## Specific message contents

None.

## 9.4.3.3.5 Test requirement

- 1) 1.1 At step 33 the UE shall perform location-updating procedure.

- 1.2 At step 41 the UE shall send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating type IE set to "normal location updating".
- 2) At step 85 the UE shall not perform the IMSI detach procedure.
- 3) At step 78 the UE shall send a CM SERVICE REQUEST message with the CM Service Type IE set to "emergency call establishment", CKSN IE set to "no key is available" and Mobile Identity IE set to its IMSI.
- At step 80 the UE shall send an EMERGENCY SETUP message.
- 4) —
- 4.1 At step 128 the UE shall send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating type IE set to "normal location updating";
- 4.2 At step 134 the UE shall send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating type IE set to "normal location updating".
- 5) —
- 5.1 At step 179 the UE shall perform a normal location updating procedure if it enters a new cell;
- 5.2 At step 185 the UE shall send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating type IE set to "normal location updating".

#### ~~9.4.3.4 Location updating / abnormal cases / attempt counter less or equal to 4, stored LAI equal to broadcast LAI~~

##### ~~9.4.3.4.1 Definition~~

##### ~~9.4.3.4.2 Conformance requirement~~

- 1) When a failure such as cases d), f), g) and h) of clause 4.4.4.9 of TS 24.008 has occurred during a periodic location updating procedure (the broadcast LAI is equal to the stored LAI):
- 1.1 the UE shall be able to establish an MM connection i.e. send a RRC CONNECTION REQUEST message and then a CM SERVICE REQUEST message, CKSN and LAI set to those which have been allocated to the UE, Mobile Identity IE set to the TMSI which has been allocated to the UE;
- 1.2 then the UE shall not attempt a location updating procedure.
- 2) When a failure such as cases d), f), g) and h) of clause 4.4.4.9 of TS 24.008 has occurred during an IMSI attach procedure (the broadcast LAI is equal to the stored LAI):
- 2.1 the UE shall be able to establish an MM connection i.e. send a RRC CONNECTION REQUEST message and then a CM SERVICE REQUEST message, CKSN and LAI set to those which have been allocated to the UE, Mobile Identity IE set to the TMSI which has been allocated to the UE;
- 2.2 then the UE shall not attempt a location updating procedure.
- 3) When a failure such as cases d), f), g) and h) of clause 4.4.4.9 of TS 24.008 has occurred during a periodic location updating procedure and the attempt counter is smaller than 4 the UE shall send, after T3211 expiry, a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to the TMSI which has been allocated to the UE, CKSN IE and LAI set to those which have been allocated to the UE and the Location Updating Type IE set to "periodic updating".
- 3.1 When the UE's attempt counter reaches the value 4 (four failures such as cases d), f), g) and h) of clause 4.4.4.9 of TS 24.008 have occurred during a periodic location updating procedure) after T3212 expiry it shall send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating Type IE set to "normal".

- 4) When the UE's attempt counter reaches the value 4 (four failures such as cases d), f), g) and h) of clause 4.4.4.9 of TS 24.008 have occurred during a periodic location updating procedure) it shall use a request for a CM connection other than emergency call as a trigger for a location updating procedure.
- 5) When a failure such as cases d), f), g) and h) of clause 4.4.4.9 of TS 24.008 has occurred during an IMSI attach procedure and the attempt counter is smaller than 4 the UE shall send, after T3211 expiry, a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to the TMSI which has been allocated to the UE, CKSN IE and LAI set to those which have been allocated to the UE and the Location Updating type set to "IMSI attach".
- 5.1 When the UE's attempt counter reaches the value 4 (four failures such as cases d), f), g) and h) of clause 4.4.4.9 of TS 24.008 have occurred during an IMSI attach procedure) after T3212 expiry it shall send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating type set to "normal".
- 6) When the UE's attempt counter reaches the value 4 (four failures such as cases d), f), g) and h) of clause 4.4.4.9 of TS 24.008 have occurred during an IMSI attach procedure) it shall use a request for a CM connection other than emergency call as a trigger for a location updating procedure.

## References

TS 24.008 clause 4.4.4.9.

### 9.4.3.4.3 ————— Test purpose

To verify that in the case when the attempt counter is smaller than 4 and the broadcast LAI is equal to the stored LAI, the UE is in the MM IDLE state and NORMAL SERVICE substate. To verify that timer T3211 is stopped after a MM connection establishment.

To verify that the UE uses the T3211 timer, and that it enters the MM IDLE state and NORMAL SERVICE substate when its attempt counter reaches value 4 even in the case where the stored LAI is equal to the broadcast LAI.

### 9.4.3.4.4 ————— Method of test

#### Initial conditions

- System Simulator:
  - one cell: B, belonging to location area b;
  - IMSI attach/detach is allowed;
  - T3212 is set to 6 minutes.
- User Equipment:
  - the UE is "Idle updated" on cell B with a valid CKSN and a TMSI.

#### Related ICS/IXIT statements

USIM removal possible while UE is powered Yes/No.

Switch off on button Yes/No.

#### Test Procedure

A failure during the periodic location updating is triggered: as the broadcast LAI is equal to the stored LAI, the UE is still in the MM IDLE state and NORMAL SERVICE substate and timer T3211 is started. A CM connection other than for emergency call is attempted. It is checked that this is possible and that T3211 is stopped. Same test is performed with a failure during an IMSI attach procedure.

Then failures are triggered during the periodic location updating to let the attempt counter to reach the value of 4. The UE shall enter the MM IDLE state and ATTEMPTING TO UPDATE substate and delete any TMSI, stored LAI, ciphering key sequence number and ciphering key. When the attempt counter reaches the value of 4, timer T3212 shall be started. At timer T3212 expiry a location updating procedure is started. A request for CM connection other for than emergency call shall trigger a location updating procedure.

Same tests are performed when the failures are triggered during an IMSI attach procedure.

### Specific message contents

None.

#### 9.4.3.4.5 Test requirement

1)-

1.1 At step 8 the UE shall send a RRC CONNECTION REQUEST message and at step 11 the UE shall send a CM SERVICE REQUEST message, CKSN and LAI set to those which have been allocated to the UE, Mobile Identity IE set to the TMSI which has been allocated to the UE;

1.2 At step 11 the UE shall not attempt a location updating procedure.

2)-

2.1 At step 31 the UE shall send a RRC CONNECTION REQUEST message and at step 34 the UE shall send a CM SERVICE REQUEST message, CKSN and LAI set to those which have been allocated to the UE, Mobile Identity IE set to the TMSI which has been allocated to the UE;

2.2 At step 39 the UE shall not attempt a location updating procedure.

3)- At step 51 the UE shall send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to the TMSI which has been allocated to the UE, CKSN IE and LAI set to those which have been allocated to the UE and the Location Updating Type IE set to "periodic updating".

3.1 At step 69 the UE shall send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating Type IE set to "normal".

4)- At step 103 the UE shall send a LOCATION UPDATING REQUEST message.

5)- At step 132 the UE shall send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to the TMSI which has been allocated to the UE, CKSN IE and LAI set to those which have been allocated to the UE and the Location Updating Type IE set to "IMSI attach".

5.1 At step 152 the UE shall send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating Type IE set to "normal".

6)- At step 194 the UE shall send a LOCATION UPDATING REQUEST message.

### 9.4.4 Location updating / release / expiry of T3240

#### 9.4.4.1 Definition

#### 9.4.4.2 Conformance requirement

The UE receiving a LOCATION UPDATING ACCEPT message shall start T3240: it shall abort the RRC connection at the expiry of timer T3240.

## References

TS 24.008 clauses 4.4.4.8 and 11.2.

## 9.4.4.3 Test purpose

To verify that the UE aborts the RRC connection at the expiry of timer T3240.

## 9.4.4.4 Method of test

## Initial conditions

- System Simulator:
  - two cells: A and B, belonging to different location areas a and b.
- User Equipment:
  - the UE has a valid TMSI. It is "idle-updated" on cell A.

## Related ICS/IXIT statements

None.

## Test Procedure

A normal location updating procedure is performed. The RRC connection is not released by the SS within the timer T3240. It is checked that the UE aborts the RRC connection.

## Expected sequence

| NOTE1: The definitions for "Serving cell" and "non-suitable cell" are specified in TS 34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only".                                                                                                      |           |    |                                       |                                                                                                                               |
| NOTE2: At the expiration of T3240, as per TS 24.008, RR connection shall be aborted. In UMTS, UE cannot release RRC connection on its own. Instead, UE can send a Signalling Connection Release Request to the UTRAN, in order to initiate the release of RRC connection. |           |    |                                       |                                                                                                                               |

## Specific message contents

None.

## 9.4.4.5 Test requirement

At step 10 the UE shall abort the RRC connection.

## ~~9.4.5 Location updating / periodic~~

### ~~9.4.5.1 Location updating / periodic spread~~

#### ~~9.4.5.1.1 Definition~~

#### ~~9.4.5.1.2 Conformance requirement~~

- ~~1) The UEs shall perform spreading of the time before performing a periodic location updating when the location updating timer value is reduced.~~
- ~~2) The UE shall reset timer T3212 when the UE is deactivated, and shall start with a value between zero and the broadcasted value when reactivated in the same cell, IMSI attach being forbidden.~~
- ~~3) When activated the UE shall start timer T3212 with a value randomly drawn in the allowed range.~~

~~NOTE: This conformance requirement is not covered by a test purpose. It is intended to be covered by a manufacturer declaration.~~

#### References

TS 24.008 clause 4.4.2.

#### ~~9.4.5.1.3 Test purpose~~

- ~~1) To check that when the location updating timer is reduced, the timer running in the UE is started with a value depending on the current timer value and the new broadcasted T3212 value.~~
- ~~2) To verify that when the UE is reactivated in the same cell (as the one in which it was deactivated), IMSI attach being forbidden, the UE starts the timer T3212 with a value between zero and the broadcasted value.~~

~~NOTE: It is not tested that the value is random.~~

#### ~~9.4.5.1.4 Method of test~~

##### Initial conditions

— System Simulator:

- one cell, T3212 is set to 30 minutes;
- IMSI attach is allowed in the cell;

— User Equipment:

- the UE is deactivated. The stored MCC, MNC and LAC correspond to the broadcasted values. The stored update status is "updated".

##### Related ICS/IXIT statements

None.

##### Test procedure

The UE is activated. It performs IMSI attach. 3 minutes after the end of the IMSI attach procedure, the value of T3212 is set to 6 minutes. The UE shall perform periodic location updating 6 minutes after the end of the IMSI attach procedure.

Then, the IMSI attach/detach is forbidden. T3212 is still set to 6 minutes.

The UE is deactivated. The UE is reactivated. It is checked that the UE performs a periodic location updating during the 6 minutes following activation.

## Specific message contents

None.

## 9.4.5.1.5 ——— Test requirement

At step 10 the UE shall send an RRC CONNECTION REQUEST for a periodic location updating.

At step 21 the UE shall send an RRC CONNECTION REQUEST for a periodic location updating.

### ~~9.4.5.2 Location updating / periodic normal / test 1~~

#### ~~9.4.5.2.1 Definition~~

#### ~~9.4.5.2.2 Conformance requirement~~

- ~~1—The UE shall stop and reset the timer T3212 of the periodic location updating procedure when the first MM message is received or SECURITY mode setting is completed in the case of MM connection establishment.~~
- ~~2—The UE shall stop and reset the timer T3212 of the periodic location updating procedure when the UE has responded to paging and thereafter has received the first correct L3 message that is not an RRC message.~~

#### ~~References~~

~~TS 24.008 clause 4.4.2.~~

#### ~~9.4.5.2.3 Test purpose~~

~~To verify that the UE stops and resets the timer T3212 of the periodic location updating procedure when:~~

- ~~—the first MM message is received in the case of MM connection establishment, security mode being not set;~~
- ~~—the UE has responded to paging and the first correct L3 message that is not an RRC message is received.~~

~~NOTE:—T3212 is stopped when the MM idle state is left and restarted when the MM sublayer returns to that state, substate NORMAL SERVICE or ATTEMPTING TO UPDATE. As a consequence, the exact time when T3212 is reset between those two events cannot be tested.~~

#### ~~9.4.5.2.4 Method of test~~

##### ~~Initial conditions~~

- ~~—System Simulator:~~
  - ~~—1 cell, default parameters;~~
  - ~~—IMSI attach/detach is not allowed;~~
  - ~~—the T3212 time-out value is 2/10 hour.~~
- ~~—User Equipment:~~
  - ~~—the UE has a valid TMSI. It is "idle updated".~~

##### ~~Related ICS/IXIT statements~~

~~None.~~

##### ~~Test procedure~~

~~An UE originated MM connection is established and cleared. The RRC CONNECTION is released. It is checked that the UE performs a periodic location updating 12 minutes after the release of the RRC CONNECTION.~~

~~One minute after the periodic location updating, the UE is paged, it sends a RRC CONNECTION REQUEST message and the SS responds with an RRC CONNECTION SETUP message, a call is established and then cleared. It is checked that the UE performs a periodic location updating 12 minutes after the release of the link.~~

## Expected sequence

## Specific message contents

None.

## 9.4.5.2.5 Test requirement

At step 10 the UE shall initiate an RRC CONNECTION REQUEST 12 minutes after the release of the RRC CONNECTION (at step 7).

At step 25 the UE shall initiate an RRC CONNECTION REQUEST 12 minutes after the release of the RRC CONNECTION (at step 22).

### ~~9.4.5.3 Location updating / periodic normal / test 2~~

#### ~~9.4.5.3.1 Definition~~

#### ~~9.4.5.3.2 Conformance requirement~~

When a LOCATION UPDATING ACCEPT or a LOCATION UPDATING REJECT message is received, the timer T3212 is stopped and reset and the UE shall perform a periodic location updating after T3212 expiry.

#### References

TS 24.008 clause 4.4.2.

#### ~~9.4.5.3.3 Test purpose~~

To verify that the UE stops and resets the timer T3212 of the periodic location updating procedure when a LOCATION UPDATING ACCEPT message is received.

NOTE: T3212 is stopped when the MM idle state is left and restarted when the MM sublayer returns to that state, substate NORMAL SERVICE or ATTEMPTING TO UPDATE. As a consequence, the exact time when T3212 is reset between those two events cannot be tested.

#### ~~9.4.5.3.4 Method of test~~

#### Initial conditions

- System Simulator:
  - 2 cells, IMSI attach/detach is allowed in both cells;
  - T3212 is set to 6 minutes.
- User Equipment:
  - the UE has a valid TMSI. It is "idle updated" on cell A.

#### Related ICS/IXIT statements

USIM removal possible while UE is powered Yes/No.

Switch off on button yes/No.

#### Test procedure

A normal location updating is performed. The RRC CONNECTION is released. One minute later, the UE is deactivated, then reactivated in the same cell. It is checked that the UE performs an IMSI attach and a periodic location updating 6 minutes after the IMSI attach.

### Specific message contents

None.

#### 9.4.5.3.5 Test requirement

After step 28 the UE shall performs an IMSI attach.

After step 33 the UE shall performs periodic location updating 6 minutes after step 28.

### 9.4.5.4 Location updating / periodic search for higher priority PLMN when in VPLMN

#### 9.4.5.4.1 Location updating / periodic search for higher priority PLMN / UE waits time T

##### 9.4.5.4.1.1 Definition

##### 9.4.5.4.1.2 Conformance requirement

1. If the MS is in a VPLMN, the MS shall periodically attempt to obtain service on its HPLMN or higher priority PLMN listed in "user controlled PLMN-selector" or "operator controlled PLMN-selector".
2. In the case that the mobile has a stored "Equivalent PLMNs" list the mobile shall only select a PLMN if it is of a higher priority than those of the same country as the current serving PLMN which are stored in the "Equivalent PLMNs" list.
3. For this purpose, a value T minutes may be stored in the SIM, T is either in the range 6 minutes to 8 hours in 6 minute steps or it indicates that no periodic attempts shall be made. If no value is stored in the SIM, a default value of 60 minutes is used.
4. The attempts to access the HPLMN or higher priority PLMN shall be as specified below:
  - a) The periodic attempts shall only be performed in automatic mode when the MS is roaming;
  - b) After switch-on, a period of at least 2 minutes and at most T minutes shall elapse before the first attempt is made;
  - c) The MS shall make an attempt if the MS is on the VPLMN at time T after the last attempt;
  - d) Periodic attempts shall only be performed by the MS while in idle mode;
  - e) If the HPLMN or higher priority PLMN is not found, the MS shall remain on the VPLMN;
  - f) In steps i), ii) and iii) the MS shall limit its attempts to access higher priority PLMNs to PLMNs of the same country as the current serving VPLMN;
  - g) Only the priority levels of Equivalent PLMNs of the same country as the current serving VPLMN shall be taken into account to compare with the priority level of a selected PLMN.

References

TS 22.011 clause 3.2.2.5. and TS 23.122 4.4.3.3.

9.4.5.4.1.3 Test purpose

To verify that when a cell of a higher priority PLMN the HPLMN becomes available, following the successful location request on a VPLMN and after the first search the mobile has failed to find a higher priority PLMN, that the UE shall perform a location update request on a higher priority PLMN after time T. Where T is the Search Period stored in the USIM.

9.4.5.4.1.4 Method of test

Initial conditions

- System Simulator:
  - four cells A, B, C and D, belonging to different location areas with location identification a, b, c and d. Their country codes and mobile network codes are defined as follows:

| Cell | MCC | MNC |
|------|-----|-----|
| A    | 001 | 001 |
| B    | 022 | 002 |
| C    | 001 | 010 |
| D    | 001 | 100 |

Initially Cells A, B and C shall not be broadcasting. IMSI attach/detach is not allowed on any of other cells.

- User Equipment:
  - the UE is switched off. The HPLMN Search Period on the USIM shall be set to 6 minutes. The location area information on the USIM is "deleted".
  - The following USIM fields are configured:

| USIM field               | Priority        | PLMN |
|--------------------------|-----------------|------|
| EF <sub>HPLMNWA</sub> CT | 1 <sup>st</sup> | A    |
| EF <sub>PLMNWA</sub> CT  | 1 <sup>st</sup> | B    |
|                          | 2 <sup>nd</sup> | E    |
| EF <sub>OPLMNWA</sub> CT | 1 <sup>st</sup> | C    |
|                          | 2 <sup>nd</sup> | D    |

In the table PLMN X is the PLMN code from cell X (see above). PLMN E is defined as MCC=001, MNC=030.

Related ICS/IXIT statements

Switch on/off button Yes/No.

Test Procedure

Only Cell D shall be broadcasting. The UE shall be switched on either by using the Power Switch or by applying power. A normal location updating is performed on Cell D. The SS shall include the PLMN E in the list of equivalent PLMNs that is sent in the Location Update Accept message. Cells B and C shall be made available after 8 minutes, thus ensuring the UE fails to find any higher priority PLMN during its first attempt. It is verified that the UE does not perform a location update request on Cell B or C (waiting for at least 6 minutes after broadcasting of Cells B and C). Then Cell A is also made available, and it is verified that the UE performs a location update request on Cell A within 6 minutes after broadcasting of Cell A.

## Expected sequence

| NOTE: — The definitions for "Suitable neighbor cell" are specified in TS 34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only". |           |    |                                                                                                                                                                                                                         |                                                                                                                                                                                      |

## Specific message contents

None.

## 9.4.5.4.1.5 Test requirement

At step 9, the UE shall not send any LOCATION UPDATING REQUEST on cell B or C.

At step 13 the UE shall send a LOCATION UPDATING REQUEST message on Cell A.

## 9.4.5.4.2 Location updating / search for higher priority PLMN / UE in manual mode

## 9.4.5.4.2.1 Definition

## 9.4.5.4.2.2 Conformance requirement

The periodic attempts shall only be performed if in automatic mode when the UE is in a VPLMN.

## References

TS 22.011 clause 3.2.2.5. and TS 23.122 clause 4.4.3.3.

## 9.4.5.4.2.3 ——— Test purpose

To verify that no Search for Higher Priority PLMN is performed when the UE is not in automatic mode.

## 9.4.5.4.2.4 ——— Method of test

## Initial conditions

—— System Simulator:

—— two cells A and B, belonging to different location areas with location identification a and b. Cell A shall be a cell of the HPLMN and Cell B shall be a cell of the VPLMN with a Country Code the same as that of Cell A. Initially Cell A shall not be broadcasting. IMSI attach/detach is not allowed on either cell.

—— User Equipment:

—— the UE is switched off. The HPLMN Search Period on the USIM shall be set to 6 minutes. The location area information on the USIM is "deleted".

## Related ICS/IXIT statements

Switch on/off button Yes/No.

## Test Procedure

Only Cell B shall be broadcasting. The UE shall be switched on either by using the Power Switch or by applying power. A normal location updating is performed on Cell B. The UE is forced into manual selection mode. Cell A is made available. It is verified that the UE does not attempt to perform a location update on Cell A.

## Expected sequence

## Specific message contents

None.

#### ~~9.4.5.4.2.5 Test requirement~~

~~At step 11 the UE shall not attempt to perform a location update.~~

#### ~~9.4.5.4.3 Location updating / search for higher priority PLMN / UE waits at least two minutes and at most T minutes~~

##### ~~9.4.5.4.3.1 Definition~~

##### ~~9.4.5.4.3.2 Conformance requirement~~

~~After switch on, the UE waits at least 2 minutes and at most T minutes before the first Search for higher priority PLMN is attempted.~~

#### ~~References~~

~~TS 22.011 clause 3.2.2.5. and TS 23.122 4.4.3.3.~~

##### ~~9.4.5.4.3.3 Test purpose~~

~~To verify that the UE waits at least 2 minutes and at most T minutes before attempting its first Search for higher priority PLMN.~~

##### ~~9.4.5.4.3.4 Method of test~~

#### ~~Initial Conditions~~

##### ~~— System Simulator:~~

- ~~— two cells A and B, belonging to different location areas with location identification a and b. Cell A shall be a cell of the HPLMN and Cell B shall be a cell of the VPLMN with a Country Code the same as that of Cell A. Initially Cell A shall not be broadcasting. IMSI attach/detach is not allowed on either cell.~~

##### ~~— User Equipment:~~

- ~~— the UE is switched off. The HPLMN Search Period on the USIM shall be set to 6 minutes. The location area information on the USIM is "deleted".~~

#### ~~Related ICS/IXIT statements~~

~~Switch on/off button Yes/No.~~

#### ~~Test Procedure~~

~~Only Cell B shall be broadcasting. The UE shall be switched on either by using the Power Switch or by applying power. A normal location updating is performed on Cell B. Cell A is made available. It is verified that the UE attempts to perform a location update on Cell A, after at least 2 minutes and at most T minutes have passed following power on.~~

## Specific message contents

None.

## 9.4.5.4.3.5 Test requirement

At step 11 the UE shall attempt to perform a location update.

## 9.4.6 Location updating / interworking of attach and periodic

## 9.4.6.1 Definition

## 9.4.6.2 Conformance requirement

- 1) If the UE is in service state NO CELL AVAILABLE, LIMITED SERVICE, PLMN SEARCH or PLMN SEARCH-NORMAL SERVICE when the timer T3212 expires the location updating procedure is delayed until this service state is left.
- 2) The T3212 time-out value shall not be changed in the NO CELL AVAILABLE, LIMITED SERVICE, PLMN SEARCH and PLMN SEARCH-NORMAL SERVICE states.

- 3) If the selected cell is in the location area where the UE is registered and IMSI ATTACH is not required and timer T3212 has not expired, then the state is NORMAL SERVICE.

## References

- 1) ~~TS 24.008 clause 4.4.2.~~
- 2) ~~TS 24.008 clause 4.4.2.~~
- 3) ~~TS 24.008 clause 4.2.1.1.~~

## 9.4.6.3 Test purpose

- 1) ~~To check that if the PLU timer expires while the UE is out of coverage, the UE informs the network of its return to coverage.~~
- 2) ~~To check that the PLU timer is not disturbed by cells of forbidden PLMNs.~~
- 3) ~~To check that if the PLU timer does not expire while out of coverage and if the mobile returns to the LA where it is updated, the UE does not inform the network of its return to coverage.~~

## 9.4.6.4 Method of test

### Initial conditions

- ~~— System Simulator:~~
  - ~~— two cells, a and b, of different PLMNs;~~
  - ~~— T3212 is set to 12 minutes on cell a;~~
  - ~~— T3212 is set to 6 minutes on cell b;~~
  - ~~— IMSI attach is allowed in both cells.~~
- ~~— User Equipment:~~
  - ~~— the UE is deactivated. The PLMN of cell b is entered in the USIM's forbidden PLMN list.~~

### Related ICS/IXIT statements

~~None.~~

### Test procedure

~~The UE is activated and placed in automatic network selection mode. It performs IMSI attach. 1 minute after the end of the IMSI attach procedure, cell a is switched off. The UE shall not location update on cell b. 8 minutes after the end of the IMSI attach procedure, cell a is switched on. The UE shall not location update on cell a before 11,75 minutes after the end of the IMSI attach procedure. The UE shall perform a periodic location update on cell a between 11,75 minutes and 12,25 minutes after the end of the IMSI attach procedure.~~

~~3 minutes after the end of the periodic location updating procedure, cell a is switched off. The UE shall not location update on cell b. 14 minutes after the end of the periodic location updating procedure, cell a is switched on and cell b is switched off. The UE shall perform a location update on cell a before 17 minutes after the end of the periodic location updating procedure.~~

|                                                                                                                                                              |           |    |                                 | After the sending of this message, the SS waits for the disconnection of the main signalling link.                                                           |
|                                                                                                                                                              |           |    |                                 | The UE shall not initiate an RRC connection establishment. This is checked during 12 minutes.                                                                |
| NOTE: — The definitions for "Serving cell" and "Off cell" are specified in TS 34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only". |           |    |                                 |                                                                                                                                                              |

## Specific message contents

None.

#### 9.4.6.5 ~~Test requirement~~

- ~~1) At step 20 the UE shall send an RRC CONNECTION REQUEST and at step 23 the UE shall attempt to perform a location update.~~
- ~~2) At step 11 the UE shall send an RRC CONNECTION REQUEST and at step 14 the UE shall attempt to perform a location update.~~
- ~~3) At step 27 the UE shall not initiate an RRC connection during 12minutes.~~

### 9.4.7 Location Updating / accept with deletion of Equivalent PLMN list

#### 9.4.7.1 ~~Definition~~

~~Test to verify that the UE removes its stored Equivalent PLMN list when no Equivalent PLMN list is included in the LOCATION UPDATING ACCEPT message from the network during a Location Update.~~

#### 9.4.7.2 ~~Conformance requirement~~

~~The network may also send a list of "equivalent PLMNs" in the LOCATION UPDATING ACCEPT message. Each entry of the list contains a PLMN code (MCC+MNC). The mobile station shall store the list, as provided by the network, except that any PLMN code that is already in the "forbidden PLMN list" shall be removed from the "equivalent PLMNs" list before it is stored by the mobile station. In addition the mobile station shall add to the stored list the PLMN code of the network that sent the list. All PLMNs in the stored list shall be regarded as equivalent to each other for PLMN selection, cell selection/re-selection and handover. The stored list in the mobile station shall be replaced on each occurrence of the LOCATION UPDATING ACCEPT message. If no list is contained in the message, then the stored list in the mobile station shall be deleted. The list shall be stored in the mobile station while switched off so that it can be used for PLMN selection after switch-on.~~

#### References

TS 24.008 4.4.4.6

#### 9.4.7.3 ~~Test purpose~~

~~The UE shall delete its stored Equivalent PLMN list if no Equivalent PLMN list is contained in the LOCATION UPDATING ACCEPT message received from the network during Location Update.~~

#### 9.4.7.4 ~~Method of test~~

~~Initial conditions:~~

~~Cell\_selection\_and\_reselection\_quality\_measure is CPICH\_RSCP (FDD).~~

| Cell   | CPICH_RSCP / RF signal level [dBm] (FDD) | P-CCPCH_RSCP / RF signal level [dBm] (TDD) | Test Channel | PLMN   |
|--------|------------------------------------------|--------------------------------------------|--------------|--------|
| Cell 1 | -72                                      | -61                                        | 1            | PLMN 1 |
| Cell 2 | -48                                      | -48                                        | 2            | PLMN 2 |

#### Test procedure

- ~~a) The SS activates cell 1 and monitors the cell for random access requests from the UE.~~
- ~~b) The UE is switched on.~~
- ~~c) The SS waits for random access requests from the UE~~
- ~~d) A LOCATION UPDATE ACCEPT message shall be sent on reception of a LOCATION UPDATE message from the UE on cell 1. The LOCATION UPDATE ACCEPT message shall include PLMN 2 in the equivalent PLMN list.~~

- e) The SS activates cell 2 and monitors the cell for random access requests from the UE.
- f) A LOCATION UPDATE ACCEPT message shall be sent on reception of a LOCATION UPDATE message from the UE on cell 2. The LOCATION UPDATE ACCEPT message shall include PLMN 1 in the equivalent PLMN list.
- g) Cell 2 is switched off.
- h) The SS waits for random access requests from the UE.
- i) A LOCATION UPDATE ACCEPT message shall be sent on reception of a LOCATION UPDATE message from the UE on cell 1. The LOCATION UPDATE ACCEPT message shall include no equivalent PLMN list.
- j) The SS activates cell 2 and monitors the cell for random access requests from the UE.
- k) The SS waits for random access requests from the UE.

#### 9.4.7.5 Test requirements

- 1) After step c) the UE will perform a Location Update in Cell 1 that will be accepted by the SS.
- 2) After step d) the displayed PLMN in the UE shall be PLMN 1.
- 3) After step e) the UE will perform a Location Update in Cell 2 that will be accepted by the SS.
- 4) After step f) the displayed PLMN in the UE shall be PLMN 2.
- 5) After step h) the UE will perform a Location Update in Cell 1 that will be accepted by the SS.
- 6) After step i) the displayed PLMN in the UE shall be PLMN 1.
- 7) After step k) there shall be no random access request from the UE on cell 2.

### 9.4.8 Location Updating after UE power off

#### 9.4.8.1 Definition

Test to verify that the UE stores the Equivalent PLMN list at UE power off and uses the stored Equivalent PLMN list after UE switch on.

#### 9.4.8.2 Conformance requirement

The network may also send a list of "equivalent PLMNs" in the LOCATION UPDATING ACCEPT message. Each entry of the list contains a PLMN code (MCC+MNC). The mobile station shall store the list, as provided by the network, except that any PLMN code that is already in the "forbidden PLMN list" shall be removed from the "equivalent PLMNs" list before it is stored by the mobile station. In addition the mobile station shall add to the stored list the PLMN code of the network that sent the list. All PLMNs in the stored list shall be regarded as equivalent to each other for PLMN selection, cell selection/re-selection and handover. The stored list in the mobile station shall be replaced on each occurrence of the LOCATION UPDATING ACCEPT message. If no list is contained in the message, then the stored list in the mobile station shall be deleted. The list shall be stored in the mobile station while switched off so that it can be used for PLMN selection after switch on.

#### References

TS 24.008 4.4.4.6

#### 9.4.8.3 Test purpose

The Equivalent PLMN list shall be stored in the mobile station while switched off so that it can be used for PLMN selection after switch on.

#### 9.4.8.4 ~~Method of test~~

##### ~~Initial conditions~~

~~The UE is in automatic PLMN selection mode.~~

~~The UE is equipped with a USIM containing default values except for those listed below.~~

| USIM field              | Priority        | PLMN   |
|-------------------------|-----------------|--------|
| EF <sub>LOGI</sub>      |                 | PLMN 1 |
| EF <sub>HPLMNwAcT</sub> | 1 <sup>st</sup> | PLMN 1 |
| EF <sub>PLMNwAcT</sub>  | Empty           |        |
| EF <sub>OPLMNwAcT</sub> | 1 <sup>st</sup> | PLMN 3 |
|                         | 2 <sup>nd</sup> | PLMN 2 |

~~The SS simulates three cells as listed below.~~

| Cell   | Test Channel | PLMN   |
|--------|--------------|--------|
| Cell 1 | 1            | PLMN 1 |
| Cell 2 | 2            | PLMN 2 |
| Cell 3 | 3            | PLMN 3 |

##### ~~Test procedure~~

- ~~The SS activates cell 1 and monitors the cell for random access requests from the UE.~~
- ~~The UE is switched on.~~
- ~~The SS waits for random access requests from the UE.~~
- ~~A LOCATION UPDATE ACCEPT message shall be sent on reception of a LOCATION UPDATE message from the UE on cell 1. The LOCATION UPDATE ACCEPT message shall include PLMN 2 in the equivalent PLMN list.~~
- ~~The UE is switched off.~~
- ~~The SS deactivates cell 1 and activates cell 2 and cell 3.~~
- ~~The UE is switched on.~~
- ~~The SS waits for random access requests from the UE.~~

#### 9.4.8.5 ~~Test requirements~~

- ~~After step c) the UE will perform a Location Update in Cell 1 that will be accepted by the SS.~~
- ~~After step d) the displayed PLMN in the UE will be PLMN 1.~~
- ~~After step h) the UE shall perform a Location Update in Cell 2 that will be accepted by the SS.~~

### 9.4.9 ~~Location Updating/ Accept Storage of Equivalent PLMN list.~~

#### 9.4.9.1 ~~Definition~~

~~Test to verify that, before storing the ‘equivalent PLMN list’ received from the network during a Location Update, the UE removes any PLMN already included in the ‘forbidden PLMN list’. Consequently the UE shall not select a PLMN Equivalent to the registered PLMN if it is included in the ‘forbidden PLMN list’ in the USIM.~~

#### 9.4.9.2 ~~Conformance requirement~~

- ~~1. If a "PLMN not allowed" message is received by an MS in response to an LR request from a VPLMN, that VPLMN is added to a list of "forbidden PLMNs" in the SIM and thereafter that VPLMN will not be accessed by the MS when in automatic mode. A PLMN is removed from the "forbidden PLMNs" list if, after a subsequent manual selection of that PLMN, there is a successful LR. This list is retained when the MS is switched off or the SIM is removed. The HPLMN shall not be stored on the list of "forbidden PLMNs".~~
- ~~2. At switch on, or following recovery from lack of coverage, the MS selects the registered PLMN or equivalent PLMN (if it is available) using all access technologies that the MS is capable of and if necessary (in the case of recovery from lack of coverage, see subclause 4.5.2) attempts to perform a Location Registration.~~
- ~~3. Automatic Network Selection Mode Procedure~~
  - ~~— The MS selects and attempts registration on other PLMNs, if available and allowable, in the following order:~~
    - ~~i) HPLMN (if not previously selected);~~
    - ~~ii) each PLMN in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);~~
    - ~~iii) each PLMN in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);~~
    - ~~iv) other PLMN/access technology combinations with received high quality signal in random order;~~
    - ~~v) other PLMN/access technology combinations in order of decreasing signal quality.~~
- ~~4. Allowable PLMN: In the case of a MS operating in MS operation mode A or B, this is a PLMN which is not in the list of "forbidden PLMNs" in the MS.~~
- ~~5. The network may also send a list of "equivalent PLMNs" in the LOCATION UPDATING ACCEPT message. Each entry of the list contains a PLMN code (MCC+MNC). The mobile station shall store the list, as provided by the network, except that any PLMN code that is already in the "forbidden PLMN list" shall be removed from the "equivalent PLMNs" list before it is stored by the mobile station. In addition the mobile station shall add to the stored list the PLMN code of the network that sent the list. All PLMNs in the stored list shall be regarded as equivalent to each other for PLMN selection, cell selection/re-selection and handover. The stored list in the mobile station shall be replaced on each occurrence of the LOCATION UPDATING ACCEPT message. If no list is contained in the message, then the stored list in the mobile station shall be deleted. The list shall be stored in the mobile station while switched off so that it can be used for PLMN selection after switch on.~~

#### 9.4.9.3 ~~Test purpose~~

- ~~1. The UE shall not select a forbidden PLMN even though it is included in the equivalent PLMN list provided by the network (a forbidden PLMN shall not be stored in the mobile's list even if it is indicated by the network).~~

#### 9.4.9.4 ~~Method of test~~

##### Initial conditions

The UE is in automatic PLMN selection mode.

All Radio Access Technology USIM fields and cells are UTRAN.

| Cell   | Test Channel | PLMN   |
|--------|--------------|--------|
| Cell 1 | 1            | PLMN 1 |
| Cell 2 | 2            | PLMN 2 |

The UE is equipped with a USIM containing default values except for those listed below.

| USIM field              | Priority        | PLMN   |
|-------------------------|-----------------|--------|
| EF <sub>LOCI</sub>      |                 | PLMN 1 |
| EF <sub>HPLMNwACT</sub> | 1 <sup>st</sup> | PLMN 3 |
| EF <sub>PLMNwACT</sub>  | 1 <sup>st</sup> | PLMN 2 |
| EF <sub>FPLMN</sub>     | PLMN 2          |        |

## Test procedure

- The SS activates cells 1 and 2 and monitors the cells for random access requests from the UE
- The UE is switched on
- The SS waits for random access requests from the UE
- A LOCATION UPDATE ACCEPT message shall be sent on reception of a LOCATION UPDATE REQUEST message from the UE. The Location Update Accept message shall include PLMN 2 in the equivalent PLMN list.
- Cell 1 is switched off
- The SS waits for random access requests from the UE

### 9.4.9.5 Test requirements

After step c) the UE will perform a Location Update in Cell 1 that will be accepted by the SS.

After step d), The displayed PLMN in the UE shall be PLMN 1.

In step f), the UE shall inform that only limited service is possible.

## 9.5 MM connection

### 9.5.1 Introduction

[tbd]

### 9.5.2 MM connection / establishment in security mode

#### 9.5.2.1 Definition

#### 9.5.2.2 Conformance requirement

- The UE shall be able to correctly set up an MM connection in a Mobile Originating CM connection attempt and send a CM SERVICE REQUEST message with CKSN information element as stored in the USIM and Mobile Identity information element set to the TMSI.
- The UE shall be able to interpret security mode setting as acceptance of its CM service request i.e. send a CM message.

## References

TS 24.008 clause 4.5.1.1.

**9.5.2.3** ~~Test purpose~~

To verify that the UE can correctly set up an MM connection in an origination and interpret security mode setting as acceptance of its CM service request.

**9.5.2.4** ~~Method of test~~~~Initial conditions~~

- ~~— System Simulator:~~
  - ~~— 1 cell, default parameters.~~
- ~~— User Equipment:~~
  - ~~— the UE has a valid TMSI. It is "idle updated".~~

~~Related ICS/IXIT statements~~

~~None.~~

~~Test Procedure~~

A mobile-originating CM connection is initiated. After the UE has sent the CM SERVICE REQUEST message to the SS, an authentication procedure and a security mode setting procedure are performed. Then, the UE sends a CM message and the SS clears the call and releases the RRC CONNECTION.

~~Expected sequence~~

| Step | Direction |    | Message                         | Comments                                                                                           |
|------|-----------|----|---------------------------------|----------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                 |                                                                                                    |
| 1    | UE        |    |                                 | A MO CM connection is attempted.                                                                   |
| 2    | →         |    | RRC CONNECTION REQUEST          |                                                                                                    |

~~Specific message contents~~

~~None.~~

**9.5.2.5** ~~Test requirement~~

At step 5 the UE shall send the CM SERVICE REQUEST message to the SS.

At step A10 or B10 or C10 the UE shall send a CM message and the SS shall release the RRC connection (step 14).

### 9.5.3 ~~MM connection / establishment in non-security mode~~

#### 9.5.3.1 ~~Definition~~

#### 9.5.3.2 ~~Conformance requirement~~

Upon reception of the CM SERVICE ACCEPT message, the UE shall send a CM message.

#### References

TS 24.008 clause 4.5.1.1.

#### 9.5.3.3 ~~Test purpose~~

To verify that the UE can correctly set up an MM connection in an originating CM connection establishment when security mode setting is not required.

#### 9.5.3.4 ~~Method of test~~

#### Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE has a valid TMSI. It is "idle updated".

#### Related ICS/IXIT statements

None.

#### Test Procedure

A mobile-originating CM connection is attempted. The MM connection is established without invoking the security mode setting procedure.

Then, the UE sends a CM message and the SS releases the RRC CONNECTION.

## Specific message contents

None.

## 9.5.4.5 Test requirement

The UE shall attempt MO-CM connection (step 1).

At step 7 the UE shall not send a layer 3 message and at step 9 the UE shall send an RRC CONNECTION RELEASE COMPLETE message.

## 9.5.5 MM connection / establishment rejected cause 4

## 9.5.5.1 Definition

## 9.5.5.2 Conformance requirement

- 1) The UE shall be able to correctly set up an MM connection in a Mobile Originating CM connection attempt and send a CM SERVICE REQUEST message with CKSN information element as stored in the USIM and Mobile Identity information element set to the TMSI.
- 2) The UE, when receiving a CM SERVICE REJECT message with reject cause "IMSI unknown in VLR" shall wait for the network to release the RRC connection.
- 3) The UE shall then be able to perform a location updating procedure.

## References

TS 24.008 clause 4.5.1.1.

## 9.5.5.3 Test purpose

To verify that the UE can correctly accept a CM SERVICE REJECT message with reject cause "IMSI unknown in VLR".

## 9.5.5.4 Method of test

## Initial conditions

— System Simulator:

— 1 cell, default parameters.

—User Equipment:

—the UE has a valid TMSI. It is "idle updated".

#### Related ICS/IXIT statements

None.

#### Test Procedure

A mobile-originating CM connection is attempted. After the UE has sent the CM SERVICE REQUEST message to the SS, the SS responds with a CM SERVICE REJECT message with reject cause "IMSI unknown in VLR". On receipt of this message, the UE shall delete any TMSI, LAI, cipher key and cipher key sequence number. The RRC CONNECTION is released. It is checked that the UE performs a normal location updating procedure.

#### 9.5.5.5 ————— Test requirement

- 1) The UE shall attempt MO-CM connection (at step 1) and at step 5 the UE shall send a CM SERVICE REQUEST message with CKSN information element as stored in the USIM and Mobile Identity information element set to the TMSI.
- 2) At step 6 the SS should send a CM SERVICE REJECT message with reject cause "IMSI unknown in VLR", and at step 8 the UE shall send an RRC CONNECTION RELEASE message.

- 3) At step 12 the UE send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating type set to "deleted LAI".

## 9.5.6 MM connection / expiry T3230

### 9.5.6.1 Definition

### 9.5.6.2 Conformance requirement

At T3230 expiry (i.e. no response is given but an RRC connection is available) the MM connection establishment shall be aborted.

### References

TS 24.008 clauses 4.5.1.2 and 11.2.

### 9.5.6.3 Test purpose

To verify that at T3230 expiry, the UE aborts the MM connection establishment.

### 9.5.6.4 Method of test

#### Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE has a valid TMSI. It is "idle-updated".

#### Related ICS/IXIT statements

None.

#### Test Procedure

A mobile-originating CM connection is attempted. After the UE has sent the CM SERVICE REQUEST message to the SS, the SS waits for expiry of timer T3230. It is checked that the UE send a MM STATUS message and waits for the release of the RRC connection.

##### 9.5.7.1.1 Definition

##### 9.5.7.1.2 Conformance requirement

- 1) Upon reception of an ABORT message, the UE shall release any ongoing MM connection and enter the "wait for network command" state.
- 2) If the cause in the ABORT message was cause #6, the UE shall:
  - 2.1 not perform normal location updating;
  - 2.2 not perform periodic location updating;
  - 2.3 not respond to paging with TMSI;
  - 2.4 reject any request for Mobile-Originating call establishment except Emergency call;
  - 2.5 not perform IMSI detach if deactivated.
- 3) After reception of an ABORT message with cause #6, the UE, if it supports speech, shall accept a request for an emergency call by sending a RRC-CONNECTION Request message with the establishment cause set to "emergency call".
- 4) After reception of an ABORT message with cause #6, the UE shall delete the stored LAI, CKSN and TMSI.

### Reference(s)

TS 24.008 clause 4.3.5.

##### 9.5.7.1.3 Test purpose

To check that upon reception of an ABORT message with cause #6 during call establishment:

- the UE does not send any layer 3 message;
- after reception of an ABORT message and after having been deactivated and reactivated, the UE performs location updating using its IMSI as mobile identity and indicates deleted LAI and CKSN;
- the UE does not perform location updating, does not answer to paging with TMSI, rejects any request for mobile originating call except emergency call, does not perform IMSI detach;
- the UE accepts a request for emergency call.

##### 9.5.7.1.4 Method of test

### Initial Conditions

- System Simulator:

- 2 cells, default parameters.
- User Equipment:
  - the UE has a valid TMSI, CKSN and CK, IK. It is "idle-updated" on cell B.

#### Related ICS/IXIT Statement(s)

USIM removal possible while UE is powered Yes/No.

Switch off on button Yes/No.

Support of speech Yes/No.

#### Test procedure

A mobile-originating CM connection is attempted. Upon reception of the AUTHENTICATION RESPONSE message, the SS sends an ABORT message with cause #6. The SS waits for 5 s. The UE shall not send any layer 3 message. The SS releases the RRC connection.

The SS checks that the UE has entered the state MM IDLE substate NO IMSI, i.e. does not perform normal location updating, does not perform periodic updating, does not respond to paging, rejects any requests from CM entities except emergency calls and does not perform IMSI detach if deactivated.

### Specific message contents

None.

#### 9.5.7.1.5 — Test requirement

- 1) At step 10 the UE shall not send any layer 3 message and at step 12 the UE shall send an RRC CONNECTION RELEASE COMPLETE message.
- 2)
  - 2.1 At step 14 the UE shall not initiate an RRC connection establishment (not perform normal location updating).
  - 2.2 At step 16 the UE shall not initiate an RRC connection establishment (not perform periodic location updating).
  - 2.3 At step 18 the UE shall not initiate an RRC connection establishment (not respond to paging with TMSI).

~~2.4 At step 20 the UE shall not initiate an RRC connection establishment (reject any request for Mobile Originating call establishment).~~

~~2.5 At step 32 the UE shall not initiate an RRC connection establishment. (not perform IMSI detach).~~

~~3) At step 22 the UE shall send an RRC CONNECTION REQUEST message with the establishment cause set to "emergency call".~~

~~4) At step 37 the UE send a LOCATION UPDATING REQUEST message with the Mobile Identity IE set to its IMSI, CKSN IE set to "no key is available" and the Location Updating type set to "deleted LAI".~~

### ~~9.5.7.2 MM connection / abortion by the network / cause not equal to #6~~

#### ~~9.5.7.2.1 Definition~~

#### ~~9.5.7.2.2 Conformance requirement~~

~~Upon reception of an ABORT message, the UE shall release any ongoing MM connection and enter the "wait for network command" state.~~

#### ~~Reference(s)~~

~~TS 24.008 clause 4.3.5.~~

#### ~~9.5.7.2.3 Test purpose~~

~~To check that when multiple MM connections are established, the UE releases all MM connections upon reception of an ABORT message, in the case when the two MM connections are established for a mobile terminating call and a non call related supplementary service operation.~~

#### ~~9.5.7.2.4 Method of test~~

#### ~~Initial Conditions~~

~~— System Simulator:~~

~~— 1 cell, default parameters.~~

~~— User Equipment:~~

~~— the UE is in state U10 of a mobile terminating call.~~

#### ~~Related ICS/IXIT Statement(s)~~

~~The UE supports a non-call related supplementary service operation during an active call Yes/No.~~

#### ~~Test procedure~~

~~A non-call related supplementary service operation is attempted at the UE. Upon reception of the REGISTER message, the SS sends an ABORT message with cause #17. The SS sends a DISCONNECT using the TI of the mobile terminating call. Upon reception of the RELEASE message, the SS send a RELEASE COMPLETE message with the PD and TI of the DISCONNECT message and with cause #81. The SS releases the RRC connection.~~

## Expected Sequence

This procedure is performed if the UE supports non-call-related supplementary service operation.

## Specific message contents

None.

### 9.5.7.2.5 Test requirement

At step 10 the SS shall send a RELEASE COMPLETE message and at step 12 the UE shall send an RRC CONNECTION RELEASE COMPLETE message.

## 9.5.8 MM connection / follow-on request pending

### 9.5.8.1 MM connection / follow-on request pending / test 1

#### 9.5.8.1.1 Definition

#### 9.5.8.1.2 Conformance requirement

The UE shall not attempt to establish a new MM connection after location updating on the same RRC connection if not allowed by the network.

## Reference(s)

TS 24.008 clause 4.4.4.6.

#### 9.5.8.1.3 Test purpose

To check that when the network does not include the follow-on-proceed IE in a LOCATION UPDATING ACCEPT message, a UE that has a CM application request pending does not attempt to establish a new MM connection on that RRC connection.

#### 9.5.8.1.4 Method of test

##### Initial Conditions

— System Simulator:

— 1 cell, ATT flag is set to "MSs in the cell shall apply IMSI attach and detach procedure".

— User Equipment:

— the UE has a valid TMSI and is deactivated.

##### Related ICS/IXIT Statement(s)

None.

##### Test procedure

The UE is activated and a CM connection is attempted during the location updating procedure. The SS does not include the follow on proceed information element in the LOCATION UPDATING ACCEPT message. The SS waits for at least 8 s. The UE shall not send any layer 3 message for 8 s.

##### Expected Sequence

| 8    |           | UE |                                 | The UE shall not send any layer 3 message for 8 s after reception of the LOCATION UPDATING ACCEPT message.           |
| 9    | ←         |    | RRC CONNECTION RELEASE          | After the sending of this message, the SS waits for the disconnection of the main signalling link.                   |
| 10   | →         |    | RRC CONNECTION RELEASE COMPLETE |                                                                                                                      |

##### Specific message contents

None.

#### 9.5.8.1.5 Test requirement

After step 8 the UE shall not send any layer 3 messages.

### 9.5.8.2 MM connection / follow-on request pending / test 2

#### 9.5.8.2.1 Definition

#### 9.5.8.2.2 Conformance requirement

A UE supporting the follow-on request procedure and having a CM connection request pending shall correctly establish an MM connection following a location update when allowed by the network.

## Reference(s)

TS 24.008 clause 4.4.4.6.

### 9.5.8.2.3 ~~Test purpose~~

To check that when the network includes the follow on proceed IE in a LOCATION-UPDATING-ACCEPT message, a UE that supports the follow on request procedure and that has a CM application request pending establishes successfully a new MM connection on that RRC connection.

### 9.5.8.2.4 ~~Method of test~~

#### Initial Conditions

- ~~— System Simulator:~~
  - ~~— 1 cell, ATT flag is set to "MSs in the cell shall apply IMSI attach and detach procedure".~~
- ~~— User Equipment:~~
  - ~~— the UE has a valid TMSI and is deactivated.~~

#### Related ICS/IXIT Statement(s)

UE supports the follow on request procedure Yes/No.

#### Test procedure

The UE is activated and a CM connection is attempted during the location updating procedure. The SS includes the follow on proceed information element in the LOCATION-UPDATING-ACCEPT message. The SS waits for at least 8 s.

If the UE supports the follow on request procedure:

- ~~— the UE shall send a CM SERVICE REQUEST. Upon reception of that message, the SS sends a CM SERVICE ACCEPT message. The UE shall send an initial CM message. Upon reception of that message, the SS releases the RRC connection.~~

If the UE does not support the follow on request procedure:

- ~~— the UE shall not send any layer 3 message for 8 s.~~

## Expected Sequence

## Specific message contents

None.

## 9.5.8.2.5 — Test requirement

After step 6:

The UE shall send a CM-SERVICE-REQUEST if the UE supports the follow-on request procedure.

The UE shall not send any layer 3 message if the UE does not support the follow-on request procedure.

## 9.5.8.3 — MM connection / follow-on request pending / test 3

## 9.5.8.3.1 — Definition

## 9.5.8.3.2 — Conformance requirement

- 1) The UE shall not set the follow-on proceed IE in a LOCATION-UPDATING-REQUEST message if no MM connection request is pending.
- 2) When the network includes the follow-on proceed IE in a LOCATION-UPDATING-ACCEPT message, a UE that has no CM application request pending shall not attempt to establish a new MM connection on that RRC connection.
- 3) The UE shall correctly handle a CM connection established by the network on the RRC connection that was used for the location updating procedure.

## Reference(s)

TS 24.008 clause 4.4.4.6.

### 9.5.8.3.3 ————— Test purpose

- 1) To check that a UE that has no CM application request pending sets the follow-on-proceed IE to No follow-on request pending in a LOCATION UPDATING REQUEST message.
- 2) To check that when the network includes the follow-on-proceed IE in a LOCATION UPDATING ACCEPT message, a UE that has no CM application request pending does not attempt to establish a new MM connection on that RRC connection.
- 3) To check that the UE accepts establishment by the network of a new MM connection on the existing RRC connection.

### 9.5.8.3.4 ————— Method of test

#### Initial Conditions

— System Simulator:

— 1 cell, ATT flag is set to "MSs in the cell shall apply IMSI attach and detach procedure".

— User Equipment:

— the UE has a valid TMSI and is deactivated.

#### Related ICS/IXIT Statement(s)

Supported services on TCH.

