

**Source:** T1  
**Title:** CR's to TS 34.123-1 v4.2.0 for creation of Rel-5 specification for approval  
**Agenda item:** 5.1.3  
**Document for:** Approval

---

This document contains 3 CRs to TS 34.123-1 v4.2.0 related to the creation of Rel-5 specification. These CRs have been agreed by T1 and are put forward to TSG T for approval.

*These CRs were agreed by T1 conditionally to the approval of T2 CR 23.040-054 in TP-020104.*

## Foreword

This Technical Specification (TS) has been produced by the 3<sup>rd</sup> Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
  - 1 presented to TSG for information;
  - 2 presented to TSG for approval;
  - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

---

## Introduction

The present document is the first part of a multi-part conformance specification valid for 3GPP Release 1999 and 3GPP Release 4. 3GPP TS 34.123-2 [11] contains a pro-forma for the Implementation Conformance Statement (ICS) and an applicability table, indicating the release from which each test case is applicable. 3GPP TS 34.123-3 [12] contains a detailed and executable description of the test cases written in a standard testing language, TTCN, as defined in ISO/IEC 9646.

For at least a minimum set of services, the prose descriptions of test cases will have a matching detailed test case implemented in TTCN [12].

For Release 1999, the minimum set of services are defined as:

- voice calls;
- emergency calls;
- SMS (both Point-to-point and Cell broadcast);
- Circuit Switched data at up to 64 k bits/second;
- fax;

including the underlying layers to support these services.

Release 4 will also include the areas:

- auto-calling restrictions.

The present document may contain descriptions of tests for additional services, but these tests may not have matching TTCN test cases.

The present document will not contain any tests on the USIM, or the interface between the UE and the USIM. These tests are documented elsewhere.

---

# 1 Scope

The present document specifies the protocol conformance testing for the 3<sup>rd</sup> Generation User Equipment (UE).

This is the first part of a multi-part test specification. The following information can be found in this part:

- the overall test structure;
- the test configurations;
- the conformance requirement and reference to the core specifications;
- the test purposes; and
- a brief description of the test procedure, the specific test requirements and short message exchange table.

The following information relevant to testing can be found in accompanying specifications:

- the default setting of the test parameters [9];
- the applicability of each test case [11].

A detailed description of the expected sequence of messages can be found in the 3<sup>rd</sup> part of this test specification.

The Implementation Conformance Statement (ICS) pro-forma can be found in the 2<sup>nd</sup> part of the present document.

The present document is valid for UE implemented according to 3GPP Release 1999 or 3GPP Release 4.

---

# 2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document in the same Release as the present document.
  - For a Release 1999 UE, references to 3GPP documents are to version 3.x.y, when available.
  - For a Release 4 UE, references to 3GPP documents are to version 4.x.y, when available.

## 3 Definitions and abbreviations

(void)

### 3.1 Definitions

For the purposes of the present document, the terms and definitions given in TR 21.905 apply, unless specified below:

**example:** text used to clarify abstract rules by applying them literally

### 3.2 Abbreviations

For the purposes of the present document, the abbreviations specified in TR 25.905 apply, with any additional abbreviations specified below:

SS — System Simulator

---

## 4 Requirements Overview

The requirements of the present document are provided in 3GPP TS 34.123-1 version 5 (Release 5) [40].

### 4.1 Test Methodology

#### 4.1.1 Testing of optional functions and procedures

Any function or procedure which is optional, as indicated in the present document, may be subject to a conformance test if it is implemented in the UE.

A declaration by the apparatus supplier (ICS) is used to determine whether an optional function/procedure has been implemented.

#### 4.1.2 Test interfaces and facilities

Detailed descriptions of the UE test interfaces and special facilities for testing are provided in [10].

### 4.2 Implicit Testing

For some 3GPP signalling and protocol features conformance is not verified explicitly in the present document. This does not imply that correct functioning of these features is not essential, but that these are implicitly tested to a sufficient degree in other tests.

## 5 – 18 (void) – Reference Conditions

The reference environments used by all signalling and protocol tests are specified in TS 34.108. Where a test requires an environment that is different, this will be specified in the test itself.

### 5.1 Generic setup procedures

A set of basic generic procedures for radio resource signalling, and generic setup procedures for layer 3 NAS signalling are described in TS 34.108 clause 7. These procedures are used in numerous test cases throughout the present document.

### 6 – Idle mode operations

In the following paragraphs some explanatory text is given concerning the nature of the tests in this clause and the general behaviour of the SS is described.

Since the conformance requirements of most of the tests in this clause cannot be tested explicitly, testing is done implicitly by testing the UE behaviour from its responses to the SS.

In some cases, a test is performed in multiple stages in order that the requirements can be tested within the above constraints.

For any UE all the carriers are in its supported band(s) of operation.

Unless otherwise stated in the method of test, in all of the tests of this clause:

— the default values of the system information data fields given in TS 34.108 are used;

— the UE is equipped with a USIM containing default values. The USIM is in the idle updated state in the default location area with a TMSI assigned at the beginning of each test;

— the cells shall be configured such that  $Squal > 0$  (FDD only) and  $Srxlev > 0$  while applying  $Qqualmin$  (FDD only) and  $Qrxlevmin$  in table 6.1. In addition, for an FDD cell, the measured primary CPICH RSCP value shall be greater than or equal to  $-95$  dBm (definition of High Quality cell, see TS 25.304, clause 5.1.2.2). In addition, for a TDD cell, the measured P-CCPCH RSCP shall be greater than or equal to  $-84$  dBm (definition of High Quality cell, see TS 25.304, clause 5.1.2.2).

Three different methods A, B and C are applied in the tests:

#### Method A:

— the SS is continuously paging the UE on all cells at the start of the test and does not respond to RACH requests from the UE (which causes a cell reselection). Where a test specifies that the UE is not paged on a particular cell, only idle paging is transmitted. This method is similar to the one used in TS 51.010-1, clause 20.

#### Method B:

— the SS is continuously paging the UE on all cells at the start of the test and responds to RACH requests from the UE with an IMMEDIATE ASSIGNMENT REJECT (GERAN cell) or RRC CONNECTION REJECT (UTRAN cell) message which causes the UE to return to Idle mode. Where a test specifies that the UE is not paged in a particular cell, only idle paging is transmitted.

#### Method C:

— no continuously paging as in method A or B. Normal response to RACH requests so Location Updating and Calls can be done.

Table 6.1: Default values of the system information fields

| Parameter          | Setting                  |
|--------------------|--------------------------|
| IMSI attach/detach | Method A, B: Not allowed |
|                    | Method C: Allowed        |

|                                                |                 |
|------------------------------------------------|-----------------|
| Intra-frequency cell re-selection indicator    | Allowed         |
| Cell_selection_and_reselection_quality_measure | CPICH_RSCP(FDD) |
| Qqualmin (FDD-only)                            | -24 dB          |
| Qrxlevmin (FDD)                                | -115 dBm        |
| <b>Qrxlevmin (TDD)</b>                         | <b>-103 dBm</b> |
| DRX-cycle-length                               | 1,28 s          |

CPICH\_Ec/Io and SCH\_Ec/Io shall fulfil requirements in TS 25.133, clause 8.1.2.2.1: The UE is able to identify a new detectable cell belonging to the monitored set within  $T_{\text{identify-intra}}$  when CPICH\_Ec/Io  $\geq$  -20 dB and SCH\_Ec/Io  $\geq$  -20 dB.

It is a UE option whether to indicate access technologies to the user (TS 23.122, clause 4.4.3.1.2). Therefore, for combined UTRAN/GSM tests, it is indicated in parentheses which access technology shall be indicated to the user if the UE has this capability.

If a parameter is indicated with a \*, it means that the parameter is calculated internally in the UE and is only shown for clarification of the test procedure.

The PLMN numbers indicated in table 6.2 are used in test cases to associate a cell with an MCC and MNC for that cell. If no PLMN is explicitly specified, the default value is PLMN 1.

Table 6.2: Location Area Information (LAI) in System Information type 3 messages broadcast on the BCCH

| PLMN                         | MCC1 | MCC2 | MCC3 | MNC1 | MNC2 | MNC3        | LAC |
|------------------------------|------|------|------|------|------|-------------|-----|
| 1                            | 0    | 0    | 1    | 0    | 1    | Not-present | x   |
| 2                            | 0    | 0    | 2    | 1    | 1    | Not-present | x   |
| 3                            | 0    | 0    | 4    | 2    | 1    | Not-present | x   |
| 4                            | 0    | 0    | 5    | 3    | 1    | Not-present | x   |
| 5                            | 0    | 0    | 6    | 4    | 1    | Not-present | x   |
| 6                            | 0    | 0    | 7    | 5    | 1    | Not-present | x   |
| 7                            | 0    | 0    | 8    | 6    | 1    | Not-present | x   |

| NOTE: 'x' denotes any value. |      |      |      |      |      |             |     |

References: TS 23.122, annex A and TS 23.003, clause 2.

The test channel numbers indicated in tables 6.3, 6.4 and 6.5 are used in test cases to associate a cell with a frequency for that cell. The frequencies for GSM and DCS cells in table 6.5 are identical to those used in TS 51.010-1, clause 26.3.1. The RF signal levels for GSM cells are given in table 6.5 for UTRAN FDD cells in TS 34.108, table 6.1.1

and for UTRAN TDD cells in TS 34.108, table 6.1.5. If no channel is explicitly specified, the default value is Test Channel 1.

Table 6.3: UTRA (FDD) test frequencies

| Test Channel |                               |        | ITU region 2               |        |
|--------------|-------------------------------|--------|----------------------------|--------|

| 7            | +55/-58                     | 885        | +55/-58                     | 885        |
| 8            | +53/-60                     | 293        | +53/-60                     | 340        |

For testing an E-GSM Mobile station, the BCCH ARFCN of GSM Test Channel 7 at GSM 900 column shall be 985 (instead of 97). For testing an R-GSM Mobile station, the BCCH ARFCN of GSM Test Channel 7 at GSM 900 column shall be 965 (instead of 97).

#### 6.1 In a pure 3GPP environment

##### 6.1.1 PLMN selection and reselection

##### 6.1.1.1 PLMN selection of RPLMN, HPLMN, UPLMN and OPLMN; Manual mode

##### 6.1.1.1.1 Definition

Test to verify that the UE can present the available PLMNs in priority order to the user when asked to do so in manual mode and that the displayed PLMNs can be selected / reselected by the user. Forbidden PLMNs shall also be displayed in the list. If available, the RPLMN shall be selected at switch-on, otherwise the displayed list shall include in priority

order HPLMN, User-PLMN and Operator-PLMN. The last priority in the list is "Other PLMN/access technology combinations" which is not included in this test.

Only UTRAN cells and a UE equipped with a USIM with Radio Access Technology fields set to UTRAN are considered.

#### 6.1.1.1.2 Conformance requirement

1. At switch on, or following recovery from lack of coverage, the MS selects the registered PLMN or equivalent PLMN (if it is available) using all access technologies that the MS is capable of and if necessary (in the case of recovery from lack of coverage, see TS 23.122, clause 4.5.2) attempts to perform a Location Registration.

If successful registration is achieved, the MS indicates the selected PLMN.

If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows either Automatic or Manual Network Selection Mode Procedure depending on its operating mode.

#### 2. Manual Network Selection Mode Procedure:

The MS indicates whether there are any PLMNs, which are available using all supported access technologies. This includes PLMNs in the "forbidden PLMNs" list and PLMNs which only offer services not supported by the MS.

If displayed, PLMNs meeting the criteria above are presented in the following order:

##### 2.1 HPLMN;

2.2 PLMNs contained in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

2.3 PLMNs contained in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

2.4 Other PLMN/access technology combinations with received high quality signal in random order;

2.5 Other PLMN/access technology combinations in order of decreasing signal quality.

The user may select his desired PLMN and the MS then initiates registration on this PLMN using the access technology chosen by the user for that PLMN or using the highest priority available access technology for that PLMN, if the associated access technologies have a priority order. (This may take place at any time during the presentation of PLMNs). For such a registration, the MS shall ignore the contents of the "forbidden LAs for roaming", "forbidden LAs for regional provision of service", "forbidden PLMNs for GPRS service" and "forbidden PLMNs" lists.

If the user does not select a PLMN, the selected PLMN shall be the one that was selected before the PLMN selection procedure started. If no such PLMN was selected or that PLMN is no longer available, then the MS shall attempt to camp on any acceptable cell and enter the limited service state.

3. If a "PLMN not allowed" message is received by an MS in response to an LR request from a VPLMN, that VPLMN is added to a list of "forbidden PLMNs" in the SIM and thereafter that VPLMN will not be accessed by the MS when in automatic mode. A PLMN is removed from the "forbidden PLMNs" list if, after a subsequent manual selection of that PLMN, there is a successful LR. This list is retained when the MS is switched off or the SIM is removed. The HPLMN shall not be stored on the list of "forbidden PLMNs".

#### References

1. TS 23.122, clause 4.4.3.1;

2. TS 23.122, clause 4.4.3.1.2;

3. TS 23.122, clause 3.1.

NOTE: TS 31.102 defines the USIM fields.

#### 6.1.1.1.3 Test purpose

1. To verify that if available, the RPLMN is selected at switch-on.

2. To verify that in Manual Network Selection Mode Procedure, the UE presents the HPLMN, UPLMN and OPLMN in a prioritized order.

3. To verify that forbidden PLMNs are also displayed in the list.

#### 6.1.1.1.4 Method of test

##### Initial conditions

The UE is in manual PLMN selection mode.

Cell levels are from table 6.3. (FDD).

All Radio Access Technology USIM fields and cells are UTRAN.

| Cell   | CPICH_<br>Ec [dBm/3.84<br>MHz]<br>(FDD) | P-CCPCH_<br>RSCP [dBm]<br>(TDD) | Test Channel | PLMN   |
|--------|-----------------------------------------|---------------------------------|--------------|--------|
| Cell 1 | -72                                     | -61                             | 1            | PLMN 1 |
| Cell 2 | -75                                     | -64                             | 2            | PLMN 2 |
| Cell 3 | -78                                     | -67                             | 3            | PLMN 3 |
| Cell 4 | -81                                     | -70                             | 4            | PLMN 4 |
| Cell 5 | -84                                     | -73                             | 5            | PLMN 5 |
| Cell 6 | -87                                     | -76                             | 6            | PLMN 6 |

The UE is equipped with a USIM containing default values except for those listed below.

| USIM field              | Priority        | PLMN   |
|-------------------------|-----------------|--------|
| EF <sub>LOC1</sub>      |                 | PLMN 1 |
| EF <sub>HPLMNwAcT</sub> | 1 <sup>st</sup> | PLMN 2 |
| EF <sub>PLMNwAcT</sub>  | 1 <sup>st</sup> | PLMN 3 |
|                         | 2 <sup>nd</sup> | PLMN 4 |
| EF <sub>OPLMNwAcT</sub> | 1 <sup>st</sup> | PLMN 5 |
|                         | 2 <sup>nd</sup> | PLMN 6 |
| EF <sub>FPLMN</sub>     | PLMN 3          |        |

##### Test procedure

Method B is applied.

a) The SS activates cells 1-6 and monitors the cells for random access requests from the UE.

b) The UE is switched on.

c) The SS waits for random access requests from the UE.

d) Cell 1 is switched off.

e) PLMN 4 shall be selected when the PLMN list is presented.

- f) ~~The SS waits for random access requests from the UE.~~
- g) ~~Cell 4 is switched off.~~
- h) ~~PLMN 3 shall be selected when the PLMN list is presented. The SS shall reject the Registration Request from the UE.~~
- i) ~~PLMN 5 shall be selected (the list is already available).~~
- j) ~~The SS waits for random access requests from the UE.~~
- k) ~~Cell 5 is switched off.~~
- l) ~~PLMN 2 shall be selected when the PLMN list is presented.~~
- m) ~~The SS waits for random access requests from the UE.~~
- n) ~~Cell 2 is switched off.~~
- o) ~~PLMN 6 shall be selected when the PLMN list is presented.~~
- p) ~~The SS waits for random access requests from the UE.~~
- q) ~~Cell 6 is switched off.~~

#### 6.1.1.1.5 Test Requirements

- 1) ~~In step c), the response from the UE shall be on Cell 1. The displayed PLMN shall be PLMN 1.~~
- 2) ~~In step e), the list shall be presented. The priority shall be as follows: PLMN 2, PLMN 3, PLMN 4, PLMN 5, PLMN 6.~~
- 3) ~~In step f), the response from the UE shall be on Cell 4. The displayed PLMN shall be PLMN 4.~~
- 4) ~~In step h), the list shall be presented. The priority shall be as follows: PLMN 2, PLMN 3, PLMN 5, PLMN 6. After PLMN 3 has been selected, the list shall appear again as the UE cannot perform registration.~~
- 6) ~~In step j), the response from the UE shall be on Cell 5. The displayed PLMN shall be PLMN 5.~~
- 7) ~~In step l), the list shall be presented. The priority shall be as follows: PLMN 2, PLMN 3, PLMN 6.~~
- 8) ~~In step m), the response from the UE shall be on Cell 2. The displayed PLMN shall be PLMN 2.~~
- 9) ~~In step o), the list shall be presented. The priority shall be as follows: PLMN 3, PLMN 6.~~
- 10) ~~In step p), the response from the UE shall be on Cell 6. The displayed PLMN shall be PLMN 6.~~
- 11) ~~After step q), the UE shall inform that only limited service is possible.~~

#### 6.1.1.2 PLMN selection of "Other PLMN / access technology combinations"; Manual mode

##### 6.1.1.2.1 Definition

Test to verify that the UE can present the available PLMNs in priority order to the user when asked to do so in manual mode and that the displayed PLMNs can be selected / reselected by the user. Forbidden PLMNs shall also be displayed in the list. In this test are only considered "Other PLMN/access technology combinations" in the priority list.

Only UTRAN cells and a UE equipped with a USIM with Radio Access Technology fields set to UTRAN are considered.

##### 6.1.1.2.2 Conformance requirement

1. At switch on, or following recovery from lack of coverage, the MS selects the registered PLMN or equivalent PLMN (if it is available) using all access technologies that the MS is capable of and if necessary (in the case of recovery from lack of coverage, see TS 23.122, clause 4.5.2) attempts to perform a Location Registration.

If successful registration is achieved, the MS indicates the selected PLMN.

If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows either Automatic or Manual Network Selection Mode Procedure depending on its operating mode.

## 2. Manual Network Selection Mode Procedure:

The MS indicates whether there are any PLMNs, which are available using all supported access technologies. This includes PLMNs in the "forbidden PLMNs" list and PLMNs which only offer services not supported by the MS.

If displayed, PLMNs meeting the criteria above are presented in the following order:

### 2.1 HPLMN;

2.2 PLMNs contained in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

2.3 PLMNs contained in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

2.4 Other PLMN/access technology combinations with received high quality signal in random order;

2.5 Other PLMN/access technology combinations in order of decreasing signal quality.

In 2.5, the MS shall order the PLMN/access technology combinations in order of decreasing signal quality within each access technology. The order between PLMN/access technology combinations with different access technologies is an MS implementation issue.

The user may select his desired PLMN and the MS then initiates registration on this PLMN using the access technology chosen by the user for that PLMN or using the highest priority available access technology for that PLMN, if the associated access technologies have a priority order. (This may take place at any time during the presentation of PLMNs). For such a registration, the MS shall ignore the contents of the "forbidden LAs for roaming", "forbidden LAs for regional provision of service", "forbidden PLMNs for GPRS service" and "forbidden PLMNs" lists.

If the user does not select a PLMN, the selected PLMN shall be the one that was selected before the PLMN selection procedure started. If no such PLMN was selected or that PLMN is no longer available, then the MS shall attempt to camp on any acceptable cell and enter the limited service state.

3. If a "PLMN not allowed" message is received by an MS in response to an LR request from a VPLMN, that VPLMN is added to a list of "forbidden PLMNs" in the SIM and thereafter that VPLMN will not be accessed by the MS when in automatic mode. A PLMN is removed from the "forbidden PLMNs" list if, after a subsequent manual selection of that PLMN, there is a successful LR. This list is retained when the MS is switched off or the SIM is removed. The HPLMN shall not be stored on the list of "forbidden PLMNs".

4. The UE shall scan all RF channels in the UTRA band according to its capabilities to find available PLMNs. On each carrier, the UE shall search for the strongest cell according to the cell search procedures (for FDD, see TS 25.214, and TDD, see TS 25.224) and read its system information, in order to find out which PLMN the cell belongs to. If the UE can read the PLMN identity, the found PLMN shall be reported to the NAS as a high quality PLMN (but without the RSCP value), provided that the following high quality criterion is fulfilled:

— For an FDD cell, the measured primary CPICH RSCP value shall be greater than or equal to -95 dBm.

— For a TDD cell, the measured P-CCPCH RSCP shall be greater than or equal to -84 dBm.

— Found PLMNs that do not satisfy the high quality criterion, but for which the UE has been able to read the PLMN identities are reported to the NAS together with the CPICH RSCP value for UTRA FDD cells and P-CCPCH RSCP for UTRA TDD cells.

4. TS 25.304, clause 5.1.2.2.

NOTE: — TS 31.102 defines the USIM fields.

#### 6.1.1.2.3 Test purpose

1. — To verify that in Manual Network Selection Mode Procedure, the UE presents "Other PLMN/access technology combinations" in a prioritized order according to conformance requirement 2.4 and 2.5.

2. — To verify that forbidden PLMNs are also displayed in the list.

#### 6.1.1.2.4 Method of test

Initial conditions

The UE is in manual PLMN selection mode.

All Radio Access Technology USIM fields and cells are UTRAN.

| Cell   | CPICH_Ec<br>[dBm/3.84<br>MHz]<br><br>(FDD) | P-CCPCH_<br>RSCP [dBm]<br><br>(TDD) | High-Quality<br>signal | Test-Channel | PLMN    |
|--------|--------------------------------------------|-------------------------------------|------------------------|--------------|---------|
| Cell 1 | -85                                        | -74                                 | Yes                    | 1            | PLMN-6  |
| Cell 2 | -80                                        | -69                                 | Yes                    | 2            | PLMN-7  |
| Cell 3 | -80                                        | -69                                 | Yes                    | 3            | PLMN-8  |
| Cell 4 | -98                                        | -87                                 | No                     | 4            | PLMN-9  |
| Cell 5 | -101                                       | -90                                 | No                     | 5            | PLMN-10 |
| Cell 6 | -104                                       | -93                                 | No                     | 6            | PLMN-11 |

The UE is equipped with a USIM containing default values except for those listed below.

| USIM field              | Priority        | PLMN   |
|-------------------------|-----------------|--------|
| EF <sub>LOCI</sub>      |                 | PLMN-1 |
| EF <sub>HPLMNwAcT</sub> | 1 <sup>st</sup> | PLMN-2 |
| EF <sub>PLMNwAcT</sub>  | 1 <sup>st</sup> | PLMN-3 |
|                         | 2 <sup>nd</sup> | PLMN-4 |
| EF <sub>OPLMNwAcT</sub> | 1 <sup>st</sup> | PLMN-5 |
|                         | 2 <sup>nd</sup> | PLMN-6 |
| EF <sub>FPLMN</sub>     | PLMN-10         |        |

Test procedure

Method B is applied.

a) — The SS activates cells 1-6 and monitors the cells for random access requests from the UE.

b) — The UE is switched on.

c) — PLMN-9 shall be selected when the PLMN list is presented.

d) — The SS waits for random access requests from the UE.

- e) Cell 4 is switched off.
- f) PLMN 7 shall be selected when the PLMN list is presented.
- g) The SS waits for random access requests from the UE.
- h) Cell 2 is switched off.
- i) PLMN 6 shall be selected when the PLMN list is presented.
- j) The SS waits for random access requests from the UE.
- k) Cell 1 is switched off.
- l) PLMN 11 shall be selected when the PLMN list is presented.
- m) The SS waits for random access requests from the UE.
- n) Cell 6 is switched off.
- o) PLMN 10 shall be selected when the PLMN list is presented. The SS shall reject the Registration Request from the UE.
- p) Cell 5 is switched off.
- q) PLMN 8 shall be selected (the list is already available)
- r) The SS waits for random access requests from the UE.
- s) Cell 3 is switched off.

#### 6.1.1.2.5 Test Requirements

- 1) In step c), the list shall be presented. The priority shall be as follows: PLMN 6 followed by PLMN 7, PLMN 8 in random order, followed by PLMN 9, PLMN 10, PLMN 11.
- 2) In step d), the response from the UE shall be on Cell 4. The displayed PLMN shall be PLMN 9.
- 3) In step f), the list shall be presented. The priority shall be as follows: PLMN 6 followed by PLMN 7, PLMN 8 in random order, followed by PLMN 10, PLMN 11.
- 4) In step g), the response from the UE shall be on Cell 2. The displayed PLMN shall be PLMN 7.
- 5) In step i), the list shall be presented. The priority shall be as follows: PLMN 6, PLMN 8, PLMN 10, PLMN 11.
- 6) In step j), the response from the UE shall be on Cell 1. The displayed PLMN shall be PLMN 6.
- 7) In step l), the list shall be presented. The priority shall be as follows: PLMN 8, PLMN 10, PLMN 11.
- 8) In step m), the response from the UE shall be on Cell 6. The displayed PLMN shall be PLMN 11.
- 9) In step o), the list shall be presented. The priority shall be as follows: PLMN 8, PLMN 10. After PLMN 10 has been selected, the list shall appear again as the UE cannot perform registration.
- 10) In step q), the list shall be presented and shall only contain PLMN 8.
- 11) In step r), the UE shall respond on Cell 3. The displayed PLMN shall be PLMN 8.
- 12) After step s), the UE shall inform that no network is available.

#### 6.1.1.3 PLMN selection; independence of RF level and preferred PLMN; Manual mode

##### 6.1.1.3.1 Definition

Test to verify that in Manual Network Selection Mode, the UE is able to obtain normal service on a PLMN which is neither the better nor a preferred PLMN and that it tries to obtain service on a VPLMN if and only if the user selects it manually.

#### 6.1.1.3.2 Conformance requirement

1. ~~At switch-on, or following recovery from lack of coverage, the MS selects the registered PLMN or equivalent PLMN (if it is available) using all access technologies that the MS is capable of and if necessary (in the case of recovery from lack of coverage, see TS 23.122, clause 4.5.2) attempts to perform a Location Registration.~~

~~If successful registration is achieved, the MS indicates the selected PLMN.~~

~~If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows either Automatic or Manual Network Selection Mode Procedure depending on its operating mode.~~

#### 2. ~~Manual Network Selection Mode Procedure:~~

~~The MS indicates whether there are any PLMNs, which are available using all supported access technologies. This includes PLMNs in the "forbidden PLMNs" list and PLMNs which only offer services not supported by the MS.~~

~~If displayed, PLMNs meeting the criteria above are presented in the following order:~~

##### 2.1 ~~HPLMN;~~

2.2 ~~PLMNs contained in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);~~

2.3 ~~PLMNs contained in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);~~

2.4 ~~Other PLMN/access technology combinations with received high quality signal in random order;~~

2.5 ~~Other PLMN/access technology combinations in order of decreasing signal quality.~~

~~—The user may select his desired PLMN and the MS then initiates registration on this PLMN using the access technology chosen by the user for that PLMN or using the highest priority available access technology for that PLMN, if the associated access technologies have a priority order. (This may take place at any time during the presentation of PLMNs). For such a registration, the MS shall ignore the contents of the "forbidden LAs for roaming", "forbidden LAs for regional provision of service", "forbidden PLMNs for GPRS service" and "forbidden PLMNs" lists.~~

~~If the user does not select a PLMN, the selected PLMN shall be the one that was selected before the PLMN selection procedure started. If no such PLMN was selected or that PLMN is no longer available, then the MS shall attempt to camp on any acceptable cell and enter the limited service state.~~

#### References

1. ~~TS 23.122, clause 4.4.3.1.~~

2. ~~TS 23.122, clause 4.4.3.1.2~~

NOTE: ~~— TS 31.102 defines the USIM fields.~~

#### 6.1.1.3.3 Test purpose

1. ~~To verify that the selected PLMN at switch-on is the HPLMN.~~

2. ~~To verify that in Manual Network Selection Mode Procedure the UE tries to obtain service on a VPLMN if and only if the user selects it manually.~~

3. ~~To verify that the UE is able to obtain normal service on a PLMN which is neither the better nor a preferred PLMN.~~

#### 6.1.1.3.4 Method of investigation

##### Initial conditions

~~The UE is in manual PLMN selection mode.~~

~~"IMSI attach" flag in the BCCH is set to allowed.~~

~~For FDD only:~~

Step a-d:

| Parameter    | Unit         | Cell 1 | Cell 2 | Cell 3 |
|--------------|--------------|--------|--------|--------|
| Test Channel |              | 1      | 2      | 3      |
| CPICH_Ec     | dBm/3.84 MHz | -60    | -70    | OFF    |
| PLMN         |              | 1      | 2      | 3      |

Step e-f:

|          |              |           |     |     |
|----------|--------------|-----------|-----|-----|
| CPICH_Ec | dBm/3.84 MHz | -60 → OFF | -70 | OFF |
|----------|--------------|-----------|-----|-----|

Step g-h:

|          |              |     |     |           |
|----------|--------------|-----|-----|-----------|
| CPICH_Ec | dBm/3.84 MHz | OFF | -70 | OFF → -60 |
|----------|--------------|-----|-----|-----------|

Step i-l:

|          |              |     |           |     |
|----------|--------------|-----|-----------|-----|
| CPICH_Ec | dBm/3.84 MHz | OFF | -70 → OFF | -60 |
|----------|--------------|-----|-----------|-----|

For TDD only:

Step a-d:

| Parameter    | Unit | Cell 1 | Cell 2 | Cell 3 |
|--------------|------|--------|--------|--------|
| Test Channel |      | 1      | 2      | 3      |
| P-CCPCH_RSCP | dBm  | -69    | -72    | OFF    |
| Qrxlevmin    | dBm  | -103   | -103   | -103   |
| Srxlev*      | dB   | 34     | 31     | -      |
| PLMN         |      | 1      | 2      | 3      |

Step e-f:

|              |  |           |     |     |
|--------------|--|-----------|-----|-----|
| P-CCPCH_RSCP |  | -69 → OFF | -72 | OFF |
|--------------|--|-----------|-----|-----|

Step g-h:

|              |  |     |     |           |
|--------------|--|-----|-----|-----------|
| P-CCPCH_RSCP |  | OFF | -72 | OFF → -69 |
|--------------|--|-----|-----|-----------|

Step i-l:

|              |  |     |           |     |
|--------------|--|-----|-----------|-----|
| P-CCPCH_RSCP |  | OFF | -72 → OFF | -69 |
|--------------|--|-----|-----------|-----|

The UE is equipped with a USIM containing default values except for those listed below.

| USIM field              | Priority        | PLMN   |
|-------------------------|-----------------|--------|
| EF <sub>LOCI</sub>      |                 |        |
| EF <sub>HPLMNwAcT</sub> | 1 <sup>st</sup> | PLMN-1 |

|                        |                 |        |
|------------------------|-----------------|--------|
| EF <sub>PLMNwAcT</sub> | 1 <sup>st</sup> | PLMN-3 |
|------------------------|-----------------|--------|

#### Test procedure

Method C is applied.

- a) ~~The SS activates cells 1 and 2.~~
- b) ~~The UE is switched on.~~
- c) ~~PLMN 1 is selected manually.~~
- d) ~~The SS waits for random access requests from the UE. A complete Location Update is done.~~
- e) ~~Cell 1 is switched off.~~
- f) ~~The SS waits to see if there is any random access request from the UE.~~
- g) ~~Cell 3 is switched on.~~
- h) ~~The SS waits to see if there is any random access request from the UE.~~
- i) ~~PLMN 2 is selected manually.~~
- j) ~~The SS waits for random access requests from the UE. A complete Location Update is done.~~
- k) ~~Cell 2 is switched off.~~
- l) ~~The SS waits to see if there is any random access request from the UE.~~

#### 6.1.1.3.5 Test Requirements

- 1) ~~In step d), there shall be a response on Cell 1. The selected PLMN shall be PLMN 1.~~
- 2) ~~In step f), there shall be no response from the UE within 2 min.~~
- 3) ~~In step h), there shall be no response from the UE within 2 min.~~
- 4) ~~In step j), there shall be a response on Cell 2. The selected PLMN shall be PLMN 2.~~
- 5) ~~In step l), there shall be no response from the UE within 2 min.~~

#### 6.1.1.4 PLMN selection of RPLMN, HPLMN, UPLMN and OPLMN; Automatic mode

##### 6.1.1.4.1 Definition

Test to verify that in Automatic Network Selection Mode, the UE selects PLMNs in a prioritized order. Forbidden PLMNs shall not be selected. If available, the RPLMN shall be selected at switch-on, otherwise the list shall include in priority order HPLMN, User-PLMN and Operator-PLMN. The last priority in the list is "Other PLMN/access technology combinations" which is not included in this test.

Only UTRAN cells and a UE equipped with a USIM with Radio Access Technology fields set to UTRAN are considered.

##### 6.1.1.4.2 Conformance requirement

1. ~~At switch-on, or following recovery from lack of coverage, the MS selects the registered PLMN or equivalent PLMN (if it is available) using all access technologies that the MS is capable of and if necessary (in the case of recovery from lack of coverage, see TS 23.122, clause 4.5.2) attempts to perform a Location Registration.~~

~~—If successful registration is achieved, the MS indicates the selected PLMN.~~

If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows either Automatic or Manual Network Selection Mode Procedure depending on its operating mode.

