.
8		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall reconfigure its uplink and downlink channels before transiting to CELL_FACH state.
9		←	SYSTEM INFORMATION BLOCK TYPE 12	SS includes cell 3 into the monitored neighbour cell list. SS waits for 1 minutes and verifies that no MEASUREMENT REPORT messages are received. Cell 3 is switched on, and SS adjusts the transmission power for CPICH such that its Ec/No falls into the report range specified.
10		←	PAGING TYPE 1	SS pages for UE using the assigned U-RNTI identity.
11		→	CELL UPDATE	UE shall transmit this message with measured results on RACH channels for cell 1 and 3 appended.
12		←	CELL UPDATE CONFIRM	No change in physical resource allocation and RNTI identities.
13		←	PHYSICAL CHANNEL RECONFIGURATION	Allocates dedicated physical channels.
14		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall transit to CELL_DCH state.
15		←	MEASUREMENT REPORT	UE shall continue to report cell 2's CPICH Ec/No value on a periodic basis.

PHYSICAL CHANNEL RECONFIGURATION (Step 13)

Use the same message sub-type found in Clause 8.1 of TS34.108, which is entitled "Packet to CELL_DCH from CELL_FACH in PS")

MEASUREMENT REPORT (Step 15)

The contents of this message should be the same as in step 6.

8.4.1.5.5 Test Requirement

After step 5, the UE shall start to transmit MEASUREMENT REPORT messages at 16 seconds interval. The message shall contain the measured result of cell 2's CPICH Ec/No value.

After step 8, the UE shall not send any MEASUREMENT REPORT messages which report quantities requested in MEASUREMENT CONTROL messages in step 5.

After step 10, the UE shall respond to the paging and transmit a CELL UPDATE message. In this message, the measured values CPICH Ec/No for cell 1 and cell 3 shall be included.

After step 14, the UE shall revert to the original measurement reporting mechanism and send MEASUREMENT REPORT messages containing estimates for cell 2's CPICH Ec/No value. The UE shall not transmit any MEASUREMENT REPORT messages, which indicate measurement quantities of cell 3.

8.4.1.6 Measurement Control and Report: Inter-frequency measurement for transition from CELL_DCH to CELL_FACH state

8.4.1.6.1 Definition

8.4.1.6.2 Conformance requirement

When transiting from CELL_DCH state to CELL_FACH state, the UE shall terminate all reporting activities related to inter-frequency measurements. After reaching CELL_FACH state, the UE shall begin to monitor neighbouring cells listed in the IE “inter-frequency cell info” of the system information type 12 message.

Reference

3GPP TS 25.331, clause 8.4.1.7

8.4.1.6.3 Test Purpose

To verify that UE ceases to transmit MEASUREMENT REPORT messages when moving from CELL_DCH state to CELL_FACH, even if it has detected that reporting criteria have been satisfied in CELL_FACH state. To verify that the UE extracts information for inter-frequency measurement from system information messages after reaching CELL_FACH state.

8.4.1.6.4 Method of test

Initial Condition

SS: 2 cells – ~~Both Cell 1 and cell 2 is~~ are active ~~while cell 2 is inactive~~. Cell 2 is allocated a frequency which is 1 UARFCN away from cell 1 in both uplink and downlink directions. The applicable radio conditions for cell 1 and cell 2 are as follow:

	Cell 1	Cell 2
UARFCN (N_u and N_d)	Channel 1	Channel 2
CPICH RSCP	-75 dBm	-85 dBm
$Q_{rxlevmin}$	-90 dBm	-90 dBm
S	15	5

UE: idle state and camped onto cell 1.

Test Procedure

The UE is initially in idle mode. SS pages the UE with the establishment cause set to “Terminating PS Data Call”. The SYSTEM INFORMATION TYPE 12 message is modified so that no measurement tasks are to be performed by the UE. The UE shall respond to the paging by sending a RRC CONNECTION REQUEST message on the uplink CCCH ~~carried by PRACH~~. Upon receiving this message, SS allocates dedicated DPDCH physical channels to the UE by transmitting RRC CONNECTION SETUP message. The UE shall reply by transmitting a RRC CONNECTION SETUP COMPLETE message. SS then checks the IE “Measurement Capability” of this message and verifies that the UE is capable of performing inter-frequency measurements under FDD mode. After the confirmation of the UE inter-frequency measurement ability, SS transmits PHYSICAL CHANNEL RECONFIGURATION message. In this message, information related to the radio bearers and uplink/downlink radio resources remain unchanged as compared to the equivalent IEs found in RRC CONNECTION SETUP message. The only difference concerns IE “DPCH compressed mode info”, which indicates that the UE shall apply the given parameters for compressed mode operations. The UE shall return PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to acknowledge that compressed mode mechanism can be exercised.