#### Test procedure

The UE is activated. The UE performs location updating. The UE shall set the follow-on-proceed IE to No follow-on request pending in the LOCATION UPDATING REQUEST message. The SS includes the follow-on-proceed IE in the LOCATION UPDATING ACCEPT message. The SS waits for 5 s. The UE shall not send any layer 3 message for 5 s. The SS sends a SETUP message to the UE requesting a basic service supported by the UE. The UE shall send either a CALL CONFIRMED message if it supports a service on TCH or a RELEASE COMPLETE with cause #88.

#### Expected Sequence

~~Specific message contents~~

~~None.~~

~~9.5.8.3.5 Test requirement~~

~~At step 8 the UE shall not send any layer 3 message.~~

~~After step 9:~~

~~The UE shall send CALL CONFIRMED message if the UE supports a basic service on TCH.~~

~~The UE shall send RELEASE COMPLETE message if the UE does not support a basic service on TCH.~~

## ~~10 Circuit Switched Call Control (CC)~~

### ~~10.1 Circuit switched Call Control (CC) state machine verification~~

#### ~~10.1.1 General on CC state machine verification~~

The principle of checking the call control functions consists in the validation of each call control identified state.

State U0 as an initial state is not verified in the tests of 10.1.2 (establishment of an outgoing call).

State U0.1 is never verified.

The steps to be followed within each performed test are:

- bring the UE into the required state;
- trigger the tested event;
- check the UE response and new state.

In clauses 10.1.2 and 10.1.3 different tables are defined to bring the UE into the required initial state. The exact table to be chosen is specified individually in clause "Initial conditions" of "Method of test" for each test case.

For each test, unless otherwise specified, a circuit-switched basic service among those supported by the UE but excluding the emergency call teleservice shall be chosen arbitrarily, and the test shall be performed according to that basic service. If the only circuit-switched basic service supported by the mobile is emergency call, then the incoming call tests shall not be performed and the other call control tests shall be performed with the EMERGENCY SETUP message replacing the SETUP message.

The initial states are to be checked through STATUS ENQUIRY messages sent by the SS, when feasible. This is not explicitly stated in the tables of expected sequences of signalling messages. The checking of final states are explicitly included into the expected sequences of signalling messages.

The following postamble may be used by the SS to bring UE back to idle mode in those test cases, in which it is not already included into expected sequence of signalling messages:

**Table 10.1.1/1: A postamble to bring the UE back to idle mode.**

| Step            | Direction        |    | Message                                                   | Comments                                      |
|-----------------|------------------|----|-----------------------------------------------------------|-----------------------------------------------|
|                 | UE               | SS |                                                           |                                               |
| N<br>n+1<br>n+2 | <--<br>--><br>UE |    | RRC CONNECTION RELEASE<br>RRC CONNECTION RELEASE COMPLETE | the UE shall release the main signalling link |

The postamble has not been included into all of the tests in order to leave an option to concatenate the procedures in the future by using a final state of a test case as an initial state to another one.

For the special case of U0, the state is checked by sending STATUS ENQUIRY message with all possible values of transaction identifier (seven values) as U0 is the only state in which for every TI the UE will answer with release complete with cause #81. If U0 is to be verified when no RRC connection exists, first a mobile terminating radio connection must be established.

The UE responses are either call management messages received by the SS or lower layers functions activated within the UE or MMI actions (e.g. the buzzing of an alerting tone).

A time-out within the UE is triggered by the SS when it does not answer back an UE expected response.

The test sequences may be split in 3 main groups:

- establishment and release of an outgoing call;
- establishment and release of an incoming call;
- in-call functions.

Some test cases use Basic Generic Procedures, "Mobile terminated establishment of Radio Resource Connection" and "Radio Bearer Setup Procedure" defined in TS34.108 clause 7.

General tolerance value on protocol timers defined in TS34.108 is used in some test cases if no specific tolerance on timer is defined in a test case.

#### Remark on verification of transient states

Some call control states of the user equipment may be transient, depending on implementation, configuration of the UE and previous messages.

If a test starts in a transient state, then the test is executed without verification of the starting state.

### 10.1.2 Establishment of an outgoing call

#### Initial conditions

As a minimum requirement the UE is updated and has been given a TMSI, a ciphering key and cipher key sequence number, and the layer 2, RRC and MM functionalities have been verified.

There are as many CM initial conditions as states to be checked.

The tables below describe message exchanges which bring the UE in the requested initial states.

A state may be taken as initial only when all the states which lead to this initial states have been validated. The order followed in the test procedure will be U0, U0.1, U1, U3, U4, U10, U12, U19, U11 as seen in the table underneath.

The UE is brought again in the initial state starting with U0 at each new test performed.

**Table 10.1.2/1: Establishment of an outgoing call, procedure 1 (late assignment)**

| Step                                                                                                                                   | Direction |    | Message                       | Comments                   |

— TS 24.008 clause 5.2.1.1 and clause 4.5.1.1, TS 25.331 clause 8.1.3.

~~10.1.2.1.1.3 Test purpose~~

To verify that upon initiation of an outgoing basic call by user the UE initiates establishment of an MM connection, using as first MM message a CM SERVICE REQUEST message with CM service type "Mobile originating call establishment or packet mode connection establishment".

~~10.1.2.1.1.4 Method of test~~

## Related ICS/IXIT statements

— supported MO circuit switched basic services.

## Initial conditions

System Simulator:

— 1 cell, default parameters.

User Equipment:

— The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

## Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. When the SS receives CM SERVICE REQUEST, the contents of it shall be checked.

### Specific message contents:

None.

### 10.1.2.2.2.5 — Test requirements

After step 1 a CC entity of the UE in CC-state U0.1, "MM-connection pending", shall send a SETUP message specifying the Called party BCD number that was entered into the UE and then enter CC state U1, "Call initiated".

### 10.1.2.2.3 — Outgoing call / U0.1 MM connection pending / lower layer failure

#### 10.1.2.2.3.1 — Definition

The call control entity of the UE being in the state, U0.1, a lower layer failure is accomplished at the UE and consequently, communication at layer 3 level with the peer entity is terminated.

#### 10.1.2.2.3.2 — Conformance requirement

- 1) Upon a lower layer failure the UE releases the MM-connection in progress and returns to idle mode. In that state no call exists, and the CC entity is in state U0, "Null".

### References

—TS 24.008, clause 4.5.1.2, clause 5.2.1.1, clause 5.5.3.2 and clause 8.3, TS 25.331 clause 8.3.1 and clause 8.5.6.

#### 10.1.2.2.3.3 — Test purpose

To verify that after the UE with a CC entity in state U0.1, "MM-connection pending", has detected a lower layer failure and has returned to idle mode, the CC entity is in state U0, "Null".

#### 10.1.2.2.3.4 — Method of test

### Related ICS/IXIT statements

—supported MO circuit switched basic services.

### Initial conditions

System Simulator:

— 1 cell, default parameters.

User Equipment:

— The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

— The UE is brought into the state U0.1 by using table 10.1.2/1.

### Test procedure

An MO-circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. When the UE has sent a CM SERVICE REQUEST message, the SS modifies the scrambling code of downlink transmission (DL DPCH) to generate a lower layer failure at the UE. The SS waits long enough to enable the UE to perform cell update procedure. The SS sends RRC CONNECTION RELEASE message as a response to the CELL UPDATE message from the UE. The SS re-modifies the scrambling code of downlink transmission (DL DPCH) to the original one and waits 60 s. The SS will check that the UE will not send any message during 60 s.

### Expected sequence

~~— supported MO circuit switched basic services.~~

### Initial conditions

System Simulator:

— 1 cell, default parameters.

User Equipment:

— The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

— The UE is brought into the state U1 by using table 10.1.2/1.

### Test procedure

An MO-circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U1. When T303 expires at the UE, the UE shall send DISCONNECT. The SS checks by using the status enquiry procedure that the CC entity has entered the state U11, disconnect request.

### Expected sequence

### 10.1.2.3.5.4 — Method of test

## Related ICS/IXIT statements

—supported MO circuit switched basic services.

## Initial conditions

System Simulator:

—1 cell, default parameters.

User Equipment:

—The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

—The UE is brought into the state U1 by using table 10.1.2/4.

## Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U1. The SS sends an ALERTING message to the UE. The SS checks by using the status enquiry procedure that the CC entity has entered the state U4, call delivered.

## Expected sequence

| Step | Direction |    | Message        | Comments            |
|------|-----------|----|----------------|---------------------|
|      | UE        | SS |                |                     |
| 1    |           | <  | ALERTING       | cause 30#, state U4 |
| 2    |           | <  | STATUS ENQUIRY |                     |
| 3    |           | >  | STATUS         |                     |

## Specific message contents:

None.

### 10.1.2.3.5.5 — Test requirements

After step 1 a CC entity of the UE in CC-state U1, "Call initiated", shall enter CC-state U4, "Call delivered".

### 10.1.2.3.6 — Outgoing call / U1 call initiated / entering state U10

#### 10.1.2.3.6.1 — Definition

The call control entity of the UE being in the state, U1, a CONNECT message is received by the UE.

#### 10.1.2.3.6.2 — Conformance requirement

- 1) A CC entity of the UE in CC-state U1, "Call initiated", upon receipt of a CONNECT message, shall send a CONNECT ACKNOWLEDGE message to its peer entity and enter CC-state U10, "Active".

References

~~—TS 24.008, clause 5.2.1.1 and clause 5.2.1.6.~~

~~10.1.2.3.6.3~~ ~~Test purpose~~

## 10.1.2.4.3.4 — Method of test

## Related ICS/IXIT statements

— supported MO circuit switched basic services.

## Initial conditions

System Simulator:

— 1 cell, default parameters.

User Equipment:

- The UE is in MM-state "idle, updated" with valid TMSI and CKSN.
- The UE is brought into the state U3 by using table 10.1.2/3.

### Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U3. The SS sends a PROGRESS message not containing indication of in-band information availability to the UE. The SS checks that the UE has stopped T310, i.e. at T310 time-out no DISCONNECT message is sent by the UE. Then the SS checks by using the status enquiry procedure that the state of the CC entity has remained unchanged.

### Expected sequence

| Step | Direction |    | Message        | Comments                                                          |
|------|-----------|----|----------------|-------------------------------------------------------------------|
|      | UE        | SS |                |                                                                   |
| 1    |           | <  | PROGRESS       | (note)                                                            |
| 2    |           | <  | STATUS ENQUIRY |                                                                   |
| 3    |           | >  | STATUS         | cause 30#, state U3                                               |
| 4    |           | SS |                | SS waits at least 45 s and checks no DISCONNECT is sent by the UE |
| 5    |           | <  | STATUS ENQUIRY |                                                                   |
| 6    |           | >  | STATUS         | cause 30#, state U3                                               |

NOTE: —Tested with a valid cause value among:

- #4 call has returned to PLMN/ISDN;
- #32 call is end-to-end PLMN/ISDN; or
- any value in the set #(21-127).

### Specific message contents:

None.

### 10.1.2.4.3.5 — Test requirements

After step 1 a CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding", shall stay in CC-state U3.

After step 3 SS waits at least 45 s and checks no DISCONNECT is sent by the UE.

### 10.1.2.4.4 — Outgoing call / U3 UE originating call proceeding / PROGRESS with in-band information

#### 10.1.2.4.4.1 — Definition

The call control entity of the UE being in the state, U3, a PROGRESS message indicating availability of in-band information is received by the UE.

#### 10.1.2.4.4.2 — Conformance requirement

- 1) A CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding", upon receipt of a PROGRESS message indicating in-band announcement shall through-connect the traffic channel for speech, if DTCH is in a speech mode. If DTCH is not in speech mode, the UE shall not through-connect the DTCH.
- 2) After receipt of the PROGRESS message, T310 shall be stopped.

### ~~10.1.2.4.4.5~~ ~~Test requirements~~

~~After step 2 a CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding", shall through-connect the traffic channel for speech, if DTCH is in a speech mode. If DTCH is not in speech mode, the UE shall not through-connect the DTCH.~~

~~After step 2 the SS waits at least 45 s and checks no DISCONNECT is sent by the UE.~~

~~After step 5 the SS checks that the user connection for speech is attached (both downlink and uplink), if the channel mode is speech.~~

### ~~10.1.2.4.5~~ ~~Outgoing call / U3 UE originating call proceeding / DISCONNECT with in band tones~~

#### ~~10.1.2.4.5.1~~ ~~Definition~~

~~The call control entity of the UE being in the state, U3, a DISCONNECT message indicating availability of in band information is received by the UE.~~

#### ~~10.1.2.4.5.2~~ ~~Conformance requirement~~

- ~~1) A CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding", upon receipt of a DISCONNECT with progress indicator #8, shall through-connect the speech channel to make in-band announcements available, if traffic channel is in speech mode. If DTCH is not in speech mode, the UE shall send a RELEASE message.~~

### References

- ~~— TS 24.008 clause 5.2.1.4 and clause 5.4.4.~~

### ~~10.1.2.4.5.3~~ ~~Test purpose~~

~~To verify that a CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding", upon receipt of a DISCONNECT with progress indicator #8 through-connects the speech channel to make in-band announcements available, if traffic channel is in speech mode. If DTCH is not in speech mode, the UE sends a RELEASE message.~~

### ~~10.1.2.4.5.4~~ ~~Method of test~~

### Related ICS/IXIT statements

- ~~— supported MO circuit switched basic services.~~

### Initial conditions

System Simulator:

- ~~— 1 cell, default parameters.~~

User Equipment:

- ~~— The UE is in MM-state "idle, updated" with valid TMSI and CKSN.~~

—The UE is brought into the state U3 by using table 10.1.2/3.

### Test procedure

An MO-circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U3. The SS sends a RADIO BEARER SETUP for traffic channel to the UE. The UE shall respond with a RADIO BEARER SETUP COMPLETE message. The SS sends a DISCONNECT message containing indication of in-band information availability to the UE. The SS checks that if channel mode is speech, the DTCH shall be through connected and the UE enters state U12, disconnect indication. If channel mode is not speech, the DTCH shall not be through connected and the UE shall enter state U19, release request.

— TS 25.331 clause 8.2.1, TS 24.008 clause 5.2.1.9.

#### 10.1.2.4.9.3 — Test purpose

To verify that a CC entity of the UE in CC-state U3, "Mobile Originating Call Proceeding", when a traffic channel is allocated by the network performing the radio bearer establishment procedure, stays in CC-state U3.

#### 10.1.2.4.9.4 — Method of test

### Related ICS/IXIT statements

— supported MO circuit switched basic services.

### Initial conditions

System Simulator:

— 1 cell, default parameters.

User Equipment:

—The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

—The UE is brought into the state U3 by using table 10.1.2/3.

### Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U3. The SS sends a RADIO BEARER SETUP for traffic channel to the UE. The UE shall respond with a RADIO BEARER SETUP COMPLETE message. The SS checks by using the status enquiry procedure that the state of the CC entity has remained unchanged.

### Expected sequence

| Step | Direction |    | Message                      | Comments             |
|------|-----------|----|------------------------------|----------------------|
|      | UE        | SS |                              |                      |

### Specific message contents:

None.

### 10.1.2.4.9.5 — Test requirements

After step 1 the CC state U3, "Mobile Originating Call Proceeding", shall remain unchanged.

### 10.1.2.4.10 — Outgoing call / U3 UE originating call proceeding / timer T310 time-out

#### 10.1.2.4.10.1 — Definition

The call control entity of the UE being in the state, U3, if no response is then received from the SS, timer T310 expires at the UE side.

#### 10.1.2.4.10.2 — Conformance requirement

- 1) A CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding" shall, upon expiry of timer T310, and not before, initiate call release by sending DISCONNECT and enter the CC-state U11, "Disconnect Request".

### References

—TS 24.008 clause 5.2.1.3./Abnormal case, clause 5.4.3 and clause 11.3.

#### 10.1.2.4.10.3 — Test purpose

To verify that a CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding" will, upon expiry of timer T310, initiate call release by sending DISCONNECT and enter the CC-state U11, "Disconnect Request".

#### 10.1.2.4.10.4 — Method of test

### Related ICS/IXIT statements

—supported MO circuit switched basic services.

### Initial conditions

System Simulator:

—1 cell, default parameters.

User Equipment:

—The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

—The UE is brought into the state U3 by using table 10.1.2/3.

#### Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U3. The T310 expires at the UE and the UE shall send DISCONNECT. The SS checks timer T310 accuracy and that the CC entity has entered the state U11, disconnect request.

#### Expected sequence

| Step | Direction |    | Message        | Comments                                                                                |
|------|-----------|----|----------------|-----------------------------------------------------------------------------------------|
|      | UE        | SS |                |                                                                                         |

| 2    |           | →  | DISCONNECT     |                                                                                         |
| 3    |           | ←  | STATUS ENQUIRY |                                                                                         |
| 4    |           | →  | STATUS         |                                                                                         |

#### Specific message contents:

None.

#### 10.1.2.4.10.5 — Test requirements

Upon expiry of timer T310, a CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding" shall initiate call release by sending a DISCONNECT message and enter the CC-state U11, "Disconnect Request".

#### 10.1.2.4.11 — Outgoing call / U3 UE originating call proceeding / lower layer failure

##### 10.1.2.4.11.1 — Definition

The call control entity of the UE being in the state, U3, a lower layer failure is accomplished at the UE and consequently, communication at layer 3 level with the peer entity is terminated.

##### 10.1.2.4.11.2 — Conformance requirement

- 1) If a CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding" has detected a lower layer failure and has returned to idle mode, the CC entity is in state U0, "Null".

#### References

—TS 24.008 clause 4.5.2.3, clause 4.5.3 and clause 5.5.3.2, TS 25.331 clause 8.3.1 and clause 8.5.6.

##### 10.1.2.4.11.3 — Test purpose

To verify that a CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding" having detected a lower layer failure and having returned to idle mode, the CC entity is in state U0, "Null".

##### 10.1.2.4.11.4 — Method of test

#### Related ICS/IXIT statements

—supported MO circuit switched basic services.

### Initial conditions

System Simulator:

— 1 cell, default parameters.

User Equipment:

— The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

— The UE is brought into the state U3 by using table 10.1.2/4.

### Test procedure

An MO-circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The UE is brought to the state U3. The SS modifies the scrambling code of downlink transmission (DL DPCH) to generate a lower layer failure at the UE. The SS waits long enough to perform cell update procedure. The SS sends RRC CONNECTION RELEASE message as a response to the CELL UPDATE message from the UE. The SS re-modifies the scrambling code of downlink transmission (DL DPCH) to the original one and waits 60 s. The SS will check that the UE will not send any message during 60 s.

### Expected sequence

| Step | Direction |    | Message                               | Comments                                                                   |
|------|-----------|----|---------------------------------------|----------------------------------------------------------------------------|
|      | UE        | SS |                                       |                                                                            |
| 1    |           | SS | CELL UPDATE<br>RRC CONNECTION RELEASE | SS modifies the scrambling code of DPCH for generating lower layer failure |
| 2    |           | →  |                                       | CCCH                                                                       |
| 3    |           | ←  |                                       | CCCH                                                                       |
| 4    |           | SS |                                       | SS re-modifies the scrambling code of DPCH to the original one.            |
| 5    |           | SS |                                       | SS waits 60 s.<br>UE shall send no message on DCCH                         |

### Specific message contents:

None.

#### 10.1.2.4.11.5 — Test requirements

After step 4 the UE shall not send any message to the SS during 60 s.

#### 10.1.2.4.12 — Outgoing call / U3 UE originating call proceeding / unknown message received

##### 10.1.2.4.12.1 — Definition

The call control entity of the UE being in the state, U3, an unknown message is received by the UE.

##### 10.1.2.4.12.2 — Conformance requirement

- 1) A CC-entity of the UE in CC-state U3, "Mobile Originating Call Proceeding" having received an unknown message from its peer entity shall return a STATUS message.

#### Related ICS/IXIT statements

~~— supported MO circuit switched basic services.~~

#### Initial conditions

System Simulator:

~~— 1 cell, default parameters.~~

User Equipment:

~~— The UE is in MM state "idle, updated" with valid TMSI and CKSN.~~

~~— The UE is brought into the state U4 by using table 10.1.2/3.~~

#### Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U4. The SS sends a DISCONNECT message containing indication of in-band information availability to the UE. The SS checks that if channel mode is MO telephony, the DTCH shall be through connected and the UE enters state U12, disconnect indication. If channel mode is not speech, the DTCH shall not be through connected and the UE shall enter state U19, release request.

## Specific message contents:

NOTE: — the Progress Indicator, Progress Description:

— #8 in-band information or appropriate pattern now available.

## 10.1.2.5.3.5 — Test requirements

After step 1 a CC-entity of the UE in CC-state U4, "Call-Delivered", shall through-connect the speech-channel to make in-band announcements available, if traffic channel is in speech mode. If DTCH is not in speech mode, the UE shall send a RELEASE message.

## 10.1.2.5.4 — Outgoing call / U4 call delivered / DISCONNECT without in-band tones

## 10.1.2.5.4.1 — Definition

The call-control entity of the UE being in the state, U4, a DISCONNECT message is received by the UE. The DISCONNECT message does not contain indication of in-band information availability.

## 10.1.2.5.4.2 — Conformance requirement

- 1) A CC-entity of the UE in CC-state U4, "Call-Delivered", upon receipt of a DISCONNECT without progress indicator, shall return a RELEASE message and enter the CC-state U19, "Release Request".

## References

— TS 24.008 clause 5.4.4.

## 10.1.2.5.4.3 — Test purpose

To verify that a CC-entity of the UE in CC-state U4, "Call-Delivered", upon receipt of a DISCONNECT without progress indicator, returns a RELEASE message and enters the CC-state U19, "Release Request".

## 10.1.2.5.4.4 — Method of test

## Related ICS/IXIT statements

— supported MO circuit-switched basic services.

## Initial conditions

System Simulator:

— 1 cell, default parameters.

User Equipment:

—The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

—The UE is brought into the state U4 by using table 10.1.2/3.

### Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U4. The SS sends a DISCONNECT message not containing indication of in-band information availability to the UE. The UE shall respond with a RELEASE message. The SS checks by using the status enquiry procedure that the CC entity of the UE has entered the state U19, release request.

### Expected sequence

#### 10.1.2.5.5.5 Test requirements

After step 1 a CC entity of the UE in CC-state U4, "Call Delivered", shall respond with the RELEASE COMPLETE message.

After step 3 CC entities relating to all mobile-originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

#### 10.1.2.5.6 Outgoing call / U4 call delivered / lower layer failure

##### 10.1.2.5.6.1 Definition

The call control entity of the UE being in the state, U4, a lower layer failure is accomplished at the UE and consequently, communication at layer 3 level with the peer entity is terminated.

~~10.1.2.5.6.2 Conformance requirement~~

- ~~1) When CC-entity of the UE in CC-state U4, "Call Delivered" has detected a lower layer failure and has returned to idle mode, the CC-entity is in CC-state U0, "Null".~~

~~References~~

~~— TS 24.008 clause 4.5.2.3, clause 4.5.3 and clause 5.5.3.2., TS 25.331 clause 8.3.1 and clause 8.5.6.~~

~~10.1.2.5.6.3 Test purpose~~

~~To verify that a CC-entity of the UE in CC-state U4, "Call Delivered" having detected a lower layer failure and has returned to idle mode, the CC-entity is in CC-state U0, "Null".~~

~~10.1.2.5.6.4 Method of test~~~~Related ICS/IXIT statements~~

~~— supported MO circuit switched basic services.~~

~~Initial conditions~~

~~System Simulator:~~

~~— 1 cell, default parameters.~~

~~User Equipment:~~

~~— The UE is in MM-state "idle, updated" with valid TMSI and CKSN.~~

~~— The UE is brought into the state U4 by using table 10.1.2/3.~~

~~Test procedure~~

~~An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The UE is brought to the state U4. The SS modifies the scrambling code of downlink transmission (DL DPCH) to generate a lower layer failure at the UE. The SS waits long enough to perform cell update procedure. The SS sends RRC CONNECTION RELEASE message as a response to the CELL UPDATE message from the UE. The SS re-modifies the scrambling code of downlink transmission (DL DPCH) to the original one and waits 60 s. The SS will check that the UE will not send any message during 60 s.~~

## 10.1.2.6.1 — U10 call active / termination requested by the user

## 10.1.2.6.1.1 — Definition

The call control entity of the UE being in the state, U10, the user requests to terminate the call.

## 10.1.2.6.1.2 — Conformance requirement

- 1) A CC entity of the UE in CC state U10, "Call Active", upon request by the user to terminate shall send a DISCONNECT message and enter the CC state U11, "Disconnect Request".

## References

— TS 24.007 clause 6.2.2, TS 24.008 clause 5.4.3.

## 10.1.2.6.1.3 — Test purpose

To verify that the a CC entity of the UE in CC state U10, "Call Active", upon request by the user to terminate will send a DISCONNECT message and enter the CC state U11, "Disconnect Request".

## 10.1.2.6.1.4 — Method of test

## Related ICS/IXIT statements

— supported MO circuit switched basic services.

## Initial conditions

System Simulator:

— 1 cell, default parameters.

User Equipment:

— The UE is in MM state "idle, updated" with valid TMSI and CKSN.

— The UE is brought into the state U10 by using table 10.1.2/1.

## Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U10. The user requests termination of the call. The UE shall send a DISCONNECT message. The SS checks by using the status enquiry procedure that the CC entity has entered the state U11, disconnect request.

## Expected sequence

| Step | Direction |    | Message        | Comments                   |
|------|-----------|----|----------------|----------------------------|
|      | UE        | SS |                |                            |
| 1    |           |    |                |                            |
| 2    |           | →  | DISCONNECT     | MMI action, terminate call |
| 3    |           | ←  | STATUS ENQUIRY | U11                        |
| 4    |           | →  | STATUS         | cause 30#, state U11       |

## Specific message contents:

None.

## 10.1.2.6.1.5 — Test requirements

After step 1 a CC entity of the UE in CC state U10, "Call Active", shall send a DISCONNECT message and enter the CC state U11, "Disconnect Request".

## 10.1.2.6.2 — U10 call active / RELEASE received

### 10.1.2.6.2.1 — Definition

The call control entity of the UE being in the state, U10, a RELEASE message is received by the UE.

### 10.1.2.6.2.2 — Conformance requirement

- 1) A CC-entity of the UE in CC-state U10, "Call Active", upon receipt of the RELEASE shall respond with the RELEASE COMPLETE message and enter the CC-state U0, "Null"
- 2) When the UE returns to the idle mode it shall release the MM-connection and the CC-entities relating to the seven mobile originating transaction identifiers shall be in CC-state U0, "Null"

## References

Conformance requirement 1: — TS 24.008 clause 5.4.2 and clause 5.4.4.

Conformance requirement 2: — TS 24.008 clause 4.5.3 and clause 5.5.3.2.

### 10.1.2.6.2.3 — Test purpose

- 1) To verify that the a CC-entity of the UE in CC-state U10, "Call Active", upon receive of the RELEASE will respond with the RELEASE COMPLETE message and enter the CC-state U0, "Null"
- 2) To verify that the UE on returning to the idle mode releases the MM-connection and that the CC-entities relating to the seven mobile originating transaction identifiers are in CC-state U0, "Null"

### 10.1.2.6.2.4 — Method of test

## Related ICS/IXIT statements

— supported MO circuit switched basic services.

**Initial conditions**

System Simulator:

— 1 cell, default parameters.

User Equipment:

— The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

— The UE is brought into the state U10 by using table 10.1.2/1.

**Test procedure**

An MO-circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U10. The SS sends a RELEASE message to the UE. The UE shall respond with a RELEASE COMPLETE message. The SS checks by using the status enquiry procedure that the CC entity has entered the state U0 with all the relevant transaction identifiers.

**10.1.2.6.2.5 — Test requirements**

After step 1 a CC entity of the UE in CC state U10, "Call Active", shall return a RELEASE COMPLETE message.

After step 3 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

**10.1.2.6.3 — U10 call active / DISCONNECT with in band tones****10.1.2.6.3.1 — Definition**

The call control entity of the UE being in the state, U10, a DISCONNECT message indicating availability of in band information is received by the UE.

### 10.1.2.6.3.2 ~~Conformance requirement~~

- 1) ~~A CC entity of the UE in CC state U10, "Call Active", upon receipt of a DISCONNECT message with a Progress Indicator indicating in-band information, shall through-connect the speech channel to make in-band announcements available, if traffic channel is in speech mode. If DTCH is not in speech mode, the UE shall send a RELEASE message.~~

### References

~~— TS 24.008 clause 5.4.4.1.1 and clause 5.5.1.~~

### 10.1.2.6.3.3 ~~Test purpose~~

~~To verify that a CC entity of the UE in CC state U10, "Call Active", upon receipt of a DISCONNECT message with a Progress Indicator indicating in-band information, through-connects the speech channel to make in-band announcements available, if traffic channel is in speech mode. If DTCH is not in speech mode, the UE sends a RELEASE message.~~

### 10.1.2.6.3.4 ~~Method of test~~

### Related ICS/IXIT statements

~~— supported MO circuit switched basic services.~~

### Initial conditions

System Simulator:

~~— 1 cell, default parameters.~~

User Equipment:

~~— The UE is in MM state "idle, updated" with valid TMSI and CKSN.~~

~~— The UE is brought into the state U10 by using table 10.1.2/1.~~

### Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U10. The SS sends a DISCONNECT message containing indication of in-band information availability to the UE. The SS checks that if channel mode is speech, the DTCH shall be through connected and the UE enters state U12, disconnect indication. If channel mode is not speech, the DTCH shall not be through-connected and the UE enters state U19, release request.

### Specific message contents:

NOTE 1: With the cause value chosen arbitrarily.

NOTE 2: TI flag has the value indicating the UE as a originator of the call.

### 10.1.2.6.5 — Test requirements

After step 2 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

### 10.1.2.6.6 — U10 call active / SETUP received

#### 10.1.2.6.6.1 — Definition

If the UE does not react correctly when receiving a SETUP message on a new Transaction Identifier during an active call, the active call may be lost.

#### 10.1.2.6.6.2 — Conformance requirement

- 1) A UE that has a call established when receiving a SETUP message shall respond either with a CALL CONFIRMED message or a RELEASE COMPLETE message, both with cause #17 "user busy".
- 2) The call control state of the existing transaction shall not be affected by the incoming SETUP message.

### Reference(s):

Conformance requirement 1: —TS 24.008 clause 5.2.2.3.1.

Conformance requirement 2: —TS 24.008 clause 5.1.1.

#### 10.1.2.6.6.3 — Test purpose

- 1) To verify that a User Equipment that has a call established and receives a SETUP message answers either with a CALL CONFIRMED message with cause "user busy" if it supports call waiting, or with a RELEASE COMPLETE message with cause "user busy" otherwise.
- 2) To verify that after having sent this message, the UE is still in state U10 for the established call.

#### 10.1.2.6.6.4 Method of test

##### Initial conditions

System Simulator:

— 1 cell, default parameters.

User Equipment:

— The UE is idle updated with valid TMSI and CKSN.

— The UE is brought into the state U10 by using table 10.1.2/1.

##### Related ICS/IXIT statement(s)

— supported MO circuit switched basic services.

— support of call waiting Y/N.

##### Test Procedure

The UE has a mobile originated call in the U10 state. When UE sends a SETUP message and SS receives it in the first call establishment, SS sends a CALL PROCEEDING message without Network Call Control Capability IE.

The SS sends a SETUP message to the UE (with signal IE indicating "call waiting tone on" and without Network Call Control Capability IE).

If the UE does not support call waiting it shall answer by a RELEASE COMPLETE message.

If the UE supports call waiting it shall answer by a CALL CONFIRMED message followed by an ALERTING. The second transaction is then released by the SS with a RELEASE COMPLETE message.

In both cases the SS checks by using the status enquiry procedure that the CC entity of the UE is still in state U10, active call for the original call.

##### Expected sequence

10.1.2.7.4.3 ——— Test purpose

To verify that the a CC-entity of the UE in CC-state U11, "Disconnect Request" having detected a lower layer failure returns to the idle mode. The CC entity is thus in state U0, "Null".

10.1.2.7.4.4 ——— Method of test

Related ICS/IXIT statements

—supported MO circuit switched basic services.

Initial conditions

System Simulator:

—1 cell, default parameters.

User Equipment:

—The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

—The UE is brought into the state U11 by using table 10.1.2/4.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The UE is brought to the state U11. The SS modifies the scrambling code of downlink transmission (DL DPCH) to generate a lower layer failure at the UE. The SS waits long enough to enable the UE to perform cell update procedure. The SS sends RRC CONNECTION RELEASE message as a response to the CELL UPDATE message from the UE. The SS re-modifies the scrambling code of downlink transmission (DL DPCH) to the original one and waits 60 s. The SS will check that the UE will not send any message during 60 s.

Expected sequence

| Step | Direction |    | Message                | Comments                                                                   |

User Equipment:

—The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

—The UE is brought into the state U12 by using Option A of table 10.1.2/3.

Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U12. The SS sends a message with message type not defined for the protocol discriminator to the UE. The UE shall respond with a STATUS message, and finally the SS checks by using the status enquiry procedure that the state of the CC entity has remained unchanged.

Expected sequence

| Step | Direction |    | Message         | Comments                        |
|------|-----------|----|-----------------|---------------------------------|
|      | UE        | SS |                 |                                 |
| 1    |           | <  | unknown message | message type not defined for PD |
| 2    |           | >  | STATUS          | cause 97#, state U12            |
| 3    |           | <  | STATUS-ENQUIRY  |                                 |
| 4    |           | >  | STATUS          | cause 30#, state U12            |

Specific message contents:

None.

10.1.2.8.4.5 ——— Test requirements

After step 1 a CC-entity of the UE in CC-state U12, "Disconnect Indication", shall return a STATUS message.

10.1.2.9 ——— Outgoing call / U19 release request

10.1.2.9.1 ——— Outgoing call / U19 release request / timer T308 time-out

10.1.2.9.1.1 ——— Definition

The call control entity of the UE being in the state, U19, if no response is then received from the SS, timer T308 expires at the UE side.

~~10.1.2.9.1.2~~ ~~Conformance requirement~~

- ~~1) A CC entity of the UE in CC-state U19, "Release Request" will, upon the first expiry of timer T308 send the RELEASE message to its peer entity and remain in the CC-state U19.~~

~~References~~

~~— TS 24.008 clause 5.4.4.1.3.1 and clause 11.3.~~

~~10.1.2.9.1.3~~ ~~Test purpose~~

#### ~~10.1.2.9.2.4 Method of test~~

#### Related ICS/IXIT statements

~~— supported MO circuit switched basic services.~~

#### Initial conditions

System Simulator:

~~— 1 cell, default parameters.~~

User Equipment:

~~— The UE is in MM-state "idle, updated" with valid TMSI and CKSN.~~

~~— The UE is brought into the state U19 by using table 10.1.2/4.~~

#### Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U19. The SS allows T308 expiry at the UE, and the UE shall repeat sending the RELEASE message and start timer T308 again. The SS allows again T308 expiry at the UE. The UE shall abort the RRC connection. The SS waits long enough to enable the UE to return to idle state listening to paging, and then pages UE to create RRC connection. Finally, the SS will check the state of the UE by using STATUS ENQUIRY with the relevant transaction identifiers.

##### Specific message contents:

NOTE:—With the same cause number as originally contained in DISC and optional cause #102 recovery on timer expiry.

#### 10.1.2.9.3.5 Test requirements

After step 2 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid-TI value).

#### 10.1.2.9.4 Outgoing call / U19 release request / RELEASE COMPLETE received

##### 10.1.2.9.4.1 Definition

The call control entity of the UE being in the state, U19, a RELEASE COMPLETE message is received by the UE.

##### 10.1.2.9.4.2 Conformance requirement

- 1) A CC entity of the UE in CC-state U19, "Release Request", upon receipt of a RELEASE COMPLETE, shall release the MM-connection and enter the CC-state U0, "Null" with the CC entities relating to the seven mobile originating transaction identifiers in state U0, "Null".

## References

—TS 24.008 clause 5.4.4.1.3, clause 4.5.3 and clause 8.3.

### 10.1.2.9.4.3 — Test purpose

To verify that a CC-entity of the UE in CC-state U19, "Release Request", upon receipt of a RELEASE COMPLETE, shall release the MM-connection and enters the CC-state U0, "Null" with the CC entities relating to the seven mobile originating transaction identifiers in state U0, "Null".

### 10.1.2.9.4.4 — Method of test

## Related ICS/IXIT statements

—supported MO circuit-switched basic services.

## Initial conditions

System Simulator:

—1 cell, default parameters.

User Equipment:

—The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

—The UE is brought into the state U19 by using table 10.1.2/1.

## Test procedure

An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The CC entity of the UE is brought to the state U19. The SS sends a RELEASE COMPLETE message to the UE. The UE shall release the MM-connection. The SS checks by using the status enquiry procedure that the CC entity has entered the state U0 with all the relevant transaction identifiers.

### 10.1.2.9.4.5 — Test requirements

After step 2 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

### ~~10.1.2.9.5 Outgoing call / U19 release request / lower layer failure~~

#### ~~10.1.2.9.5.1 Definition~~

~~The call control entity of the UE being in the state, U19, a lower layer failure is accomplished at the UE and consequently, communication at layer 3 level with the peer entity is terminated.~~

#### ~~10.1.2.9.5.2 Conformance requirement~~

~~A CC-entity of the UE in CC-state U19, "Release Request", having detected a lower layer failure, shall return to the idle mode, the CC-entity is in state U0, "Null".~~

#### ~~References~~

~~— TS 24.008 clause 4.5.2.3, clause 4.5.3, clause 5.5.3.2 and clause 8.3, TS 25.331 clause 8.3.1 and clause 8.5.6.~~

#### ~~10.1.2.9.5.3 Test purpose~~

~~To verify that a CC-entity of the UE in CC-state U19, "Release Request", having detected a lower layer failure, returns to the idle mode, the CC-entity is in state U0, "Null".~~

#### ~~10.1.2.9.5.4 Method of test~~

#### ~~Related ICS/IXIT statements~~

~~— supported MO circuit switched basic services.~~

#### ~~Initial conditions~~

~~System Simulator:~~

~~— 1 cell, default parameters.~~

~~User Equipment:~~

~~— The UE is in MM-state "idle, updated" with valid TMSI and CKSN.~~

~~— The UE is brought into the state U19 by using table 10.1.2/1.~~

#### ~~Test procedure~~

~~An MO circuit switched basic service is selected that is supported by the UE; if the UE supports MO telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then, the UE is made to initiate a call. The UE is brought to the state U19. The SS modifies the scrambling code of downlink transmission (DL DPCH) to generate a lower layer failure at the UE. The SS waits long enough to enable the UE to perform cell update procedure. The SS sends RRC CONNECTION RELEASE message as a response to the CELL UPDATE message from the UE. The SS re-modifies the scrambling code of downlink transmission (DL DPCH) to the original one and waits 60 s. The SS will check that the UE will not send any message during 60 s.~~

## Specific message contents:

None.

## 10.1.2.9.5.5 — Test requirements

After step 4 CC the UE shall not send any message to the SS during 60 s.

## 10.1.3 — Establishment of an incoming call / Initial conditions

The tables below describe message exchanges which bring the UE in the requested initial states in case of an incoming call.

A state may be taken as initial only when all the states which lead to this initial states have been validated. The order will be U0, U6, U9, U7, U8, U10, U26 etc. as in the following tables.

Table 10.1.3/1: Establishment of an incoming call, procedure 1

**10.1.3.1 Incoming call / U0 null state****10.1.3.1.1 Incoming call / U0 null state / SETUP received with a non-supported bearer capability****10.1.3.1.1.1 Definition**

The call control entity of the UE being in the state, U0, a SETUP message is received with only one bearer capability and this bearer capability is not supported by the UE.

**10.1.3.1.1.2** ——— **Conformance requirement**

- 1) A CC entity of the UE, upon receipt of SETUP containing one bearer capability and this bearer capability is not supported, shall return a RELEASE COMPLETE with correct cause value to its peer entity and return to the idle mode. The CC entities relating to the seven mobile terminating transaction identifiers shall be in the state U0, "Null".

**References**

—— TS 24.008 clause 5.2.2.2 and annex B.

**10.1.3.1.1.3** ——— **Test purpose**

To verify that a CC entity of the UE, upon receipt of SETUP containing one bearer capability and this bearer capability is not supported, returns a RELEASE COMPLETE with correct cause value to its peer entity, and returns to the idle mode. To verify that the CC entities relating to the seven mobile terminating transaction identifiers are then in the state U0, "Null".

**10.1.3.1.1.4** ——— **Method of test****Related ICS/IXIT statements**

—— supported MT circuit switched basic services.

**Initial conditions**

System Simulator:

—— 1 cell, default parameters.

User Equipment:

—— The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

**Test procedure**

A mobile terminated call is initiated. The UE receives a SETUP message that contains a bearer capability not supported by the UE. The UE returns a RELEASE COMPLETE message. The SS checks by using the status enquiry procedure that the CC entity is still in the state U0 with all the relevant transaction identifiers.

**Expected sequence**

**Specific message contents:**

NOTE 1: With one bearer capability and that bearer capability is not supported by the UE.

NOTE 2: With cause #88 incompatible destination.

#### ~~10.1.3.1.1.5 Test requirements~~

~~After step 7 a CC entity of the UE shall return a RELEASE COMPLETE message with cause value #88 (incompatible destination) and return to the idle mode.~~

~~After step 9 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).~~

#### ~~10.1.3.2 Incoming call / U6 call present~~

##### ~~10.1.3.2.1 Incoming call / U6 call present / automatic call rejection~~

###### ~~10.1.3.2.1.1 Definition~~

~~Although the state U6 is transient, the ability to refuse a call (automatically) in this state is tested, if it is implemented at the UE.~~

###### ~~10.1.3.2.1.2 Conformance requirement~~

- ~~1) A CC entity of the UE in CC-state U6, "Call Present", upon receipt of a rejection indication of the incoming call from the user, send RELEASE COMPLETE with the appropriate cause value to its peer entity and enter the CC-state U0, "Null". The CC entities relating to the seven mobile terminating transaction identifiers shall be in state U0, "Null".~~

#### References

~~—TS 24.007 clause 6.2.2, TS 24.008 clause 5.2.2.3.1, clause 5.5.3.2 and clause 8.3.~~

##### ~~10.1.3.2.1.3 Test purpose~~

~~To verify that a CC entity of the UE in CC-state U6, "Call Present", shall upon receipt of a rejection indication of the incoming call from the user, shall send RELEASE COMPLETE with the appropriate cause value to its peer entity and enter the CC-state U0, "Null". The CC entities relating to the seven mobile terminating transaction identifiers are then in state U0, "Null".~~

##### ~~10.1.3.2.1.4 Method of test~~

#### Related ICS/IXIT statements

- ~~—supported teleservices;~~
- ~~—the UE supports an ability to refuse a call after receipt of a SETUP message.~~

#### Initial conditions

System Simulator:

- ~~—1 cell, default parameters.~~

User Equipment:

- ~~—The UE is in MM-state "idle, updated" with valid TMSI and CKSN.~~
- ~~—The UE is brought into the state U6 by using table 10.1.3/2.~~

#### Test procedure

A teleservice is selected that is supported by the UE; if the UE supports speech, the selected teleservice is speech. If necessary, the UE is configured for that teleservice. Then a mobile terminated call is initiated. The call control entire of

the UE is brought to the state U6 (Note: The state U6 is not checked, since it is not stable). The UE is made to refuse the call (the refusal may require some preliminary preparations in order to achieve refusal at this point). The UE shall send a RELEASE COMPLETE message and enter a call control state U0. The SS checks by using the status enquiry procedure that the CC entity has entered the state U0 with all the relevant transaction identifiers.

#### Expected sequence

#### Specific message contents:

NOTE:—With cause value #21 call rejected.

#### 10.1.3.2.1.5—Test requirements

After step 1 a CC entity of the UE shall return a RELEASE COMPLETE message with cause value #21 (call rejected) and return to the idle mode.

After step 11 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

#### 10.1.3.3—Incoming call / U9 mobile terminating call confirmed

##### 10.1.3.3.1—Incoming call / U9 mobile terminating call confirmed / alerting or immediate connecting

##### 10.1.3.3.1.1—Definition

The call control entity of the UE having entered the state, U9, with signal information received in the preceding SETUP message, the subsequent behaviour of the UE is tested.

##### 10.1.3.3.1.2—Conformance requirement

- 1) A CC entity in CC-state U9, "Mobile Terminating Call Confirmed", (if signalled by the network in previous SETUP message that it may alert) shall either send a ALERTING message to its peer entity and enter state U7, or send a CONNECT message to its peer entity and enter U8.

#### References

—TS 24.008 clause 5.2.2.3.2 and clause 5.2.2.5.

##### 10.1.3.3.1.3—Test purpose

To verify that a CC entity in CC-state U9, "Mobile Terminating Call Confirmed", (if signalled by the network in previous SETUP message that it may alert) will either send a ALERTING message to its peer entity and enter state U7, or send a CONNECT message to its peer entity and enter U8.

#### 10.1.3.3.1.4 Method of test

##### Related ICS/IXIT statements

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used.

##### Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE is in MM-state "idle, updated" with valid TMSI and CKSN.
- The UE is brought into the state U9 by using table 10.1.3/2.

##### Test procedure

An MT circuit switched basic service is selected that is supported by the UE; if the UE supports MT telephony, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U9 by using a SETUP message containing signalling information element. (The state U9 is not a stable state in this case, and consequently it is not checked as an initial state.) If the UE supports immediate connect for the selected basic service ( $p = Y$ ), it sends a CONNECT message and enters the state U8, connect request. Otherwise ( $p = N$ ) the UE sends an ALERTING message and enters the state U7, call receiving. The SS checks by using the status enquiry procedure that the CC entity has entered its state as described.

##### Expected sequence

| Step | Direction |    | Message        | Comments                       |
|------|-----------|----|----------------|--------------------------------|
|      | UE        | SS |                |                                |
| A1   | ->        | <  | CONNECT        | $p = Y$<br>cause 30#, state U8 |

| A3   |           |    | STATUS         |                                |
| B1   | ->        | <  | ALERTING       | $p = N$<br>cause 30#, state U7 |
| B2   |           |    | STATUS-ENQUIRY |                                |
| B3   |           |    | STATUS         |                                |

##### Specific message contents:

None.

#### 10.1.3.3.1.5 Test requirements

A CC entity in CC-state U9, "Mobile Terminating Call Confirmed", (if signalled by the network in previous SETUP message that it may alert) shall either send an ALERTING message and enter state U7, or send a CONNECT message and enter U8.

#### 10.1.3.3.2 Incoming call / U9 mobile terminating call confirmed / DTCH assignment

##### 10.1.3.3.2.1 Definition

The call control entity of the UE being in the state, U9, a radio bearer establishment procedure is performed for traffic channel.

**10.1.3.3.2.2 Conformance requirement**

- 1) A CC-entity of the UE in CC-state U9, "Mobile Terminating Call Confirmed", when a traffic channel is allocated by the network performing the radio-bearer establishment procedure, shall send a ALERTING message and enter state U7.

**References**

- TS 25.331 clause 8.2.1, TS 24.008 clause 5.2.2.7 and clause 5.2.2.3.2.

**10.1.3.3.2.3 Test purpose**

To verify that a CC-entity of the UE in CC-state U9, "Mobile Terminating Call Confirmed", when a traffic channel is allocated by the network performing the radio-bearer establishment procedure, shall send a ALERTING message and enters state U7.

**10.1.3.3.2.4 Method of test****Related ICS/IXIT statements**

- supported MT circuit switched basic services;  
 — MT circuit switched basic services for which immediate connect is not used.

**Initial conditions**

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE is in MM-state "idle, updated" with valid TMSI and CKSN.  
 — The UE is brought into the state U9 by using table 10.1.3/4.

**Test procedure**

An MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U9 (by using a SETUP message not containing the signal information element). The SS sends a RADIO BEARER SETUP for traffic channel to the UE. The UE shall respond with a RADIO BEARER SETUP COMPLETE message. The UE sends an ALERTING message and enters state U7, call received. The SS verifies by using the status enquiry procedure that the UE has entered the correct state.

**Expected sequence**

- The UE is brought into the state U9 by using table 10.1.3/4.

### Test procedure

An MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U9. The SS sends a DISCONNECT message to the UE. The UE responds by sending a RELEASE message and enters state U19, release request. The SS verifies by using the status enquiry procedure that the UE has entered the correct state.

### Expected sequence

| Step | Direction |    | Message        | Comments             |
|------|-----------|----|----------------|----------------------|
|      | UE        | SS |                |                      |
| 1    |           | <- | DISCONNECT     |                      |
| 2    |           | -> | RELEASE        |                      |
| 3    |           | <- | STATUS ENQUIRY |                      |
| 4    |           | -> | STATUS         | cause 30#, state U19 |

### Specific message contents:

None.

#### 10.1.3.3.4.5 — Test requirements

After step 1 a CC entity of the UE in CC-state U9, "UE Terminating Call Confirmed", shall return a RELEASE message and enter the CC-state U19, "Release Request".

#### 10.1.3.3.5 — Incoming call / U9 mobile terminating call confirmed / RELEASE received

##### 10.1.3.3.5.1 — Definition

The call control entity of the UE being in the state, U9, a RELEASE message is received by the UE.

##### 10.1.3.3.5.2 — Conformance requirement

- 1) A CC entity of the UE in CC-state U9, "Mobile Terminating Call Confirmed", upon receipt of a RELEASE shall return a RELEASE COMPLETE and enter the CC-state U0, "Null".
- 2) On returning to the idle mode the UE shall release the MM-connection and the CC-entities relating to the seven mobile terminating transaction identifiers shall be in CC-state U0, "Null".

### References

Conformance requirement 1: — TS 24.008 clause 5.4.4.

Conformance requirement 2: — TS 24.008 clause 4.5.3, clause 5.5.3.2 and clause 8.3.

#### 10.1.3.3.5.3 — Test purpose

- 1) To verify that a CC entity of the UE in CC-state U9, "Mobile Terminating Call Confirmed", upon receipt of a RELEASE will return a RELEASE COMPLETE and enter the CC-state U0, "Null".
- 2) To verify that the UE on returning to the idle mode releases the MM-connection and that the CC-entities relating to the seven mobile terminating transaction identifiers are in CC-state U0, "Null".

#### 10.1.3.3.5.4 — Method of test

### Related ICS/IXIT statements

— supported MT circuit switched basic services;

—MT circuit switched basic services for which immediate connect is not used.

#### Initial conditions

System Simulator:

—1 cell, default parameters.

User Equipment:

—The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

—The UE is brought into the state U9 by using table 10.1.3/4.

#### Test procedure

An MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U9. The SS sends a RELEASE message to the UE. The UE responds by sending a RELEASE COMPLETE message and enters state U0, null. The SS verifies by using the status enquiry procedure that the UE has entered the correct state with the relevant transaction identifiers.

#### Expected sequence

| Step | Direction |    | Message                         | Comments                                                                                                                                                      |

#### Specific message contents:

None.

#### 10.1.3.3.5.5 — Test requirements

After step 1 a CC entity of the UE in CC-state U9, "UE Terminating Call Confirmed", shall return a RELEASE COMPLETE message.

After step 3 CC entities relating to all mobile originating transaction identifiers shall send RELEASE COMPLETE messages with cause value #81 (invalid TI value).

#### 10.1.3.3.6 — Incoming call / U9 mobile terminating call confirmed / lower layer failure

##### 10.1.3.3.6.1 — Definition

The call control entity of the UE being in the state, U9, a lower layer failure is accomplished at the UE and consequently, communication at layer 3 level with the peer entity is terminated.

##### 10.1.3.3.6.2 — Conformance requirement

- 1) A CC entity of the UE in CC-state U9, "Mobile Terminating Call Confirmed", having detected a lower layer failure shall return to idle mode, the CC entity is in state U0, "Null".

## References

—TS 24.008 clause 4.5.2.3, clause 4.5.3, clause 5.5.3.2 and clause 8.3, TS 25.331 clause 8.3.1 and clause 8.5.6.

### 10.1.3.3.6.3 — Test purpose

To verify that a CC entity of the UE in CC-state U9, "Mobile Terminating Call Confirmed", having detected a lower layer failure returns to idle mode, the CC entity is in state U0, "Null".

### 10.1.3.3.6.4 — Method of test

## Related ICS/IXIT statements

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used.

## Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE is in MM-state "idle, updated" with valid TMSI and CKSN.
- The UE is brought into the state U9 by using table 10.1.3/4.

## Test procedure

An MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The UE is brought to the state U9. The SS modifies the scrambling code of downlink transmission (DL-DPCH) to generate a lower layer failure at the UE. The SS waits long enough to enable the UE to perform cell update procedure. The SS sends RRC-CONNECTION-RELEASE message as a response to the CELL-UPDATE message from the UE. The SS re-modifies the scrambling code of downlink transmission (DL-DPCH) to the original one and waits 60 s. The SS will check that the UE will not send any message during 60 s.

## Expected sequence

| Step | Direction |    | Message                | Comments                                                                   |
|------|-----------|----|------------------------|----------------------------------------------------------------------------|

### Test procedure

An MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U7. The SS sends a DISCONNECT message. The UE responds with a RELEASE message. The SS checks by using the status enquiry procedure that the CC entity has entered state U19, release request.