2. ~~Automatic Network Selection Mode Procedure:~~

The MS selects and attempts registration on other PLMNs, if available and allowable in the following order:

2.1 HPLMN (if not previously selected);

2.2 Each PLMN in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

2.3 Each PLMN in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

2.4 Other PLMN/access technology combinations with received high quality signal in random order;

2.5 Other PLMN/access technology combinations in order of decreasing signal quality.

If successful registration is achieved, the MS indicates the selected PLMN.

If registration cannot be achieved because no PLMNs are available and allowable, the MS indicates "no service" to the user, waits until a new PLMN is available and allowable and then repeats the procedure.

If there were one or more PLMNs which were available and allowable, but an LR failure made registration on those PLMNs unsuccessful or an entry in the "forbidden LAs for regional provision of service" list prevented a registration attempt, the MS selects the first such PLMN again and enters a limited service state.

3. If a "PLMN not allowed" message is received by an MS in response to an LR request from a VPLMN, that VPLMN is added to a list of "forbidden PLMNs" in the SIM and thereafter that VPLMN will not be accessed by the MS when in automatic mode. A PLMN is removed from the "forbidden PLMNs" list if, after a subsequent manual selection of that PLMN, there is a successful LR. This list is retained when the MS is switched off or the SIM is removed. The HPLMN shall not be stored on the list of "forbidden PLMNs".

#### References

1. TS 23.122, clause 4.4.3.1.

2. TS 23.122, clause 4.4.3.1.1.

3. TS 23.122, clause 3.1.

NOTE: TS 31.102 defines the USIM fields.

#### 6.1.1.4.3 Test purpose

1. To verify that if available, the RPLMN is selected at switch-on.

2. To verify that in Automatic Network Selection Mode Procedure, the UE selects the RPLMN, HPLMN, UPLMN and OPLMN in a prioritized order.

3. To verify that forbidden PLMNs are not selected.

#### 6.1.1.4.4 Method of test

#### Initial conditions

The UE is in automatic PLMN selection mode.

Cell levels are from table 6.3 (FDD).

All Radio Access Technology USIM fields and cells are UTRAN.

| Cell   | CPICH_<br>Ec [dBm/3.84<br>MHz]<br>(FDD) | P-CCPCH_<br>RSCP [dBm]<br>(TDD) | Test Channel | PLMN   |
|--------|-----------------------------------------|---------------------------------|--------------|--------|
| Cell 1 | -72                                     | -61                             | 1            | PLMN 1 |

|        |     |     |   |        |
|--------|-----|-----|---|--------|
| Cell-2 | -75 | -64 | 2 | PLMN-2 |
| Cell-3 | -78 | -67 | 3 | PLMN-3 |
| Cell-4 | -81 | -70 | 4 | PLMN-4 |
| Cell-5 | -84 | -73 | 5 | PLMN-5 |
| Cell-6 | -87 | -76 | 6 | PLMN-6 |

The UE is equipped with a USIM containing default values except for those listed below.

| USIM-field              | Priority        | PLMN   |
|-------------------------|-----------------|--------|
| EF <sub>LOGI</sub>      |                 | PLMN-1 |
| EF <sub>HPLMNwAcT</sub> | 1 <sup>st</sup> | PLMN-2 |
| EF <sub>PLMNwAcT</sub>  | 1 <sup>st</sup> | PLMN-3 |
|                         | 2 <sup>nd</sup> | PLMN-4 |
| EF <sub>OPLMNwAcT</sub> | 1 <sup>st</sup> | PLMN-5 |
|                         | 2 <sup>nd</sup> | PLMN-6 |
| EF <sub>FPLMN</sub>     | PLMN-3          |        |

#### Test procedure

Method B is applied.

- a) The SS activates cells 1-6 and monitors the cells for random access requests from the UE.
- b) The UE is switched on.
- c) The SS waits for random access requests from the UE.
- d) Cell 1 is switched off.
- e) The SS waits for random access requests from the UE.
- f) Cell 2 is switched off.
- g) The SS waits for random access requests from the UE.
- i) Cell 4 is switched off.
- j) The SS waits for random access requests from the UE.
- k) Cell 5 is switched off.
- l) The SS waits for random access requests from the UE.
- m) Cell 6 is switched off.

#### 6.1.1.4.5 Test Requirements

- 1) In step c), the response from the UE shall be on Cell 1. The displayed PLMN shall be PLMN-1.
- 2) In step e), the response from the UE shall be on Cell 2. The displayed PLMN shall be PLMN-2.
- 3) In step g), the response from the UE shall be on Cell 4. The displayed PLMN shall be PLMN-4.

4) In step j), the response from the UE shall be on Cell 5. The displayed PLMN shall be PLMN 5.

5) In step l), the response from the UE shall be on Cell 6. The displayed PLMN shall be PLMN 6.

6) After step m), the UE shall inform that only limited service is possible

#### 6.1.1.5 PLMN selection of "Other PLMN / access technology combinations"; Automatic mode

##### 6.1.1.5.1 Definition

Test to verify that in Automatic Network Selection Mode, the UE selects PLMNs in a prioritized order. Forbidden PLMNs shall not be selected. In this test are only considered "Other PLMN/access technology combinations" in the priority list.

Only UTRAN cells and a UE equipped with a USIM with Radio Access Technology fields set to UTRAN are considered.

##### 6.1.1.5.2 Conformance requirement

1. At switch on, or following recovery from lack of coverage, the MS selects the registered PLMN or equivalent PLMN (if it is available) using all access technologies that the MS is capable of and if necessary (in the case of recovery from lack of coverage, see TS 23.122, clause 4.5.2) attempts to perform a Location Registration.

If successful registration is achieved, the MS indicates the selected PLMN.

If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows either Automatic or Manual Network Selection Mode Procedure depending on its operating mode.

##### 2. Automatic Network Selection Mode Procedure:

The MS selects and attempts registration on other PLMNs, if available and allowable in the following order:

2.1 HPLMN (if not previously selected);

2.2 Each PLMN in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

2.3 Each PLMN in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

2.4 Other PLMN/access technology combinations with received high quality signal in random order;

2.5 Other PLMN/access technology combinations in order of decreasing signal quality.

In 2.5, the MS shall order the PLMN/access technology combinations in order of decreasing signal quality within each access technology. The order between PLMN/access technology combinations with different access technologies is an MS implementation issue.

If successful registration is achieved, the MS indicates the selected PLMN.

If registration cannot be achieved because no PLMNs are available and allowable, the MS indicates "no service" to the user, waits until a new PLMN is available and allowable and then repeats the procedure.

If there were one or more PLMNs which were available and allowable, but an LR failure made registration on those PLMNs unsuccessful or an entry in the "forbidden LAs for regional provision of service" list prevented a registration attempt, the MS selects the first such PLMN again and enters a limited service state.

3. If a "PLMN not allowed" message is received by an MS in response to an LR request from a VPLMN, that VPLMN is added to a list of "forbidden PLMNs" in the SIM and thereafter that VPLMN will not be accessed by the MS when in automatic mode. A PLMN is removed from the "forbidden PLMNs" list if, after a subsequent manual selection of that PLMN, there is a successful LR. This list is retained when the MS is switched off or the SIM is removed. The HPLMN shall not be stored on the list of "forbidden PLMNs".

4. The UE shall scan all RF channels in the UTRA band according to its capabilities to find available PLMNs. On each carrier, the UE shall search for the strongest cell according to the cell search procedures (for FDD, see TS 25.214, and TDD, see TS 25.224) and read its system information, in order to find out which PLMN the cell belongs to. If the UE

can read the PLMN identity, the found PLMN shall be reported to the NAS as a high quality PLMN (but without the RSCP value), provided that the following high quality criterion is fulfilled:

— For an FDD cell, the measured primary CPICH RSCP value shall be greater than or equal to -95 dBm.

— For a TDD cell, the measured P-CCPCH RSCP shall be greater than or equal to -84 dBm.

Found PLMNs that do not satisfy the high quality criterion, but for which the UE has been able to read the PLMN identities are reported to the NAS together with the CPICH RSCP value for UTRA FDD cells and P-CCPCH RSCP for UTRA TDD cells.

4. TS 25.304, clause 5.1.2.2.

NOTE: TS 31.102 defines the USIM fields.

#### 6.1.1.5.3 Test purpose

1. To verify that in Automatic Network Selection Mode Procedure, the UE selects "Other PLMN/access technology combinations" in a prioritized order according to conformance requirement 2.4 and 2.5.

2. To verify that forbidden PLMNs are not selected.

#### 6.1.1.5.4 Method of test

#### Initial conditions

The UE is in automatic PLMN selection mode.

All Radio Access Technology USIM fields and cells are UTRAN.

| Cell   | CPICH_Ec<br>[dBm/3.84<br>MHz]<br>(FDD) | P-CCPCH_RSCP<br>[dBm]<br>(TDD) | High<br>Quality<br>signal | Test Channel | PLMN    |
|--------|----------------------------------------|--------------------------------|---------------------------|--------------|---------|
| Cell 1 | -85                                    | -74                            | Yes                       | 1            | PLMN 6  |
| Cell 2 | -80                                    | -69                            | Yes                       | 2            | PLMN 7  |
| Cell 3 | -80                                    | -69                            | Yes                       | 3            | PLMN 8  |
| Cell 4 | -98                                    | -87                            | No                        | 4            | PLMN 9  |
| Cell 5 | -101                                   | -90                            | No                        | 5            | PLMN 10 |
| Cell 6 | -104                                   | -93                            | No                        | 6            | PLMN 11 |

The UE is equipped with a USIM containing default values except for those listed below.

| USIM field              | Priority        | PLMN   |
|-------------------------|-----------------|--------|
| EF <sub>LOGI</sub>      |                 | PLMN 1 |
| EF <sub>HPLMNwAcT</sub> | 1 <sup>st</sup> | PLMN 2 |
| EF <sub>PLMNwAcT</sub>  | 1 <sup>st</sup> | PLMN 3 |

|                         |                 |        |
|-------------------------|-----------------|--------|
|                         | 2 <sup>nd</sup> | PLMN 4 |
| EF <sub>OPLMNwAcT</sub> | 1 <sup>st</sup> | PLMN 5 |
|                         | 2 <sup>nd</sup> | PLMN 6 |
| EF <sub>FPLMN</sub>     | PLMN 10         |        |

#### Test procedure

Method B is applied.

- a) ~~The SS activates cells 1-6 and monitors the cells for random access requests from the UE.~~
- b) ~~The UE is switched on.~~
- c) ~~The SS waits for random access requests from the UE.~~
- d) ~~Cell 1 is switched off.~~
- e) ~~The SS waits for random access requests from the UE.~~
- f) ~~The cell associated to the currently shown PLMN shall be switched off.~~
- g) ~~The SS waits for random access requests from the UE.~~
- h) ~~The cell associated to the currently shown PLMN shall be switched off.~~
- i) ~~The SS waits for random access requests from the UE.~~
- j) ~~Cell 4 is switched off.~~
- k) ~~The SS waits for random access requests from the UE.~~
- l) ~~Cell 6 is switched off.~~

#### 6.1.1.5.5 Test Requirements

- 1) ~~In step c), the response from the UE shall be on Cell 1. The displayed PLMN shall be PLMN 6.~~
- 2) ~~In step e), the response from the UE shall be on either Cell 2 or 3. The displayed PLMN shall be the one associated with the cell on which the response was received.~~
- 3) ~~In step g), the response from the UE shall be on either Cell 2 or 3 (excluding the cell in step 2). The displayed PLMN shall be the one associated with the cell on which the response was received.~~
- 4) ~~In step i), the response from the UE shall be on Cell 4. The displayed PLMN shall be PLMN 9.~~
- 5) ~~In step k), the response from the UE shall be on Cell 6. The displayed PLMN shall be PLMN 11.~~
- 6) ~~After step l), the UE shall inform that only limited service is possible.~~

#### 6.1.1.6 UE will transmit only if PLMN available

##### 6.1.1.6.1 Definition

Test to verify that the UE will not generate any RF output if no PLMN is available.

##### 6.1.1.6.2 Conformance requirement

[FFS: Currently no requirements exist in core specs.]

##### 6.1.1.6.3 Test purpose

- 1. ~~To verify that the UE does not give any "Service indication" when no PLMN is available.~~
- 2. ~~To verify that the UE will not generate any RF output when no PLMN is available.~~

## 6.1.1.6.4 Method of test

## Initial conditions

For FDD only:

| Parameter | Unit         | Cell 1 | Cell 2 | Cell 3 |
|-----------|--------------|--------|--------|--------|
| CPICH_Ec  | dBm/3.84 MHz | -60    | -65    | -70    |

For TDD only:

| Parameter    | Unit | Cell 1 | Cell 2 | Cell 3 |
|--------------|------|--------|--------|--------|
| P-CCPCH_RSCP | dBm  | -69    | -71    | -73    |
| Qrxlevmin    | dBm  | -103   | -103   | -103   |
| Srxlev*      | dB   | 34     | 32     | 30     |

## Test procedure

Method C is applied:

- a) The SS activates the cells 1-3 and monitors them for random access requests from the UE.
- b) The UE is switched on.
- c) The SS waits for random access request from the UE.
- d) Cells 1-3 are switched off.
- e) The SS shall wait 20 s to allow the UE to detect the loss of cells.
- f) By MMI, an attempt to originate a call is made.
- g) By MMI, an attempt to originate an emergency call is made (only if UE supports speech).

## 6.1.1.6.5 Test Requirements

- 1) In step c), after the UE has responded on Cell 1, it shall not respond on any other cell within 1 min.
- 2) In step f) and g), the UE shall not produce any RF output, neither give any "service indication" within 2 min.

## 6.1.1.7 Cell reselection of ePLMN in manual mode

## 6.1.1.7.1 Definition

Test to verify that the UE shall be able to reselect another PLMN declared as equivalent PLMN as the registered PLMN in the manual mode:

## 6.1.1.7.2 Conformance requirement

## B) Manual network selection mode

Once the UE has registered on a PLMN selected by the user, the UE shall not automatically register on a different PLMN unless:

- i) The new PLMN is declared as an equivalent PLMN by the registered PLMN;
- or;
- ii) The user selects automatic mode.

## References:

TS 22.011 clause 3.2.2.2B

## 6.1.1.7.3 Test purpose

To verify that in Manual Network Selection Mode Procedure, the UE can perform reselection to an equivalent PLMN.

## 6.1.1.7.4 Method of test

## Initial conditions

The UE is in manual PLMN selection mode.

Cell\_selection\_and\_reselection\_quality\_measure is CPICH\_RSCP (FDD).

All Radio Access Technology-USIM fields and cells are UTRAN.

| Cell   | CPICH_<br>RSCP [dBm]<br>(FDD) | P-CCPCH_<br>RSCP [dBm]<br>(TDD) | Test Channel | PLMN   |
|--------|-------------------------------|---------------------------------|--------------|--------|
| Cell 1 | -78                           | [TBD]                           | 1            | PLMN 1 |
| Cell 2 | -62                           | [TBD]                           | 2            | PLMN 2 |
| Cell 3 | -68                           | [TBD]                           | 3            | PLMN 3 |

PLMN1 is the HPLMN.

The UE is equipped with a USIM containing default values except for those listed below.

| USIM field         | Priority | PLMN   |
|--------------------|----------|--------|
| EF <sub>LOCI</sub> |          | PLMN 1 |

## Test procedure

a) The SS activates cells 1.

b) The UE is switched on.

c) The SS waits for random access requests from the UE.

d) A Location Update Accept message shall be sent on reception of a Location Update message from the UE. The Location Update Accept message shall include PLMN3 in the equivalent PLMN list.

e) Cell 2 and 3 are activated.

## 6.1.1.7.5 Test Requirements

1) In step c), the response from the UE shall be on Cell 1. The displayed PLMN shall be PLMN 1.

2) In step e), the UE shall perform a cell reselection and Location Update to PLMN 3, which is equivalent to PLMN1.

## 6.1.2 Cell selection and reselection

## 6.1.2.1 Cell reselection

## 6.1.2.1.1 Definition

Test to verify that the UE performs the cell reselection correctly for intra/inter-frequency cells if the serving cell becomes barred or  $S < 0$ .

#### 6.1.2.1.2—Conformance requirement

1.—When camped on a cell, the UE shall regularly search for a better cell according to the cell reselection criteria. If a better cell is found, that cell is selected. The change of cell may imply a change of RAT.

2.—A "suitable cell" is a cell on which the UE may camp on to obtain normal service. Such a cell shall fulfil all the following requirements:

2.1 The cell is part of the selected PLMN or of a PLMN considered as equivalent by the UE according to the information provided by the NAS.

2.2 The cell is not barred.

2.3 The cell is not part of the list of "forbidden LAs for roaming".

2.4 The cell selection criteria are fulfilled.

3.—When camped normally, the UE shall execute the cell reselection evaluation process on the following occasions/triggers:

3.1 UE internal triggers, so as to meet performance as specified in TS 25.133 for FDD mode and in TS 25.123 for TDD mode.

3.2 When information on the BCCH used for the cell reselection evaluation procedure has been modified.

4.—Cell Reselection Criteria:

4.1 The UE shall perform ranking of all cells that fulfil the S criterion.

4.2 The cells shall be ranked according to the R criteria. The best ranked cell is the cell with the highest R value. If an FDD cell is ranked as the best cell, the UE shall perform cell re-selection to that FDD cell. If a TDD cell is ranked as the best cell, the UE shall perform cell re-selection to that TDD cell.

4.3 In all cases, the UE shall reselect the new cell, only if the cell reselection criteria are fulfilled during a time interval T<sub>res</sub>.

4.4 The cell-ranking criterion R is derived from Q, Q<sub>hyst</sub>, Q<sub>offset</sub>, TEMP\_OFFSET and PENALTY\_TIME. However, TEMP\_OFFSET<sub>n</sub> and PENALTY\_TIME<sub>n</sub> are only applicable if the usage of HCS is indicated in system information.

5.—When cell status "barred" is indicated, the UE shall select another cell according to the following rule:

5.1 If the "Intra-frequency cell re-selection indicator" IE in Cell Access Restriction IE is set to value "allowed", the UE may select another cell on the same frequency if selection/re-selection criteria are fulfilled.

5.2 If the "Intra-frequency cell re-selection indicator" IE is set to "not allowed" the UE shall not re-select a cell on the same frequency as the barred cell. For emergency call, the Intra-frequency cell re-selection indicator IE shall be ignored, i.e. even if it is set to "not allowed" the UE may select another intra-frequency cell.

#### References

1.—TS 25.304, clause 5.2.1.

2.—TS 25.304, clause 4.3.

3.—TS 25.304, clause 5.2.5.1.

4.—TS 25.304, clause 5.2.6.1.4.

5.—TS 25.304, clause 5.3.1.1.

#### 6.1.2.1.3—Test purpose

1.—To verify that the UE performs cell reselection on the following occasions:

1.1 Serving cell becomes barred;

1.2  $S < 0$  for serving cell.

2. To verify conformance requirement 5.

NOTE: Reselection triggered by the cell becoming a part of a forbidden registration area is tested in clause 9.4.2.3 and clause 9.4.2.4.

6.1.2.1.4 Method of test

Initial conditions

Reselection,  $Q_{\text{hyst}}$ ,  $Q_{\text{offset}}$ ,  $\text{TEMP\_OFFSET}$  and  $\text{PENALTY\_TIME}$  are not used, so the cell-ranking criterion  $R$  equals  $\text{CPICH\_RSCP}$  for FDD cells, and  $\text{P-CCPCH\_RSCP}$  for TDD cells.

Step a-c (FDD):

| Parameter                                   | Unit         | Cell 1      | Cell 2      | Cell 3      |
|---------------------------------------------|--------------|-------------|-------------|-------------|
| Test Channel                                |              | 1           | 1           | 2           |
| $\text{CPICH\_Ec}$                          | dBm/3.84 MHz | -60         | -70         | -80         |
| $Q_{\text{rxlevmin}}$                       | dBm          | -115        | -115        | -115        |
| $S_{\text{rxlev}}^*$                        | dBm          | 55          | 45          | 35          |
| Intra-frequency cell re-selection indicator |              | Not Allowed | Not Allowed | Not Allowed |
| CellBarred                                  |              | 0           | 0           | 0           |

Step a-c (TDD):

| Parameter              | Unit | Cell 1 | Cell 2 | Cell 3 |
|------------------------|------|--------|--------|--------|
| $\text{P-CCPCH\_RSCP}$ | dBm  | -69    | -71    | -73    |
| $Q_{\text{rxlevmin}}$  | dBm  | -103   | -103   | -103   |
| $S_{\text{rxlev}}^*$   | dB   | 34     | 32     | 30     |

Step d-f:

|            |  |       |   |   |
|------------|--|-------|---|---|
| CellBarred |  | 0 → 1 | 0 | 0 |
|------------|--|-------|---|---|

Step g-h:

|                                             |  |                       |                       |                       |
|---------------------------------------------|--|-----------------------|-----------------------|-----------------------|
| Intra-frequency cell re-selection indicator |  | Not Allowed → Allowed | Not Allowed → Allowed | Not Allowed → Allowed |
|---------------------------------------------|--|-----------------------|-----------------------|-----------------------|

Step i (FDD):

|                       |     |            |      |      |
|-----------------------|-----|------------|------|------|
| $Q_{\text{rxlevmin}}$ | dBm | -115 → -50 | -115 | -115 |
|-----------------------|-----|------------|------|------|

|         |     |          |    |    |
|---------|-----|----------|----|----|
| Srxlev* | dBm | 55 → -10 | 45 | 35 |
|---------|-----|----------|----|----|

Step i (TDD):

|           |  |            |      |      |
|-----------|--|------------|------|------|
| Qrxlevmin |  | -103 → -68 | -103 | -103 |
| Srxlev*   |  | 34 → -6    | 32   | 30   |

#### Test procedure

Method B is applied.

- a) The SS activates Cell 1-3 and monitors them for random access requests from the UE.
- b) The UE is switched on.
- c) The SS waits for random access requests from the UE.
- d) The SS sets Cell 1 to be barred.
- e) The SS waits for random access requests from the UE.
- f) The SS sets "Intra-frequency cell re-selection indicator" to "Allowed".
- g) The SS waits for random access requests from the UE.
- h) The stored information cell selection list in the UE is deleted and the UE is switched off.
- i) Step a-e) is repeated except that in step d) for FDD cells, Qrxlevmin is increased to -50 dBm, or in step d) for TDD cells, Qrxlevmin is increased to -68, so S will become negative instead of the cell being barred while maintaining the same RF level.

#### 6.1.2.1.5 Test requirements

- 1) In step c), after the UE has responded on Cell 1, it shall not respond on any other cell within 1 min.
- 2) In step e), the UE shall respond on Cell 3.
- 3) In step g), the UE shall respond on Cell 2.
- 4) In step i), the UE shall respond on Cell 2.

#### 6.1.2.2 Cell reselection using Qhyst, Qoffset and Treselection

##### 6.1.2.2.1 Definition

Test to verify that the UE performs the cell reselection correctly if system information parameters Qoffset, Qhyst and Treselection are applied for non-hierarchical cell structures. TEMP\_OFFSET and PENALTY\_TIME are only applicable when HCS is applied and are tested in clauses 6.1.2.4 and 6.1.2.5.

##### 6.1.2.2.2 Conformance requirement

1. When camped normally, the UE shall execute the cell reselection evaluation process on the following occasions/triggers:

1.1 UE internal triggers, so as to meet performance as specified in TS 25.133 for FDD mode and in TS 25.123 for TDD mode.

1.2 When information on the BCCH used for the cell reselection evaluation procedure has been modified.

2. Cell Reselection Criteria:

2.1 The UE shall perform ranking of all cells that fulfil the S criterion.

2.2 The cells shall be ranked according to the R criteria. The best ranked cell is the cell with the highest R value. If an FDD cell is ranked as the best cell, the UE shall perform cell re-selection to that FDD cell. If a TDD cell is ranked as the best cell, the UE shall perform cell re-selection to that TDD cell.

2.3 In all cases, the UE shall reselect the new cell, only if the cell reselection criteria are fulfilled during a time interval Treselection.

2.4 The cell-ranking criterion R is derived from Q, Qhyst, Qoffset, TEMP\_OFFSET and PENALTY\_TIME. However, TEMP\_OFFSETn and PENALTY\_TIMEn are only applicable if the usage of HCS is indicated in system information.

#### References

1. TS 25.304, clause 5.2.5.1.

2. TS 25.304, clause 5.2.6.1.4.

#### 6.1.2.2.3 Test purpose

1. To verify that the UE calculates R from Qhyst and Qoffset and that the modification of these parameters on the BCCH triggers the cell reselection evaluation process. TEMP\_OFFSET and PENALTY\_TIME are not applied.

2. To verify that the UE reselects the new cell, if the cell reselection criteria are fulfilled during a time interval Treselection.

#### 6.1.2.2.4 Method of test

##### Initial conditions

For FDD only:

Step a-e:

| Parameter        | Unit         | Cell 1 | Cell 2 |
|------------------|--------------|--------|--------|
| CPICH_Ec         | dBm/3.84 MHz | -60    | -70    |
| Qhyst1s          | dBm          | 20     |        |
| R <sub>s</sub> * | dBm          | -40    |        |
| R <sub>n</sub> * | dBm          | -70    |        |

Step d-e:

|                  |              |           |           |
|------------------|--------------|-----------|-----------|
| CPICH_Ec         | dBm/3.84 MHz | -60 → -70 | -70 → -60 |
| R <sub>s</sub> * | dBm          | -40 → -50 |           |
| R <sub>n</sub> * | dBm          | -70 → -60 |           |

Step f-g:

|                  |     |           |  |
|------------------|-----|-----------|--|
| Qhyst1s          | dBm | 20 → 0    |  |
| R <sub>s</sub> * | dBm | -50 → -70 |  |
| R <sub>n</sub> * | dBm | -60       |  |

Step h-j:

|                             |              |     |     |
|-----------------------------|--------------|-----|-----|
| CPICH_Ec                    | dBm/3.84 MHz | -60 | -70 |
| Qoffset1 <sub>s,n</sub>     | dBm          | 20  |     |
| R <sub>s</sub> <sup>*</sup> | dBm          | -60 |     |
| R <sub>n</sub> <sup>*</sup> | dBm          | -90 |     |

Step k-l:

|                             |              |           |           |
|-----------------------------|--------------|-----------|-----------|
| CPICH_Ec                    | dBm/3.84 MHz | -60 → -70 | -70 → -60 |
| R <sub>s</sub> <sup>*</sup> | dBm          | -60 → -70 |           |
| R <sub>n</sub> <sup>*</sup> | dBm          | -90 → -80 |           |

Step m-n:

|                             |     |           |  |
|-----------------------------|-----|-----------|--|
| Qoffset1 <sub>s,n</sub>     | dBm | 20 → 0    |  |
| R <sub>s</sub> <sup>*</sup> | dBm | -70       |  |
| R <sub>n</sub> <sup>*</sup> | dBm | -80 → -60 |  |

Step o-p:

|                           |   |    |  |
|---------------------------|---|----|--|
| Treselection <sub>s</sub> | s | 30 |  |
|---------------------------|---|----|--|

For TDD-only:

Step a-c:

| Parameter                   | Unit | Cell 1 | Cell 2 |
|-----------------------------|------|--------|--------|
| P-CCPCH RSCP                | dBm  | -68    | -71    |
| Qhyst1 <sub>s</sub>         | dB   | 10     |        |
| R <sub>s</sub> <sup>*</sup> | dB   | -58    |        |
| R <sub>n</sub> <sup>*</sup> | dB   | -71    |        |

Step d-e:

|                             |     |           |           |
|-----------------------------|-----|-----------|-----------|
| P-CCPCH RSCP                | dBm | -68 → -71 | -71 → -68 |
| R <sub>s</sub> <sup>*</sup> | dB  | -58 → -61 |           |
| R <sub>n</sub> <sup>*</sup> | dB  | -71 → -68 |           |

Step f-g:

|                             |    |           |  |
|-----------------------------|----|-----------|--|
| Qhyst1 <sub>s</sub>         | dB | 10 → 0    |  |
| R <sub>s</sub> <sup>*</sup> | dB | -61 → -71 |  |
| R <sub>n</sub> <sup>*</sup> | dB | -68       |  |

Step h-j:

|              |     |     |     |
|--------------|-----|-----|-----|
| P-CCPCH RSCP | dBm | -68 | -71 |
|--------------|-----|-----|-----|

|                           |    |     |  |
|---------------------------|----|-----|--|
| $Q_{\text{offset}_{s,n}}$ | dB | 10  |  |
| $R_s^*$                   | dB | -68 |  |
| $R_n^*$                   | dB | -81 |  |

Step k-l:

|              |     |           |           |
|--------------|-----|-----------|-----------|
| P-CCPCH RSCP | dBm | -68 → -71 | -71 → -68 |
| $R_s^*$      | dB  | -68 → -71 |           |
| $R_n^*$      | dB  | -81 → -78 |           |

Step m-n:

|                           |    |           |  |
|---------------------------|----|-----------|--|
| $Q_{\text{offset}_{s,n}}$ | dB | 10 → 0    |  |
| $R_s^*$                   | dB | -71       |  |
| $R_n^*$                   | dB | -78 → -68 |  |

Step o-p:

|                            |   |    |  |
|----------------------------|---|----|--|
| $T_{\text{reselection}_s}$ | s | 30 |  |
|----------------------------|---|----|--|

#### Test procedure

Method B is applied.

- a) The SS activates Cell 1 and 2 and monitors them for random access requests from the UE.
- b) The UE is switched on.
- c) The SS waits to see if there is any random access requests from the UE.
- d) The SS changes the level of Cell 1 and 2 and waits for 10 s (TS 25.133, A.4.2.1.2 for FDD mode and TS 25.123, A.4.2.1.2 for TDD mode).
- e) The SS waits for random access requests from the UE.
- f) The SS resets  $Q_{\text{hyst}}$  for Cell 1.
- g) The SS waits for random access requests from the UE.
- h) The stored information cell selection list in the UE is deleted and the UE is switched off.
- i) The UE is switched on.
- j) The SS waits to see if there is any random access requests from the UE.
- k) The SS changes the level of Cell 1 and 2 and waits for 10 s (TS 25.133, clause A.4.2.1.2 for FDD mode and TS 25.123, clause A.4.2.1.2 for TDD mode).
- l) The SS waits for random access requests from the UE.
- m) The SS resets  $Q_{\text{offset}}$  for Cell 1.
- n) The SS waits for random access requests from the UE.
- o) Step h-n) is repeated except that  $T_{\text{reselection}}$  is 30 s

#### 6.1.2.2.5 Test Requirements

- 1) In step c), after the UE has responded on Cell 1, it shall not respond on any other cell within 1 min.

- 2) In step e), the UE shall keep responding on Cell 1.
- 3) In step g), the UE shall respond on Cell 2.
- 4) In step j), the UE shall select a cell to camp on and eventually make a reselection to Cell 1.
- 5) In step l), the UE shall keep responding on Cell 1.
- 6) In step n), the UE shall respond on Cell 2.
- 7) In step o), the UE shall respond as in previous steps except that when reselecting to Cell 2, there shall be no response from the UE on Cell 2 within 28 s of broadcasting Qoffset but the UE shall respond on Cell 2 within 34 s.

NOTE:— Minimum time set by Treselection— 2 s tolerance. Maximum time set by Treselection + 1 280 msec. for DRX cycle + 2 s tolerance

#### 6.1.2.3 HCS Cell reselection

##### 6.1.2.3.1 Definition

Test to verify that the UE performs the cell reselection correctly for hierarchical cell structures. This shall be done according to the HCS priority, the received signal quality value Q and the quality level threshold criterion H.

##### 6.1.2.3.2 Conformance requirement

1. When camped normally, the UE shall execute the cell reselection evaluation process on the following occasions/triggers:

1.1 UE internal triggers, so as to meet performance as specified in TS 25.133 for FDD mode and in TS 25.123 for TDD mode.

1.2 When information on the BCCH used for the cell reselection evaluation procedure has been modified.

2. Cell Reselection Criteria for hierarchical cells:

2.1 The quality level threshold criterion H for hierarchical cell structures is used to determine whether prioritised ranking according to hierarchical cell re-selection rules shall apply, and is calculated from the Q, Qhcs, TEMP\_OFFSET and PENALTY\_TIME parameters.

2.2 The UE shall perform ranking of all cells that fulfil the S criterion among all cells that have the highest HCS\_PRIO among those cells that fulfil the criterion  $H \geq 0$ .

2.3 The cells shall be ranked according to the R criteria. The best ranked cell is the cell with the highest R value. If an FDD cell is ranked as the best cell, the UE shall perform cell re-selection to that FDD cell. If a TDD cell is ranked as the best cell, the UE shall perform cell re-selection to that TDD cell.

2.4 In all cases, the UE shall reselect the new cell, only if the cell reselection criteria are fulfilled during a time interval Treselection.

2.5 The cell-ranking criterion R is derived from Q, Qhyst, Qoffset, TEMP\_OFFSET, PENALTY\_TIME.

#### References

- 1. TS 25.304, clause 5.2.2.
- 2. TS 25.304, clause 5.2.6.1.4.

##### 6.1.2.3.3 Test purpose

- 1. Verify that the UE ignores cells with  $H < 0$  for reselection and that H is calculated from Qhcs. The modification of this parameter on the BCCH shall trigger the cell reselection evaluation process.
- 2. Verify that the UE ranks cells based on both HCS priority and R. Qhyst, Qoffset, TEMP\_OFFSET, PENALTY\_TIME and Treselection are not applied so R equals CPICH\_RSCP for FDD cells, and P-CCPCH\_RSCP for TDD cells.