SS then send a MEASUREMENT CONTROL message to the UE, specifying that cell 2 be the measurement object for inter-frequency type measurement. The periodic reporting criterion is selected for this measurement. SS waits for 8 seconds to allow the periodic timer to expire. The UE shall send a MEASUREMENT REPORT message containing measured result of cell 2’s reporting quantity (CPICH Ec/No). SS transmits PHYSICAL CHANNEL RECONFIGURATION message again, requesting the UE to switch ~~its~~ from uplink and downlink DPDCH to common physical channels. The UE shall return PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and then moves to CELL_FACH state. SS waits for another 8 seconds to detect any possible uplink MEASUREMENT REPORT messages as a result of inter-frequency measurements. SS then increases the transmission power of cell 2 by 20 dBm. SS waits for [x] seconds to allow the UE to perform cell re-selection. The UE shall transmit a CELL

UPDATE message on the uplink CCCH of cell 2, specifying the cause as “cell re-selection”. SS replies with CELL UPDATE CONFIRM message.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1				UE is initially in idle mode and camped onto cell 1. SYSTEM INFORMATION BLOCK TYPE 12 is redefined, disabling all measurement and reporting activities.
2		←	PAGING TYPE 1	SS pages UE with cause set to “incoming circuit-switched call”
3		→	RRC CONNECTION REQUEST	
4		←	RRC CONNECTION SETUP	Uplink and downlink DPDCH resources are allocated.
5		→	RRC CONNECTION SETUP COMPLETE	UE shall indicate that it's capable of performing inter-frequency measurement for FDD mode.
6		←	PHYSICAL CHANNEL RECONFIGURATION	SS instructs UE to begin compressed mode operation.
7		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall enter CELL_DCH state.
8		←	MEASUREMENT CONTROL	SS indicates that cell 2 be monitored. SS waits for 8 seconds.
9		→	MEASUREMENT REPORT	UE shall transmit this message to report cell 2's CPICH Ec/No value.
10		←	PHYSICAL CHANNEL RECONFIGURATION	SS changes the physical channel allocation to common channel configuration.
11		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall moves to CELL_FACH state.
12				SS waits for 8 seconds to verify that no MEASUREMENT REPORT messages are detected.
13				SS changes SYSTEM INFORMATION BLOCK TYPE 12 message to request that cell 2 <u>to</u> be included into neighbour cell list for inter-frequency measurements.
14				SS increases the transmission power of cell 2 by 20 dBm, and then wait for a [x] seconds to allow the UE to re-select to a new cell.
15		→	CELL UPDATE	UE shall detect that cell 2 has become the best cell and then perform cell re-selection procedure.
16		←	CELL UPDATE CONFIRM	SS acknowledges the cell 2 is updated.

Notes:

The value [x] seconds is TBD, after the cell re-selection duration is determined from TS 25.304.

AM_RLC error indication (for U-plane)	Check to see if it is set to FALSE
Cell update cause	Check to see if it is set to “Cell Reselection”
Protocol error info	Check to see if it is absent or set to FALSE
Measured results on RACH	Check to see if it is absent
Protocol error information	Check to see if it is absent

CELL UPDATE CONFIRM

Use the same message sub-type found in Clause ~~98.4~~ of TS34.108.

8.4.1.6.5 Test Requirement

After step 4 the UE shall transmit RRC CONNECTION SETUP COMPLETE message with the IE “Measurement capability”, indicating that both uplink and downlink inter-frequency measurements for FDD mode are supported.

After step 8 the UE shall transmit MEASUREMENT REPORT message to report cell 2’s CPICH Ec/No value.

After step 11 the UE shall stop sending MEASUREMENT REPORT messages which contain inter-frequency measured results for cell 2’s CPICH Ec/No value.

After step 14 the UE shall transmit CELL UPDATE message to inform that a cell reselection to cell 2 has occurred.

8.4.1.7 Measurement Control and Report: Intra-frequency measurement for transition from CELL_FACH to CELL_DCH state

8.4.1.7.1 Definition

8.4.1.7.2 Conformance requirement

When transiting from CELL_FACH state to CELL_DCH state, the UE shall resume intra-frequency measurement if it has previously stored such a measurement context in CELL_DCH state. If the measurement context indicates reporting in CELL_DCH state, the UE shall re-start the associated reporting activities. In the case when the UE is not assigned any measurement tasks, it shall monitor the list of neighbouring cells stated in system information messages. It shall transmit MEASUREMENT REPORT messages when the reporting criteria (if specified in system information messages) are met. When in CELL_DCH state, the UE shall override existing measurement and reporting contexts extracted from system information messages, if a MEASUREMENT CONTROL message is received. The UE shall then apply the new measurement and reporting parameters accordingly.