### Expected sequence

| Step | Direction |    | Message        | Comments                       |
|------|-----------|----|----------------|--------------------------------|
|      | UE        | SS |                |                                |
| 1    |           | <- | DISCONNECT     | (note)<br>cause 30#, state U19 |
| 2    |           | -> | RELEASE        |                                |
| 3    |           | <- | STATUS ENQUIRY |                                |
| 4    |           | -> | STATUS         |                                |

### Specific message contents:

NOTE: — With a progress indicator indicating in-band information; Progress Indicator, Progress Description #8.

#### 10.1.3.4.3.5 — Test requirements

After step 1 a CC entity of a UE in CC-state U7, "Call Received", if a DTCH was not assigned, shall return a RELEASE message and enter the CC-state U19, "Release Request".

#### 10.1.3.4.4 — Incoming call / U7 call received / RELEASE received

##### 10.1.3.4.4.1 — Definition

The call control entity of the UE being in the state, U7, a RELEASE message is received by the UE.

##### 10.1.3.4.4.2 — Conformance requirement

- 1) A CC entity of a UE in CC-state U7, "Call Received", upon receipt of a RELEASE shall return a RELEASE COMPLETE and enter the CC-state U0, "Null".
- 2) On returning to the idle mode the UE shall release the MM-connection and the CC-entities relating to the seven mobile terminating transaction identifiers shall be in CC-state U0, "Null".

### References

Conformance requirement 1: — TS 24.008 clause 5.4.4.

Conformance requirement 2: — TS 24.008 clause 4.5.3 and clause 5.5.3.2.

**10.1.3.4.4.3 — Test purpose**

- 1) To verify that a CC entity of a UE in CC-state U7, "Call Received", upon receipt of a RELEASE will return a RELEASE COMPLETE and enter the CC-state U0, "Null".
- 2) To verify that the UE on returning to the idle mode releases the MM-connection and that the CC-entities relating to the seven mobile terminating transaction identifiers are in CC-state U0, "Null".

**10.1.3.4.4.4 — Method of test****Related ICS/IXIT statements**

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used.

**Initial conditions**

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE is in MM-state "idle, updated" with valid TMSI and CKSN.
- The UE is brought into the state U7 by using table 10.1.3/1.

**Test procedure**

An MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U7. The SS sends a RELEASE message. The UE responds with a RELEASE COMPLETE message. The SS checks by using the status enquiry procedure that the CC entity has entered state U0, null, with the relevant transaction identifiers.

**Expected sequence**

#### Initial conditions

System Simulator:

- ~~— 1 cell, default parameters.~~

User Equipment:

- ~~— The UE is in MM-state "idle, updated" with valid TMSI and CKSN.~~
- ~~— The UE is brought into the state U7 by using table 10.1.3/2.~~

#### Test procedure

An MT circuit switched basic service is selected that is supported by the UE and for which the UE does not use immediate connection; if the UE supports MT telephony without immediate connection, the selected basic service is telephony. If necessary, the UE is configured for that basic service. Then a mobile terminated call is initiated. The UE is brought to the state U7. The SS modifies the scrambling code of downlink transmission(DL DPCH) to generate a lower layer failure at the UE. The SS waits long enough to enable the UE to perform cell update procedure. The SS sends RRC CONNECTION RELEASE message as a response to the CELL UPDATE message from the UE. The SS re-modifies the scrambling code of downlink transmission(DL DPCH) to the original one and waits 60 s. The SS will check that the UE will not send any message during 60 s.

## Expected sequence

#### Specific message contents:

None.

#### 10.1.3.5.2.5 Test requirements

Upon expiry of timer T313 without receiving the appropriate protocol message to complete the incoming call a CC entity of a UE in CC-state U8, "Connect Request", shall initiate the clearing of that incoming call by sending a DISCONNECT message and enter the CC-state U11, "Disconnect Request".

#### 10.1.3.5.3 Incoming call / U8 connect request / termination requested by the user

##### 10.1.3.5.3.1 Definition

The call control entity of the UE being in the state, U8, the user requests for releasing of the call.

##### 10.1.3.5.3.2 Conformance requirement

- 1) A CC entity of a UE in CC-state U8, "Connect Request", upon request by the user to terminate shall send a DISCONNECT message and enter the CC-state U11, "Disconnect Request".

#### References

— TS 24.007 clause 6.2.2, TS 24.008 clause 5.4.3.

##### 10.1.3.5.3.3 Test purpose

To verify that a CC entity of a UE in CC-state U8, "Connect Request", upon request by the user to terminate will send a DISCONNECT message and enter the CC-state U11, "Disconnect Request".

##### 10.1.3.5.3.4 Method of test

#### Related ICS/IXIT statements

- supported MT circuit switched basic services;
- MT circuit switched basic services for which immediate connect is not used.

#### Initial conditions

System Simulator:

— 1 cell, default parameters.

User Equipment:

- The UE is in MM-state "idle, updated" with valid TMSI and CKSN.
- The UE is brought into the state U8 by using table 10.1.3/2.

### Test procedure

An MT circuit switched basic service is selected that is supported by the UE; if the UE supports MT telephony, the selected basic service is telephony. If necessary the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U8 (if the UE uses immediate connection for the selected basic service then  $p = Y$ , otherwise  $p = N$ ). Then the user requests termination of the call. The UE sends a DISCONNECT message and enters state U11, disconnect request. The SS verifies by using the status enquiry procedure that the UE has entered the correct state.

### Expected sequence

| Step | Direction |    | Message                      | Comments                            |

| 3    |           | -> | DISCONNECT                   |                                     |
| 4    |           | <- | STATUS ENQUIRY               |                                     |
| 5    |           | -> | STATUS                       |                                     |
|      |           |    |                              | cause 30#, state U11                |

### Specific message contents:

None.

### 10.1.3.5.3.5 — Test requirements

After step 2 a CC entity of a UE in CC-state U8, "Connect Request", shall send a DISCONNECT message and enter the CC-state U11, "Disconnect Request".

### 10.1.3.5.4 — Incoming call / U8 connect request / DISCONNECT received with in-band information

#### 10.1.3.5.4.1 — Definition

The call control entity of the UE being in the state, U8, a DISCONNECT message indicating availability of in-band information is received by the UE.

#### 10.1.3.5.4.2 — Conformance requirement

A CC entity of a UE in CC-state U8, "Connect Request", upon receipt of a DISCONNECT with progress indicator #8 shall enter CC-state U12, if the traffic channel is in speech mode. If the DTCH is not in speech mode, the UE shall send a RELEASE message and enter CC-state U19.

### References

- TS 24.008 clause 5.4.4 and clause 5.5.1.

#### 10.1.3.5.4.3 — Test purpose

To verify that a CC entity of a UE in CC-state U8, "Connect Request", upon receipt of a DISCONNECT with progress indicator #8 enters CC-state U12, if the traffic channel is in speech mode, and that the UE sends a RELEASE message and enters CC-state U19 if the DTCH is not in speech mode.

#### 10.1.3.5.4.4 Method of test

##### Related ICS/IXIT statements

—supported MT circuit switched basic services.

##### Initial conditions

System Simulator:

—1 cell, default parameters.

User Equipment:

—The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

The UE is brought into the state U8 by using table 10.1.3/4.

##### Test procedure

An MT circuit switched basic service is selected that is supported by the UE; if the UE supports MT telephony, the selected basic service is telephony. If necessary the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U8. The SS sends a DISCONNECT message containing indication of in-band information availability to the UE. If channel mode is speech, the UE enters state U12, disconnect indication. If channel mode is not speech, the UE sends a RELEASE message and enters state U19, release request.

##### Expected sequence

##### Specific message contents:

NOTE:—With a progress indicator indicating in-band information; Progress Indicator, Progress-description #8.

#### 10.1.3.5.4.5 Test requirements

After step 1 a CC entity of a UE in CC-state U8, "Connect Request", shall enter CC-state U12, if the traffic channel is in speech mode. If the DTCH is not in speech mode, the UE shall send a RELEASE message and enter CC-state U19.

#### 10.1.3.5.5 Incoming call / U8 connect request / DISCONNECT received without in-band information

##### 10.1.3.5.5.1 Definition

The call control entity of the UE being in the state, U8, a DISCONNECT message is received by the UE. The DISCONNECT message does not contain indication of in-band information availability.

##### 10.1.3.5.5.2 Conformance requirement

- 1) A CC entity of a UE in CC-state U8, "Connect Request", upon receipt of a DISCONNECT without progress indicator, shall return a RELEASE message and enter the CC-state U19, "Release Request".

## References

—TS 24.008 clause 5.4.4 and clause 5.4.4.1.2.

### 10.1.3.5.5.3 ——— Test purpose

To verify that a CC entity of a UE in CC-state U8, "Connect Request", upon receipt of a DISCONNECT without progress indicator, returns a RELEASE message and enters the CC-state U19, "Release Request".

### 10.1.3.5.5.4 ——— Method of test

## Related ICS/IXIT statements

—supported MT circuit switched basic services.

## Initial conditions

System Simulator:

—1 cell, default parameters.

User Equipment:

—The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

—The UE is brought into the state U8 by using table 10.1.3/4.

## Test procedure

An MT circuit switched basic service is selected that is supported by the UE; if the UE supports MT telephony, the selected basic service is telephony. If necessary the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U8. The SS sends a DISCONNECT message not containing indication of in-band information availability to the UE. The UE shall respond with a RELEASE message. The SS checks by using the status enquiry procedure that the CC entity of the UE has entered the state U19, release request.

## Expected sequence

| Step | Direction |    | Message        | Comments                           |
|------|-----------|----|----------------|------------------------------------|
|      | UE        | SS |                |                                    |
| 1    |           | <  | DISCONNECT     | (note)<br><br>cause 30#, state U19 |

| 3    |           | <  | STATUS ENQUIRY |                                    |
| 4    |           | >  | STATUS         |                                    |

## Specific message contents:

NOTE: —Without a progress indicator indicating in-band information.

### 10.1.3.5.5.5 ——— Test requirements

After step 1 a CC entity of a UE in CC-state U8, "Connect Request", shall return a RELEASE message and enter the CC-state U19, "Release Request".

### 10.1.3.5.6 ——— Incoming call / U8 connect request / RELEASE received

#### 10.1.3.5.6.1 ——— Definition

The call control entity of the UE being in the state, U8, a RELEASE message is received by the UE.

**10.1.3.5.6.2** Conformance requirement

- 1) A CC entity of a UE in CC-state U8, "Connect Request", upon receipt of a RELEASE shall return a RELEASE COMPLETE and enter the CC-state U0, "Null".
- 2) On returning to the idle mode the UE shall release the MM-connection and the CC-entities relating to the seven mobile terminating transaction identifiers shall be in CC-state U0, "Null".

**References**

Conformance requirement 1: TS 24.008 clause 5.4.4.

Conformance requirement 2: TS 24.008 clause 4.5.3 and clause 5.5.3.2.

**10.1.3.5.6.3** Test purpose

- 1) To verify that a CC entity of a UE in CC-state U8, "Connect Request", upon receipt of a RELEASE will return a RELEASE COMPLETE and enter the CC-state U0, "Null".
- 2) To verify that the UE on returning to the idle mode releases the MM-connection and that the CC-entities relating to the seven mobile terminating transaction identifiers are in CC-state U0, "Null".

**10.1.3.5.6.4** Method of test**Related ICS/IXIT statements**

— supported MT circuit switched basic services.

**Initial conditions**

System Simulator:

— 1 cell, default parameters.

User Equipment:

— The UE is in MM-state "idle, updated" with valid TMSI and CKSN.

— The UE is brought into the state U8 by using table 10.1.3/1.

**Test procedure**

An MT circuit switched basic service is selected that is supported by the UE; if the UE supports MT telephony, the selected basic service is telephony. If necessary the UE is configured for that basic service. Then a mobile terminated call is initiated. The CC entity of the UE is brought to the state U8. The SS sends a RELEASE message. The UE responds with a RELEASE COMPLETE message. The SS checks by using the status enquiry procedure that the CC entity has entered state U0, null, with the relevant transaction identifiers.

**Expected sequence**

~~— supported MT circuit switched basic services.~~

#### Initial conditions

System Simulator:

~~— 1 cell, default parameters.~~

User Equipment:

~~— The UE is in MM-state "idle, updated" with valid TMSI and CKSN.~~

~~— The UE is brought into the state U8 by using table 10.1.3/1.~~

#### Test procedure

An MT circuit switched basic service is selected that is supported by the UE; if the UE supports MT telephony, the selected basic service is telephony. If necessary the UE is configured for that basic service. Then a mobile terminated call is initiated. The UE is brought to the state U8. The SS modifies the scrambling code of downlink transmission (DL DPCH) to generate a lower layer failure at the UE. The SS waits long enough to enable the UE to perform cell update procedure. The SS sends RRC CONNECTION RELEASE message as a response to the CELL UPDATE message from the UE. The SS re-modifies the scrambling code of downlink transmission (DL DPCH) to the original one and waits 60 s. The SS will check that the UE will not send any message during 60 s.

## Expected sequence

### 10.1.4 — In call functions

#### 10.1.4.1 — In-call functions / DTMF information transfer

##### 10.1.4.1.1 — In-call functions / DTMF information transfer / basic procedures

##### 10.1.4.1.1.1 — Definition

Dual Tone Multi Frequency (DTMF) is an inband one out of four plus one out of four signalling system primarily used from terminal instruments in telecommunication networks.

##### 10.1.4.1.1.2 — Conformance requirement

- 1) An UE supporting the Mobile originating DTMF protocol control procedure, having a CC entity for speech in state U10, "Active": when made to send a DTMF tone, shall send a START DTMF message on the correct DCCH.
- 2) An UE supporting the Mobile originating DTMF protocol control procedure, having a CC entity for speech in state U10, "Active": when made to send a DTMF tone (the corresponding IA5 character being selected from among the ones supported), shall send a START DTMF message specifying the correct IA5 character in the "keypad information" field of the keypad facility information element.

#### References

—TS 24.008 clause 5.5.7.

##### 10.1.4.1.1.3 — Test purpose

- 1) To verify that an UE supporting the Mobile originating DTMF protocol control procedure, having a CC entity for speech in state U10, "Active": when made to send a DTMF tone, sends a START DTMF message on the correct DCCH.

- 2) To verify that an UE supporting the Mobile originating DTMF protocol control procedure, having a CC entity for speech in state U10, "Active": when made to send a DTMF tone (the corresponding IA5 character being selected from among the ones supported), sends a START DTMF message specifying the correct IA5 character in the "keypad information" field of the keypad facility information element.

#### 10.1.4.1.1.4 Method of test

##### Related ICS/IXIT statements

- supported teleservices;
- supported character set (e.g. 0-9, #, \*, A, B, C, D);
- if and how DTMF tone is indicated to the user.

##### Initial conditions

###### System Simulator:

- 1 cell, default parameters.

###### User Equipment:

- The UE is in MM-state "idle, updated" with valid TMSI and CKSN.
- The UE is brought into the state U10 "Active" for speech by using Generic call setup procedure for mobile originating circuit switched call defined in TS 34.108.

##### Test procedure

The UE being in the call active state, a user causes a DTMF tone to be generated e.g. by depression of a key in the UE. A DTMF digit corresponding to the digit indicated by the user is sent in a START DTMF message by the UE. The SS will return a START DTMF ACKNOWLEDGE message to the UE. This acknowledgement may be used in the UE to generate an indication as a feedback for a successful transmission. Then the user indicates that the DTMF sending should cease e.g. by releasing the key. The UE will send a STOP DTMF message to the network which is acknowledged with STOP DTMF ACKNOWLEDGE by the SS.

The sequence described above is repeated for each of the applicable characters 0-9, #, \*, A, B, C, and D.

Then a case of rejecting a DTMF tone is tested and the state of the UE is verified.

## Expected sequence

| Step | Direction |    | Message                | Comments                                                                                     |

## Specific message contents:

None.

## 10.1.4.1.1.5 — Test requirements

Upon a user making to send a DTMF tone a CC entity for speech in the CC state U10, "Active", shall send a START DTMF message on the DCCH to SS.

The SS will verify that the transmitted information corresponds to the digit pressed in the UE.

After step 7 (successful DTMF transmission) the CC state U10, "Active", shall remain unchanged.

After step 11 (unsuccessful DTMF transmission) the CC state U10, "Active", shall remain unchanged.

## 10.1.4.2 — In-call functions / user notification

User notification procedure allows the network to notify a UE of any call-related event during the "active" state of a call. It also may allow a UE to notify the remote user of any appropriate call-related event during the "active" state of a call by sending a NOTIFY message containing a notification indicator to the network. No state change occurs at any of the interface sides during this procedure.

## 10.1.4.2.1 — In-call functions / User notification / UE terminated

## 10.1.4.2.1.1 — Definition

This is a case for testing user notification procedure terminated by the user equipment.

## 10.1.4.2.1.2 — Conformance requirement

- 1) A CC entity of a UE in CC state U10, "active", upon receiving of a NOTIFY message shall remain in the active state.

- ~~1) The UE being in the call active state after having successful completed a physical channel reconfiguration, shall remain in the call active state.~~

~~References~~

~~— TS 24.008 clause 5.3.4.3.2, TS 25.331 clause 8.3.5.~~

~~10.1.4.3.1.3~~ ~~Test purpose~~

~~To verify that the UE being in the call active state after having successful completed a physical channel reconfiguration remains in the call active state.~~

~~10.1.4.3.1.4~~ ~~Method of test~~

~~Related ICS/IXIT statements~~

~~— supported circuit switched basic services;~~

~~Initial conditions~~

~~System Simulator:~~

~~— 1 cell, default parameters.~~

~~User Equipment:~~

~~— The UE is in MM-state "idle, updated" with valid TMSI and CKSN.~~

~~— The UE is brought into the state U10 "Active" by using Generic call setup procedure for mobile originating circuit switched calls defined in TS 34.108.~~

~~Test procedure~~

~~The UE being in the call active state, the SS initiated physical channel reconfiguration procedure causing an intracell change of channel by sending a PHYSICAL CHANNEL RECONFIGURATION message to the UE. The UE performs physical channel reconfiguration procedure and after the main signalling link is successfully established, the UE returns a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC. The state of the UE is then checked.~~

~~Expected sequence~~

| Step | Direction |    | Message                                   | Comments |

~~None.~~

~~10.1.4.3.1.5~~ ~~Test requirements~~

~~The UE being in the call active state after having successful completed a physical channel reconfiguration, shall remain in the call active state.~~

### ~~10.1.4.3.2 In-call functions / channel changes / an unsuccessful channel change in active mode/Hard handover~~

#### ~~10.1.4.3.2.1 Definition~~

~~This is a case to test an unsuccessful change of the frequency of a physical channel during active state of a call.~~

#### ~~10.1.4.3.2.2 Conformance requirement~~

- ~~1) The UE, when returning to the old channel after physical channel reconfiguration failure, shall remain in the call active state.~~

#### References

~~—TS 24.008 clause 5.3.4.3.~~

#### ~~10.1.4.3.2.3 Test purpose~~

~~To verify that the UE, when returning to the old channel after physical channel reconfiguration failure, will remain in the call active state.~~

#### ~~10.1.4.3.2.4 Method of test~~

#### Related ICS/IXIT statements

~~—supported circuit switched basic services.~~

#### Initial conditions

System Simulator:

~~—1 cell, default parameters.~~

User Equipment:

~~—The UE is in MM-state "idle, updated" with valid TMSI and CKSN.~~

~~—The UE is brought into the state U10 "Active" by using Generic call setup procedure for mobile-originating circuit switched calls defined in TS 34.108.~~

#### Test procedure

The SS sends a PHYSICAL CHANNEL RECONFIGURATION message, but does not activate the assigned physical channel. The UE shall attempt try to activate the new channel (this is not verified) and shall then reactivate the "old" channel. The UE shall send a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC and shall set the cause value in IE "failure cause" to "physical channel failure". The state of the UE is then checked.

#### Initial conditions

System Simulator:

~~—1 cell, default parameters~~

User Equipment:

~~—The UE is in MM-state "idle, updated" with valid TMSI and CKSN on cell A.~~

#### Test procedure

The UE is brought into the state U10 "Active" by using Generic call setup procedure for mobile originating circuit switched calls defined in TS34.108. The SS modifies the scrambling code of downlink transmission (DL DPCH) to generate a lower layer failure at the UE. The SS waits long enough to enable the UE to perform cell update procedure. The SS sends RRC CONNECTION RELEASE as a response message to the CELL UPDATE message from the UE. The SS re-modifies the scrambling code of downlink transmission (DL DPCH) to the original one. The UE shall re-establish the call using CM RE-ESTABLISHMENT message. The SS performs security mode control and radio bearer establishment procedures. The UE shall through-connect the appropriate bearer channel. Then, the call is cleared by the SS.

## Specific message contents:

CM RE-ESTABLISHMENT REQUEST message contains Ciphering key sequence number IE with the value which the UE was allocated in.

## 10.2.1.5 Test requirements

After step 2 a CC entity of the UE in the "active" state, shall suspend any further message to be sent and await the completion of the re-establishment procedure.

After step 12 the UE resume user data exchange when an appropriate channel is available.

## 10.3 User to user signalling

## 10.3.1 Definition

The "user to user" information element is used to convey information between the mobile user and a remote ISDN user.

NOTE: There is no test for an UE originating call including a "user-user" information element since it is not a mandatory UE feature.

## 10.3.2 Conformance requirement

The inclusion of the "user-user" information element in downlink call control messages shall cause no adverse effects on the operation of the UE.

## References

— TS 24.008 clauses 5.2.2, 9.3.7, 9.3.23.1 and 10.5.4.25.

### 10.3.3 Purpose of the test

The purpose of this test is to verify that inclusion of the "user-user" information element in either of the down link messages, SETUP or DISCONNECT causes no adverse effects on the operation of the UE.

### 10.3.4 Method of test

#### Related ICS/IXIT statement(s)

- Supported MT circuit-switched basic services.
- Support of user-user information element, and details of suitable codings.

#### Initial conditions:

##### System Simulator:

- The SS simulates 1 cell, with default parameters.

##### User Equipment:

- The UE is in MM-state "idle updated", with a valid TMSI and CKSN.

#### Test procedure

The SS attempts to set up a mobile terminated call, with one of the supported circuit-switched basic services which has been arbitrarily chosen, the generic call set up procedures for mobile terminating circuit-switched calls, (either speech or data) as specified in TS 34.108 clause 7. The default SETUP message contents are modified to include the user-user Information Element. The UE shall not respond adversely to the inclusion of the user-user information element.

After 30 s the SS sends a DISCONNECT message, again the UE shall not respond adversely to the inclusion of the user-user information element, but shall continue to clear down the call normally.

#### Expected sequence

| 7    |           | -> | RRC CONNECTION RELEASE COMPLETE |                                                                                                                                                                                                                        |

#### Specific message contents:

SETUP message contains user-user IE with the string coded in IA5 characters: for example "Call Setup".

DISCONNECT message contains user-user IE with the string coded in IA5 characters: for example "Call Disconnect". (The codings above are for example only. For the case of an UE which supports "user-user" signalling it may be necessary to add meaning to the data fields, see ICS/IXIT statement(s).)

NOTE:—The codings above are for example only. For the case of an UE which supports "user-user" signalling it may be necessary to add meaning to the data fields, see ICS/IXIT statement(s).

### ~~10.3.5 Test requirements~~

~~The inclusion of the "user-user" information element in downlink call control messages shall cause no adverse effects on the operation of the UE.~~

## 11 Session Management Procedures

### 11.1 PDP context activation

#### 11.1.1 Initiated by the UE

##### 11.1.1.1 Attach initiated by context activation/QoS Offered by Network is the QoS Requested

###### 11.1.1.1.1 Definition

###### 11.1.1.1.2 Conformance requirement

PDP context activation shall initiate PS Attach by the UE to establish a GMM context, when the UE is PS Detached.

In order to request a PDP context activation, the UE sends an ACTIVATE PDP CONTEXT REQUEST message to the network, enters the state PDP ACTIVE-PENDING and starts timer T3380. The message contains the selected NSAPI, PDP type, requested QoS and, if the UE requests a static address, the PDP address.

If the QoS offered by the network is the same as the QoS requested by the UE, then upon receipt of the message ACTIVATE PDP CONTEXT ACCEPT the UE shall stop timer T3380.

In GSM, the MS shall initiate establishment of the logical link for the LLC SAPI indicated by the network with the offered QoS and selected radio priority level if no logical link has been already established for that SAPI.

In UMTS, both the network and the MS shall store the LLC SAPI and the radio priority in the PDP context.

A UE, which is capable of operating in both GSM and UMTS, shall use a valid LLC SAPI, while a UE which is capable of operating only in UMTS shall indicate the LLC SAPI value as "LLC SAPI not assigned" in order to avoid unnecessary value range checking and any other possible confusion in the network.

NOTE:—The radio priority level and the LLC SAPI parameters, though not used in UMTS, shall be included in the messages, in order to support handover between UMTS and GSM networks.

#### Reference

3GPP TS 24.008 clauses 6.1.3.1 and 6.1.3.1.1.

###### 11.1.1.1.3 Test purpose

To check that the UE initiates a PS attach, if one is not already active, when PDP context activation is requested.

To test the behaviour of the UE when SS responds to the PDP context activation request with the requested QoS.

###### 11.1.1.1.4 Method of test

#### Initial conditions

System Simulator:

—1 cell, default parameters.

User Equipment:

—The UE is in GMM state "GMM-DEREGISTERED, normal service" with valid P-TMSI and CKSN.

### Related ICS/IXIT statements

- PS Supported ————— yes/no
- Auto Attach supported ————— yes / no
- Method of context activation

### Test procedure

If the UE is attached, then the Detach Request is originated from the UE indicating "GPRS detach without switching off". The SS responds with a Detach Accept after completing the security mode procedures. A PDP context activation is then requested by the user. The PS attach (ATTACH REQUEST) is then indirectly caused by a requested PDP context activation. The SS returns the ATTACH ACCEPT message to the UE. Now session management can proceed with PDP context activation.

On receipt of the ACTIVATE PDP CONTEXT REQUEST message an ACTIVATE PDP CONTEXT ACCEPT is returned by the SS with the same requested QoS. The contents of the ACTIVATE PDP CONTEXT REQUEST message shall then be checked. The SS then waits for T3380 seconds to ensure T3380 has been stopped and no more ACTIVATE PDP CONTEXT REQUEST messages are sent by the UE. The SS then sends a MODIFY PDP CONTEXT REQUEST message to which the UE shall reply with a MODIFY PDP CONTEXT ACCEPT message to ensure the context has been set up.

### Expected sequence

#### 11.1.1.2.1.5 Test requirements

To pass the test UE shall:

- when the SS responds to a PDP context activation request, initiated by the UE, with the QoS lower than the requested but higher than or equal to the minimum, the UE shall complete the PDP context activation procedure.
- to see if the PDP context activation was successful, SS shall request PDP context modification and UE shall accept it.

#### 11.1.1.2.2 QoS rejected by UE

##### 11.1.1.2.2.1 Definition

##### 11.1.1.2.2.2 Conformance requirement

In order to request a PDP context activation, the UE sends an ACTIVATE PDP CONTEXT REQUEST message to the network.

Upon receipt of the message ACTIVATE PDP CONTEXT ACCEPT offering a QoS which is not acceptable to the UE, the UE shall initiate the PDP context deactivation procedure.

### Reference

3GPP TS 24.008 clause 6.1.3.1.1.

#### 11.1.1.2.2.3 Test purpose

To test the behaviour of the UE when the QoS offered by SS in response to a PDP context activation request is not acceptable to the UE.

#### 11.1.1.2.2.4 Method of test

##### Initial conditions

System Simulator:

— 1 cell, default parameters.

User Equipment:

— The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

##### Related ICS/IXIT statements

— PS Supported ————— yes/no

— User setting of Minimum QoS supported — yes/no

— Method of setting minimum QoS

— Method of context activation

##### Test procedure

The requested QoS and Minimum QoS are set. A PDP context activation is requested by the user. On receipt of the ACTIVATE PDP CONTEXT REQUEST message an ACTIVATE PDP CONTEXT ACCEPT message is returned by the SS with a QoS lower than the minimum. The UE shall then send a DEACTIVATE PDP CONTEXT REQUEST message. A DEACTIVATE PDP CONTEXT ACCEPT message will be sent in return by the SS.

##### Expected sequence

| Step | Direction |    | Message                        | Comments                            |
|------|-----------|----|--------------------------------|-------------------------------------|
|      | UE        | SS |                                |                                     |
| 1    |           | UE |                                | Initiate a context activation       |
| 2    | →         |    | ACTIVATE PDP CONTEXT REQUEST   | Request a PDP context activation    |
| 3    | ←         |    | ACTIVATE PDP CONTEXT ACCEPT    | Accept the PDP context activation   |
| 4    | →         |    | DEACTIVATE PDP CONTEXT REQUEST | Deactivate the PDP context          |
| 5    | ←         |    | DEACTIVATE PDP CONTEXT ACCEPT  | Accept the PDP context deactivation |

##### Specific message contents

None.

#### 11.1.1.2.2.5 Test requirements

The UE shall reject the QoS offered by the SS in response to a PDP context activation request, if the QoS is not acceptable to the UE.

### 11.1.2 PDP context activation requested by the network, successful and unsuccessful

#### 11.1.2.1 Definition

This test needs to take into account the number of active PDP contexts supported simultaneously by the UE, to be able to test the response when all contexts are activated and the network tries to initiate a new context.

### 11.1.2.2 ~~Conformance requirement~~

1) ~~Upon receipt of a REQUEST PDP CONTEXT ACTIVATION message:~~

- ~~• If the UE accepts the request the UE shall then initiate the PDP context activation procedure.~~
- ~~• If the UE rejects the request, the UE shall send a REQUEST PDP CONTEXT ACTIVATION REJECT message with one of the following causes:~~

~~#26: insufficient resources;~~

~~#31: activation rejected, unspecified;~~

~~#40: feature not supported; or~~

~~#95 — 111: protocol errors.~~

2) ~~The UE shall not ignore the request.~~

3) ~~If the UE accepts the request, the ACTIVATE PDP CONTEXT REQUEST message sent by the UE shall contain the parameters requested by the network in the REQUEST PDP CONTEXT ACTIVATION message, except for the offered QoS which may be changed by the UE.~~

4) ~~Whenever a REQUEST PDP CONTEXT ACTIVATION message is received by the UE specifying a transaction identifier relating to a PDP context not in state PDP-INACTIVE, the UE shall locally deactivate the old PDP context relating to the received transaction identifier. Furthermore, the UE shall continue with the activation procedure of a new PDP context as indicated in the received message.~~

### Reference

3GPP TS 24.008 clauses 6.1.3.1.2, 6.1.3.1.4 and 8.3.2.f).

3GPP TS 27.060 clause 7.3.3.

### 11.1.2.3 ~~Test purpose~~

~~To test the behaviour of the UE upon receipt of a context activation request from the SS.~~

### 11.1.2.4 ~~Method of test~~

#### Initial conditions

System Simulator:

~~— 1 cell, default parameters.~~

User Equipment:

~~— The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.~~

#### Related ICS/IXIT statements

~~— PS Supported ————— yes/no~~

~~— Network requested PDP context activation supported — yes/no~~

~~— Number of network initiated PDP contexts supported~~

### Case 1

~~For a UE that supports PDP context activation requested by the network.~~

### Test procedure

A REQUEST PDP CONTEXT ACTIVATION message is sent by the SS. On receipt of the ACTIVATE PDP CONTEXT REQUEST message an ACTIVATE PDP CONTEXT ACCEPT message is returned by the SS. This is repeated until the maximum number of contexts supported by the UE is activated.

If all 256 PDP contexts are supported by the UE (extended TI mechanism in SM allows 256 PDP contexts), skip to step 7, request PDP context activation for an existing PDP context.

If maximum number of PDP contexts supported by the UE is less than 256, one more context should be requested by the SS. In response to this activation request the UE shall return a REQUEST PDP CONTEXT ACTIVATION REJECT message with cause set to 'insufficient resources', 'activation rejected, unspecified' or 'protocol errors' using cause values #26, #31, #40 or #95-111.

REQUEST PDP CONTEXT ACTIVATION message is then sent by the SS using currently activated context transaction identifier. The UE shall activate this context in place of the previous context.

### Expected sequence

| Step | Direction |    | Message                               | Comments                                                                                                                                                                             |

| 4    |           | SS |                                       | Steps 1-3 are repeated for the number of Network Initiated contexts supported.<br>NOTE: If all 256 contexts are supported steps 5 and 6 should not be performed.                     |
| 5    | ←         |    | REQUEST PDP CONTEXT ACTIVATION        | SS requests a PDP context activation                                                                                                                                                 |
| 6    | →         |    | REQUEST PDP CONTEXT ACTIVATION REJECT | The context activation request is rejected with cause 'insufficient resources', 'activation rejected, unspecified' or 'protocol errors' using cause values #26, #31, #40 or #95-111. |
| 7    |           | ←  | REQUEST PDP CONTEXT ACTIVATION        | SS requests a PDP context activation for an existing context with TI the same as one of the active PDP contexts                                                                      |
| 8    |           | UE |                                       | UE locally deactivates the old PDP context with the same TI value                                                                                                                    |
| 9    | →         |    | ACTIVATE PDP CONTEXT REQUEST          | UE continues with the activation of a new PDP context to replace deactivated context                                                                                                 |
| 10   |           | ←  | ACTIVATE PDP CONTEXT ACCEPT           | SS accepts the PDP context activation                                                                                                                                                |

### Case 2

For an UE that does not support PDP context activation requested by the network.

### Test procedure

A REQUEST PDP CONTEXT ACTIVATION message is sent by the SS. The UE shall then send a REQUEST PDP CONTEXT ACTIVATION REJECT message.

## Expected sequence

| Step | Direction |    | Message                               | Comments                                                                                                                                                                                                       |
|------|-----------|----|---------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                       |                                                                                                                                                                                                                |
| 1    |           | ←  | REQUEST PDP CONTEXT ACTIVATION        | Request a PDP context activation                                                                                                                                                                               |
| 2    |           | →  | REQUEST PDP CONTEXT ACTIVATION REJECT | Reject the PDP context activation request with cause 'insufficient resources' or 'feature not supported', 'activation rejected, unspecified' or 'protocol errors' using cause values #26, #31, #40 or #95-111. |

## Specific message contents

In Case 1 step 7, TI IE value is equal to the TI value of one of the active PDP contexts, Offered PDP address IE value and/or Access point name IE value are (is) different from the corresponding IE value(s) in the existing PDP context.

## 11.1.2.5 Test requirements

The UE that is configured to support one or more PDP contexts simultaneously shall:

- accept PDP context activation initiated by the SS if number of active contexts is lower than the maximum.
- locally deactivate the old PDP context when a REQUEST PDP CONTEXT ACTIVATION message is received, specifying a transaction identifier relating to an active PDP context and continue with the activation procedure of a new PDP context as indicated in the received message.

The UE that does not support PDP Context Activation (a number of active contexts supported by the UE is equal to maximum or UE does not support PDP context) shall reject PDP context activation initiated by the SS.

## 11.1.3 Abnormal Cases

## 11.1.3.1 T3380 Expiry

## 11.1.3.1.1 Definition

## 11.1.3.1.2 Conformance requirement

- 1) On the first expiry of the timer T3380, the UE shall re-send the PDP CONTEXT ACTIVATION REQUEST.
- 2) On the second expiry of the timer T3380, the UE shall re-send the PDP CONTEXT ACTIVATION REQUEST.
- 3) On the third expiry of the timer T3380, the UE shall re-send the PDP CONTEXT ACTIVATION REQUEST.
- 4) On the fourth expiry of the timer T3380, the UE shall re-send the PDP CONTEXT ACTIVATION REQUEST.
- 5) On the fifth expiry of the timer T3380, the UE shall release all resources possibly allocated for this invocation and shall abort the procedure; no automatic PDP context activation re-attempt shall be performed.

## Reference

3GPP TS 24.008 clause 6.1.3.1.5 a).

## 11.1.3.1.3 Test purpose

To test the behaviour of the UE when the SS does not reply to PDP CONTEXT ACTIVATION REQUEST.

#### 11.1.3.1.4 Method of test

##### Initial conditions

System Simulator:

— 1 cell, default parameters.

User Equipment:

— The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

##### Related ICS/IXIT statements

— PS Supported — yes/no

— Method of activating a context

##### Test procedure

A PDP context activation is requested by the user. The UE shall send the ACTIVATE PDP CONTEXT REQUEST message five times with T3380 seconds between each message. After this, no further ACTIVATE PDP CONTEXT REQUEST messages shall be sent by the UE.

##### Expected sequence

| Step | Direction |    | Message                      | Comments                                                                                             |
|------|-----------|----|------------------------------|------------------------------------------------------------------------------------------------------|

| 4    | →         |    | ACTIVATE PDP CONTEXT REQUEST | Request a PDP context activation                                                                     |
| 5    |           | SS |                              | T3380 seconds                                                                                        |
| 6    | →         |    | ACTIVATE PDP CONTEXT REQUEST | Request a PDP context activation                                                                     |
| 7    |           | SS |                              | T3380 seconds                                                                                        |
| 8    | →         |    | ACTIVATE PDP CONTEXT REQUEST | Request a PDP context activation                                                                     |
| 9    |           | SS |                              | T3380 seconds                                                                                        |
| 10   | →         |    | ACTIVATE PDP CONTEXT REQUEST | Request a PDP context activation                                                                     |
| 11   |           | SS |                              | Wait for T3380 seconds to ensure no further ACTIVATE PDP CONTEXT REQUEST messages are sent by the UE |

##### Specific message contents

None.

#### 11.1.3.1.5 Test requirements

UE shall re-send the ACTIVATE PDP CONTEXT REQUEST to SS five times in order to initiate PDP context, with expiry of timer T3380 between messages. After fifth try, UE shall send no more ACTIVATE PDP CONTEXT REQUEST to SS.

### ~~11.1.3.2 Collision of UE initiated and network requested PDP context activation~~

#### ~~11.1.3.2.1 Definition~~

~~This test needs to take into account the number of PDP contexts supported by the UE, to be able to test the response when the network tries to initiate a new context.~~

#### ~~11.1.3.2.2 Conformance requirement~~

~~A collision of a UE initiated and a network requested PDP context activation procedure is identified by the UE if a REQUEST PDP CONTEXT ACTIVATION message is received from the network after the UE has sent an ACTIVATE PDP CONTEXT REQUEST message, and the UE has not yet received an ACTIVATE PDP CONTEXT ACCEPT or ACTIVATE PDP CONTEXT REJECT message.~~

~~NOTE: In general, the UE is unable to test if the PDP type, PDP address and APN in the REQUEST PDP CONTEXT ACTIVATION message are the same as those for the PDN to which it is attempting to activate a context. This is because the UE may have omitted one or more of the parameters in the ACTIVATE PDP CONTEXT REQUEST message, since it is relying on default values to be provided by the network.~~

~~In the case of such a collision, the UE initiated PDP context activation shall take precedence over the network requested PDP context activation. If the UE is able to compare the PDP type, PDP address and APN requested in the ACTIVATE PDP CONTEXT REQUEST message with those requested in the REQUEST PDP CONTEXT ACTIVATION message and these parameters are equal, then the UE shall discard the REQUEST PDP CONTEXT ACTIVATION message and shall wait for the network response to its ACTIVATE PDP CONTEXT REQUEST message. If the UE is not able to compare the PDP type, PDP address, and APN requested in the ACTIVATE PDP CONTEXT REQUEST message with those requested in the REQUEST PDP CONTEXT ACTIVATION message, then the UE shall send a REQUEST PDP CONTEXT ACTIVATION REJECT message with the cause 'insufficient resources' to the network, and wait for an ACTIVATE PDP CONTEXT ACCEPT message.~~

#### Reference

3GPP TS 24.008 clause 6.1.3.1.5 b), case: Static PDP address collision detected within the UE.

#### ~~11.1.3.2.3 Test purpose~~

~~To test the behaviour of the UE when there is a collision between an UE initiated and network requested PDP context activation detected by the UE.~~

#### ~~11.1.3.2.4 Method of test~~

##### Initial conditions

System Simulator:

— 1 cell, default parameters.

User Equipment:

— The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

##### Related ICS/IXIT statements

— PS Supported ————— yes/no

— Network requested PDP context activation supported — yes/no

— Method of PDP context activation

## Case 1

For an UE that supports PDP context activation requested by the network.

### Test procedure

A PDP context activation is requested by the user with a static PDP address. After receipt of the ACTIVATE PDP CONTEXT REQUEST message the SS sends a REQUEST PDP CONTEXT ACTIVATION message followed by an ACTIVATE PDP CONTEXT ACCEPT message in a time less than T3380 (Use T3380/2). The UE shall send no messages within this time.

### Expected sequence

| Step | Direction |    | Message                        | Comments                                                                            |
|------|-----------|----|--------------------------------|-------------------------------------------------------------------------------------|
|      | UE        | SS |                                |                                                                                     |
| 1    | UE        |    |                                | Initiate a context activation                                                       |
| 2    | →         |    | ACTIVATE PDP CONTEXT REQUEST   | Request a PDP context activation (with static PDP address)                          |
| 3    | ←         |    | REQUEST PDP CONTEXT ACTIVATION | Request a PDP context activation request                                            |
| 4    |           | SS |                                | Wait for T3380/2 seconds to ensure UE does not re-send ACTIVATE PDP CONTEXT REQUEST |
| 5    | ←         |    | ACTIVATE PDP CONTEXT ACCEPT    | Accept the PDP context activation                                                   |

## Case 2

For a UE that does not support PDP context activation requested by the network.

### Test procedure

A PDP context activation is requested by the user. After receipt of the ACTIVATE PDP CONTEXT REQUEST message the SS sends a REQUEST PDP CONTEXT ACTIVATION message. The UE shall send a REQUEST PDP CONTEXT ACTIVATION REJECT message with cause set to 'insufficient resources'. The SS then sends an ACTIVATE PDP CONTEXT ACCEPT.

### Expected sequence

| Step | Direction |    | Message                               | Comments                               |
|------|-----------|----|---------------------------------------|----------------------------------------|
|      | UE        | SS |                                       |                                        |
| 1    | UE        |    |                                       | Initiate a context activation          |
| 2    | →         |    | ACTIVATE PDP CONTEXT REQUEST          | Request a PDP context activation       |
| 3    | ←         |    | REQUEST PDP CONTEXT ACTIVATION        | Request a PDP context activation       |
| 4    | →         |    | REQUEST PDP CONTEXT ACTIVATION REJECT | Cause set to 'insufficient resources'. |
| 5    | ←         |    | ACTIVATE PDP CONTEXT ACCEPT           | Accept the PDP context activation      |

### Specific message contents

For Case 1 and Case 2:

Step 2: ACTIVATE PDP CONTEXT REQUEST message contains PDP address and APN IEs.

Step 3: REQUEST PDPD CONTEXT ACTIVATION message contains the same PDP address and APN values as in Step 2.

### ~~11.1.3.2.5 Test requirements~~

~~In the case of such collision,~~

- ~~— UE that supports PDP context activation requested by the network shall discard the REQUEST PDP CONTEXT ACTIVATION message from SS and wait for an ACTIVATE PDP CONTEXT ACCEPT message.~~
- ~~— UE that does not support PDP context activation requested by the network shall reject PDP context activation initiated by the SS.~~

### ~~11.1.3.3 Network initiated PDP context activation request for an already activated PDP context (on the UE side)~~

#### ~~11.1.3.3.1 Definition~~

#### ~~11.1.3.3.2 Conformance requirement~~

~~If the UE receives a REQUEST PDP CONTEXT ACTIVATION message with the same combination of APN, PDP type and PDP address as an already activated PDP context, the UE shall deactivate the existing PDP context and, if any, all the linked PDP contexts (matching the combination of APN, PDP type and PDP address) locally without notification to the network and proceed with the requested PDP context activation.~~

#### ~~Reference~~

~~3GPP TS 24.008 clause 6.1.3.1.5 d).~~

#### ~~11.1.3.3.3 Test purpose~~

~~To test the behaviour of the UE when it detects a network initiated PDP context activation for the PDP context already activated on the UE side.~~

#### ~~11.1.3.3.4 Method of test~~

#### ~~Initial conditions~~

~~System Simulator:~~

- ~~— 1 cell, default parameters.~~

~~User Equipment:~~

- ~~— The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.~~

#### ~~Related ICS/IXIT statements~~

~~PS Supported ————— yes/no~~

~~Method of PDP context activation~~

#### ~~Test procedure~~

~~A PDP context activation is requested by the user. SS accepts PDP context activation. Secondary PDP context activation is requested by the user. SS accepts secondary PDP context activation. SS sends a REQUEST PDP CONTEXT ACTIVATION message with the same combination of APN, PDP type and PDP address as an already activated PDP context. The UE deactivates the existing PDP context and linked secondary PDP context (matching the combination of APN, PDP type and PDP address) locally without notification to the SS and proceeds with the requested PDP context activation.~~

| 10   | ←         |    | ACTIVATE PDP CONTEXT ACCEPT            | SS accepts the PDP context activation                                                                                        |

## Specific message contents

None.

## 11.1.3.3.5—Test requirements

When inconsistency of PDP context between the UE and network is detected by the UE, then local synchronisation procedure shall be initiated in the UE. The PDP context and all (if any) linked contexts are implicitly deactivated and the new request shall be proceeded.

## 11.1.4—Secondary PDP context activation procedures

## 11.1.4.1—Successful Secondary PDP Context Activation Procedure Initiated by the UE

## 11.1.4.1.1—QoS Offered by Network is the QoS Requested

## 11.1.4.1.1.1—Definition

## 11.1.4.1.1.2—Conformance requirement

In order to request a secondary PDP context activation with the same PDP address and APN as an already active PDP context, the UE shall send an ACTIVATE SECONDARY PDP CONTEXT REQUEST message to the network, enter the state PDP ACTIVE-PENDING and start timer T3380. The message contains the selected NSAPI, a QoS profile, a requested LLC SAPI and the linked TI.

If the QoS offered by the network is the same as the QoS requested by the UE, then upon receipt of the message ACTIVATE SECONDARY PDP CONTEXT ACCEPT, the UE shall stop timer T3380.

In GSM the UE shall initiate establishment of the logical link for the LLC SAPI indicated by the network, with the offered QoS and selected radio priority level, if no logical link has been already established for that SAPI.

Although not used in UMTS, LLC SAPI shall be included in the messages, in order to support handover between UMTS and GSM networks.

## Reference

3GPP TS 24.008 clauses 6.1.3.2 and 6.1.3.2.1.

## 11.1.4.1.1.3 ——— Test purpose

To test the behaviour of the UE when SS responds to a Secondary PDP context activation request with the requested QoS.

## 11.1.4.1.1.4 ——— Method of test

## Initial conditions

System Simulator:

—— 1 cell, default parameters.

User Equipment:

—— The UE and is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

## Related ICS/IXIT statements

—— PS Supported ——— yes/no

—— Method of context activation

## Test procedure

A PDP context activation is requested by the user and accepted by the SS. Secondary PDP context activation is requested by the user. On receipt of the ACTIVATE SECONDARY PDP CONTEXT REQUEST message an ACTIVATE SECONDARY PDP CONTEXT ACCEPT is returned by the SS with the same requested QoS. The SS then waits for T3380 seconds to ensure T3380 has been stopped and no more ACTIVATE SECONDARY PDP CONTEXT REQUEST messages are sent by the UE. The SS then sends a MODIFY PDP CONTEXT REQUEST message to which the UE shall reply with a MODIFY PDP CONTEXT ACCEPT message to ensure the context has been set-up.

## Expected sequence

| Step | Direction |    | Message                                              | Comments                                                                               |

| 1    |           | UE |                                                      | Initiate a PDP context activation                                                      |
| 2    | →         |    | ACTIVATE PDP CONTEXT REQUEST                         | Activate a PDP context                                                                 |
| 3    | ←         |    | ACTIVATE PDP CONTEXT ACCEPT                          | Accept the PDP context                                                                 |
| 4    |           | UE |                                                      | Initiate a secondary PDP context activation                                            |
| 5    | →         |    | ACTIVATE SECONDARY PDP CONTEXT REQUEST               | Request a Secondary PDP context activation                                             |
| 6    | ←         |    | ACTIVATE SECONDARY PDP CONTEXT ACCEPT                | Accept the Secondary PDP context activation                                            |
| 7    |           | SS |                                                      | Wait for T3380 seconds to ensure no further activate request messages come from the UE |
| 8    | ←         |    | MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION) | SS sends a modify request to UE for the activated context                              |
| 9    | →         |    | MODIFY PDP CONTEXT ACCEPT (UE TO NETWORK DIRECTION)  | UE accepts the modification request from the network to show context is activated      |

### Specific message contents

The Linked TI information element in ~~ACTIVATE SECONDARY PDP CONTEXT REQUEST~~ message specifies the TI for the PDP context already activated. The SS can derive PDP address for the secondary PDP context from Linked TI.

#### ~~11.1.4.1.1.5~~ Test requirements

To pass the test the UE shall:

- when the SS responds to a Secondary PDP context activation request initiated by the UE, with the requested QoS, the UE shall complete the Secondary PDP context activation procedure. To check if the Secondary PDP context activation was successful, SS shall request PDP context modification and UE shall accept it.

#### ~~11.1.4.1.2~~ QoS Offered by Network is a lower QoS

##### ~~11.1.4.1.2.1~~ QoS accepted by UE

###### ~~11.1.4.1.2.1.1~~ Definition

This test can only be performed if minimum QoS can be set by the user.

###### ~~11.1.4.1.2.1.2~~ Conformance requirement

In order to request a Secondary PDP context activation with the same PDP address and APN as an already active PDP context, the UE shall send an ~~ACTIVATE SECONDARY PDP CONTEXT REQUEST~~ message to the network, enter the state ~~PDP ACTIVE-PENDING~~ and start timer T3380. If the QoS offered by the network is acceptable to UE, then upon receipt of the message ~~ACTIVATE SECONDARY PDP CONTEXT ACCEPT~~ the UE shall stop timer T3380.

In GSM the UE shall initiate establishment of the logical link for the LLC SAPI indicated by the network, with the offered QoS and selected radio priority level, if no logical link has been already established for that SAPI.

### Reference

3GPP TS 24.008 clauses 6.1.3.2 and 6.1.3.2.1.

###### ~~11.1.4.1.2.1.3~~ Test purpose

To test the behaviour of the UE when the SS responds to a Secondary PDP context activation request with a lower QoS than that requested.

###### ~~11.1.4.1.2.1.4~~ Method of test

### Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE is in GMM state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

### Related ICS/IXIT statements

- PS Supported ————— yes/no
- User setting of Minimum QoS supported — yes/no
- Method of setting minimum QoS
- Method of context activation

## Test procedure

The requested QoS and Minimum QoS are set. A PDP context activation is requested by the user and accepted by the SS. Secondary context activation is requested by the user. On receipt of the ACTIVATE SECONDARY PDP CONTEXT REQUEST message an ACTIVATE SECONDARY PDP CONTEXT ACCEPT is returned by the SS with a QoS lower than the requested but higher than or equal to the minimum. The SS then sends a MODIFY PDP CONTEXT REQUEST message and the UE shall respond with a MODIFY PDP CONTEXT ACCEPT message to confirm the context is active.

## Expected sequence

### 11.1.4.1.2.1.5 — Test requirements

To pass the test when the SS responds to a Secondary PDP context activation request, initiated by the UE, with the QoS lower than the requested but higher than or equal to the minimum, the UE shall complete the Secondary PDP context activation procedure. To see if the PDP context activation was successful, SS shall request PDP context modification and UE shall accept it.

### 11.1.4.1.2.2 — QoS rejected by UE

#### 11.1.4.1.2.2.1 — Definition

This test can only be performed if minimum QoS can be set by the user.

#### 11.1.4.1.2.2.2 — Conformance requirement

In order to request a Secondary PDP context activation with the same PDP address and APN as an already active PDP context, the UE shall send an ACTIVATE SECONDARY PDP CONTEXT REQUEST message to the network.

Upon receipt of the message ACTIVATE SECONDARY PDP CONTEXT ACCEPT offering a QoS which is not acceptable to the UE, the UE shall initiate the PDP context deactivation procedure.

## Reference

| 2    | →         |    | ACTIVATE PDP CONTEXT REQUEST           | Activate a PDP context                                                      |
| 3    |           | ←  | ACTIVATE PDP CONTEXT ACCEPT            | Accept the PDP context                                                      |
| 4    | UE        |    |                                        | Initiate a secondary PDP context activation                                 |
| 5    | →         |    | ACTIVATE SECONDARY PDP CONTEXT REQUEST | Request a Secondary PDP context activation                                  |
| 6    |           | ←  | ACTIVATE SECONDARY PDP CONTEXT ACCEPT  | Accept the Secondary PDP context activation with QoS lower than Minimum QoS |
| 7    | →         |    | DEACTIVATE PDP CONTEXT REQUEST         | Request deactivation of the secondary PDP context                           |
| 8    |           | ←  | DEACTIVATE PDP CONTEXT ACCEPT          | Accept the PDP context deactivation                                         |

~~Specific message contents~~

~~In step 3 *Negotiated QoS* IE is equal to *Requested QoS* IE in step 2 and step 5.~~

~~In step 7 SM cause IE shall have value #37: QoS not accepted.~~

Tear down indicator IE shall not be included in the DEACTIVATE PDP CONTEXT REQUEST message because only the PDP context for this specific TI shall be deactivated.