##### 6.1.2.3.4 Method of test

Initial conditions

For FDD only:

Step a-c:

| Parameter                   | Unit         | Cell 1 | Cell 2 | Cell 3 |
|-----------------------------|--------------|--------|--------|--------|
| CPICH_Ec                    | dBm/3.84 MHz | -60    | -65    | -70    |
| HCS_priority                |              | 6      | 7      | 7      |
| Qhcs <sub>s</sub>           | dBm          | -80    | -50    | -50    |
| H <sub>s</sub> <sup>*</sup> | dBm          | 20     | -15    | -20    |

Step d-e:

|                             |     |     |     |           |
|-----------------------------|-----|-----|-----|-----------|
| Qhcs <sub>s</sub>           | dBm | -80 | -50 | -50 → -80 |
| H <sub>s</sub> <sup>*</sup> | dBm | 20  | -15 | -20 → 10  |

Step f-g:

|                             |     |     |           |     |
|-----------------------------|-----|-----|-----------|-----|
| Qhcs <sub>s</sub>           | dBm | -80 | -50 → -80 | -80 |
| H <sub>s</sub> <sup>*</sup> | dBm | 20  | -15 → 15  | 10  |

For TDD only:

Step a-c:

| Parameter                   | Unit | Cell 1 | Cell 2 | Cell 3 |
|-----------------------------|------|--------|--------|--------|
| P-CCPCH_RSCP                | dBm  | -69    | -71    | -73    |
| HCS_priority                |      | 6      | 7      | 7      |
| Qhcs <sub>s</sub>           | dB   | -30    | -10    | -10    |
| H <sub>s</sub> <sup>*</sup> | dB   | -39    | -61    | -63    |

Step d-e:

|                             |    |     |     |           |
|-----------------------------|----|-----|-----|-----------|
| Qhcs <sub>s</sub>           | dB | -30 | -10 | -10 → -30 |
| H <sub>s</sub> <sup>*</sup> | dB | -39 | -61 | -63 → -43 |

Step f-g:

|                             |    |     |           |     |
|-----------------------------|----|-----|-----------|-----|
| Qhcs <sub>s</sub>           | dB | -30 | -10 → -30 | -30 |
| H <sub>s</sub> <sup>*</sup> | dB | -39 | -61 → -41 | -43 |

Test procedure

Method B is applied.

- The SS activates the cells 1-3 and monitors them for random access requests from the UE.
- The UE is switched on.
- The SS waits for random access requests from the UE.
- The SS changes Qhcs for Cell 3.

- e) The SS waits for random access requests from the UE.
- f) The SS changes Qhcs for Cell 2.
- g) The SS waits for random access requests from the UE.

#### 6.1.2.3.5 Test requirements

- 1) In step c), after the UE has responded on Cell 1, it shall not respond on any other cell within 1 min.
- 2) In step e), the UE shall respond on Cell 3.
- 3) In step g), the UE shall respond on Cell 2.

#### 6.1.2.4 HCS Cell reselection using reselection timing parameters for the H criterion

##### 6.1.2.4.1 Definition

Test to verify that the UE performs the cell reselection correctly for hierarchical cell structures using TEMP\_OFFSET and PENALTY\_TIME applied to the H criterion.

##### 6.1.2.4.2 Conformance requirement

1. When camped normally, the UE shall execute the cell reselection evaluation process on the following occasions/triggers:

1.1 UE internal triggers, so as to meet performance as specified in TS 25.133 for FDD mode and in TS 25.123 for TDD mode.

1.2 When information on the BCCH used for the cell reselection evaluation procedure has been modified.

2. Cell Reselection Criteria for hierarchical cells:

2.1 The quality level threshold criterion H for hierarchical cell structures is used to determine whether prioritised ranking according to hierarchical cell re-selection rules shall apply, and is calculated from the Q, Qhcs, TEMP\_OFFSET and PENALTY\_TIME parameters.

2.2 The UE shall perform ranking of all cells that fulfil the S criterion among all cells that have the highest HCS\_Prio among those cells that fulfil the criterion  $H \geq 0$ .

2.3 The cells shall be ranked according to the R criteria. The best ranked cell is the cell with the highest R value. If an FDD cell is ranked as the best cell, the UE shall perform cell re-selection to that FDD cell. If a TDD cell is ranked as the best cell, the UE shall perform cell re-selection to that TDD cell.

2.4 In all cases, the UE shall reselect the new cell, only if the cell reselection criteria are fulfilled during a time interval T<sub>reselction</sub>.

2.5 The cell-ranking criterion R is derived from Q, Q<sub>hyst</sub>, Q<sub>offset</sub>, TEMP\_OFFSET and PENALTY\_TIME.

3. TEMP\_OFFSET<sub>n</sub> applies an offset to the H criteria for the duration of PENALTY\_TIME<sub>n</sub> after the timer T<sub>n</sub> has started for that cell. T<sub>n</sub> shall be started from zero when  $Q_{meas,n} > Q_{hcs,n}$ . TEMP\_OFFSET is only applied to the H criteria if the cells have different HCS priorities.

#### References

- 1. TS 25.304, clause 5.2.2.
- 2,3. TS 25.304, clause 5.2.6.1.4.

#### 6.1.2.4.3 Test purpose

1. Verify that TEMP\_OFFSET is applied to the H criterion for a period of PENALTY\_TIME and that the timer is started when  $Q_{meas,n} > Q_{hcs,n}$  if serving and neighbour cell have different HCS priorities.

#### 6.1.2.4.4 Method of test

#### Initial conditions

For FDD only:

Step a-c:

| Parameter                   | Unit         | Cell 1 | Cell 2 | Cell 3 |
|-----------------------------|--------------|--------|--------|--------|
| CPICH_Ec                    | dBm/3.84 MHz | -60    | -70    | -70    |
| HCS-priority                |              | 2      | 4      | 7      |
| $Q_{hcs_s}$                 | dBm          | -80    |        |        |
| $Q_{hcs_{n=2}}$             | dBm          | -50    |        |        |
| $Q_{hcs_{n=3}}$             | dBm          | -50    |        |        |
| TEMP_OFFSET1 <sub>n=2</sub> | dBm          | 30     |        |        |
| TEMP_OFFSET1 <sub>n=3</sub> | dBm          | 30     |        |        |
| $H_s^*$                     | dBm          | 20     |        |        |
| $H_{n=2}^*$                 | dBm          | -20    |        |        |
| $H_{n=3}^*$                 | dBm          | -20    |        |        |
| PENALTY_TIME <sub>n=2</sub> | sec          | 40     |        |        |
| PENALTY_TIME <sub>n=3</sub> | sec          | 60     |        |        |

Step d-e:

|                 |     |                            |  |  |
|-----------------|-----|----------------------------|--|--|
| $Q_{hcs_s}$     | dBm | -80                        |  |  |
| $Q_{hcs_{n=2}}$ | dBm | -50 → -80                  |  |  |
| $Q_{hcs_{n=3}}$ | dBm | -50 → -80                  |  |  |
| $H_s^*$         | dBm | 20                         |  |  |
| $H_{n=2}^*$     | dBm | -20 → 10<br>(after 40 sec) |  |  |
| $H_{n=3}^*$     | dBm | -20 → 10<br>(after 60 sec) |  |  |

For TDD only:

Step a-c:

| Parameter       | Unit | Cell 1 | Cell 2 | Cell 3 |
|-----------------|------|--------|--------|--------|
| P-CCPCH-RSCP    | dBm  | -69    | -73    | -73    |
| HCS-priority    |      | 2      | 4      | 7      |
| $Q_{hcs_s}$     | dB   | -20    |        |        |
| $Q_{hcs_{n=2}}$ | dB   | -10    |        |        |

|                       |     |     |  |  |
|-----------------------|-----|-----|--|--|
| $Q_{hcs_{n=3}}$       | dB  | -10 |  |  |
| $TEMP\_OFFSET2_{n=2}$ | dB  | 10  |  |  |
| $TEMP\_OFFSET2_{n=3}$ | dB  | 10  |  |  |
| $H_s^*$               | dB  | -49 |  |  |
| $H_{n=2}^*$           | dB  | -63 |  |  |
| $H_{n=3}^*$           | dB  | -63 |  |  |
| $PENALTY\_TIME_{n=2}$ | sec | 40  |  |  |
| $PENALTY\_TIME_{n=3}$ | sec | 60  |  |  |

Step d-e:

|                 |    |                             |  |  |
|-----------------|----|-----------------------------|--|--|
| $Q_{hcs_s}$     | dB | -20                         |  |  |
| $Q_{hcs_{n=2}}$ | dB | -10 → -20                   |  |  |
| $Q_{hcs_{n=3}}$ | dB | -10 → -20                   |  |  |
| $H_s^*$         | dB | -49                         |  |  |
| $H_{n=2}^*$     | dB | -63 → -53<br>(after 40 sec) |  |  |
| $H_{n=3}^*$     | dB | -63 → -53<br>(after 60 sec) |  |  |

Test procedure

Method B is applied.

- a) The SS activates the cells 1-3 and monitors them for random access requests from the UE.
- b) The UE is switched on.
- c) The SS waits for random access requests from the UE.
- d) The SS changes  $Q_{hcs}$  for Cell 2 and 3.
- e) The SS waits for random access requests from the UE.

#### 6.1.2.4.5 Test requirements

- 1) In step c), after the UE has responded on Cell 1, it shall not respond on any other cell within 1 min.
- 2) In step e), there shall be no response from the UE on Cell 2 within 38 s of changing the parameters but the UE shall respond on Cell 2 within 44 s. There shall be no response from the UE on Cell 3 within 58 s of changing the parameters but the UE shall respond on Cell 3 within 64 s.

NOTE: — Minimum time set by  $PENALTY\_TIME$  (cell 2) – 2 s tolerance. Maximum time set by  $PENALTY\_TIME$  (cell 2) + 1 280 msec. for DRX cycle + 2 s tolerance. Same calculation for Cell 3.

#### 6.1.2.5 HCS Cell reselection using reselection timing parameters for the R criterion

##### 6.1.2.5.1 Definition

Test to verify that the UE performs the cell reselection correctly for hierarchical cell structures using TEMP\_OFFSET and PENALTY\_TIME applied to the R criterion.

#### 6.1.2.5.2—Conformance requirement

1.—When camped normally, the UE shall execute the cell reselection evaluation process on the following occasions/triggers:

1.1 UE internal triggers, so as to meet performance as specified in TS 25.133 for FDD mode and in TS 25.123 for TDD mode.

1.2 When information on the BCCH used for the cell reselection evaluation procedure has been modified.

2.—Cell Reselection Criteria for hierarchical cells:

2.1 The quality level threshold criterion H for hierarchical cell structures is used to determine whether prioritised ranking according to hierarchical cell re-selection rules shall apply, and is calculated from the  $Q$ ,  $Q_{hcs}$ , TEMP\_OFFSET and PENALTY\_TIME parameters.

2.2 The UE shall perform ranking of all cells that fulfil the S criterion among all cells, not considering HCS priority levels, if no cell fulfil the criterion  $H \geq 0$ .

2.3 The cells shall be ranked according to the R criteria. The best ranked cell is the cell with the highest R value. If a FDD cell is ranked as the best cell, the UE shall perform cell re-selection to that FDD cell. If a TDD cell is ranked as the best cell, the UE shall perform cell re-selection to that TDD cell.

2.4 In all cases, the UE shall reselect the new cell, only if the cell reselection criteria are fulfilled during a time interval Treselection.

2.5 The cell-ranking criterion R is derived from  $Q$ ,  $Q_{hyst}$ ,  $Q_{offset}$ , TEMP\_OFFSET, PENALTY\_TIME.

3.—TEMP\_OFFSET<sub>n</sub> applies an offset to the R criteria for the duration of PENALTY\_TIME<sub>n</sub> after the timer T<sub>n</sub> has started for that cell. T<sub>n</sub> shall be started from zero when  $Q_{meas,n} > Q_{meas,s} + Q_{offset2_{s,n}}$ . TEMP\_OFFSET is only applied to the R criteria if the cells have identical priorities.

#### References

1.—TS 25.304, clause 5.2.2.

2,3.—TS 25.304, clause 5.2.6.1.4.

#### 6.1.2.5.3—Test purpose

1.—Verify that TEMP\_OFFSET is applied to the R criterion for a period of PENALTY\_TIME and that the timer is started when  $Q_{meas,n} > Q_{meas,s} + Q_{offset2_{s,n}}$  if serving and neighbour cell have identical HCS priorities.

#### 6.1.2.5.4—Method of test

##### Initial conditions

For FDD only:

Step a-c:

| Parameter                   | Unit         | Cell 1 | Cell 2 | Cell 3 |
|-----------------------------|--------------|--------|--------|--------|
| CPICH_Ec                    | dBm/3.84 MHz | -60    | -70    | -70    |
| HCS priority                |              | 1      | 1      | 1      |
| TEMP_OFFSET2 <sub>n=2</sub> | dBm          | 20     |        |        |
| TEMP_OFFSET2 <sub>n=3</sub> | dBm          | 20     |        |        |
| PENALTY_TIME <sub>n=2</sub> | sec          | 40     |        |        |

|                             |     |     |  |  |
|-----------------------------|-----|-----|--|--|
| PENALTY_TIME <sub>n=3</sub> | sec | 60  |  |  |
| H <sub>s</sub> *            | dBm | -60 |  |  |
| H <sub>n=2</sub> *          | dBm | -70 |  |  |
| H <sub>n=3</sub> *          | dBm | -70 |  |  |
| R <sub>s</sub> *            | dBm | -60 |  |  |
| R <sub>n=2</sub> *          | dBm | -70 |  |  |
| R <sub>n=3</sub> *          | dBm | -70 |  |  |

Step d-e:

|                    |              |                                        |                      |                      |
|--------------------|--------------|----------------------------------------|----------------------|----------------------|
| CPICH_Ec           | dBm/3.84 MHz | <del>-60</del> → -70                   | <del>-70</del> → -65 | <del>-70</del> → -60 |
| R <sub>s</sub> *   | dBm          | -70                                    |                      |                      |
| R <sub>n=2</sub> * | dBm          | <del>-85</del> → -65<br>(after 40 sec) |                      |                      |
| R <sub>n=3</sub> * | dBm          | <del>-80</del> → -60<br>(after 60 sec) |                      |                      |

For TDD only:

Step a-c:

| Parameter          | Unit | Cell 1 | Cell 2 | Cell 3 |
|--------------------|------|--------|--------|--------|
| P-CCPCH RSCP       | dBm  | -69    | -73    | -73    |
| HCS priority       |      | 1      | 1      | 1      |
| H <sub>s</sub> *   | dB   | -69    |        |        |
| H <sub>n=2</sub> * | dB   | -73    |        |        |
| H <sub>n=3</sub> * | dB   | -73    |        |        |
| R <sub>s</sub> *   | dB   | -69    |        |        |
| R <sub>n=2</sub> * | dB   | -73    |        |        |
| R <sub>n=3</sub> * | dB   | -73    |        |        |

Step d-e:

|                             |    |         |  |  |
|-----------------------------|----|---------|--|--|
| Qoffset1 <sub>s,n=2</sub>   | dB | 0 → -10 |  |  |
| Qoffset1 <sub>s,n=3</sub>   | dB | 0 → -10 |  |  |
| TEMP_OFFSET1 <sub>n=2</sub> | dB | 10      |  |  |
| TEMP_OFFSET1 <sub>n=3</sub> | dB | 10      |  |  |

|                                        |                |                                                   |  |  |
|----------------------------------------|----------------|---------------------------------------------------|--|--|
| <del>PENALTY_TIME<sub>n=2</sub></del>  | <del>sec</del> | <del>40</del>                                     |  |  |
| <del>PENALTY_TIME<sub>n=3</sub></del>  | <del>sec</del> | <del>60</del>                                     |  |  |
| <del>R<sub>s</sub><sup>*</sup></del>   | <del>dB</del>  | <del>-13</del>                                    |  |  |
| <del>R<sub>n=2</sub><sup>*</sup></del> | <del>dB</del>  | <del>-73 → -63</del><br><del>(after 40 sec)</del> |  |  |
| <del>R<sub>n=3</sub><sup>*</sup></del> | <del>dB</del>  | <del>-73 → -63</del><br><del>(after 60 sec)</del> |  |  |

### Test procedure

Method B is applied.

- ~~The SS activates the cells 1-3 and monitors them for random access requests from the UE.~~
- ~~The UE is switched on.~~
- ~~The SS waits for random access requests from the UE.~~
- ~~The SS changes the level of Cell 1-3.~~
- ~~The SS waits for random access requests from the UE.~~

#### 6.1.2.5.5 Test requirements

- ~~In step c), after the UE has responded on Cell 1, it shall not respond on any other cell within 1 min.~~
- ~~In step c), there shall be no response from the UE on Cell 2 within 38 s of changing the parameters but the UE shall respond on Cell 2 within 50 s. There shall be no response from the UE on Cell 3 within 58 s of changing the parameters but the UE shall respond on Cell 3 within 70 s.~~

NOTE: — Minimum time set by PENALTY\_TIME (cell 2) — 2 s tolerance. Maximum time set by PENALTY\_TIME (cell 2) + 6.4 s ( $T_{\text{evaluateFDD}}$  from TS 25.133, table 4.1 for FDD mode and  $T_{\text{evaluateTDD}}$  from TS 25.123, table 4.1 for TDD mode) + 1 280 msec. for system info scheduling + 2 s tolerance. Same calculation for Cell 3.

#### 6.1.2.6 Emergency calls

##### 6.1.2.6.1 Definition

Test to verify that the UE shall be able to initiate emergency calls when no suitable cells of the selected PLMN are available, but at least one acceptable cell is available.

##### 6.1.2.6.2 Conformance requirement

###### 1. Acceptable cell:

An "acceptable cell" is a cell on which the UE may camp to obtain limited service (originate emergency calls). Such a cell shall fulfil the following requirements, which is the minimum set of requirements to initiate an emergency call in a UTRAN network:

1.1 The cell is not barred;

1.2 The cell selection criteria are fulfilled.

2. A "suitable cell" is a cell on which the UE may camp on to obtain normal service. Such a cell shall fulfil all the following requirements:

2.1 The cell is part of the selected PLMN or, of a PLMN considered as equivalent by the UE according to the information provided by the NAS.

2.2 The cell is not barred.

~~2.3 The cell is not part of the list of "forbidden LAs for roaming".~~

~~2.4 The cell selection criteria are fulfilled.~~

~~3. If the UE is unable to find any suitable cell of selected PLMN the UE shall enter the *Any cell selection* state.~~

~~4. *Any Cell Selection State*: In this state, the UE shall attempt to find an acceptable cell of an any PLMN to camp on, trying all RATs that are supported by the UE and searching first for a high quality cell. The UE, which is not camped on any cell, shall stay in this state until an acceptable cell is found.~~

~~5. *Camped on Any Cell State*: In this state the UE obtains limited service. The UE shall regularly attempt to find a suitable cell of the selected PLMN, trying RATs that are supported by the UE. If a suitable cell is found, this causes an exit to the *Camped normally State*.~~

~~6. In the *Camped on Any Cell State*, the UE shall perform the cell reselection evaluation process on the following occasions/triggers:~~

~~6.1 UE internal triggers, so as to meet performance as specified in TS 25.133 for FDD mode and TS 25.123 for TDD mode.~~

~~6.2 When information on the BCCH used for the cell reselection evaluation procedure has been modified.~~

#### References

~~1. TS 25.304, clause 4.3.~~

~~2. TS 25.304, clause 4.3.~~

~~3. TS 25.304, clause 5.2.2.1.~~

~~4. TS 25.304, clause 5.2.8.~~

~~5. TS 25.304, clause 5.2.2.5.~~

~~6. TS 25.304, clause 5.2.9.1.~~

#### ~~6.1.2.6.3 Test purpose~~

~~1. To verify that the UE shall be able to initiate emergency calls when no suitable cells of the selected PLMN are available, but at least one acceptable cell is available.~~

~~2. To verify that the UE selects a cell with  $S > 0$  and  $\text{CellBarred} = 0$  (acceptable cell) when no suitable cells of the selected PLMN are available.~~

~~3. To verify that the UE ranks the acceptable cells according to the cell ranking criterion  $R$  which in this test case equals  $Q$  as  $Q_{\text{hyst}}$ ,  $Q_{\text{offset}}$ ,  $\text{TEMP\_OFFSET}$  and  $\text{PENALTY\_TIME}$  parameters are not used. Treselection is not used either.~~

#### ~~6.1.2.6.4 Method of test~~

##### Initial conditions

~~In step a-d, Cell 1 and 2 are neither suitable nor acceptable cells. Cell 3 is an acceptable cell but not suitable.~~

~~In step e-f, both Cell 1 and 3 are acceptable cells.~~

~~Step a-d:~~

~~For FDD only:~~

| Parameter | Unit         | Cell 1 | Cell 2 | Cell 3 |
|-----------|--------------|--------|--------|--------|
| CPICH_Ec  | dBm/3.84 MHz | -65    | -60    | -70    |
| Qrxlevmin | dBm          | -80    | -50    | -80    |

|            |     |           |           |           |
|------------|-----|-----------|-----------|-----------|
| Srxlev*    | dBm | 15        | -10       | 10        |
| CellBarred |     | 1         | 0         | 0         |
| PLMN       |     | forbidden | forbidden | forbidden |

For TDD only:

|              |      |           |           |           |
|--------------|------|-----------|-----------|-----------|
| Parameter    | Unit | Cell 1    | Cell 2    | Cell 3    |
| P-CCPCH RSCP | dBm  | -69       | -77       | -71       |
| CellBarred   |      | 1         | 0         | 0         |
| PLMN         |      | forbidden | forbidden | forbidden |

Step e-f:

|            |  |     |   |   |
|------------|--|-----|---|---|
| CellBarred |  | 1→0 | 0 | 0 |
|------------|--|-----|---|---|

NOTE: — All the BCCH cells belong to the same PLMN, which is not the UE's home PLMN and is in the USIM's forbidden PLMN's list.

Test procedure

Method C is applied.

- a) The SS activates the cells and monitors them for random access requests from the UE.
- b) The UE is switched on.
- c) 50 s after switch on, an emergency call is initiated on the UE.
- d) The SS waits for random access request from the UE.
- e) The SS changes the CellBarred of Cell 1 to 0.
- f) After 30 s an emergency call is initiated on the UE.
- g) The SS waits for random access request from the UE.

#### 6.1.2.6.5 Test requirements

- 1) In step d), the first access from the UE shall be on Cell 3.
- 2) In step g), the first access from the UE shall be on Cell 1.

#### 6.1.2.7 Emergency calls; Intra-frequency cell "Not allowed"

##### 6.1.2.7.1 Definition

Test to verify that for emergency call and cell status "barred", the Intra-frequency cell re-selection indicator IE is ignored, i.e. even if it is set to "not allowed" the UE may select another intra-frequency cell.

##### 6.1.2.7.2 Conformance requirement

- 1. When cell status "barred" is indicated:

— The UE is not permitted to select/re-select this cell, not even for emergency calls.

— The UE shall select another cell according to the following rule:

~~— If the "Intra-frequency cell re-selection indicator" IE is set to "not allowed" the UE shall not re-select a cell on the same frequency as the barred cell. For emergency call, the Intra-frequency cell re-selection indicator IE" shall be ignored, i.e. even if it is set to "not allowed" the UE may select another intra-frequency cell.~~

#### References

1. ~~TS 25.304, clause 5.3.1.1.~~

#### 6.1.2.7.3 Test purpose

~~To verify that for emergency call and cell status "barred", the Intra-frequency cell re-selection indicator IE is ignored, i.e. even if it is set to "not allowed" the UE may select another intra-frequency cell.~~

#### 6.1.2.7.4 Method of test

##### Initial conditions

~~Cell 1 and 2 are on the same carrier frequency.~~

~~Step a-c:~~

~~For FDD only:~~

| Parameter                                   | Unit         | Cell 1      | Cell 2      |
|---------------------------------------------|--------------|-------------|-------------|
| CPICH_Ec                                    | dBm/3.84 MHz | -60         | -70         |
| Intra-frequency cell re-selection indicator |              | Not allowed | Not allowed |
| CellBarred                                  |              | 0           | 0           |

~~For TDD only:~~

| Parameter    | Unit | Cell 1 | Cell 2 |
|--------------|------|--------|--------|
| P-CCPCH-RSCP | dBm  | -77    | -69    |
| CellBarred   | dBm  | 0      | 0      |

~~Step d-i:~~

|            |  |       |   |
|------------|--|-------|---|
| CellBarred |  | 0 → 1 | 0 |
|------------|--|-------|---|

#### Test procedure

~~Method C is applied.~~

- ~~a) The SS activates the cells and monitors them for any random access requests from the UE.~~
- ~~b) The UE is switched on.~~
- ~~c) The SS waits for random access request from the UE.~~
- ~~d) The SS sets Cell 1 to be barred.~~
- ~~e) The SS waits to see if there is any random access request from the UE.~~
- ~~f) By MMI, an attempt to originate a call is made.~~

- ~~g) The SS waits to see if there is any random access request from the UE.~~
- ~~h) By MMI, an emergency call is initiated on the UE.~~
- ~~i) The SS waits for random access request from the UE.~~

#### ~~6.1.2.7.5 Test requirements~~

- ~~1) In step c), after the UE has responded on Cell 1, it shall not respond on any other cell within 1 min.~~
- ~~2) In step e), there shall be no response from the UE within 2 min.~~
- ~~3) In step g), there shall be no response from the UE within 2 min. It shall not be possible to originate the call.~~
- ~~4) In step i), the UE shall respond on Cell 2. It shall be possible to originate the emergency call.~~

#### ~~6.1.2.8 Cell reselection: Equivalent PLMN~~

##### ~~6.1.2.8.1 Definition~~

~~Test to verify that the UE performs the cell reselection correctly to a cell belonging to a PLMN Equivalent to the registered PLMN, if the serving cell of registered PLMN becomes barred or  $S < 0$ .~~

##### ~~6.1.2.8.2 Conformance requirement~~

~~1. When camped on a cell, the UE shall regularly search for a better cell according to the cell reselection criteria. If a better cell is found, that cell is selected. The change of cell may imply a change of RAT.~~

~~2. A "suitable cell" is a cell on which the UE may camp on to obtain normal service. Such a cell shall fulfil all the following requirements.~~

~~2.1 The cell is part of the selected PLMN or of a PLMN considered as equivalent by the UE according to the information provided by the NAS~~

~~2.2 The cell is not barred~~

~~2.3 The cell is not part of the list of "forbidden LAs for roaming"~~

~~2.4 The cell selection criteria are fulfilled~~

~~3. When camped normally, the UE shall execute the cell reselection evaluation process on the following occasions/triggers:~~

~~3.1 UE internal triggers, so as to meet performance as specified in TS 25.133 for FDD mode and in TS 25.123 for TDD mode.~~

~~3.2 When information on the BCCH used for the cell reselection evaluation procedure has been modified~~

~~4. Cell Reselection Criteria:~~

~~4.1 The UE shall perform ranking of all cells that fulfil the S-criterion~~

~~4.2 The cells shall be ranked according to the R-criteria. The best ranked cell is the cell with the highest R value. If an FDD cell is ranked as the best cell, the UE shall perform cell re-selection to that FDD cell. If a TDD cell is ranked as the best cell, the UE shall perform cell re-selection to that TDD cell.~~

~~4.3 In all cases, the UE shall reselect the new cell, only if the cell reselection criteria are fulfilled during a time interval T<sub>res</sub>.~~

~~4.4 The cell-ranking criterion R is derived from Q, Q<sub>hyst</sub>, Q<sub>offset</sub>, TEMP\_OFFSET and PENALTY\_TIME. However, TEMP\_OFFSET<sub>n</sub> and PENALTY\_TIME<sub>n</sub> are only applicable if the usage of HCS is indicated in system information.~~

~~5. When cell status "barred" is indicated, the UE shall select another cell according to the following rule:~~

~~5.1 If the "Intra-frequency cell re-selection indicator" IE in Cell Access Restriction IE is set to value "allowed", the UE may select another cell on the same frequency if selection/re-selection criteria are fulfilled.~~

5.2 If the "Intra-frequency cell re-selection indicator" IE is set to "not-allowed" the UE shall not re-select a cell on the same frequency as the barred cell. For emergency call, the Intra-frequency cell re-selection indicator IE" shall be ignored, i.e. even if it is set to "not-allowed" the UE may select another intra-frequency cell.

2. TS 25.304, 4.3

3. TS 25.304, 5.2.5.1

4. TS 25.304, 5.2.6.1.4

5. TS 25.304, 5.3.1.1

6.1.2.8.3 Test purpose

1. To confirm that the UE treats the cell of the equivalent PLMN as a cell of the current PLMN.

2. To verify that the UE performs cell reselection on the following occasions:

2.1 Serving cell becomes barred.

2.2  $S < 0$  for serving cell.

3. To verify conformance requirement 5.

NOTE: Reselection triggered by the cell becoming a part of a forbidden registration area is tested in clause 9.4.2.3 "Location updating / rejected / location area not allowed" and 9.4.2.4 "Location updating / rejected / roaming not allowed in this LA".

6.1.2.8.4 Method of test

#### Initial conditions

Treselection, Qhyst, Qoffset, TEMP\_OFFSET and PENALTY\_TIME are not used, so the cell-ranking criterion R equals CPICH\_Ec/Io for FDD cells, and P-CCPCH RSCP for TDD cells.

The UE is Idle Updated on PLMN1 in cell 1, and The SS includes PLMN 2 and PLMN 3 under IE 'Equivalent PLMN' during Idle Update Procedure.

Step a-c (FDD):

| Parameter                                   | Unit | Cell 1      | Cell 2      | Cell 3      |
|---------------------------------------------|------|-------------|-------------|-------------|
| Test Channel                                |      | 1           | 1           | 2           |
| PLMN                                        |      | PLMN 1      | PLMN 2      | PLMN 3      |
| CPICH_Ec/Io                                 | dB   | -13         | -15         | -17         |
| Qqualmin                                    | dB   | -20         | -20         | -20         |
| Squal*                                      | dB   | 7           | 5           | 3           |
| Intra-frequency cell re-selection indicator |      | Not Allowed | Not Allowed | Not Allowed |
| CellBarred                                  |      | 0           | 0           | 0           |

Step d-f:

|            |  |     |   |   |
|------------|--|-----|---|---|
| CellBarred |  | 0→1 | 0 | 0 |
|------------|--|-----|---|---|

Step g-h:

|                                             |  |                          |                          |                          |
|---------------------------------------------|--|--------------------------|--------------------------|--------------------------|
| Intra-frequency cell re-selection indicator |  | Not Allowed<br>→ Allowed | Not Allowed<br>→ Allowed | Not Allowed<br>→ Allowed |
|---------------------------------------------|--|--------------------------|--------------------------|--------------------------|

Step i (FDD):

|          |    |         |     |     |
|----------|----|---------|-----|-----|
| Qqualmin | dB | -20→-10 | -20 | -20 |
| Squal*   | dB | 7→3     | 5   | 3   |

Test procedure

Method C is applied.

- a) The SS activates Cell 1-3 and monitors them for random access requests from the UE.
- b) The UE is switched on.
- c) The SS waits for random access requests from the UE. A complete Location Update is done. SS specifies PLMN 2 and 3 are Equivalent to PLMN 1 in Location Update Accept Message.
- d) The SS sets Cell 1 to be barred.
- e) The SS waits for random access requests from the UE. A complete Location Update is done. SS specifies PLMN 2 is Equivalent to PLMN 3 in Location Update Accept Message.
- f) The SS sets "Intra-frequency cell re-selection indicator" to "Allowed".
- g) The SS waits for random access requests from the UE. A complete Location Update is done.
- h) The stored information cell selection list in the UE is deleted and the UE is switched off.
- i) Step a-e) is repeated except that in step d) for FDD cells, Qqualmin is increased to -10 dB, or in step d) for TDD cells, Qrxlevmeas is increased to [TBD], so S will become negative instead of the cell being barred while maintaining the same RF level.

#### 6.1.2.8.5 Test requirements

- 1) In step c), after the UE has responded on Cell 1, it shall not respond on any other cell within 1 min.
- 2) In step e), the UE shall respond on Cell 3.
- 3) In step g), the UE shall respond on Cell 2.
- 4) In step i), the UE shall respond on Cell 2.

### 6.2 Multi-mode environment (2G/3G case)

#### 6.2.1 PLMN and RAT selection and reselection

##### 6.2.1.1 Selection of the correct PLMN and associated RAT

###### 6.2.1.1.1 Definition

Test to verify that the UE selects the correct combination of PLMN and associated access technology according to the fields on the USIM.

###### 6.2.1.1.2 Conformance requirement

1. At switch on, or following recovery from lack of coverage, the MS selects the registered PLMN or equivalent PLMN (if it is available) using all access technologies that the MS is capable of and if necessary (in the case of recovery from lack of coverage, see TS 23.122, clause 4.5.2) attempts to perform a Location Registration.

If successful registration is achieved, the MS indicates the selected PLMN.

If there is no registered PLMN, or if registration is not possible due to the PLMN being unavailable or registration failure, the MS follows either Automatic or Manual Network Selection Mode Procedure depending on its operating mode.

#### References

1. TS 23.122, clause 4.4.3.1.

NOTE: — TS 31.102 defines the USIM fields.

#### 6.2.1.1.3 Test purpose

1. To verify that the UE selects the correct combination of PLMN and associated access technology according to the fields on the USIM.

#### 6.2.1.1.4 Method of test

##### Initial conditions

The UE is in automatic PLMN selection mode.