Reference

3GPP TS 25.331, clause 8.4.1.8

8.4.1.7.3 Test Purpose

To confirm that UE resumes intra-frequency measurement and reporting when it enters CELL_DCH state from CELL_FACH state, if such a condition exists before entering CELL_DCH state. To confirm that the UE continues to monitor the neighbour cells intra-frequency measurement list found in system information messages, if no previous assigned measurement is present. To confirm that the UE transmits MEASUREMENT REPORT messages if reporting conditions stated in system information messages have been satisfied. To confirm that a subsequent MEASUREMENT CONTROL message received in CELL_DCH state

Initial Condition

System Simulator: 3 cells –All 3 are all active. The transmission power (RSCP) for CPICH of the 3 cells are as follow: cell 1 (-40dBm), cell 2 (-55dBm) and cell 3 (-70dBm).

UE: CELL_FACH in cell 1.

Test Procedure

The UE is brought to CELL_FACH state, after the test operator has successfully initiated a packet-switched data call. The SYSTEM INFORMATION BLOCK TYPE 12 message is changed with respect to the default message contents, specifying that cell 2 is to be included in the neighbouring cell list for intra-frequency measurement. Event 1e is selected in IE "Intra-frequency measurement reporting criteria".

SS send a PHYSICAL CHANNEL RECONFIGURATION message to UE, allocating dedicated physical channels on both uplink and downlink direction. Upon receiving such a message, the UE shall return PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and move to CELL_DCH state. The UE shall send MEASUREMENT REPORT messages to indicate that the measured result of cell 2, as the measurement quantity has exceeded the threshold value in system information message. After receiving this message, SS transmits MEASUREMENT CONTROL message in which it specifies that intra-frequency measurement for cell 3 shall be performed. The reporting criteria are the same as in SYSTEM INFORMATION BLOCK TYPE 12 message, except that the reporting threshold is lowered. After receiving such a message, the UE shall transmit another MEASUREMENT REPORT message. SS verifies that only measurement reading for cell 3 is included and no IEs shall be present, pertaining to measurement quantity in cell 2.

Next, SS sends PHYSICAL CHANNEL RECONFIGURATION message to UE. In this message, the physical channel resources are switched to common physical channels – PRACH (RACH) for the uplink and S-CCPCH (FACH) for the downlink. UE shall reply with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE and transits to CELL_FACH. SS checks the uplink RACH to confirm that no MEASUREMENT REPORT messages are received. SS then transmits another MEASUREMENT CONTROL message. The key parameters employed are: measurement type = 'intra-frequency measurement', measurement object = 'cell 2', reporting criteria = 'periodic reporting', measurement validity = 'resume', UE state for reporting = 'CELL_DCH'. SS waits for 10 seconds before sending a PHYSICAL CHANNEL RECONFIGURATION message, comprising DPDCH physical channels. UE shall then return to CELL_DCH state, start to monitor the neighbour cell specified by the SS while the UE was in CELL_FACH state. The UE shall resume periodic reporting of cell 2's CPICH RSCP measured results by sending MEASUREMENT REPORT messages.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1				UE is initially in CELL_FACH after having successfully connected a packet-switched data call. SYSTEM INFORMATION TYPE BLOCK TYPE 12 message is changed according to the descriptions in Specific Message Contents.
2		←	PHYSICAL CHANNEL RECONFIGURATION	Allocates DPDCH physical channels.
3		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall move to CELL_DCH state.
4		←	MEASUREMENT REPORT	Reports cell 2's RSCP value.
5		→	MEASUREMENT CONTROL	Specifies cell 3 as the measurement object for intra-frequency measurement. The reporting criteria is the same as defined in SYSTEM INFORMATION BLOCK TYPE 12 message, with the exception that threshold for event 1e is lowered.
6		←	MEASUREMENT REPORT	UE shall report the estimated value for cell 3's CPICH RSCP reading only.
7		→	PHYSICAL CHANNEL RECONFIGURATION	Allocates PRACH and S-CCPCH physical channels.
8		←	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall move to CELL_FACH state.
9				SS checks that no MEASUREMENT REPORT messages are sent by UE.
10		→	MEASUREMENT CONTROL	SS indicates that intra-frequency measurement and reporting for cell 2 be resumed if the UE subsequently transits to CELL_DCH state.
11		→	PHYSICAL CHANNEL RECONFIGURATION	SS waits for 10 seconds before sending this message. DPCH physical channels are assigned to the UE in this message.
12		←	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE shall return to CELL_DCH state.
13		←	MEASUREMENT REPORT	UE begins to report cell 2's measured results again.