#### ~~11.1.4.1.2.2.5~~ ——— Test requirements

The UE shall reject the QoS offered by the SS in response to a Secondary PDP context activation request, if the QoS is not acceptable to the UE.

#### ~~11.1.4.1.2.3~~ ——— LLC SAPI rejected by the UE

##### ~~11.1.4.1.2.3.1~~ Definition

This test can only be performed if LLC SAPI can be set by the user.

##### ~~11.1.4.1.2.3.2~~ ——— Conformance Requirement

In order to request a PDP context activation with the same PDP address and APN as an already active PDP context, the UE shall send an ACTIVATE SECONDARY PDP CONTEXT REQUEST message to the network.

Upon receipt of an ACTIVATE SECONDARY PDP CONTEXT REQUEST, the network shall select a radio priority level based on the QoS negotiated and shall reply with an ACTIVATE SECONDARY PDP CONTEXT ACCEPT message, if the request can be accepted.

Upon receipt of the message ACTIVATE SECONDARY PDP CONTEXT ACCEPT, the UE shall stop timer T3380 and enter the state PDP-ACTIVE.

In GSM the UE shall initiate establishment of the logical link for the LLC SAPI indicated by the network if no logical link has been already established for that SAPI. If the LLC SAPI indicated by the network can not be supported by the UE, the UE shall initiate the PDP context deactivation procedure.

##### ~~11.1.4.1.2.3.3~~ ——— Test Purpose

To verify the behaviour of the UE when the network responds to the ACTIVATE SECONDARY PDP CONTEXT REQUEST message with a negotiated LLC SAPI which is not supported by the UE.

#### Reference

3GPP TS 24.008, clause 6.1.3.2.1.

#### ~~11.1.4.1.2.3.4~~ ——— Method of test

#### Initial conditions

System Simulator:

—— 1 cell, default parameters.

User Equipment:

—— The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

#### Related ICS/IXIT statements

—— PS Supported ————— yes/no

—— User setting of LLC SAPI supported ——— yes/no

—— Method of setting LLC SAPI

—— Method of context activation

### Test procedure

The requested LLC SAPI is set. This is the only LLC SAPI supported by the UE. A PDP context activation is requested by the user and accepted by the SS. A secondary PDP context activation is requested by the user. On receipt of the ACTIVATE SECONDARY PDP CONTEXT REQUEST message an ACTIVATE SECONDARY PDP CONTEXT ACCEPT message is returned by the SS with the LLC SAPI not supported by the UE. The UE shall then send a DEACTIVATE PDP CONTEXT REQUEST message for the secondary PDP context. A DEACTIVATE PDP CONTEXT ACCEPT message will be sent in return by the SS.

### Expected sequence

| Step | Direction |    | Message                                | Comments                                                                          |
|------|-----------|----|----------------------------------------|-----------------------------------------------------------------------------------|
|      | UE        | SS |                                        |                                                                                   |
| 1    | UE        |    |                                        | Initiate a PDP context activation                                                 |
| 2    | →         |    | ACTIVATE PDP CONTEXT REQUEST           | Activate a PDP context                                                            |
| 3    |           | ←  | ACTIVATE PDP CONTEXT ACCEPT            | Accept the PDP context                                                            |
| 4    | UE        |    |                                        | Initiate a secondary PDP context activation                                       |
| 5    | →         |    | ACTIVATE SECONDARY PDP CONTEXT REQUEST | Request a Secondary PDP context activation                                        |
| 6    |           | ←  | ACTIVATE SECONDARY PDP CONTEXT ACCEPT  | Accept the Secondary PDP context activation with LLC SAPI not supported by the UE |
| 7    | →         |    | DEACTIVATE PDP CONTEXT REQUEST         | Request deactivation of all PDP contexts                                          |
| 8    |           | ←  | DEACTIVATE PDP CONTEXT ACCEPT          | Accept the PDP context deactivation                                               |

### Specific message contents

In step 3 *Negotiated LLC SAPI* IE is equal to *Requested LLC SAPI* IE in step 2 and step 5.

In step 7 SM cause IE shall have value #25: LLC or SNDCP failure. Also, *Tear down indicator* IE shall be included in the DEACTIVATE PDP CONTEXT REQUEST message to deactivate all PDP contexts for this PDP address.

## 11.1.4.2 Unsuccessful Secondary PDP Context Activation Procedure Initiated by the UE

### 11.1.4.2.1 Definition

### 11.1.4.2.2 Conformance requirement

Upon receipt of an ACTIVATE SECONDARY PDP CONTEXT REQUEST message, the network may reject the UE initiated PDP context activation by sending an ACTIVATE SECONDARY PDP CONTEXT REJECT message to the UE. Upon receipt of an ACTIVATE SECONDARY PDP CONTEXT REJECT message, the UE shall stop timer T3380 and enter the state PDP-INACTIVE.

### Reference

3GPP TS 24.008 clauses 6.1.3.2 and 6.1.3.2.2.

### 11.1.4.2.3 Test purpose

To test the behaviour of the UE when network rejects the UE initiated Secondary PDP context activation.

#### 11.1.4.2.4 Method of test

##### Initial conditions

System Simulator:

— 1 cell, default parameters.

User Equipment:

— The UE and is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

##### Related ICS/IXIT statements

— PS Supported ————— yes/no

— Method of context activation

##### Test procedure

A PDP context activation is requested by the user and accepted by the SS. Secondary context activation is requested by the user. On receipt of the ACTIVATE SECONDARY PDP CONTEXT REQUEST message from the UE, an ACTIVATE SECONDARY PDP CONTEXT REJECT with cause #43 'unknown PDP context' is returned by the SS. SS shall wait for T3380 seconds to ensure that the UE sends no more ACTIVATE SECONDARY PDP CONTEXT REQUEST messages.

##### Expected sequence

| Step | Direction |    | Message                                | Comments                                                                               |
|------|-----------|----|----------------------------------------|----------------------------------------------------------------------------------------|
|      | UE        | SS |                                        |                                                                                        |
| 1    |           | UE |                                        | Initiate a PDP context activation                                                      |
| 2    | →         |    | ACTIVATE PDP CONTEXT REQUEST           | Activate a PDP context                                                                 |
| 3    | ←         |    | ACTIVATE PDP CONTEXT ACCEPT            | Accept the PDP context                                                                 |
| 4    |           | UE |                                        | Initiate a secondary PDP context activation                                            |
| 5    | →         |    | ACTIVATE SECONDARY PDP CONTEXT REQUEST | Request a Secondary PDP context activation                                             |
| 6    | ←         |    | ACTIVATE SECONDARY PDP CONTEXT REJECT  | SS rejects the Secondary PDP context activation with cause '#43: unknown PDP context'  |
| 7    |           | SS |                                        | Wait for T3380 seconds to ensure no further activate request messages come from the UE |

##### Specific message contents

Step 5. The *Linked TI* information element specifies the TI which is different from the TI in the PDP context activated in steps 1-3.

#### 11.1.4.2.5 Test requirements

After a secondary PDP context activation being rejected by the network, the UE shall not re-send the ACTIVATE SECONDARY PDP CONTEXT REQUEST message.

### ~~11.1.4.3 Abnormal cases~~

#### ~~11.1.4.3.1 T3380 Expiry~~

##### ~~11.1.4.3.1.1 Definition~~

##### ~~11.1.4.3.1.2 Conformance requirement~~

- ~~1) On the first expiry of the timer T3380, the UE shall re-send the ACTIVATE SECONDARY PDP CONTEXT REQUEST.~~
- ~~2) On the second expiry of the timer T3380, the UE shall re-send the ACTIVATE SECONDARY PDP CONTEXT REQUEST.~~
- ~~3) On the third expiry of the timer T3380, the UE shall re-send the ACTIVATE SECONDARY PDP CONTEXT REQUEST.~~
- ~~4) On the fourth expiry of the timer T3380, the UE shall re-send the ACTIVATE SECONDARY PDP CONTEXT REQUEST.~~
- ~~5) On the fifth expiry of the timer T3380, the UE shall release all resources possibly allocated for this invocation and shall abort the procedure; automatic secondary PDP context activation re-attempt shall be performed.~~

### Reference

3GPP TS 24.008 clause 6.1.3.2.3 a).

#### ~~11.1.4.3.1.3 Test purpose~~

To test the behaviour of the UE when the SS does not reply to ACTIVATE SECONDARY PDP CONTEXT REQUEST message.

#### ~~11.1.4.3.1.4 Method of test~~

### Initial conditions

System Simulator:

— 1 cell, default parameters.

User Equipment:

— The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

### Related ICS/IXIT statements

— PS Supported ————— yes/no

— Method of activating a context

### Test procedure

A PDP context is activated by the user and accepted by the SS. Secondary PDP context activation is requested by the user. The UE shall send ACTIVATE SECONDARY PDP CONTEXT REQUEST message five times with T3380 seconds between each message. After this, no further ACTIVATE SECONDARY PDP CONTEXT REQUEST messages shall be sent by the UE.

## Expected sequence

| 14   | SS        |    |                                        | Wait for T3380 seconds to ensure no further ACTIVATE SECONDARY PDP CONTEXT REQUEST messages are sent by the UE |

## Specific message contents

None.

## 11.1.4.3.1.5 Test requirements

UE shall re-send the ACTIVATE SECONDARY PDP CONTEXT REQUEST to SS five times in order to initiate a Secondary PDP context, with expiry of timer T3380 between messages. After fifth try, UE shall send no more ACTIVATE SECONDARY PDP CONTEXT REQUEST messages to SS.

## 11.2 PDP context modification procedure

## 11.2.1 Network initiated PDP context modification

## 11.2.1.1 Definition

This test can only be performed if minimum QoS can be set by the user.

## 11.2.1.2 Conformance requirement

1) Upon receipt of a MODIFY PDP CONTEXT REQUEST message

- If the UE can accept the modification requested, the UE shall reply with the MODIFY PDP CONTEXT ACCEPT message.
- If the UE is unable to accept the modification requested, the UE shall initiate the PDP context deactivation procedure for the NSAPI that has been indicated in the message MODIFY PDP CONTEXT REQUEST—the reject cause IE value of the DEACTIVATE PDP CONTEXT REQUEST message shall indicate "QoS not accepted".

2) The UE shall either accept the modification request or deactivate the PDP context, it shall not ignore the modification request.

## Reference

3GPP TS 24.008 clauses 6.1.3.3 and 6.1.3.3.1.

### 11.2.1.3 Test purpose

To test the behaviour of the UE upon receipt of a MODIFY PDP CONTEXT REQUEST message from SS.

### 11.2.1.4 Method of test

#### Initial conditions

System Simulator:

— 1 cell, default parameters.

User Equipment:

— The UE is in GMM state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

#### Related ICS/IXIT statements

— PS Supported — yes/no

— User setting of Minimum QoS supported — yes/no

— Method of setting minimum QoS

— Method of activating a PDP context

#### Test procedure

A PDP context is activated by the user and accepted by the SS. A MODIFY PDP CONTEXT REQUEST message is then sent to the UE with a QoS that is acceptable to the UE (higher than or equal to the minimum QoS set in the UE). The UE shall send a MODIFY PDP CONTEXT ACCEPT message in return. A MODIFY PDP CONTEXT REQUEST message is then sent to the UE with a QoS that is not acceptable to the UE (lower than the minimum QoS set in the UE). The UE shall send a DEACTIVATE PDP CONTEXT REQUEST message in return.

#### Expected sequence

| Step | Direction |    | Message                                              | Comments                                                                                                  |

## Specific message contents

None.

### 11.2.1.5 Test requirements

The UE shall:

- Accept PDP context modification initiated by the SS if QoS is higher than or equal to the minimum QoS set in the UE;
- Reject PDP context modification initiated by the SS if QoS is lower than the minimum QoS set in the UE.

## 11.2.2 UE initiated PDP context modification

### 11.2.2.1 UE initiated PDP Context Modification accepted by network

#### 11.2.2.1.1 Definition

This test can only be performed if minimum QoS can be set by the user.

#### 11.2.2.1.2 Conformance requirement

In order to initiate the procedure, the UE sends the MODIFY PDP CONTEXT REQUEST message to the network, enters the state PDP-MODIFY-PENDING and starts timer T3381. The message may contain the requested new QoS and/or the TFT and the requested LLC SAPI (used in GSM).

Upon receipt of the MODIFY PDP CONTEXT REQUEST message, the network may reply with the MODIFY PDP CONTEXT ACCEPT message in order to accept the context modification. The reply message may contain the negotiated QoS and the radio priority level based on the new QoS profile and the negotiated LLC SAPI, that shall be used in GSM by the logical link.

Upon receipt of the MODIFY PDP CONTEXT ACCEPT message, the UE shall stop the timer T3381. If the offered QoS parameters received from the network differs from the QoS requested by the UE, the UE shall either accept the negotiated QoS or initiate the PDP context deactivation procedure.

## Reference

3GPP TS 24.008 clauses 6.1.3.3 and 6.1.3.3.2.

#### 11.2.2.1.3 Test purpose

To test the behaviour of the UE upon receipt of a MODIFY PDP CONTEXT ACCEPT message from the network with

- Requested QoS;
- QoS higher than or equal to the minimum QoS set in the UE;
- QoS lower than the minimum QoS set in the UE.

#### 11.2.2.1.4 Method of test

## Initial conditions

System Simulator:

- 1 cell, default parameters.

User Equipment:

- The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

### Related ICS/IXIT statements

- PS Supported—yes/no
- User setting of Minimum QoS supported—yes/no
- Method of setting minimum QoS
- Method of activating a PDP context

### Test procedure

A PDP context is activated by the user and accepted by the SS. The UE initiates a PDP context modification by sending a MODIFY PDP CONTEXT REQUEST message with new QoS. The SS accepts the context modification and replies with the MODIFY PDP CONTEXT ACCEPT message with the QoS requested.

The UE initiates new PDP context modification with higher QoS. The SS is unable to provide requested QoS, so it replies by sending MODIFY PDP CONTEXT ACCEPT message with new QoS that is lower than requested but still acceptable to the UE (higher than or equal to the minimum QoS set in the UE).

The UE initiates new PDP context modification with new QoS. The SS is unable to provide requested QoS, so it replies by sending MODIFY PDP CONTEXT ACCEPT message with QoS that is not acceptable to the UE (lower than the minimum QoS set in the UE). The UE shall send a DEACTIVATE PDP CONTEXT REQUEST message in return and SS shall respond with a DEACTIVATE PDP CONTEXT ACCEPT message.

—Method of activating a PDP context

### Test procedure

A PDP context is activated by the user and accepted by the SS. The UE initiates a PDP context modification by sending a MODIFY PDP CONTEXT REQUEST message. The SS rejects the context modification and replies with the MODIFY PDP CONTEXT REJECT with cause set to # 26: insufficient resources.

### Expected sequence

### Specific message contents

None.

### 11.2.2.2.5 — Test requirements

After receiving MODIFY PDP CONTEXT REJECT message from the network, UE shall not resend PDP context modification request.

## 11.2.3 — Abnormal cases

### 11.2.3.1 — T3381 Expiry

#### 11.2.3.1.1 — Definition

#### 11.2.3.1.2 — Conformance requirement

On the first expiry of timer T3381, the UE shall re-send the MODIFY PDP CONTEXT REQUEST message, reset and restart timer T3381. This retransmission is repeated four times, i.e. on the fifth expiry of timer T3381, the MS may UE continue to use the previously negotiated QoS or it may initiate the PDP context deactivation procedure.

### Reference

3GPP TS 24.008 clause 6.1.3.3.4 a) case: In the UE.

### Test purpose

To test the behaviour of the UE when network does not reply to MODIFY PDP CONTEXT REQUEST message.

#### 11.2.3.1.4 Method of test

##### Initial conditions

System Simulator:

— 1 cell, default parameters.

User Equipment:

— The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

##### Related ICS/IXIT statements

— PS Supported ————— yes/no

— Method of activating a PDP context

##### Test procedure

A PDP context activation is requested by the user and accepted by the SS. The UE shall send MODIFY PDP CONTEXT REQUEST (UE TO NETWORK DIRECTION) message five times with T3381 seconds between each message. After this no further MODIFY PDP CONTEXT REQUEST (UE TO NETWORK DIRECTION) messages shall be sent by the UE.

|      | UE        | SS |                                                      |                                                                                                    |
| 1    | UE        |    |                                                      | Initiate a PDP context activation                                                                  |
| 2    | →         |    | ACTIVATE PDP CONTEXT REQUEST                         | Activate a PDP context                                                                             |
| 3    | ←         |    | ACTIVATE PDP CONTEXT ACCEPT                          | Accept the PDP context activation                                                                  |
| 4    | →         |    | MODIFY PDP CONTEXT REQUEST (UE TO NETWORK DIRECTION) | Request modification of the PDP context                                                            |
| 5    | ←         |    | MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION) | Request modification of the PDP context with the same TI                                           |
| 6    | UE        |    |                                                      | UE identifies collision, terminates internally the UE initiated PDP context modification procedure |
| 7    | →         |    | MODIFY PDP CONTEXT ACCEPT (UE TO NETWORK DIRECTION)  | Accept SS initiated PDP context modification                                                       |

## Specific message contents

Steps 4 and 5 – The TI IE value is the same, with TI flag set to "0" identifying both, the UE and the network, as transaction initiator. TI flag indicates to the UE that it is attempting to allocate the same TI value simultaneously with the SS.

Step 7 – The TI flag set to "1" indicating that the message belongs to the transaction initiated by the other side, in this case SS.

Steps 4, 5 and 7 – Bit7, Bit6 and Bit5 of the TI IE are the same.

## 11.2.3.2.5 Test requirements

In step 6, the UE shall terminate internally the UE initiated PDP context modification procedure and proceed with SS initiated PDP context modification.

## 11.3 PDP context deactivation procedures

## 11.3.1 PDP context deactivation initiated by the UE

## 11.3.1.1 Definition

## 11.3.1.2 Conformance requirement

The DEACTIVATE PDP CONTEXT REQUEST message sent by UE contains the transaction identifier in use for the PDP context to be deactivated and a cause code that typically indicates one of the following causes:

- #25: LLC or SMDCP failure (GSM only);
- #26: insufficient resources;
- #36: regular PDP context deactivation; or
- #37: QoS not accepted.

Upon receipt of the DEACTIVATE PDP CONTEXT ACCEPT message, the UE shall stop timer T3390.

Whenever any session management message except REQUEST PDP CONTEXT ACTIVATION or SM-STATUS is received by the UE specifying a transaction identifier which is not recognised as relating to an active context or to a context that is in the process of activation or deactivation, the UE shall send a SM-STATUS message with cause #81 "invalid transaction identifier value" using the received transaction identifier value including the extension octet and remain in the PDP-INACTIVE state.

## Reference

3GPP TS 24.008 clauses 6.1.3.4, 6.1.3.4.1 and 8.3.2 (b).

### 11.3.1.3 ————— Test purpose

To test the behaviour of the UE upon receipt of a DEACTIVATE PDP CONTEXT ACCEPT message from the SS in PDP context deactivation procedure initiated by the UE.

### 11.3.1.4 ————— Method of test

#### Initial conditions

System Simulator:

— 1 cell, default parameters.

User Equipment:

— The UE is in GMM state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

#### Related ICS/IXIT statements

— PS Supported ————— yes/no

— Method of activating a PDP context

— Method of deactivating the PDP context

#### Test procedure

A PDP context is activated by the user and accepted by the SS. PDP context deactivation is then requested by the user. The UE shall send a DEACTIVATE PDP CONTEXT REQUEST message to the SS. The SS shall then reply with a DEACTIVATE PDP CONTEXT ACCEPT message. The SS shall then wait for T3390 seconds to ensure T3390 has been stopped and that no further messages are sent from the UE. The SS shall then send a MODIFY PDP CONTEXT REQUEST for the deactivated context and the UE shall reply with an SM-STATUS message with cause #81 'transaction identifier not known'.

## Expected sequence

| 2    | →         |    | ACTIVATE PDP CONTEXT REQUEST                         | Activate a PDP context                                                           |
| 3    |           | ←  | ACTIVATE PDP CONTEXT ACCEPT                          | Accept the PDP context                                                           |
| 4    | UE        |    |                                                      | Initiate a context deactivation                                                  |
| 5    | →         |    | DEACTIVATE PDP CONTEXT REQUEST                       | Request a deactivation of a PDP context                                          |
| 6    |           | ←  | DEACTIVATE PDP CONTEXT ACCEPT                        | Accept the PDP context deactivation                                              |
| 7    |           | SS |                                                      | Wait for T3390 seconds to ensure no further deactivate request messages are sent |
| 8    |           | ←  | MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION) | Send a modify request to UE for the deactivated context.                         |
| 9    | →         |    | SM STATUS                                            | Cause set to #81                                                                 |

## Specific message contents

None.

## 11.3.1.5 Test requirements

In PDP context deactivation procedure initiated by the UE, upon receipt of a DEACTIVATE PDP CONTEXT ACCEPT message from the SS, the UE shall deactivate PDP context associated with given PDP address and TI.

Then, upon modification procedure initiated by the network, for deactivated PDP context, UE shall reply with SM STATUS message with cause #81.

~~11.3.2 PDP context deactivation initiated by the network~~~~11.3.2.1 Definition~~~~11.3.2.2 Conformance requirement~~

The DEACTIVATE PDP CONTEXT REQUEST message sent by SS contains the transaction identifier in use for the PDP context to be deactivated and a cause code that typically indicates one of the following causes:

# 25: LLC or SMDCP failure (GSM-only);

# 36: regular PDP context deactivation;

# 38: network failure; or

# 39: reactivation requested.

The UE shall, upon receipt of the DEACTIVATE PDP CONTEXT REQUEST message from network, reply with a DEACTIVATE PDP CONTEXT ACCEPT message.

## Reference

3GPP TS 24.008 clauses 6.1.3.4, 6.1.3.4.2.

## 11.3.2.3 Test purpose

To test the behaviour of the UE upon receipt of a DEACTIVATE PDP CONTEXT REQUEST message from the SS.

#### 11.3.2.4 Method of test

##### Initial conditions

System Simulator:

— 1 cell, default parameters.

User Equipment:

— The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.

##### Related ICS/IXIT statements

— PS Supported ————— yes/no

— Method of activating a PDP context

##### Test procedure

A PDP context is activated by the user and accepted by the SS. A DEACTIVATE PDP CONTEXT REQUEST message is then sent by the SS. The UE shall reply with a DEACTIVATE PDP CONTEXT ACCEPT message. The SS shall then send a MODIFY PDP CONTEXT REQUEST for the deactivated context and the UE shall reply with an SM STATUS message with cause #81 'invalid transaction identifier value'.

##### Expected sequence

| Step | Direction |    | Message                                              | Comments                                                 |
|------|-----------|----|------------------------------------------------------|----------------------------------------------------------|
|      | UE        | SS |                                                      |                                                          |
| 1    |           | UE |                                                      | Initiate a context activation                            |
| 2    | →         |    | ACTIVATE PDP CONTEXT REQUEST                         | Activate a PDP context                                   |
| 3    | ←         |    | ACTIVATE PDP CONTEXT ACCEPT                          | Accept the PDP context                                   |
| 4    | ←         |    | DEACTIVATE PDP CONTEXT REQUEST                       | Request a deactivation of a PDP context                  |
| 5    | →         |    | DEACTIVATE PDP CONTEXT ACCEPT                        | Accept the PDP context deactivation.                     |
| 6    | ←         |    | MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION) | Send a modify request to UE for the deactivated context. |
| 7    | →         |    | SM STATUS                                            | Cause set to #81                                         |

##### Specific message contents

None.

#### 11.3.2.5 Test requirements

Upon receipt of a request for deactivation of a PDP context from the SS, the UE shall deactivate PDP context. Then, upon modification procedure initiated by the network, for deactivated PDP context, UE shall reply with SM STATUS message with cause #81, as confirmation that previously SS requested PDP context deactivation was performed by the UE.

### ~~11.3.3 Abnormal cases~~

#### ~~11.3.3.1 T3390 Expiry~~

##### ~~11.3.3.1.1 Definition~~

##### ~~11.3.3.1.2 Conformance requirement~~

- ~~— On the first expiry of timer T3390, the UE shall resend the message DEACTIVATE PDP CONTEXT REQUEST.~~
- ~~— On the second expiry of timer T3390, the UE shall resend the message DEACTIVATE PDP CONTEXT REQUEST.~~
- ~~— On the third expiry of timer T3390, the UE shall resend the message DEACTIVATE PDP CONTEXT REQUEST.~~
- ~~— On the fourth expiry of timer T3390, the UE shall resend the message DEACTIVATE PDP CONTEXT REQUEST.~~
- ~~— On the fifth expiry of timer T3390, the UE shall release all resources allocated and shall erase the PDP context related data.~~

#### Reference

3GPP TS 24.008 clause 6.1.3.4.3 a) case In the UE.

##### ~~11.3.3.1.3 Test purpose~~

To test the behaviour of the UE when the SS does not reply to a DEACTIVATE PDP CONTEXT REQUEST message from the UE.

##### ~~11.3.3.1.4 Method of test~~

#### ~~Initial conditions~~

System Simulator:

- ~~— 1 cell, default parameters.~~

User Equipment:

- ~~— The UE is in GMM state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.~~

#### ~~Related ICS/IXIT statements~~

- ~~— PS Supported ————— yes/no~~
- ~~— Method of activating a PDP context~~
- ~~— Method of deactivating a PDP context~~

#### Test procedure

A PDP context is activated by the user and accepted by the SS. PDP context deactivation is then requested by the user. The UE shall send a DEACTIVATE PDP CONTEXT REQUEST message five times with T3390 seconds between each message. T3390 seconds after the fifth message the SS shall send a MODIFY PDP CONTEXT REQUEST message for the deactivated context and the UE shall reply with SM STATUS with cause set to #81 'Transaction identifier not known'.

## Expected sequence

| Step | Direction |    | Message                                              | Comments                                |

| 14   |           | SS |                                                      | Wait T3390 seconds                      |
| 15   | ←         |    | MODIFY PDP CONTEXT REQUEST (NETWORK TO UE DIRECTION) | Try to modify the deactivated context.  |
| 16   | →         |    | SM STATUS                                            | Cause set to #81                        |

## Specific message contents

None.

## 11.3.3.1.5 — Test requirements

If SS does not respond to UE initiated PDP context deactivation procedure, the UE shall retransmit a DEACTIVATE PDP CONTEXT REQUEST five times, with T3390 timer expiry between the successive messages, before releasing resources allocated to the PDP context and deleting PDP context related data.

## 11.3.3.2 — Collision of UE and network initiated PDP context deactivation requests

## 11.3.3.2.1 — Definition

## 11.3.3.2.2 — Conformance requirement

If the UE and the network initiated PDP context deactivation requests collide, the UE and the network shall each reply with the message DEACTIVATE PDP CONTEXT ACCEPT and shall stop timer T3390 and T3395, respectively.

## Reference

3GPP TS 24.008 clause 6.1.3.4.3 b).

## 11.3.3.2.3 — Test purpose

To test the behaviour of the UE when there is a collision between an UE initiated and network initiated context deactivation.

#### 11.3.3.2.4 Method of test

##### Initial conditions

System Simulator:

— 1 cell, default parameters.

User Equipment:

— The UE is in GMM-state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN

##### Related ICS/IXIT statements

— PS Supported ————— yes/no

— Method of activating a PDP context

— Method of deactivating a PDP context

##### Test procedure

A PDP context is activated by the user and accepted by the SS. Context deactivation is then requested by the user. Upon receipt of the DEACTIVATE PDP CONTEXT REQUEST message the SS sends a DEACTIVATE PDP CONTEXT REQUEST message. The UE shall reply with only one DEACTIVATE PDP CONTEXT ACCEPT message. Upon receipt of this message the SS sends a DEACTIVATE PDP CONTEXT ACCEPT message.

##### Expected sequence

| Step | Direction |    | Message                        | Comments                                |
|------|-----------|----|--------------------------------|-----------------------------------------|
|      | UE        | SS |                                |                                         |
| 1    | UE        |    |                                | Initiate a context activation           |
| 2    | →         |    | ACTIVATE PDP CONTEXT REQUEST   | Activate a PDP context                  |
| 3    | ←         |    | ACTIVATE PDP CONTEXT ACCEPT    | Accept the PDP context                  |
| 4    | UE        |    |                                | Initiate a context deactivation         |
| 5    | →         |    | DEACTIVATE PDP CONTEXT REQUEST | Request a deactivation of a PDP context |
| 6    | ←         |    | DEACTIVATE PDP CONTEXT REQUEST | Request a deactivation of a PDP context |
| 7    | →         |    | DEACTIVATE PDP CONTEXT ACCEPT  | Accept the PDP context deactivation     |
| 8    | ←         |    | DEACTIVATE PDP CONTEXT ACCEPT  | Accept the PDP context deactivation     |

##### Specific message contents

None.

#### 11.3.3.2.5 Test requirements

When UE and SS initiated PDP context deactivation requests collide, the UE shall reply with DEACTIVATE PDP CONTEXT ACCEPT to the SS.

## ~~11.4 Unknown or Unforeseen Transaction Identifier/Non- semantical Mandatory Information Element Errors~~

### ~~11.4.1 Error cases~~

#### ~~11.4.1.1 Definition~~

#### ~~11.4.1.2 Conformance requirement~~

~~The mobile station shall ignore a session management message with TI-EXT bit = 0. Otherwise, the following procedures shall apply:~~

- ~~— Whenever any session management message, except REQUEST PDP CONTEXT ACTIVATION or SM-STATUS, is received by the UE specifying a transaction identifier which is not recognized as relating to an active context or to a context that is in the process of activation or, the UE shall send a SM-STATUS message with cause #81 "invalid transaction identifier value" using the received transaction identifier value including the extension octet and remain in the PDP-INACTIVE state.~~
- ~~— When a REQUEST PDP CONTEXT ACTIVATION message is received with a transaction identifier flag set to "1", this message shall be ignored.~~

~~When on receipt of a message,~~

- ~~— an "imperative message part" error; or~~
- ~~— a "missing mandatory IE " error.~~

~~is diagnosed or when a message containing:~~

- ~~— a syntactically incorrect mandatory IE; or~~
- ~~— an IE unknown in the message, but encoded as "comprehension required"; or~~
- ~~— an out of sequence IE encoded as "comprehension required".~~

~~is received, the UE shall proceed as follows:~~

- ~~— If the message was a SM message the SM-STATUS message with cause # 96 "invalid mandatory information" shall be returned.~~
- ~~— If a mobile station receives a SM message with message type not defined for the PD or not implemented by the receiver, it shall return a status message SM-STATUS with cause #97 'message type non-existent or not implemented'.~~
- ~~— If the mobile station receives a message not compatible with the protocol state, the mobile station shall ignore the message except for the fact that when the message was a SM message the SM-STATUS message with cause #98 'Message type not compatible with protocol state' shall be returned.~~

~~Other syntactic errors.~~

~~This clause applies to the analysis of the value part of an information element. It defines the following terminology:~~

- ~~— An IE is defined to be syntactically incorrect in a message if it contains at least one value defined as 'reserved', or if its value part violates syntactic rules given in the specification of the value part. However it is not a syntactical error that a type 4 standard IE specifies in its length indicator a greater length than possible according to the value part specification: extra bits are ignored.~~

### ~~Reference~~

~~3GPP TS 24.008 clauses 8.3.2 and 8.5 and 3GPP TS 24.007 clause 11.4.2.~~

#### ~~11.4.1.3 Test purpose~~

~~To test the behaviour of the UE when messages with unknown or unforeseen transaction identifiers or non-semantical mandatory information element errors occur.~~

#### ~~11.4.1.4 Method of test~~

##### ~~Initial conditions~~

~~System Simulator:~~

~~— 1 cell, default parameters.~~

~~User Equipment:~~

~~— The UE is in GMM state "GMM-REGISTERED, normal service" with valid P-TMSI and CKSN.~~

##### ~~Related ICS/IXIT statements~~

~~None.~~

##### ~~Test procedure~~

~~A PDP context activation is requested by the SS with the transaction identifier set to '1'. The UE shall not respond to this request.~~

~~A PDP context is then activated from the UE. Two invalid accept messages are then sent by the SS with T3380 seconds between them. After a further T3380 seconds a valid accept message is sent by the SS.~~

~~A deactivation message is then sent from the SS with the transaction identifier set to '111'. The UE shall reply with a SM-STATUS message with transaction identifier set to '111'.~~

~~A deactivate message is then sent from the SS with a different transaction identifier to the one used in the activate request message sent by the UE. The UE shall reply with a SM-STATUS message with cause #81 'invalid transaction identifier value'.~~

~~Three invalid modification messages are then sent to the UE in turn. The UE shall respond each time with a SM-STATUS message with cause # 96 "invalid mandatory information".~~

## 11.4.1.5 Test requirements

TBD.

## 12 Elementary procedure for Packet Switched Mobility Management

### 12.1 Applicability, default conditions and default messages

All test cases for PS mobility management apply for all PS mobiles unless otherwise stated in a specific test. Within each test case, the ICS statement indicates whether the test shall be performed for mobiles that can only operate in mode –class A, only in mode –class C, or in both mode –class A and C. For some procedures, the mobile class is of no importance.

Note that only the layer 3 messages are described in the document. The mapping of the layer 3 messages to lower layers and the use of logical channels is not described in the present document.

The terms 'PS/CS mode of operation' and 'PS mode of operation' are not used in the present document with some exceptions. Instead the terms 'UE operation mode A' and 'UE operation mode C' are used.

The default conditions and default message contents not specified in this clause must be set as in "PS default conditions"

Below is a list of the RAI values and the corresponding RAC, LAC and MCC used in the test cases:

RAI-1: MCC1/MNC1/LAC1/RAC1 (Used if only one cell)

RAI-2: MCC2/MNC1/LAC1/RAC1

RAI-3: MCC1/MNC1/LAC2/RAC1

RAI-4: MCC1/MNC1/LAC1/RAC2

RAI-5: MCC1/MNC1/LAC1/RAC3

RAI-6: MCC2/MNC1/LAC2/RAC1

RAI-7: MCC2/MNC1/LAC1/RAC2

RAI-8: MCC1/MNC2/LAC1/RAC1

RAI-9: MCC1/MNC2/LAC2/RAC1

RAI-10: MCC1/MNC2/LAC1/RAC2

If the User Equipment initial condition specifies that the mobile has a valid IMSI but the initial condition does not mention P-TMSI, then that shall be interpreted as that the mobile has no valid P-TMSI.

The tests are based on 3GPP TS 24.008.

## 12.2 PS attach procedure

This procedure is used to indicate for the network that the IMSI is available for traffic by establishment of a GMM context.

### 12.2.1 Normal PS attach

The normal PS attach procedure is a GMM procedure used by PS UEs of UE operation mode A or C to IMSI attach for PS services only.

#### 12.2.1.1 PS attach / accepted

##### 12.2.1.1.1 Definition

##### 12.2.1.1.2 Conformance requirement

- 1) If the network accepts the PS attach procedure (signalled by an IMSI) and allocates a P-TMSI, the UE shall acknowledge the P-TMSI and continue communication with the P-TMSI.
- 2) If the network accepts the PS attach procedure (signalled by P-TMSI) and reallocates a new P-TMSI, the UE shall acknowledge the new P-TMSI and continue communication with the new P-TMSI.
- 3) If the network accepts the PS attach procedure (signalled by a P-TMSI) from the UE without reallocation of the old P-TMSI, the UE shall continue communication with the old P-TMSI.

#### Reference

3GPP TS 24.008 clause 4.7.3.1

#### 12.2.1.1.3 ~~Test purpose~~

~~To test the behaviour of the UE if the network accepts the PS attach procedure.~~

~~The following cases are identified:~~

- ~~1) P-TMSI / P-TMSI signature is allocated;~~
- ~~2) P-TMSI / P-TMSI signature is reallocated;~~
- ~~3) Old P-TMSI / P-TMSI signature is not changed.~~

#### 12.2.1.1.4 ~~Method of test~~

##### ~~Initial condition~~

~~System Simulator:~~

- ~~— One cell operating in network operation mode II.~~

~~User Equipment:~~

- ~~— The UE has a valid IMSI.~~

##### ~~Related ICS/IXIT statements~~

- ~~— Support of PS service Yes/No~~
- ~~— UE operation mode A Yes/No~~
- ~~UE operation mode C Yes/No~~
- ~~Switch off on button Yes/No~~
- ~~Automatic PS attach procedure at switch on or power on Yes/No~~

##### ~~Test procedure~~

- ~~1) The UE sends an ATTACH REQUEST message with identity IMSI. The SS allocates a P-TMSI and returns ATTACH ACCEPT message with a P-TMSI. The UE acknowledge the P-TMSI by sending ATTACH COMPLETE message. Further communication UE – SS is performed by the new P-TMSI.~~
- ~~2) The UE sends an ATTACH REQUEST message with identity P-TMSI. The SS reallocates a new P-TMSI and returns ATTACH ACCEPT message with the new P-TMSI. The UE acknowledge the P-TMSI by sending ATTACH COMPLETE message. Further communication UE – SS is performed by the new P-TMSI. The UE will not answer signalling addressed to the old P-TMSI.~~
- ~~3) The UE sends an ATTACH REQUEST message with identity P-TMSI. The SS accepts the P-TMSI and returns ATTACH ACCEPT message without any P-TMSI. Further communication UE – SS is performed by the old P-TMSI.~~

## Expected Sequence

| Step | Direction |    | Message                         | Comments                                                                                                                                                           |

### Specific message contents

None.

#### 12.2.1.1.5 Test requirements

At step3, 11 and 20, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

UE shall perform the following actions depending on the Mobile identity in the ATTACH REQUEST message and on the Mobile identity in the ATTACH ACCEPT message.

- Case 1) The Mobile identity in the ATTACH REQUEST message is the IMSI and the Mobile identity in the ATTACH ACCEPT message is the P-TMSI.

— At step5, UE shall:

- acknowledge the P-TMSI by sending the ATTACH COMPLETE message.

- Case 2) The Mobile identity in the ATTACH REQUEST message is the P-TMSI and the Mobile identity in the ATTACH ACCEPT message is the new P-TMSI.

— At step13, UE shall:

- acknowledge the new P-TMSI by sending the ATTACH COMPLETE message.

At step23, UE shall:

- respond to the paging message for PS domain by sending the SERVICE REQUEST message.

#### 12.2.1.2 PS attach / rejected / IMSI invalid / illegal UE

##### 12.2.1.2.1 Definition

##### 12.2.1.2.2 Conformance requirement

- 1) If the network rejects a PS attach procedure from the User Equipment with the cause 'Illegal UE', the User Equipment shall consider USIM invalid for PS services until power is switched off or USIM is removed.
- 2) If the network rejects a PS attach procedure from the User Equipment with the cause 'Illegal UE' the User Equipment shall delete the stored RAI, PS-CKSN, P-TMSI and P-TMSI signature.
- 3) If the network rejects a PS attach procedure from the User Equipment with the cause 'Illegal UE', the User Equipment shall delete the LAI.

## Reference

3GPP TS 24.008 clause 4.7.3.1.

### ~~12.2.1.2.3~~ ~~Test purpose~~

~~To test the behaviour of the UE if the network rejects the PS attach procedure of the UE with the cause 'illegal UE'.~~

### ~~12.2.1.2.4~~ ~~Method of test~~

## Initial condition

### System Simulator:

- ~~— Three cells (not simultaneously activated), cell A with MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in~~
- ~~— MCC1/MNC1/LAC2/RAC1 (RAI-3), cell C in MCC2/MNC1/LAC1/RAC1 (RAI-2).~~
- ~~— All three cells are operating in network operation mode II (in case of UE operation mode A).~~

### User Equipment:

- ~~— The UE has a valid P-TMSI-1, P-TMSI-1 signature and RAI-1.~~

## Related ICS/IXIT statements

- ~~— Support of PS service Yes/No~~
- ~~— UE operation mode C Yes/No~~
- ~~— UE operation mode A Yes/No (only if mode C not supported)~~
- ~~— Switch off on button Yes/No~~
- ~~— Automatic PS attach procedure at switch on or power on Yes/No~~

## Test procedure

~~The SS rejects a PS attach with the cause value 'Illegal UE'. The SS checks that the UE does not perform PS attach in the same or another PLMN.~~

| NOTE:—The definitions for "Off cell" and "Serving cell" are specified in TS34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only". |           |    |                    |                                                                                                                                                                                                                     |

### Specific message contents

None.

#### 12.2.1.2.5 Test requirements

At step4, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step8, 10, 13 and 15, UE shall:

- not send the ATTACH REQUEST message to SS, even if there is an instruction of attach request from MMI or from AT command.

At step20, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

#### 12.2.1.3 PS attach / rejected / IMSI invalid / PS services not allowed

##### 12.2.1.3.1 Definition

##### 12.2.1.3.2 Conformance requirement

- 1) If the network rejects a PS attach procedure from the User Equipment with the cause 'PS services not allowed', the User Equipment shall consider USIM invalid for PS services until power is switched off or USIM is removed.
- 2) If the network rejects a PS attach procedure from the User Equipment with the cause 'PS services not allowed' the User Equipment shall delete the stored RAI, PS-CKSN, P-TMSI and P-TMSI signature.

### Reference

3GPP TS 24.008 clause 4.7.3.1.

##### 12.2.1.3.3 Test purpose

To test the behaviour of the UE if the network rejects the PS attach procedure of the UE with the cause 'PS services not allowed' (no valid PS-subscription for the IMSI).

##### 12.2.1.3.4 Method of test

### Initial condition

System Simulator:

- Two cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (HPLMN, RAI-1) and cell B in MCC2/MNC1/LAC1/RAC1 (RAI-2). Both cells are operating in network operation mode II.

User Equipment:

- The UE has a valid P-TMSI-1, P-TMSI-1 signature and RAI-1.

### Related ICS/IXIT statements

- Support of PS service Yes/No
- UE operation mode C Yes/No
- UE operation mode A Yes/No

- USIM removal possible without powering down Yes/No
- Switch off on button Yes/No
- Automatic PS attach procedure at switch on or power on Yes/No

### Test procedure

The SS rejects a normal attach with the cause value 'PS services not allowed'. The SS checks that the UE does not perform PS attach in another PLMN.

### Expected Sequence

### Specific message contents

None.

#### 12.2.1.3.5 Test requirements

At step4, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step8, UE shall:

- not perform a PS attach procedure.

At step11, after the UE is switched on or a USIM is replaced, UE shall:

- perform the PS attach procedure.

#### 12.2.1.4 PS attach / rejected / PLMN not allowed

##### 12.2.1.4.1 Definition

##### 12.2.1.4.2 Conformance requirement

- 1) If the network rejects a PS attach procedure from the User Equipment with the cause 'PLMN not allowed' the User Equipment shall:
  - 1.1 not perform PS attach when switched on in the same routing area or location area.
  - 1.2 not perform PS attach when in the same PLMN and when that PLMN is not selected manually.
  - 1.3 delete the stored RAI, PS-CKSN, P-TMSI and P-TMSI signature.
  - 1.4 store the PLMN in the 'forbidden PLMN' list.
- 2) If the network rejects a PS attach procedure from the User Equipment with the cause 'PLMN not allowed' the User Equipment shall perform PS attach when a new PLMN is entered.
- 3) If the network rejects a PS attach procedure from the User Equipment with the cause 'PLMN not allowed' and if after that the PLMN from which this rejection was received, is manually selected, the User Equipment shall perform a PS attach procedure.

### Reference

3GPP TS 24.008 clause 4.7.3.1.

##### 12.2.1.4.3 Test purpose

To test the behaviour of the UE if the network rejects the PS attach procedure of the UE with the cause 'PLMN not allowed'.

##### 12.2.1.4.4 Method of test

##### 12.2.1.4.4.1 Test procedure 1

### Initial condition

System Simulator:

- Four cells (not simultaneously activated), cell A in MCC1/MNC2/LAC1/RAC1 (RAI-8), cell B in MCC1/MNC2/LAC1/RAC1 (RAI-8), cell C in MCC1/MNC2/LAC2/RAC1 (RAI-9) and cell D in MCC2/MNC1/LAC1/RAC1 (RAI-2).

All four cells are operating in network operation mode II (in case of UE operation mode A). The PLMN of the four cells should NOT be that of the UE Home PLMN.

#### User Equipment:

—The UE has a valid P-TMSI-1, P-TMSI-1 signature and RAI-8. UE is Idle Updated on cell A.

#### Related ICS/IXIT statements

—Support of PS service—Yes/No  
UE operation mode C—Yes/No  
UE operation mode A—Yes/No (only if mode C not supported)  
Switch off on button—Yes/No  
Automatic PS attach procedure at switch on or power on—Yes/No

#### Test procedure

The SS rejects a PS attach with the cause value 'PLMN not allowed'. The SS checks that the UE does not perform PS attach if activated in the same routing area or location area and performs PS attach only when a new PLMN is entered.

NOTE: — The definitions for "Off cell" and "Serving cell" are specified in TS34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only".

#### 12.2.1.4.4.2 Test procedure 2

##### Initial condition

##### System Simulator:

- One cell operating in network operation mode II: MCC2/MNC1/LAC1/RAC1 (RAI-2). The PLMN of the cell should NOT be that of the Mobile Station Home PLMN.

##### User Equipment:

- The UE has a valid P-TMSI-1, P-TMSI-1 signature and RAI-2. UE is Idle Updated on cell A.

##### Related ICS/IXIT statements

- Support of PS service Yes/No
- UE operation mode C Yes/No
- UE operation mode A Yes/No (only if mode C not supported)
- Switch off on button Yes/No
- Automatic PS attach procedure at switch on or power on Yes/No

##### Test procedure

The SS rejects a PS attach with the cause value 'PLMN not allowed'. The subscribers access rights is changed to allow PS attach. Then the PLMN from which this rejection was received is manually selected and the SS check that a PS attach is performed.

##### Expected Sequence

| Step | Direction |    | Message            | Comments                                                                               |
|------|-----------|----|--------------------|----------------------------------------------------------------------------------------|

##### Specific message contents

None.

#### ~~12.2.1.4.5 Test requirements~~

##### ~~Test requirements for test procedure 1~~

~~At step4, when the UE is powered on or switched on, UE shall:~~

- ~~— initiate the PS attach procedure with information elements specified in the above Expected Sequence.~~

~~At step6, UE shall:~~

- ~~— not perform PS attach procedure.~~

~~UE shall perform the following actions depending on the PLMN or the routing area or the location area~~

- ~~— Case 1) UE is in the same routing area or location area when the power is switched on,~~

~~— At step11, UE shall:~~

- ~~— not perform PS attach procedure.~~

- ~~— Case2) UE is in the same PLMN, and this PLMN is not selected manually~~

~~— At step14, UE shall:~~

- ~~— not perform PS attach procedure.~~

- ~~— Case3) UE is in a new PLMN.~~

~~— At step19, UE shall:~~

- ~~— perform the PS attach procedure.~~

##### ~~Test requirements for test procedure 2~~

~~At step3, when the UE is powered on or switched on, UE shall:~~

- ~~— initiate the PS attach procedure with information elements specified in the above Expected Sequence.~~

~~At step5, UE shall:~~

- ~~— not perform PS attach procedure.~~

~~At step9, when the UE is in the new PLMN, and this PLMN is selected manually, UE shall~~

- ~~— perform the PS attach procedure.~~

#### ~~12.2.1.5a PS attach / rejected / roaming not allowed in this location area~~

##### ~~12.2.1.5a.1 Definition~~

##### ~~12.2.1.5a.2 Conformance requirement~~

- ~~1) If the network rejects a PS attach procedure from the User Equipment with the cause 'roaming not allowed in this location area' the User Equipment shall:~~

~~1.1 not perform PS attach when in the same location area.~~

~~1.2 delete the stored RAI, PS-CKSN, P-TMSI and P-TMSI signature.~~

~~1.3 store the LA in the 'forbidden location areas for roaming' list.~~

~~1.4 perform PS attach when a new location area is entered.~~

~~1.5 Periodically search for its HPLMN.~~

- 2) The User Equipment shall reset the list of 'Forbidden location areas for roaming' when switched off or when the USIM is removed.
- 3) The UE shall be capable of storing at least 6 entries in the list of 'Forbidden location areas for roaming'.

#### Reference

3GPP TS 24.008 clause 4.7.3.1.

#### ~~12.2.1.5a.3~~ Test purpose

##### Test purpose 1

To test that on receipt of a rejection using the 'roaming not allowed in this location area' cause code, the UE ceases trying to attach on that location area. Successful PS attach procedure is possible in other location areas.

##### Test purpose 2

To test that if the UE is switched off or the USIM is removed the list of 'forbidden location areas for roaming' is cleared.

##### Test purpose 3

To test that at least 6 entries can be held in the list of 'forbidden location areas for roaming' (the requirement in 3GPP TS 24.008 is to store at least 10 entries. This is not fully tested by the third procedure).

##### Test purpose 4

To test that if a cell of the Home PLMN is available then the UE returns to it in preference to any other available cell.

#### ~~12.2.1.5a.4~~ Method of test

#### ~~12.2.1.5a.4.1~~ Test procedure 1

#### Initial condition

#### System Simulator:

- Three cells (not simultaneously activated), cell A in MCC2/MNC1/LAC1/RAC1 (RAI-2, Not HPLMN), cell B in MCC2/MNC1/LAC2/RAC1 (RAI-6, Not HPLMN) and cell C in MCC2/MNC1/LAC1/RAC2 (RAI-7, Not HPLMN);
- All three cells are operating in network operation mode II.

#### User Equipment:

- The UE has a valid P-TMSI-1, P-TMSI-1 signature and RAI-2.

#### Related ICS/IXIT statements

- Support of PS service — Yes/No
- UE operation mode C — Yes/No
- UE operation mode A — Yes/No
- Switch off on button — Yes/No
- Automatic PS attach procedure at switch on or power on — Yes/No

### Test procedure

The SS rejects a PS attach with the cause value 'Roaming not allowed in this area'. A new attempt for a PS attach is not possible. Successful PS attach / detach procedures are performed in another location area. A new attempt for a PS attach is performed in the 1<sup>st</sup> location area. This attempt shall not succeed, as the LA is on the forbidden list.

NOTE: The definitions for "Off cell" and "Serving cell" are specified in TS34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only".

#### ~~12.2.1.5a.4.2 Test procedure 2~~

##### ~~Initial condition~~

##### ~~System Simulator:~~

- ~~— One cell in MCC2/MNC1/LAC1/RAC1 (RAI-2, Not HPLMN) operating in network operation mode II.~~

##### ~~User Equipment:~~

- ~~— The UE has a valid P-TMSI-1, P-TMSI-1 signature and RAI-2.~~

##### ~~Related ICS/IXIT statements~~

- ~~— Support of PS service — Yes/No~~
- ~~UE operation mode C — Yes/No~~
- ~~UE operation mode A — Yes/No (only if mode C not supported)~~
- ~~Switch off on button Yes/No~~
- ~~Automatic PS attach procedure at switch on or power on — Yes/No~~

##### ~~Test procedure~~

~~The SS rejects a PS attach updating with the cause value 'Roaming not allowed in this area'. The UE is switched off for 10 s and switched on again. The SS check that a PS attach is possible on the cell on which the PS attach had been rejected.~~

~~If USIM removal is possible without switching off: The SS rejects a PS attach with the cause value 'Roaming not allowed in this area'. The USIM is removed and inserted in the UE. The SS check that a PS attach is possible on the cell on which the PS attach had been rejected.~~

## 12.2.1.5a.4.3 — Test procedure 3

## Initial condition

## System Simulator:

- Six cells (not simultaneously activated), cell A in MCC2/MNC1/LAC1/RAC1 (RAI-2, Not HPLMN), cell B in MCC2/MNC1/LAC2/RAC1 (RAI-3, Not HPLMN), cell C in MCC2/MNC1/LAC3/RAC1 (Not HPLMN), cell D in MCC2/MNC1/LAC4/RAC1 (Not HPLMN), cell E in MCC2/MNC1/LAC5/RAC1 (Not HPLMN), cell F in MCC2/MNC1/LAC6/RAC1 (Not HPLMN).
- All six cells are operating in network operation mode II (in case of UE operation mode A).

## User Equipment:

- The UE has a valid P-TMSI-1, P-TMSI-1 signature and RAI-2.

## Related ICS/IXIT statements

- Support of PS service — Yes/No
- UE operation mode C — Yes/No
- UE operation mode A — Yes/No (only if mode C not supported)
- Switch off on button — Yes/No
- Automatic PS attach procedure at switch on or power on — Yes/No

### Test procedure

The SS rejects a PS attach with the cause value 'Roaming not allowed in this area'. This is done for 6 different location areas. Then the SS checks that the UE does not attempt to perform an attach procedure on the non-allowed location areas.