Cell levels are from tables 6.3 and 6.4.

| Cell   | CPICH <sub>Ec</sub> / RF<br>signal level<br>[dBm/3.84 MHz] | P-CCPCH_RSCP/<br>RF signal level<br>[dBm] (TDD) | Test Channel | PLMN   | Radio Access<br>Technology |
|--------|------------------------------------------------------------|-------------------------------------------------|--------------|--------|----------------------------|
| Cell 1 | -48                                                        | -48                                             | 1            | PLMN 1 | GSM                        |
| Cell 2 | -72                                                        | -61                                             | 1            | PLMN 1 | UTRAN                      |
| Cell 3 | -75                                                        | -64                                             | 2            | PLMN 2 | UTRAN                      |
| Cell 4 | -50                                                        | -50                                             | 2            | PLMN 2 | GSM                        |

The UE is equipped with a USIM containing default values except for those listed below.

#### USIM A

| USIM field              | Priority        | PLMN   | Access Technology Identifier |
|-------------------------|-----------------|--------|------------------------------|
| EF <sub>LOCI</sub>      |                 |        |                              |
| EF <sub>HPLMNwAcT</sub> | 1 <sup>st</sup> | PLMN 1 | GSM                          |
|                         | 2 <sup>nd</sup> |        | UTRAN                        |

#### USIM B

| USIM field              | Priority        | PLMN   | Access Technology Identifier |
|-------------------------|-----------------|--------|------------------------------|
| EF <sub>LOCI</sub>      |                 |        |                              |
| EF <sub>HPLMNwAcT</sub> | 1 <sup>st</sup> | PLMN 2 | UTRAN                        |
|                         | 2 <sup>nd</sup> |        | GSM                          |

#### Test procedure

Method B is applied.

- a) ~~The SS activates cells 1-4 and monitors the cells for random access requests from the UE. The UE shall have a USIM with settings according to USIM A.~~
- b) ~~The UE is switched on.~~
- c) ~~The SS waits for random access requests from the UE.~~
- d) ~~The UE is switched off and a USIM with settings according to USIM B is inserted.~~
- e) ~~The UE is switched on.~~
- f) ~~The SS waits for random access requests from the UE.~~

#### 6.2.1.1.5 Test Requirements

- 1) ~~In step c), the response from the UE shall be on Cell 1. The displayed PLMN shall be PLMN1 (GSM).~~
- 2) ~~In step f), the response from the UE shall be on Cell 3. The displayed PLMN shall be PLMN2 (UTRAN).~~

#### 6.2.1.2 Selection of RAT for HPLMN; Manual mode

##### 6.2.1.2.1 Definition

Test to verify that the UE selects the HPLMN RAT according to the HPLMN RAT priority list on the USIM. If no RAT on the list is available, the UE shall try to obtain registration on the same PLMN using other UE-supported RATs.

##### 6.2.1.2.2 Conformance requirement

1. ~~To allow provision for multiple HPLMN codes, the HPLMN access technologies are stored on the SIM together with PLMN codes. This version of the specification does not support multiple HPLMN codes and the "HPLMN Selector with Access Technology" data field is only used by the MS to get the HPLMN access technologies. The HPLMN code is the PLMN code included in the IMSI.~~

2. ~~For HPLMN, the MS shall search for all access technologies it is capable of. The MS shall start its search using the access technologies stored in the "HPLMN Selector with Access Technology" data field on the SIM in priority order (i.e. the PLMN/access technology combinations are listed in priority order, if an entry includes more than one access technology then no priority is defined for the preferred access technology and the priority is an implementation issue).~~

##### 3. ~~Manual Network Selection Mode Procedure:~~

The MS indicates whether there are any PLMNs, which are available using all supported access technologies. This includes PLMNs in the "forbidden PLMNs" list and PLMNs which only offer services not supported by the MS.

If displayed, PLMNs meeting the criteria above are presented in the following order:

##### 3.1 HPLMN;

3.2 PLMNs contained in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

3.3 PLMNs contained in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

3.4 Other PLMN/access technology combinations with received high quality signal in random order;

3.5 Other PLMN/access technology combinations in order of decreasing signal quality.

The user may select his desired PLMN and the MS then initiates registration on this PLMN using the access technology chosen by the user for that PLMN or using the highest priority available access technology for that PLMN, if the associated access technologies have a priority order. (This may take place at any time during the presentation of PLMNs). For such a registration, the MS shall ignore the contents of the "forbidden LAs for roaming", "forbidden LAs for regional provision of service", "forbidden PLMNs for GPRS service" and "forbidden PLMNs" lists.

If the user does not select a PLMN, the selected PLMN shall be the one that was selected before the PLMN selection procedure started. If no such PLMN was selected or that PLMN is no longer available, then the MS shall attempt to camp on any acceptable cell and enter the limited service state.

NOTE: — It is an MS implementation option whether to indicate access technologies to the user. If the MS does display access technologies, then the access technology used should be the access technology chosen by the user for that PLMN. If the MS does not display access technologies, then the access technology chosen for a particular PLMN should be the highest priority available access technology for that PLMN, if the associated access technologies have a priority order.

#### 6.2.1.2.3 Test purpose

1. To verify that:

1.1 the UE searches for a HPLMN RAT according to the HPLMN Selector with Access Technology data field on the USIM in priority order;

1.2 If no RAT on the priority list is available, the UE tries to obtain registration on the same PLMN using other UE-supported RATs.

#### 6.2.1.2.4 Method of test

##### Initial conditions

The UE is in manual PLMN selection mode.

Cell levels are from tables 6.3 and 6.4.

| Cell   | CPICH_Ec / RF<br>signal level<br>[dBm/3.84 MHz]<br>(FDD) | P-CCPCH_RSCP/<br>RF signal level<br>[dBm] (TDD) | Test Channel | PLMN   | Radio Access<br>Technology |
|--------|----------------------------------------------------------|-------------------------------------------------|--------------|--------|----------------------------|
| Cell 1 | -72                                                      | -61                                             | 1            | PLMN-2 | UTRAN                      |
| Cell 2 | -48                                                      | -48                                             | 1            | PLMN-2 | GSM                        |
| Cell 3 | -75                                                      | -64                                             | 2            | PLMN-3 | UTRAN                      |
| Cell 4 | -50                                                      | -50                                             | 2            | PLMN-3 | GSM                        |

The UE is equipped with a USIM containing default values except for those listed below.

##### USIM A

| USIM field              | Priority        | PLMN   | Access Technology Identifier |
|-------------------------|-----------------|--------|------------------------------|
| EF <sub>LOGI</sub>      |                 | PLMN-1 |                              |
| EF <sub>HPLMNwAcT</sub> | 1 <sup>st</sup> | PLMN-2 | UTRAN                        |
|                         | 2 <sup>nd</sup> |        | GSM                          |

## USIM B

| USIM field              | Priority        | PLMN   | Access Technology Identifier |
|-------------------------|-----------------|--------|------------------------------|
| EF <sub>LOCI</sub>      |                 | PLMN 1 |                              |
| EF <sub>HPLMNwAcT</sub> | 1 <sup>st</sup> | PLMN 2 | UTRAN                        |
|                         | 2 <sup>nd</sup> |        |                              |

## Test procedure

Method B is applied.

- a) ~~The SS activates cells 1-4 and monitors the cells for random access requests from the UE. The UE shall have a USIM with settings according to USIM A.~~
- b) ~~The UE is switched on.~~
- c) ~~PLMN2 (UTRAN) shall be selected when the PLMN list is presented.~~
- d) ~~The SS waits for random access requests from the UE.~~
- e) ~~Cell 1 is switched off.~~
- f) ~~PLMN2 (GSM) shall be selected when the PLMN list is presented.~~
- g) ~~The SS waits for random access requests from the UE.~~
- h) ~~The UE is switched off and a USIM with settings according to USIM B is inserted. All cells except Cell 1 are active.~~
- i) ~~The UE is switched on.~~
- j) ~~PLMN2 (GSM) shall be selected when the PLMN list is presented.~~
- k) ~~The SS waits for random access requests from the UE.~~

## 6.2.1.2.5 Test Requirements

- 1) ~~In step c), the list shall be presented. It shall contain as highest priority PLMN2 (UTRAN as number 1 on the list and GSM as number 2).~~
- 2) ~~In step d), the response from the UE shall be on Cell 1 (1<sup>st</sup> priority RAT for EF<sub>HPLMNwAcT</sub>). The displayed PLMN shall be PLMN2 (UTRAN).~~
- 3) ~~In step f), the list shall be presented. It shall contain as highest priority PLMN2 (GSM).~~
- 4) ~~In step g), the response from the UE shall be on Cell 2 (2<sup>nd</sup> priority RAT for EF<sub>HPLMNwAcT</sub>). The displayed PLMN shall be PLMN2 (GSM).~~
- 5) ~~In step j), the list shall be presented. It shall contain as highest priority PLMN2 (GSM).~~
- 6) ~~In step k), the response from the UE shall be on Cell 2. The displayed PLMN shall be PLMN2 (GSM). (PLMN2 is not available on UTRAN so registration on the same PLMN is attempted using other UE-supported RATs).~~

## 6.2.1.3 Selection of RAT for UPLMN; Manual mode

## 6.2.1.3.1 Definition

Test to verify that the UE selects the UPLMN RAT according to the UPLMN RAT priority list on the USIM. If no RAT on the list is available, the UE shall not try to obtain registration on the same PLMN(s) with other RAT(s) but instead search for PLMNs in the OPLMN list.

## 6.2.1.3.2 Conformance requirement

### 1. Manual Network Selection Mode Procedure:

The MS indicates whether there are any PLMNs, which are available using all supported access technologies. This includes PLMNs in the "forbidden PLMNs" list and PLMNs which only offer services not supported by the MS.

If displayed, PLMNs meeting the criteria above are presented in the following order:

#### 1.1 HPLMN;

1.2 PLMNs contained in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

1.3 PLMNs contained in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

1.4 Other PLMN/access technology combinations with received high quality signal in random order;

1.5 Other PLMN/access technology combinations in order of decreasing signal quality.

The user may select his desired PLMN and the MS then initiates registration on this PLMN using the access technology chosen by the user for that PLMN or using the highest priority available access technology for that PLMN, if the associated access technologies have a priority order. (This may take place at any time during the presentation of PLMNs). For such a registration, the MS shall ignore the contents of the "forbidden LAs for roaming", "forbidden LAs for regional provision of service", "forbidden PLMNs for GPRS service" and "forbidden PLMNs" lists.

If the user does not select a PLMN, the selected PLMN shall be the one that was selected before the PLMN selection procedure started. If no such PLMN was selected or that PLMN is no longer available, then the MS shall attempt to camp on any acceptable cell and enter the limited service state.

NOTE:— It is an MS implementation option whether to indicate access technologies to the user. If the MS does display access technologies, then the access technology used should be the access technology chosen by the user for that PLMN. If the MS does not display access technologies, then the access technology chosen for a particular PLMN should be the highest priority available access technology for that PLMN, if the associated access technologies have a priority order.

NOTE:— TS 31.102 defines the USIM fields.

#### 6.2.1.3.3 Test purpose

1. To verify that:

1.1 the UE selects the UPLMN RAT according to the UPLMN RAT priority list on the USIM.

1.2 If no RAT on the list is available, the UE does not try to obtain registration on the same PLMN with another RAT but instead searches for PLMNs in the OPLMN list.

#### 6.2.1.3.4 Method of test

#### Initial conditions

The UE is in manual PLMN selection mode.

Cell levels are from tables 6.3 and 6.4.

| Cell   | CPICH_Ec / RF<br>signal level<br><br>[dBm/3.84 MHz]<br>(FDD) | P-CCPCH_RSCP/<br>RF signal level<br>[dBm] (TDD) | Test Channel | PLMN   | Radio Access<br>Technology |
|--------|--------------------------------------------------------------|-------------------------------------------------|--------------|--------|----------------------------|
| Cell 1 | -72                                                          | -61                                             | 1            | PLMN-3 | UTRAN                      |

|        |     |     |   |        |       |
|--------|-----|-----|---|--------|-------|
| Cell 2 | -48 | -48 | 1 | PLMN-3 | GSM   |
| Cell 3 | -75 | -64 | 2 | PLMN-4 | UTRAN |
| Cell 4 | -50 | -50 | 2 | PLMN-4 | GSM   |
| Cell 5 | -78 | -67 | 3 | PLMN-5 | UTRAN |

The UE is equipped with a USIM containing default values except for those listed below.

| USIM field              | Priority        | PLMN   | Access Technology Identifier |
|-------------------------|-----------------|--------|------------------------------|
| EF <sub>LOCI</sub>      |                 | PLMN-1 |                              |
| EF <sub>HPLMNwAcT</sub> | 1 <sup>st</sup> | PLMN-2 | UTRAN                        |
|                         | 2 <sup>nd</sup> |        | GSM                          |
| EF <sub>PLMNwAcT</sub>  | 1 <sup>st</sup> | PLMN-3 | UTRAN                        |
|                         | 2 <sup>nd</sup> | PLMN-4 | GSM                          |
| EF <sub>OPLMNwAcT</sub> | 1 <sup>st</sup> | PLMN-5 | UTRAN                        |
|                         | 2 <sup>nd</sup> | PLMN-6 | GSM                          |

#### Test procedure

Method B is applied.

- The SS activates cells 1-5 and monitors the cells for random access requests from the UE.
- The UE is switched on.
- PLMN3 (UTRAN) shall be selected when the PLMN list is presented.
- The SS waits for random access requests from the UE.
- Cell 1 is switched off.
- PLMN4 (GSM) shall be selected when the PLMN list is presented.
- The SS waits for random access requests from the UE.
- Cell 4 is switched off.
- PLMN5 (UTRAN) shall be selected when the PLMN list is presented.
- The SS waits for random access requests from the UE.

#### 6.2.1.3.5 Test Requirements

- In step c), the list shall be presented. It shall contain in priority PLMN3 (UTRAN), PLMN4 (GSM), other PLMNs.
- In step d), the response from the UE shall be on Cell 1 (1<sup>st</sup> priority RAT for EF<sub>PLMNwAcT</sub>). The displayed PLMN shall be PLMN3 (UTRAN).
- In step f), the list shall be presented. It shall contain in priority PLMN4 (GSM), PLMN5 (UTRAN), other PLMNs.
- In step g), the response from the UE shall be on Cell 4 (2<sup>nd</sup> priority RAT for EF<sub>PLMNwAcT</sub>). The displayed PLMN shall be PLMN4 (GSM).
- In step i), the list shall be presented. It shall contain as highest priority PLMN5 (UTRAN).

6) In step j), the response from the UE shall be on Cell 5 (1<sup>st</sup> priority RAT for EF<sub>OPLMNwAcT</sub>). The displayed PLMN shall be PLMN5 (UTRAN).

#### 6.2.1.4 Selection of RAT for OPLMN; Manual mode

##### 6.2.1.4.1 Definition

Test to verify that the UE selects the OPLMN RAT according to the OPLMN RAT priority list on the USIM. If no RAT on the list is available, the UE shall not try to obtain registration on the same PLMN(s) with other RAT(s) but instead search for other PLMN/access technology combinations with received high quality signal in random order.

##### 6.2.1.4.2 Conformance requirement

###### 1. Manual Network Selection Mode Procedure:

The MS indicates whether there are any PLMNs, which are available using all supported access technologies. This includes PLMNs in the "forbidden PLMNs" list and PLMNs which only offer services not supported by the MS.

If displayed, PLMNs meeting the criteria above are presented in the following order:

###### 1.1 HPLMN;

1.2 PLMNs contained in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

1.3 PLMNs contained in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

1.4 Other PLMN/access technology combinations with received high quality signal in random order;

1.5 Other PLMN/access technology combinations in order of decreasing signal quality.

The user may select his desired PLMN and the MS then initiates registration on this PLMN using the access technology chosen by the user for that PLMN or using the highest priority available access technology for that PLMN, if the associated access technologies have a priority order. (This may take place at any time during the presentation of PLMNs). For such a registration, the MS shall ignore the contents of the "forbidden LAs for roaming", "forbidden LAs for regional provision of service", "forbidden PLMNs for GPRS service" and "forbidden PLMNs" lists.

If the user does not select a PLMN, the selected PLMN shall be the one that was selected before the PLMN selection procedure started. If no such PLMN was selected or that PLMN is no longer available, then the MS shall attempt to camp on any acceptable cell and enter the limited service state.

NOTE: — It is an MS implementation option whether to indicate access technologies to the user. If the MS does display access technologies, then the access technology used should be the access technology chosen by the user for that PLMN. If the MS does not display access technologies, then the access technology chosen for a particular PLMN should be the highest priority available access technology for that PLMN, if the associated access technologies have a priority order.

NOTE: — TS 31.102 defines the USIM fields.

##### 6.2.1.4.3 Test purpose

###### 1. To verify that:

1.1 the UE selects the OPLMN RAT according to the OPLMN RAT priority list on the USIM.

1.2 If no RAT on the list is available, the UE does not try to obtain registration on the same PLMN(s) with other RAT(s) but instead searches for "other PLMN/access technology combinations with received high quality signal in random order".

##### 6.2.1.4.4 Method of test

#### Initial conditions

The UE is in manual PLMN selection mode.

Cell levels are from tables 6.3 and 6.4.

| Cell   | CPICH_Ec / RF<br>signal level<br>[dBm/3.84 MHz]<br>(FDD) | P-CCPCH_RSCP /<br>RF signal level<br>[dBm] (TDD) | Test Channel | PLMN   | Radio Access<br>Technology |
|--------|----------------------------------------------------------|--------------------------------------------------|--------------|--------|----------------------------|
| Cell-1 | -72                                                      | -61                                              | 1            | PLMN-5 | UTRAN                      |
| Cell-2 | -48                                                      | -48                                              | 1            | PLMN-5 | GSM                        |
| Cell-3 | -75                                                      | -64                                              | 2            | PLMN-6 | UTRAN                      |
| Cell-4 | -50                                                      | -50                                              | 2            | PLMN-6 | GSM                        |
| Cell-5 | -78                                                      | -67                                              | 3            | PLMN-7 | UTRAN                      |

The UE is equipped with a USIM containing default values except for those listed below.

| USIM field              | Priority        | PLMN   | Access<br>Technology<br>Identifier |
|-------------------------|-----------------|--------|------------------------------------|
| EF <sub>LOC1</sub>      |                 | PLMN-1 |                                    |
| EF <sub>HPLMNwAcT</sub> | 1 <sup>st</sup> | PLMN-2 | UTRAN                              |
|                         | 2 <sup>nd</sup> |        | GSM                                |
| EF <sub>PLMNwAcT</sub>  | 1 <sup>st</sup> | PLMN-3 | UTRAN                              |
|                         | 2 <sup>nd</sup> | PLMN-4 | GSM                                |
| EF <sub>OPLMNwAcT</sub> | 1 <sup>st</sup> | PLMN-5 | UTRAN                              |
|                         | 2 <sup>nd</sup> | PLMN-6 | GSM                                |

Test procedure

Method B is applied.

- a) The SS activates cells 1-5 and monitors the cells for random access requests from the UE.
- b) The UE is switched on.
- c) PLMN5 (UTRAN) shall be selected when the PLMN list is presented.
- d) The SS waits for random access requests from the UE.
- e) Cell 1 is switched off.
- f) PLMN6 (GSM) shall be selected when the PLMN list is presented.
- g) The SS waits for random access requests from the UE.
- h) Cell 4 is switched off.
- i) PLMN7 (UTRAN) shall be selected when the PLMN list is presented.
- j) The SS waits for random access requests from the UE.

#### 6.2.1.4.5 Test Requirements

- 1) In step c), the list shall be presented. It shall contain in priority PLMN5 (UTRAN), PLMN6 (GSM), other PLMNs.
- 2) In step d), the response from the UE shall be on Cell 1 (1<sup>st</sup> priority RAT for EF<sub>OPLMNwAcT</sub>). The displayed PLMN shall be PLMN5 (UTRAN).
- 3) In step f), the list shall be presented. It shall contain as highest priority PLMN6 (GSM) followed by PLMN5 (GSM), PLMN6 (UTRAN) and PLMN7 (UTRAN) in random order.
- 4) In step g), the response from the UE shall be on Cell 4 (2<sup>nd</sup> priority RAT for EF<sub>OPLMNwAcT</sub>). The displayed PLMN shall be PLMN6 (GSM).
- 5) In step i), the list shall be presented. It shall contain PLMN5 (GSM), PLMN6 (UTRAN) and PLMN7 (UTRAN) in random order.
- 6) In step j), the response from the UE shall be on Cell 5. The displayed PLMN shall be PLMN7 (UTRAN).

#### 6.2.1.5 Selection of "Other PLMN / access technology combinations"; Manual mode

##### 6.2.1.5.1 Definition

Test to verify that if neither RPLMN, HPLMN, UPLMN nor OPLMN is available, the UE first tries to obtain registration on "Other PLMN/access technology combinations with received high quality signal in random order" and secondly on "Other PLMN/access technology combinations in order of decreasing signal quality".

##### 6.2.1.5.2 Conformance requirement

##### 1. Manual Network Selection Mode Procedure:

The MS indicates whether there are any PLMNs, which are available using all supported access technologies. This includes PLMNs in the "forbidden PLMNs" list and PLMNs which only offer services not supported by the MS.

If displayed, PLMNs meeting the criteria above are presented in the following order:

##### 1.1 HPLMN;

1.2 PLMNs contained in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

1.3 PLMNs contained in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

1.4 Other PLMN/access technology combinations with received high quality signal in random order;

1.5 Other PLMN/access technology combinations in order of decreasing signal quality.

In 1.5, the MS shall order the PLMN/access technology combinations in order of decreasing signal quality within each access technology. The order between PLMN/access technology combinations with different access technologies is an MS implementation issue.

The user may select his desired PLMN and the MS then initiates registration on this PLMN using the access technology chosen by the user for that PLMN or using the highest priority available access technology for that PLMN, if the associated access technologies have a priority order. (This may take place at any time during the presentation of PLMNs). For such a registration, the MS shall ignore the contents of the "forbidden LAs for roaming", "forbidden LAs for regional provision of service", "forbidden PLMNs for GPRS service" and "forbidden PLMNs" lists.

If the user does not select a PLMN, the selected PLMN shall be the one that was selected before the PLMN selection procedure started. If no such PLMN was selected or that PLMN is no longer available, then the MS shall attempt to camp on any acceptable cell and enter the limited service state.

NOTE: — It is an MS implementation option whether to indicate access technologies to the user. If the MS does display access technologies, then the access technology used should be the access technology chosen by the user for that PLMN. If the MS does not display access technologies, then the access technology chosen for a particular PLMN should be the highest priority available access technology for that PLMN, if the associated access technologies have a priority order.

2. ~~UTRA case: The UE shall scan all RF channels in the UTRA band according to its capabilities to find available PLMNs. On each carrier, the UE shall search for the strongest cell according to the cell search procedures (for FDD, see TS 25.214, and TDD, see TS 25.224) and read its system information, in order to find out which PLMN the cell belongs to. If the UE can read the PLMN identity, the found PLMN shall be reported to the NAS as a high quality PLMN (but without the RSCP value), provided that the following high quality criterion is fulfilled:~~

~~— For an FDD cell, the measured primary CPICH RSCP value shall be greater than or equal to  $-95$  dBm.~~

~~— For a TDD cell, the measured P-CCPCH RSCP value shall be greater than or equal to  $-84$  dBm.~~

~~Found PLMNs that do not satisfy the high quality criterion, but for which the UE has been able to read the PLMN identities are reported to the NAS together with the CPICH RSCP value for UTRA FDD cells and P-CCPCH RSCP for UTRA TDD cells.~~

3. ~~GSM case: A PLMN shall be understood to be received with high quality signal if the signal level is above  $-85$  dBm.~~

2. ~~TS 25.304, clause 5.1.2.2.~~

3. ~~TS 03.22, clause 4.4.3.~~

NOTE: ~~TS 31.102 defines the USIM fields.~~

#### 6.2.1.5.3 Test purpose

1. ~~To verify that:~~

1.1 ~~If neither RPLMN, HPLMN, UPLMN nor OPLMN is available, the UE tries to obtain registration on "Other PLMN/access technology combinations with received high quality signal in random order".~~

1.2 ~~If no PLMN is available in test purpose 1.1, the UE tries to obtain registration on "Other PLMN/access technology combinations in order of decreasing signal quality".~~

2. ~~The "random order" in test purpose 1.1 is not verified.~~

#### 6.2.1.5.4 Method of test

##### Initial conditions

~~The UE is in manual PLMN selection mode.~~

| Cell   | CPICH_Ec /RF<br>signal level<br>[dBm/3.84 MHz]<br>(FDD) | P-CCPCH_RSCP /<br>RF signal level<br>[dBm] (TDD) | High Quality<br>signal | Test<br>Channel | PLMN    | Radio Access<br>Technology |

#### Test procedure

Method B is applied.

- a) ~~The SS activates cells 1-6 and monitors the cells for random access requests from the UE.~~
- b) ~~The UE is switched on.~~
- c) ~~PLMN11 shall be selected when the PLMN list is presented.~~
- d) ~~The SS waits for random access requests from the UE.~~
- e) ~~Cell 5 is switched off.~~
- f) ~~PLMN8 shall be selected when the PLMN list is presented.~~
- g) ~~The SS waits for random access requests from the UE.~~
- h) ~~Cell 2 is switched off.~~
- i) ~~PLMN10 shall be selected when the PLMN list is presented.~~
- j) ~~The SS waits for random access requests from the UE.~~
- k) ~~Cell 4 is switched off.~~
- l) ~~PLMN7 shall be selected when the PLMN list is presented. The SS shall reject the Registration Request from the UE.~~
- m) ~~Cell 1 is switched off.~~
- n) ~~PLMN9 shall be selected when the PLMN list is presented.~~
- o) ~~The SS waits for random access requests from the UE.~~
- p) ~~Cell 3 is switched off.~~
- q) ~~PLMN12 shall be selected when the PLMN list is presented. The SS shall reject the Registration Request from the UE.~~
- r) ~~Cell 6 is switched off.~~

#### 6.2.1.5.5 Test Requirements

In all steps, the PLMN priority list shall be as follows: PLMN7, PLMN8 in random order followed by the other PLMNs. PLMN9 shall always come before PLMN10 and PLMN11 shall always come before PLMN12.

- 1) In step c), the list shall be presented and contain PLMN7, 8, 9, 10, 11, 12.
- 2) In step d), the response from the UE shall be on Cell 5. The displayed PLMN shall be PLMN11.
- 3) In step f), the list shall be presented and contain PLMN7, 8, 9, 10, 12.
- 4) In step g), the response from the UE shall be on Cell 2. The displayed PLMN shall be PLMN8.
- 5) In step i), the list shall be presented and contain PLMN7, 9, 10, 12.
- 6) In step j), the response from the UE shall be on Cell 4. The displayed PLMN shall be PLMN10.
- 7) In step l), the list shall be presented and contain PLMN7, 9, 12. After the PLMN has been selected, the list shall appear again as the UE cannot perform registration.
- 9) In step n), the list shall be presented and contain PLMN9, 12.
- 10) In step o), the response from the UE shall be on Cell 3. The displayed PLMN shall be PLMN9.
- 11) In step q), the list shall be presented and shall only contain PLMN12. After the PLMN has been selected, the list shall appear again as the UE cannot perform registration.
- 13) After step r), the UE shall inform that no network is available

#### 6.2.1.6 Selection of RAT for HPLMN; Automatic mode

##### 6.2.1.6.1 Definition

Test to verify that the UE selects the HPLMN RAT according to the HPLMN RAT priority list on the USIM. If no RAT on the list is available, the UE shall try to obtain registration on the same PLMN using other UE-supported RATs.

##### 6.2.1.6.2 Conformance requirement

1. To allow provision for multiple HPLMN codes, the HPLMN access technologies are stored on the SIM together with PLMN codes. This version of the specification does not support multiple HPLMN codes and the "HPLMN Selector with Access Technology" data field is only used by the MS to get the HPLMN access technologies. The HPLMN code is the PLMN code included in the IMSI.

2. For HPLMN, the MS shall search for all access technologies it is capable of. The MS shall start its search using the access technologies stored in the "HPLMN Selector with Access Technology" data field on the SIM in priority order (i.e. the PLMN/access technology combinations are listed in priority order, if an entry includes more than one access technology then no priority is defined for the preferred access technology and the priority is an implementation issue).

##### 3. Automatic Network Selection Mode Procedure:

The MS selects and attempts registration on other PLMNs, if available and allowable in the following order:

3.1 HPLMN (if not previously selected);

3.2 Each PLMN in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

3.3 Each PLMN in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);

3.4 Other PLMN/access technology combinations with received high quality signal in random order;

3.5 Other PLMN/access technology combinations in order of decreasing signal quality.

If successful registration is achieved, the MS indicates the selected PLMN.

If registration cannot be achieved because no PLMNs are available and allowable, the MS indicates "no service" to the user, waits until a new PLMN is available and allowable and then repeats the procedure.

If there were one or more PLMNs which were available and allowable, but an LR failure made registration on those PLMNs unsuccessful or an entry in the "forbidden LAs for regional provision of service" list prevented a registration attempt, the MS selects the first such PLMN again and enters a limited service state.

NOTE: TS 31.102 defines the USIM fields.

## 6.2.1.6.3 Test purpose

## 1. To verify that:

1.1 the UE searches for a HPLMN RAT according to the HPLMN Selector with Access Technology data field on the USIM in priority order.

1.2 If no RAT on the priority list is available, the UE tries to obtain registration on the same PLMN using other UE-supported RATs.

## 6.2.1.6.4 Method of test

## Initial conditions

The UE is in automatic PLMN selection mode.

Cell levels are from tables 6.3 and 6.4.

| Cell   | CPICH <sub>E<sub>c</sub></sub> / RF<br>signal level<br>[dBm/3.84 MHz]<br>(FDD) | P-CCPCH <sub>RSCP</sub> /<br>RF signal level<br>[dBm] (TDD) | Test Channel | PLMN   | Radio Access<br>Technology |
|--------|--------------------------------------------------------------------------------|-------------------------------------------------------------|--------------|--------|----------------------------|
| Cell 1 | -72                                                                            | -61                                                         | 1            | PLMN 2 | UTRAN                      |
| Cell 2 | -48                                                                            | -48                                                         | 1            | PLMN 2 | GSM                        |
| Cell 3 | -75                                                                            | -64                                                         | 2            | PLMN 3 | UTRAN                      |
| Cell 4 | -50                                                                            | -50                                                         | 2            | PLMN 3 | GSM                        |

The UE is equipped with a USIM containing default values except for those listed below.

## USIM A

| USIM field              | Priority        | PLMN   | Access Technology Identifier |
|-------------------------|-----------------|--------|------------------------------|
| EF <sub>LOCI</sub>      |                 | PLMN 1 |                              |
| EF <sub>HPLMNwAcT</sub> | 1 <sup>st</sup> | PLMN 2 | UTRAN                        |
|                         | 2 <sup>nd</sup> |        | GSM                          |

## USIM B

| USIM field              | Priority        | PLMN   | Access Technology Identifier |
|-------------------------|-----------------|--------|------------------------------|
| EF <sub>LOCI</sub>      |                 | PLMN 1 |                              |
| EF <sub>HPLMNwAcT</sub> | 1 <sup>st</sup> | PLMN 2 | UTRAN                        |
|                         | 2 <sup>nd</sup> |        |                              |

### Test procedure

Method B is applied.

- a) ~~The SS activates cells 1-4 and monitors the cells for random access requests from the UE. The UE shall have a USIM with settings according to USIM A.~~
- b) ~~The UE is switched on.~~
- c) ~~The SS waits for random access requests from the UE.~~
- d) ~~The UE is switched off and a USIM with settings according to USIM A is again inserted. All cells except Cell 1 are active.~~
- e) ~~The SS waits for random access requests from the UE.~~
- f) ~~The UE is switched off and a USIM with settings according to USIM B is inserted. All cells except Cell 1 are active.~~
- g) ~~The UE is switched on.~~
- h) ~~The SS waits for random access requests from the UE.~~

### 6.2.1.6.5 Test Requirements

- 1) ~~In step c), the response from the UE shall be on Cell 1 (1<sup>st</sup> priority RAT for EF<sub>HPLMNwAct</sub>). The displayed PLMN shall be PLMN2 (UTRAN).~~
- 2) ~~In step e), the response from the UE shall be on Cell 2 (2<sup>nd</sup> priority RAT for EF<sub>HPLMNwAct</sub>). The displayed PLMN shall be PLMN2 (GSM).~~
- 3) ~~In step h), the response from the UE shall be on Cell 2. The displayed PLMN shall be PLMN2 (GSM). (PLMN2 is not available on UTRAN so registration on the same PLMN is attempted using other UE-supported RATs).~~

### 6.2.1.7 Selection of RAT for UPLMN; Automatic mode

#### 6.2.1.7.1 Definition

Test to verify that the UE selects the UPLMN RAT according to the UPLMN RAT priority list on the USIM. If no RAT on the list is available, the UE shall not try to obtain registration on the same PLMN(s) with other RAT(s) but instead search for PLMNs in the OPLMN list.

#### 6.2.1.7.2 Conformance requirement

##### 1. Automatic Network Selection Mode Procedure:

The MS selects and attempts registration on other PLMNs, if available and allowable in the following order:

- 1.1 HPLMN (if not previously selected);
- 1.2 Each PLMN in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);
- 1.3 Each PLMN in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);
- 1.4 Other PLMN/access technology combinations with received high quality signal in random order;
- 1.5 Other PLMN/access technology combinations in order of decreasing signal quality.