- UE internal measurement system information	Not Present

[Editor's Note] IE "Threshold Used Frequency" (originated from CR-324) and IE "Reporting Threshold" (originated from CR-289r1) are basically similar in function, it is not clear whether one should be removed.

PHYSICAL CHANNEL RECONFIGURATION (Step 2)

Use the same message sub-type found in Clause 8.1 of TS34.108, which is entitled “Packet to CELL_DCH from CELL_FACH in PS”

MEASUREMENT REPORT (Step 4)

Information Element	Value/Remarks
Measurement identity number	Check to see if set to 10
Measurement Results	
- CHOICE measurement	Check to see if set to “Intra-frequency measured results list”
- Intra-frequency measured results	
- Cell measured results	
- Cell Identity	Check to see if set to the id of cell 2
- SFN-SFN observed time difference	Check to see if this IE is absent
- Primary CPICH Info	
- Primary Scrambling Code	Check to see if it's the same code for cell 2
- CPICH Ec/No	Check to see if this IE is absent
- CPICH RSCP	Check to see if this IE is present
- Pathloss	Check to see if this IE is absent
- CFN-SFN observed time difference	Check to see if this IE is absent
Event Results	
- CHOICE event result	Check to see if it's set to 'Intra-frequency measurement event results'
- Intra-frequency event identity	Check to see if this IE is set to '1e'
- Cell measured event results	
- Primary CPICH info	
- Primary scrambling code	Check to see if it's the same code for cell 2

MEASUREMENT CONTROL (Step 5)

Information Element	Value/Remark
Measurement Identity Number	11
Measurement Command	Setup
Measurement Reporting Mode	Not Present
Additional measurements list	Not Present
CHOICE measurement type	Intra-frequency measurement
- Intra-frequency cell info list	
- Removed intra-frequency info list	Not Present
- New intra-frequency info list	
- Intra-frequency cell id	Set to id of cell 3
- Cell info	
- Cell individual offset	0 dB
- Reference time difference to cell	0 chips
- Primary CPICH Info	
- Primary Scrambling Code	Set to same code as used for cell 3
- Primary CPICH TX power	Not Present
- Read SFN Indicator	FALSE
- TX Diversity Indicator	FALSE
- Intra-frequency measurement quantity	
- Filter Coefficient	0
- Measurement quantity	CPICH RSCP
- Intra-frequency reporting quantity	
- Reporting quantities for active set cells	
- SFN-SFN observed time difference	No report
- Cell identity	FALSE
- CPICH Ec/No	FALSE
- CPICH RSCP	FALSE
- Pathloss	FALSE
- CFN-SFN observed time difference	FALSE
- Reporting quantities for monitored set cells	
- SFN-SFN observed time difference	No report
- Cell identity	TRUE
- CPICH Ec/No	FALSE
- CPICH RSCP	TRUE
- Pathloss	FALSE
- CFN-SFN observed time difference	FALSE
- Reporting quantities for unlisted cells	Not present
- Reporting cell status	Not present
- Measurement validity	Not present
- CHOICE report criteria	Intra-frequency measurement criteria
- Parameters required for each event	
- Intra-frequency event identity	1e
- Triggering condition	Monitored set cells
- Reporting Range	Not Present
- Cells forbidden to affect Reporting range	Not Present
- Primary CPICH Info	
- Primary Scrambling Code	Set to the same scrambling code for cell 3
- W	Not Present
- Hysteresis	1.0 dB
- Reporting deactivation threshold	Not Present
- Replacement activation threshold	Not Present
- Reporting Threshold	-90dBm
- Time to Trigger	0
- Amount of reporting	Infinity
- Reporting interval	16 seconds
DPCH compressed mode status info	Not Present

MEASUREMENT REPORT (Step 6)

Information Element	Value/Remarks
Measurement identity number	Check to see if set to 11
Measurement Results	
- CHOICE measurement	Check to see if set to "Intra-frequency measured results list"
- Intra-frequency measured results	
- Cell measured results	
- Cell Identity	Check to see if set to the id of cell 3
- SFN-SFN observed time difference	Check to see if this IE is absent
- Primary CPICH Info	
- Primary Scrambling Code	Check to see if it's the same code for cell 3
- CPICH Ec/No	Check to see if this IE is absent

Event Results	
- CHOICE event result	Check to see if it's set to 'Intra-frequency measurement event results'
- Intra-frequency event identity	Check to see if this IE is set to '1e'
- Cell measured event results	
- Primary CPICH info	
- Primary scrambling code	Check to see if it's the same code for cell 2

8.4.1.7.5 Test Requirement

After step 3 the UE shall report cell 2's CPICH RSCP value by transmitting a MEASUREMENT REPORT message.