Different types of UE may use different methods to periodically clear the list of forbidden areas (e.g. every day at 12am) for roaming. If the list is cleared while the test is being run, it may be necessary to re-run the test.

| NOTE: — The definitions for "Off cell" and "Serving cell" are specified in TS34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only". |           |    |         |                                                                                                                                                                                        |

#### 12.2.1.5a.4.4 Test procedure4

##### Initial condition

##### System Simulator:

- Two cells, cell A in MCC2/MNC1/LAC1/RAC1 (not HPLMN, RAI-2) and cell B in MCC1/MNC1/LAC1/RAC1 (HPLMN, RAI-1).  
Both cells are operating in network operation mode II (in case of UE operation mode A).

##### User Equipment:

- The UE has a valid P-TMSI-1, P-TMSI-1 signature and RAI-2.

##### Related ICS/IXIT statements

- Support of PS service — Yes/No
- UE operation mode C — Yes/No
- UE operation mode A — Yes/No (only if mode C not supported)
- Switch off on button Yes/No
- Automatic PS attach procedure at switch on or power on — Yes/No

##### Test procedure

The SS rejects a PS attach with the cause value "Roaming not allowed in this area". A second cell belonging to the HPLMN is activated. It is checked that the UE returns to its HPLMN.

## Expected Sequence

## Specific message contents

None.

## 12.2.1.5a.5 Test requirements

## Test requirements for Test procedure1

At step4, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step6, when the UE receives the ATTACH REJECT message with GMM cause = 'Roaming not allowed in this area', UE shall:

— not perform the PS attach procedure.

At step11, when the new location area is entered, UE shall:

— perform the PS attach procedure

At step19, when the rejected location area is entered, UE shall

— not perform PS attach procedure.

#### Test requirements for Test procedure2

At step3, when the UE is powered up or switched on, UE shall:

— initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step5, after the UE receives the ATTACH REJECT message with GMM cause = 'Roaming not allowed in this area', UE shall:

— not perform PS attach procedure.

At step9, when the UE is switched off or USIM is replaced, UE shall:

— perform the PS attach procedure.

#### Test requirements for Test procedure3

At step4, when the UE is powered up or switched on, UE shall:

— initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step6, 13, 20, 27, 34 and 41, after the UE receives the ATTACH REJECT message with GMM cause = 'Roaming not allowed in this area', UE shall:

— not perform PS attach procedure.

At step11, 18, 25, 32 and 39, UE shall:

— initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step45, 49 and 53, UE shall:

— not perform PS attach procedure.

#### Test requirements for Test procedure4

At step4, when the UE is powered up or switched on, UE shall:

— initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step6, when the UE receives the ATTACH REJECT message with GMM cause = 'Roaming not allowed in this area', UE shall:

— not perform PS attach procedure.

At step10, when a new location area is entered, UE shall:

— perform the PS attach procedure.

### ~~12.2.1.5b PS attach / rejected / No Suitable Cells In Location Area~~

#### ~~12.2.1.5b.1 Definition~~

#### ~~12.2.1.5b.2 Conformance requirement~~

~~(1) If the network rejects a PS attach procedure from the User Equipment with the cause 'No Suitable Cells In Location Area', the User Equipment shall:~~

- ~~1.1 not perform PS attach when in the same location area.~~
- ~~1.2 delete the stored RAI, PS-CKSN, P-TMSI and P-TMSI signature.~~
- ~~1.3 store the LA in the 'forbidden location areas for roaming' list.~~
- ~~1.4 perform PS attach when a new location area is entered.~~

#### Reference

3GPP TS 24.008 clauses 4.7.3.1.

#### ~~12.2.1.5b.3 Test purpose~~

~~To test the behaviour of the UE if the network rejects the PS attach procedure of the UE with the cause 'No Suitable Cells In Location Area'.~~

#### ~~12.2.1.5b.4 Method of test~~

#### Initial condition

System Simulator:

- ~~— Three cells, cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC2/RAC1 (RAI-3), cell C in MCC2/MNC1/LAC1/RAC1 (RAI-2)~~
- ~~— All three cells are operating in network operation mode II.~~

User Equipment:

- ~~— The UE has a valid P-TMSI-1, P-TMSI-1 signature and RAI-1.~~

#### Related ICS/IXIT statements

- ~~— Support of PS service — Yes/No~~
- ~~UE operation mode A — Yes/No~~
- ~~Switch-off on button — Yes/No~~
- ~~Automatic PS attach procedure at switch-on or power-on — Yes/No~~

#### Test procedure

The SS rejects a PS attach with the cause value 'No Suitable Cells In Location Area'. The SS checks that the UE shall search for a suitable cell in a different location area on the same PLMN and shall perform PS attach procedure in that cell.

## Expected Sequence

## Specific message contents

None.

## 12.2.1.5b.5 — Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step8, when the UE enters a suitable cell in a different location area on the same PLMN, UE shall:

- perform the PS attach procedure.

### ~~12.2.1.6 PS attach / abnormal cases / access barred due to access class control~~

#### ~~12.2.1.6.1 Definition~~

#### ~~12.2.1.6.2 Conformance requirement~~

- ~~1) The UE shall not perform PS attach procedure, but stays in the current serving cell and applies normal cell reselection process.~~
- ~~2) The User Equipment shall perform the PS attach procedure when:~~
  - ~~2.1 Access is granted.~~
  - ~~2.2 Cell is changed.~~

#### Reference

3GPP TS 24.008 clause 4.7.3.1.

#### ~~12.2.1.6.3 Test purpose~~

##### ~~Test purpose1~~

~~To test the behaviour of the UE in case of access class control (access is granted).~~

##### ~~Test purpose2~~

~~To test the behaviour of the UE in case of access class control (Cell is changed).~~

#### ~~12.2.1.6.4 Method of test~~

##### ~~12.2.1.6.4.1 Test procedure1~~

##### Initial condition

An access class x (0-15) is arbitrarily chosen. The USIM is programmed with this access class x. Communication with User Equipments using access class x is initially indicated to be barred.

##### System Simulator:

- ~~— One cell operating in network operation mode II.~~
- ~~Access class x barred.~~

##### User Equipment:

- ~~— The UE has a valid P-TMSI-1, P-TMSI-1 signature and RAI-1.~~

##### Related ICS/IXIT statements

- ~~— Support of PS service — Yes/No~~
- ~~— UE operation mode C — Yes/No~~
- ~~— UE operation mode A — Yes/No~~
- ~~— Switch off on button — Yes/No~~
- ~~— Automatic PS attach procedure at switch on or power on — Yes/No~~

### Test procedure

The SS indicates access class x barred. A PS attach procedure is not performed.

The SS indicates that access class x is not barred. A PS attach procedure is performed.

| 12   | SS        |    |                 | The SS is set in network operation mode II.                                                                             |
| 13   | UE        |    |                 | The UE is set in UE operation mode A (see ICS) and the test is repeated from step 3 to step 11.                         |

### 12.2.1.6.4.2 Test procedure2

#### Initial condition

An access class x (0-15) is arbitrarily chosen. The USIM is programmed with this access class x. Communication with User Equipments using access class x is indicated to be barred on cell A.

#### System Simulator:

- Two cells, cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1) has access class x barred, cell B in MCC1/MNC1/LAC1/RAC1 (RAI-1) has access class x not barred.
- Both cells are operating in network operation mode II (in case of UE operation mode A).

#### User Equipment:

- The UE has a valid P-TMSI-2, P-TMSI-2 signature and RAI-1.

#### Related ICS/IXIT statements

- Support of PS service — Yes/No
- UE operation mode C — Yes/No
- UE operation mode A Yes/No Switch off on button — Yes/No
- Automatic PS attach procedure at switch on or power on — Yes/No

### Test procedure

The SS indicates access class x barred. A PS attach procedure is not performed.

A cell change is performed into a cell where access class x is not barred. A PS attach procedure is performed.

### Expected Sequence

| Step                                                                                                                                                                     | Direction |    | Message         | Comments                                                                          |

| 12                                                                                                                                                                       | →         |    | DETACH REQUEST  | Message not sent if power is removed.                                             |
|                                                                                                                                                                          |           |    |                 | Detach type = 'power switched off, PS detach'                                     |
| NOTE: The definitions for "Suitable neighbour cell" and "Serving cell" are specified in TS34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only". |           |    |                 |                                                                                   |

### Specific message contents

None.

### 12.2.1.6.5 Test requirements

#### Test requirements for Test procedure1

At step4, when the UE access class x is barred, UE shall:

- not perform a PS attach procedure.

At step7, when the UE access class x is granted, UE shall:

- initiate the PS attach procedure.

## ~~Test requirements for Test procedure2~~

~~At step5, when the UE access class x is barred, UE shall:~~

- ~~— not perform a PS attach procedure.~~

~~At step8, when the serving cell is changed, UE shall:~~

- ~~— initiate the PS attach procedure.~~

## ~~12.2.1.7 PS attach / abnormal cases / change of cell into new routing area~~

### ~~12.2.1.7.1 Definition~~

### ~~12.2.1.7.2 Conformance requirement~~

~~When a change of cell into a new routing area is performed before ATTACH ACCEPT message is received by the UE, the UE shall abort the PS attach procedure and re-initiate it immediately.~~

### ~~Reference~~

~~3GPP TS 24.008 clause 4.7.3.1.~~

### ~~12.2.1.7.3 Test purpose~~

~~To test the behaviour of the UE in case of procedure collision.~~

### ~~12.2.1.7.4 Method of test~~

### ~~Initial condition~~

~~System Simulator:~~

- ~~— Two cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1) and cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4).~~
- ~~Both cells are operating in network operation mode II (in case of UE operation mode A).~~

~~User Equipment:~~

- ~~— The UE has a valid P-TMSI-1, P-TMSI-1 signature and RAI-1.~~

### ~~Related ICS/IXIT statements~~

- ~~— Support of PS service — Yes/No~~
- ~~— UE operation mode C — Yes/No~~
- ~~— UE operation mode A — Yes/No (only if mode C not supported)~~
- ~~— Switch off on button — Yes/No~~
- ~~— Automatic PS attach procedure at switch on or power on — Yes/No~~

### ~~Test procedure~~

~~The UE initiates a PS attach procedure. The ATTACH ACCEPT message is delayed from the SS. The UE performs a cell reselection to a cell in a new routing area. The UE shall re-initiate a PS attach procedure in the new routing area.~~

## Specific message contents

None.

## 12.2.1.7.5 Test requirements

At step4, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected sequence.

At step8, when a change of cell into a new routing area is performed before ATTACH ACCEPT message or ATTACH REJECT message is received by the UE, UE shall:

- abort the PS attach procedure and re-initiate the PS attach procedure immediately with new information elements.

## ~~12.2.1.8 PS attach / abnormal cases / power off~~

### ~~12.2.1.8.1 Definition~~

### ~~12.2.1.8.2 Conformance requirement~~

~~When power is switched off before ATTACH ACCEPT message is received by the UE, the UE shall abort the PS attach procedure and perform a PS detach procedure.~~

### ~~Reference~~

~~3GPP TS 24.008 clause 4.7.3.~~

### ~~12.2.1.8.3 Test purpose~~

~~To test the behaviour of the UE in case of procedure collision.~~

### ~~12.2.1.8.4 Method of test~~

#### ~~Initial condition~~

#### ~~System Simulator:~~

- ~~— One cell operating in network operation mode II.~~

#### ~~User Equipment:~~

- ~~— The UE has a valid P-TMSI-1, P-TMSI-1 signature and RAI-1.~~

#### ~~Related ICS/IXIT statements~~

- ~~— Support of PS service — Yes/No~~
- ~~UE operation mode C — Yes/No~~
- ~~UE operation mode A — Yes/No~~
- ~~Switch off on button — Yes/No~~
- ~~Automatic PS attach procedure at switch on or power on — Yes/No~~

#### ~~Test procedure~~

~~The UE is switched off after initiating an attach procedure. A PS detach is automatically performed by the UE before power is switched off.~~

| 7    | UE        |    |                | The UE is set in UE operation mode A (see ICS) and the test is repeated from step 2 to step 6.     |

## Specific message contents

None.

## 12.2.1.8.5 — Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step6, when power is switched off before ATTACH ACCEPT message is received, UE shall:

- abort the PS attach procedure and perform the PS detach procedure.

## 12.2.1.9 — PS attach / abnormal cases / PS detach procedure collision

## 12.2.1.9.1 — Definition

## 12.2.1.9.2 — Conformance requirement

- 1) When a DETACH REQUEST message is received by the UE (any cause except re-attach) while waiting for an ATTACH ACCEPT message, the UE shall terminate the PS attach procedure and continue with the PS detach procedure.
- 2) When a DETACH REQUEST message is received by the UE (cause re-attach) while waiting for an ATTACH ACCEPT message, the UE shall ignore the PS detach procedure and continue with the PS attach procedure.

## Reference

3GPP TS 24.008 clause 4.7.3.1.

## 12.2.1.9.3 — Test purpose

To test the behaviour of the UE in case of procedure collision.

## 12.2.1.9.4 — Method of test

## Initial condition

System Simulator:

—One cell operating in network operation mode H.

#### User Equipment:

—The UE has a valid P-TMSI-1, P-TMSI-1 signature and RAI-1.

#### Related ICS/IXIT statements

—Support of PS service—Yes/No

UE operation mode C—Yes/No

UE operation mode A—Yes/No (only if mode C not supported)

Switch off on button Yes/No

Automatic PS attach procedure at switch on or power on—Yes/No

#### Test procedure

The UE initiates a PS attach procedure. The SS does not answer the PS attach procedure, but initiates a PS detach procedure (any cause except re-attach). The UE shall terminate the PS attach procedure and continue with the PS detach procedure.

The UE initiates a PS attach procedure. The SS does not answer the PS attach procedure, but initiates a PS detach procedure (cause re-attach). The UE shall ignore the PS detach procedure and continue with the PS attach.

#### Specific message contents

None.

#### ~~12.2.1.9.5 Test requirements~~

~~At step3, when the UE is powered up or switched on, UE shall:~~

- ~~—initiate the PS attach procedure with information elements specified in the above Expected Sequence.~~

~~UE shall perform the following actions depending on the Detach type in the DETACH REQUEST message:~~

~~Case1) Detach type = ‘re-attach not required’ GMM cause is not re-attach~~

~~At step6, when the DETACH REQUEST message is received by the UE while waiting for an ATTACH ACCEPT message, UE shall:~~

- ~~—terminate the PS attach procedure and continue with the PS detach procedure.~~

~~Case2) Detach type = ‘re-attach required’~~

~~At step11, when the DETACH REQUEST message is received by the UE while waiting for an ATTACH ACCEPT message, UE shall:~~

- ~~—ignore the PS detach procedure and continue with the PS attach procedure.~~

### ~~12.2.2 Combined PS attach~~

#### ~~12.2.2.1 Combined PS attach / PS and non-PS attach accepted~~

##### ~~12.2.2.1.1 Definition~~

##### ~~12.2.2.1.2 Conformance requirement~~

- ~~1) If the network accepts the combined PS attach procedure (signalled by an IMSI) and allocates a P-TMSI, the UE shall acknowledge the P-TMSI and continue communication with the P-TMSI.~~
- ~~2) If the network accepts the combined PS attach procedure (signalled by P-TMSI) and reallocates a new P-TMSI, the UE shall acknowledge the new P-TMSI and continue communication with the new P-TMSI.~~
- ~~3) If the network accepts the combined PS attach procedure (signalled by a P-TMSI) from the UE without reallocation of the previously used P-TMSI, the UE shall continue communication with the previously used P-TMSI.~~
- ~~4) If the network accepts the combined PS attach procedure and determines that IMSI shall be used in CS operations, the UE shall continue communication with the IMSI for CS operations.~~
- ~~5) If the network accepts the combined PS attach procedure and determines that a TMSI shall be used in CS operations, the UE shall continue communication with the TMSI for CS operations.~~

#### ~~Reference~~

~~3GPP TS 24.008 clause 4.7.3.2.~~

##### ~~12.2.2.1.3 Test purpose~~

~~To test the behaviour of the UE if the network accepts the PS attach procedure.~~

~~The following cases are identified:~~

- ~~1) P-TMSI / P-TMSI signature is allocated;~~
- ~~2) P-TMSI / P-TMSI signature is reallocated;~~
- ~~3) Old P-TMSI / P-TMSI signature is not changed;~~
- ~~4) Mobile terminating CS call is allowed with IMSI;~~

- 5) Mobile terminating CS call is not allowed with TMSI.

#### 12.2.2.1.4 Method of test

##### Initial condition

##### System Simulator:

- One cell operating in network operation mode I.

##### User Equipment:

- The UE has a valid IMSI.

##### Related ICS/IXIT statements

- Support of PS service — Yes/No  
UE operation mode A — Yes/No  
Switch off on button — Yes/No  
Automatic PS attach procedure at switch on or power on — Yes/No

##### Test procedure

- 1) The UE sends an ATTACH REQUEST message with identity IMSI. The SS allocates a P-TMSI and returns ATTACH ACCEPT message with a P-TMSI. The UE acknowledges the P-TMSI by sending ATTACH COMPLETE message. Further communication UE – SS is performed by the new P-TMSI. For CS calls, the IMSI is used.
- 2) The UE is CS paged in order to verify that the IMSI is used for CS calls.
- 3) The UE is PS paged in order to verify that the new P-TMSI is used for PS services.
- 4) The UE sends an ATTACH REQUEST message with identity P-TMSI. The SS allocates a new P-TMSI and returns ATTACH ACCEPT message with the new P-TMSI and a new TMSI. The UE acknowledges the P-TMSI and the TMSI by sending ATTACH COMPLETE message. Further communication UE – SS is performed by the new P-TMSI. For CS calls, the new TMSI is used. The UE is CS paged in order to verify that the new TMSI is used for CS services.
- 5) The UE is PS paged in order to verify that the new P-TMSI is used for PS services. The UE will not answer signalling addressed to the old P-TMSI.
- 6) The UE sends an ATTACH REQUEST message with identity P-TMSI. The SS accepts the P-TMSI and returns ATTACH ACCEPT message without any P-TMSI. Further communication UE – SS is performed by the previously used P-TMSI.
- 7) The UE is PS paged in order to verify that the previously used P-TMSI is used for PS services.

#### Specific message contents

None.

#### 12.2.2.1.5 Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

Case 1) SS accept the combined PS attach procedure (signalled by an IMSI) and allocates a P-TMSI.

At step5, UE shall

— send the ATTACH COMPLETE message.

At step10, when the UE receives the paging message for CS domain with Mobile identity = IMSI, UE shall;

— respond to the paging message for CS domain by sending the PAGING RESPONSE message.

At step14, when the UE receives the paging message for PS domain with Mobile identity = P-TMSI-1, UE shall:

— respond to the paging message for PS domain by sending the SERVICE REQUEST message.

Case 2) SS accepts the combined PS attach procedure (signalled by P-TMSI) and reallocates a new P-TMSI and TMSI.

At step20, UE shall:

— send the ATTACH COMPLETE message.

At step26, when the UE receives the paging message for CS domain with Mobile identity = TMSI, UE shall;

— respond to the paging message for CS domain by sending the PAGING RESPONSE message.

At step30, when the UE receives the paging message for PS domain with Mobile identity = P-TMSI-2, UE shall:

— respond to the paging message for PS domain by sending the SERVICE REQUEST message.

Case 3) SS accepts the combined PS attach procedure (signalled by a P-TMSI) from the UE without reallocation of the previously used P-TMSI.

At step39, when the UE receives the paging message for PS domain with Mobile identity = P-TMSI-2, UE shall:

— respond to the paging message for PS domain by sending the SERVICE REQUEST message.

## 12.2.2.2 Combined PS attach / PS only attach accepted

### 12.2.2.2.1 Definition

### 12.2.2.2.2 Conformance requirement

- 1) If the network accepts the combined PS attach procedure, but GMM cause code 'TMSI unknown in HLR' is sent to the UE the User Equipment shall delete the stored TMSI, LAI and CKSN. The User Equipment shall consider USIM invalid for non-PS services until power is switched off or USIM is removed.
- 2) If the network accepts the combined PS attach procedure, but GMM cause code 'MSC temporarily not reachable', 'Network failure' or 'Congestion' is sent to the UE, an UE operation mode A UE may perform an MM IMSI attach procedure.

### Reference

3GPP TS 24.008 clause 4.7.3.2.

### 12.2.2.2.3 Test purpose

#### Test propose1

To test the behaviour of the UE if the network accepts the PS attach procedure with indication PS only, GMM cause 'TMSI unknown in HLR'.

#### Test porpose2

To test the behaviour of the UE if the network accepts the PS attach procedure with indication PS only, GMM cause 'MSC temporarily not reachable', 'Network failure' or 'Congestion'.

~~12.2.2.2.4 Method of test~~~~12.2.2.2.4.1 Test purpose1~~~~Initial condition~~~~System Simulator:~~~~— One cell operating in network operation mode 1.~~~~User Equipment:~~~~— The UE has a valid IMSI.~~~~Related ICS/IXIT statements~~~~— Support of PS service — Yes/No~~~~UE operation mode A — Yes/No~~~~Switch off on button Yes/No~~~~Automatic PS attach procedure at switch on or power on — Yes/No~~~~Test procedure~~

The UE sends an ATTACH REQUEST message with identity IMSI. The SS allocates a P-TMSI and returns ATTACH ACCEPT message with a P-TMSI. GMM cause 'IMSI unknown in HLR' is indicated from SS. Further communication UE-SS is performed by the P-TMSI. CS services are not possible.

~~Expected Sequence~~

~~12.2.2.2.4.2 Test purpose2~~~~Initial condition~~~~System Simulator:~~~~— One cell operating in network operation mode 1.~~

**User Equipment:**

~~—The UE has a valid TMSI, P-TMSI, P-TMSI signature and RAI.~~

**Related ICS/IXIT statements**

~~—Support of PS service—Yes/No  
UE operation mode A—Yes/No  
Automatic MM IMSI attach procedure for UE operation mode A UE—Yes/No  
Switch off on button Yes/No  
Automatic PS attach procedure at switch on or power on—Yes/No~~

**Test procedure**

~~The UE sends an ATTACH REQUEST message. The SS allocates a P-TMSI and returns ATTACH ACCEPT message with a P-TMSI. GMM cause 'MSC temporarily not reachable', 'Network failure' or 'Congestion' is indicated from SS. The cause code is arbitrarily chosen. The UE sends a ROUTING AREA UPDATE REQUEST message. The SS returns a ROUTING AREA UPDATE ACCEPT message. GMM cause 'MSC temporarily not reachable', 'Network failure' or 'Congestion' is indicated from SS. The cause code is arbitrarily chosen. The ROUTING AREA UPDATE procedure is repeated four times. An UE operation mode A UE may then perform an MM IMSI attach procedure (according to the ICS statement). Further communication UE – SS is performed by the P-TMSI. The existence of a signalling channel is verified by a request for mobile identity.~~

**Expected Sequence**

~~Dependent whether the option 'Automatic MM IMSI attach procedure for UE operation mode A UE' is supported or not, the steps 1-22 or 23-53 apply depending on manufacturer (see ICS).~~

#### 12.2.2.2.5 Test requirements

##### Test requirements for Test purpose1

At step3, when the UE is powered up or switched on, UE shall:

- initiate the Combined PS attach procedure with information elements specified in the above Expected Sequence.

At step7, when the UE receives the paging message for CS domain, UE shall:

- not respond to the paging message for CS domain.

## Test requirements for Test purpose2

Case 1) UE does not support Automatic MM-IMSI attach procedure.

At step3, when the UE is powered up or switched on, UE shall:

- initiate the Combined PS attach procedure with information elements specified in the above Expected Sequence.

At step7, 10, 12 and 16, when the routing area updating attempt counter is less than 5 and the stored RAI is equal to the RAI of the current serving cell, UE shall:

- perform the combined routing area update procedure indicating “combined RA/LA updating with IMSI attach”.

Case 2) UE supports Automatic MM-IMSI attach procedure.

At step25, when the UE is powered up or switched on, UE shall:

- initiate the Combined PS attach procedure with information elements specified in the above Expected Sequence.

At step28, 31, 33 and 37, when the routing area updating attempt counter is less than 5 and the stored RAI is equal to the RAI of the current serving cell, UE shall:

- perform the combined routing area update procedure indicating “combined RA/LA updating with IMSI attach”.

At step41, UE shall:

- perform MM location updating procedure.

At step53, UE shall:

- respond to the paging message for CS domain by sending the PAGING RESPONSE message.

## ~~12.2.2.3 Combined PS attach / PS attach while IMSI attach~~

### ~~12.2.2.3.1 Definition~~

### ~~12.2.2.3.2 Conformance requirement~~

If the PS UE is already attached for non-PS services by the MM specific attach procedure, but wants to perform an attach for PS services, the combined PS attach procedure is performed.

### Reference

3GPP TS 24.008 clause 4.7.3.2.

### ~~12.2.2.3.3 Test purpose~~

To test the behaviour of the UE if PS attach performed while IMSI attached.

### ~~12.2.2.3.4 Method of test~~

### Initial condition

System Simulator:

- One cell operating in network operation mode I. ATT flag is set.

User Equipment:

- The UE has a valid TMSI-1, P-TMSI-1, P-TMSI-1 signature and RAI-1.

### Related ICS/IXIT statements

- Support of PS service—Yes/No

- UE operation mode A — Yes/No  
 Switch off on button — Yes/No  
 Automatic PS attach procedure at switch on or power on — Yes/No

### Test procedure

The UE is forced to register for CS services but not to PS services. The SS verifies that the UE does not respond to paging messages for PS domain. Then the UE is triggered to perform the PS attach procedure and the SS verifies that it responds to PS paging messages.

### Specific message contents

None.

### 12.2.2.3.5 — Test requirements

UE is already attached for non-PS service with the MM specific attach procedure.

At step5, UE shall:

— not respond to the paging message for PS domain.

At step7, when the UE is requested to attach for PS services, UE shall:

— perform the combined PS attach procedure.

At step13, UE shall:

— respond to the paging message for PS domain by sending the SERVICE REQUEST message.

#### 12.2.2.4 Combined PS attach / rejected / IMSI invalid / illegal ME

##### 12.2.2.4.1 Definition

##### 12.2.2.4.2 Conformance requirement

- 1) If the network rejects a combined PS attach procedure from the User Equipment with the cause 'Illegal ME', the User Equipment shall consider USIM invalid for PS and non-PS services until power is switched off or USIM is removed.
- 2) If the network rejects a combined PS attach procedure from the User Equipment with the cause 'Illegal ME', the User Equipment shall delete the stored TMSI, LAI, CSKN, RAI, PS-CSKN, P-TMSI and P-TMSI signature.

#### Reference

— 3GPP TS 24.008 clause 4.7.3.2

##### 12.2.2.4.3 Test purpose

To test the behaviour of the UE if the network rejects the combined PS attach procedure of the UE with the cause 'Illegal ME'.

##### 12.2.2.4.4 Method of test

#### Initial condition

#### System Simulator:

— Three cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1) and cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4), cell C in MCC2/MNC1/LAC1/RAC1 (RAI-2).  
All three cells are operating in network operation mode I.

#### User Equipment:

— The UE has a valid TMSI-1, P-TMSI-1, P-TMSI-1 signature and RAI-1.

#### Related ICS/IXIT statements

— Support of PS service — Yes/No  
UE operation mode A — Yes/No  
USIM removal possible without powering down — Yes/No  
Switch off on button — Yes/No  
Automatic PS attach procedure at switch on or power on — Yes/No

#### Test procedure

The SS rejects a PS attach with the cause value 'Illegal ME'. The SS checks that the UE does not perform PS attach in the same or another PLMN. CS services are not possible as the USIM is blocked for CS services. PS services are not possible as the USIM is blocked for PS services.

### Specific message contents

None.

#### 12.2.2.4.5 Test requirements

At step4, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with the information elements specified in the above Expected Sequence.

At step7, 9 and 16, when the UE receives the paging message for CS domain, UE shall,

- not respond to the paging message for CS domain.

At step11 and 21, when the UE receives the paging message for PS domain, UE shall,

- not respond to the paging message for PS domain.

At step27, when the USIM is replaced, UE shall:

- perform the combined PS attach procedure.

At step34, when the UE receives the paging message for CS domain, UE shall,

- respond to the paging message for CS domain by sending the RAGING RESPONSE message.

### ~~12.2.2.5 Combined PS attach / rejected / PS services and non-PS services not allowed~~

#### ~~12.2.2.5.1 Definition~~

#### ~~12.2.2.5.2 Conformance requirement~~

- ~~1) If the network rejects a combined PS attach procedure from the User Equipment with the cause 'PS services and non-PS services not allowed', the User Equipment shall consider USIM invalid for PS and non-PS services until power is switched off or USIM is removed.~~
- ~~2) If the network rejects a combined PS attach procedure from the User Equipment with the cause 'PS services and non-PS services not allowed', the User Equipment shall delete the stored TMSI, LAI, CSKN, RAI, PS-CKSN, P-TMSI and P-TMSI signature.~~

#### ~~Reference~~

~~3GPP TS 24.008 clause 4.7.3.2.~~

#### ~~12.2.2.5.3 Test purpose~~

~~To test the behaviour of the UE if the network rejects the combined PS attach procedure of the UE with the cause 'PS services and non-PS services not allowed'.~~

#### ~~12.2.2.5.4 Method of test~~

#### ~~Initial condition~~

~~System Simulator:~~

- ~~— Two cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1) and cell B in MCC2/MNC1/LAC1/RAC1 (RAI-2).~~
- ~~Both cells are operating in network operation mode I.~~

~~User Equipment:~~

- ~~— The UE has a valid TMSI-1, P-TMSI-1, P-TMSI-1 signature and RAI-1.~~

#### ~~Related ICS/IXIT statements~~

- ~~— Support of PS service — Yes/No~~
- ~~UE operation mode A — Yes/No~~
- ~~Switch off on button — Yes/No~~
- ~~Automatic PS attach procedure at switch on or power on — Yes/No~~

#### ~~Test procedure~~

~~The SS rejects a PS attach with the cause value 'PS services and non-PS services not allowed'. The SS checks that the UE does not perform PS attach in the same or another PLMN. CS services are not possible as the USIM is blocked for CS services. PS services are not possible as the USIM is blocked for PS services.~~

| NOTE: — The definitions for "Off cell" and "Serving cell" are specified in TS34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only". |           |    |                                 |                                                                                                                                                                                                                                                                         |

#### Specific message contents

None.

#### 12.2.2.5.5 Test requirements

At step4, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with the information elements specified in the above Expected Sequence.

At step8 and 14, when the UE receives the paging message for CS domain, UE shall:

- not respond to the paging message for CS domain.

At step10 and 17, when the UE receives the paging message for PS domain, UE shall:

- not respond to the paging message for PS domain.

At step22, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure.

At step29, when the UE receives the paging message for CS domain, UE shall:

- respond to the paging message for CS domain by sending the PAGING RESPONSE message.

At step36, when the UE receives the paging message for PS domain, UE shall:

- respond to the paging message for PS domain by sending the SERVICE REQUEST message.

### ~~12.2.2.6 Combined PS attach / rejected / PS services not allowed~~

#### ~~12.2.2.6.1 Definition~~

#### ~~12.2.2.6.2 Conformance requirement~~

- ~~1) If the network rejects a combined PS attach procedure from the User Equipment with the cause 'PS services not allowed', the User Equipment shall consider USIM invalid for PS services until power is switched off or USIM is removed.~~
- ~~2) If the network rejects a combined PS attach procedure from the User Equipment with the cause 'PS services not allowed' the User Equipment shall delete the stored RAI, PS-CKSN, P-TMSI and P-TMSI signature.~~
- ~~3) A PS class AUE shall perform an MM-IMSI attach procedure.~~

#### Reference

~~— 3GPP TS 24.008 clause 4.7.3.2~~

#### ~~12.2.2.6.3 Test purpose~~

~~To test the behaviour of the UE if the network rejects the PS attach procedure of the UE with the cause 'PS services not allowed'.~~

#### ~~12.2.2.6.4 Method of test~~

#### Initial condition

##### System Simulator:

- ~~— Two cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1) and cell B in MCC2/MNC1/LAC1/RAC1 (RAI-2).~~
- ~~Both cells are operating in network operation mode I.~~
- ~~ATT flag set to 1~~

##### User Equipment:

- ~~— The UE has a valid TMSI, P-TMSI-1, P-TMSI-1 signature and RAI-1.~~

#### Related ICS/IXIT statements

- ~~— Support of PS service — Yes/No~~
- ~~UE operation mode A — Yes/No~~
- ~~Switch off on button — Yes/No~~
- ~~Automatic PS attach procedure at switch on or power on — Yes/No~~

#### Test procedure

~~The SS rejects a normal attach with the cause value 'PS services not allowed'. The SS checks that the UE does not perform PS attach. PS services are not possible. An UE operation mode A UE shall perform an MM-IMSI attach.~~

#### Specific message contents

None.

#### 12.2.2.6.5 Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with the information elements specified in the above Expected Sequence.

At step6, if the UE is PS class A, UE shall:

- perform the MM IMSI attach procedure.

At step11, 22 and 36, when the UE receives the paging message for CS domain, UE shall:

- respond to the paging message for CS domain by sending the PAGING RESPONSE message.

At step26, when the UE receives the paging message for PS domain, UE shall:

- not respond to the paging message for PS domain.

At step29, UE shall:

- perform the PS attach procedure.

### ~~12.2.2.7a Combined PS attach / rejected / location area not allowed~~

#### ~~12.2.2.7a.1 Definition~~

#### ~~12.2.2.7a.2 Conformance requirement~~

- ~~1) If the network rejects a combined PS attach procedure from the User Equipment with the cause 'location area not allowed' the User Equipment shall:~~
  - ~~1.1 not perform combined PS attach when in the same location area.~~
  - ~~1.2 delete the stored LAI, CKSN, TMSI, RAI, PS-CKSN, P-TMSI and P-TMSI signature.~~
  - ~~1.3 store the LA in the 'forbidden location areas for regional provision of service'.~~
- ~~2) If the network rejects a combined PS attach procedure from the User Equipment with the cause 'location area not allowed' the User Equipment shall:~~
  - ~~2.1 perform combined PS attach when a new location area is entered.~~
  - ~~2.2 delete the list of forbidden LAs when power is switched off.~~

#### ~~Reference~~

~~3GPP TS 24.008 clauses 4.7.3.2.~~

#### ~~12.2.2.7a.3 Test purpose~~

~~To test the behaviour of the UE if the network rejects the combined PS attach procedure with the cause 'Location Area not allowed'.~~

~~To test that the UE deletes the list of forbidden LAs when power is switched off.~~

#### ~~12.2.2.7a.4 Method of test~~

#### ~~Initial condition~~

##### ~~System Simulator:~~

- ~~— Three cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4), cell C in MCC1/MNC1/LAC2/RAC1 (RAI-3). All cells are operating in network operation mode I.~~

##### ~~User Equipment:~~

- ~~— The UE has a valid TMSI, P-TMSI, P-TMSI signature and RAI.~~

#### ~~Related ICS/IXIT statements~~

- ~~— Support of PS service — Yes/No~~
- ~~UE operation mode A — Yes/No~~
- ~~Switch off on button — Yes/No~~
- ~~Automatic PS attach procedure at switch on or power on — Yes/No~~

#### ~~Test procedure~~

~~The SS rejects a combined PS attach with the cause value 'Location Area not allowed'. The SS checks that the UE does not perform combined PS attach while in the location area, performs PS attach when a new location area is entered and deletes the list of forbidden LAs when switched off. CS services are not possible unless an IMSI attach procedure is performed.~~

~~Different types of UE may use different methods to periodically clear the list of forbidden location areas (e.g. every day at 12am). If the list is cleared while the test is being run, it may be necessary to re-run the test.~~

| NOTE: The definitions for "Off cell" and "Serving cell" are specified in TS34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only". |           |    |                                 |                                                                                                                                                                 |

### Specific message contents

None.

### 12.2.2.7a.5 Test requirements

At step4, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with the information elements specified in the above Expected Sequence

At step6, when the UE receives the ATTACH REJECT message with GMM cause = 'Location Area not allowed', UE shall:

- not initiate MM location updating procedure.

At step8, when the UE receives the paging message for CS domain, UE shall:

- not respond to the paging message for CS domain.

At step10 and 16, when the UE receives the paging message for PS domain, UE shall:

- not respond to the paging message for PS domain.

At step13 and 18, when the UE is in the same location area, UE shall:

- not perform PS attach procedure.

At step21, when the UE enters a new location area, UE shall

- perform the combined PS attach procedure.

At step28 and 52, when the UE receives the paging message for CS domain, UE shall:

- respond to the paging message for CS domain by sending the PAGING RESPONSE message.

At step35 and 59, when the UE receives the paging message for PS domain, UE shall:

- respond to the paging message for PS domain by sending the SERVICE REQUEST message.

At step45, when the UE is powered up or switched on, UE shall:

- perform the combined PS attach procedure.

### ~~12.2.2.7b Combined PS attach / rejected / No Suitable Cells In Location Area~~

#### ~~12.2.2.7b.1 Definition~~

#### ~~12.2.2.7b.2 Conformance requirement~~

~~1) If the network rejects a combined PS attach procedure from the User Equipment with the cause 'No Suitable Cells In Location Area', the User Equipment shall:~~

~~1.1 not perform combined PS attach when in the same location area.~~

~~1.2 delete the stored LAI, CKSN, TMSI, RAI, PS-CKSN, P-TMSI and P-TMSI signature.~~

~~1.3 store the LA in the 'forbidden location areas for roaming'.~~

~~2) If the network rejects a combined PS attach procedure from the User Equipment with the cause 'No Suitable Cells In Location Area', the User Equipment shall:~~

~~2.1 search for a suitable cell in a different location area on the same PLMN.~~

#### Reference

3GPP TS 24.008 clauses 4.7.3.2.

#### ~~12.2.2.7b.3 Test purpose~~

~~To test the behaviour of the UE if the network rejects the combined PS attach procedure with the cause 'No Suitable Cells In Location Area'.~~

#### ~~12.2.2.7b.4 Method of test~~

#### Initial condition

##### System Simulator:

~~— Three cells, cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC2/RAC1 (RAI-3), cell C in MCC2/MNC1/LAC1/RAC1 (RAI-2)~~

##### User Equipment:

~~— The UE has valid TMSI, P-TMSI, P-TMSI signature and RAI~~

#### Related ICS/IXIT statements

~~— Support of PS service — Yes/No~~

~~UE operation mode A — Yes/No~~

~~Switch off on button — Yes/No~~

~~Automatic PS attach procedure at switch on or power on — Yes/No~~

#### Test procedure

~~The SS rejects a combined PS attach with the cause value 'No Suitable Cells In Location Area'. The SS checks that the UE shall search for a suitable cell in a different location area on the same PLMN and shall perform combined PS attach procedure in that cell~~

## Expected Sequence

| Step                                                                                                                                                                     | Direction |    | Message         | Comments                                                                                                                                                                                                                                                                                 |

## Specific message contents

None.

## 12.2.2.7b.5 Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with the information elements specified in the above Expected sequence.

At step7, when the UE enters a suitable cell in a different location area on the same PLMN, UE shall:

- initiate the combined PS attach procedure.

### ~~12.2.2.8 Combined PS attach / abnormal cases / attempt counter check / miscellaneous reject causes~~

#### ~~12.2.2.8.1 Definition~~

#### ~~12.2.2.8.2 Conformance requirement~~

- ~~1) When a combined PS attach procedure is rejected with the attempt counter less than five, the User Equipment shall repeat the combined PS attach procedure after T3311 timeout.~~
- ~~2) When a combined PS attach procedure is rejected with the attempt counter five, the User Equipment shall delete the stored TMSI, LAI, CKSN, P-TMSI, P-TMSI signature, PS CKSN and RAI and start T3302.~~
- ~~3) When the T3302 expire, a new combined PS attach procedure shall be initiated.~~

GMM cause codes that can be selected are:

'TMSI unknown in HLR'

'UE identity cannot be derived by the network'

'Network failure'

'Congestion'

'retry upon entry into a new cell'

'Semantically incorrect message'

'Invalid mandatory information'

'Message type non-existent or not implemented'

'Message type not compatible with the protocol state'

'Information element non-existent or not implemented'

'Conditional IE error'

'Message not compatible with the protocol state'

'Protocol error, unspecified'

### Reference

3GPP TS 24.008 clause 4.7.3.2.

#### ~~12.2.2.8.3 Test purpose~~

To test the behaviour of the UE with respect to the attempt counter.

#### ~~12.2.2.8.4 Method of test~~

#### Initial condition

System Simulator:

— One cell operating in network operation mode I.

User Equipment:

~~—The UE has a valid TMSI, P-TMSI, P-TMSI signature and RAI.~~

#### Related ICS/IXIT statements

~~—Support of PS service—Yes/No~~

~~UE operation mode A Yes/No Automatic PS attach procedure at switch on or power on Yes/No~~

~~—Switch off on button Yes/No~~

#### Test procedure

The UE initiates a combined PS attach procedure (attempt counter zero).

The SS rejects the attach with an arbitrarily chosen cause code.

The UE initiates a new combined PS attach procedure (attempt counter one) after T3311 expires.

The SS rejects the attach with an arbitrarily chosen cause code.

The UE initiates a new combined PS attach procedure (attempt counter two) after T3311 expires.

The SS rejects the attach with an arbitrarily chosen cause code.

The UE initiates a new combined PS attach procedure (attempt counter three) after T3311 expires.

The SS rejects the attach with an arbitrarily chosen cause code.

The UE initiates a new combined PS attach procedure (attempt counter four) after T3311 expires.

The SS rejects the attach with an arbitrarily chosen cause code.

The UE shall not perform a new successful attach procedure after 15 seconds.

The UE initiates a combined PS attach procedure with attempt counter zero after T3302 expires without P-TMSI, P-TMSI signature, PS CKSN and RAI.

T3302; set to 10 minutes.

T3311; 15 seconds.

### Specific message contents

None.

### 12.2.2.8.5 Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with the information elements specified in the above Expected Sequence.

UE shall perform the following actions depending on the conditions described below.

- Case1) A combined PS attach procedure is rejected with the attempt counter less than five

- At step6, 9, 12 and 15, when the timer T3311 timeout has occurred, UE shall:

- repeat the combine PS attach procedure.

- Case2) A combined PS attach procedure is rejected with the attempt counter five

At step21, when the UE receives the paging message for PS domain, UE shall:

- not respond to the paging message for PS domain.

- Case3) The T3302 expires

- At step23, UE shall:

- re-initiate the new combined PS attach procedure.

At step30, when the UE receives the paging message for CS domain, UE shall:

- respond to the paging message for CS domain by sending the ~~PAGING RESPONSE~~ message.

At step34, when the UE receives the paging message for PS domain, UE shall:

- respond to the paging message for PS domain by sending the ~~SERVICE REQUEST~~ message.

### ~~12.2.2.9 Combined PS attach / abnormal cases / PS detach procedure collision~~

#### ~~12.2.2.9.1 Definition~~

#### ~~12.2.2.9.2 Conformance requirement~~

- ~~1) When a DETACH REQUEST message is received by the UE (any cause except re-attach) while waiting for an ATTACH ACCEPT message or ATTACH REJECT message, the UE shall terminate the combined PS attach procedure and continue with the combined PS detach procedure.~~
- ~~2) When a DETACH REQUEST message is received by the UE (cause re-attach) while waiting for an ATTACH ACCEPT message or ATTACH REJECT message, the UE shall ignore the combined PS detach procedure and continue with the combined PS attach procedure.~~

#### Reference

3GPP TS 24.008 clause 4.7.3.2.

#### ~~12.2.2.9.3 Test purpose~~

~~To test the behaviour of the UE in case of procedure collision.~~

#### ~~12.2.2.9.4 Method of test~~

#### Initial condition

System Simulator:

- One cell operating in network operation mode I.

User Equipment:

- The UE has valid TMSI, P-TMSI, P-TMSI signature and RAI. UE is Idle Updated.

#### Related ICS/IXIT statements

Support of PS service—Yes/No

UE operation mode A—Yes/No

Switch off on button—Yes/No

Automatic PS attach procedure at switch on or power on—Yes/No

Re-attach automatically when the network commands a detach with no cause value—Yes/No

#### Test procedure

The UE initiates a combined PS attach procedure. The SS does not answer the combined PS attach procedure, but initiates a combined PS detach procedure (any cause except re-attach). The UE shall terminate the combined PS attach procedure and continue with the combined PS detach procedure.

The UE initiates a combined PS attach procedure. The SS does not answer the combined PS attach procedure, but initiates a combined PS detach procedure (cause re-attach). The UE shall ignore the combined PS detach procedure and continue with the combined PS attach. CS services are also possible.

### Specific message contents

None.

#### 12.2.2.9.5 Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with the information elements specified in the above Expected Sequence.

UE shall perform the following actions depending on the Detach type described below.

Case1) Detach type is not re-attach

At step6, UE shall:

- respond to DETACH REQUEST message by sending DETACH ACCEPT message.

Case2) Detach type is re-attach

At step13, UE shall:

- ignore the PS detach procedure.

At step15, UE shall:

- send the ATTACH COMPLETE message.

At step20, when the UE receives the paging message for CS domain, UE shall:

- respond to the paging message for CS domain by sending the PAGING RESPONSE message.

At step24, when the UE receives the paging message for PS domain, UE shall:

- respond to the paging message for PS domain by sending the SERVICE REQUEST message.

## 12.3 PS detach procedure

### 12.3.1 UE initiated PS detach procedure

#### 12.3.1.1 PS detach / power off / accepted

##### 12.3.1.1.1 Definition

##### 12.3.1.1.2 Conformance requirement

The UE detaches the IMSI for PS services if the UE is switched off.

#### Reference

- 3GPP TS 24.008 clause 4.7.4.1

##### 12.3.1.1.3 Test purpose

To test the behaviour of the UE for the detach procedure.

#### 12.3.1.1.4 Method of test

##### Initial condition

##### System Simulator:

— One cell operating in network operation mode H.

##### User Equipment:

— The UE has a valid P-TMSI-1, P-TMSI-1 signature and RAI-1.

##### Related ICS/IXIT statements

— Support of PS service — Yes/No

UE operation mode C — Yes/No

UE operation mode A — Yes/No

Switch off on button — Yes/No

Automatic PS attach procedure at switch on or power on — Yes/No

##### Test procedure

The UE performs a PS attach procedure.

The UE sends a DETACH REQUEST message to the SS.

##### Expected Sequence

| Step | Direction |    | Message         | Comments                                                                                                                |
|------|-----------|----|-----------------|-------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                 |                                                                                                                         |
| 1    | UE        |    |                 | The UE is set in UE operation mode C (see ICS). If UE operation mode C not supported, goto step 8.                      |
| 2    | UE        |    |                 | The UE is powered up or switched on and initiates an attach (see ICS).                                                  |
| 3    | →         |    | ATTACH REQUEST  | Attach type = 'PS attach'<br>Mobile identity = P-TMSI-1<br>P-TMSI-1 signature                                           |
| 4    |           | ←  | ATTACH ACCEPT   | Routing area identity = RAI-1<br>Attach result = 'PS only attached'<br>Mobile identity = P-TMSI-2<br>P-TMSI-2 signature |
| 5    | →         |    | ATTACH COMPLETE | Routing area identity = RAI-1                                                                                           |
| 6    | UE        |    |                 | The UE is switched off (see ICS).                                                                                       |
| 7    | →         |    | DETACH REQUEST  | Detach type = 'power switched off, PS detach'                                                                           |
| 8    | UE        |    |                 | The UE is set in UE operation mode A (see ICS) and the test is repeated from step 2 to step 7.                          |

##### Specific message contents

None.

#### 12.3.1.1.5 Test requirements

At step 3, when the UE is powered up or switched on, UE shall:

— initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step 7, when the UE is switched off, UE shall:

— send the DETACH REQUEST message to SS with the Detach type = 'power switched off, PS detach'.

### ~~12.3.1.2 PS detach / accepted~~

#### ~~12.3.1.2.1 Definition~~

#### ~~12.3.1.2.2 Conformance requirement~~

~~The UE detaches the IMSI for PS services if the UE is ordered to do so with MMI or AT commands.~~

#### ~~Reference~~

~~3GPP TS 24.008 clause 4.7.4.1.~~

#### ~~12.3.1.2.3 Test purpose~~

## Specific message contents

None.

## 12.3.1.2.5 Test requirements

At step 3, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step 7, UE shall:

- sends the DETACH REQUEST message (without power off) to SS.

At step 10, when the UE receives the paging message for PS domain, UE shall:

- not respond to the paging message for PS domain.

## 12.3.1.3 PS detach / abnormal cases / attempt counter check / procedure timeout

## 12.3.1.3.1 Definition

## 12.3.1.3.2 Conformance requirement

- 1) When a T3321 timeout has occurred during a PS detach procedure with the attempt counter less than five, the User Equipment shall repeat the PS detach procedure.
- 2) When a T3321 timeout has occurred during a PS detach procedure with the attempt counter five, the User Equipment shall not repeat the procedure.

## Reference

3GPP TS 24.008 clause 4.7.4.1.

### 12.3.1.3.3 ~~Test purpose~~

~~To test the behaviour of the UE with respect to the attempt counter.~~

### 12.3.1.3.4 ~~Method of test~~

#### ~~Initial condition~~

~~System Simulator:~~

~~— One cell operating in network operation mode II.~~

~~User Equipment:~~

~~— The UE has a valid P-TMSI-1, P-TMSI-1 signature and RAI-1.~~

#### ~~Related ICS/IXIT statements~~

~~— Support of PS service — Yes/No~~

~~UE operation mode C — Yes/No~~

~~UE operation mode A — Yes/No~~

~~Switch off on button — Yes/No~~

~~Automatic PS attach procedure at switch on or power on — Yes/No~~

#### ~~Test procedure~~

~~The UE performs a PS attach procedure.~~

~~The UE initiates a PS detach procedure (attempt counter zero). The SS does not answer with DETACH ACCEPT message before T3321 timeout.~~

~~The UE initiates a new PS detach procedure (attempt counter one) after T3321 expires. The SS does not answer with DETACH ACCEPT message before T3321 timeout.~~

~~The UE initiates a new PS detach procedure (attempt counter two) after T3321 expires. The SS does not answer with DETACH ACCEPT message before T3321 timeout.~~

~~The UE initiates a new PS detach procedure (attempt counter three) after T3321 expires. The SS does not answer with DETACH ACCEPT message before T3321 timeout.~~

~~The UE initiates a new PS detach procedure (attempt counter four) after T3321 expires. The SS does not answer with DETACH ACCEPT message before T3321 timeout.~~

~~The UE initiates a new PS detach procedure with attempt counter five (after T3321 expires). The SS does not answer with DETACH ACCEPT message before T3321 timeout.~~

~~At T3321 timeout in the UE, the UE then deletes the logical link since the retransmissions have been repeated four times.~~

~~The UE performs a new PS attach procedure.~~

~~T3321; 15 seconds.~~

## Specific message contents

None.

## 12.3.1.3.5 ——— Test requirements

At step3, when the UE is powered up or switched on, UE shall:

—— initiate the PS attaché procedure with the information elements specified in the above Expected Sequence.

At step9, 12, 15 and 18, when a T3321 expires with the attempt counter less than five, UE shall:

—initiate the new PS detach procedure.

At step19, when the attempt counter is greater than or equal to five, UE shall:

—not repeat the PS detach procedure.

At step20, UE shall:

—initiate the PS attaché procedure.

### ~~12.3.1.4 PS detach / abnormal cases / GMM common procedure collision~~

#### ~~12.3.1.4.1 Definition~~

#### ~~12.3.1.4.2 Conformance requirement~~

When any of the GMM common messages P-TMSI REALLOCATION COMMAND, GMM STATUS or GMM INFORMATION is received by the UE while waiting for a DETACH ACCEPT message with detach cause different from "power off", the UE shall ignore the GMM common message.

#### ~~Reference~~

3GPP TS 24.008 clause 4.7.4.1.

#### ~~12.3.1.4.3 Test purpose~~

To test the behaviour of the UE in case of procedure collision.

#### ~~12.3.1.4.4 Method of test~~

#### ~~Initial condition~~

System Simulator:

—One cell operating in network operation mode II.

User Equipment:

—The UE has a valid IMSI.

#### ~~Related ICS/IXIT statements~~

- Support of PS service—Yes/No
- UE operation mode C—Yes/No
- UE operation mode A—Yes/No (only if mode C not supported)
- Switch off on button—Yes/No
- Automatic PS attach procedure at switch on or power on—Yes/No

#### ~~Test procedure~~

The following test procedure is repeated for sequence counter k = 1,2,3:

The UE performs a PS attach.

The UE initiates a PS detach. The SS initiates a P-TMSI REALLOCATION COMMAND message (k=1), a GMM STATUS message (k=2) and a GMM INFORMATION message (k=3). The UE shall ignore the GMM common messages and continue with the PS detach procedure.

The SS signal to the UE, but no response is received, as the signalling link is disconnected.

## Expected Sequence

The test sequence is repeated for  $k = 1 \dots 3$

## Specific message contents

None.