If successful registration is achieved, the MS indicates the selected PLMN.

If registration cannot be achieved because no PLMNs are available and allowable, the MS indicates "no service" to the user, waits until a new PLMN is available and allowable and then repeats the procedure.

If there were one or more PLMNs which were available and allowable, but an LR failure made registration on those PLMNs unsuccessful or an entry in the "forbidden LAs for regional provision of service" list prevented a registration attempt, the MS selects the first such PLMN again and enters a limited service state.

#### References

1. TS 23.122, clause 4.4.3.1.1.

NOTE: TS 31.102 defines the USIM fields.

#### 6.2.1.7.3 Test purpose

1. To verify that:

1.1 the UE selects the UPLMN RAT according to the UPLMN RAT priority list on the USIM.

1.2 If no RAT on the list is available, the UE does not try to obtain registration on the same PLMN with another RAT but instead searches for PLMNs in the OPLMN list.

#### 6.2.1.7.4 Method of test

##### Initial conditions

The UE is in automatic PLMN selection mode.

Cell levels are from tables 6.3 and 6.4.

| Cell   | CPICH <sub>E<sub>c</sub></sub> / RF signal level [dBm/3.84 MHz] (FDD) | P-CCPCH / RF signal level [dBm] (TDD) | Test Channel | PLMN   | Radio Access Technology |
|--------|-----------------------------------------------------------------------|---------------------------------------|--------------|--------|-------------------------|
| Cell 1 | -72                                                                   | -61                                   | 1            | PLMN 3 | UTRAN                   |
| Cell 2 | -48                                                                   | -48                                   | 1            | PLMN 3 | GSM                     |
| Cell 3 | -75                                                                   | -64                                   | 2            | PLMN 4 | UTRAN                   |
| Cell 4 | -50                                                                   | -50                                   | 2            | PLMN 4 | GSM                     |
| Cell 5 | -78                                                                   | -67                                   | 3            | PLMN 5 | UTRAN                   |

The UE is equipped with a USIM containing default values except for those listed below.

| USIM field              | Priority        | PLMN   | Access Technology Identifier |
|-------------------------|-----------------|--------|------------------------------|
| EF <sub>LOCI</sub>      |                 | PLMN 1 |                              |
| EF <sub>HPLMNwAcT</sub> | 1 <sup>st</sup> | PLMN 2 | UTRAN                        |
|                         | 2 <sup>nd</sup> |        | GSM                          |
| EF <sub>PLMNwAcT</sub>  | 1 <sup>st</sup> | PLMN 3 | UTRAN                        |
|                         | 2 <sup>nd</sup> | PLMN 4 | GSM                          |
| EF <sub>OPLMNwAcT</sub> | 1 <sup>st</sup> | PLMN 5 | UTRAN                        |
|                         | 2 <sup>nd</sup> | PLMN 6 | GSM                          |

#### Test procedure

Method B is applied.

- a) ~~The SS activates cells 1-5 and monitors the cells for random access requests from the UE.~~
- b) ~~The UE is switched on.~~
- c) ~~The SS waits for random access requests from the UE.~~
- d) ~~Cell 1 is switched off.~~
- e) ~~The SS waits for random access requests from the UE.~~
- f) ~~Cell 4 is switched off.~~
- g) ~~The SS waits for random access requests from the UE.~~

#### 6.2.1.7.5 Test Requirements

- 1) ~~In step c), the response from the UE shall be on Cell 1 (1<sup>st</sup> priority RAT for EF<sub>PLMNwAcT</sub>). The displayed PLMN shall be PLMN3 (UTRAN).~~
- 2) ~~In step e), the response from the UE shall be on Cell 4 (2<sup>nd</sup> priority RAT for EF<sub>PLMNwAcT</sub>). The displayed PLMN shall be PLMN4 (GSM).~~
- 3) ~~In step g), the response from the UE shall be on Cell 5 (1<sup>st</sup> priority RAT for EF<sub>OPLMNwAcT</sub>). The displayed PLMN shall be PLMN5 (UTRAN).~~

#### 6.2.1.8 Selection of RAT for OPLMN; Automatic mode

##### 6.2.1.8.1 Definition

~~Test to verify that the UE selects the OPLMN RAT according to the OPLMN RAT priority list on the USIM. If no RAT on the list is available, the UE shall not try to obtain registration on the same PLMN(s) with other RAT(s) but instead search for other PLMN/access technology combinations with received high quality signal in random order.~~

##### 6.2.1.8.2 Conformance requirement

##### 1. Automatic Network Selection Mode Procedure:

~~The MS selects and attempts registration on other PLMNs, if available and allowable in the following order:~~

- 1.1 ~~HPLMN (if not previously selected);~~
- 1.2 ~~Each PLMN in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);~~
- 1.3 ~~Each PLMN in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);~~
- 1.4 ~~Other PLMN/access technology combinations with received high quality signal in random order;~~
- 1.5 ~~Other PLMN/access technology combinations in order of decreasing signal quality.~~

~~If successful registration is achieved, the MS indicates the selected PLMN.~~

~~If registration cannot be achieved because no PLMNs are available and allowable, the MS indicates "no service" to the user, waits until a new PLMN is available and allowable and then repeats the procedure.~~

~~If there were one or more PLMNs which were available and allowable, but an LR failure made registration on those PLMNs unsuccessful or an entry in the "forbidden LAs for regional provision of service" list prevented a registration attempt, the MS selects the first such PLMN again and enters a limited service state.~~

#### References

- 1. ~~TS 23.122, clause 4.4.3.1.1.~~

~~NOTE: —TS 31.102 defines the USIM fields.~~

## 6.2.1.8.3 Test purpose

1. To verify that:

1.1 the UE selects the OPLMN RAT according to the OPLMN RAT priority list on the USIM.

1.2 If no RAT on the list is available, the UE does not try to obtain registration on the same PLMN(s) with other RAT(s) but instead searches for "other PLMN/access technology combinations with received high quality signal in random order".

## 6.2.1.8.4 Method of test

Initial conditions

The UE is in automatic PLMN selection mode.

Cell levels are from tables 6.3 and 6.4.

| Cell   | CPICH_Ec / RF<br>signal level<br>[dBm/3.84 MHz]<br>(FDD) | P-CCPCH_RSCP /<br>RF signal level<br>[dBm] (TDD) | Test<br>Channel | PLMN   | Radio Access<br>Technology |
|--------|----------------------------------------------------------|--------------------------------------------------|-----------------|--------|----------------------------|
| Cell 1 | -72                                                      | -61                                              | 1               | PLMN-5 | UTRAN                      |
| Cell 2 | -48                                                      | -48                                              | 1               | PLMN-5 | GSM                        |
| Cell 3 | -75                                                      | -64                                              | 2               | PLMN-6 | UTRAN                      |
| Cell 4 | -50                                                      | -50                                              | 2               | PLMN-6 | GSM                        |
| Cell 5 | -78                                                      | -67                                              | 3               | PLMN-7 | UTRAN                      |

The UE is equipped with a USIM containing default values except for those listed below.

| USIM field              | Priority        | PLMN   | Access<br>Technology<br>Identifier |
|-------------------------|-----------------|--------|------------------------------------|
| EF <sub>LOGI</sub>      |                 | PLMN-1 |                                    |
| EF <sub>HPLMNwAcT</sub> | 1 <sup>st</sup> | PLMN-2 | UTRAN                              |
|                         | 2 <sup>nd</sup> |        | GSM                                |
| EF <sub>PLMNwAcT</sub>  | 1 <sup>st</sup> | PLMN-3 | UTRAN                              |
|                         | 2 <sup>nd</sup> | PLMN-4 | GSM                                |
| EF <sub>OPLMNwAcT</sub> | 1 <sup>st</sup> | PLMN-5 | UTRAN                              |
|                         | 2 <sup>nd</sup> | PLMN-6 | GSM                                |

Test procedure

Method B is applied.

a) The SS activates cells 1-5 and monitors the cells for random access requests from the UE.

b) The UE is switched on.

c) The SS waits for random access requests from the UE.

- d) ~~Cell 1 is switched off.~~
- e) ~~The SS waits for random access requests from the UE.~~
- f) ~~Cell 4 is switched off.~~
- g) ~~The SS waits for random access requests from the UE.~~

#### 6.2.1.8.5 ~~Test Requirements~~

- 1) ~~In step c), the response from the UE shall be on Cell 1 (1<sup>st</sup> priority RAT for EF<sub>OPLMNwAcT</sub>). The displayed PLMN shall be PLMN5 (UTRAN).~~
- 2) ~~In step e), the response from the UE shall be on Cell 4 (2<sup>nd</sup> priority RAT for EF<sub>OPLMNwAcT</sub>). The displayed PLMN shall be PLMN6 (GSM).~~
- 3) ~~In step g), the response from the UE shall be on either Cell 2, 3 or 5 (other PLMN/access technology combination) with associated PLMN5 (GSM), PLMN6 (UTRAN) or PLMN7 (UTRAN) shown.~~

#### 6.2.1.9 ~~Selection of "Other PLMN / access technology combinations"; Automatic mode~~

##### 6.2.1.9.1 ~~Definition~~

~~Test to verify that if neither RPLMN, HPLMN, UPLMN nor OPLMN is available, the UE first tries to obtain registration on "Other PLMN/access technology combinations with received high quality signal in random order" and secondly on "Other PLMN/access technology combinations in order of decreasing signal quality".~~

##### 6.2.1.9.2 ~~Conformance requirement~~

##### 1. ~~Automatic Network Selection Mode Procedure;~~

~~The MS selects and attempts registration on other PLMNs, if available and allowable in the following order:~~

- 1.1 ~~HPLMN (if not previously selected);~~
- 1.2 ~~Each PLMN in the "User Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);~~
- 1.3 ~~Each PLMN in the "Operator Controlled PLMN Selector with Access Technology" data field in the SIM (in priority order);~~
- 1.4 ~~Other PLMN/access technology combinations with received high quality signal in random order;~~
- 1.5 ~~Other PLMN/access technology combinations in order of decreasing signal quality.~~

~~In 1.5, the MS shall order the PLMN/access technology combinations in order of decreasing signal quality within each access technology. The order between PLMN/access technology combinations with different access technologies is an MS implementation issue.~~

~~If successful registration is achieved, the MS indicates the selected PLMN.~~

~~If registration cannot be achieved because no PLMNs are available and allowable, the MS indicates "no service" to the user, waits until a new PLMN is available and allowable and then repeats the procedure.~~

~~If there were one or more PLMNs which were available and allowable, but an LR failure made registration on those PLMNs unsuccessful or an entry in the "forbidden LAs for regional provision of service" list prevented a registration attempt, the MS selects the first such PLMN again and enters a limited service state.~~

~~2. UTRA case: The UE shall scan all RF channels in the UTRA band according to its capabilities to find available PLMNs. On each carrier, the UE shall search for the strongest cell according to the cell search procedures (for FDD, see TS 25.214, and TDD, see TS 25.224) and read its system information, in order to find out which PLMN the cell belongs to. If the UE can read the PLMN identity, the found PLMN shall be reported to the NAS as a high quality PLMN (but without the RSCP value), provided that the following high quality criterion is fulfilled:~~

- ~~— For an FDD cell, the measured primary CPICH RSCP value shall be greater than or equal to -95 dBm.~~
- ~~— For a TDD cell, the measured P-CCPCH RSCP shall be greater than or equal to -84 dBm.~~

Found PLMNs that do not satisfy the high quality criterion, but for which the UE has been able to read the PLMN identities are reported to the NAS together with the CPICH RSCP value for UTRA FDD cells and P-CCPCH RSCP for UTRA TDD cells.

3. ~~GSM case: A PLMN shall be understood to be received with high quality signal if the signal level is above -85 dBm.~~

1. ~~TS 23.122, clause 4.4.3.1.1.~~

2. ~~TS 25.304, clause 5.1.2.2.~~

3. ~~TS 03.22, clause 4.4.3.~~

NOTE: ~~TS 31.102 defines the USIM fields.~~

#### 6.2.1.9.3 Test purpose

1. ~~To verify that:~~

1.1 ~~If neither RPLMN, HPLMN, UPLMN nor OPLMN is available, the UE tries to obtain registration on "Other PLMN/access technology combinations with received high quality signal in random order".~~

1.2 ~~If no PLMN is available in test purpose 1.1, the UE tries to obtain registration on "Other PLMN/access technology combinations in order of decreasing signal quality".~~

2. ~~The "random order" in test purpose 1.1 is not verified.~~

#### 6.2.1.9.4 Method of test

##### Initial conditions

The UE is in automatic PLMN selection mode.

| Cell   | CPICH_Ec /RF<br>signal level<br>[dBm/3.84 MHz]<br>(FDD) | P-CCPCH_RSCP<br>/ RF signal level<br>[dBm] (TDD) | "High<br>Quality<br>signal" | Test<br>Channel | PLMN    | Radio Access<br>Technology |
|--------|---------------------------------------------------------|--------------------------------------------------|-----------------------------|-----------------|---------|----------------------------|
| Cell 1 | -80                                                     | -69                                              | Yes                         | 1               | PLMN 7  | UTRAN                      |
| Cell 2 | -65                                                     | -65                                              | Yes                         | 1               | PLMN 8  | GSM                        |
| Cell 3 | -98                                                     | -87                                              | No                          | 2               | PLMN 9  | UTRAN                      |
| Cell 4 | -101                                                    | -90                                              | No                          | 2               | PLMN 10 | UTRAN                      |
| Cell 5 | -88                                                     | -88                                              | No                          | 3               | PLMN 11 | GSM                        |
| Cell 6 | -91                                                     | -91                                              | No                          | 3               | PLMN 12 | GSM                        |

The UE is equipped with a USIM containing default values except for those listed below.

| USIM field              | Priority        | PLMN   | Access<br>Technology<br>Identifier |
|-------------------------|-----------------|--------|------------------------------------|
| EF <sub>LOC1</sub>      |                 | PLMN 1 |                                    |
| EF <sub>HPLMNwAcT</sub> | 1 <sup>st</sup> | PLMN 2 | UTRAN                              |
|                         | 2 <sup>nd</sup> |        | GSM                                |
| EF <sub>PLMNwAcT</sub>  | 1 <sup>st</sup> | PLMN 3 | UTRAN                              |

|                         |                 |        |       |
|-------------------------|-----------------|--------|-------|
|                         | 2 <sup>nd</sup> | PLMN 4 | GSM   |
| EF <sub>OPLMNwAcT</sub> | 1 <sup>st</sup> | PLMN 5 | UTRAN |
|                         | 2 <sup>nd</sup> | PLMN 6 | GSM   |

Test procedure

Method B is applied.

- a) The SS activates cells 1-6 and monitors the cells for random access requests from the UE.
- b) The UE is switched on.
- c) The SS waits for random access requests from the UE.
- d) The cell on which a response was received, is switched off.
- e) Step c-d) is repeated until the UE informs that no network is available.

#### 6.2.1.9.5 Test Requirements

- 1) In step c), the displayed PLMN is noted.
- 2) When the test procedure has finished, the noted PLMNs shall have appeared in the following order: PLMN7, PLMN8 in random order followed by the other PLMNs. PLMN9 shall come before PLMN10 and PLMN11 shall come before PLMN12.

#### 6.2.2 Cell selection and reselection

##### 6.2.2.1 Cell reselection if cell becomes barred or $S < 0$ ; UTRAN to GSM

###### 6.2.2.1.1 Definition

Test to verify that if both a GSM and UTRAN network is available, the UE performs cell reselection from UTRAN to GSM if the UTRAN cell becomes barred or  $S$  falls below zero.

###### 6.2.2.1.2 Conformance requirement

1. When camped on a cell, the UE shall regularly search for a better cell according to the cell reselection criteria. If a better cell is found, that cell is selected. The change of cell may imply a change of RAT.

2. A "suitable cell" is a cell on which the UE may camp on to obtain normal service. Such a cell shall fulfil all the following requirements:

2.1 The cell is part of the selected PLMN or, of a PLMN considered as equivalent by the UE according to the information provided by the NAS.

2.2 The cell is not barred.

2.3 The cell is not part of the list of "forbidden LAs for roaming".

2.4 The cell selection criteria are fulfilled.

3. When camped normally, the UE shall execute the cell reselection evaluation process on the following occasions/triggers:

3.1 UE internal triggers, so as to meet performance as specified in TS 25.133 for FDD and TS 25.123 for TDD.

3.2 When information on the BCCH used for the cell reselection evaluation procedure has been modified.

4. Cell Reselection Criteria:

4.1 The UE shall perform ranking of all cells that fulfil the  $S$  criterion.

4.2 The cells shall be ranked according to the R criteria specified above, deriving  $Q_{meas,n}$  and  $Q_{meas,s}$  and calculating the R values using CPICH RSCP, P-CCPCH RSCP and the averaged received signal level as specified in TS 25.133 and TS 25.123 for FDD, TDD and GSM cells, respectively. The best ranked cell is the cell with the highest R value. If a TDD or GSM cell is ranked as the best cell, then the UE shall perform cell re-selection to that TDD or GSM cell.

4.3 In all cases, the UE shall reselect the new cell, only if the cell reselection criteria are fulfilled during a time interval  $T_{res}$ .

4.4 The cell-ranking criterion R is derived from Q,  $Q_{hyst}$ ,  $Q_{offset}$ ,  $TEMP\_OFFSET$  and  $PENALTY\_TIME$ . However,  $TEMP\_OFFSET$  and  $PENALTY\_TIME$  are only applicable if the usage of HCS is indicated in system information.

1. TS 25.304, clause 5.2.1.
2. TS 25.304, clause 4.3.
3. TS 25.304, clause 5.2.5.1.
4. TS 25.304, clause 5.2.6.1.4.

#### 6.2.2.1.3 Test purpose

1. To verify that the UE performs reselection from UTRAN to GSM on the following occasions:

1.1 Serving cell becomes barred.

1.2  $S < 0$  for serving cell.

#### 6.2.2.1.4 Method of test

#### Initial conditions

The USIM does not contain any preferred RAT.

#### Step a-c:

| Parameter          | Unit | Cell 1<br>(UTRAN) |
|--------------------|------|-------------------|
| Test Channel       |      | 1                 |
| CPICH Ec (FDD)     | dBm  | -60               |
| P-CCPCH RSCP (TDD) | dBm  | -63               |
| $Q_{rxlevmin}$     | dBm  | -100              |
| $S_{rxlev}^*$      | dBm  | 40                |
| CellBarred         |      | 0                 |

| Parameter            | Unit | Cell 2<br>(GSM) | Cell 3<br>(GSM) |
|----------------------|------|-----------------|-----------------|
| Test Channel         |      | 1               | 2               |
| RF Signal Level      | dBm  | -80             | -85             |
| $RXLEV\_ACCESS\_MIN$ | dBm  | -100            | -100            |
| $C1^*$               | dBm  | 20              | 15              |

|             |     |     |     |
|-------------|-----|-----|-----|
| FDD_Qmin    | dB  | -20 | -20 |
| FDD_Qoffset | dBm | 0   | 0   |

Step d-f:

|            |      |                   |
|------------|------|-------------------|
| Parameter  | Unit | Cell 1<br>(UTRAN) |
| CellBarred |      | 0 → 1             |

Step g:

|           |      |                   |
|-----------|------|-------------------|
| Parameter | Unit | Cell 1<br>(UTRAN) |
| Qrxlevmin | dB   | -100 → -40        |
| Srxlev*   | dB   | 40 → -20          |

Test procedure

Method B is applied.

- The SS activates cells 1, 2, and 3. The SS monitors cells 1, 2 and 3 for random access requests from the UE.
- The UE is switched on.
- The SS waits for random access request from the UE.
- The SS sets Cell 1 to be barred.
- The SS waits for random access request from the UE.
- The stored information cell selection list in the UE is deleted and the UE is switched off.
- Step a-e) is repeated except that in step d), Qrxlevmin is increased, so S will become negative instead of being barred. Step g does not apply to TDD cells.

#### 6.2.2.1.5 Test Requirements

- In step c), after the UE has responded on Cell 1, it shall not respond on any other cell within 1 min.
- In step e), the UE shall respond on Cell 2.
- In step g), the UE shall respond on Cell 2 after Qrxlevmin is increased. Step g does not apply to the testing of TDD cells.

#### 6.2.2.2 Cell reselection if cell becomes barred or C1 < 0; GSM to UTRAN

##### 6.2.2.2.1 Definition

Test to verify that if both a GSM and UTRAN network is available, the UE performs cell reselection from GSM to UTRAN if the GSM cell becomes barred or the path loss criterion C1 falls below zero for a period of 5 s.

##### 6.2.2.2.2 Conformance requirement

- At least every 5 s the MS shall calculate the value of C1 and C2 for the serving cell and re-calculate C1 and C2 values for non-serving cells (if necessary). The MS shall then check whether:

1.1 The path loss criterion (C1) for current serving cell falls below zero for a period of 5 s. This indicates that the path loss to the cell has become too high.

2. While camped on a cell of the registered PLMN ("camped normally"), the MS may need to select a different cell ("normal cell reselection" state). The following events trigger a cell reselection:

2.1 The path loss criterion parameter C1 (see TS 03.22, clause 3.6) indicates that the path loss to the cell has become too high;

2.2 The cell camped on (current serving cell) has become barred.

#### References

1. TS 05.08, clause 6.6.2.

2. TS 03.22, clause 4.5.

#### 6.2.2.2.3 Test purpose

1. To verify that the UE performs reselection from GSM to UTRAN on the following occasions:

1.1 Serving cell becomes barred.

1.2 The path loss criterion C1 for serving cell falls below zero for a period of 5 s.

#### 6.2.2.2.4 Method of test

#### Initial conditions

The USIM does not contain any preferred RAT. Step a-c:

| Parameter          | Unit | Cell 1<br>(GSM)         |
|--------------------|------|-------------------------|
| Test Channel       |      | 1                       |
| RF Signal Level    | dBm  | -50                     |
| RXLEV_ACCESS_MIN   | dBm  | -70                     |
| MS_TXPWR_MAX = CCH | dBm  | Max. output power of UE |
| FDD_Qmin           | dB   | -20                     |
| FDD_Qoffset        | dBm  | 0                       |
| CellBarred         |      | 0                       |
| C1*                | dBm  | 20                      |

| Parameter          | Unit         | Cell 2<br>(UTRAN) | Cell 3<br>(UTRAN) |
|--------------------|--------------|-------------------|-------------------|
| P-CCPCH_RSCP (FDD) | dBm          | -65               | -67               |
| CPICH_Ec (FDD)     | dBm/3.84 MHz | -60               | -70               |
| Qrxlevmin          | dBm          | -100              | -100              |
| Srxlev*            | dBm          | 40                | 30                |

Step d-e:

| Parameter  | Unit | Cell 1<br>(GSM) |
|------------|------|-----------------|
| CellBarred |      | 0 → 1           |

Step f-g:

| Parameter       | Unit | Cell 1<br>(GSM)              |
|-----------------|------|------------------------------|
| RF Signal Level | dBm  | -50 →<br>-80 (4sec) →<br>-50 |
| C1*             | dBm  | 20 →<br>-10 (4sec) →<br>20   |

Step h:

| Parameter       | Unit | Cell 1<br>(GSM) |
|-----------------|------|-----------------|
| RF Signal Level | dBm  | -50 →<br>-80    |
| C1*             | dBm  | 20 →<br>-10     |

Test procedure

Method B is applied.

- The SS activates cells 1, 2, and 3. The SS monitors cells 1, 2 and 3 for random access requests from the UE.
- The UE is switched on.
- The SS waits for random access request from the UE.
- The SS sets Cell 1 to be barred.
- The SS waits for random access request from the UE.
- The stored information cell selection list in the UE is deleted and the UE is switched off.
- Step a-c) is repeated except that in step d), the SS reduces signal level on Cell 1 to -80 dBm for 4 s and then raises the level back to -50 dBm (C1 becomes -10 dBm during this period).
- The SS reduces signal level on Cell 1 to -80 dBm.

#### 6.2.2.2.5 Test Requirements

- In step c), after the UE has responded on Cell 1, it shall not respond on any other cell within 1 min.
- In step e), the UE shall respond on Cell 2.
- In step g), there shall be no access on Cell 2 within 30 s, after having reduced the signal level on Cell 1.

~~4) In step h), the UE shall respond on Cell 2.~~

### ~~6.2.2.3 Cell reselection timings; GSM to UTRAN~~

#### ~~6.2.2.3.1 Definition~~

~~Test to verify that the UE meets the cell reselection timing requirements when both a GSM and UTRAN network is available.~~

#### ~~6.2.2.3.2 Conformance requirement~~

~~1. If the 3G Cell Reselection list (see TS 04.18) includes UTRAN frequencies, the MS shall, at least every 5 s update the value RLA\_C for the serving cell and each of the at least 6 strongest non-serving GSM cells.~~

~~1.1 The MS shall then reselect a suitable UTRAN cell if its measured RSCP value exceeds the value of RLA\_C for the serving cell and all of the suitable non-serving GSM cells by the value XXX\_Qoffset for a period of 5 s and, for FDD, the UTRAN cells measured Ec/No value is equal or greater than the value FDD\_Qmin.~~

~~— Ec/No and RSCP are the measured quantities.~~

~~— FDD\_Qmin and XXX\_Qoffset are broadcast on BCCH of the serving cell. XXX indicates other radio access technology/mode.~~

~~1.2 In case of a cell reselection occurring within the previous 15 s, XXX\_Qoffset is increased by 5 dB.~~

~~1.3 Cell reselection to UTRAN shall not occur within 5 s after the MS has reselected a GSM from an UTRAN cell if a suitable GSM cell can be found.~~

~~1.4 If more than one UTRAN cell fulfils the above criteria, the UE shall select the cell with the greatest RSCP value.~~

~~2. The MS shall be able to identify and select a new best UTRAN cell on a frequency, which is part of the 3G Cell Reselection list, within 30 s after it has been activated under the condition that there is only one UTRAN frequency in the list and under good radio conditions.~~

~~— The allowed time is increased by 30 s for each additional UTRAN frequency in the 3G Cell Reselection list. However, multiple UTRAN cells on the same frequency in the neighbour cell list does not increase the allowed time.~~

~~NOTE: — Definitions of measurements are in TS 25.215 and TS 25.101 for FDD mode, in TS 25.225 and TS 25.102 for TDD mode, clause 3.2 and TS 05.08, clause 6.1.~~

#### ~~References~~

~~1. TS 05.08, clause 6.6.5.~~

~~2. TS 05.08, clause 6.6.4.~~

#### ~~6.2.2.3.3 Test purpose~~

~~1. To verify that:~~

~~1.1 The UE meets conformance requirement 1.1 and additionally, that no reselection is performed if the period is less than 5 s~~

~~1.2 The UE meets conformance requirement 1.2.~~

~~1.3 The UE meets conformance requirement 1.3.~~

#### ~~6.2.2.3.4 Method of test~~

##### ~~Initial conditions~~

~~The USIM does not contain any preferred RAT.~~

~~Step a-c:~~

| Parameter        | Unit | Cell 1 (GSM)            | Cell 2 (GSM)            |
|------------------|------|-------------------------|-------------------------|
| Test Channel     |      | 1                       | 2                       |
| RF Signal Level  | dBm  | -70                     | -85                     |
| RXLEV_ACCESS_MIN | dBm  | -100                    | -100                    |
| MS_TXPWR_MAX_CCH | dBm  | Max. output power of UE | Max. output power of UE |
| FDD_Qmin         | dBm  | -20                     | -20                     |
| FDD_Qoffset      | dBm  | 5                       | 5                       |

| Parameter          | Unit | Cell 3 (UTRAN) |
|--------------------|------|----------------|
| Test Channel       |      | 1              |
| CPICH_RSCP (FDD)   | dBm  | -74            |
| P-CCPCH_RSCP (TDD) | dBm  | -63            |
| Qrxlevmin          | dBm  | -100           |
| Srxlev*            | dBm  | 26             |

Step d-g:

| Parameter       | Unit | Cell 1 (GSM)                | Cell 2 (GSM) |
|-----------------|------|-----------------------------|--------------|
| RF Signal Level | dBm  | -70 →<br>-82 (4 s) →<br>-70 | OFF          |

Step h-j:

| Parameter       | Unit | Cell 1 (GSM) | Cell 2 (GSM) |
|-----------------|------|--------------|--------------|
| RF Signal Level | dBm  | -82 →<br>-70 | OFF          |

Step k-m:

| Parameter       | Unit | Cell 1 (GSM)          | Cell 2 (GSM) |
|-----------------|------|-----------------------|--------------|
| RF Signal Level | dBm  | -82 →<br>-70 →<br>-82 | OFF          |

Test procedure

NOTE: — Step a-c): Test purpose 1.3. Step d-g): test purpose 1.1. Step h-k): test purpose 1.2.

Method A is applied.

- a) ~~The SS activates the channels. The UE is not paged on any of the cells.~~
- b) ~~The UE is switched on.~~
- c) ~~After 50 s, the SS starts paging continuously on cells 1 and 3 for 20 s. The SS monitors cells 1 and 3 for random access requests from the UE.~~
- d) ~~Cell 2 is switched off. The SS stops paging on the cells and waits for 20 s. (The UE should revert to Cell 1 due to cell reselection).~~
- e) ~~The SS starts paging continuously on Cell 3.~~
- f) ~~The SS decreases the transmit level of Cell 1 to -82 dBm for a period of 4 s (RSCP will then exceed RXLEV by more than XXX\_Qoffset) and then changes the level back to -70 dBm.~~
- g) ~~The SS waits to see if there is any random access requests from the UE on Cell 3.~~
- h) ~~The SS stops paging on all cells and sets the transmit level of Cell 1 to -82 dBm.~~
- i) ~~The SS waits 20 s and then starts paging continuously on Cell 1. (The UE should revert to Cell 3 due to cell reselection).~~
- j) ~~The SS increases the transmit level of Cell 1 to -70 dBm and waits for the UE to access on Cell 1. The SS records the time t from the increase in the level of Cell 1 to the first response from the UE.~~
- k) ~~The SS stops paging on all cells and sets the transmit level of Cell 1 back to -82 dBm.~~
- l) ~~The SS waits 20 s (The UE should revert to Cell 3 due to cell reselection).~~
- m) ~~The SS increases the transmit level of Cell 1 to -70 dBm. After t+2 s (i.e. 2 s after reselection to Cell 1), the SS starts paging continuously on Cell 3, changes the level of Cell 1 back to -82 dBm and waits to see if there is any random access request on Cell 3. (Within 15 sec after reselection to GSM, the level of Cell 1 is -82 + 10 dBm = -72 dBm. After the 15 s period, the level of Cell 1 is -82 + 5 dBm = -77 dBm. The level of Cell 3 is -74 dBm, thus leading to reselection to Cell 3 after 15 s).~~

#### 6.2.2.3.5 Test Requirements

- 1) ~~In step c), after the UE has reselected Cell 1 from Cell 3 as indicated by random access requests, any random access requests on Cell 3 shall not occur within 4,5 s of the last random access request on Cell 1.~~
- 2) ~~In step g), there shall be no access on Cell 3 within 34 s of decreasing the level of Cell 1.~~
- 3) ~~In step j), the UE shall respond on Cell 1.~~
- 4) ~~In step m), there shall be no response on Cell 3 within 11 s after the level of Cell 1 is changed back to -82 dBm.~~

NOTE: — The 11 s is derived from (t+15) s minimum cell reselection timer minus (t+2) s from the start of step m) up to the decrease of the level of Cell 1. A further 2 s are subtracted to cover for any uncertainty introduced by the random access process occurring after step g).

## 7 Layer 2

### 7.1 MAC

#### General

If not otherwise mentioned, the same procedures as used in RRC test specification (TS 34.123-1) or in the Generic procedure (TS 34.108) applies to reach Initial conditions for MAC testing.

If not explicitly described, the same message contents and settings are applied as described in the RRC test description default settings.

#### 7.1.1 Mapping between logical channels and transport channels

##### 7.1.1.1 CCCH mapped to RACH/FACH / Invalid TCTF

###### 7.1.1.1.1 Definition

This tests that the MAC applies the correct header to the MAC PDU according to the type of logical channel carried on the RACH/FACH transport channel. Incorrect application of MAC headers would result in inoperation of the UE.

###### 7.1.1.1.2 Conformance requirement

CCCH mapped to RACH/FACH:

- TCTF field is included in MAC header.

The following fields are defined for the MAC header:

- Target Channel Type Field
- ...

#### Coding of the Target Channel Type Field on FACH for FDD

| TCTF              | Designation                                                                           |
|-------------------|---------------------------------------------------------------------------------------|
| 00                | BCCH                                                                                  |
| 01000000          | CCCH                                                                                  |
| 01000001-01111111 | Reserved<br>(PDUs with this coding will be discarded by this version of the protocol) |
| 10000000          | CTCH                                                                                  |
| 10000001-10111111 | Reserved<br>(PDUs with this coding will be discarded by this version of the protocol) |
| 11                | DCCH or DTCH over FACH                                                                |

#### Reference(s)

TS 25.321 clauses 9.2.1 and 9.2.1.4.

### 7.1.1.1.3 Test purpose

1. To verify that the UE discards PDUs with reserved or incorrect values in the TCTF field.
2. To verify that the TCTF field is correctly applied when a CCCH is mapped to the RACH/FACH.