After step 5 the UE shall delete all measurement and reporting contexts obtained from system information messages. However, it shall transmit a MEASUREMENT REPORT message containing measured results of cell 3's CPICH RSCP value only.

After step 8 the UE shall stop intra-frequency measurement reporting assigned previously in the MEASUREMENT CONTROL message received in step 5.

After step 12 the UE shall resume the measurement and reporting activities as specified in MEASUREMENT CONTROL message received in step 10. The UE shall transmit MEASUREMENT REPORT message, containing measured results of cell 2's CPICH RSCP value.

8.4.1.8 Measurement Control and Report: Inter-frequency measurement for transition from CELL_FACH to CELL_DCH state

8.4.1.8.1 Definition

8.4.1.8.2 Conformance requirement

When transiting from CELL_FACH state to CELL_DCH state, the UE shall stop monitoring the list of inter-frequency neighbour cells indicated in system information messages. If the UE has a previously stored inter-frequency measurement context marked as 'resume', it shall reinstate the suspended measurement and associated reporting activities after it has re-entered CELL_DCH state. The UE shall be able to start/terminate inter-frequency measurement by decoding the "DPCH compressed mode status info" IE in MEASUREMENT CONTROL messages.

Reference

3GPP TS 25.331 clause 8.4.1.8, 8.5.7.6.13

8.4.1.8.3 Test Purpose

To confirm that the UE erases all inter-frequency measurement contexts used in CELL_FACH state, when it moves to CELL_DCH. To confirm that the UE resumes inter-frequency measurements and reporting, which was assigned prior to CELL_FACH state, after it moves to CELL_DCH state. To confirm that the UE resumes inter-frequency measurement and reporting activities after it has received a MEASUREMENT CONTROL message specifying that a stored compressed mode pattern sequence be re-activated.

Initial Condition

SS: 3 cells – All 3 cells are active and the applicable radio conditions are stated in the table below:

	Cell 1	Cell 2	Cell 3
UARFCN (N_u and N_d)	Channel 1	Channel 2	Channel 2
CPICH RSCP	-60 dBm	-65 dBm	-75 dBm
$Q_{rxlevmin}$	-90 dBm	-90 dBm	-90 dBm
S	30	25	15

UE: CELL_FACH in cell 1 after an incoming packet-switched data call is successfully established.

Test Procedure

The UE is in CELL_FACH state after a successful connection, triggered by an incoming packet-switched data call. SS modifies the content of SYSTEM INFORMATION BLOCK TYPE 12 message, which indicates that cell 2 shall be included in the list of neighbouring cells to be monitored for inter-frequency measurements. Next, SS transmits MEASUREMENT CONTROL message to request the UE to execute an inter-frequency measurement for cell 3. The parameters of the reporting criteria are as follow: event-triggered with event identity = '2c', threshold for non-used frequency = '-80 dBm', hysteresis = '1.0dB', time to trigger = '10 seconds', amount of reporting = '1' and reporting interval = '0'. In the same message, IE "Measurement validity" is set to 'resume' and "UE state for reporting" is assigned the value 'CELL_DCH'.

SS sends PHYSICAL CHANNEL RECONFIGURATION message to allocate dedicated physical channels to the UE. Simultaneously, SS uses this message to command UE to start applying compressed mode mechanism for DPCH. The UE shall reply with PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and then move to CELL_DCH state. SS waits for 10 seconds. The UE shall transmit MEASUREMENT REPORT message, containing the selected frequency quality estimate (in the case CPICH Ec/No) of cell 3. SS verifies that this message does not contain measured results for cell 2. After sending this message, the UE shall not transmit any more MEASUREMENT REPORT messages.