## 12.3.1.4.5 Test requirements

At step 3, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step 10A, 10B, 10C and 13, when any of the GMM common messages P-TMSI REALLOCATION COMMAND, GMM STATUS or GMM INFORMATION is received by the UE while waiting for a DETACH ACCEPT message with detach cause different from "power off, UE shall:

- ignore any of the GMM common message.

~~12.3.1.5 PS detach / power off / accepted~~~~12.3.1.5.1 Definition~~~~12.3.1.5.2 Conformance requirement~~

The UE detach the IMSI for PS and non-PS services.

## Reference

3GPP TS 24.008 clause 4.7.4.1.

~~12.3.1.5.3 Test purpose~~

To test the behaviour of the UE for the detach procedure.

~~12.3.1.5.4 Method of test~~

## Initial condition

## System Simulator:

— One cell operating in network operation mode 1.

## User Equipment:

— The UE has a valid IMSI.

## Related ICS/IXIT statements

— Support of PS service — Yes/No

UE operation mode A — Yes/No

Switch off on button — Yes/No

Automatic PS attach procedure at switch on or power on — Yes/No

## Test procedure

The UE performs a combined PS attach procedure (for PS and non-PS services).

The UE sends a DETACH REQUEST message to the SS. The UE then deletes the logical link.

## Expected Sequence

## Specific message contents

None.

## 12.3.1.6.5 — Test requirements

At step 3, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with the information elements specified in the above Expected Sequence.

At step 10, when the UE receives the paging message for PS domain, UE shall:

- not respond to the paging message for PS domain.

At step 12, when the UE receives the paging message for CS domain, UE shall:

- not respond to the paging message for CS domain.

## 12.3.1.7 — PS detach / accepted / IMSI detach

## 12.3.1.7.1 — Definition

## 12.3.1.7.2 — Conformance requirement

The UE shall detach for CS services.

## Reference

3GPP TS 24.008 clause 4.7.4.1.

### ~~12.3.1.7.3 Test purpose~~

~~To test the behaviour of the UE for the detach procedure.~~

### ~~12.3.1.7.4 Method of test~~

#### ~~Initial condition~~

##### ~~System Simulator:~~

- ~~— One cell operating in network operation mode I.~~

##### ~~User Equipment:~~

- ~~— The UE has a valid IMSI.~~

#### ~~Related ICS/IXIT statements~~

- ~~— Support of PS service — Yes/No~~
- ~~UE operation mode A — Yes/No~~
- ~~Switch off on button — Yes/No~~
- ~~Automatic PS attach procedure at switch on or power on — Yes/No~~
- ~~User requested non-PS detached — Yes/No~~

#### ~~Test procedure~~

~~The UE performs a combined PS attach procedure (for PS and non-PS services).~~

~~The UE performs an PS detach (for non-PS services).~~

~~CS services are not possible.~~

~~The UE attach for non-PS services by a routing area update procedure and CS services are again possible.~~

### Specific message contents

None.

#### 12.3.1.7.5 Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with the information elements specified in the above Expected Sequence.

At step10, after the detach procedure (Detach type = 'normal detach, IMSI detach') is completed, UE shall:

- respond to the paging message for PS domain by sending the SERVICE REQUEST message.

At step12, after the detach procedure (Detach type = 'normal detach, IMSI detach') is completed, UE shall:

- not respond to the paging message for CS.

At step21, after the routing area updating procedure (Update type = 'Combined RA/LA updating') is completed, UE shall:

- respond to the paging message for CS domain by sending the PAGING RESPONSE message.

#### 12.3.1.8 PS detach / abnormal cases / change of cell into new routing area

##### 12.3.1.8.1 Definition

##### 12.3.1.8.2 Conformance requirement

When a change of cell into a new routing area is performed before DETACH ACCEPT message is received by the UE, the UE shall abort the PS detach procedure and re-initiate it after the routing area update procedure.

### Reference

3GPP TS 24.008 clause 4.7.4.1.

##### 12.3.1.8.3 Test purpose

To test the behaviour of the UE in case of procedure collision.

##### 12.3.1.8.4 Method of test

### Initial condition

System Simulator:

- Two cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1) and cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4).  
Both cells are operating in network operation mode I.

User Equipment:

- The UE has a valid IMSI.

### Related ICS/IXIT statements

- Support of PS service — Yes/No
- UE operation mode A — Yes/No
- Switch off on button — Yes/No
- Automatic PS attach procedure at switch on or power on — Yes/No
- User requested combined PS and non-PS detached without powering off — Yes/No

**Test procedure**

The UE performs a combined PS attach procedure (for PS and non-PS services).

The UE initiates a PS detach procedure. The DETACH ACCEPT message is delayed from the SS.

The UE performs a cell update into a new routing area.

The UE shall re-initiate a PS detach procedure when the routing area update procedure is finished.

The UE deletes the logical link.

**Expected Sequence**

NOTE: — The definitions for "Off cell" and "Serving cell" are specified in TS34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only".

### Specific message contents

None.

#### 12.3.1.8.5 Test requirements

At step4, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with the information elements specified in the above Expected Sequence.

At step12, when a change of cell into a new routing area is performed before DETACH ACCEPT message is received by the UE, UE shall:

- abort a PS detach procedure.
- perform routing area updating procedure.

At step15, when the UE completes a routing area updating procedure, UE shall:

- re-initiate the PS detach procedure.

#### 12.3.1.9 PS detach / abnormal cases / PS detach procedure collision

##### 12.3.1.9.1 Definition

##### 12.3.1.9.2 Conformance requirement

When a DETACH REQUEST is received by the UE while waiting for a DETACH ACCEPT message, the UE shall answer the network initiated PS detach procedure.

### Reference

3GPP TS 24.008 clause 4.7.4.1.

##### 12.3.1.9.3 Test purpose

To test the behaviour of the UE in case of procedure collision.

##### 12.3.1.9.4 Method of test

### Initial condition

System Simulator:

- One cell operating in network operation mode I.

User Equipment:

- The UE has a valid IMSI.

### Related ICS/IXIT statements

- Support of PS service—Yes/No
- UE operation mode A—Yes/No
- Switch off-on button—Yes/No
- Automatic PS attach procedure at switch on or power on—Yes/No
- User requested combined PS and non-PS detached without powering off—Yes/No

### Test procedure

The UE performs a combined PS attach procedure (for PS and non-PS services).

The UE initiates a PS detach. The SS does not answer the detach procedure, but initiates a detach procedure (cause re-attach not required). The UE shall continue with the network initiated detach procedure.

The UE deletes the logical link.

PS and CS services are not possible.

#### 12.3.1.9.5 ——— Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with the information elements specified in the above Expected Sequence.

At step9, when the UE receives DETACH REQUEST message from SS before UE initiated PS detach procedure has been completed, UE shall:

- send the DETACH ACCEPT message to SS.

At step12, when the UE receives the paging message for PS domain, UE shall:

- not respond to the paging message for PS domain.

At step14, when the UE receives the paging message for CS domain, UE shall:

- not respond to the paging message for CS domain.

## ~~12.3.2 Network initiated PS detach procedure~~

### ~~12.3.2.1 PS detach / re-attach not required / accepted~~

#### ~~12.3.2.1.1 Definition~~

#### ~~12.3.2.1.2 Conformance requirement~~

~~The UE detach the IMSI for PS services.~~

#### ~~Reference~~

~~3GPP TS 24.008 clause 4.7.4.2.~~

#### ~~12.3.2.1.3 Test purpose~~

~~To test the behaviour of the UE for the detach procedure.~~

#### ~~12.3.2.1.4 Method of test~~

#### ~~Initial condition~~

~~System Simulator:~~

- ~~— One cell operating in network operation mode II (in case of UE operation mode A).~~

~~User Equipment:~~

- ~~— The UE has a valid IMSI.~~

#### ~~Related ICS/IXIT statements~~

- ~~— Support of PS service — Yes/No~~
- ~~UE operation mode C — Yes/No~~
- ~~UE operation mode A — Yes/No (only if mode C not supported)~~
- ~~Switch off on button — Yes/No~~
- ~~Automatic PS attach procedure at switch on or power on — Yes/No~~

#### ~~Test procedure~~

~~The UE performs a PS attach procedure.~~

~~The SS sends a DETACH REQUEST message to the UE. The UE then deletes the logical link.~~

~~The SS signal to the UE, but no response is received, as the signalling link is disconnected.~~

## Specific message contents

None.

## 12.3.2.1.5 Test requirements

At step4, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step9, when the UE receives the DETACH REQUEST message from SS and the detach type IE indicates 're-attach not required', the UE shall:

- send DETACH ACCEPT message to SS.

At step11, when the UE receives the paging message for PS domain, UE shall:

- not respond to the paging message for PS domain.

## 12.3.2.2 PS detach / rejected / IMSI invalid / PS services not allowed

## 12.3.2.2.1 Definition

## 12.3.2.2.2 Conformance requirement

- 1) If the network performs a PS detach procedure with the cause 'PS services not allowed', the User Equipment shall consider USIM invalid for PS services until power is switched off or USIM is removed.
- 2) If the network performs a PS detach procedure with the cause 'PS services not allowed' the User Equipment shall delete the stored RAI, PS-CKSN, P-TMSI and P-TMSI signature.

## Reference

3GPP TS 24.008 clause 4.7.4.2.

### ~~12.3.2.2.3 Test purpose~~

~~To test the behaviour of the UE if the network orders a PS detach procedure with the cause 'PS services not allowed' (no valid PS-subscription for the IMSI).~~

### ~~12.3.2.2.4 Method of test~~

#### ~~Initial condition~~

#### ~~System Simulator:~~

- ~~— Two cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (HPLMN, RAI-1) and cell B in MCC2/MNC1/LAC1/RAC1 (RAI-2).~~
- ~~Both cells are operating in network operation mode II.~~

#### ~~User Equipment:~~

- ~~— The UE has a valid P-TMSI-1, P-TMSI-1 signature and RAI-1.~~

#### ~~Related ICS/IXIT statements~~

- ~~— Support of PS service — Yes/No~~
- ~~UE operation mode C — Yes/No~~
- ~~UE operation mode A — Yes/No~~
- ~~USIM removal possible without powering down — Yes/No~~
- ~~Switch off on button — Yes/No~~
- ~~Automatic PS attach procedure at switch on or power on — Yes/No~~

#### ~~Test procedure~~

~~The SS performs a detach with the cause value 'PS services not allowed'. The SS checks that the UE does not perform PS attach in another PLMN.~~

### ~~12.3.2.2.5 Test requirements~~

~~At step4 and 15, when the UE is powered up or switched on, UE shall:~~

- ~~— initiate the PS attach procedure with the information elements specified in the above Expected Sequence.~~

~~At step8, when the UE receives the DETACH REQUEST message (Detach type = 're-attach not required', Cause = 'PS services not allowed') from SS, UE shall:~~

- ~~— send DETACH ACCEPT message.~~

~~At step13, UE shall:~~

- ~~— not perform PS attach procedure.~~

### ~~12.3.2.3 PS detach / IMSI detach / accepted~~

#### ~~12.3.2.3.1 Definition~~

#### ~~12.3.2.3.2 Conformance requirement~~

~~The UE detach the IMSI for PS services.~~

#### Reference

3GPP TS 24.008 clause 4.7.4.2.

#### ~~12.3.2.3.3 Test purpose~~

~~To test the behaviour of the UE for the detach procedure.~~

#### ~~12.3.2.3.4 Method of test~~

#### Initial condition

System Simulator:

- One cell operating in network operation mode I.

User Equipment:

- The UE has a valid IMSI.

#### Related ICS/IXIT statements

- Support of PS service — Yes/No
- UE operation mode A — Yes/No
- Switch off on button — Yes/No
- Automatic PS attach procedure at switch on or power on — Yes/No

#### Test procedure

The UE performs a combined PS attach procedure (for PS and non-PS services).

The SS sends a DETACH REQUEST message to the UE. The UE then performs an IMSI detach (detach for non-PS services).

The SS signal to the UE, but no response is received, as the signalling link is disconnected.

The UE attach for non-PS services by a routing area update procedure. Both PS and CS services are possible.

#### Expected Sequence

#### Specific message contents

None.

#### 12.3.2.3.5 Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with the information elements specified in the above Expected Sequence.

At step8, when the UE receives the DETACH REQUEST message with Detach-type = 'IMSI-detach', UE shall;

- send the DETACH ACCEPT message to SS.

At step10, after the completion of the detach procedure, UE shall;

- perform combined routing area updating procedure.

At step17, when the UE receives the paging message for CS domain, UE shall:

- respond to the paging message for CS domain by sending the PAGING RESPONSE message.

### ~~12.3.2.4 PS detach / re-attach requested / accepted~~

#### ~~12.3.2.4.1 Definition~~

#### ~~12.3.2.4.2 Conformance requirement~~

~~The UE shall deactivate the logical link and re-activate it.~~

#### ~~Reference~~

~~3GPP TS 24.008 clause 4.7.4.2.~~

#### ~~12.3.2.4.3 Test purpose~~

~~To test the behaviour of the UE for the detach procedure in case automatic re-attach.~~

#### ~~12.3.2.4.4 Method of test~~

#### ~~Initial condition~~

~~System Simulator:~~

- One cell in operating in network operation mode I.

~~User Equipment:~~

- The UE has a valid TMSI, P-TMSI, P-TMSI signature and RAI.

#### ~~Related ICS/IXIT statements~~

- Support of PS service—Yes/No
- UE operation mode A—Yes/No
- Switch-off on button—Yes/No
- Automatic PS attach procedure at switch-on or power-on—Yes/No

#### ~~Test procedure~~

~~The UE performs a combined PS attach procedure (for PS and non-PS services).~~

~~The SS sends a DETACH REQUEST message to the UE with cause re-attach. The UE then detaches for PS services. The UE automatically performs a new combined PS attach procedure (for PS and non-PS services) and PS and CS services are possible.~~

## Specific message contents

None.

## 12.3.2.4.5 ——— Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with the information elements specified in the above Expected Sequence.

At step8, when the UE receives DETACH REQUEST message with Detach type = 're-attach required', UE shall:

- send DETACH ACCEPT message to SS.

At step9, after UE completed PS detach procedure with Detach type = 're-attach required', UE shall:

- initiate the combined PS attach procedure.

At step13, when the UE receives the paging message for PS domain, UE shall:

- respond to the paging message for PS domain by sending the SERVICE REQUEST message.

At step18, when the UE receives the paging message for CS domain, UE shall:

- respond to the paging message for CS domain by sending the PAGING RESPONSE message.

### 12.3.2.5 ~~PS detach / rejected / location area not allowed~~

#### 12.3.2.5.1 ~~Definition~~

#### 12.3.2.5.2 ~~Conformance requirement~~

- 1) ~~If the network performs a PS detach procedure with the cause 'location area not allowed' the User Equipment shall:~~
  - 1.1 ~~not perform combined PS attach when in the same location area.~~
  - 1.2 ~~delete the stored LAI, CKSN, TMSI, RAI, PS-CKSN, P-TMSI and P-TMSI signature.~~
  - 1.3 ~~store the LA in the 'forbidden location areas for regional provision of service'.~~
- 2) ~~If the network performs a PS detach procedure with the cause 'location area not allowed' the User Equipment shall:~~
  - 2.1 ~~perform combined PS attach when a new location area is entered.~~
  - 2.2 ~~delete the list of forbidden LAs when power is switched off.~~

#### Reference

3GPP TS 24.008 clauses 4.7.4.2.

#### 12.3.2.5.3 ~~Test purpose~~

~~To test the behaviour of the UE if the network orders the PS detach procedure with the cause 'Location Area not allowed'.~~

~~To test that the UE deletes the list of forbidden LAs when power is switched off.~~

#### 12.3.2.5.4 ~~Method of test~~

#### Initial condition

System Simulator:

- Three cells (not simultaneously activated), cell A in MCC2/MNC1/LAC1/RAC2 (RAI-2, Not HPLMN), cell B in MCC2/MNC1/LAC1/RAC2 (RAI-7, Not HPLMN), cell C in MCC2/MNC1/LAC2/RAC1 (RAI-6, Not HPLMN).  
All cells are operating in network operation mode I.

User Equipment:

~~—The UE has a valid IMSI.~~

#### ~~Related ICS/IXIT statements~~

~~—Support of PS service—Yes/No~~

~~UE operation mode A—Yes/No~~

~~Switch off on button Yes/No~~

~~Automatic PS attach procedure at switch on or power on—Yes/No~~

#### ~~Test procedure~~

~~The SS orders a PS detach with the cause value 'Location Area not allowed'. The SS checks that the UE does not perform combined PS attach while in the location area, performs PS attach when a new location area is entered and deletes the list of forbidden LAs when switched off. CS services are not possible unless an IMSI attach procedure is performed.~~

~~Different types of UE may use different methods to periodically clear the list of forbidden location areas (e.g. every day at 12am). If the list is cleared while the test is being run, it may be necessary to re-run the test.~~

| NOTE: — The definitions for “Off cell” and “Serving cell” are specified in TS34.108 clause 6.1 “Reference Radio Conditions for signalling test cases only”. |           |    |                                 |                                                                                                                                                                 |

#### Specific message contents

None.

#### 12.3.2.5.5 — Test requirements

At step4, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step8, when the UE receive the DETACH REQUEST message (Detach type = 're-attach not required', Cause = 'Location Area not allowed') from SS, UE shall:

- send the DETACH ACCEPT message.

UE shall perform the following action depending on UE location.

- 1) UE is in the same location area.

At step9 and 18, UE shall:

- not perform location updating procedure.

At step11 and 20, when the UE receives the paging message for CS domain, UE shall:

- not respond to the paging message for PS domain.

At step13 and 22, when the UE receives the paging message for PS domain, UE shall:

- not respond to the paging message for PS domain.

At step17, UE shall;

- not perform PS attach procedure.

- 2) UE is in the new location area.

At step27, UE shall;

— perform the combined PS attach procedure.

At step34, when the UE receives the paging message for CS domain with Mobile identity = IMSI, UE shall;

— respond to the paging message for CS domain by sending the PAGING RESPONSE message.

At step41, when the UE receives the paging message for PS domain with Mobile identity = P-TMSI-1, UE shall:

— respond to the paging message for PS domain by sending the SERVICE REQUEST message.

At step50, when the UE is powered up or switched on, UE shall:

— initiate the PS attach procedure with the information elements specified in the above Expected Sequence

At step57, when the UE receives the paging message for CS domain with Mobile identity = IMSI, UE shall;

— respond to the paging message for CS domain by sending the PAGING RESPONSE message.

At step64, when the UE receives the paging message for PS domain with Mobile identity = P-TMSI-1, UE shall:

— respond to the paging message for PS domain by sending the SERVICE REQUEST message.

### ~~12.3.2.6 PS detach / rejected / No Suitable Cells In Location Area~~

#### ~~12.3.2.6.1 Definition~~

#### ~~12.3.2.6.2 Conformance requirement~~

1. If the network performs a PS detach procedure with the cause 'No Suitable Cells In Location Area', the User Equipment shall:

1.1 delete the stored LAI, CKSN, TMSI, RAI, PS-CKSN, P-TMSI and P-TMSI signature.

1.2 store the LA in the 'forbidden location areas for roaming'.

#### Reference

3GPP TS 24.008 clauses 4.7.4.2.

#### ~~12.3.2.6.3 Test purpose~~

To test the behaviour of the UE if the network sends the DETACH REQUEST message with the cause 'No Suitable Cells In Location Area'.

#### ~~12.3.2.6.4 Method of test~~

#### Initial condition

##### System Simulator:

— Three cells, cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC2/RAC1 (RAI-3), cell C in MCC2/MNC1/LAC1/RAC1 (RAI-2)

— All three cells are operating in network operation mode II.

##### User Equipment:

— The UE has valid IMSI.

## Related ICS/IXIT statements

- Support of PS service—Yes/No
- UE operation mode A—Yes/No
- Switch off on button—Yes/No
- Automatic PS attach procedure at switch on or power on—Yes/No

## Test procedure

The SS sends a DETACH REQUEST message with the cause value 'No Suitable Cells In Location Area'. The SS checks that the UE shall not perform combined PS attach while in the same location area on the same PLMN. The SS checks that the UE shall perform PS attach when the UE enters a suitable cell in a different location area on the same PLMN.

## Expected Sequence

| Step                                                                                                                                                                     | Direction |    | Message         | Comments                                                                                                                                                                                                                                                                                 |

| 13                                                                                                                                                                       | ->        |    | DETACH REQUEST  | Message not sent if power is removed.<br>Detach type = 'power switched off, PS detach'                                                                                                                                                                                                   |
| NOTE:—The definitions for "Suitable neighbour cell" and "Serving cell" are specified in TS34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only". |           |    |                 |                                                                                                                                                                                                                                                                                          |

### Specific message contents

None.

#### 12.3.2.6.5 Test requirements

At step3, when the UE is powered up or switched on, UE shall:

—initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step9, when the UE enters a suitable cell in a different location area on the same PLMN, UE shall:

—perform the PS attach procedure.

## 12.4 Routing area updating procedure

This procedure is used to update the actual routing area of an UE in the network.

### 12.4.1 Normal routing area updating

The routing area updating procedure is a GMM procedure used by PS UEs of UE operation mode A or C that are IMSI attached for PS services only.

#### 12.4.1.1 Routing area updating / accepted

##### 12.4.1.1.1 Definition

##### 12.4.1.1.2 Conformance requirement

- 1) If the network accepts the routing area updating procedure and reallocates a P-TMSI, the UE shall acknowledge the new P-TMSI and continue communication with the new P-TMSI.
- 2) If the network accepts the routing area updating procedure from the UE without reallocation of the old P-TMSI, the UE shall continue communication with the old P-TMSI.

### Reference

3GPP TS 24.008 clause 4.7.5.1.

##### 12.4.1.1.3 Test purpose

To test the behaviour of the UE if the network accepts the routing area updating procedure.

The following cases are identified:

- 1) P-TMSI / P-TMSI signature is reallocated.
- 2) Old P-TMSI / P-TMSI signature is not changed.

##### 12.4.1.1.4 Method of test

### Initial condition

System Simulator:

- Two cells, cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4). Both cells are operating in network operation mode II.

User Equipment:

- The UE has a valid IMSI.

## Related ICS/IXIT statements

- Support of PS service—Yes/No  
 UE operation mode A—Yes/No  
 UE operation mode C—Yes/No  
 Switch off on button—Yes/No  
 Automatic PS attach procedure at switch on or power on—Yes/No

## Test procedure

- 1) The UE sends a ROUTING AREA UPDATE REQUEST message. The SS reallocates the P-TMSI and returns ROUTING AREA UPDATE ACCEPT message with a new P-TMSI. The UE acknowledge the new P-TMSI by sending ROUTING AREA UPDATE COMPLETE message. Further communication UE – SS is performed by the new P-TMSI. The UE will not answer signalling addressed to the old P-TMSI.
- 2) The UE sends a ROUTING AREA UPDATE REQUEST message. The SS accepts the P-TMSI and returns ROUTING AREA UPDATE ACCEPT message without any P-TMSI. Further communication UE – SS is performed by the P-TMSI.

## Expected Sequence

| NOTE:—The definitions for "Suitable neighbour cell" and "Serving cell" are specified in TS34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only". |           |    |                                 |                                                                                                                                                                                                       |

### Specific message contents

None.

### 12.4.1.1.5 Test requirements

At step4, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step8, UE shall;

- initiate the routing area updating procedure with the information elements specified in the above Expected Sequence.

At step13, when the UE receives the paging message for PS domain with Mobile identity = P-TMSI-2, UE shall:

- not respond to the paging message for PS domain.

At step16, UE shall;

- initiate the routing area updating procedure with the information elements specified in the above Expected Sequence.

At step19, when the UE receives the paging message for PS domain with Mobile identity = P-TMSI-1, UE shall:

- respond to the paging message for PS domain by sending the SERVICE REQUEST message.

### ~~12.4.1.2 Routing area updating / rejected / IMSI invalid / illegal ME~~

#### ~~12.4.1.2.1 Definition~~

#### ~~12.4.1.2.2 Conformance requirement~~

- ~~1) If the network rejects a routing area updating procedure from the User Equipment with the cause 'Illegal ME', the User Equipment shall consider USIM invalid for PS services until power is switched off or USIM is removed.~~
- ~~2) If the network rejects a routing area updating procedure from the User Equipment with the cause 'Illegal ME', the User Equipment shall delete the stored RAI, PS-CKSN, P-TMSI and P-TMSI signature.~~

#### Reference

3GPP TS 24.008 clause 4.7.5.1.

#### ~~12.4.1.2.3 Test purpose~~

~~To test the behaviour of the UE if the network rejects the routing area updating procedure of the UE with the cause 'Illegal ME'.~~

#### ~~12.4.1.2.4 Method of test~~

#### Initial condition

System Simulator:

- ~~— Three cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4), cell C in MCC2/MNC1/LAC1/RAC1 (RAI-2).~~
- ~~All three cells are operating in network operation mode II (in case of UE operation mode A)~~

User Equipment:

- ~~— The UE has a valid P-TMSI-1, P-TMSI-1 signature and RAI-1.~~

#### Related ICS/IXIT statements

- ~~— Support of PS service — Yes/No~~
- ~~UE operation mode C — Yes/No~~
- ~~UE operation mode A — Yes/No (only if mode C not supported)~~
- ~~USIM removal possible without powering down — Yes/No~~
- ~~Switch off on button — Yes/No~~
- ~~Automatic PS attach procedure at switch on or power on — Yes/No~~

#### Test procedure

~~The SS rejects a routing area updating with the cause value 'Illegal ME'. The SS checks that the UE does not perform PS attach in the same or another PLMN.~~

## Expected Sequence

| Step | Direction |    | Message                     | Comments                                                                                                                                                                                                            |

### Specific message contents

None.

#### 12.4.1.2.5 Test requirements

At step4, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step8, UE shall;

- initiate the routing area updating procedure with the information elements specified in the above Expected Sequence.

At step11, after the routing area updating procedure is rejected with GMM cause = 'Illegal ME', UE shall;

- not respond to the paging message for PS domain.

At step14, UE shall,

- not initiate PS attach procedure.

At step17, after the UE is powered up or USIM is replaced, UE shall;

- initiate the PS attach procedure.

#### 12.4.1.3 Routing area updating / rejected / UE identity cannot be derived by the network

##### 12.4.1.3.1 Definition

##### 12.4.1.3.2 Conformance requirement

If the network rejects a routing area updating procedure from the User Equipment with the cause 'UE identity cannot be derived by the network', the User Equipment shall delete the stored RAI, PS-CKSN, P-TMSI and P-TMSI signature.

Depending on the manufacturer the UE may or may not perform a PS attach procedure.

### Reference

3GPP TS 24.008 clause 4.7.5.1.

##### 12.4.1.3.3 Test purpose

To test the behaviour of the UE if the network rejects the routing area updating procedure of the UE with the cause 'UE identity cannot be derived by the network'.

##### 12.4.1.3.4 Method of test

### Initial condition

System Simulator:

- Two cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4).  
Both cells are operating in network operation mode II (in case of UE operation mode A).

#### User Equipment:

- The UE has a valid P-TMSI-1, P-TMSI-1 signature and RAI-1.

#### Related ICS/IXIT statements

- Support of PS service—Yes/No
- UE operation mode C—Yes/No
- UE operation mode A—Yes/No (only if mode C not supported)
- Automatic attach procedure when UE identity cannot be derived by the network—Yes/No
- Switch off on button—Yes/No
- Automatic PS attach procedure at switch on or power on—Yes/No

#### Test procedure

The SS rejects a normal routing area updating with the cause value 'UE identity cannot be derived by the network'. The UE detach locally. A new PS attach may be performed.

## Expected Sequence

## Specific message contents

None.

#### ~~12.4.1.3.5 Test requirements~~

~~At step4, when the UE is powered up or switched on, UE shall:~~

- ~~— initiate the PS attach procedure with the information elements specified in the above Expected Sequence.~~

~~At step9, UE shall;~~

- ~~— initiate the routing area updating procedure with the information elements specified in the above Expected Sequence.~~

~~UE shall perform the following actions depending on the implementation of the UE.~~

~~Case 1) UE supports an Automatic PS attach procedure.~~

~~At step13, UE shall;~~

- ~~— initiate the PS attach procedure.~~

~~Case 2) UE does not support an Automatic PS attach procedure.~~

~~At step20, when the UE receives the paging message for PS domain, UE shall:~~

- ~~— not respond to the paging message for PS domain.~~

#### ~~12.4.1.4a Routing area updating / rejected / location area not allowed~~

##### ~~12.4.1.4a.1 Definition~~

##### ~~12.4.1.4a.2 Conformance requirement~~

- ~~1) If the network rejects a routing area updating procedure from the User Equipment with the cause 'location area not allowed' the User Equipment shall:~~

~~1.1 not perform PS attach when in the same location area.~~

~~1.2 delete the stored RAI, PS-CKSN, P-TMSI and P-TMSI signature.~~

~~1.3 store the LA in the 'forbidden location areas for regional provision of service'.~~

- ~~2) If the network rejects a routing area updating procedure from the User Equipment with the cause 'location area not allowed' the User Equipment shall:~~

~~2.1 perform PS attach when a new location area is entered.~~

~~2.2 delete the list of forbidden LAs after switch off (power off).~~

#### ~~Reference~~

~~3GPP TS 24.008 clauses 4.7.5.1.~~

##### ~~12.4.1.4a.3 Test purpose~~

~~To test the behaviour of the UE if the network rejects the routing area updating procedure of the UE with the cause 'Location Area not allowed'.~~

~~To test that the UE deletes the list of forbidden LAs when power is switched off.~~

##### ~~12.4.1.4a.4 Method of test~~

#### ~~Initial condition~~

~~System Simulator:~~

- Three cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1) , cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4), cell C in MCC1/MNC1/LAC2/RAC1 (RAI-3).
- All cells are operating in network operation mode II.

#### User Equipment:

- The UE has a valid IMSI.

#### Related ICS/IXIT statements

- Support of PS service—Yes/No
- UE operation mode A—Yes/No
- UE operation mode C—Yes/No
- USIM removal possible without powering down—Yes/No
- Switch off on button—Yes/No
- Automatic PS attach procedure at switch on or power on—Yes/No

#### Test procedure

The SS rejects a routing area updating with the cause value 'Location Area not allowed'. The SS checks that the UE does not perform PS attach while in the location area, performs PS attach when a new location area is entered and deletes the list of forbidden LAs when switched off.

Different types of UE may use different methods to periodically clear the list of forbidden location areas (e.g. every day at 12am). If the list is cleared while the test is being run, it may be necessary to re-run the test.

### Specific message contents

None.

### 12.4.1.4a.5 Test requirements

At step4, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step9, UE shall:

- initiate the routing area updating procedure with the information elements specified in the above Expected Sequence.

At step12, when the UE receives the paging message for PS domain, UE shall:

- not respond to the paging message for PS domain.

At step12 and 15, when in the same location area, UE shall

- not perform PS attach procedure.

At step18, when a new location area is entered, UE shall

- perform the PS attach procedure.

At step24, when the USIM is replaced, UE shall;

- perform the PS attach procedure.

At step29, UE shall;

- initiate the routing area updating procedure with the information elements specified in the above Expected Sequence.

#### ~~12.4.1.4b Routing area updating / rejected / No Suitable Cells In Location Area~~

##### ~~12.4.1.4b.1 Definition~~

##### ~~12.4.1.4b.2 Conformance requirement~~

1) If the network rejects a routing area updating procedure from the User Equipment with the cause 'No Suitable Cells In Location Area', the User Equipment shall:

- 1.1 delete the stored RAI, PS-CKSN, P-TMSI and P-TMSI signature.
- 1.2 store the LA or the PLMN identity in the 'forbidden location areas for roaming'.
- 1.3 search for a suitable cell in a different location area on the same PLMN.

#### Reference

3GPP TS 24.008 clauses 4.7.5.1.

##### ~~12.4.1.4b.3 Test purpose~~

To test the behaviour of the UE if the network rejects the routing area updating procedure with the cause 'No Suitable Cells In Location Area'.

To test that the UE deletes the list of forbidden LAs when power is switched off.

##### ~~12.4.1.4b.4 Method of test~~

#### Initial condition

##### System Simulator:

- Four cells, cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC2/RAC1 (RAI-3), cell C in MCC2/MNC1/LAC1/RAC1 (RAI-2), cell D in MCC1/MNC1/LAC1/RAC2 (RAI-4);
- All three cells are operating in network operation mode II.

##### User Equipment:

- The UE has valid IMSI.

#### Related ICS/IXIT statements

- Support of PS service — Yes/No
- UE operation mode A — Yes/No
- USIM removal possible without powering down — Yes/No

Switch off on button — Yes/No

Automatic PS attach procedure at switch on or power on — Yes/No

### Test procedure

The SS rejects a routing area updating with the cause value 'No Suitable Cells In Location Area'. The SS checks that the UE shall perform PS attach procedure when the UE enters a suitable cell in a different location area on the same PLMN.

### Expected Sequence

| Step                                                                                                                                                                       | Direction |    | Message                     | Comments                                                                                                                                                                                                                                                                                                                                                                                    |

### Specific message contents

None.

#### 12.4.1.4b.5 ——— Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step7, UE shall;

- initiate the routing area updating procedure.

At step9, when the UE enters a suitable cell in a different location area on the same PLMN, UE shall:

- perform the PS attach procedure.

#### 12.4.1.5 ——— Routing area updating / abnormal cases / attempt counter check / miscellaneous reject causes

##### 12.4.1.5.1 ——— Definition

##### 12.4.1.5.2 ——— Conformance requirement

When a routing area updating procedure is rejected with the attempt counter less than five, the UE shall repeat the routing area updating procedure after T3330 timeout.

When a T3330 timeout has occurred during a routing area updating procedure with the attempt counter five, the UE shall start timer T3302.

When the T3302 expire, a new routing area updating procedure shall be initiated.

### Reference

3GPP TS 24.008 clause 4.7.5.1.

##### 12.4.1.5.3 ——— Test purpose

To test the behaviour of the UE with respect to the attempt counter.

##### 12.4.1.5.4 ——— Method of test

### Initial condition

System Simulator:

- Two cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4). The ATT-flag shall indicate that the MS should use IMSI attach/detach procedures.  
Both cells are operating in network operation mode II (in case of UE operation mode A).

User Equipment:

- The UE has a valid P-TMSI-1, P-TMSI-1 signature and RAI-1.

### Related ICS/IXIT statements

- Support of PS service — Yes/No
- UE operation mode C — Yes/No
- UE operation mode A — Yes/No (only if mode C not supported)

Switch off on button — Yes/No

Automatic PS attach procedure at switch on or power on — Yes/No

### Test procedure

The UE initiates a routing area updating procedure (attempt counter zero).

The SS rejects the routing area updating procedure with a GMM cause 'congestion' code.

The UE initiates a new routing area updating procedure (attempt counter one) after T3311 expires.

The SS rejects the routing area updating procedure with a GMM cause 'congestion' code.

The UE initiates a new routing area updating procedure (attempt counter two) after T3311 expires.

The SS rejects the routing area updating procedure with a GMM cause 'congestion' code.

The UE initiates a new routing area updating procedure (attempt counter three) after T3311 expires.

The SS rejects the routing area updating procedure with a GMM cause 'congestion' code.

The UE initiates a new routing area updating procedure (attempt counter four) after T3311 expires.

The SS rejects the routing area updating procedure with a GMM cause 'congestion' code.

The UE initiates a new routing area updating procedure with attempt counter five (after T3311 expires).

The SS rejects the routing area updating procedure with a GMM cause 'congestion' code.

The UE shall not perform a new successful routing area updating procedure after T3311 seconds.

The UE initiates a routing area updating procedure with attempt counter zero after T3302 expires with the stored P-TMSI, P-TMSI signature, PS-CKSN and RAI.

T3302; set to 12 minutes.

T3330; set to 15 seconds.

T3311; set to 15 seconds.

#### Specific message contents

None.

#### 12.4.1.5.5 Test requirements

At step4, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step8, UE shall:

- perform the routing area updating procedure.

UE shall perform the following actions depending on the conditions described below.

- Case 1) At step11, 14, 17 and 20, a routing area updating procedure is rejected from SS with the attempt counter less than five,
  - UE shall:
    - repeat the routing area updating procedure after T3330 timeout
- Case2) At step22 a routing area updating procedure is rejected from SS with the attempt counter five
  - At step22, UE shall:
    - not initiate a routing area updating procedure.
- Case3) At step24, the T3302 expires
  - UE shall:

— initiate the new routing area updating procedure

#### ~~12.4.1.6 Routing area updating / abnormal cases / change of cell into new routing area~~

##### ~~12.4.1.6.1 Definition~~

##### ~~12.4.1.6.2 Conformance requirement~~

~~When a change of cell into a new routing area is performed before the routing area updating procedure is finished, the UE shall abort the routing area updating procedure and re-initiate it in the new routing area.~~

#### ~~Reference~~

~~3GPP TS 24.008 clause 4.7.5.1.~~

##### ~~12.4.1.6.3 Test purpose~~

~~To test the behaviour of the UE in case of procedure collision.~~

##### ~~12.4.1.6.4 Method of test~~

#### ~~Initial condition~~

##### ~~System Simulator:~~

- ~~— Three cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4) and cell C in MCC1/MNC1/LAC1/RAC3 (RAI-5).~~
- ~~All cells are operating in network operation mode II (in case of UE operation mode A).~~

##### ~~User Equipment:~~

- ~~— The UE has a valid P-TMSI-1, P-TMSI-1 signature and RAI-1.~~

#### ~~Related ICS/IXIT statements~~

- ~~— Support of PS service — Yes/No~~
- ~~UE operation mode C — Yes/No~~
- ~~UE operation mode A — Yes/No~~
- ~~Switch off on button — Yes/No~~
- ~~Automatic PS attach procedure at switch on or power on — Yes/No~~

#### ~~Test procedure~~

~~The UE initiates a routing area updating procedure. The ROUTING AREA UPDATE ACCEPT message is delayed from the SS. The UE performs a cell update into a new routing area. The UE shall re-initiate a routing area updating procedure in the new routing area.~~

## Expected Sequence

| NOTE: — The definitions for "Off cell" and "Serving cell" are specified in TS34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only". |           |    |                             |                                                                                                                                                                                        |

## Specific message contents

None.

#### 12.4.1.6.5 ~~Test requirements~~

~~At step4, when the UE is powered up or switched on, UE shall:~~

- ~~—initiate the PS attach procedure with the information elements specified in the above Expected Sequence.~~

~~At step9, UE shall:~~

- ~~—initiate the routing area update procedure.~~

~~At step13, when change of cell into a new routing area is performed before the routing area updating procedure is finished, UE shall:~~

- ~~—abort the routing area updating procedure.~~
- ~~—re-initiate new routing area updating procedure in the new routing area.~~

#### ~~12.4.1.7 Routing area updating / abnormal cases / change of cell during routing area updating procedure~~

##### ~~12.4.1.7.1 Definition~~

##### ~~12.4.1.7.2 Conformance requirement~~

~~When a change of cell within a new routing area is performed before the routing area updating procedure is finished, the UE shall perform the cell update before the routing area updating procedure is finished.~~

#### ~~Reference~~

~~3GPP TS 24.008 clause 4.7.5.1.~~

##### ~~12.4.1.7.3 Test purpose~~

~~To test the behaviour of the UE in case of procedure collision.~~

##### ~~12.4.1.7.4 Method of test~~

#### ~~Initial condition~~

~~System Simulator:~~

- ~~—Three cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4) and cell C in MCC1/MNC1/LAC1/RAC2 (RAI-4). All three cells are operating in network operation mode II.~~

~~User Equipment:~~

- ~~—The UE has a valid P-TMSI-1, P-TMSI-1 signature and RAI-1.~~

#### ~~Related ICS/IXIT statements~~

- ~~—Support of PS service—Yes/No~~
- ~~UE operation mode C—Yes/No~~
- ~~UE operation mode A—Yes/No~~
- ~~Switch off on button—Yes/No~~
- ~~Automatic PS attach procedure at switch on or power on—Yes/No~~

#### ~~Test procedure~~

~~The UE initiates a routing area updating procedure. The ROUTING AREA UPDATE ACCEPT message is delayed from the SS. The UE performs a cell update within the routing area. The UE then waits for the ROUTING AREA UPDATE ACCEPT message.~~

## Expected Sequence

## Specific message contents

None.

## 12.4.1.7.5 Test requirements

At step4, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step8, UE shall:

- initiate routing area update procedure.

At step12a, when a change of cell within a new routing area is performed, UE shall:

- perform the cell update before the routing area updating procedure is finished.

#### ~~12.4.1.8 Routing area updating / abnormal cases / P-TMSI reallocation procedure collision~~

##### ~~12.4.1.8.1 Definition~~

##### ~~12.4.1.8.2 Conformance requirement~~

When a P-TMSI REALLOCATION COMMAND message is received by the UE while waiting for a ROUTING AREA UPDATE ACCEPT message, the UE shall ignore the P-TMSI reallocation procedure and continue with the routing area updating procedure.

#### Reference

3GPP TS 24.008 clause 4.7.5.1.

##### ~~12.4.1.8.3 Test purpose~~

To test the behaviour of the UE in case of procedure collision.

##### ~~12.4.1.8.4 Method of test~~

#### ~~Initial condition~~

System Simulator:

- Two cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1) and cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4).  
Both cells are operating in network operation mode II (in case of UE operation mode A).

User Equipment:

- The UE has a valid IMSI.

#### Related ICS/IXIT statements

- Support of PS service—Yes/No
- UE operation mode C—Yes/No
- UE operation mode A—Yes/No (only if mode C not supported)
- Switch off on button—Yes/No
- Automatic PS attach procedure at switch on or power on—Yes/No

#### Test procedure

The UE initiates a routing area updating procedure. The SS does not answer the routing area updating procedure, but initiates a P-TMSI reallocation procedure. The UE shall ignore the P-TMSI reallocation procedure and continue with the routing area updating procedure.

## Expected Sequence

| Step                                                                                                                                                      | Direction |    | Message                      | Comments                                                                                                                |

| NOTE: The definitions for "Off cell" and "Serving cell" are specified in TS34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only". |           |    |                              |                                                                                                                         |

## Specific message contents

None.

## 12.4.1.8.5 Test requirements

At step4, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step9, UE shall:

- initiate the routing area updating procedure.

At step11, when a P-TMSI REALLOCATION COMMAND message is received from SS while waiting for a ROUTING AREA UPDATE ACCEPT message, UE shall:

- ~~— ignore the P-TMSI reallocation procedure.~~
- ~~— continue with the routing area updating procedure.~~

## ~~12.4.2 Combined routing area updating~~

The combined routing area updating procedure is a GMM procedure used by PS UEs of UE operation mode A that are IMSI attached for PS and non-PS services. In order to use the combined routing area updating procedure, the network must operate in network operation mode I.

### ~~12.4.2.1 Combined routing area updating / combined RA/LA accepted~~

#### ~~12.4.2.1.1 Definition~~

#### ~~12.4.2.1.2 Conformance requirement~~

- ~~1) If the network accepts the combined routing area updating procedure and reallocates a P-TMSI, the UE shall acknowledge the new P-TMSI and continue communication with the new P-TMSI.~~
- ~~2) If the network accepts the combined routing area updating procedure from the UE without reallocation of the old P-TMSI, the UE shall continue communication with the old P-TMSI.~~

#### Reference

3GPP TS 24.008 clause 4.7.5.2.

#### ~~12.4.2.1.3 Test purpose~~

To test the behaviour of the UE if the network accepts the combined routing area updating procedure.

The following cases are identified:

- ~~1) P-TMSI / P-TMSI signature is reallocated.~~
- ~~2) Old P-TMSI / P-TMSI signature is not changed.~~
- ~~3) Mobile terminating CS call is allowed with IMSI.~~
- ~~4) Mobile terminating CS call is allowed with TMSI.~~

#### ~~12.4.2.1.4 Method of test~~

#### Initial condition

##### System Simulator:

- ~~— Two cells, cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4).~~
- ~~Both cells operating in network operation mode I.~~

##### User Equipment:

- ~~— The UE has a valid IMSI.~~

#### Related ICS/IXIT statements

- ~~— Support of PS service — Yes/No~~
- ~~UE operation mode A — Yes/No~~
- ~~Switch off on button — Yes/No~~
- ~~Automatic PS attach procedure at switch on or power on — Yes/No~~

## Test procedure

- 1) A combined PS attach procedure is performed. The UE sends a ROUTING AREA UPDATE REQUEST message. The SS reallocates the P-TMSI, unassigns the TMSI and returns ROUTING AREA UPDATE ACCEPT message with a new P-TMSI and IMSI. The UE acknowledge the new P-TMSI by sending ROUTING AREA UPDATE COMPLETE message. Further communication UE – SS is performed by the new P-TMSI. For CS calls, the IMSI is used
- 2) The UE is CS paged in order to verify that the IMSI is used for CS calls.
- 3) A combined PS attach procedure is performed. The UE sends an ROUTING AREA UPDATE REQUEST message. The SS accepts the P-TMSI signature and returns ROUTING AREA UPDATE ACCEPT message without any P-TMSI and with a new TMSI. The UE acknowledge the new TMSI by sending ROUTING AREA UPDATE COMPLETE message. Further communication UE-SS is performed by the old P-TMSI. For CS calls, the new TMSI is used.
- 4) The UE is CS paged in order to verify that the TMSI is used for CS calls.

## Specific message contents

None.

#### 12.4.2.1.5 ~~Test requirements~~

At step3, when the UE is powered up or switched on, UE shall:

- ~~— initiate the combined PS attach procedure with information elements specified in the above Expected Sequence.~~

At step7, when the RF level of the attached cell is lower than the RF level of the new cell, UE shall:

- ~~— initiate the combined routing area update procedure (Update type = 'Combined RA/LA updating') with the information elements specified above Expected Sequence.~~

At step9, UE shall:

- ~~— acknowledge the new P-TMSI by sending the ROUTING AREA UPDATE COMPLETE message.~~

At step11, when the UE receives the paging message for PS domain, UE shall:

- ~~— respond to the paging message for PS domain by sending the SERVICE REQUEST message.~~

At step16, when the UE receives the paging message for CS domain, UE shall;

- ~~— respond to the paging message for CS domain by sending the PAGING RESPONSE message.~~

At step20, when the RF level of the attached cell is lower than the RF level of the new cell, UE shall:

- ~~— initiate the combined routing area update procedure (Update type = 'Combined RA/LA updating') with the information elements specified above Expected Sequence.~~

At step22, UE shall:

- ~~— acknowledge the new TMSI by sending the ROUTING AREA UPDATE COMPLETE message.~~

At step24, when the UE receives the paging message for PS domain, UE shall:

- ~~— respond to the paging message for PS domain by sending the SERVICE REQUEST message.~~

At step29, when the UE receives the paging message for CS domain, UE shall;

- ~~— respond to the paging message for CS domain by sending the PAGING RESPONSE message.~~

#### 12.4.2.2 ~~Combined routing area updating / UE in CS operation at change of RA~~

##### 12.4.2.2.1 ~~Definition~~

##### 12.4.2.2.2 ~~Conformance requirement~~

PS UE in UE operation mode A that is in an ongoing CS transaction at change of routing area shall initiate the normal routing area updating procedure.

##### Reference

3GPP TS 24.008 clause 4.7.5.2.

##### 12.4.2.2.3 ~~Test purpose~~

To test the behaviour of the UE if the routing area is changed during an ongoing circuit switched transmission.

##### 12.4.2.2.4 ~~Method of test~~

##### Initial condition

System Simulator:

- Two cells, cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4). Both cells operating in network operation mode I.

#### User Equipment:

- The UE has a valid IMSI.

#### Related ICS/IXIT statements

- Support of PS service — Yes/No
- UE operation mode A — Yes/No
- Switch off on button — Yes/No
- Automatic PS attach procedure at switch on or power on — Yes/No

#### Test procedure

A combined PS attach procedure is performed. The UE in UE operation mode A initiates a CS call. The routing area change. The UE will perform the normal routing area updating procedure during the ongoing circuit-switched transaction.

## Expected Sequence

| Step                                                                                                                                                                       | Direction |    | Message                      | Comments                                                                                                                                                                    |

## Specific message contents

None.

## 12.4.2.2.5 — Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with information elements specified in the above Expected Sequence.

At step9, when the RF level of the attached cell is lower than the RF level of the new cell during the CS connection, UE shall:

- initiate the normal routing area updating procedure.

### ~~12.4.2.3 Combined routing area updating / RA only accepted~~

#### ~~12.4.2.3.1 Definition~~

#### ~~12.4.2.3.2 Conformance requirement~~

- ~~1) If the network accepts the combined PS attach procedure, but GMM cause code 'TMSI unknown in HLR' is sent to the UE the User Equipment shall delete the stored TMSI, LAI and CKSN. The User Equipment shall consider USIM invalid for non-PS services until power is switched off or USIM is removed.~~
- ~~2) If the network accepts the combined PS attach procedure, but GMM cause code 'MSC temporarily not reachable', 'Network failure' or 'Congestion' is sent to the UE, an UE operation mode A UE may perform an MM IMSI attach procedure.~~

#### Reference

3GPP TS 24.008 clause 4.7.5.2.

#### ~~12.4.2.3.3 Test purpose~~

##### ~~Test porpose1~~

~~To test the behaviour of the UE if the network accepts the routing area updating procedure with indication RA only, GMM cause 'TMSI unknown in HLR'.~~

##### ~~Test porpose2~~

~~To test the behaviour of the UE if the network accepts the routing area updating procedure with indication RA only, GMM cause 'MSC temporarily not reachable', 'Network failure' or 'Congestion'.~~

#### ~~12.4.2.3.4 Method of test~~

##### ~~Test Procedure1~~

##### ~~Initial condition~~

~~System Simulator:~~

- ~~— Two cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4).~~
- ~~Both cells operating in network operation mode I.~~

~~User Equipment:~~

- ~~— The UE has a valid IMSI.~~

##### ~~Related ICS/IXIT statements~~

- ~~— Support of PS service — Yes/No~~
- ~~UE operation mode A — Yes/No~~
- ~~Switch off on button — Yes/No~~
- ~~Automatic PS attach procedure at switch on or power on — Yes/No~~

##### ~~Test procedure~~

~~After attach, the UE sends an ROUTING AREA UPDATE REQUEST message. The SS allocates a P-TMSI and returns ROUTING AREA UPDATE ACCEPT message with a P-TMSI. GMM cause 'TMSI unknown in HLR' is indicated from SS. Further communication UE – SS is performed by the P-TMSI. CS services are not possible.~~

| NOTE:—The definitions for "Off cell" and "Serving cell" are specified in TS34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only". |           |    |                                 |                                                                                                                                                                                                 |

## Test Procedure2

## Initial condition

## System Simulator:

- Two cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4).
- Both cells operating in network operation mode I.

## User Equipment:

—The UE has a valid IMSI.

## Related ICS/IXIT statements

—Support of PS service—Yes/No

UE operation mode A—Yes/No

Automatic MM IMSI attach procedure for UE operation mode A UE—Yes/No

Switch off on button—Yes/No

Automatic PS attach procedure at switch on or power on—Yes/No

## Test procedure

After attach, the UE sends an ROUTING AREA UPDATE REQUEST message. The SS allocates a new P-TMSI signature and returns ROUTING AREA UPDATE ACCEPT message. GMM cause 'MSC temporarily not reachable', 'Network failure' or 'Congestion' is indicated from SS. The cause code is arbitrarily chosen. This procedure is repeated until the routing area updating attempt counter is equal to five. An UE operation mode A UE may perform an MM IMSI attach procedure (according to the ICS statement). Further communication UE-SS is performed by the P-TMSI. The existence of a signalling channel is verified by a request for mobile identity. It is further verified that the UE after a successful IMSI attach procedure can perform CS services.

## Expected Sequence

Dependent whether the option 'Automatic MM IMSI attach procedure for UE operation mode A UE' is not supported or not, the steps 1-13 or 14-35 apply depending on manufacturer (see ICS).

None.

### 12.4.2.3.5 — Test requirements

#### Test requirements for Test Procedure1

At step3, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with information elements specified in the above Expected Sequence.

At step7, when the RF level of the attached cell is lower than the RF level of the new cell, UE shall:

- initiate the combined routing area updating procedure.

At step9, UE shall:

- acknowledge the new P-TMSI by sending the ROUTING AREA UPDATE COMPLETE message.

At step11, when the UE receives the paging message for PS domain, UE shall:

- respond to the paging message for PS domain by sending the SERVICE REQUEST message.

At step13, when the UE receives the paging message for CS domain, UE shall:

- not respond to the paging message for CS domain.

#### Test requirements for Test Procedure2

At step3 and 31, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with information elements specified in the above Expected Sequence.

At step6 and 35, when the RF level of the attached cell is lower than the RF level of the new cell, UE shall:

- initiate the combined routing area updating procedure.

At step11, 15, 19 and 23, UE shall:

- re-initiate the combined routing area updating procedure.

At step39, 43, 47 and 51, UE shall:

- re-initiate the combined routing area updating procedure.

At step55, UE shall:

- perform MM location updating procedure.

At step60, when the UE receives the paging message for CS domain, UE shall:

- not respond to the paging message for CS domain.