### 7.1.1.1.4 Method of test

#### Initial conditions

#### System Simulator:

- 1 cell, default parameters, Ciphering Off.
- The SCCPCH is configured as specified in TS 34.108 clause 6.10.2.4.3.3 (Interactive/Background 32 kbps RAB + SRB for PCCH + SRB for CCCH + SRB for DCCH + SRB for BCCH) with the following exceptions for the FACH:

|                                                                                                                                                                      |                                             |           |                    |

|                                                                                                                                                                      | Max number of bits/TTI before rate matching |           | 752 (alt. 1136)    |
|                                                                                                                                                                      | RM attribute                                |           | 200-240            |
| NOTE: —The SS MAC layer must be configured not to add a MAC header so that the header can be added by the test case in order to create the necessary invalid values. |                                             |           |                    |

- And using the configuration in TS 34.108 clause 6.10.2.4.3.3 for the PCH.

- The TFCS should be configured as specified in clause 6.10.2.4.3.3.1.4.

#### User Equipment:

- The UE shall operate under normal test conditions, Ciphering Off.
- The Test-USIM shall be inserted.
- The SS starts broadcasting the System Information as specified in TS 34.108 clause 6.1, using the configuration for the PRACH and SCCPCH (signalled in SYSTEM INFORMATION 5) as follows:
  1. The SCCPCH is configured as specified in TS 34.108 clause 6.10.2.4.3.3 (Interactive/Background 32 kbps RAB + SRB for PCCH + SRB for CCCH + SRB for DCCH + SRB for BCCH).
  2. The PRACH is configured as specified in TS 34.108 clause 6.10.2.4.4.1.

~~—The SS follows the procedure in TS 34.108 clause 7.2.2.1 (CS UE) or 7.2.2.2 (PS UE) so that the UE shall be in idle mode and registered.~~

#### ~~Test procedure~~

- ~~a) The SS pages the UE.~~
- ~~b) The SS waits for the first RRC CONNECTION REQUEST message to arrive on the PRACH/CCCH.~~
- ~~c) The SS responds with an RRC CONNECTION SETUP message (specified in TS 34.108 clause 9: Contents of RRC CONNECTION SETUP message: UM (Transition to CELL\_DCH). In this case the SS will transmit the message in 152-bit (note) segments, with a valid UM RLC header and with the MAC header set as follows:~~

| Field | Value |
|-------|-------|
| TCTF  | 00'B  |

~~NOTE:—In the case of a 2-bit MAC header the segment shall be padded to the correct length.~~

- ~~d) The SS waits for retransmission of the RRC CONNECTION REQUEST on the PRACH/CCCH due to expiry of timer T300.~~
- ~~e) The SS repeats steps c) and d), with the TCTF field set as follows:~~

| Iteration | TCTF Value |
|-----------|------------|
| 2         | 01000001'B |
| 3         | 10000000'B |
| 4         | 10000001'B |
| 5         | 11'B       |

- ~~f) The SS repeats steps c) and d), with the TCTF field set as to 01000000'B.~~

## Specific Message Contents

None.

**7.1.1.1.5 ——— Test Requirement**

On the first iteration, and on each iteration in step e) the UE should not recognise the RRC CONNECTION SETUP message and therefore should retransmit the RRC CONNECTION REQUEST after each expiry of T300 (the UE should send up to N300=7 RRC CONNECTION REQUESTs before abandoning the procedure).

On the final iteration the UE should respond with an RRC CONNECTION SETUP COMPLETE message.

**7.1.1.2 ——— DTCH or DCCH mapped to RACH/FACH / Invalid TCTF****7.1.1.2.1 ——— Definition**

This tests that the MAC applies the correct header to the MAC PDU according to the type of logical channel carried on the RACH/FACH transport channel. Incorrect application of MAC headers would result in inoperation of the UE.

**7.1.1.2.2 ——— Conformance requirement**

DTCH or DCCH mapped to RACH/FACH:

TCTF field, C/T field, UE-Id type field and UE-Id are included in the MAC header.

The following fields are defined for the MAC header:

—— Target Channel Type Field

...

**Coding of the Target Channel Type Field on FACH for FDD**

| TCTF                  | Designation                                                                                 |

TS 25.321 clauses 9.2.1 and 9.2.1.1 c).

**7.1.1.2.3 ——— Test purpose**

1. To verify that the UE discards PDUs with reserved or incorrect values in the TCTF field.
2. To verify that the TCTF field, C/T field, UE-Id type and UE-Id field are correctly applied when a DTCH or DCCH is mapped to the RACH/FACH.

**7.1.1.2.4 ——— Method of test****Initial conditions****System Simulator:**

—— 1 cell, default parameters, Ciphering Off.

- The SCCPCH is configured as specified in TS 34.108 clause 6.10.2.4.3.3 (Interactive/Background 32 kbps RAB + SRB for PCCH + SRB for CCCH + SRB for DCCH + SRB for BCCH) with the following exceptions for the FACH:

|                                                                                                                                                                     |                                             |           |                    |

|                                                                                                                                                                     | CRC, bit                                    |           | 16                 |
|                                                                                                                                                                     | Max number of bits/TTI before rate matching |           | 752 (alt. 1136)    |
|                                                                                                                                                                     | RM attribute                                |           | 200-240            |
| NOTE: The SS MAC layer must be configured not to add a MAC header so that the header can be added by the test case in order to create the necessary invalid values. |                                             |           |                    |

- and using the configuration in TS 34.108 clause 6.10.2.4.3.3 for the PCH.

- The TFCS should be configured as specified in clause 6.10.2.4.3.3.1.4.

#### User Equipment:

- The UE shall operate under normal test conditions, Ciphering Off.
- The Test-USIM shall be inserted.
- The SS starts broadcasting the System Information as specified in TS 34.108 clause 6.1, using the configuration for the PRACH and SCCPCH (signalled in SYSTEM INFORMATION 5) as follows:
1. The SCCPCH is configured as specified in TS 34.108 clause 6.10.2.4.3.3 (Interactive/Background 32 kbps RAB + SRB for PCCH + SRB for CCCH + SRB for DCCH + SRB for BCCH).
  2. The PRACH is configured as specified in TS 34.108 clause 6.10.2.4.4.1.
- The SS follows the procedure in TS 34.108 clause 7.4.2.1 (Mobile Terminated) so that the UE shall be in state BGP 6-2 (CS-CELL\_FACH\_INITIAL) with the following exception:
1. The RLC entity for RB#3 (SRB#3), AM DCCH for high priority NAS signalling has Missing PDU Indicator enabled.
  2. The RLC entity for RB#3 (SRB#3), AM DCCH for high priority NAS signalling, has Transmission window size set to 128, and has Receive window size set to 128.

#### Test procedure

- a) The SS receives the PAGING RESPONSE message from the UE and checks the TCTF field.
- b) The SS transmits MAC PDUs containing RLC AM PDUs containing a DIRECT TRANSFER message containing an AUTHENTICATION REQUEST message.

—The DIRECT TRANSFER message shall be segmented into 128-bit PDUs, with correct RLC AM headers.

—The MAC header shall be set as follows:

| Field      | Value                                                     |
|------------|-----------------------------------------------------------|
| TCTF       | 00'B                                                      |
| UE-ID Type | C-RNTI                                                    |
| UE-ID      | As set in RRC CONNECTION SETUP message.                   |
| C/T        | Logical Channel ID for SRB #3 (AM-DCCH-NAS High Priority) |

—Where a TCTF size of 8-bits is used, 6-bits from the RLC payload shall be discarded.

c) The SS again transmits MAC PDUs as in b) above, but this time uses the correct TCTF of 11'B. The sequence numbers in the RLC headers shall be incremented normally from those sent in b).

d) The SS receives a STATUS PDU on SRB #3 AM RLC on the RACH due to detection of missing PDUs.

e) The SS repeats steps b), c) and d), with the TCTF field set as follows:

| Iteration | TCTF Value |
|-----------|------------|
| 2         | 01000000'B |
| 3         | 01000001'B |
| 4         | 10000000'B |
| 5         | 10000001'B |

#### Expected sequence

| Step | Direction |    | Message                                                                                            | Comments                                                                                |

|      |           |    | ...                                                                                                |                                                                                         |
|      | ←         |    | MAC PDU(TCTF, UE-ID, C/T, RLC AM PDU(SN=x+n+n, DIRECT TRANSFER(AUTHENTICATION REQUEST) SEGMENT n)) | Sent with correct TCTF = 11'B                                                           |
| 4    | →         |    | RLC-STATUS-PDU                                                                                     | NAK PDUs with SN = x to x+n                                                             |
| 5    | →         |    | AUTHENTICATION RESPONSE                                                                            | TCTF Field is recognised as correct for the DCCH                                        |

Expected sequence is repeated for iterations 2 to 5.

## Specific Message Contents

None

### 7.1.1.2.5 Test Requirement

In step a) the TCTF field should have the value 00'B. Note that this may be implied from receipt of the PAGING RESPONSE message correctly by the SS test script.

On the first iteration, and on each iteration in step d) the UE shall transmit a STATUS PDU on the RLC AM entity associated with SRB #3 each time the first PDU with TCTF=11'B is received in step c), negatively acknowledging the PDUs transmitted in step b) as missing.

At the end of each expected sequence the SS shall receive an AUTHENTICATION RESPONSE message.

### 7.1.1.3 DTCH or DCCH mapped to RACH/FACH / Invalid C/T Field

#### 7.1.1.3.1 Definition

This tests that the MAC applies the correct header to the MAC PDU according to the type of logical channel carried on the RACH/FACH transport channel. Incorrect application of MAC headers would result in inoperation of the UE.

#### 7.1.1.3.2 Conformance requirement

DTCH or DCCH mapped to RACH/FACH:

TCTF field, C/T field, UE-Id type field and UE-Id are included in the MAC header.

The following fields are defined for the MAC header:

##### — C/T field

The C/T field provides identification of the logical channel instance when multiple logical channels are carried on the same transport channel...

**Structure of the C/T field**

| C/T field | Designation                                                                           |
|-----------|---------------------------------------------------------------------------------------|
| 0000      | Logical channel 1                                                                     |
| 0001      | Logical channel 2                                                                     |
| ...       | ...                                                                                   |
| 1110      | Logical channel 15                                                                    |
| 1111      | Reserved<br>(PDUs with this coding will be discarded by this version of the protocol) |

## Reference(s)

TS 25.321 clauses 9.2.1 and 9.2.1.1 c).

### 7.1.1.3.3 Test purpose

1. To verify that the UE discards PDUs with reserved or incorrect values in C/T field.
2. To verify that the TCTF field, C/T field, UE-Id type and UE-Id field are correctly applied when a DTCH or DCCH is mapped to the RACH/FACH.

### 7.1.1.3.4 Method of test

Initial conditions

System Simulator:

See clause 7.1.1.2.4.

**User Equipment:**

See clause 7.1.1.2.4.

**Test procedure**

a) The SS receives the **PAGING RESPONSE** message from the UE and checks the **C/T** field.

b) The SS transmits MAC PDUs containing RLC AM PDUs containing a **DIRECT TRANSFER** message containing an **AUTHENTICATION REQUEST** message:

— The **DIRECT TRANSFER** message shall be segmented into 128-bit PDUs, with correct RLC AM headers.

— The MAC header shall be set as follows:

| Field      | Value                                   |
|------------|-----------------------------------------|
| TCTF       | 11'B                                    |
| UE ID Type | C-RNTI                                  |
| UE ID      | As set in RRC CONNECTION SETUP message. |
| C/T        | 0111'B                                  |

c) The SS again transmits MAC PDUs as in b) above, but this time uses the correct **C/T** value for **AM-DCCH-NAS** High Priority of 0010'B. The sequence numbers in the RLC headers shall be incremented normally from those sent in b).

d) The SS receives a **STATUS PDU** on **SRB #3 AM RLC** on the **RACH** due to detection of missing PDUs.

e) The SS repeats steps b), c) and d), with the **C/T** field set as follows:

| Iteration | C/T Value |
|-----------|-----------|
| 2         | 1111'B    |

## Expected sequence

| Step | Direction |    | Message                                                                                            | Comments                                        |
|------|-----------|----|----------------------------------------------------------------------------------------------------|-------------------------------------------------|
|      | UE        | SS |                                                                                                    |                                                 |
| 1    | →         |    | PAGING RESPONSE                                                                                    | Check C/T field                                 |
| 2    | ←         |    | MAC PDU(TCTF, UE-ID, C/T, RLC AM PDU(SN=x, DIRECT TRANSFER(AUTHENTICATION REQUEST) SEGMENT 1))     | Sent with incorrect C/T = 0111'B, or 1111'B.    |
|      | ←         |    | MAC PDU(TCTF, UE-ID, C/T, RLC AM PDU(SN=x+1, DIRECT TRANSFER(AUTHENTICATION REQUEST) SEGMENT 2))   | Sent with incorrect C/T = 0111'B, or 1111'B.    |
|      |           |    | ...                                                                                                |                                                 |
|      | ←         |    | MAC PDU(TCTF, UE-ID, C/T, RLC AM PDU(SN=x+n, DIRECT TRANSFER(AUTHENTICATION REQUEST) SEGMENT n))   | Sent with incorrect C/T = 0111'B, or 1111'B.    |
| 3    | ←         |    | MAC PDU(TCTF, UE-ID, C/T, RLC AM PDU(SN=x+n+1, DIRECT TRANSFER(AUTHENTICATION REQUEST) SEGMENT 1)) | Sent with correct C/T = 0010'B                  |
|      | ←         |    | MAC PDU(TCTF, UE-ID, C/T, RLC AM PDU(SN=x+n+2, DIRECT TRANSFER(AUTHENTICATION REQUEST) SEGMENT 2)) | Sent with correct C/T = 0010'B                  |
|      |           |    | ...                                                                                                |                                                 |
|      | ←         |    | MAC PDU(TCTF, UE-ID, C/T, RLC AM PDU(SN=x+n+n, DIRECT TRANSFER(AUTHENTICATION REQUEST) SEGMENT n)) | Sent with correct C/T = 0010'B                  |
| 4    | →         |    | RLC-STATUS-PDU                                                                                     | NAK PDUs with SN = x to x+n                     |
| 5    | →         |    | AUTHENTICATION RESPONSE                                                                            | C/T Field is recognised as correct for the DCCH |

Expected sequence is repeated for iteration 2.

## Specific Message Contents

None

## 7.1.1.3.5 — Test Requirement

In step a) the C/T field should be set to the Logical Channel ID for SRB #4 (0010'B). Note that this may be implied from receipt of the PAGING RESPONSE message correctly by the SS test script.

On the first iteration, and on each iteration in step d) the UE shall transmit a STATUS PDU on the RLC AM entity associated with SRB #3 each time the first PDU with C/T=0010'B is received in step c), negatively acknowledging the PDUs transmitted in step b) as missing.

At the end of each expected sequence the SS shall receive an AUTHENTICATION RESPONSE message.

## 7.1.1.4 — DTCH or DCCH mapped to RACH/FACH / Invalid UE ID Type Field

## 7.1.1.4.1 — Definition

This tests that the MAC applies the correct header to the MAC PDU according to the type of logical channel carried on the RACH/FACH transport channel. Incorrect application of MAC headers would result in inoperation of the UE.

## 7.1.1.4.2 — Conformance requirement

DTCH or DCCH mapped to RACH/FACH:

TCTF field, C/T field, UE-Id type field and UE-Id are included in the MAC header.

The following fields are defined for the MAC header:

—UE-Id Type

The UE-Id Type field is needed to ensure correct decoding of the UE-Id field in MAC Headers.

**Table 9.2.1.7: UE-Id Type field definition**

| UE-Id Type field 2 bits | UE-Id Type                                                                            |
|-------------------------|---------------------------------------------------------------------------------------|
| 00                      | U-RNTI                                                                                |
| 01                      | C-RNTI                                                                                |
| 10                      | Reserved<br>(PDUs with this coding will be discarded by this version of the protocol) |
| 11                      | Reserved<br>(PDUs with this coding will be discarded by this version of the protocol) |

**Reference(s)**

TS 25.321 clauses 9.2.1 and 9.2.1.1 c).

**7.1.1.4.3 ————— Test purpose**

1. To verify that the UE discards PDUs with reserved values in UE-Id type field.
2. To verify that the TCTF field, C/T field, UE-Id type and UE-Id field are correctly applied when a DTCH or DCCH is mapped to the RACH/FACH.

**7.1.1.4.4 ————— Method of test**

**Initial conditions**

System Simulator:

See clause 7.1.1.2.4.

User Equipment:

See clause 7.1.1.2.4.

**Test procedure**

- a) The SS receives the PAGING RESPONSE message from the UE and checks the UE-Id Type field.
  - b) The SS transmits MAC PDUs containing RLC AM PDUs containing a DIRECT TRANSFER message containing an AUTHENTICATION REQUEST message.
- The DIRECT TRANSFER message shall be segmented into 128-bit PDUs, with correct RLC AM headers.
- The MAC header shall be set as follows:

| Field      | Value                                                             |
|------------|-------------------------------------------------------------------|
| TCTF       | 11'B                                                              |
| UE ID Type | 10'B                                                              |
| UE ID      | As set in RRC CONNECTION SETUP message.                           |
| C/T        | Logical Channel ID for SRB #3 (AM-DCCH NAS High Priority): 0010'B |

- c) The SS again transmits MAC PDUs as in b) above, but this time uses the correct UE-Id type value for C-RNTI of 01'B. The sequence numbers in the RLC headers shall be incremented normally from those sent in b).
- d) The SS receives a STATUS PDU on SRB #3 AM RLC on the RACH due to detection of missing PDUs.
- e) The SS repeats steps b), c) and d), with the UE-Id type field set as follows:

| Iteration | UE-Id type Value |
|-----------|------------------|
| 2         | 11'B             |

#### Expected sequence

| Step | Direction |    | Message                                                                                            | Comments                                        |

| <b>C-RNTI</b>     | <b>16 bits</b>               |

#### ~~Reference(s)~~

~~TS 25.321 clauses 9.2.1 and 9.2.1.1 c).~~

#### ~~7.1.1.5.3 Test purpose~~

- ~~1. To verify that the UE ignores PDUs with UE-Ids that do not match the Id allocated to it.~~
- ~~2. To verify that the TCTF field, C/T field, UE-Id type and UE-Id field are correctly applied when a DTCH or DCCH is mapped to the RACH/FACH.~~

#### ~~7.1.1.5.4 Method of test~~

#### ~~Initial conditions~~

~~System Simulator:~~

~~See clause 7.1.1.2.4.~~

~~User Equipment:~~

~~See clause 7.1.1.2.4.~~

#### ~~Test procedure~~

- ~~a) The SS receives the PAGING RESPONSE message from the UE and checks the UE-Id field.~~
  - ~~b) The SS transmits MAC PDUs containing RLC AM PDUs containing a DIRECT TRANSFER message containing an AUTHENTICATION REQUEST message.~~
- ~~— The DIRECT TRANSFER message shall be segmented into 128-bit PDUs, with correct RLC AM headers.~~
- ~~— The MAC header shall be set as follows:~~

| Field      | Value                                                             |
|------------|-------------------------------------------------------------------|
| TCTF       | 11'B                                                              |
| UE-ID-Type | C-RNTI                                                            |
| UE-ID      | Address allocated in RRC CONNECTION SETUP message + 1.            |
| C/T        | Logical Channel ID for SRB #3 (AM-DCCH-NAS High Priority): 0010'B |

c) The SS again transmits MAC PDUs as in b) above, but this time uses the correct UE-Id value of the address allocated in the RRC CONNECTION SETUP message. The sequence numbers in the RLC headers shall be incremented normally from those sent in b).

d) The SS receives a STATUS PDU on SRB #3 AM RLC on the RACH due to detection of missing PDUs.

#### Specific Message Contents

None

#### 7.1.1.5.5 Test Requirement

In step a) the UE-Id field should be set to the C-RNTI allocated in the RRC CONNECTION SETUP message. Note that this may be implied from receipt of the PAGING RESPONSE message correctly by the SS test script.

In step d) the UE shall transmit a STATUS PDU on the RLC AM entity associated with SRB #3 when the first PDU with UE-Id = value of the address allocated in the RRC CONNECTION SETUP message, is received in step c); negatively acknowledging the PDUs transmitted in step b) as missing.

At the end of the expected sequence the SS shall receive an AUTHENTICATION RESPONSE message.

#### ~~7.1.1.6 DTCH or DCCH mapped to DSCH or USCH~~

##### ~~7.1.1.6.1 Definition and applicability~~

Applicable for if mode TDD only or FDD only is supported.

##### ~~7.1.1.6.2 Conformance requirement~~

The TCTF field is included in the MAC header for TDD only. The UE-Id type and UE-Id are included in the MAC header for FDD only. The C/T field is included if multiplexing on MAC is applied.

#### Reference(s)

TS 25.321 clause 9.2.1.1.

##### ~~7.1.1.6.3 Test purpose~~

To verify when DTCH or DCCH is mapped to DSCH or USCH, the TCTF field is applied for TDD only, the UE-Id type and UE-Id are applied for FDD only. If multiplexing on MAC is applied, C/T field is included, otherwise, the C/T field is not included in the MAC header.

##### ~~7.1.1.6.4 Method of test~~

#### Initial conditions

System Simulator:

- 1 cell, default parameters. Ciphering Off.

User Equipment:

- The UE shall operate under normal test conditions, Ciphering Off.
- The Test-USIM shall be inserted.

The UE is in Connected mode and a connection is established as described in the TS 34.123-1, 7.3 PDCP testing, clause "Setup a UE-originated PS session using IP Header compression in AM RLC (using Loop-back test mode 1).

#### Related ICS/IXIT Statement(s)

TBD

#### Foreseen Final State of the UE

#### Test procedure

- The SS sends a certain data block to the UE.
- After having received the data block via configured mapped channels, the UE forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its MAC configuration to the SS.
- The SS receives the returned data block and checks its MAC header whether the TCTF is applied for TDD only, or the UE-Id type and UE-Id are applied for FDD only and the C/T field shall not be applied.
- The SS configures the RLC.
- The SS starts a Radio Bearer Reconfiguration procedure to be connected in RLC transparent mode and configures the Radio Bearer for multiplexing.
- The SS sends a certain data block to the UE.

- g) After having received the data block via configured mapped channels, the UE forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its MAC configuration to the SS.
- h) The SS receives the returned data block and check its MAC header whether the TCTF is applied for TDD only, or the UE-Id type and UE-Id are applied for FDD only and the C/T field is applied.
- i) The SS reconfigures its RLC mode to be in AM.

**User Equipment:**

- The UE shall operate under normal test conditions, Ciphering Off.
- The Test-USIM shall be inserted.

The UE is in Connected mode and a connection is established as described in the TS 34.123-1, 7.3 PDCP testing, clause "Setup a UE-originated PS session using IP Header compression in UM RLC (using Loop back test mode 1).

## Related ICS/IXIT Statement(s)

TBD

## Foreseen Final State of the UE

## Test procedure

- a) The SS sends SIBs 7, 8, and 9, sends CSICH information and waits 30 s.
- b) The SS reconfigures its RLC mode to be in transparent mode RLC. Afterwards it sends a certain data block to the UE.
- c) After having received the data block via configured mapped channels, the UE forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its MAC configuration to the SS.
- d) The SS receives the returned data block and checks its MAC header, whether a UE-Id type and a UE-Id are included.
- e) The SS reconfigures its RLC mode to be in AM.
- f) The SS starts a Radio Bearer Reconfiguration procedure to be connected in RLC transparent mode and configures the Radio Bearer for multiplexing.
- g) The SS sends the next data block via its MAC entity with MAC header, including the UE-Id type as "C-RNTI" and UE-Id as C-RNTI of the UE. C/T field.
- h) After having received the data block via configured mapped channels, the UE forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its MAC configuration to the SS.
- i) The SS receives the returned data block and checks its MAC header, whether UE-Id type, UE-Id field are included and C/T field is applied or not.

## 7.1.1.7.5 Test requirements

The UE-Id type and UE-Id field are included in the MAC header. When multiplexing on MAC is not applied, C/T field is included in the MAC header. Otherwise, C/T field is not included.

## 7.1.1.8 DTCH or DCCH mapped to DCH / Invalid C/T Field

## 7.1.1.8.1 Definition

This tests that the MAC applies the correct header to the MAC PDU according to the type of logical channel carried on the DCH transport channel. Incorrect application of MAC headers would result in inoperation of the UE.

## 7.1.1.8.2 Conformance requirement

DTCH or DCCH mapped to DCH, no multiplexing of dedicated channels on MAC: -no MAC header is required.

DTCH or DCCH mapped to DCH, with multiplexing of dedicated channels on MAC: -C/T field is included in MAC header.

The following fields are defined for the MAC header:

— C/T field

The C/T field provides identification of the logical channel instance when multiple logical channels are carried on the same transport channel.

**Structure of the C/T field**

| C/T field | Designation                                                                                 |
|-----------|---------------------------------------------------------------------------------------------|
| 0000      | Logical channel 1                                                                           |
| 0001      | Logical channel 2                                                                           |
| ...       | ...                                                                                         |
| 1110      | Logical channel 15                                                                          |
| 1111      | Reserved<br>(PDUs with this coding will be<br>discarded by this version of<br>the protocol) |

Reference(s)

TS 25.321 clauses 9.2.1 and 9.2.1.1 b).

7.1.1.8.3 — Test purpose

1. To verify that the UE discards PDUs with reserved or incorrect values in C/T field.
2. To verify that the C/T field is correctly applied when a DTCH or DCCH is mapped to a DCH.

7.1.1.8.4 — Method of test

Initial conditions

System Simulator:

- 1 cell, default parameters, Ciphering Off.

- The DCH/DPCH is configured as specified in TS 34.108 clause 6.10.2.4.1.2: Stand-alone UL:3.4 DL:3.4 kbps SRBs for DCCH) with the following exception:

|                                                                                                                                                                      |                                                             |                     |

|                                                                                                                                                                      | Max number of bits/TTI before rate matching                 | 516                 |
|                                                                                                                                                                      | Uplink: Max number of bits/radio frame before rate matching | 129                 |
|                                                                                                                                                                      | RM attribute                                                | 155-165             |
| NOTE: —The SS MAC layer must be configured not to add a MAC header so that the header can be added by the test case in order to create the necessary invalid values. |                                                             |                     |

The TFCS should be configured as specified in clause 6.10.2.4.1.2.1.1.2.

#### User Equipment:

- The UE shall operate under normal test conditions, Ciphering Off.
- The Test-USIM shall be inserted.
- The SS starts broadcasting the System Information as specified in TS 34.108 clause 6.1, using the configuration for the PRACH and SCCPCH (signalled in SYSTEM INFORMATION 5) as follows:
  1. The SCCPCH is configured as specified in TS 34.108 clause 6.10.2.4.3.3 (Interactive/Background 32 kbps RAB + SRB for PCCH + SRB for CCCH + SRB for DCCH + SRB for BCCH).
  2. The PRACH is configured as specified in TS 34.108 clause 6.10.2.4.4.1.
- The SS follows the procedure in TS 34.108 clause 7.4.2.1 (Mobile Terminated) so that the UE shall be in state BGP-6-1 (CS-CELL\_DCH\_INITIAL). During this procedure the RRC CONNECTION SETUP message shall allocate a DCH to carry the signalling radio bearers as follows:
  1. The DCH/DPCH is configured as specified in TS 34.108 clause 6.10.2.4.1.2: Stand-alone UL:3.4 DL:3.4 kbps SRBs for DCCH) with the following exception:
    - 1.1 The RLC entity for RB#3 (SRB#3), AM-DCCH for high priority NAS signalling has Missing PDU Indicator enabled.
    - 1.2 The RLC entity for RB#3 (SRB#3), AM-DCCH for high priority NAS signalling, has Transmission window size set to 128, and has Receive window size set to 128.

#### Test procedure

- a) The SS receives the PAGING RESPONSE message from the UE and checks the C/T field.
- b) The SS transmits MAC PDUs containing RLC-AM PDUs containing a DIRECT TRANSFER message containing an AUTHENTICATION REQUEST message.

—The DIRECT TRANSFER message shall be segmented into 128-bit PDUs, with correct RLC AM headers.

—The MAC header shall be set as follows:

| Field | Value  |
|-------|--------|
| C/T   | 0100'B |

c) The SS again transmits MAC PDUs as in b) above, but this time uses the correct C/T value for AM-DCCH NAS High Priority of 0010'B. The sequence numbers in the RLC headers shall be incremented normally from those sent in b).

d) The SS receives a STATUS PDU on SRB #3 AM RLC on the DCH due to detection of missing PDUs.

e) The SS repeats steps b), c) and d), with the C/T field set as follows:

| Iteration | C/T Value |
|-----------|-----------|
| 2         | 1111'B    |

#### Expected sequence

| Step | Direction |    | Message                                                                               | Comments                                        |

|      | ←         |    | MAC PDU(C/T, RLC AM PDU(SN=x+n+n, DIRECT TRANSFER(AUTHENTICATION REQUEST) SEGMENT n)) | Sent with correct C/T = 0010'B                  |
| 4    | →         |    | RLC-STATUS-PDU                                                                        | NAK PDUs with SN = x to x+n                     |
| 5    | →         |    | AUTHENTICATION RESPONSE                                                               | C/T Field is recognised as correct for the DCCH |

#### Specific Message Contents

None

#### 7.1.1.8.5 ————— Test Requirement

In step a) the C/T field should be set to the Logical Channel ID for SRB #3 (0010'B). Note that this may be implied from receipt of the PAGING RESPONSE message correctly by the SS test script.

On the first iteration, and on each iteration in step d) the UE shall transmit a STATUS PDU on the RLC AM entity associated with SRB #3 each time the first PDU with C/T=0010'B is received in step c), negatively acknowledging the PDUs transmitted in step b) as missing.

At the end of each expected sequence the SS shall receive an AUTHENTICATION RESPONSE message.

## 7.1.2 RACH/FACH procedures

### 7.1.2.1 Selection and control of Power Level

#### 7.1.2.1.1 Selection and control of Power Level (FDD)

##### 7.1.2.1.1.1 Definition

Selection and control of power level for PRACH is controlled by the physical random access procedure which is initiated upon request of a PHY-Data-REQ primitive from the MAC sublayer.

The UE selection of "PRACH system information" is described in TS 25.331 clause 8.5.17.

##### 7.1.2.1.1.2 Conformance requirement

A. For FDD and prior to PRACH or PCPCH transmission the UE shall:

- read the IEs "Primary CPICH DL TX power", "UL interference" and "Constant value" in System Information Block type 6 (or System Information Block type 5, if system information block type 6 is not being broadcast) and System Information Block type 7;

- measure the value for the CPICH\_RSCP;

- calculate the power for the first preamble as:

$$\text{Preamble\_Initial\_Power} = \text{Primary CPICH DL TX power} - \text{CPICH\_RSCP} + \text{UL interference} + \text{Constant Value}$$

Where;

- Primary CPICH DL TX power shall have the value of IE "Primary CPICH DL TX power";

- UL interference shall have the value of IE "UL interference"; and

- Constant Value shall have the value of IE "Constant Value".

- as long as the physical layer is configured for PRACH or PCPCH transmission:

- continuously recalculate the Preamble\_Initial\_Power when any of the broadcast parameters used in the above formula changes; and

- resubmit to the physical layer the new calculated Preamble\_Initial\_Power.

B. The physical random-access procedure shall be performed as follows:

....

3. Set the Preamble Retransmission Counter to Preamble Retrans Max.

4. Set the parameter Commanded Preamble Power to Preamble\_Initial\_Power.

5. In the case that the Commanded Preamble Power exceeds the maximum allowed value, set the preamble transmission power to the maximum allowed power. In the case that the Commanded Preamble Power is below the minimum level required in 3GPP TS 25.101, set the preamble transmission power to a value, which shall be at or above the Commanded Preamble Power and at or below the required minimum power specified in 3GPP TS 25.101. Otherwise set the preamble transmission power to the Commanded Preamble Power. Transmit a preamble using the selected uplink access slot, signature, and preamble transmission power.

6. If no positive or negative acquisition indicator ( $AI \neq +1$  nor  $-1$ ) corresponding to the selected signature is detected in the downlink access slot corresponding to the selected uplink access slot:

6.1 Select the next available access slot in the set of available RACH sub-channels within the given ASC.

6.2 Randomly select a new signature from the set of available signatures within the given ASC. The random function shall be such that each of the allowed selections is chosen with equal probability.

6.3 Increase the Commanded Preamble Power by  $\Delta P_0$  = Power Ramp Step [dB]. If the Commanded Preamble Power exceeds the maximum allowed power by 6dB, the UE may pass L1 status ("No ack on AICH") to the higher layers (MAC) and exit the physical random access procedure.

6.4 Decrease the Preamble Retransmission Counter by one.

6.5 If the Preamble Retransmission Counter  $> 0$  then repeat from step 5. Otherwise pass L1 status ("No ack on AICH") to the higher layers (MAC) and exit the physical random access procedure.

7—If a negative acquisition indicator corresponding to the selected signature is detected in the downlink access slot corresponding to the selected uplink access slot, pass L1 status ("Nack on AICH received") to the higher layers (MAC) and exit the physical random access procedure.

#### Reference(s)

TS 25.331 clause 8.5.7.

TS 25.214 clause 6.1.

#### 7.1.2.1.1.3 ————— Test purpose

To verify that:

A— the UE selects the correct initial preamble transmit power at start of a power ramp cycle, taking account of the "Primary CPICH DL TX power", "UL interference" and "Constant value" parameter values as received in SIB5 as well as the measured CPICH\_RSCP;

B1— the UE, when not receiving any reply from UTRAN:

- performs a power ramp cycle taking into account the Power Ramp Step and Preamble Retrans Max parameter values as received in SIB 5;
- does not transmit on the PRACH resources specified in the BCH message SIB 5 after that the physical random access procedure is terminated.