SS modifies the reporting criteria by transmitting a MEASUREMENT CONTROL message on the downlink DCCH using AM-RLC. In this message, SS commands the UE to perform inter-frequency measurement and reporting for cell 3 using periodic reporting mechanism. Upon receiving this message, the UE shall transmit MEASUREMENT REPORT message at 2 seconds interval. In the next sequence, SS transmits a PHYSICAL CHANNEL RECONFIGURATION message and deactivates the compressed mode pattern sequence with "TGPSI" IE set to 1. The UE shall respond by sending PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and also stop the periodic reporting activities. Following this, SS sends a MEASUREMENT CONTROL message and re-activates the compressed mode pattern sequence by using the "DPCH compressed mode status" IE. SS confirms that the UE has reconfigured itself to start measurement reporting again. The SS shall be able to receive MEASUREMENT REPORT messages continuously at 2 seconds interval.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1				UE is initially in CELL_FACH state after establishing an incoming packet-switched data call. SS modifies SYSTEM INFORMATION BLOCK TYPE 12 to include cell 2 into the neighbour cell list for inter-frequency measurements.
2		←	MEASUREMENT CONTROL	SS specifies inter-frequency measurement and reporting parameters for cell 3.
3		←	PHYSICAL CHANNEL RECONFIGURATION	SS allocates DPCH physical channels and specifies compressed mode parameters
4		→	PHYSICAL CHANNEL RECONFIGURATION COMPLETE	UE moves to CELL_DCH state.
5		→	MEASUREMENT REPORT	UE shall resume inter-frequency measurement task for cell 3 and transmit this message to report the measured CPICH Ec/No value
<u>6</u>		<u>←</u>	<u>MEASUREMENT CONTROL</u>	<u>SS changes the reporting criteria for cell 3 to 'periodic reporting'</u>
<u>7</u>		<u>→</u>	<u>MEASUREMENT REPORT</u>	<u>UE shall begin to transmit this message at 2 seconds interval.</u>
<u>8</u>		<u>←</u>	<u>PHYSICAL CHANNEL RECONFIGURATION</u>	<u>SS deactivates the currently used pattern sequence for compressed mode operation.</u>
<u>9</u>		<u>→</u>	<u>PHYSICAL CHANNEL RECONFIGURATION COMPLETE</u>	<u>UE stays in CELL_DCH state. SS waits for 5 seconds and verifies that no MEASUREMENT REPORT messages are received.</u>
<u>10</u>		<u>←</u>	<u>MEASUREMENT CONTROL</u>	<u>SS activates the pattern sequence stored by the UE.</u>
<u>11</u>		<u>→</u>	<u>MEASUREMENT REPORT</u>	<u>SS checks that MEASUREMENT REPORT messages are received at 2 seconds interval.</u>

PHYSICAL CHANNEL RECONFIGURATION (Step 3)

Use the same message sub-type found in Clause 98.4 of TS34.108, which is entitled "(Packet to CELL_DCH from CELL_FACH in PS", with the following exceptions in the IE(s) concerned:

Information Element	Value/Remarks
Downlink information common for all radio links	
- Downlink DPCH info common for all RL	0 (Single)
- Downlink DPCH power control information	Refer to the parameter set in TS 34.108
- DPC mode	Flexible
- Spreading factor	FALSE
- Fixed or flexible position	Not Present
- TFCI existence	0
- Number of bits for Pilot bits (SF=128, 256)	
- Downlink DPCH Offset Value	1
- DPCH compressed mode info	Active
- TGPSI	
- TGPS Status Flag	FDD Measurement
- Transmission gap pattern sequence configuration parameters	62
- TGMP	(Current CFN + (256 – TTI/10msec)) mod 256
- TGPRC	8
- TGCFN	10
- TGSN	5
- TGL1	15
- TGL2	35
- TGD	35
- TGPL1	Mode 1
- TGPL2	Mode 1
- RPP	DL
- ~~TPRM~~ ITP	F/2
- UL/DL Mode	~~F/2~~ Not Present
- Downlink compressed mode method	No code change
- Uplink compressed mode method	A
- ~~Scrambling code change~~	2.0
- Downlink frame type	1.0
- DeltaSIR ₁	Not Present
- DeltaSIRAfter ₁	None
- DeltaSIR ₂	Not Present
- TX Diversity Mode	
- SSDT information	
- S field	
- Code Word Set	

MEASUREMENT REPORT (Step 5)

Information Element	Value/Remarks
Measurement identity number	Check to see if set to 14
Measurement Results	
- CHOICE measurement	Check to see if set to "Inter-frequency measured results list"
- Inter-frequency measurement results	
- Frequency info	
- UARFCN (uplink)	Check to see if set to the UARFCN of the uplink frequency for cell 3
- UARFCN (downlink)	Check to see if set to the UARFCN of the downlink frequency for cell 3
- UTRA carrier RSSI	Check to see if it is absent
- Inter-frequency cell measurement results	
- Cell measured results	
- Cell Identity	Check to see if set to the id of cell 3
- SFN-SFN observed time difference	Check to see if it is absent
- Primary CPICH Info	
- Primary Scrambling Code	Check to see if set to the same code for cell 3
- CPICH Ec/No	Check to see if it is present
- CPICH RSCP	Check to see if it is absent
- Pathloss	Check to see if it is absent
- CFN-SFN observed time difference	Check to see if it is absent
Event Results	
- CHOICE event result	Inter-frequency event results
- Inter-frequency event identity	Check to see if it's set to '2c'
- Inter-frequency cells	
- Frequency Info	
- UARFCN (uplink)	Check to see if set to the UARFCN of the uplink frequency for cell 3
- UARFCN (downlink)	Check to see if set to the UARFCN of the downlink frequency for cell 3
- Non frequency related measurement event results	
- Primary CPICH Info	
- Primary Scrambling Code	Check to see if set to the same code for cell 3