## ~~12.4.2.4 Combined routing area updating / rejected / PLMN not allowed~~

### ~~12.4.2.4.1 Definition~~

### ~~12.4.2.4.2 Conformance requirement~~

- 1) If the network rejects a combined routing area updating procedure from the User Equipment with the cause 'PLMN not allowed' the User Equipment shall:

- 1.1 not perform combined GPRA attach when switched on in the same location area or PLMN.
- 1.2 delete the stored RAI, PS-CKSN, P-TMSI, P-TMSI signature, TMSI-CKSN and LAI.
- 1.3 store the PLMN in the 'forbidden PLMN list'.

- 2) An MS that receives a ROUTING AREA UPDATE REJECT message stops timer T3330, enters state MM IDLE and for all causes except #12, #14 and #15 deletes the list of "equivalent PLMNs".

## Reference

3GPP TS 24.008 clause 4.7.5.2.

### ~~12.4.2.4.3 Test purpose~~

To test the behaviour of the UE if the network rejects the combined routing area updating procedure of the UE with the cause 'PLMN not allowed'.

### ~~12.4.2.4.4 Method of test~~

## Initial condition

### System Simulator:

- Five cells (not simultaneously activated), cell A in MCC1/MNC2/LAC1/RAC1 (RAI-8), cell B in MCC1/MNC2/LAC1/RAC2 (RAI-10), cell C in MCC1/MNC2/LAC2/RAC1 (RAI-9) and cell D in MCC2/MNC1/LAC1/RAC1 (RAI-2), cell E in MCC1/MNC3/LAC1/RAC1 (RAI-11).
- The PLMN containing Cells A, B and C is equivalent to the PLMN that contains Cell E.  
All five cells are operating in network operation mode I

### User Equipment:

- The UE has a valid IMSI.

## Related ICS/IXIT statements

- Support of PS service—Yes/No
- UE operation mode A—Yes/No
- Switch off on button—Yes/No
- Automatic PS attach procedure at switch on or power on—Yes/No

### Test procedure

The SS rejects a combined routing area updating with the cause value 'PLMN not allowed'. The SS checks that the UE does not perform PS attach if activated in the same PLMN. The SS checks that the UE does not perform IMSI attach if activated in the same PLMN.

### Specific message contents

None.

### 12.4.2.4.5 Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with information elements specified in the above Expected Sequence.

At step9, when the RF level of the attached cell is lower than the RF level of the new cell, UE shall:

- initiate the combined routing area update procedure (Update type = 'Combined RA/LA updating') with the information elements specified above Expected Sequence.

At step 10, the UE shall delete the equivalent PLMN list (MCC=1, MNC=3).

At step 12, the UE shall not initiate a PS attach procedure to cell E.

At step 18 and 24, UE shall:

- not initiate a PS attach procedure.

At step14, 20 and 26, when the UE receives the paging message for PS domain, UE shall:

- not respond to the paging message for PS domain.

At step20, when the UE receives the paging message for CS domain, UE shall:

- not respond to the paging message for CS domain.

At step30, UE shall:

- perform the PS attach procedure.

#### ~~12.4.2.5a~~ Combined routing area updating / rejected / roaming not allowed in this location area

##### ~~12.4.2.5a.1~~ Definition

##### ~~12.4.2.5a.2~~ Conformance requirement

- 1) If the network rejects a combined routing area updating procedure from the User Equipment with the cause 'roaming not allowed in this location area' the User Equipment:
  - 1.1 shall not perform combined PS attach when in the same location area.
  - 1.2 shall delete the stored RAI, PS-CKSN, P-TMSI P-TMSI signature, TMSI, CKSN and LAI.
  - 1.3 shall store the LA in the 'forbidden location areas for roaming'.
  - 1.4 may perform combined PS attach when a new location area is entered.
- 2) The User Equipment shall reset the list of 'Forbidden location areas for roaming' when switched off or when the USIM is removed.

#### Reference

3GPP TS 24.008 clause 4.7.5.2.

##### ~~12.4.2.5a.3~~ Test purpose

###### ~~Test purpose1~~

To test that on receipt of a rejection using the 'Roaming not allowed in this area' cause code, the UE ceases trying a routing area updating procedure on that location area. Successful combined routing area updating procedure is possible in other location areas.

###### ~~Test purpose2~~

To test that if the UE is switched off or the USIM is removed the list of 'forbidden location areas for roaming' is cleared.

##### ~~12.4.2.5a.4~~ Method of test

###### ~~12.4.2.5a.4.1~~ Test procedure1

#### ~~Initial condition~~

System Simulator:

- Two cells, cell A in MCC2/MNC1/LAC1/RAC1 (RAI-2), cell B in MCC2/MNC1/LAC2/RAC1 (RAI-6). Both cells are operating in network operation mode I.

User Equipment:

- The UE has a valid IMSI.

#### Related ICS/IXIT statements

- Support of PS service — Yes/No
- UE operation mode A — Yes/No
- Switch off on button — Yes/No
- Automatic PS attach procedure at switch on or power on — Yes/No

#### Test procedure

The SS rejects a combined routing area updating with the cause value 'Roaming not allowed in this area'. A new attempt for a combined PS attach is not possible. Successful combined PS attach procedure is performed in another location area. The UE is moved back to the 1<sup>st</sup> location area. A combined routing area updating shall not be performed, as the LA is on the forbidden list.

| NOTE: The definitions for "Suitable neighbour cell" and "Serving cell" are specified in TS34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only". |           |    |                                 |                                                                                                                                                                                                       |

#### 12.4.2.5a.4.2 Test procedure2

##### Initial condition

##### System Simulator:

- Two cells, cell A in MCC2/MNC1/LAC1/RAC1 (RAI-2), cell B in MCC2/MNC1/LAC2/RAC1 (RAI-6). Both cells are operating in network operation mode I.

##### User Equipment:

- The UE has a valid IMSI. UE is Idle Updated on cell A.

##### Related ICS/IXIT statements

- Support of PS service — Yes/No
- UE operation mode A — Yes/No
- USIM removal possible without powering down — Yes/No
- Switch off on button — Yes/No
- Automatic PS attach procedure at switch on or power on — Yes/No

### Test procedure

The SS rejects a combined routing area updating with the cause value 'Roaming not allowed in this area'. The UE is switched off for 10 seconds and switched on again. The SS checks that a combined PS attach is possible on the cell on which the previous combined routing area updating had been rejected.

If USIM removal is possible without switching off:

The SS rejects a routing area updating with the cause value 'Roaming not allowed in this area'. The USIM is removed and inserted in the UE. The SS checks that a PS attach procedure and routing area updating procedure is possible on the cell on which the routing area updating had previously been rejected.

## Expected Sequence

None.

### 12.4.2.5a.5 Test requirements

#### Test requirements for Test procedure1

At step3, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with information elements specified in the above Expected Sequence.

At step9, when the RF level of the attached cell is lower than the RF level of the new cell, UE shall:

- initiate the combined routing area update procedure (Update type = 'Combined RA/LA updating') with the information elements specified above Expected Sequence

At step12, when the SS rejects the combined routing area update procedure with GMM cause = 'Roaming not allowed in this area', UE shall:

- not initiate a PS attach procedure.

At step14, when the UE receives the paging message for PS domain, UE shall;

- not respond to the paging message for PS domain.

At step16, when the UE receives the paging message for CS domain, UE shall:

- not respond to the paging message for CS domain.

At step20, UE shall:

- initiate the combined PS attach procedure.

At step27, when the UE receives the paging message for CS domain, UE shall:

- respond to the paging message for CS domain by sending the PAGING RESPONSE message.

At step31, when the UE receives the paging message for PS domain, UE shall:

- respond to the paging message for PS domain by sending the SERVICE REQUEST message.

At step35, when the UE receives the paging message for PS domain, UE shall:

- not respond to the paging message for PS domain.

## Test requirements for Test procedure2

At step3, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with information elements specified in the above Expected Sequence.

At step9, UE shall:

- initiate the combined routing area update procedure (Update type = 'Combined RA/LA updating') with the information elements specified above Expected Sequence.

At step14, when the UE receives the paging message for PS domain, UE shall:

- not respond to the paging message for PS domain.

At step16, when the UE receives the paging message for CS domain, UE shall:

- not respond to the paging message for CS domain.

At step20, UE shall:

- initiate the combined PS attach procedure.

At step27, when the UE receives the paging message for CS domain, UE shall:

- respond to the paging message for CS domain by sending the PAGING RESPONSE message.

At step31, when the UE receives the paging message for PS domain, UE shall:

- respond to the paging message for PS domain by sending the SERVICE REQUEST message.

## 12.4.2.5b ~~Combined routing area updating / rejected / No Suitable Cells In Location Area.~~

### 12.4.2.5b.1 ~~Definition~~

### 12.4.2.5b.2 ~~Conformance requirement~~

- 1) If the network rejects a combined routing area updating procedure from the User Equipment with the cause 'No Suitable Cells In Location Area', the User Equipment shall:
  - 1.1 delete the stored RAI, PS-CKSN, P-TMSI and P-TMSI signature.
  - 1.2 store the LA or the PLMN identity in the 'forbidden location areas for roaming'.
  - 1.3 search for a suitable cell in a different location area on the same PLMN.
- 2) An MS that receives a ROUTING AREA UPDATE REJECT message stops timer T3330, enters state MM IDLE and for all causes except #12, #14 and #15 deletes the list of "equivalent PLMNs".

## Reference

3GPP TS 24.008 clauses 4.7.5.2.4

### ~~12.4.2.5b.3~~ ———— Test purpose

~~To test the behaviour of the UE if the network rejects a combined routing area updating procedure of the UE with the cause 'No Suitable Cells In Location Area'.~~

~~To test that the UE deletes the list of forbidden LAs when power is switched off.~~

### ~~12.4.2.5b.4~~ ———— Method of test

## ~~Initial condition~~

### ~~System Simulator:~~

~~—— Five cells, cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC2/RAC1 (RAI-3), cell C in MCC2/MNC1/LAC1/RAC1 (RAI-2), cell D in MCC1/MNC1/LAC1/RAC2 (RAI-4), cell E in MCC1/MNC2/LAC1/RAC1 (RAI-5).~~

~~—— All five cells are operating in network operation mode II.~~

~~The PLMN contains Cell A, B and D is equivalent to the PLMN that contains Cell E.~~

### ~~User Equipment:~~

~~—— The UE has valid IMSI.~~

## Related ICS/IXIT statements

~~—— Support of PS service——Yes/No~~

~~UE operation mode A——Yes/No~~

~~USIM removal possible without powering down——Yes/No~~

~~Switch off on button——Yes/No~~

~~Automatic PS attach procedure at switch on or power on——Yes/No~~

## Test procedure

~~The SS rejects a combined routing area updating with the cause value 'No Suitable Cells In Location Area'. The SS checks that the UE shall perform PS attach procedure when the UE enters a suitable cell in a different location area on the same PLMN.~~

## Expected Sequence

| NOTE: The definitions for "Suitable neighbour cell", "Serving cell" and "Off cell" are specified in TS34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only". |    |                             |                                                                                                                                    |

### Specific message contents

None.

#### 12.4.2.5b.5 Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the Combined PS attach procedure with the information elements specified in the above Expected Sequence.

At step7, when the RF level of the attached cell is lower than the RF level of the new cell, UE shall:

- initiate the combined routing area update procedure.

At step 8, the UE shall maintain the equivalent PLMN list (MCC=1, MNC=2).

At step9, when the UE enters a suitable cell in a different location area on the same PLMN, UE shall:

- perform the PS attach procedure.

At step 15, the UE shall maintain the equivalent PLMN list (MCC=1, MNC=2).

At step 17, when the UE enters a suitable cell in a different but equivalent PLMN (MCC=1, MNC=2), UE shall:

- perform the PS attach procedure.

#### 12.4.2.6 Combined routing area updating / abnormal cases / access barred due to access class control

##### 12.4.2.6.1 Definition

##### 12.4.2.6.2 Conformance requirement

- 1) The UE shall not perform combined routing area updating procedure, but stays in the current serving cell and applies normal cell reselection process.
- 2) The User Equipment shall perform the combined routing area updating procedure when:
  - 2.1 Access is granted.
  - 2.2 Cell is changed.

## Reference

3GPP TS 24.008 clause 4.7.5.2.

### 12.4.2.6.3 ——— Test purpose

#### Test purpose1

To test the behaviour of the UE in case of access class control (access is granted).

#### Test purpose2

To test the behaviour of the UE in case of access class control (cell is changed).

### 12.4.2.6.4 ——— Method of test

#### 12.4.2.6.4.1 ——— Test procedure1

#### Initial condition

An access class x (0-15) is arbitrarily chosen. The USIM is programmed with this access class x. Communication with User Equipments using access class x is initially indicated to be barred on Cell B.

#### System Simulator:

- Two cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1) has Access Class x not barred, cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4) has Access Class x barred.
- Both cells are operating in network operation mode I.

#### User Equipment:

- The UE has valid IMSI. UE is Idle Updated on cell A.

#### Related ICS/IXIT statements

- Support of PS service — Yes/No
- UE operation mode A — Yes/No
- Switch off on button — Yes/No
- Automatic PS attach procedure at switch on or power on — Yes/No

#### Test procedure

A PS attach procedure is performed. The routing area is changed. The SS indicates access class x barred. A routing area updating procedure is not performed.

The SS indicates that access class x is not barred. A routing area updating procedure is performed.

## Expected Sequence

## 12.4.2.6.4.2 — Test procedure2

## Initial condition

An access class x (0-15) is arbitrarily chosen. The USIM is programmed with this access class x. Communication with User Equipments using access class x is indicated to be barred on cell B.

## System Simulator:

- Three cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1) has access class x not barred, cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4) has access class x barred, cell C in

~~MCC1/MNC1/LAC1/RAC2 (RAI-4) has access class x not barred.  
All three cells are operating in network operation mode I.~~

~~User Equipment:~~

~~—The UE has a valid IMSI.~~

~~Related ICS/IXIT statements~~

~~—Support of PS service—Yes/No~~

~~UE operation mode A—Yes/No~~

~~Switch off on button—Yes/No~~

~~Automatic PS attach procedure at switch on or power on—Yes/No~~

~~Test procedure~~

~~A PS attach procedure is performed. The routing area is changed. The SS indicates access class x barred. A routing area updating procedure is not performed.~~

~~A cell change is performed into a cell where access class x is not barred. A routing area updating procedure is performed.~~

## Expected Sequence

| Step                                                                                                                                                      | Direction |    | Message                      | Comments                                                                                                                                                                                                                                 |

## 12.4.2.6.5 Test requirements

## Test requirements for Test procedure1

At step3, when the UE is powered up or switched on, UE shall:

—initiate the combined PS attach procedure with information elements specified in the above Expected Sequence.

At step8, when the access class x is barred, UE shall:

—not perform the combined routing area updating procedure.

At step10, when the access class x is not barred, UE shall:

—perform the combined routing area updating procedure.

#### Test requirements for Test procedure2

At step3, when the UE is powered up or switched on, UE shall:

—initiate the combined PS attach procedure with information elements specified in the above Expected Sequence.

At step8, when the access class x is barred UE shall:

—not perform the combined routing area updating procedure.

At step11, when the serving cell is changed, UE shall:

—perform the combined routing area updating procedure.

### ~~12.4.2.7 Combined routing area updating / abnormal cases / attempt counter check / procedure timeout~~

#### ~~12.4.2.7.1 Definition~~

#### ~~12.4.2.7.2 Conformance requirement~~

- ~~1) When a T3330 timeout has occurred during a routing area updating procedure, the UE shall repeat the routing area updating procedure after T3330 timeout until the procedure is repeated five times.~~
- ~~2) When a routing area updating procedure is repeated five times, the routing area updating attempt counter is incremented and five more routing area updating procedures are performed. This procedure is repeated until the routing area updating attempt counter is five, the UE shall then start timer T3302.~~
- ~~3) When the T3302 expire, a new routing area updating procedure shall be initiated.~~

#### Reference

3GPP TS 24.008 clause 4.7.5.2.

#### ~~12.4.2.7.3 Test purpose~~

To test the behaviour of the UE with respect to the attempt counter.

#### ~~12.4.2.7.4 Method of test~~

#### Initial condition

##### System Simulator:

- Two cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4).
- Both cells are operating in network operation mode L.

##### User Equipment:

- The UE has a valid IMSI. UE is Idle Updated on cell A.

### Related ICS/IXIT statements

- Support of PS service—Yes/No
- UE operation mode A—Yes/No
- Switch off on button—Yes/No
- Automatic PS attach procedure at switch on or power on—Yes/No

### Test procedure

The UE initiates a routing area updating procedure (routing area updating attempt counter zero). The SS does not answer with ROUTING AREA UPDATE ACCEPT message before T3330 timeout. The UE restarts the routing area updating procedure four times. The SS never answers with ROUTING AREA UPDATE ACCEPT message before T3330 timeout. After five consecutive routing area update procedures, the routing area updating attempt counter is incremented and T3311 is started.

The UE initiates a new routing area updating procedure (routing area updating attempt counter one) after T3311 expires. The SS does not answer with ROUTING AREA UPDATE ACCEPT message before T3330 timeout. The UE restarts the routing area updating procedure four times. The SS never answers with ROUTING AREA UPDATE ACCEPT message before T3330 timeout. After five consecutive routing area update procedures, the routing area updating attempt counter is incremented and T3311 is started.

The UE initiates a new routing area updating procedure (routing area updating attempt counter two) after T3311 expires. The SS does not answer with ROUTING AREA UPDATE ACCEPT message before T3330 timeout. The UE restarts the routing area updating procedure four times. The SS never answers with ROUTING AREA UPDATE ACCEPT message before T3330 timeout. After five consecutive routing area update procedures, the routing area updating attempt counter is incremented and T3311 is started.

The UE initiates a new routing area updating procedure (routing area updating attempt counter three) after T3311 expires. The SS does not answer with ROUTING AREA UPDATE ACCEPT message before T3330 timeout. The UE restarts the routing area updating procedure four times. The SS never answers with ROUTING AREA UPDATE ACCEPT message before T3330 timeout. After five consecutive routing area update procedures, the routing area updating attempt counter is incremented and T3311 is started.

The UE initiates a new routing area updating procedure (routing area updating attempt counter four) after T3311 expires. The SS does not answer with ROUTING AREA UPDATE ACCEPT message before T3330 timeout. The UE restarts the routing area updating procedure four times. The SS never answers with ROUTING AREA UPDATE ACCEPT message before T3330 timeout. After five consecutive routing area update procedures, the routing area updating attempt counter is incremented and as the routing area updating attempt counter is five, T3302 is started.

The UE performs a Location Update procedure.

The UE initiates a routing area updating procedure with routing area updating attempt counter zero after T3302 expires with the stored P-TMSI, P-TMSI signature, PS-CKSN and RAU.

T3302; set to 12 minutes.

T3311; 15 seconds.

T3330; 15 seconds.

## Expected Sequence

### Specific message contents

None.

### 12.4.2.7.5 Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with information elements specified in the above Expected Sequence.

At step8, when the RF level of the attached cell is lower than the RF level of the new cell, UE shall:

- initiate the combined routing area updating procedure with information elements specified in the above Expected Sequence.

UE shall perform the following actions depending on the conditions described below.

- Case 1) A timer T3330 timeout has occurred during a combined routing area updating procedure with the Routing area attempt counter less than five and the Retransmission counter less than five

At step11, 14, 17 and 20, UE shall:

- repeat the combined routing area updating procedure after the timer T3330 timeout

- Case 2) A timer T3330 timeout has occurred during a combined routing area updating procedure with the Routing area attempt counter less than five and the Retransmission counter five

At step 22, UE shall:

— not repeat the combined routing area updating procedure.

Case 3) A timer T3311 timeout has occurred and the Routing area attempt counter is less than five,

At step23, UE shall:

— repeat the combined routing area updating procedure

— Case 4) A timer T3330 timeout has occurred during a combined routing area updating procedure with the Routing area attempt counter five and the Retransmission-counter five.

At step24, UE shall:

— not initiate a routing area updating procedure.

Case5) The timer T3302 expires

At step25, UE shall:

— initiate the new routing area updating procedure

## ~~12.4.2.8 Combined routing area updating / abnormal cases / change of cell into new routing area~~

### ~~12.4.2.8.1 Definition~~

### ~~12.4.2.8.2 Conformance requirement~~

When a change of cell into a new routing area is performed before the routing area updating procedure is finished, the UE shall abort the routing area updating procedure and re-initiate it in the new routing area.

### Reference

3GPP TS 24.008 clause 4.7.5.2.

### ~~12.4.2.8.3 Test purpose~~

To test the behaviour of the UE in case of procedure collision.

### ~~12.4.2.8.4 Method of test~~

### Initial condition

#### System Simulator:

- Three cells, cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4), cell C in MCC1/MNC1/LAC1/RAC3 (RAI-5).
- All three cells are operating in network operation mode I.

#### User Equipment:

- The UE has a valid IMSI.

### Related ICS/IXIT statements

- Support of PS service — Yes/No
- UE operation mode A — Yes/No
- Switch off on button — Yes/No
- Automatic PS attach procedure at switch on or power on — Yes/No

### Test procedure

The UE initiates a routing area updating procedure. The ROUTING AREA UPDATE ACCEPT message is delayed from the SS. The UE performs a cell update into a new routing area. The UE shall re-initiate a routing area updating procedure in the new routing area. The UE shall not increment the attempt counter.

NOTE: The definitions for "Suitable neighbour cell" and "Serving cell" are specified in TS34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only".

## Specific message contents

None.

#### 12.4.2.8.5 Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with the information elements specified in the above Expected Sequence.

At step8, when the RF level of the attached cell is lower than the RF level of the new cell, UE shall:

- initiate the routing area update procedure.

At step12, when change of cell into new routing area is performed before the routing area updating procedure is finished, UE shall:

- abort the routing area updating procedure.
- re-initiate new routing area updating procedure in the new routing area.

#### 12.4.2.9 Combined routing area updating / abnormal cases / change of cell during routing area updating procedure

##### 12.4.2.9.1 Definition

##### 12.4.2.9.2 Conformance requirement

When a change of cell within new routing area is performed before the routing area updating procedure is finished, the UE shall perform the cell update before the routing area updating procedure is finished.

##### Reference

3GPP TS 24.008 clause 4.7.5.2.

##### 12.4.2.9.3 Test purpose

To test the behaviour of the UE in case of procedure collision.

##### 12.4.2.9.4 Method of test

##### Initial condition

System Simulator:

- Three cells, cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4), cell C in MCC1/MNC1/LAC1/RAC2 (RAI-4).
- All three cells are operating in network operation mode I.

User Equipment:

- The UE has a valid IMSI. UE is Idle Updated on cell A.

##### Related ICS/IXIT statements

- Support of PS service—Yes/No
- UE operation mode A—Yes/No
- Switch off on button—Yes/No
- Automatic PS attach procedure at switch on or power on—Yes/No

##### Test procedure

The UE initiates a routing area updating procedure. The ROUTING AREA UPDATE ACCEPT message is delayed from the SS. The UE performs a cell update within the routing area. The UE then waits for the ROUTING AREA UPDATE ACCEPT message.

## Expected Sequence

| Step                                                                                                                                                                       | Direction |    | Message                      | Comments                                                                                                                                                                                                                                                               |

## Specific message contents

None.

#### 12.4.2.9.5 ——— Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with the information elements specified in the above Expected Sequence.

At step8, when the RF level of the attached cell is lower than the RF level of the new cell, UE shall:

- initiate routing area update procedure.

At step12a, when a change of cell within a new routing area is performed before the routing area updating procedure is finished, UE shall:

- perform the cell update.

#### 12.4.2.10 ——— Combined routing area updating / abnormal cases / PS detach procedure collision

##### 12.4.2.10.1 ——— Definition

##### 12.4.2.10.2 ——— Conformance requirement

- 1) When a detach request is received with cause 'PS detach' or 'combined PS/IMSI detach' by the UE while waiting for a ROUTING AREA UPDATE ACCEPT message, the UE shall terminate the routing area updating procedure and continue with the PS detach procedure.
- 2) When a detach request is received with cause 'IMSI detach' by the UE while waiting for a ROUTING AREA UPDATE ACCEPT message, the UE shall ignore the detach request and continue with the routing area updating procedure.

#### Reference

3GPP TS 24.008 clause 4.7.5.2.

##### 12.4.2.10.3 ——— Test purpose

To test the behaviour of the UE in case of procedure collision.

##### 12.4.2.10.4 ——— Method of test

##### 12.4.2.10.4.1 ——— Test procedure1

#### Initial condition

System Simulator:

- Two cells, cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4). Both cells are operating in network operation mode I.

User Equipment:

- The UE has a valid IMSI.

#### Related ICS/IXIT statements

- Support of PS service — Yes/No
- UE operation mode A — Yes/No
- Switch off on button — Yes/No
- Automatic PS attach procedure at switch on or power on — Yes/No

## Test procedure

The UE initiates a routing area updating procedure. The SS does not answer the routing area updating procedure, but initiates a PS detach procedure with cause 'PS detach' or 'combined PS/IMSI detach'. The UE shall terminate the routing area updating procedure and continue with the PS detach procedure.

## Expected Sequence

## Specific message contents

None.

## 12.4.2.10.4.2 Test procedure2

### Initial condition

### System Simulator:

Two cells, cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4).  
Both cells are operating in network operation mode 1.

### User Equipment:

The UE has a valid P-TMSI, P-TMSI signature and RAI.

#### Related ICS/IXIT statements

Support of PS service—Yes/No

UE operation mode A—Yes/No

Switch off on button—Yes/No

Automatic PS attach procedure at switch on or power on—Yes/No

#### Test procedure

The UE initiates a routing area updating procedure. The SS does not answer the routing area updating procedure, but initiates a PS detach procedure with cause 'IMSI detach'. The UE shall ignore the detach procedure and continue with the routing area updating procedure.

## 12.4.2.10.5 Test requirements

## Test requirements for Test procedure1

At step3, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with the information elements specified in the above Expected Sequence.

At step8, when the RF level of the attached cell is lower than the RF level of the new cell, UE shall:

- initiate routing area update procedure.

At step11, when the UE receives a DETACH REQUEST message with cause 'PS detach' or 'combined PS/IMSI detach' from SS while waiting for a ROUTING AREA UPDATE ACCEPT message, UE shall:

- terminate the routing area updating procedure
- continue with the PS detach procedure.

#### Test requirements for Test procedure2

At step3, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with the information elements specified in the above Expected Sequence.

At step8, when the RF level of the attached cell is lower than the RF level of the new cell, UE shall:

- initiate routing area update procedure.

At step11, the UE receives a DETACH REQUEST message with cause 'IMSI detach' from SS while waiting for a ROUTING AREA UPDATE ACCEPT message, UE shall:

- ignore the detach request procedure.
- continue with the routing area updating procedure.

### 12.4.3 Periodic routing area updating

#### 12.4.3.1 Periodic routing area updating / accepted

##### 12.4.3.1.1 Definition

##### 12.4.3.1.2 Conformance requirement

The User Equipment shall perform a periodic routing area update procedure after a T3312 timeout.

#### Reference

3GPP TS 24.008 clauses 4.7.2.2 and 4.7.5.1.

##### 12.4.3.1.3 Test purpose

To test the behaviour of the UE with respect to the periodic routing area updating procedure.

##### 12.4.3.1.4 Method of test

#### Initial condition

System Simulator:

One cell operating in network operation mode II (in case of UE operation mode A).

User Equipment:

The UE has a valid P-TMSI-1, P-TMSI-1 signature and RAI-1.

### Related ICS/IXIT statements

Support of PS service—Yes/No  
 UE operation mode C—Yes/No  
 UE operation mode A—Yes/No  
 USIM removal possible without powering down—Yes/No  
 Switch off on button—Yes/No  
 Automatic PS attach procedure at switch on or power on—Yes/No

### Test procedure

The UE initiates a PS attach procedure with identity P-TMSI. The SS reallocates the P-TMSI and returns ATTACH ACCEPT message with a new P-TMSI and timer T3312. The UE acknowledge the new P-TMSI by sending ATTACH COMPLETE message. A routing area updating procedure is performed at T3312 timeout.

T3312; set to 6 minutes.

## Specific message contents

None.

## 12.4.3.2.5 — Test requirements

At step3, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step5, when the timer T3312 is expired, UE shall:

- initiate the routing area updating procedure with Update type = 'Periodic updating'.

## 12.4.3.3 — Periodic routing area updating / no cell available / network mode I

## 12.4.3.3.1 — Definition

## 12.4.3.3.2 — Conformance requirement

If the UE is both IMSI attached for PS and non-PS services, and if the UE lost coverage of the registered PLMN and timer T3312 expires; if the UE returns to coverage in a cell that supports PS and the network is in network operation mode I, then the UE shall perform a combined routing area update procedure indicating 'combined RA/LA updating with IMSI attach'.

## Reference

3GPP TS 24.008 clauses 4.7.2.2 and 4.7.5.1.

### 12.4.3.3.3 ——— Test purpose

To test the behaviour of the UE with respect to the periodic routing area updating procedure.

### 12.4.3.3.4 ——— Method of test

## Initial condition

### System Simulator:

Two cells, cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4).  
Cell A is operating in network operation mode II and cell B is in network operation mode I.

### User Equipment:

The UE has a valid P-TMSI-1, P-TMSI-1 signature and RAI-1.

Idle updated on Cell A

## Related ICS/IXIT statements

Support of PS service—Yes/No

UE operation mode A—Yes/No

Switch off on button—Yes/No

Automatic PS attach procedure at switch on or power on—Yes/No

## Test procedure

The UE initiates a PS attach procedure. The SS reallocates the P-TMSI and returns ATTACH ACCEPT message with a new P-TMSI and timer T3312. The UE acknowledge the new P-TMSI by sending ATTACH COMPLETE message. PS radio contact is distorted before T3312 timeout. PS radio contact is established again (after T3312 timeout), and a routing area updating procedure is performed immediately.

T3312; set to 6 minutes.

## Expected Sequence

## Specific message contents

None.

## 12.4.3.3.5 Test requirements

At step4, when the UE is powered up or switched on, UE shall:

- initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step12, when the UE is both IMSI attached for PS and non-PS service, and if the UE lost coverage of the reiterated PLMN and the timer T3312 expires, if the UE returns to coverage in a cell that supports PS and the network is in network operation mode I, UE shall:

- perform the combined routing area update procedure indicating "combined RA/LA updating with IMSI attach".

#### ~~12.4.3.4~~ Periodic routing area updating / no cell available

##### ~~12.4.3.4.1~~ Definition

##### ~~12.4.3.4.2~~ Conformance requirement

If the UE is both IMSI attached for PS and non-PS services, and if the UE lost coverage of the registered PLMN and timer T3312 expires; if the UE returns to coverage in a cell that supports PS and the network is in network operation mode II, then the UE shall perform a periodic routing area update procedure and a periodic location update procedure.

#### Reference

3GPP TS 24.008 clauses 4.7.2.2 and 4.7.5.2.

##### ~~12.4.3.4.3~~ Test purpose

To test the behaviour of the UE with respect to the periodic routing area updating procedure.

##### ~~12.4.3.4.4~~ Method of test

#### Initial condition

System Simulator:

- One cell operating in network operation mode II.

User Equipment:

- The UE has a valid P-TMSI-1, P-TMSI-1 signature and RAI-1.

Idle updated on Cell A

#### Related ICS/IXIT statements

- Support of PS service—Yes/No
- UE operation mode A—Yes/No
- Switch off on button—Yes/No
- Automatic PS attach procedure at switch on or power on—Yes/No

#### Test procedure

The UE initiates a PS attach procedure. The SS reallocates the P-TMSI and returns ATTACH ACCEPT message with a new P-TMSI and timer T3312. The UE acknowledge the new P-TMSI by sending ATTACH COMPLETE message. PS radio contact is distorted before T3312 timeout. PS radio contact is established again (after T3312 timeout), and a periodic routing area updating procedure and a periodic location update procedure is performed immediately.

T3312; set to 6 minutes.

## Expected Sequence

## Specific message contents

## RRC System information block type 1

| Information element                  | CommentValue |
|--------------------------------------|--------------|
| T3212 (Periodical Location updating) | Infinity     |

## 12.4.3.4.5 Test requirements

At step2, when the UE is powered up or switched on, UE shall:

- initiate the combined PS attach procedure with the information elements specified in the above Expected Sequence.

At step16, when the UE is both IMSI attached for PS and non-PS service, and if the UE lost coverage of the reiterated PLMN and the timer T3312 expires, if the UE returns to coverage in a cell in the same RA that supports PS and that indicates that the network is in network operation mode II, UE shall:

- perform the periodic routing area updating procedure indicating "Periodic updating".

## ~~12.5 P-TMSI reallocation~~

### ~~12.5.1 Definition~~

### ~~12.5.2 Conformance requirement~~

- ~~1) A User Equipment shall acknowledge a new P-TMSI when explicitly allocated.~~
- ~~2) The P-TMSI shall be updated on the USIM when the User Equipment is correctly deactivated in accordance with the manufacturer's instructions.~~
- ~~3) A User Equipment shall use the given P-TMSI in further communication with the network.~~

### ~~Reference~~

~~3GPP TS 24.008 clause 4.7.6.~~

### ~~12.5.3 Test purpose~~

~~To verify that the UE is able to receive and acknowledge a new P-TMSI by means of an explicit P-TMSI reallocation procedure.~~

~~To verify that the UE has stored the P-TMSI in a non-volatile memory.~~

~~The implicit reallocation procedure is tested in the attach procedure.~~

### ~~12.5.4 Method of test~~

#### ~~Initial condition~~

~~System Simulator:~~

~~One cell operating in network operation mode II.~~

~~User Equipment:~~

~~The UE has a valid IMSI.~~

#### ~~Related ICS/IXIT statements~~

~~Support of PS service—Yes/No~~

~~UE operation mode A—Yes/No~~

~~UE operation mode C—Yes/No (only if mode A not supported)~~

~~Switch off on button—Yes/No~~

~~Automatic PS attach procedure at switch on or power on—Yes/No~~

#### ~~Test procedure~~

~~An explicit P-TMSI reallocation procedure is performed (P-TMSI reallocation command sent from the SS and acknowledged from the UE by P-TMSI reallocation complete). The UE is PS detached and switched off. Its power supply is interrupted for 10 seconds. The power supply is resumed and then the UE is switched on. A PS attach procedure is performed with the given P-TMSI as identity.~~

## Specific message contents

None.

## 12.5.5 Test requirements

At step3, when the UE is powered up or switched on, UE shall:

—initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step7, when the UE receives P-TMSI REALLOCATION COMMAND message from SS, UE shall:

—acknowledge the new P-TMSI by sending P-TMSI REALLOCATION COMPLETE message.

At step12, when the UE is powered up or switched on, UE shall:

—initiate the PS attach procedure with the information elements specified in the above Expected Sequence.

At step18, when the UE receives the paging message for PS domain with Mobile identity = P-TMSI-2, UE shall:

—respond to the paging message for PS domain by sending the SERVICE REQUEST message.

## 12.6 PS authentication and ciphering

### 12.6.1 Test of authentication

The purpose of this procedure is to verify the user identity. A correct response is essential to guarantee the establishment of the connection. If not, the connection will drop.

#### 12.6.1.1 Authentication accepted

##### 12.6.1.1.1 Definition

##### 12.6.1.1.2 Conformance requirement

A User Equipment shall correctly respond in an authentication and ciphering procedure by sending a response with the RES information field set to the same value as the one produced by the authentication and ciphering algorithm in the network.

#### Reference

3GPP TS 24.008 clause 4.7.7.

##### 12.6.1.1.3 Test purpose

To test the behaviour of the UE if the network accepts the authentication and ciphering procedure.

##### 12.6.1.1.4 Method of test

#### Initial condition

##### System Simulator:

Two cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4).

Both cells are operating in network operation mode II.

##### User Equipment:

The UE has a valid IMSI.

#### Related ICS/IXIT statements

Support of PS service—Yes/No

UE operation mode A—Yes/No

UE operation mode C—Yes/No

Switch off on button—Yes/No

Automatic PS attach procedure at switch on or power on—Yes/No

#### Test procedure

A PS attach is performed, and the SS initiates an authentication and ciphering procedure.

The SS checks the value RES sent by the UE in the AUTHENTICATION AND CIPHERING RESPONSE message.

The UE initiates a routing area updating procedure and the SS checks the value of the PS Ciphering Key Sequence Number sent by the UE in the ROUTING AREA REQUEST message.

#### Expected Sequence

#### Specific message contents

None.

#### ~~12.6.1.1.5 Test requirements~~

~~At step4, when the UE is powered on or switched on, UE shall:~~

- ~~—initiate the PS attach procedure with information elements specified in the above Expected Sequence.~~

~~At step6, when the UE receives the AUTHENTICATION AND CIPHERING REQUEST message from SS, UE shall:~~

- ~~—send the AUTHENTICATION AND CIPHERING RESPONSE message with the RES information field set to the same value as the one produced by the authentication and ciphering algorithm in the network.~~

~~At step11, when the RF level of the attached cell is lower than the RF level of the new cell, UE shall:~~

- ~~—perform routing area updating procedure.~~

#### ~~12.6.1.2 Authentication rejected by the network~~

##### ~~12.6.1.2.1 Definition~~

##### ~~12.6.1.2.2 Conformance requirement~~

~~Upon receipt of an AUTHENTICATION AND CIPHERING REJECT message, the UE shall set the PS update status to GU3 ROAMING NOT ALLOWED and shall delete the P-TMSI, P-TMSI signature, RAI and PS ciphering key sequence number stored.~~

~~The USIM shall be considered as invalid until switching off or the USIM is removed.~~

~~If the AUTHENTICATION AND CIPHERING REJECT message is received, the UE shall abort any GMM procedure, shall stop the timers T3310 and T3330 (if running) and shall enter state GMM-DEREGISTERED.~~

##### ~~Reference~~

~~3GPP TS 24.008 clauses 4.7.7.5.~~

##### ~~12.6.1.2.3 Test purpose~~

~~To test the behaviour of the UE if the network rejects the authentication and ciphering procedure.~~

##### ~~12.6.1.2.4 Method of test~~

##### ~~Initial condition~~

##### ~~System Simulator:~~

~~Two cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4).  
Both cells are operating in network operation mode II.~~

##### ~~User Equipment:~~

~~The UE has a valid IMSI.~~

##### ~~Related ICS/IXIT statements~~

~~Support of PS service—Yes/No  
UE operation mode A—Yes/No  
UE operation mode C—Yes/No  
Switch off on button—Yes/No  
Automatic PS attach procedure at switch on or power on—Yes/No~~

### Test procedure

The test sequence is repeated for  $K = 1, 2$ .

A complete PS attach procedure is performed. The SS rejects the following authentication and ciphering procedure. The UE is paged with its former P-TMSI and shall not respond.

The Cell is changed into a new Routing Area.

The SS checks that the UE does not perform normal routing area updating.

The SS then checks that the UE does not perform a PS detach.

The SS checks that the UE does not perform a PS Attach procedure.

### Expected Sequence

The test sequence is repeated for  $k = 1, 2$

For  $k = 1$ , the UE is set in UE operation mode C. If MS operation mode C not supported then  $k = 2$ .

For  $k = 2$  the UE is set in UE operation mode A.

| Step                                                                                                                                                        | Direction |    | Message                               | Comments                                                                                                                                                                               |

## Specific message contents

None.

## 12.6.1.2.5 — Test requirements

At step3, when the UE is powered on or switched on, UE shall:

—initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step9, when the UE receives the AUTHENTICATION AND CIPHERING REJECT message, UE shall:

—not respond paging message for PS domain.

At step13, when the RF level of the attached cell is lower than the RF level of the new cell, UE shall:

—not perform normal routing area updating.

At step17, when the UE is switched off, UE shall:

—not perform PS detach procedure.

### 12.6.1.3 Authentication rejected by the UE

#### 12.6.1.3.1 GMM cause 'MAC failure'

##### 12.6.1.3.1.1 Definition

##### 12.6.1.3.1.2 Conformance requirement

If the UE considers the MAC code (supplied by the core network in the AUTN parameter) to be invalid, the UE shall send AUTHENTICATION AND CIPHERING FAILURE message with the reject cause 'MAC failure' to the System Simulator.

#### Reference

3GPP TS 24.008 clause 4.7.7.

##### 12.6.1.3.1.3 Test purpose

To test the behaviors of the UE, when the UE considers the MAC code (supplied by the core network in the AUTN parameter) to be invalid.

##### 12.6.1.3.1.4 Method of test

#### Initial condition

System Simulator:

—Two cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4).  
Both cells are operating in network operation mode II.

—The MAC (Message Authentication Code) code, which is included in AUTHENTICATION AND CIPHERING REQUEST, is invalid value.

User Equipment:

—The UE has a valid IMSI.

#### Related ICS/IXIT statements

—Support of PS service—Yes/No  
UE operation mode A—Yes/No  
UE operation mode C—Yes/No  
Switch off on button—Yes/No  
Automatic PS attach procedure at switch on or power on—Yes/No

### ~~Test procedure~~

~~A PS attach is performed, and the SS initiates an authentication and ciphering procedure.~~

~~The UE sends AUTHENTICATION AND CIPHERING FAILURE message with reject cause 'MAC failure' to the SS and starts timer T3214.~~

~~The SS initiates an identification procedure, upon receipt of a failure message with reject cause 'MAC failure'.~~

~~After the identification procedure is complete, the SS re-initiates an authentication and ciphering procedure.~~

~~T3360; set to 6 seconds.~~

~~T3318; set to 5 seconds.~~

## Specific message contents

None.

#### ~~12.6.1.3.1.5~~ ~~Test requirements~~

~~At step6, when the UE is powered on or switched on, UE shall:~~

- ~~— initiate the PS attach procedure with information element specified in the above Expected Sequence.~~

~~At step9, when the UE receives the AUTHENTICATION AND CIPHERING REQUEST with Invalid Message Authentication Code, UE shall:~~

- ~~— send the AUTHENTICATION AND CIPHERING FAILURE message with GMM cause 'MAC failure' to the SS~~

~~At step11, when the UE receives the IDENTITY REQUEST message with Identity type = IMSI from SS, UE shall:~~

- ~~— send the IDENTITY RESPONSE message with Mobile identity = IMSI to SS.~~

~~At step14, when the UE receives the second AUTHENTICATION AND CIPHERING REQUEST message (containing a valid MAC) from SS, UE shall:~~

- ~~— send the AUTHENTICATION AND CIPHERING RESPONSE message to SS~~

#### ~~12.6.1.3.2~~ ~~GMM cause 'Synch failure'~~

##### ~~12.6.1.3.2.1~~ ~~Definition~~

##### ~~12.6.1.3.2.2~~ ~~Conformance requirement~~

~~If the UE considers the SQN (supplied by the core network in the AUTN parameter) to be out of range, the UE shall send AUTHENTICATION AND CIPHERING FAILURE message with the reject cause 'Synch failure' to the System Simulator.~~

~~3GPP TS 24.008 clause 4.7.7.~~

##### ~~12.6.1.3.2.3~~ ~~Test purpose~~

~~To test the behaviors of the UE, when the UE considers the SQN (supplied by the core network in the AUTN parameter) to be out of range.~~

##### ~~12.6.1.3.2.4~~ ~~Method of test~~

#### ~~Initial condition~~

#### ~~System Simulator:~~

- ~~— Two cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4).~~
- ~~Both cells are operating in network operation mode II.~~

#### ~~User Equipment:~~

- ~~— The UE has a valid IMSI.~~

#### ~~Related ICS/IXIT statements~~

- ~~— Support of PS service — Yes/No~~
- ~~UE operation mode A — Yes/No~~
- ~~UE operation mode C — Yes/No~~
- ~~Switch off-on button — Yes/No~~
- ~~Automatic PS attach procedure at switch on or power on — Yes/No~~

**Test procedure**

A PS attach is performed, and the SS initiates an authentication and ciphering procedure.

UE sends AUTHENTICATION AND CIPHERING FAILURE message with reject cause 'synch failure' to the SS and starts timer T3214.

SS re-initiates an authentication and ciphering procedure.

T3360; set to 6 seconds.

T3320; set to 15 seconds.

**Expected Sequence**

#### Specific message contents

None.

#### 12.6.1.3.2.5 Test requirements

At step4, when the UE is powered on or switched on, UE shall:

- initiate the PS attach procedure with information element specified in the above Expected Sequence.

At step7, when the UE receives the AUTHENTICATION AND CIPHERING REQUEST message (SQN is out of range.), UE shall:

- send the AUTHENTICATION AND CIPHERING FAILURE message with GMM cause 'synch failure' to the SS

At step10, when the UE receives the second AUTHENTICATION AND CIPHERING REQUEST message from SS, UE shall:

- send the AUTHENTICATION AND CIPHERING RESPONSE message to SS.

At step15, when the RF level of the attached cell is lower than the RF level of the new cell, UE shall:

- perform routing area updating procedure.

#### 12.6.1.3.3 Authentication rejected by the UE / fraudulent network

##### 12.6.1.3.3.1 Definition

##### 12.6.1.3.3.2 Conformance requirement

It can be assumed that the source of the authentication challenge is not genuine (authentication not accepted by the UE) if any of the following occur:

- After sending the AUTHENTICATION & CIPHERING FAILURE message with GMM cause 'MAC failure' the timer T3318 expires;
- Upon receipt of the second AUTHENTICATION & CIPHERING REQUEST message from the network while the T3318 is running and the MAC value cannot be resolved.

If the UE deems that the network has failed in the authentication check, then the UE shall treat the cell where the AUTHENTICATION & CIPHERING REQUEST message was received as barred, until System Information is refreshed.

#### Reference

3GPP TS 24.008 clause 4.7.7.6.1.

##### 12.6.1.3.3.3 Test purpose

To test UE treating a cell as barred:

1. when the network sends the second AUTHENTICATION & CIPHERING REQUEST message with invalid MAC code during the timer T3318 is running.
2. when the timer T3318 has expired.

#### 12.6.1.3.3.4 Method of test

##### Initial condition

##### System Simulator:

- Two cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1(RAI-1), cell B in MCC1/MNC1/LAC1/RAC2(RAI-2).
- Both cells are operating in network operation mode II.

##### User Equipment:

- The UE has a valid IMSI.

##### Related ICS/IXIT statements

- Support of PS service — Yes/No
- UE operation mode A — Yes/No
- UE operation mode C — Yes/No
- Automatic PS attach procedure at switch on or power on — Yes/No

##### Test procedure

Two cells are configured. Cell A transmits with higher power so that the UE attempts an attach procedure to cell A.

During the attach procedure, the SS initiates an authentication and ciphering procedure but it sends an incorrect Message Authentication Code (MAC) value in its AUTHENTICATION AND CIPHERING REQUEST message.

The UE sends AUTHENTICATION AND CIPHERING FAILURE message to the SS indicating authentication failure.

The SS repeats a second time the authentication procedure, which fails again. Next, the UE shall attempt to attach to cell B, which again fails. In this case T3318 expires after the second attempt.

The UE shall treat now both cells as barred and shall not attempt to access the network, even if the user triggers the UE to perform an attach procedure.

| NOTE: The definitions for "Off cell" and "Serving cell" are specified in TS34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only". |           |    |                                      |                                                                                                                                                               |

## Specific message contents

None.

## 12.6.1.3.3.5 Test requirements

At step3, when the UE is powered on or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step5, when the UE receives the AUTHENTICATION AND CIPHERING REQUEST message with invalid Message Authentication Code (MAC), UE shall:

- send the AUTHENTICATION AND CIPHERING FAILURE message with GMM cause 'MAC failure' to the SS.

At step7, when the UE receives the second AUTHENTICATION AND CIPHERING REQUEST message with invalid Message Authentication Code (MAC) from the network during a timer T3318 is running, UE shall:

~~—send an AUTHENTICATION AND CIPHERING FAILURE message with GMM cause 'MAC failure' to the SS.~~

~~At step11, when the activated cell is changed from cell A to cell B, UE shall:~~

~~—initiate the PS attach procedure with information elements specified in the above Expected Sequence.~~

~~At step13, when the UE receives the AUTHENTICATION AND CIPHERING REQUEST message with invalid Message Authentication Code (MAC), UE shall:~~

~~—send an AUTHENTICATION AND CIPHERING FAILURE message with GMM cause 'MAC failure' to the SS.~~

~~At step17, when the timer T3318 is expired, UE shall:~~

~~—not attempt to access the network.~~

## ~~12.6.2 Void~~

## ~~12.7 Identification procedure~~

~~The purpose of this procedure is to check that the UE gives its identity as requested by the network. If this procedure does not work, it will not be possible for the network to rely on the identity claimed by the UE.~~

### ~~12.7.1 General Identification~~

#### ~~12.7.1.1 Definition~~

#### ~~12.7.1.2 Conformance requirement~~

- ~~1) When requested by the network the User Equipment shall send its IMSI.~~
- ~~2) When requested by the network the User Equipment shall send its IMEI as stored in the Mobile Equipment.~~
- ~~3) When requested by the network the User Equipment shall send its IMEISV as stored in the Mobile Equipment.~~

#### ~~Reference~~

~~3GPP TS 24.008 clauses 4.7.8~~

#### ~~12.7.1.3 Test purpose~~

~~To verify that the UE sends identity information as requested by the system. The following identities can be requested: IMSI, IMEI and IMEISV.~~

#### ~~12.7.1.4 Method of test~~

#### ~~Initial condition~~

~~System Simulator:~~

~~One cell operating in network mode II.~~

~~User Equipment:~~

~~The UE has a valid IMSI.~~

#### ~~Related ICS/IXIT statements~~

~~Support of PS service Yes/No~~

~~UE operation mode A Yes/No~~

~~UE operation mode C Yes/No~~

Switch off on button—Yes/No

Automatic PS attach procedure at switch on or power on—Yes/No

### Test procedure

The SS requests identity information from the UE:

—IMSI

—IMEI

—IMEISV

### Expected Sequence

| Step | Direction |    | Message           | Comments                                                                                            |
|------|-----------|----|-------------------|-----------------------------------------------------------------------------------------------------|
|      | UE        | SS |                   |                                                                                                     |
| 1    |           | SS |                   | The UE is set in UE operation mode C (see ICS). If UE operation mode C not supported, goto step 14. |
| 2    | UE        |    |                   | The UE is powered up or switched on and initiates an attach (see ICS).                              |
| 3    | →         |    | ATTACH REQUEST    | Attach type = 'PS attach'                                                                           |

| 12   | UE        |    |                   | The UE is switched off or power is removed (see ICS).                                               |
| 13   | →         |    | DETACH REQUEST    | Message not sent if power is removed.                                                               |
|      |           |    |                   | Detach type = 'power switched off, PS detach'                                                       |
| 14   | UE        |    |                   | The UE is set in UE operation mode A (see ICS) and the test is repeated from step 2 to step 13.     |

### Specific message contents

None.

#### 12.7.1.5 Test requirements

At step3, when the UE is powered on or switched on, UE shall:

—initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step7, when the SS requests an IMSI with the IDENTITY REQUEST message, UE shall:

—send the IDENTITY RESPONSE message with the Mobile identity = IMSI.

At step9, when the SS requests an IMEI with the IDENTITY REQUEST message, UE shall:

—send the IDENTITY RESPONSE message with the Mobile identity = IMEI.

At step11, when the SS requests an IMEISV with the IDENTITY REQUEST message, UE shall:

—send the IDENTITY RESPONSE message with the Mobile identity = IMEISV.

## ~~12.8 GMM READY timer handling~~

~~The READY timer is not applicable for UMTS.~~

### ~~12.8.1 Definition~~

### ~~12.8.2 Conformance requirement~~

~~If a READY timer value is received by an UE capable of both UMTS and GSM in the ATTACH ACCEPT or the ROUTING AREA UPDATE ACCEPT messages, then the received value shall be stored by the UE in order to be used at an intersystem change from UMTS to GSM.~~

### ~~Reference~~

~~3GPP TS 24.008 clause 4.7.2.1~~

### ~~12.8.3 Test purpose~~

~~To verify the functionality of the READY timer.~~

### ~~12.8.4 Method of test~~

#### ~~12.8.4.1 Test procedure1~~

### ~~Initial condition~~

~~System Simulator:~~

~~Two cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC1 (RAI-1).  
Both cells are operating in network operation mode II.~~

~~User Equipment:~~

~~The UE has a valid IMSI.~~

### ~~Related ICS/IXIT statements~~

~~Support of PS service—Yes/No~~

~~UE operation mode A—Yes/No~~

~~Switch off on button—Yes/No~~

~~Automatic PS attach procedure at switch on or power on—Yes/No~~

### ~~Test procedure~~

~~An attach is performed.~~

~~T3314; set to 60 seconds~~

| NOTE: The definitions for "Off cell" and "Serving cell" are specified in TS34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only". |           |    |                 |                                                                                                                                                                                        |

## Specific message contents

None.

## 12.8.5 Test requirements

At step4, when the UE receives the ATTACH ACCEPT or the ROUTING AREA UPDATE ACCEPT messages, UE shall:

- store the received READY timer value.

## 12.9 Service Request procedure (UMTS Only)

## 12.9.1 Service Request Initiated by UE Procedure

## 12.9.1.1 Definition

## 12.9.1.2 Conformance requirement

UE shall send the Service Request message to the network in order to establish the PS signalling connection for the upper layer signalling or for the resource reservation for active PDP context(s).