B2— the UE, when detecting a negative acquisition indicator:

- does not transmit on the PRACH resources specified in the BCH message SIB 5 after that the physical random access procedure is terminated.

#### 7.1.2.1.1.4 ————— Method of test

##### Initial conditions

The UE is attached to the network and in idle mode.

Preamble Retrans Max parameter in SIB5 set to 5.

##### Related ICS/IXIT Statement(s)

TBD

##### Foreseen Final State of the UE

The same as the initial conditions.

##### Test procedure

- a) The SS pages the UE until it performs a RACH access.
- b) The SS measures the power level of the RACH access.

- c) The SS does not acknowledge the RACH access, causing the UE to retry.
- d) The SS again measures the power level of the RACH access.
- e) The SS repeats the procedure from step c) until the maximum number of retries  $N_{RA}$  have been attempted, and monitors the RACH channel for [TBD] seconds to ensure that no further RACH accesses occur.
- f) The SS pages the UE until it performs a RACH access.
- g) The SS measures the power level of the RACH access.
- h) The SS responds with a negative acquisition indicator on the AICH.
- i) The SS monitors the RACH channel for [TBD] seconds to ensure that no further RACH accesses occur.

#### Specific Message Contents

##### PRACH power offset info in System Information Block type 5

| Information Element   | Value/Remark   |
|-----------------------|----------------|
| PRACH power offset    |                |
| -Power Ramp Step      | [TBD: 1..8] dB |
| -Preamble Retrans Max | 5              |

#### 7.1.2.1.1.5 Test requirements

A. At step 2 and 9 the measured power level shall be:

—  $P_{RACH}$  = Primary CPICH DL TX power – CPICH\_RSCP + UL interference + Constant Value ± [TBD] dB

— Where "Primary CPICH DL TX power", "UL interference" and "Constant Value" are set by the SS via SIB5, and CPICH\_RSCP is the UE measured received power on one code measured on the Primary CPICH which is reported back to the SS in measurement reports.

B1

— After step 6 the UE does not perform any RACH access attempts; and

— At step 2, 3, 4, 5 and 6 the measured power level shall be

$$P_{\text{RACH}} = \text{Preamble\_Initial\_Power} + k * \Delta P_0$$

Where

- Preamble\_Initial\_Power is the SS measured  $P_{\text{RACH}}$  in step 1;
- $\Delta P_0$  is the Power Ramp Step value set in SIB5; and
- $k=1$  for step 2,  $k=2$  for step 3,  $k=3$  for step 4,  $k=4$  for step 5 and  $k=5$  for measurement in step 6

B2 After step 10 the UE does not perform any RACH access attempts

#### ~~7.1.2.1.2 Selection and control of Power Level (3,84 Mcps TDD option)~~ (FFS)

#### ~~7.1.2.1.3 Selection and control of Power Level (1,28 Mcps TDD option)~~

##### ~~7.1.2.1.3.1 Definition and applicability~~

All TDD 1,28 Mcps UE

##### ~~7.1.2.1.3.2 Conformance requirement~~

- ~~1. The UE sets the initial preamble transmit power to the value  $P_{\text{UpPCH}}$  given in clause 8.5.7 of TS 25.331.~~
- ~~2. If the UE does not receive an acknowledgement on the FPACH then the UE increases the preamble transmission power by the specified increment  $P_{\text{wr\_ramp}}$ .~~
- ~~3. The UE ceases power ramping after the maximum number of pre-amble increments permitted has been completed.~~
- ~~4. Where the UE is permitted to complete a number of power ramping cycles, the UE returns to the initial transmit power (no increment applied) at the start of each cycle. The number of cycles completed before the UE ceases transmission should equal the maximum number of permitted power ramping cycles.~~
- ~~5. The UE does not transmit on PRACH resources.~~

#### Reference(s)

TS 25.224 clause 5.6.

TS 25.331 clause 8.5.7.

TS 25.321 clause 11.2.3.

#### ~~7.1.2.1.3.3 Test Purpose~~

To verify that:

- the UE selects the correct preamble transmit powers during a power ramp cycle, taking account of the desired  $P_{\text{UpPCH}}$  receive power and power ramp step specified in the BCH layer 3 message SIB 5,
- the number of steps in a power ramp cycle and the number of power ramp cycles completed when no reply is received from the UTRAN is equal to the values specified for these parameters in the BCH layer 3 messages SIB 5,
- the UE does not transmit on the PRACH resources specified in the BCH message SIB 5.

~~7.1.2.1.3.4 Method of test~~~~Initial conditions~~

The UE is attached to the network and in idle mode.

~~Related ICS/IXT Statement(s)~~

TBD

~~Foreseen Final State of the UE~~

The same as the initial condition.

~~Test procedure~~

- ~~a) The SS pages the UE to initiate the RACH access procedure;~~
- ~~b) The SS does not respond to UpPCH transmissions received from the UE;~~
- ~~c) The SS measures the power level of each UpPCH code that the UE transmits;~~
- ~~d) The SS monitors the PRACH resources to ensure that no transmissions are received from the UE;~~
- ~~e) The procedure is continued until the maximum permitted power ramping cycles, and within each power ramping cycle, the maximum number of UpPCH transmissions have been made. The UpPCH and PRACH channels are then continued for time, tbd, to ensure that no further transmissions are made by the UE.~~

~~Expected sequence~~

~~7.1.2.1.3.5 Test requirements~~

The power of the first UpPCH transmission should equal  $P_{\text{UpPCH}} = L_{\text{PCCPCH}} + \text{PRX}_{\text{UpPCHdes}}$ ; subsequent transmissions should increase in power by  $P_{\text{Wrfamp}}$  until the maximum permitted number of steps in a power ramping cycle has been completed. The power ramping cycle should be repeated  $M_{\text{max}}$  times before the UE ceases to transmit. The UE should not transmit on any PRACH resources.

~~7.1.2.2 Correct application of Dynamic Persistence~~~~7.1.2.2.1 Correct application of Dynamic Persistence (FDD)~~~~7.1.2.2.1.1 Definition and applicability~~

All FDD UE.

#### ~~7.1.2.2.1.2 Conformance requirement~~

The UE implements the dynamic persistence algorithm by:

- ~~1. reading the current dynamic persistence value from the BCH;~~
- ~~2. perform a random draw against the current dynamic persistence value. The random function is TBD;~~
- ~~3. defer transmission for one frame and repeat the process if the result of the random draw is negative, otherwise proceed with a RRC CONNECTION REQUEST.~~

#### Reference(s)

TS 25.321, clause 11.2.2 (figure 11.2.2.1).

#### ~~7.1.2.2.1.3 Test purpose~~

To verify that if the UE correctly operates the dynamic persistence algorithm outlined in fig 11.2.2.1 of TS25.321.

#### ~~7.1.2.2.1.4 Method of test~~

##### Initial conditions

System Simulator:

- ~~— 1 cell, default parameters, Ciphering Off.~~

User Equipment:

- ~~— The UE shall operate under normal test conditions, Ciphering Off.~~
- ~~— The Test-USIM shall be inserted.~~

##### Related ICS/IXIT Statement(s)

TBD

##### Foreseen Final State of the UE

The same as the initial conditions.

##### Test procedure

###### Iteration 1

- ~~a) The SS changes the default system information messages such that the dynamic persistence level is set to 8, and scaling factors are not transmitted. This results in a dynamic persistence value ( $P_i$ ) of 0.0078125 for all access service classes. Note: ASC#0 is not used because NumASC=7 and the lowest MLP value =1. -- See 25.321, clause 11.2.1.~~
- ~~b) The SS waits until the UE has enough time to take account of the changes.~~
- ~~c) The SS repeatedly pages the UE 100 times, waiting for the reception of a RRC CONNECTION REQUEST from the UE before each subsequent page.~~

###### Iteration 2

The SS performs step a to c) once more, but changes the default system information messages such that the dynamic persistence level is set to 1, and no scaling factors are transmitted. This results in a dynamic persistence value ( $P_i$ ) of 1 for all access service classes.

## Expected sequence

| Step | Direction |    | Message                | Comments |
|------|-----------|----|------------------------|----------|
|      | UE        | SS |                        |          |
| 1    |           | ←  | PAGE                   |          |
| 2    |           | →  | RRC CONNECTION REQUEST |          |

The above sequence is repeated 100 times.

## 7.1.2.2.5 Test requirements

## Iteration 1

The SS shall receive a RRC CONNECTION REQUEST from the UE on average every 1.28 seconds  $\pm 0.15$ s after each paging request.

## Iteration 2

The SS shall receive a RRC CONNECTION REQUEST from the UE within 150ms after each paging request.

## 7.1.2.2.2 Correct application of Dynamic Persistence (3.84 Mcps TDD option)

(FFS)

## 7.1.2.2.3 Correct application of Dynamic Persistence (1.28 Mcps TDD option)

## 7.1.2.2.3.1 Definition and applicability

All TDD 1.28 Mcps UE

## 7.1.2.2.3.2 Conformance requirement

The UE responds to changes in the dynamic persistence parameter broadcast in SIB 7.

## Reference(s)

TS 25.331 clause 8.5.12.

TS 25.321 clause 11.2.3.

## 7.1.2.2.3.3 Test Purpose

To verify that if the dynamic persistence value broadcast in SIB7 is set to zero, the UE will not attempt RACH access.

## 7.1.2.2.3.4 Method of test

## Initial conditions

The UE is attached to the network and in idle mode. The Sim card should be configured so that the UE adopts  $ASC = 1$  or greater. The SS BCH broadcast will include SIB 7 with the dynamic persistence parameter set to zero.

## Related ICS/IXT Statement(s)

TBD

## Foreseen Final State of the UE

The same as the initial condition.

**Test procedure**

- a) The SS repeatedly pages the UE for  $T_{22}$  seconds.
- b) The SS monitors UpPCH for a response from the UE.

**Expected sequence**

| Step | Direction |    | Message | Comments |
|------|-----------|----|---------|----------|
|      | UE        | SS |         |          |
| 1    |           | ←  | PAGE    |          |
| 2    |           |    | Wait    |          |

**7.1.2.2.3.5 Test Requirements**

No UpPCH transmission should be received from the UE.

**7.1.2.3 Correct Selection of RACH parameters****7.1.2.3.1 Correct Selection of RACH parameters (FDD)****7.1.2.3.1.1 Definition**

The physical random access procedure described in this subclause is initiated upon request of a PHY-Data-REQ primitive from the MAC sublayer.

The UE selection of "PRACH system information" is described in TS 25.331 clause 8.5.17.

**7.1.2.3.1.2 Conformance requirement**

A. The physical random access procedure shall be performed as follows:

- 1—Derive the available uplink access slots, in the next full access slot set, for the set of available RACH sub-channels within the given ASC with the help of TS 25.214, subclauses 6.1.1. and 6.1.2. Randomly select one access slot among the ones previously determined. If there is no access slot available in the selected set, randomly select one uplink access slot corresponding to the set of available RACH sub-channels within the given ASC from the next access slot set. The random function shall be such that each of the allowed selections is chosen with equal probability.
- 2—Randomly select a signature from the set of available signatures within the given ASC. The random function shall be such that each of the allowed selections is chosen with equal probability.
- 3—Set the Preamble Retransmission Counter to Preamble Retrans Max.
- ...
- 5—... Transmit a preamble using the selected uplink access slot, signature, and preamble transmission power.
- 6—If no positive or negative acquisition indicator ( $AI \neq +1$  nor  $-1$ ) corresponding to the selected signature is detected in the downlink access slot corresponding to the selected uplink access slot:
  - 6.1 Select the next available access slot in the set of available RACH sub-channels within the given ASC.
  - 6.2 Randomly select a new signature from the set of available signatures within the given ASC. The random function shall be such that each of the allowed selections is chosen with equal probability.
  - ...
  - 6.4 Decrease the Preamble Retransmission Counter by one.
  - 6.5 If the Preamble Retransmission Counter  $> 0$  then repeat from step 5. Otherwise pass L1 status ("No ack on AICH") to the higher layers (MAC) and exit the physical random access procedure.

- 7—If a negative acquisition indicator corresponding to the selected signature is detected in the downlink access slot corresponding to the selected uplink access slot, pass L1 status ("Nack on AICH received") to the higher layers (MAC) and exit the physical random access procedure.
- 8—Transmit the random access message three or four uplink access slots after the uplink access slot of the last transmitted preamble depending on the AICH transmission timing parameter. Transmission power of the control part of the random access message should be  $P_{p-m}$  [dB] higher than the power of the last transmitted preamble. Transmission power of the data part of the random access message is set according to subclause 5.1.1.2.
- 9—Pass L1 status "RACH message transmitted" to the higher layers and exit the physical random access procedure.

#### Reference(s)

TS 25.214 clause 6.1.

#### 7.1.2.3.1.3 ————— Test purpose

To verify that:

A1—the UE, initially:

- derives the available uplink access slots, in the next full access slot set, for the set of available RACH sub-channels within the given ASC with the help of TS 25.214, subclauses 6.1.1. and 6.1.2. and randomly select one access slot among the ones previously determined.
- randomly select a new signature from the set of available signatures within the given ASC.

A2—the UE, when not receiving any reply from UTRAN:

- selects the next available access slot in the set of available RACH sub-channels within the given ASC.
- randomly select a new signature from the set of available signatures within the given ASC.
- does not transmit on the PRACH resources specified in the BCH message SIB 5 after that the physical random access procedure is terminated.

A3—the UE, when detecting a negative acquisition indicator:

- does not transmit on the PRACH resources specified in the BCH message SIB 5 after that the physical random access procedure is terminated.

A4—the UE, when detecting a positive acquisition indicator:

- transmits the random access message three or four uplink access slots after the uplink access slot of the last transmitted preamble depending on the AICH transmission timing parameter.
- terminates the random access procedure.

#### 7.1.2.3.1.4 ————— Method of test

##### Initial conditions

The UE shall be attached to the network and in idle mode.

Preamble Retrans Max parameter in SIB5 set to 5.

2 ASC settings (ASC#0 and ASC#1) are defined (with default parameters) in SIB5, except that the parameter assigned sub-channel number is set as follows:

ASC#0—Assigned sub-channel number = '0001'B

ASC#1—Assigned sub-channel number = '0010'B

The available sub-channel number defined in SIB5 is set to '0000 0000 0011'B. Note: this value allows RACH transmission on sub-channels 0 (ASC#0) and 1 (ASC#1) only.

**Related ICS/IXIT Statement(s)**

TBD

**Foreseen Final State of the UE**

The same as the initial conditions.

**Test procedure**

- a) The SS pages the UE until it performs a RACH access.
- b) The SS measures the access slot and preamble signature used.
- c) The SS does not acknowledge the RACH access, causing the UE to retry.
- d) The SS again measures the access slot and preamble signature used.
- e) The SS repeats the procedure from step c) until the maximum number of retries  $N_{RA}$  have been attempted, and monitors the RACH channel for [TBD] seconds to ensure that no further RACH accesses occur.
- f) The SS pages the UE until it performs a RACH access.
- g) The SS measures the the access slot and preamble signature used.
- h) The SS responds with a negative acquisition indicator on the AICH.
- i) The SS monitors the RACH channel for [TBD] seconds to ensure that no further RACH accesses occur.
- j) The SS pages the UE until it performs a RACH access.
- k) The SS measures the access slot used.
- l) The SS acknowledges the RACH access normally.
- m) The SS measures the first access slot used in the PRACH message part.
- n) The SS monitors the RACH channel for [TBD] seconds to ensure that no further RACH accesses occur.

## Expected sequence

A1

At step 2

- the SS shall receive a PRACH preamble using an access slot from the set of access slots {0,1,3,4,6,7,9,10,12,13} and using a preamble signature from the set of preamble signatures { $P_0 \dots P_x$ }. See TS 25.213, clause 4.3.3.3 for a list of preamble codes.

A2

At steps 3, 4, 5, and 6

- the SS shall receive a PRACH preamble using an access slot from the set of access slots {0,1,3,4,6,7,9,10,12,13} and using a preamble signature from the set of preamble signatures { $P_0 \dots P_x$ }. See TS 25.213, clause 4.3.3.3 for a list of preamble codes.

At step 7

- the SS shall not receive on the PRACH resources specified in the BCH message SIB-5 after that the physical random access procedure is terminated.

A3

At step 11

- the SS shall not receive on the PRACH resources specified in the BCH message SIB-5 after that the physical random access procedure is terminated.

A4

At step 15

- the SS shall receive the random access message three access slots after the uplink access slot of the preamble received in step 13.

At step 11

- the SS shall not receive on the PRACH resources specified in the BCH message SIB-5 after that the physical random access procedure is terminated.

NOTE:— Due to the indeterminate timing parameter  $T_{p-p}$  (see TS 25.211, clause 7.3) it is not possible to determine the SFN and therefore the exact access slot set that should be used for PRACH preamble re-transmissions. It is only possible to determine a larger set based on allowed sub-channels.

#### ~~7.1.2.3.2 Correct Selection of RACH parameters (3.84 Mcps TDD option)~~

(FFS)

#### ~~7.1.2.3.3 Correct Selection of RACH parameters (1.28 Mcps TDD option)~~

##### ~~7.1.2.3.3.1 Definition and applicability~~

All TDD 1.28 Mcps UE

##### ~~7.1.2.3.3.2 Conformance requirement~~

That the UE selects UpPCH codes and UpPCH sub-channels that are defined for the ASC that the UE should adopt based on its AC (when the RACH message to be transmitted is an 'RRC Connection Request'). Parameters are defined in the SIB-5 messages received by the UE.

#### Reference(s)

TS25.224 clauses 4.7.1 and 5.6.

TS25.321 clause 11.2.3.

**7.1.2.3.3.3 Test Purpose**

To verify that the UE selects UpPCH codes and sub-channels that are allocated to the ASC that the UE should adopt based on its AC.

**7.1.2.3.3.4 Method of test****Initial conditions**

The UE is attached to the network and in idle mode. The Sim card should be configured so that the UE can adopt a known ASC based on its AC. The SS will broadcast SIB 5 messages that allocate to each ASC subsets of the total UpPCH codes and sub-channels.

**Related ICS/IXT Statement(s)**

TBD

**Foreseen Final State of the UE**

The same as the initial condition.

**Test procedure**

The test procedure is similar to that specified for test 7.1.2.1.3. In place of power level the test monitors the UpPCH codes that are used for the UE's UpPCH transmissions and the sub-channels in which they are made.

- a) The SS pages the UE to initiate the RACH access procedure;
- b) The SS does not respond to UpPCH transmissions received from the UE;
- c) The SS identifies the UpPCH codes on which the UE transmits;
- d) The SS identifies the system frame numbers of the frames in which the UE's UpPCH transmissions are received;
- e) The procedure is continued until the maximum permitted power ramping cycles, and within each power ramping cycle, the maximum number of UpPCH transmissions have been made.

**Expected sequence**

| Step | Direction |    | Message | Comments                              |
|------|-----------|----|---------|---------------------------------------|
|      | UE        | SS |         |                                       |
| 1    |           | <= | PAGE    |                                       |
| 2    |           | => | UpPCH   | Code and sub-channel should be valid. |
| 3    |           | => | UpPCH   | Code and sub-channel should be valid. |
| 4    |           |    | .....   |                                       |
| 5    |           | => | UpPCH   | Code and sub-channel should be valid. |
| 6    |           | => | UpPCH   | Code and sub-channel should be valid. |
| 7    |           | => | UpPCH   | Code and sub-channel should be valid. |
| 8    |           |    | .....   |                                       |
| 9    |           | => | UpPCH   | Code and sub-channel should be valid. |

**7.1.2.3.3.5 Test Requirements**

The UpPCH transmissions should be made in sub-channels and using codes that are allocated to the ASC that the UE should adopt based on its AC.

**7.1.2.4 Correct Detection and Response to FPACH (1.28 Mcps TDD option)****7.1.2.4.1 Definition and applicability**

All TDD 1,28 Mcps UE.

#### 7.1.2.4.2 Conformance requirement

That the UE:

1. Receives and acts upon an FPACH message transmitted within WT sub-frames of the UE transmitting a UpPCH code, provided that:
  - The FPACH was transmitted in the FPACH resource associated with the UpPCH code used by the UE; and
  - The FPACH message correctly identifies the UpPCH codes identity and the number of sub-frames between the UpPCH and the FPACH transmissions.
2. Responds to the valid FPACH by transmitting an 'RRC Connection Request' message in the PRACH resources associated with the FPACH. The transmission should:
  - Occupy the PRACH resource associated with the FPACH and the sub-channel in which the FPACH was received for the duration of the TTI;
  - Be made with a timing correction and a transmission power that are based on information received in the FPACH.
3. Does not respond to FPACH messages that are transmitted, within WT sub-frames of the UE UpPCH transmission, in FPACH resources that are not associated with the UpPCH code that the UE used. Nor should it respond to FPACH messages that are received on the correct FPACH resources within WT sub-frames but which contain the incorrect UpPCH code identifier or an incorrect indication of the number of sub-frames elapsed between the UpPCH and FPACH transmissions.

#### Reference(s)

TS 25.224 clauses 4.7.1, 5.2.3, 5.6.

TS 25.331 clause 8.5.7.

TS 25.321 clause 11.2.3.

#### 7.1.2.4.3 Test Purpose

To verify that:

- The UE does not respond to FPACH transmissions that are either, received on incorrect FPACH resources, or are received on correct resources and within WT sub-frames of the UpPCH transmission, but which do not contain the correct UpPCH identity or elapsed sub-frames.
- The UE does respond to an FPACH transmission that is received, within WT sub-frames of the UpPCH transmission, on the correct FPACH resources for the UpPCH code that was used, provided that the FPACH contains the identity of the UpPCH code and the number of sub-frames elapsed between the UpPCH and the FPACH transmissions.
- The UE response is to transmit an 'RRC Connection Request' message on the PRACH resources that are associated with the FPACH taking account of the timing correction and power adjustment parameters received in the FPACH.

#### 7.1.2.4.4 Method of test

##### Initial conditions

The UE is attached to the network and in idle mode. The SS-BCH-SIB-5 message will specify that there are two or more FPACH associated with the UpPCH code set in a single PRACH system information. The UpPCH code set must include one or more odd and one or more even numbered codes.

##### Related ICS/IXT Statement(s)

TBD

### Foreseen Final State of the UE

The same as the initial condition.

### Test procedure

The test procedure consists of a number of stages:

- a) The SS pages the UE to initiate RACH access.
- b) When UpPCH transmissions are received from the UE the SS should transmit FPACH responses within WT sub-frames of each UpPCH transmission but on an incorrect FPACH resource for the UpPCH code used. It is noted that the UE may change the code used for each UpPCH transmission randomly amongst those available to its ASC.
- c) The PRACH resources associated with all of the FPACH should be monitored for a transmission from the UE.
- d) The SS pages the UE to initiate RACH access.
- e) When UpPCH transmissions are received from the UE the SS should transmit FPACH responses within WT sub-frames of each UpPCH transmission on the correct FPACH resource for the UpPCH code used. The FPACH transmission should contain a signature reference number that is different from that of the UpPCH code that was used by the UE.
- f) The PRACH resources associated with all of the FPACH should be monitored for a transmission from the UE.
- g) The SS pages the UE to initiate RACH access.
- h) When UpPCH transmissions are received from the UE the SS should transmit FPACH responses within WT sub-frames of each UpPCH transmission on the correct FPACH resource for the UpPCH code used. The FPACH transmission should contain a relative sub-frame number that is different from that defined by the elapsed number of frames between the UpPCH and the FPACH transmissions.
- i) The PRACH resources associated with all of the FPACH should be monitored for a transmission from the UE.
- j) The SS pages the UE to initiate RACH access.
- k) When UpPCH transmissions are received from the UE the SS should transmit an FPACH response on the correct FPACH resources for the UpPCH code that was used by the UE. The FPACH response should include correct values for the signature reference and relative sub-frame number fields. The FPACH should also include known entries for the Received starting position of the UpPCH ( $\text{UpPCH}_{\text{POS}}$ ) and the Transmit Power Level Command for RACH ( $\text{PRX}_{\text{PRACHdes}}$ ) fields.
- l) The SS should monitor the PRACH resources associated with the FPACH commencing two or three sub-frames (depending upon the sub-frame in which the FPACH was transmitted and the length of the TTI) following the sub-frame in which the FPACH was transmitted and continuing for the number of sub-frames in the RACH TTI. The power level of the PRACH transmissions and the time of arrival of their mid-ambles should be measured. The SS should continue to monitor the UpPCH slot to ensure that the UE has ceased UpPCH transmissions.

## Expected sequence

| Step | Direction |    | Message                | Comments                                 |
|------|-----------|----|------------------------|------------------------------------------|
|      | UE        | SS |                        |                                          |
| 1    |           | ←  | PAGE                   |                                          |

| 5    |           |    | .....                  |                                          |
| 6    |           | →  | PAGE                   |                                          |
| 7    |           | →  | UpPCH                  |                                          |
| 8    |           | ←  | FPACH                  | Incorrect signature reference            |
| 9    |           | →  | UpPCH                  |                                          |
| 10   |           |    | .....                  |                                          |
| 11   |           | ←  | PAGE                   |                                          |
| 12   |           | →  | UpPCH                  |                                          |
| 13   |           | ←  | FPACH                  | Incorrect relative sub-frame number      |
| 14   |           | →  | UpPCH                  |                                          |
| 15   |           |    | .....                  |                                          |
| 16   |           | ←  | PAGE                   |                                          |
| 17   |           | →  | UpPCH                  |                                          |
| 18   |           | ←  | FPACH                  | Correct resources and information fields |
| 19   |           | →  | RRC Connection Request |                                          |

$$P_{PRACH} = L_{PCCPCH} + PRX_{PRACHdes} + i * P_{Wf_{ramp}}$$

$$UpPCH_{RX-offset} - UpPCH_{POS}$$

## 7.1.2.4.5 Test Requirements

The UE should not respond to FPACH transmissions, which are made on the incorrect FPACH resources for the UpPCH code that the UE uses. The UE should continue to transmit UpPCH until the permitted maximum number of power ramping cycles is complete.

The UE should not respond to FPACH transmissions which are made within WT sub-frames of a UpPCH transmission and on the correct FPACH resources for the UpPCH code that it used if the FPACH contains either an incorrect signature reference number or an incorrect relative sub-frame number. The UE should continue to transmit UpPCH until the permitted maximum number of power ramping cycles is complete.

The UE should respond to an FPACH received within WT sub-frames of a UpPCH transmission if the FPACH is received on the correct FPACH resources for the UpPCH code used and if it contains valid information fields. The UE should cease transmitting UpPCH bursts and transmit an RRC Connection Request message using the PRACH resources that are associated with the FPACH and the sub-frame in which the FPACH was received. The transmission should commence two or three sub-frames after that containing the FPACH (dependent upon the sub-frame in which the FPACH was transmitted and the length of the TTI) and is made in all sub-frames within the TTI. Each PRACH burst should be made using the transmission power:

$$P_{PRACH} = L_{PCCPCH} + PRX_{PRACHdes} + i * P_{Wf_{ramp}}$$

When the power used by the UE for the UpPCH transmission acknowledged by the FPACH was:

$$P_{UpPCH} = L_{PCCPCH} + PRX_{UpPCHdes} + i * P_{Wf_{ramp}}$$

And transmission timing should be such that the start of each PRACH burst is offset from the beginning of the PRACH slot by:

$$UpPCH_{RX-offset} - UpPCH_{POS} \text{ chips, to an accuracy of } 1/8 \text{ chip.}$$

Where  $UpPCH_{RX-offset}$  denotes the offset from the start of the UpPCH slot of the UE's transmission measured by SS and  $UpPCH_{POS}$  is the timing correction signalled to the UE in the FPACH.

## 7.1.2.4a Access Service class selection for RACH transmission

## 7.1.2.4a.1 Definition and applicability

All UE.

#### 7.1.2.4a.2 ~~Conformance requirement~~

~~The following ASC selection scheme shall be applied, where NumASC is the highest available ASC number and MinMLP the highest logical channel priority assigned to one logical channel:~~

- ~~— In case all TBs in the TB set have the same MLP, select  $ASC = \min(\text{NumASC}, \text{MLP})$ .~~
- ~~— In case TBs in a TB set have different priority, determine the highest priority level MinMLP and select  $ASC = \min(\text{NumASC}, \text{MinMLP})$ .~~

#### Reference(s)

~~TS 25.321 clause 11.2.1.~~

#### 7.1.2.4a.3 ~~Test purpose~~

~~To verify that MAC selects ASC correctly.~~

#### 7.1.2.4a.4 ~~Method of test~~

#### Initial conditions

System Simulator:

- ~~— 1 cell, default parameters, Ciphering Off.~~

User Equipment:

- ~~— The UE shall operate under normal test conditions, Ciphering Off.~~
- ~~— The Test-USIM shall be inserted~~
- ~~— The SS starts broadcasting the System Information as specified in TS 34.108 clause 6.1, using the configuration for the PRACH and SCCPCH (signalled in SYSTEM INFORMATION 5) as follows:~~
  - ~~1. The SCCPCH is configured as specified in TS 34.108 clause 6.10.2.4.3.3 (Interactive/Background 32 kbps RAB + SRB for PCCH + SRB for CCCH + SRB for DCCH + SRB for BCCH).~~
  - ~~2. The PRACH is configured as specified in TS 34.108 clause 6.10.2.4.4.1.~~
- ~~— The SS follows the procedure in TS 34.108 clause 7.4.2.1 (Mobile Terminated) so that the UE shall be in state BGP 6-2 (CS-CELL\_FACH\_INITIAL) with the following exception:~~
  - ~~1. The MAC Logical Priority (MLP) of the user RAB is set to 8.~~

~~The user RAB is placed into loop-back mode 1 each with the UL SDU size set to 39 bytes.~~

#### Related ICS/IXIT Statement(s)

~~TBD~~

#### Foreseen Final State of the UE

#### Test procedure

- ~~a) The SS receives the PAGING RESPONSE message from the UE and checks the access slots and preamble signatures used correspond to a valid ASC as transmitted in system information.~~
- ~~b) The SS reconfigures the transmitted system information as follows:~~
  - ~~— Only one ASC setting (ASC#0) is defined (with default parameters).~~

~~The available sub-channel number defined in system information is set to '0000 0000 0001'B. Note: this value allows RACH transmission on sub-channel 0 only.~~

- The SS then waits enough time for the UE to take the system information change into account.
- c) The SS sends 1 RLC SDU of size 10 bytes on the downlink user RAB.
- d) The SS waits to receive uplink data on RACH TrCH via the user RAB, then checks that the access slots and preamble signatures used correspond to ASC#0.
- e) The SS reconfigures the transmitted system information as follows:
  - Four ASC settings (ASC#0 to ASC#3) are defined (with default parameters), except that the parameter assigned sub-channel number is set as follows:
    - ASC#0 — Assigned sub-channel number = '0000'B
    - ASC#1 — Assigned sub-channel number = '0001'B
    - ASC#2 — Assigned sub-channel number = '0000'B
    - ASC#3 — Assigned sub-channel number = '0010'B
- The available sub-channel number defined in system information is set to '0000-0000-0001'B Note: this value allows RACH transmission on sub-channel 0 only (ASC#1).
- The SS then waits enough time for the UE to take the system information change into account.
- f) The SS sends 1 RLC SDU of size 10 bytes on the downlink user RAB.
- g) The SS waits 2s to ensure no uplink data is received on RACH TrCH via the user RAB.
- h) The SS then reconfigures the uplink user RAB to have a MAC Logical Priority of 1.
- i) The SS sends 1 RLC SDU of size 10 bytes on the downlink user RAB.
- j) The SS waits to receive uplink data on RACH TrCH via the user RAB, then checks that the access slots and preamble signatures used correspond to ASC#1.
- k) The SS may optionally release the radio bearer.

#### Expected sequence

| Step | Direction |    | Message            | Comments                                   |
|------|-----------|----|--------------------|--------------------------------------------|
|      | UE        | SS |                    |                                            |

#### 7.1.2.4a.5 — Test requirements

In step 1, the access slots and preamble signatures used on the PRACH TrCH on which the PAGING RESPONSE message was received shall correspond to configured legal values for the allowed ASCs on the PRACH.

In step 4, the access slots and preamble signatures used on the PRACH TrCH on which the RLC PDU was received shall correspond to configured legal values for the allowed ASC#0.

In step 6a, no PDUs shall be received on PRACH.

In step 9, the access slots and preamble signatures used on the PRACH TrCH on which the RLC PDU was received shall correspond to configured legal values for the allowed ASC#1.