MEASUREMENT CONTROL (Step 6)

<u>Information Element</u>	<u>Value/Remark</u>

<u>Event Results</u>	<u>Check to see if it is absent</u>

PHYSICAL CHANNEL RECONFIGURATION (Step 8)

Use the same message transmitted in step 3 with the following modifications:

<u>Information Element</u>	<u>Value/Remarks</u>
Downlink information common for all radio links	
- DPCH compressed mode info	
- TGPSI	<u>1</u>
- TGPS Status Flag	Inactive

MEASUREMENT CONTROL (Step 10)

<u>Information Element</u>	<u>Value/Remark</u>
Measurement Identity Number	Any number except 14
Measurement Command	Release
Measurement Reporting Mode	Not Present
Additional measurements list	Not Present
CHOICE measurement type	Not Present
DPCH compressed mode status info	
- Transmission gap pattern sequence	
- TGPSI	<u>1</u>
- TGPS Flag	Active

8.4.1.8.5 Test Requirement

After step 4 the UE shall transmit a MEASUREMENT REPORT message, containing the measured results for cell 3's CPICH Ec/No value. The UE shall not transmit any messages pertaining to cell 2's measurements.

After step 6 the UE shall send MEASUREMENT REPORT messages, which comprises cell 3's CPICH Ec/No measured value at 2 seconds interval. The "Event results" IE shall be omitted in these messages.

After step 8 the UE shall not transmit any MEASUREMENT REPORT messages.

After step 10 the UE shall resume the transmission of MEASUREMENT REPORT messages with identical contents as in those received after step 6.

8.4.1.9 Measurement Control and Report: Unsupported measurement in the UE

8.4.1.9.1 Definition

8.4.1.9.2 Conformance requirement

If the UTRAN indicates the UE to perform a measurement that is not supported in the UE, the UE shall keep the measurement configuration. Then the UE shall transmit a MEASUREMENT CONTROL FAILURE message on the DCCH using AM RLC.

Reference

3GPP TS25.331 clause 8.4.1.

8.4.1.9.3 Test purpose

To confirm that the UE transmits a MEASUREMENT CONTROL FAILURE message, with the value "unsupported measurement" specified in IE" failure cause" when the SS commanded the UE to perform an unsupported measurement by sending a MEASUREMENT CONTROL message.

8.4.1.9.4 Method of test

Initial Condition

System Simulator : 1cell

UE : CELL_DCH

[Editor's note : It is assumed in this test that the UE under test does not possess any inter-system measurement capability. The mandatory type(s) of measurement capability that should be implemented by the UE is to be discussed]

Test Procedure

The UE is in the CELL_DCH state. The SS transmits a MEASUREMENT CONTROL message which includes parameters (e.g. Measurement identity number : 2 , measurement command : Setup , measurement type: inter-system measurements, measurement reporting mode: unacknowledged and periodical reporting, measurement object: inter-system cell information, measurement quantity: Signal strength, reporting quantity: RSSI on BCCH carrier). As the UE under test does not support inter-system measurement, it shall transmit a MEASUREMENT CONTROL FAILURE message on the uplink DCCH using AM RLC.

Expected sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is in the CELL_DCH state.
2		←	MEASUREMENT CONTROL	Including the parameters (e.g. Measurement identity number : 2 , measurement command : Setup , measurement type: inter-system measurements, measurement reporting mode: unacknowledged and periodical reporting, measurement object: inter-system cell information, measurement quantity: Signal strength, reporting quantity: RSSI on BCCH carrier).
3		→	MEASUREMENT CONTROL FAILURE	Which is set to "unsupported measurement" in IE" failure cause".

MEASUREMENT CONTROL FAILURE

Information Element	Value/Remarks
Failure cause	To check if it is set to "Unsupported measurement"

8.4.1.9.4 Test requirement

After step 2 the UE shall identify the unsupported measurement element in the MEASUREMENT CONTROL message and transmit a MEASUREMENT CONTROL FAILURE. In this message, the value "unsupported measurement" shall be specified in IE "failure cause".

8.4.1.10 Measurement Control and Report: Failure (Invalid Message Reception)

8.4.1.10.1 Definition

8.4.1.10.2 Conformance requirement

When the UE received a MEASUREMENT CONTROL message containing an unexpected conditional IE, it shall reply with a MEASUREMENT CONTROL FAILURE message stating the appropriate protocol error information. It shall maintain the monitoring and measurement reporting mechanism as in before the MEASUREMENT CONTROL message has been received.