## Reference

TS 24.008 clauses 4.7.13

TS 23.060 clauses 6.12.1

## 12.9.1.3 Test purpose

To test the behaviour of the UE if the UE initiates the CM layer service (e.g. SM or SMS) procedure.

~~12.9.1.4 Method of test~~~~Initial condition~~~~System Simulator:~~~~One cell operating in network operation mode II.~~~~User Equipment:~~~~The UE has a valid IMSI~~~~Related ICS/EXIT statements~~~~Support of PS service Yes/No~~~~UE operation mode A Yes/No~~~~UE operation mode C Yes/No~~~~Switch off on button Yes/No~~~~Test procedure~~

- ~~a) The UE in PMM-IDLE state sends a SERVICE REQUEST message to the SS in order to establish the PS signalling connection for the upper layer signalling.~~
- ~~b) After the SS receives the SERVICE REQUEST message, the SS performs authentication procedure.~~

## Specific message contents

None.

## 12.9.2.5 Test requirements

At step3, when the UE is powered on or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step6, when the UE receives a paging request for PS domain from the network in PMM-IDLE mode, the UE shall:

- send the SERVICE REQUEST message with service type indicated "paging response".

## 12.9.3 Service Request / rejected / Illegal MS

## 12.9.3.1 Definition

## 12.9.3.2 Conformance requirement

If the network rejects a service request procedure from the UE with the cause "Illegal MS", the UE shall:

- 1) set the GPRS update status to GU3 ROAMING NOT ALLOWED and enter state GMM DEREGISTERED.
- 2) delete any P-TMSI, P-TMSI signature, RAI and GPRS ciphering key sequence number.
- 3) consider the USIM as invalid for PS service until switched off or the USIM is removed.

## Reference

TS 24.008 clauses 4.7.13.4

### ~~12.9.3.3 Test purpose~~

~~To test the behaviour of the UE if the network rejects the service request procedure with the cause "Illegal MS".~~

### ~~12.9.3.4 Method of test~~

#### ~~Initial condition~~

#### ~~System Simulator:~~

~~One cell operating in network operation mode II.~~

#### ~~User Equipment:~~

~~The UE has a valid P-TMSI-1, P-TMSI-1 signature, RAI-1 and IMSI.~~

#### ~~Related ICS/IXIT statements~~

~~Support of PS service Yes/No~~

~~UE operation mode A Yes/No~~

~~UE operation mode C Yes/No~~

~~Switch off on button Yes/No~~

#### ~~Test procedure~~

- ~~a) The UE sends a SERVICE REQUEST message to the SS in order to establish the PS signalling connection for the upper layer signalling.~~
- ~~b) After the SS receiving the SERVICE REQUEST message, the SS sends a SERVICE REJECT message with the cause value #3(Illegal MS).~~
- ~~c) After the UE receives the SERVICE REJECT message with the cause value #3(Illegal MS), the UE deletes any P-TMSI, P-TMSI signature, RAI and GPRS ciphering key sequence number.~~
- ~~d) The SS checks that the UE does not initiate an upper-layer signalling until the power of the UE is switched off.~~
- ~~e) The SS checks that the UE does not initiate an upper-layer signalling until the USIM is removed from the UE.~~

### 12.9.3.5 Test requirements

At step4, when the UE is powered on or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step11, when the UE receives the SERVICE REJECT message with cause "Illegal MS" UE shall:

- not attempt to access the network.

At step15, when the UE is powered on or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step22, when the UE receives the SERVICE REJECT message with cause "Illegal MS" UE shall:

- not attempt to access the network.

At step26, when the USIM is replaced, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step30, UE shall:

- initiate the service request procedure.

## 12.9.4 Service Request / rejected / PS services not allowed

### 12.9.4.1 Definition

### 12.9.4.2 Conformance requirement

If the network rejects a service request procedure from the UE with the cause "PS services not allowed", the UE shall:

- 1) set the GPRS update state to GU3 ROAMING NOT ALLOWED.
- 2) delete any P-TMSI, P-TMSI signature, RAI and GPRS ciphering key sequence number.
- 3) consider the USIM as invalid for PS service until the UE is switched off or until the USIM is removed.

## Reference

TS 24.008 clauses 4.7.13.4

### ~~12.9.4.3~~ ~~Test purpose~~

~~To test the behaviour of the UE if the network rejects the service request procedure with the cause "PS service not allowed".~~

### ~~12.9.4.4~~ ~~Method of test~~

#### Initial condition

##### System Simulator:

One cell operating in network operation mode II.

##### User Equipment:

The UE has a valid P-TMSI-1, P-TMSI-1 signature and RAI-1.

#### Related ICS/IXIT statements

Support of PS service Yes/No

UE operation mode A Yes/No

UE operation mode C Yes/No

Switch off on button Yes/No

#### Test procedure

- a) ~~The UE sends a SERVICE REQUEST message to the SS in order to establish the PS signalling connection for the upper layer signalling.~~
- b) ~~After the SS receiving the SERVICE REQUEST message, the SS sends a SERVICE REJECT message with the cause value #7(PS services not allowed).~~
- c) ~~After the UE receives the SERVICE REJECT message with the cause value #7(PS services not allowed), the UE deletes any P-TMSI, P-TMSI signature, RAI and GPRS ciphering key sequence number.~~
- d) ~~The SS checks that the UE does not initiate an upper layer signalling until the UE is switched off.~~
- e) ~~The SS checks that the UE does not initiate an upper layer signalling until the USIM is removed from the UE.~~

### Specific message contents

#### 12.9.4.5 Test requirements

At step4, when the UE is powered on or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step11, when the UE receives the SERVICE REJECT message with cause "PS services not allowed" UE shall:

- not attempt to access the network.

At step15, when the UE is powered on or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step22, when the UE receives the SERVICE REJECT message with cause "PS services not allowed" UE shall:

- not attempt to access the network.

At step26, when the USIM is replaced, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step30, UE shall:

- initiate the service request procedure.

### 12.9.5 Service Request / rejected / MS identity cannot be derived by the network

#### 12.9.5.1 Definition

#### 12.9.5.2 Conformance requirement

If the network rejects a service request procedure from the UE with the cause "MS identity cannot be derived by the network", the UE shall:

- 1) set the GPRS update states to GU2 NOT UPDATED.
- 2) delete any P-TMSI, P-TMSI signature, RAI and GPRS ciphering key sequence number.
- 3) initiate the PS attach procedure automatically.

## Specific message contents

None.

## 12.9.5.5 Test requirements

At step4, when the UE is powered on or switched on, UE shall:

—initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step11, when the UE receives the SERVICE REJECT message with cause "MS identity cannot be derived by the network" UE shall:

- initiate PS attach procedure automatically.

## ~~12.9.6 Service Request / rejected / PLMN not allowed~~

### ~~12.9.6.1 Definition~~

### ~~12.9.6.2 Conformance requirement~~

~~If the network rejects a service request procedure from the UE with the cause "PLMN not allowed", the UE shall:~~

- ~~1) delete any RAI, P-TMSI, P-TMSI signature and GPRS ciphering key sequence number.~~
- ~~2) set the GPRS update status to GU3 ROAMING NOT ALLOWED.~~
- ~~3) store the LAI or the PLMN identity in the appropriate forbidden list.~~

### Reference

TS 24.008 clauses 4.7.13.4

### ~~12.9.6.3 Test purpose~~

~~To test the behaviour of the UE if the network rejects the service request procedure with the cause "PLMN not allowed".~~

### ~~12.9.6.4 Method of test~~

#### Initial condition

#### System Simulator:

- Two cells (not simultaneously activated), cell A in MCC1/MNC1/LAC1/RAC1 cell B in MCC2/MNC1/LAC1/RAC1.
- All two cells are operating in network operation mode II.

#### User Equipment:

- The UE has a valid P-TMSI-1, P-TMSI-1 signature and RAI-1.

### Related ICS/IXIT statements

- Support of PS service Yes/No
- UE operation mode A Yes/No
- UE operation mode C Yes/No
- Switch off on button Yes/No

### Test procedure

- ~~The UE sends a SERVICE REQUEST message to the SS in order to establish the PS signalling connection for the upper layer signalling.~~
- ~~After the SS receiving the SERVICE REQUEST message, the SS sends a SERVICE REJECT message with the cause value #11 (PLMN not allowed).~~
- ~~The SS checks that the UE does not initiate an upper layer signalling until the UE is switched off.~~
- ~~The SS checks that the UE does not answer a Page from the SS until the power of the UE is switched off.~~

### Test procedure

- a) The UE sends a SERVICE REQUEST message to the SS in order to establish the PS signalling connection for the upper layer signalling.
- b) After the SS receiving the SERVICE REQUEST message, the SS sends a SERVICE REJECT message with the cause value #40 (No PDP context activated).
- c) After the UE receives the SERVICE REJECT message, the UE shall send the ACTIVATE PDP CONTEXT REQUEST message.

### Specific message contents

None.

### 12.9.7a.5 Test requirements

At step4, when the UE is powered on or switched on, UE shall:

- initiate the PS attach procedure.

When the UE receives a SERVICE REJECT message with the cause "No PDP context activated", UE shall:

- deactivate all active PDP context.

At step11a, UE shall:

- initiates a Service request procedure.

At step12, UE shall:

- perform PDP context(s) activation.

### ~~12.9.7b — Service Request / rejected / No Suitable Cells In Location Area~~

#### ~~12.9.7b.1 — Definition~~

#### ~~12.9.7b.2 — Conformance requirement~~

If the network rejects a service request procedure from the UE with the cause "No Suitable Cells In Location Area", the UE shall:

- 1) delete any RAI, P-TMSI, P-TMSI signature and GPRS ciphering key sequence number.
- 2) set the GPRS update status to GU3 ROAMING NOT ALLOWED.
- 3) store the LAI or the PLMN identity in the list of 'forbidden location areas for roaming'.
- 4) search for a suitable cell in a different location area on the same PLMN.

#### Reference

TS 24.008 clauses 4.7.13.4

#### ~~12.9.7b.3 — Test purpose~~

To test the behaviour of the UE if the network rejects the service request procedure with the cause "No Suitable Cells In Location Area".

#### ~~12.9.7b.4 — Method of test~~

#### Initial condition

System Simulator:

Three cells, cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC2/RAC1 (RAI-3), cell C in MCC2/MNC1/LAC1/RAC1 (RAI-2)

All three cells are operating in network operation mode II.

User Equipment:

The UE has valid IMSI.

#### Related ICS/IXIT statements

Support of PS service — Yes/No

UE operation mode A — Yes/No

Switch off on button — Yes/No

Automatic PS attach procedure at switch on or power on — Yes/No

## Test procedure

The SS rejects a Service request with the cause value 'No Suitable Cells In Location Area'. The SS checks that the UE shall perform PS attach procedure when the UE enters a suitable cell in a different location area on the same PLMN.

## 12.9.7b.5 Test requirements

At step3, when the UE is powered on or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step10, when the UE enters a suitable cell in a different location area on the same PLMN, UE shall:

~~—perform the PS attach procedure.~~

## ~~12.9.8 Service Request / Abnormal cases / Access barred due to access class control~~

### ~~12.9.8.1 Definition~~

### ~~12.9.8.2 Conformance requirement~~

~~If the UE access class X is barred, the UE shall:~~

- ~~1) not start Service Request procedure.~~
- ~~2) stay in the current serving cell.~~
- ~~3) apply normal cell reselection process.~~

~~If the UE access class X is granted or serving cell is changed, the UE shall:~~

- ~~1) start Service Request procedure.~~

### ~~Reference~~

~~TS 24.008 clauses 4.7.13.5.~~

### ~~12.9.8.3 Test purpose~~

~~To test the behavior of the UE in case of access class control (access is granted).~~

### ~~12.9.8.4 Method of test~~

#### ~~Initial condition~~

~~A random access class X (0-15) is selected. The USIM is programmed with this access class X.~~

~~Initially, an access class X is barred.~~

#### ~~System Simulator:~~

~~One cell operating in network operation mode II.~~

~~Access class x barred.~~

#### ~~User Equipment:~~

~~The UE has a valid P-TMSI-1, P-TMSI-1 signature and RAI-1.~~

### ~~Related ICS/IXIT statements~~

~~Support of PS service—Yes/No~~

~~UE operation mode C—Yes/No~~

~~UE operation mode A—Yes/No~~

~~Switch off on button—Yes/No~~

~~Automatic PS attach procedure at switch on or power on—Yes/No~~

### ~~Test procedure~~

~~The SS initiates access class X barred. A service request procedure is not performed.~~

The SS initiates that access class X is not barred. A service request procedure is performed.

#### Specific message contents

None.

#### 12.9.8.5 Test requirements

At step2, when the UE access class x is barred, UE shall:

— not perform Service Request procedure.

At step5, when the UE access class x is barred, UE shall:

— initiate the PS attach procedure.

At step9, UE shall:

— perform Service Request procedure.

## ~~12.9.9 Service Request / Abnormal cases / Routing area update procedure is triggered~~

### ~~12.9.9.1 Definition~~

### ~~12.9.9.2 Conformance requirement~~

If a cell change into a new routing area occurs and the necessity of routing area update procedure is determined before the security mode control procedure is completed, the UE shall:

- ~~— abort Service request procedure.~~
- ~~— start routing area update procedure immediately.~~

### Reference

~~TS 24.008 clause 4.7.13.5~~

### ~~12.9.9.3 Test purpose~~

To test the behavior of the UE in case of collision between Routing area update procedure and Service request procedure.

### ~~12.9.9.4 Method of test~~

#### Initial condition

#### System Simulator:

Two cells, cell A in MCC1/MNC1/LAC1/RAC1 (RAI-1), cell B in MCC1/MNC1/LAC1/RAC2 (RAI-4). Both cells are operating in network operation mode II.

#### User Equipment:

The UE has a valid P-TMSI-1, P-TMSI-1 signature and RAI-1.

#### Related ICS/IXIT statements

Support of PS service Yes/No

UE operation mode A Yes/No

UE operation mode C Yes/No

Switch off on button Yes/No

#### Test procedure

- ~~a) The UE sends a SERVICE REQUEST message to the SS in order to establish the PS signalling connection for the upper layer signalling.~~
- ~~b) The UE initiates the routing area update procedure.~~
- ~~c) The UE aborts Service request procedure and performs Routing area updating procedure.~~

| NOTE: — The definitions for "Suitable neighbour cell" and "Serving cell" are specified in TS34.108 clause 6.1 "Reference Radio Conditions for signalling test cases only". |           |    |                                       |                                                                                                                                                                                                                                                           |

### Specific message contents

None.

#### 12.9.9.5 Test requirements

At step3, when the UE is powered on or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence—.

At step7, UE shall:

- perform the service request procedure.

At step10, when the routing area update procedure is initiated before the security mode control procedure is completed, UE shall;

- abort a Service request procedure
- perform the routing area updating procedure.

At step14, after the UE completes the routing area updating procedure, UE shall;

- restart the Service Request procedure.

### 12.9.10 Service Request / Abnormal cases / Power off

#### 12.9.10.1 Definition

#### 12.9.10.2 Conformance requirement

When the UE in GMM-SERVICE-REQUEST-INITIATED state is switched off, UE shall:

- perform PS detach procedure.

#### Reference

TS 24.008 clauses 4.7.13.5

#### 12.9.10.3 Test purpose

To test the behavior of the UE in case of collision between Service request procedure and "powered off".

#### 12.9.10.4 Method of test

#### Initial condition

System Simulator:

One cell operating in network operation mode II.

User Equipment:

The UE has a valid P-TMSI-1, P-TMSI-1 signature and RAI-1.

#### Related ICS/IXIT statements

Support of PS service Yes/No

UE operation mode A Yes/No

UE operation mode C Yes/No

Switch off on button Yes/No

### Test procedure

The UE is switched off after initiating a Service request procedure. A PS detach is automatically performed by the UE before power is switched off.

### 12.9.10.5 Test requirements

At step4, when the UE is powered on or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step7, UE shall:

- perform the service request procedure

At step9, when the UE is switched off during the Service Request procedure, UE shall;

- abort the Service request procedure.
- perform the PS detach procedure.

## ~~12.9.11 Service Request / Abnormal cases / Service request procedure collision~~

### ~~12.9.11.1 Definition~~

### ~~12.9.11.2 Conformance requirement~~

~~When the UE in GMM-SERVICE-REQUEST-INITIATED state receives a DETACH REQUEST message from the network, UE shall:~~

- ~~— perform the PS detach procedure.~~
- ~~— abort Service request procedure.~~

### Reference

TS 24.008 clauses 4.7.13.5

### ~~12.9.11.3 Test purpose~~

~~To test the behaviour of the UE in case of collision between Service request procedure and PS detach procedure.~~

### ~~12.9.11.4 Method of test~~

#### Initial condition

System Simulator:

One cell operating in network operation mode II.

User Equipment:

The UE has a valid P-TMSI-1, P-TMSI-1 signature and RAI-1.

#### Related ICS/IXIT statements

Support of PS service Yes/No

UE operation mode A Yes/No

UE operation mode C Yes/No

Switch off on button Yes/No

#### Test procedure

- ~~a) The UE sends a SERVICE REQUEST message to the SS in order to establish the PS signalling connection for the upper layer signalling.~~
- ~~b) The SS sends a DETACH REQUEST message to the UE, before the security procedure is not started.~~
- ~~c) After the UE receives the DETACH REQUEST message, the UE aborts the Service request procedure.~~

| 14   | UE        |    |                 | The UE is switched off or power is removed (see ICS).                                                              |
| 15   | ->        |    | DETACH REQUEST  | Message not sent if power is removed.<br>Detach type = 'power switched off, PS detach'                             |

## Specific message contents

None.

## 12.9.11.5 Test requirements

At step4, when the UE is powered on or switched on, UE shall:

- initiate the PS attach procedure with information elements specified in the above Expected Sequence.

At step11, when the UE receives a DETACH REQUEST message from the network before the Service request procedure completes, UE shall;

- abort the Service request procedure.
- perform the PS detach procedure.

## ~~13 General Tests~~

### ~~13.1 Emergency call / general~~

In this clause, the emergency call service is tested for user equipment that support Emergency speech call in the following cases:

- ~~— emergency call initiated in the MM idle state with authentication and security;~~
- ~~— emergency call initiated in the MM idle, no IMSI state (hence without authentication and without security), the network accepting the call;~~
- ~~— emergency call initiated in the MM idle, no IMSI state (hence without authentication and without security), the network rejecting the call.~~

These tests on emergency calls are only applicable to an UE supporting Emergency speech call.

### ~~13.2 Emergency call~~

Emergency call establishment can be initiated by an UE whether location updating has been successful or not and whether a USIM is inserted into the UE or not; but only if the UE is equipped for speech.

If the procedures tested in this clause are not correctly implemented in the UE, establishment, maintenance and clearing of connections might fail in the essential case of emergency calls.

The tests of this clause are only applicable to an UE supporting Emergency speech call.

#### ~~13.2.1 Emergency call / with USIM~~

##### ~~13.2.1.1 Emergency call / with USIM / accept case~~

###### ~~13.2.1.1.1 Definition~~

When a USIM is present, subscriber specific emergency call set-up MMI shall be provided. The operator shall specify preferred emergency call MMI(s) (e.g. 911 for US citizens or 110, 118 and 119 for Japanese citizens) for use in any (i.e. home or visited) PLMN. This shall be stored in the USIM and the UE shall read this and use any entry of these digits to set up an emergency call. It shall be possible to store more than one instance of this field.

When a USIM containing stored emergency numbers is present, only those numbers are identified as emergency numbers, i.e. default emergency numbers stored in the UE are ignored.

###### ~~13.2.1.1.2 Conformance requirement~~

- ~~1) The UE in the "MM idle" state, as after a successful location update, after the emergency call number has been entered by user, shall send a RRC CONNECTION REQUEST message with correct establishment cause ("emergency call").~~
- ~~2) After assignment of a dedicated channel the first layer message sent by the UE on the assigned dedicated channel shall be a CM SERVICE REQUEST message specifying the correct CKSN and TMSI, with CM Service Type "emergency call establishment".~~
- ~~3) Authentication and security mode setting shall be performed successfully.~~
- ~~4) After security mode setting acceptance by the network, the UE shall send an EMERGENCY SETUP message.~~
- ~~5), 6) The emergency call shall be correctly established. The assignment procedure shall be correctly performed.~~
- ~~7) After receipt of a CONNECT ACKNOWLEDGE message during correct establishment of the emergency call the DTCH shall be through connected in both directions if an appropriate DTCH is available.~~

- 8) The call shall be cleared correctly.

- For conformance requirement 8: TS 24.008, clause 5.4.

#### 13.2.1.1.3 ————— Test purpose

- 1) To verify that an UE supporting speech in the state "MM idle", when made to call the emergency call number, sends a RRC CONNECTION REQUEST message with establishment cause "emergency call".
- 2) To verify that after assignment of a dedicated channel the first layer message sent by the UE on the assigned dedicated channel is a CM SERVICE REQUEST message specifying the correct CKSN and TMSI, with CM Service Type "emergency call establishment".
- 3) To verify that authentication and security mode setting are performed successfully.
- 4) To verify that after security mode setting acceptance by the SS, the UE sends an EMERGENCY SETUP message.
- 5) To verify that subsequently, the SS having sent a CALL PROCEEDING message and then an ALERT message and having initiated the assignment procedure of an appropriate speech traffic channel, the UE performs correctly that assignment procedure.
- 6) To verify subsequent correct performance of a connect procedure.
- 7) To verify that subsequently the UE has through connected the DTCH in both directions.
- 8) To verify that the call is cleared correctly.

#### 13.2.1.1.4 ————— Method of test

#### Related ICS Statements

- Emergency speech call.

#### Initial Conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE is in state "MM idle" with valid TMSI and CKSN.

#### Test procedure

The UE is made to initiate an emergency call. The call is established with late assignment. Having reached the active state, the call is cleared by the SS.

#### 13.2.2.1.3 ————— Test purpose

- 1) To verify that the UE in the "MM idle, no IMSI" state (no USIM inserted) when made to call the emergency call number, sends a RRC CONNECTION REQUEST message with establishment cause "emergency call".
- 2) To verify that after assignment of a dedicated channel the first layer message sent by the UE on the assigned dedicated channel is a CM SERVICE REQUEST message in which the security key sequence number IE indicates "no key is available", the CM service type IE indicates "emergency number establishment", and the mobile identity IE specifies the IMEI of the UE.
- 3) To verify that after receipt of a CM SERVICE ACCEPT message from the SS, the UE sends an EMERGENCY SETUP message.
- 4) To verify that subsequently, the SS having sent a CALL PROCEEDING message and then an ALERT message and having initiated the assignment procedure of an appropriate speech traffic channel, the UE performs correctly that assignment procedure.
- 5) To verify subsequent correct performance of a connect procedure.
- 6) To verify that subsequently the UE has through connected the DTCH in both directions.
- 7) To verify that the call is cleared correctly.

#### 13.2.2.1.4 ————— Method of test

#### Related ICS Statements

- Emergency speech call

#### Initial Conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE is in MM-state "MM idle, no IMSI", no USIM inserted.

#### Test procedure

The UE is made to initiate an emergency call. The call is established without authentication, without security, with late assignment. Having reached the active state, the call is cleared by the SS.

## Expected Sequence

None.

## 13.2.2.2 Emergency call / without USIM / reject case

## 13.2.2.2.1 Definition

The following emergency numbers shall be stored in the UE for use without USIM: 000, 08, 112, 110, 118, 119, 911 and 999.

## 13.2.2.2.2 Conformance requirement

- 1) The UE in the "MM idle, no IMSI" state (no USIM inserted), after the emergency call number has been entered, shall send a RRC CONNECTION REQUEST message with correct establishment cause ("emergency call").
- 2) After assignment of a dedicated channel the first layer message sent by the UE on the assigned dedicated channel shall be a CM SERVICE REQUEST message specifying the correct IMEI and a non-available CKSN, with CM Service Type "emergency call establishment".
- 3) In the situation at the end of test purpose 2, when the UE receives a CM SERVICE REJECT message, it shall abandon the emergency call.

## Reference(s):

- For conformance requirement 1 and 2: TS 25.331 clause 8.1.3, TS 24.008 clause 5.2.1, TS 24.008 clause 4.5.1.5, TS 22.010 clause 8.
- For conformance requirement 3: TS 24.008 clause 4.5.1.5.

**13.2.2.2.3 Test purpose**

- 1) To verify that the UE in the "MM idle, no IMSI" state (no USIM inserted) when made to call the emergency call number, sends a RRC CONNECTION REQUEST message with establishment cause "emergency call".
- 2) To verify that after assignment of a dedicated channel the first layer message sent by the UE on the assigned dedicated channel is a CM SERVICE REQUEST message in which the security key sequence number IE indicates "no key is available", the CM service type IE indicates "emergency call establishment", and the mobile identity IE specifies the IMEI of the UE.
- 3) To verify that after receipt of a CM SERVICE REJECT message from the SS, the UE abandons the emergency call establishment.

**13.2.2.2.4 Method of test****Related ICS statements**

- Emergency speech call.

**Initial Conditions**

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE is in state "MM idle, no IMSI", no USIM inserted.

**Test procedure**

The UE is made to initiate an emergency call. The call is established without authentication, without security, with early assignment. The SS responds to the CM SERVICE REQUEST from the UE with a CM SERVICE REJECT message specifying in the reject cause IE the reject cause value "IMEI not accepted". The SS then verifies for during 5 seconds that the UE does not send a layer 3 message. Then the call is cleared by the SS. The SS verifies during 20 seconds after disconnection of the main signalling link that the UE does not initiate a RRC connection establishment.

**Expected Sequence**

## ~~14 Interoperability Radio Bearer Tests~~

### ~~14.1 General information for interoperability radio bearer tests~~

The purpose of the interoperability radio bearer test cases are to ensure interoperability of UE's in different regions and networks. For this purpose representative radio bearer configurations that will be used in real network implementations have been defined in TS 34.108 [9], clause 6.10.

The applicability of radio bearer tests is dependent on the UE uplink and downlink radio access capabilities and UE support tele- and bearer-services. See TS 34.123-2, annex B for applicability of the specific test cases.

#### ~~14.1.1 Generic radio bearer test procedure~~

##### ~~Initial conditions~~

~~UE in idle mode~~

##### ~~Test procedure~~

- ~~a) The SS setup the reference radio bearer configuration as specified in TS 34.108, clause 6.10 for the actual radio bearer test.~~
- ~~b) The SS limits the UE allowed uplink transport format combinations according to the "Restricted UL TFCIs", as specified for the sub-test of the actual radio bearer test, using the RRC transport format combination control procedure. See note 1.~~
- ~~c) The SS closes the test loop using UE test loop mode 1 and setting the UL RLC SDU size parameter, for all radio bearers under test, according to the "UL RLC SDU size" value as specified for the sub-test of the actual radio bearer test.~~
- ~~d) The SS transmits, for all radio bearers under test, one or more RLC SDUs having the size equal to the "Test data size" as specified for the sub-test of the actual radio bearer test. See note 2.~~
- ~~e) The SS checks that, for all radio bearers under test, the content of the received RLC SDU has the correct content and is received having the correct transport format. See TS 34.109 [10] clause 5.3.2.6.2 for details regarding the UE loopback of RLC SDUs.~~
- ~~f) The SS opens the UE test loop.~~
- ~~g) Steps b) to f) are repeated for all sub-tests~~
- ~~h) The SS may optionally release the radio bearer.~~
- ~~i) The SS may optionally deactivate the radio bearer test mode.~~

~~NOTE 1: The restricted set of TFCIs shall contain all possible TFCI that could happen in a sub-test. The actual TTI of the different radio bearers and signaling radio bearers as well as the possible UE processing delays shall be taken into consideration.~~

~~NOTE 2: For the case when the reference radio bearer configuration under test uses RLC transparent mode in downlink and is not configured for segmented operation then the radio bearer test case shall use a DL RLC SDU size (defined by the "Test data size" parameter) equal to the DL RLC PDU size. See [7] TS 25.322 for details regarding UE operation in RLC transparent mode.~~

## 14.2 Combinations on DPCH

### 14.2.1 Stand-alone UL:1.7 DL:1.7 kbps SRBs for DCCH

Test to verify establishment and signalling of stand-alone signalling reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.1.

The test case is performed by running test case 9.4.1 (Location updating / accepted) using the stand-alone signalling reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.3.1.

### 14.2.2 Stand-alone UL:3.4 DL:3.4 kbps SRBs for DCCH

Test to verify establishment and signalling of stand-alone signalling reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.2.

The test case is performed by running test case 9.4.1 (Location updating / accepted) using the stand-alone signalling reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.3.2.

### 14.2.3 Stand-alone UL:13.6 DL:13.6 kbps SRBs for DCCH

Test to verify establishment and signalling of stand-alone signalling reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.3.

The test case is performed by running test case 9.4.1 (Location updating / accepted) using the stand-alone signalling reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.3.3.

## ~~14.2.4 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH~~

### ~~14.2.4.1 Conformance requirement~~

The UE shall be able to establish the UTRAN requested radio bearers within the UE's signaled radio access capabilities.

The UE shall correctly transfer user data from peer to peer RLC entities according to the requested radio bearer configuration.

#### Reference(s)

3GPP TS 25.331, clause 8.2.1

3GPP TS 25.2xx series (Physical Layer)

3GPP TS 25.321 (MAC)

3GPP TS 25.322 (RLC)

### ~~14.2.4.2 Test purpose~~

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.4.

### ~~14.2.4.3 Method of test~~

See 14.1.1 for test procedure.

#### 14.2.4.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15 the UE transmitted transport format shall be

— for sub-test 1: RB5/TF1 (1x39);

— for sub-test 2: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).

3. At step 15 the UE shall return

— for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6 or RB7.

— for sub-test 2: an RLC SDU on each of RB5, RB6 and RB7 having the same content as sent by SS

#### ~~14.2.4a Conversational / speech / UL:(12.2 7.95 5.9 4.75) DL:(12.2 7.95 5.9 4.75) kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.4a.

#### ~~14.2.5 Conversational / speech / UL:10.2 DL:10.2 kbps / CS RAB + UL:3.4 DL: 3.4 kbps SRBs for DCCH~~

##### ~~14.2.5.1 Conformance requirement~~

See clause 14.2.4.1.

### 14.2.5.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.5.

### 14.2.5.3 Method of test

Uplink TFS:

See clause 14.1.1 for test procedure.

~~14.2.7.4 Test requirements~~

See 14.1.1 for definition of step 10 and step 15.

~~1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.~~

~~2. At step 15 the UE transmitted transport format shall be~~

~~— for sub-test 1: RB5/TF1 (1x39).~~

~~— for sub-test 2: RB5/TF2 (1x61) and RB6/TF1 (1x87).~~

~~3. At step 15 the UE shall return~~

~~— for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6.~~

~~— for sub-test 2: an RLC SDU on each of RB5 and RB6 having the same content as sent by SS~~

~~14.2.7a Conversational / speech / UL:(7.4, 6.7, 5.9, 4.75) DL:(7.4, 6.7, 5.9, 4.75) kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.7a.

~~14.2.8 Conversational / speech / UL:6.7 DL:6.7 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH~~

~~14.2.8.1 Conformance requirement~~

See clause 14.2.4.1.

~~14.2.8.2 Test purpose~~

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.8.

~~14.2.8.3 Method of test~~

See clause 14.1.1 for test procedure.

#### 14.2.11.4 Test requirements

See clause 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15 the UE transmitted transport format shall be

— for sub-test 1: RB5/TF1 (1x39).

— for sub-test 2: RB5/TF2 (1x42) and RB6/TF1 (1x53).

3. At step 15 the UE shall return

— for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6;

— for sub-test 2: an RLC SDU on each of RB5 and RB6 having the same content as sent by SS

## 14.2.12 Conversational / unknown / UL:28.8 DL:28.8 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

### 14.2.12.1 Conformance requirement

See 14.2.4.1.

### 14.2.12.2 Test purpose

To verify radio bearer establishment and correct data transfer for reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.12.

### 14.2.12.3 Method of test

#### Initial Conditions

The following RLC Info parameter values shall be set by the SS:

|                           |      |
|---------------------------|------|
| Uplink RLC                |      |
| — TM-RLC                  |      |
| — Segmentation indication | TRUE |
| Downlink RLC              |      |
| — TM-RLC                  |      |
| — Segmentation indication | TRUE |

#### Uplink TFS:

|     | TFI       | RB5<br>(28.8 kbps) | DCCH  |
|-----|-----------|--------------------|-------|
| TFS | TF0, bits | 0x576              | 0x148 |
|     | TF1, bits | 1x576              | 1x148 |
|     | TF2, bits | 2x576              | N/A   |

#### Uplink TFCs:

| TFCI    | (RB5, DCCH) |

See 14.1.1 for test procedure.

#### 14.2.15.4 ————— Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. — At step 10 the UE shall send RADIO-BEARER-SETUP-COMPLETE.
2. — At step 15 the UE transmitted transport format shall be
  - for sub-test 1: RB5/TF1 (1x576).
3. — At step 15 the UE shall return
  - for sub-test 1: an RLC-SDU on RB5 having the same content as sent by SS.

UE will return one RLC PDU. SS creates an UL RLC SDU from the received RLC PDU.<br>NOTE 4: SS is using a DL RLC SDU size of 1280 bits as test data (=DL RLC PDU size for DL/TF3). UE will return one RLC PDU. SS creates an UL RLC SDU from the received RLC PDU.<br>NOTE 5: SS is using a DL RLC SDU size of 2560 bits as test data (=DL RLC PDU size for DL/TF4). UE will return one RLC PDU. SS creates an UL RLC SDU. |                          |                        |                                    |                                    |                                 |                                |

See 14.1.1 for test procedure.

#### 14.2.18.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE shall return
  - for sub-test 1: an RLC SDU on RB5 having the same content as sent by the SS.
  - for sub-test 2 to 4: an RLC SDU on RB5 having the same content as the first 576 bits of the RLC SDU sent by the SS.

### 14.2.19 Streaming / unknown / UL:64 DL:0 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

#### 14.2.19.1 Conformance requirement

See 14.2.4.1.

#### 14.2.19.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.19.

To be able to test the uplink radio bearer using the UE loopback function for the reference radio bearer UL:64 DL:0 kbps, the reference radio bearer configuration according to TS 34.108, clause 6.10.2.4.1.15.2 (Streaming/unknown/DL:14.4 kbps) is used in downlink.

## 14.2.19.3 Method of test

## Uplink-TFS:

|     | <b>TFI</b> | <b>RB5<br/>(64 kbps)</b> | <b>DCCH</b> |
|-----|------------|--------------------------|-------------|
| TFS | TF0, bits  | 0x320                    | 0x148       |
|     | TF1, bits  | 1x320                    | 1x148       |
|     | TF2, bits  | 2x320                    | N/A         |
|     | TF3, bits  | 4x320                    | N/A         |
|     | TF4, bits  | 8x320                    | N/A         |

## Uplink-TFCS:

| <b>TFCI</b> | <b>(RB5, DCCH)</b> |
|-------------|--------------------|
| UL_TFC0     | (TF0, TF0)         |
| UL_TFC1     | (TF1, TF0)         |
| UL_TFC2     | (TF2, TF0)         |
| UL_TFC3     | (TF3, TF0)         |
| UL_TFC4     | (TF4, TF0)         |
| UL_TFC5     | (TF0, TF1)         |
| UL_TFC6     | (TF1, TF1)         |
| UL_TFC7     | (TF2, TF1)         |
| UL_TFC8     | (TF3, TF1)         |
| UL_TFC9     | (TF4, TF1)         |

## Downlink-TFS:

|     | <b>TFI</b> | <b>RB5<br/>(14.4 kbps)</b> | <b>DCCH</b> |
|-----|------------|----------------------------|-------------|
| TFS | TF0, bits  | 0x576                      | 0x148       |
|     | TF1, bits  | 1x576                      | 1x148       |

## Downlink-TFCS:

| <b>TFCI</b> | <b>(RB5, DCCH)</b> |
|-------------|--------------------|
| DL_TFC0     | (TF0, TF0)         |
| DL_TFC1     | (TF1, TF0)         |
| DL_TFC2     | (TF0, TF1)         |
| DL_TFC3     | (TF1, TF1)         |

Sub-tests:

| Sub-test | Downlink TFCs Under test | Uplink TFCs Under test | Implicitly tested                  | Restricted UL TFCs                 | UL RLC SDU size (bits) (note 1) | Test data size (bits) (note 1) |
|----------|--------------------------|------------------------|------------------------------------|------------------------------------|---------------------------------|--------------------------------|
| 1        | DL_TFC1                  | UL_TFC1                | DL_TFC0, DL_TFC2, UL_TFC0, UL_TFC5 | UL_TFC0, UL_TFC1, UL_TFC5, UL_TFC6 | RB5: 320                        | RB5: 576 (note 2)              |
| 2        | DL_TFC1                  | UL_TFC2                | DL_TFC0, DL_TFC2, UL_TFC0, UL_TFC5 | UL_TFC0, UL_TFC2, UL_TFC5, UL_TFC7 | RB5: 640                        | RB5: 576 (note 3)              |
| 3        | DL_TFC1                  | UL_TFC3                | DL_TFC0, DL_TFC2, UL_TFC0, UL_TFC5 | UL_TFC0, UL_TFC3, UL_TFC5, UL_TFC8 | RB5: 1280                       | RB5: 576 (note 4)              |
| 4        | DL_TFC1                  | UL_TFC4                | DL_TFC0, DL_TFC2, UL_TFC0, UL_TFC5 | UL_TFC0, UL_TFC4, UL_TFC5, UL_TFC9 | RB5: 2560                       | RB5: 576 (note 5)              |

NOTE 1: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

NOTE 2: SS is using a DL RLC SDU with 576 bits as test data (=DL RLC PDU size for DL/TF1). UE will return the first 320 bits of the test data.

NOTE 3: SS is using a DL RLC SDU size of 576 bits as test data (=DL RLC PDU size for DL/TF1). UE will return an RLC SDU repeating the received DL RLC SDU two times (truncating the last one to fit the UL RLC SDU size of 640 bits).

NOTE 4: SS is using a DL RLC SDU size of 576 bits as test data (=DL RLC PDU size for DL/TF1). UE will return an RLC SDU repeating the received DL RLC SDU three times (truncating the last one to fit the UL RLC SDU size of 1280 bits).

NOTE 5: SS is using a DL RLC SDU size of 576 bits as test data (=DL RLC PDU size for DL/TF1). UE will return an RLC SDU repeating the received DL RLC SDU five times (truncating the last one to fit the UL RLC SDU size of 2560 bits).

See 14.1.1 for test procedure.

#### 14.2.19.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15 the UE transmitted transport format shall be

— for sub-test 1: RB5/TF1 (1x320).

— for sub-test 2: RB5/TF2 (2x320).

— for sub-test 3: RB5/TF3 (4x320).

— for sub-test 4: RB5/TF4 (8x320).

3. At step 15 the UE shall return

— for sub-test 1: an RLC SDU on RB5 having the same content as the first 320 bits of the DL RLC SDU sent by the SS.

— for sub-test 2: an RLC SDU on RB5 for which the first 576 bits are equal to the sent DL RLC SDU bit pattern and the remaining 64 bits are equal to the first 64 bits of the sent DL RLC SDU.

— for sub-test 3: an RLC SDU on RB5 for which the first 1152 bits are equal to the sent DL RLC SDU bit pattern repeated twice and the remaining 128 bits are equal to the first 128 bits of the sent DL RLC SDU.

— for sub-test 4: an RLC SDU on RB5 for which the first 2304 bits are equal to the sent DL RLC SDU bit pattern repeated four times and the remaining 256 bits are equal to the first 256 of the sent DL RLC SDU.

## 14.2.20 Streaming / unknown / UL:0 DL:128 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

### 14.2.20.1 Conformance requirement

See 14.2.4.1.

### 14.2.20.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.20.

To be able to test the downlink radio bearer using the UE loopback function for the reference radio bearer UL:0 DL:128 kbps, the reference radio bearer configuration according to TS 34.108, clause 6.10.2.4.1.15.1 (Streaming/unknown/UL:14.4 kbps) is used in uplink. For all sub-tests UL\_TFC1 is used.

### 14.2.20.3 Method of test

Uplink TFS:

|     | TFI       | RB5<br>(28.8 kbps) | DCCH  |
|-----|-----------|--------------------|-------|
| TFS | TF0, bits | 0x576              | 0x148 |
|     | TF1, bits | 1x576              | 1x148 |

Uplink TFCS:

| 4        | DL_TFC4                  | UL_TFC1                | DL_TFC0, DL_TFC6, UL_TFC0, UL_TFC2 | UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 | RB5: 576                        | RB5: 2560 (note 5)             |
| 5        | DL_TFC5                  | UL_TFC1                | DL_TFC0, DL_TFC6, UL_TFC0, UL_TFC2 | UL_TFC0, UL_TFC1, UL_TFC2, UL_TFC3 | RB5: 576                        | RB5: 5120 (note 6)             |

NOTE 1: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

NOTE 2: SS is using a DL RLC SDU with 320 bits as test data (=DL RLC PDU size for DL/TF1). UE will return one RLC PDU. SS creates an UL RLC SDU from the first 320 bits of the received RLC PDU.

NOTE 3: SS is using a DL RLC SDU size of 640 bits as test data (=DL RLC PDU size for DL/TF2). UE will return one RLC PDU. SS creates an UL RLC SDU from the received RLC PDU.

NOTE 4: SS is using a DL RLC SDU size of 1280 bits as test data (=DL RLC PDU size for DL/TF3). UE will return one RLC PDU. SS creates an UL RLC SDU from the received RLC PDU.

NOTE 5: SS is using a DL RLC SDU size of 2560 bits as test data (=DL RLC PDU size for DL/TF4). UE will return one RLC PDU. SS creates an UL RLC SDU from the received RLC PDU.

NOTE 6: SS is using a DL RLC SDU size of 5120 bits as test data (=DL RLC PDU size for DL/TF5). UE will return one RLC PDU. SS creates an UL RLC SDU from the received RLC PDU.

See 14.1.1 for test procedure.

#### 14.2.20.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15 the UE shall return

— for sub-test 1: an RLC SDU on RB5 having the same content as sent by the SS.

— for sub-test 2 to 5: an RLC SDU on RB5 having the same content as the first 576 bits of the RLC SDU sent by the SS.

#### 14.2.21 Streaming / unknown / UL:128 DL:0 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

##### 14.2.21.1 Conformance requirement

See 14.2.4.1.

### 14.2.21.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.21.

To be able to test the uplink radio bearer using the UE loopback function for the reference radio bearer UL:64 DL: 0 kbps, the reference radio bearer configuration according to TS 34.108, clause 6.10.2.4.1.15.2 (Streaming/unknown/DL:14.4 kbps) is used in downlink.

### 14.2.21.3 Method of test

Uplink TFS:

|     | <b>TFI</b> | <b>RB5<br/>(128 kbps)</b> | <b>DCCH</b> |
|-----|------------|---------------------------|-------------|
| TFS | TF0, bits  | 0x320                     | 0x148       |

| 5        | DL_TFC1                  | UL_TFC5                | DL_TFC0, DL_TFC2, UL_TFC0, UL_TFC6 | UL_TFC0, UL_TFC5, UL_TFC6, UL_TFC11 | RB5: 5120                       | RB5: 576 (note 6)              |

NOTE 1: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

NOTE 2: SS is using a DL RLC SDU with 576 bits as test data (=DL RLC PDU size for DL/TF1). UE will return the first 320 bits of the test data.

NOTE 3: SS is using a DL RLC SDU size of 576 bits as test data (=DL RLC PDU size for DL/TF1). UE will return an RLC SDU repeating the received DL RLC SDU two times (truncating the last one to fit the UL RLC SDU size of 640 bits).

NOTE 4: SS is using a DL RLC SDU size of 576 bits as test data (=DL RLC PDU size for DL/TF1). UE will return an RLC SDU repeating the received DL RLC SDU three times (truncating the last one to fit the UL RLC SDU size of 1280 bits).

NOTE 5: SS is using a DL RLC SDU size of 576 bits as test data (=DL RLC PDU size for DL/TF1). UE will return an RLC SDU repeating the received DL RLC SDU five times (truncating the last one to fit the UL RLC SDU size of 2560 bits).

NOTE 6: SS is using a DL RLC SDU size of 576 bits as test data (=DL RLC PDU size for DL/TF1). UE will return an RLC SDU repeating the received DL RLC SDU nine times (truncating the last one to fit the UL RLC SDU size of 5120 bits).

See 14.1.1 for test procedure.

## 14.2.21.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15 the UE transmitted transport format shall be

— for sub-test 1: RB5/TF1 (1x320).

— for sub-test 2: RB5/TF2 (2x320).

— for sub-test 3: RB5/TF3 (4x320).

— for sub-test 4: RB5/TF4 (8x320).

— for sub-test 5: RB5/TF5 (16x320).

3. At step 15 the UE shall return

— for sub-test 1: an RLC SDU on RB5 having the same content as the first 320 bits of the DL RLC SDU sent by the SS.

- for sub-test 2: an RLC SDU on RB5 for which the first 576 bits are equal to the sent DL RLC SDU bit pattern and the remaining 64 bits are equal to the first 64 bits of the DL RLC SDU sent by the SS.
- for sub-test 3: an RLC SDU on RB5 for which the first 1152 bits are equal to the sent DL RLC SDU bit pattern repeated twice and the remaining 128 bits are equal to the first 128 of the sent DL RLC SDU.
- for sub-test 4: an RLC SDU on RB5 for which the first 2304 bits are equal to the sent DL RLC SDU bit pattern repeated four times and the remaining 256 bits are equal to the first 256 of the sent DL RLC SDU.
- for sub-test 5: an RLC SDU on RB5 for which the first 4608 bits are equal to the sent DL RLC SDU bit pattern repeated eight times and the remaining 512 bits are equal to the first 512 of the sent DL RLC SDU.

SS creates an UL RLC SDU from the received RLC PDU.</p> |                          |                        |                                    |                                    |                                 |                                |

See 14.1.1 for test procedure.

#### 14.2.22.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE shall return
  - for sub-test 1: an RLC SDU on RB5 having the same content as sent by the SS.
  - for sub-test 2 to 7: an RLC SDU on RB5 having the same content as the first 576 bits of the RLC SDU sent by the SS.

NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See 14.1.1 for test procedure.

#### 14.2.23.2.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
  - for sub-test 1: RB5/TF1 (1x336).
  - for sub-test 2: RB5/TF2 (2x336).
3. At step 15 the UE shall return
  - for sub-test 1 and 2: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

#### 14.2.23.3 Interactive or background / UL:32 DL:8 kbps / PS RAB / (CC, 10 ms TTI)

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.23 for the convolutional channel coding and uplink 10 ms TTI case.

See test case 14.2.23.1 for test procedure and test requirement.

#### 14.2.23.4 Interactive or background / UL:32 DL:8 kbps / PS RAB / (CC, 20 ms TTI)

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.23 for the convolutional channel coding and uplink 20 ms TTI case.

See test case 14.2.23.2 for test procedure and test requirement.

#### 14.2.23a Interactive or background / UL:8 DL:8 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.23a.

#### 14.2.23b Interactive or background / UL:16 DL:16 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.23b.

### ~~14.2.23c Interactive or background / UL:32 DL:32 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.23c.

### ~~14.2.23d Interactive or background / UL:32 DL:32 kbps / PS RAB (20 ms TTI) + UL:3.4 DL:3.4 kbps SRBs for DCCH.~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.23d.

### ~~14.2.24 Interactive or background / UL:64 DL:8 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH~~

NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See 14.1.1 for test procedure.

#### 14.2.24.1.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
  - for sub-test 1: RB5/TF1 (1x336).
  - for sub-test 2: RB5/TF2 (2x336).
  - for sub-test 3: RB5/TF3 (3x336).
  - for sub-test 4: RB5/TF4 (4x336).
3. At step 15 the UE shall return
  - for sub-test 1 to 4: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

### ~~14.2.24.2 — Interactive or background / UL:64 DL:8 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / CC~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.24 for the downlink convolutional channel coding case.

See test case 14.2.24.1 for test procedure and test requirement.

### ~~14.2.25 — Interactive or background / UL:32 DL: 64 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH~~

#### ~~14.2.25.1 — Interactive or background / UL:32 DL: 64 kbps / PS RAB / (TC, 10 ms TTI)~~

##### ~~14.2.25.1.1 — Conformance requirement~~

See 14.2.4.1.

##### ~~14.2.25.1.2 — Test purpose~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.25 for the uplink turbo channel coding and 10 ms TTI case.

##### ~~14.2.25.1.3 — Method of test~~

Uplink-TFS:

NOTE:— See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See 14.1.1 for test procedure.

#### 14.2.25.1.4 ——— Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
  - for sub-test 1 to 4: RB5/TF1 (1x336).
3. At step 15 the UE shall return
  - for sub-test 1 to 4: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

#### 14.2.25.2 ——— Interactive or background / UL:32 DL: 64 kbps / PS RAB / (TC, 20 ms TTI)

##### 14.2.25.2.1 ——— Conformance requirement

See 14.2.4.1.

##### 14.2.25.2.2 ——— Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.25 for the uplink turbo channel coding and 20 ms TTI case.

## 14.2.25.2.3 Method of test

## Uplink TFS:

|     | TFI       | RB5<br>(32 kbps) | DCCH  |
|-----|-----------|------------------|-------|
| TFS | TF0, bits | 0x336            | 0x148 |
|     | TF1, bits | 1x336            | 1x148 |
|     | TF2, bits | 2x336            | N/A   |

## Uplink TFCS:

|---------------------------------------------------------------------------------------|--------------------------|------------------------|------------------------------------|------------------------------------|-------------------------------|------------------------------|
| 1                                                                                     | DL_TFC1                  | UL_TFC1                | DL_TFC0, DL_TFC5, UL_TFC0, UL_TFC3 | UL_TFC0, UL_TFC1, UL_TFC3, UL_TFC4 | RB5: 312                      | RB5: 312                     |
| 2                                                                                     | DL_TFC2                  | UL_TFC2                | DL_TFC0, DL_TFC5, UL_TFC0, UL_TFC3 | UL_TFC0, UL_TFC2, UL_TFC3, UL_TFC5 | RB5: 632                      | RB5: 632                     |
| 3                                                                                     | DL_TFC3                  | UL_TFC1                | DL_TFC0, DL_TFC5, UL_TFC0, UL_TFC3 | UL_TFC0, UL_TFC1, UL_TFC3, UL_TFC4 | RB5: 952                      | RB5: 952                     |
| 4                                                                                     | DL_TFC4                  | UL_TFC2                | DL_TFC0, DL_TFC5, UL_TFC0, UL_TFC3 | UL_TFC0, UL_TFC2, UL_TFC3, UL_TFC5 | RB5: 1272                     | RB5: 1272                    |
| NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. |                          |                        |                                    |                                    |                               |                              |

See 14.1.1 for test procedure.

#### 14.2.25.2.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
  - for sub-test 1: RB5/TF1 (1x336).
  - for sub-test 2: RB5/TF2 (2x336).
  - for sub-test 3: RB5/TF1 (1x336).
  - for sub-test 4: RB5/TF2 (2x336).
3. At step 15 the UE shall return
  - for sub-test 1 to 4: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

#### 14.2.25.3 Interactive or background / UL:32 DL:64 kbps / PS RAB / (CG, 10 ms TTI)

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.25 for the uplink convolutional channel coding and 10 ms TTI case.

See test case 14.2.25.1 for test procedure and test requirement.

#### 14.2.25.4 Interactive or background / UL:32 DL:64 kbps / PS RAB / (CG, 20 ms TTI)

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.25 for the uplink convolutional channel coding and 20 ms TTI case.

See test case 14.2.25.2 for test procedure and test requirement.

## 14.2.26 ~~Interactive or background / UL:64 DL: 64 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH~~

### 14.2.26.1 ~~Conformance requirement~~

See 14.2.4.1.

### 14.2.26.2 ~~Test purpose~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.26.

### 14.2.26.3 ~~Method of test~~

NOTE:— See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See 14.1.1 for test procedure.

#### 14.2.26.4 ————— Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
  - for sub-test 1: RB5/TF1 (1x336).
  - for sub-test 2: RB5/TF2 (2x336).
  - for sub-test 3: RB5/TF3 (3x336).
  - for sub-test 4: RB5/TF4 (4x336).
3. At step 15 the UE shall return
  - for sub-test 1 to 4: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

## 14.2.27 ~~Interactive or background / UL:64 DL:128 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH~~

### 14.2.27.1 ~~Conformance requirement~~

See 14.2.4.1.

### 14.2.27.2 ~~Test purpose~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.27.

### 14.2.27.3 ~~Method of test~~

Uplink TFS:

|     | TFI       | RB5<br>(64 kbps) | DCCH  |
|-----|-----------|------------------|-------|
| TFS | TF0, bits | 0x336            | 0x148 |
|     | TF1, bits | 1x336            | 1x148 |
|     | TF2, bits | 2x336            | N/A   |
|     | TF3, bits | 3x336            | N/A   |
|     | TF4, bits | 4x336            | N/A   |