Reference

3GPP TS 25.331 clause 8.4.1.9

8.4.1.10.3

Test Purpose

To confirm that the UE does not change its current monitoring and measurement settings after it has received an illegal MEASUREMENT CONTROL message, which contains an unexpected IE error. To confirm that the UE resume its normal measurement reporting operations after transmitting MEASUREMENT CONTROL FAILURE message to the SS.

8.4.1.10.4

Method of test

Initial Condition

System Simulator : 1 cell.

UE : CELL_DCH

Test Procedure

The UE is initially brought to CELL_DCH. SS transmits a MEASUREMENT CONTROL message to the UE, commanding it to start transmitting report messages for the reporting quantity "UE Transmitted Power". SS then waits for the MEASUREMENT RERORT message with the allocated measurement identity to arrive. Then it transmits the MEASUREMENT CONTROL message again. In this message, SS requests that the reporting activities for "UE Transmitted Power" be stopped. At the end of this message, SS appends an unknown information element. When the UE receives this message, it shall reply with MEASURMENT CONTROL FAILURE message as it has detected a protocol error. It shall not cease to report its own transmission power level using MEASUREMENT REPORT messages.

Expected Sequence

Step	Direction		Message	Comment
	UE	SS		
1				The UE is CELL_DCH state in cell 1.
2		←	MEASUREMENT CONTROL	SS transmits this message on downlink DCCH to instruct UE to start reporting the quantity "UE transmit power".
3		→	MEASUREMENT REPORT	UE shall send this message periodically at 32 seconds interval
4		←	MEASURMENT CONTROL	SS sends a MEASUREMENT CONTROL message to request that UE stop the reporting activity.
5		→	MEASUREMENT CONTROL FAILURE	UE shall maintain its current measurement context and send this message.
6		→	MEASUREMENT REPORT	32 seconds after step 3, UE shall continue to transmit this message to the SS.

Specific Message Content

MEASUREMENT CONTROL (Step 2)

Information Element	Value/Remark
Measurement Identity Number	3
Measurement Command	Setup
Measurement Reporting Mode	Not Present
Additional measurements list	Not Present
CHOICE measurement type	UE internal measurement
- UE internal measurement quantity	
- Measurement quantity	UE Transmitted Power
- Filter coefficient	0
- UE internal reporting quantity	
- UE Transmitted Power	TRUE
- UE Rx-Tx time difference	FALSE
CHOICE report criteria	Periodical reporting criteria
- Amount of reporting	Infinity
- Reporting interval	32 seconds
<u>DPCH compressed mode status info</u>	<u>Not Present</u>

MEASUREMENT REPORT (Step 3)

Information Element	Value/Remarks
Measurement identity number	Check to see if set to 3
Measurement Results	
CHOICE measurement	Check to see if set to "UE internal measurement"
- UE Transmitted Power	Check to see if the reported power is compatible with RF class
- UE Rx-Tx report entries	Check to see if this IE is absent
Event Results	Check to see if this IE is absent

MEASUREMENT CONTROL (Step 4)

Information Element	Value/Remark
Measurement Identity Number	3
Measurement Command	Stop
Measurement Reporting Mode	Not Present
Additional measurements list	Not Present
CHOICE measurement type	Contains an arbitrary value
<u>DPCH compressed mode status info</u>	<u>Not Present</u>

MEASUREMENT CONTROL FAILURE (Step 5)

Information Element	Value/Remark
Failure cause	Check to see if set to "protocol error"
Protocol error information	Check to see if set to "Message extension not comprehended"

MEASUREMENT REPORT (Step 6)

Same as in the requirement for step 3

8.4.1.10.5 Test Requirement

After step 4 the UE shall transmit MEASUREMENT FAILURE message, stating the IE "failure cause" as "protocol error" and IE "protocol error information" as "message extension not comprehended". It shall continue to send MEASUREMENT REPORT with the correct identity number and measurement result entries at approximately 32 seconds interval.

Annex A. Default RRC Message Contents

This clause contains the default values of RRC messages, other than those specified in TS 34.108 clauses 6 and 9. Unless indicated otherwise in specific test cases, they shall be transmitted by the system simulator in RRC messages, and which are required to be received from the UE under test.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements which are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

In this clause, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

Default SYSTEM INFORMATION:

NOTE 1: SYSTEM INFORMATION BLOCK TYPE 1 (except for PLMN type "GSM-MAP"), SYSTEM INFORMATION BLOCK TYPE 8, SYSTEM INFORMATION BLOCK TYPE 9, SYSTEM INFORMATION BLOCK TYPE 10, SYSTEM INFORMATION BLOCK TYPE 14, SYSTEM INFORMATION BLOCK TYPE 15 and SYSTEM INFORMATION BLOCK TYPE 16 messages are not used.