#### ~~7.1.2.5 Control of RACH transmissions for FDD mode~~

##### ~~7.1.2.5.1 Definition and applicability~~

~~All UE.~~

##### ~~7.1.2.5.2 Conformance requirement~~

~~MAC receives the following RACH transmission control parameters from RRC with the CMAC-Config-REQ primitive: maximum number of preamble ramping cycles Mmax.~~

~~When preamble transmission counter M larger than Mmax, then the procedure will stop and enter Error handling procedure.~~

#### ~~Reference(s)~~

~~TS 25.321 11.2.2, TS 25.321 figure 11.2.2.1.~~

##### ~~7.1.2.5.3 Test purpose~~

~~To verify that the MAC entity controls RACH transmission correctly.~~

##### ~~7.1.2.5.4 Method of test~~

#### ~~Initial conditions~~

~~System Simulator:~~

- ~~— 1 cell, default parameters, Ciphering Off.~~
- ~~— SS broadcast System Information 5 with Mmax in RACH transmission parameters set as 0.~~

~~User Equipment:~~

- ~~— The UE shall operate under normal test conditions, Ciphering Off.~~
- ~~— The Test-USIM shall be inserted.~~

~~The SS starts broadcasting the System Information as specified in TS 34.108 clause 6.1, using the configuration for the PRACH and SCCPCH (signalled in SYSTEM INFORMATION 5) as follows:~~

- ~~1. The SCCPCH is configured as specified in TS 34.108 clause 6.10.2.4.3.3 (Interactive/Background 32 kbps RAB + SRB for PCCH + SRB for CCCH + SRB for DCCH + SRB for BCCH).~~
- ~~2. The PRACH is configured as specified in TS 34.108 clause 6.10.2.4.4.1.~~

~~The SS follows the procedure in TS 34.108 clause 7.2.2.1 (CS UE) or 7.2.2.2 (PS UE) so that the UE shall be in idle mode and registered.~~

#### ~~Related ICS/IXIT Statement(s)~~

~~TBD~~

#### ~~Foreseen Final State of the UE~~

~~The same as the initial conditions.~~

**Test procedure**

- a) ~~Transmission of the default system information messages specified in TS 34.108, clause 6.1 is modified such that:~~
- ~~—The dynamic persistence level (N) defined in SIB7 is set to 1, and the persistence scaling factors ( $s_x$ ) defined in SIB5 are not broadcast. Note: these values should result in an attempted RACH transmission at every persistence check.~~
  - ~~—The RACH transmission parameter  $M_{\max}$  defined in SIB5 is set to 1.~~
  - ~~—The counter N300 broadcast in SIB1 is set to 1.~~
- b) ~~The SS pages the UE for a RRC CONNECTION REQUEST.~~
- c) ~~The SS waits for a RACH preamble transmission on AICH, and does not respond to the RACH preamble transmission on AICH. This step shall be repeated  $M_{\max}$  times.~~
- d) ~~The SS checks for 100ms that no further RACH preamble transmissions are received.~~

~~The above procedure is repeated with  $M_{\max}$  set to 5.~~

**Expected sequence:**

| Step | Direction |    | Message            | Comments                   |
|------|-----------|----|--------------------|----------------------------|
|      | UE        | SS |                    |                            |
| 1    |           | ←  | System information | Modified SIB5, SIB7        |
| 2    |           | ←  | PAGING             |                            |
| 3    |           | →  | RACH preamble      | Repeated $M_{\max}$ times. |

**7.1.2.5.5 Test requirements**

~~The SS shall receive 1 RACH preamble from the UE when  $M_{\max} = 1$ .~~

~~The SS shall receive 5 RACH preambles from the UE when  $M_{\max} = 5$ .~~

**7.1.3 Priority handling between data flows of one UE****7.1.3.1 Priority handling between data flows of one UE****7.1.3.1.1 Definition and applicability****7.1.3.1.2 Conformance requirement**

~~When selecting between the Transport Format Combinations in the given Transport FormatCombination Set, priorities of the data flows to be mapped onto the corresponding Transport Channels can be taken into account.~~

~~The chosen TFC shall be selected from within the set of valid TFCs and shall satisfy the following criteria in the order in which they are listed below:~~

- ~~1. No other TFC shall allow the transmission of more highest priority data than the chosen TFC.~~
- ~~2. No other TFC shall allow the transmission of more data from the next lower priority logical channels. Apply this criterion recursively for the remaining priority levels.~~
- ~~3. No other TFC shall have a lower bit rate than the chosen TFC.~~

~~The above rules for TFC selection in the UE shall apply to DCH, and the same rules shall apply for TF selection on RACH and CPGH.~~

## Reference(s)

~~TS 25.301 clause 5.3.1.2.~~

~~TS 25.321, clause 11.4.~~

### ~~7.1.3.1.3 Test purpose~~

~~To verify that the priority between data flows of one UE was correctly handled.~~

### ~~7.1.3.1.4 Method of test~~

## Initial conditions

### System Simulator:

- ~~— 1 cell, default parameters, Ciphering Off.~~

### User Equipment:

- ~~— The UE shall operate under normal test conditions, Ciphering Off.~~
- ~~— The Test-USIM shall be inserted.~~

~~The UE is in Connected mode and a connection is established as described in the TS 34.123-1, 7.3.1.2.1.1 PDCP testing, clause "Setup a UE terminated PS session using IP Header compression in AM RLC (using Loop back test mode 1)", but for two Radio Bearer entities user (RAB#0 and RAB#1). Both user RABs shall be initially configured with a MAC logical priority of 3. The allowed TFCs shall be limited in the UE such that it's not possible to simultaneously transmit at the highest possible data rate on the DCH for each user RAB. Simultaneous transmission at lower data rates shall be possible.~~

~~The RABs are placed into loop-back mode 1 each with the UL SDU size set to 39 bytes.~~

## Related ICS/EXIT Statement(s)

~~TBD~~

## Foreseen Final State of the UE

## Test procedure

- ~~a) The SS simultaneously sends 40 RLC SDUs of size 9 bytes each on each user RAB. The SDUs are concatenated, 4 to each PDU.~~
- ~~b) After having received the PDUs via configured mapped channels, the UE forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its MAC configuration to the SS.~~
- ~~c) The SS receives the returned data and reads each TFCI which indicates the Transport Format.~~
- ~~d) The SS checks, that high data rate RBs have a high bit rate Transport Format.~~
- ~~e) Repeat step a) to d) with different MAC logical channel priority (MAC priority of RAB#0 set as 3, MAC priority of RAB#1 set as 1).~~

## 7.1.3.1.5 Test requirements

## Iteration1:

The high bit rate TF is applied to the high MAC logical channel priority Radio Bearer. That is, the bit rate of TF used in user RAB#1 should be the same as that used in user RAB#0. Note: UE and SS timing issues may produce a slightly biased result.

NOTE:—Measurements shall be taken over the 5<sup>th</sup> to 35<sup>th</sup> RLC PDUs received.

## Iteration2:

The high bit rate TF is applied to the high MAC logical channel priority Radio Bearer. That is, the bit rate of TF used in user RAB#1 should be not less than that used in user RAB#0.

NOTE:—Measurements shall be taken over the 5<sup>th</sup> to 35<sup>th</sup> RLC PDUs received.

## 7.1.4 Control of CPCH transmissions.

## 7.1.4.1 Control of CPCH transmissions for FDD

## 7.1.4.1.1 Definition and applicability

All UEs which support CPCH.

## 7.1.4.1.2 Conformance requirement

1. If counter M is not less than N<sub>access\_fails</sub>, the UE shall execute an access failure error procedure and the CPCH access procedure ends.
2. If the sum of the Frame Count Transmitted counter plus the number of frames in the next TTI is larger than NF<sub>max</sub>, the UE shall exit the CPCH transmission procedure.
3. If the CSICH information indicates no PCPCH is available, the UE shall not attempt CPCH access.
4. If the CPCH Persistency levels are all set to 8, the UE shall not attempt CPCH access.
5. If the SS issues an immediate Emergency Stop command in the DL-DPCCH for CPCH, the UE shall abort CPCH access.

- p) — The SS sends SIB-8 on BCH with parameter : NF\_max = 0 and waits 30 s.
- q) — The SS sends certain DATA BLOCKS.
- r) — The SS shall not receive any returned DATA BLOCKS within 30 s.
- s) — The SS configures its RLC entity for "AM mode".
- t) — The SS starts the RB reconfiguration procedure by sending the RADIO BEARER RECONFIGURATION message.
- u) — The SS receives RADIO BEARER RECONFIGURE COMPLETE.
- v) — After having received the UE confirmation for the reconfiguration procedure, the SS configures its RLC entity for "Transparent Mode".
- w) — The SS sends SIB-8 on BCH and waits 30 s.
- x) — The SS continuously sends CSICH information with PCA1=PCA2= NOT AVAILABLE.
- y) — The SS sends certain DATA BLOCKS.
- z) — The SS shall not receive any returned DATA BLOCKS within 30 s.
- aa) — The SS configures its RLC entity for "AM mode".
- bb) — The SS starts the RB reconfiguration procedure by sending the RADIO BEARER RECONFIGURATION message.
- cc) — The SS receives RADIO BEARER RECONFIGURE COMPLETE.
- dd) — After having received the UE confirmation for the reconfiguration procedure, the SS configures its RLC entity for "Transparent Mode".
- ee) — The SS sends CSICH information with PCA1=PCA2= AVAILABLE and the SS PHY is configured to send CPCH Emergency Stop message in all DL DPCCHs for CPCH after N\_start\_message frames.
- ff) — The SS sends certain DATA BLOCKS.
- gg) — The SS shall not receive any returned DATA BLOCKS within 30 s.
- hh) — The SS configures its RLC entity for "AM mode".
- ii) — The SS starts the RB reconfiguration procedure by sending the RADIO BEARER RECONFIGURATION message.
- jj) — The SS receives RADIO BEARER RECONFIGURE COMPLETE.
- kk) — After having received the UE confirmation for the reconfiguration procedure, the SS configures its RLC entity for "Transparent Mode".
- ll) — The SS sends SIB-9 on BCH with the CPCH persistence levels set to 8, no access allowed.
- mm) — The SS sends certain DATA BLOCKS.
- nn) — The SS shall not receive any returned DATA BLOCKS within 30 s.
- oo) — The SS configures its RLC entity for "AM mode".
- pp) — The SS starts the RB reconfiguration procedure by sending the RADIO BEARER RECONFIGURATION message.
- qq) — The SS receives RADIO BEARER RECONFIGURE COMPLETE.
- rr) — After having received the UE confirmation for the reconfiguration procedure, the SS configures its RLC entity for "Transparent Mode".
- ss) — The SS sends SIB-9 on BCH with the CPCH persistence levels set to 1, immediate access allowed.

tt) — The SS sends certain DATA BLOCKS.

uu) — The SS receives returned DATA BLOCKS.

vv) — The SS configures its RLC entity for "AM mode".

|------------------------------------------------------|------------------------|
| PCPCH Channel Availability (PCA) :<br>—PCA1<br>—PCA2 | Available<br>Available |

## 7.1.4.1.5 ————— Test requirements

The SS can't receives data blocks from UE when N\_access\_fails or NF\_max set as 0.

The SS can't receives data blocks from UE when NF\_max set as 0.

The SS can't receives data blocks from UE when CSICH info indicates channels not available.

The SS can't receives data blocks from UE when CPCH Persistency level set to 8.

The SS can't receives data blocks from UE when Emergency Stop message terminates access.

## 7.2 ——— RLC testing

## 7.2.1 ——— Transparent mode

## 7.2.1.1 ——— Segmentation and reassembly

Transparent mode segmentation and reassembly are not tested in this release of the specification.

## 7.2.2 ——— Unacknowledged mode

## 7.2.2.1 ——— General information for UM tests

Two generic Radio Access Bearers are provided for UM tests.

The UM test RAB is set up using the Generic Procedure described in clause 7.1.3 of TS 34.108, and with the default RAB replaced as follows:

- For UM 7-bit length indicator tests: the RB configuration described in 3G TS 34.108 clause 6.11.1 is used. For these tests, let UM\_7\_PayloadSize denote the RAB payload size in octets.
- For UM 15-bit length indicator tests: the RB configuration described in 3G TS 34.108 clause 6.11.2 is used. For these tests, let UM\_15\_PayloadSize denote the RAB payload size in octets.

The UM test RABs are used in all tests with the following exception:

- Tests that explicitly specify a different Radio Bearer configuration.

All other settings are the same.

### ~~7.2.2.2 Segmentation and reassembly / Selection of 7 or 15 bit Length Indicators~~

#### ~~7.2.2.2.1 Definition~~

~~The RLC segments and concatenates SDUs into payload units according to the payload unit size requested by MAC. Length indicators are added to allow correct reconstruction of SDUs. The selection of the size of the length indicator fields used must follow the specified rules. Incorrect operation of segmentation, concatenation, or coding of length indicators will result in failure of the UE to communicate.~~

#### ~~7.2.2.2.2 Conformance requirement~~

~~The size of the Length Indicator may be either 7 bits or 15 bits.~~

~~For UM, 7 bit indicators shall be used if the UMD PDU size is  $\leq 125$  octets. Otherwise 15bit indicators shall be used.~~

~~The length of the Length Indicator only depends on the size of the largest RLC PDU. The length of the Length Indicator is always the same for all PDUs, for one RLC entity.~~

#### ~~Reference(s)~~

~~TS 25.322 clauses 9.2.2.8 and 9.2.2.9.~~

#### ~~7.2.2.2.3 Test purpose~~

~~To test that if the size of the largest PDU is  $\leq 125$  octets, 7 bit indicators are used, otherwise, 15-bit indicators are used.~~

#### ~~7.2.2.2.4 Method of test~~

#### ~~Initial conditions~~

~~The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for UM 7-bit length indicator tests in clause 7.2.2.1.~~

~~These settings apply to both the uplink and downlink DTCH.~~

~~The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to 10 bytes.~~

#### ~~Test procedure~~

- ~~a) The SS transmits an RLC SDU of size 10 bytes.~~
- ~~b) The SS checks the length indicator sizes and values of the RLC PDU returned on the uplink.~~
- ~~c) The SS releases the RB, and performs the Radio Bearer establishment procedure (clause 7.1.3 of TS 34.108) with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for UM 15-bit length indicator tests in clause 7.2.2.1.~~

~~All other settings the same.~~

- ~~d) The SS transmits an RLC SDU of size 10 bytes.~~
- ~~e) The SS checks the length indicator sizes and values of the RLC PDU returned on the uplink.~~
- ~~f) The SS may optionally release the radio bearer.~~

## Expected sequence

## 7.2.2.2.5 Test requirements

1. The UE shall send 7-bit length indicators with values that correctly indicate the end of the SDU received in step 3.
2. The UE shall send 15-bit length indicators with values that correctly indicate the end of the SDU received in step 7.

## 7.2.2.3 Segmentation and reassembly / 7-bit Length Indicators / Padding

## 7.2.2.3.1 Definition

The RLC segments and concatenates SDUs into payload units according to the payload unit size requested by MAC. Length indicators are added to allow correct reconstruction of SDUs. Incorrect operation of segmentation, concatenation, or coding of length indicators will result in failure of the UE to communicate.

## 7.2.2.3.2 Conformance requirement

A PDU that has unused space, to be referred to as padding, shall use a Length Indicator to indicate that this space is used as padding unless the padding size is one octet for PDUs with 15-bit LIs. A padding Length Indicator must be placed after any Length Indicators for a PDU.

One length indicator field shall be included for each end of a SDU that the PDU includes. The LI shall be set equal to the number of octets between the end of the header fields and the end of the segment. If padding is needed, another LI field set to only 1's shall be added unless the padding size is one octet for PDUs with 15-bit LIs.

## Reference(s)

TS 25.322 clauses 9.2.2.8 and 11.2.2.1.

## 7.2.2.3.3 Test purpose

1. To test that the UE correctly segments a large SDU and padding is added at the end.
2. To test that the UE correctly deals with a 7-bit padding LI when present in a received PDU.

## 7.2.2.3.4 Method of test

## Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for UM 7-bit length indicator tests in clause 7.2.2.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to UM\_7\_PayloadSize + 1 bytes.

### Test procedure

- a) The SS transmits an RLC SDU of size UM\_7\_PayloadSize + 1 bytes. The second of the 2 PDUs sent shall contain an LI indicating that padding is present.
- b) The SS checks the length indicator sizes and values of the RLC PDU returned on the uplink, and checks the length and content of the received RLC SDU.
- c) The SS may optionally release the radio bearer.

### Expected sequence

| Step | Direction |    | Message          | Comments                       |
|------|-----------|----|------------------|--------------------------------|
|      | UE        | SS |                  |                                |
| 1    |           |    | RB ESTABLISHMENT | See generic procedures         |
| 2    |           | ←  | DOWNLINK RLC PDU | SDU 1                          |
| 3    |           | ←  | DOWNLINK RLC PDU | SDU 1 & Padding                |
| 4    |           | →  | UPLINK RLC PDU   | No LI                          |
| 5    |           | →  | UPLINK RLC PDU   | Check LIs and re-assembled SDU |
| 6    |           |    | RB RELEASE       | Optional step                  |

### 7.2.2.3.5 Test requirements

1. The UE shall return two RLC PDUs. The first shall have no LIs. The second shall have a LI indicating the PDU contains an SDU boundary after octet 1 of the data field, and the second shall indicate that the remainder of the PDU contains padding.
2. The length and data content of the received SDU should be the same as the transmitted SDU.

### 7.2.2.4 Segmentation and Reassembly / 7-bit Length Indicators / LI = 0

#### 7.2.2.4.1 Definition

The RLC segments and concatenates SDUs into payload units according to the payload unit size requested by MAC. A pre-defined length indicator value is used to indicate when an SDUs ends coincident with the end of the previous PDU. Incorrect operation of segmentation, concatenation, or coding of length indicators will result in failure of the UE to communicate.

#### 7.2.2.4.2 Conformance requirement

If the PDU is exactly filled with the last segment of a SDU and there is no room for an LI field, an LI field set to only 0's shall be included as the first length indicator in the following PDU.

### Reference(s)

TS 25.322 clause 11.2.2.1

#### 7.2.2.4.3 Test purpose

1. To test that where an SDU exactly fills a PDU, an LI of value zero is placed by the transmitter as the first LI in the next PDU.
2. To test that where an SDU exactly fills a PDU, the receiver accepts an LI of value of zero, placed as the first LI in the next PDU.

#### 7.2.2.4.4 Method of test

##### Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for UM 7-bit length indicator tests in clause 7.2.2.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into loop-back mode 1 with the UL SDU size set to UM\_7\_PayloadSize bytes.

##### Test procedure

- a) The SS transmits an RLC SDU of size  $2 * \text{UM\_7\_PayloadSize}$  bytes.
- b) The SS checks the length indicator sizes and values of the RLC PDUs returned on the uplink, and checks the length and content of the received RLC SDU.
- c) The SS may optionally release the radio bearer.

##### Expected sequence

| Step | Direction |    | Message          | Comments                       |
|------|-----------|----|------------------|--------------------------------|
|      | UE        | SS |                  |                                |
| 1    |           |    | RB ESTABLISHMENT | See generic procedures         |
| 2    |           | ←  | DOWNLINK RLC PDU | SDU 1                          |
| 3    |           | ←  | DOWNLINK RLC PDU | SDU 1                          |
| 4    |           | ←  | DOWNLINK RLC PDU | LI=0 and padding               |
| 5    |           | →  | UPLINK RLC PDU   | No Lis                         |
| 6    |           | →  | UPLINK RLC PDU   | Check Lis and re-assembled SDU |
| 7    |           |    | RB RELEASE       | Optional step                  |

#### 7.2.2.4.5 Test requirements

The UE shall return two RLC PDUs. The first shall have no LIs. The second shall have an LI indicating that the SDU exactly filled the previous PU, and an LI indicating that the remainder of the PDU contains padding.

The length of the received SDU should be UM\_7\_PayloadSize bytes, and the data content the same as the first UM\_7\_PayloadSize bytes of the transmitted SDU.

#### 7.2.2.5 Reassembly / 7-bit Length Indicators / Invalid LI value

##### 7.2.2.5.1 Definition

The RLC segments and concatenates SDUs into payload units according to the payload unit size requested by MAC. Length indicators are added to allow correct reconstruction of SDUs. The behaviour of the RLC on reception of an invalid LI value has been specified. Incorrect operation of segmentation, concatenation, or coding of length indicators will result in failure of the UE to communicate.

##### 7.2.2.5.2 Conformance requirement

Upon reception of an UMD PDU that contains Length Indicator value 1111110 ("piggybacked STATUS PDU") the receiver shall discard that UMD PDU.

##### Reference(s)

TS 25.322 clause 11.2.4.1.

### 7.2.2.5.3 Test purpose

To test that PDUs with invalid length indicators are discarded by the receiving RLC.

### 7.2.2.5.4 Method of test

#### Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for UM 7-bit length indicator tests in clause 7.2.2.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into loop-back mode 1 with the UL SDU size set to UM\_7\_PayloadSize + 1 bytes.

#### Test procedure

- a) The SS transmits two RLC SDUs of size UM\_7\_PayloadSize + 1 bytes. In the third PDU for transmission, the SS sets the value of the second (padding) LI to 1111110.
- b) The SS checks the length indicator sizes and values of any RLC PDUs returned on the uplink, and checks for the presence of any received RLC SDUs.
- c) The SS may optionally release the radio bearer.

#### Expected sequence

| Step | Direction |    | Message          | Comments                              |
|------|-----------|----|------------------|---------------------------------------|
|      | UE        | SS |                  |                                       |
| 1    |           |    | RB ESTABLISHMENT | See generic procedures                |
| 2    |           | ←  | DOWNLINK RLC PDU | SDU 1                                 |
| 3    |           | ←  | DOWNLINK RLC PDU | SDU 1 & SDU 2                         |
| 4    |           | ←  | DOWNLINK RLC PDU | SDU 2 and invalid LI (=11111110)      |
| 5    |           | →  | UPLINK RLC PDU   | SDU 1                                 |
| 6    |           | →  | UPLINK RLC PDU   | SDU 1: Check Lis and re-assembled SDU |
| 7    |           |    | RB RELEASE       | Optional step                         |

### 7.2.2.5.5 Test requirements

The UE shall return two RLC PDUs. The first shall have no LIs. The second shall have a LI indicating the end of the SDU, and a padding LI.

The length and data content of the received SDU should be the same as the first transmitted SDU. The second SDU should not be returned.

### 7.2.2.6 Reassembly / 7-bit Length Indicators / LI value > PDU size

#### 7.2.2.6.1 Definition

The RLC segments and concatenates SDUs into payload units according to the payload unit size requested by MAC. Length indicators are added to allow correct reconstruction of SDUs. The behaviour of the RLC on reception of an invalid LI value has been specified. Incorrect operation of segmentation, concatenation, or coding of length indicators will result in failure of the UE to communicate.

#### 7.2.2.6.2 Conformance requirement

If the length indicator of a PDU has a value that is larger than the PDU size—the number of octets containing LIs in the PDU—1 and is not one of the predefined values listed in the table of 3GPP TS 25.322 clause 9.2.2.8, the PDU shall be discarded and treated as a missing PDU.

If a PDU with sequence number < VR(US) is missing then all SDUs that have segments in this PDU shall be discarded.

#### Reference(s)

TS 25.322 clauses 11.2.4.2 and 11.2.3.

#### 7.2.2.6.3 ————— Test purpose

To test that PDUs with length indicators that point beyond the end of the PDU are discarded by the receiving RLC.

#### 7.2.2.6.4 ————— Method of test

#### Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for UM 7-bit length indicator tests in clause 7.2.2.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into loop-back mode 1 with the UL SDU size set to UM\_7\_PayloadSize + 1 bytes.

#### Test procedure

- a) The SS transmits three RLC SDUs of size UM 7 PayloadSize + 1 bytes. All the SDUs are concatenated or segmented over successive RLC PDUs. In the third PDU for transmission, the SS sets value of the length indicator to be UM 7 PayloadSize + 1 (decimal).
- b) The SS checks the length indicator sizes and values of the RLC PDUs returned on the uplink, and checks the length and content of the received RLC SDUs.
- c) The SS may optionally release the radio bearer.

#### Expected sequence

| Step | Direction |    | Message          | Comments                                          |
|------|-----------|----|------------------|---------------------------------------------------|
|      | UE        | SS |                  |                                                   |
| 1    |           |    | RB ESTABLISHMENT | See generic procedures                            |
| 2    | ←         |    | DOWNLINK RLC PDU | SDU 1                                             |
| 3    | ←         |    | DOWNLINK RLC PDU | SDU 1 & SDU 2                                     |
| 4    | ←         |    | DOWNLINK RLC PDU | SDU 2 & SDU 3, with bad LI                        |
| 5    | ←         |    | DOWNLINK RLC PDU | SDU 3 and padding                                 |
| 6    | →         |    | UPLINK RLC PDU   | SDU 1                                             |
| 7    | →         |    | UPLINK RLC PDU   | SDU 1 and padding: Check Lis and re-assembled SDU |
| 8    |           |    | RB RELEASE       | Optional step                                     |

#### 7.2.2.6.5 ————— Test requirements

The UE shall return two RLC PDUs. The first shall have no LIs. The second shall have a LI indicating the end of an SDU and an LI indicating that the remainder of the PDU contains padding.

The length and data content of the received SDU should be the same as the first transmitted SDU. No further SDUs or PDUs should be received.

#### 7.2.2.7 ————— Reassembly / 7-bit Length Indicators / First data octet LI

##### 7.2.2.7.1 ————— Definition

The RLC segments and concatenates SDUs into payload units according to the payload unit size requested by MAC. Length indicators are added to allow correct reconstruction of SDUs. A special LI is defined to indicate that the start of

on SDU is coincident with the start of the PDU. Incorrect operation of segmentation, concatenation, or coding of length indicators will result in failure of the UE to communicate.

#### 7.2.2.7.2 ~~Conformance requirement~~

LI = 1111100, UMD PDU: The first data octet in this RLC PDU is the first octet of a RLC SDU.

#### Reference(s)

TS 25.322 clause 9.2.2.8.

#### 7.2.2.7.3 ~~Test purpose~~

To test that a UE in unacknowledged mode correctly handles a received RLC PDU with a 7-bit length indicator having its value equal to the special length indicator value 1111100.

#### 7.2.2.7.4 ~~Method of test~~

#### Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for UM 7-bit length indicator tests in clause 7.2.2.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to 12 bytes.

#### Test procedure

- a) The SS transmits a RLC SDU of size 12 bytes in a PDU which has the 'First Data Octet LI' as the first LI in the PDU.
- b) The SS waits until the SDU has been received back from the UE, and then transmits another SDU of 12 bytes in a PDU which has the 'First Data Octet LI' as the first LI in the PDU.
- c) The SS waits until this SDU has been received back from the UE.
- e) The SS may optionally release the radio bearer.

#### Expected sequence

| Step | Direction |    | Message          | Comments                                                                                                                             |

| 3    |           |    | ...              |                                                                                                                                      |
| 4    |           | →  | UPLINK RLC PDU   |                                                                                                                                      |
| 5    |           | ←  | DOWNLINK RLC PDU |                                                                                                                                      |
| 6    |           | →  | UPLINK RLC PDU   |                                                                                                                                      |
| 7    |           |    | RB RELEASE       |                                                                                                                                      |

#### 7.2.2.7.5 ~~Test requirements~~

1. The UE shall return two RLC PDUs.
2. The length and data content of each received SDU should be the same as the transmitted SDU.

## 7.2.2.8 Segmentation and reassembly / 15-bit Length Indicators / Padding

### 7.2.2.8.1 Definition

The RLC segments and concatenates SDUs into payload units according to the payload unit size requested by MAC. Length indicators are added to allow correct reconstruction of SDUs. Incorrect operation of segmentation, concatenation, or coding of length indicators will result in failure of the UE to communicate.

### 7.2.2.8.2 Conformance requirement

A PDU that has unused space, to be referred to as padding, shall use a Length Indicator to indicate that this space is used as padding unless the padding size is one octet for PDUs with 15-bit LIs. A padding Length Indicator must be placed after any Length Indicators for a PU.

One length indicator field shall be included for each end of a SDU that the PDU includes. The LI shall be set equal to the number of octets between the end of the header fields and the end of the segment. If padding is needed, another LI field set to only 1's shall be added unless the padding size is one octet for PDUs with 15-bit LIs.

### Reference(s)

TS 25.322 clauses 9.2.2.8 and 11.2.2.1.

### 7.2.2.8.3 Test purpose

1. To test that the UE correctly segments a large SDU and padding is added at the end.
2. To test that the UE correctly deals with a 15-bit padding LI when present in a received PDU.

### 7.2.2.8.4 Method of test

#### Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for UM 15-bit length indicator tests in clause 7.2.2.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to UM\_15\_PayloadSize + 1 bytes.

#### Test procedure

- a) The SS transmits an RLC SDU of size UM\_15\_PayloadSize + 1 bytes. The second of the 2 PDUs sent shall contain an LI indicating that padding is present.
- b) The SS checks the length indicator sizes and values of the RLC PDU returned on the uplink, and checks the length and content of the received RLC SDU.
- c) The SS may optionally release the radio bearer.

#### Expected sequence

| Step | Direction |    | Message          | Comments                       |
|------|-----------|----|------------------|--------------------------------|
|      | UE        | SS |                  |                                |
| 1    |           |    | RB ESTABLISHMENT | See generic procedures         |
| 2    | ←         |    | DOWNLINK RLC PDU | SDU 1                          |
| 3    | ←         |    | DOWNLINK RLC PDU | SDU 1 & Padding                |
| 4    | →         |    | UPLINK RLC PDU   | No LI                          |
| 5    | →         |    | UPLINK RLC PDU   | Check LIs and re-assembled SDU |
| 6    |           |    | RB RELEASE       | Optional step                  |

#### ~~7.2.2.8.5 Test requirements~~

- ~~1. The UE shall return two RLC PDUs. The first shall have no LIs. The second shall have a LI indicating the PDU contains an SDU boundary after octet 1 of the data field, and the second shall indicate that the remainder of the PDU contains padding.~~
- ~~2. The length and data content of the received SDU should be the same as the transmitted SDU.~~

#### ~~7.2.2.9 Segmentation and Reassembly / 15-bit Length Indicators / LI = 0~~

##### ~~7.2.2.9.1 Definition~~

~~The RLC segments and concatenates SDUs into payload units according to the payload unit size requested by MAC. A pre-defined length indicator value is used to indicate when an SDUs ends coincident with the end of the previous PU. Incorrect operation of segmentation, concatenation, or coding of length indicators will result in failure of the UE to communicate.~~

##### ~~7.2.2.9.2 Conformance requirement~~

~~If the PDU is exactly filled with the last segment of a SDU and there is no room for an LI field, an LI field set to only 0's shall be included as the first length indicator in the following PDU.~~

##### ~~Reference(s)~~

~~TS 25.322 clause 11.2.2.1.~~

##### ~~7.2.2.9.3 Test purpose~~

- ~~1. To test that where an SDU exactly fills a PDU, an LI of value zero is placed by the transmitter as the first LI in the next PDU.~~
- ~~2. To test that where an SDU exactly fills a PDU, and an LI of value zero is the first LI in the next PDU, the receiver correctly reassembles the PDU.~~

##### ~~7.2.2.9.4 Method of test~~

##### ~~Initial conditions~~

~~The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for UM 15-bit length indicator tests in clause 7.2.2.1.~~

~~These settings apply to both the uplink and downlink DTCH.~~

~~The radio bearer is placed into loop-back mode 1 with the UL SDU size set to UM\_15\_PayloadSize bytes.~~

##### ~~Test procedure~~

- ~~a) The SS transmits an RLC SDU of size 2 \* UM\_15\_PayloadSize bytes.~~
- ~~b) The SS checks the length indicator sizes and values of the RLC PDUs returned on the uplink, and checks the length and content of the received RLC SDU.~~
- ~~c) The SS may optionally release the radio bearer.~~

## Expected sequence

| Step | Direction |    | Message          | Comments                       |
|------|-----------|----|------------------|--------------------------------|
|      | UE        | SS |                  |                                |
| 1    |           |    | RB ESTABLISHMENT | See generic procedures         |
| 2    |           | ←  | DOWNLINK RLC PDU | SDU 1                          |
| 3    |           | ←  | DOWNLINK RLC PDU | SDU 1                          |
| 4    |           | ←  | DOWNLINK RLC PDU | LI=0 and padding               |
| 5    |           | →  | UPLINK RLC PDU   | No Lis                         |
| 6    |           | →  | UPLINK RLC PDU   | Check Lis and re-assembled SDU |
| 7    |           |    | RB RELEASE       | Optional step                  |

## 7.2.2.9.5 Test requirements

The UE shall return two RLC PDUs. The first shall have no LIs. The second shall have an LI indicating that the SDU exactly filled the previous PU, and an LI indicating that the remainder of the PDU contains padding.

The length of the received SDU should be UM\_15\_PayloadSize bytes, and the data content the same as the first UM\_15\_PayloadSize bytes of the transmitted SDU.

## 7.2.2.10 Segmentation and reassembly / 15-bit Length Indicators / One octet short LI

## 7.2.2.10.1 Definition

The RLC segments and concatenates SDUs into payload units according to the payload unit size requested by MAC. A pre-defined length indicator value is used to indicate when an SDUs ends one octet short of the end of the previous PDU. Incorrect operation of segmentation, concatenation, or coding of length indicators will result in failure of the UE to communicate.

## 7.2.2.10.2 Conformance requirement

In the case where the last segment of an RLC SDU is one octet short of exactly filling the last RLC PDU, and 15-bit Length Indicators are used, the next Length Indicator shall be placed as the first Length Indicator in the next PDU and have value LI=111 1111 1111 1011.

In the case where a PDU contains a 15-bit LI indicating that an SDU ends with one octet left in the PDU, the last octet of this PDU shall be ignored and shall not be filled with the first octet of the next SDU data.

## Reference(s)

TS 25.322 clause 9.2.2.8.

## 7.2.2.10.3 Test purpose

1. To test that where the UE transmits an SDU, which is one byte short of filling a PDU, an LI indicating one byte short is placed as the first LI in the next PDU.
2. To test that where the UE correctly handles a received PDU containing an LI indicating that an SDU ended one byte short of the end of the previous PDU.

## 7.2.2.10.4 Method of test

## Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for UM-15-bit length indicator tests in clause 7.2.2.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to UM\_15\_PayloadSize – 1 bytes.

**Test procedure**

- a) The SS transmits an RLC SDU of size  $(2 * \text{UM\_15\_PayloadSize}) - 1$  bytes.
- b) The SS checks the length indicator sizes and values of the RLC PDUs returned on the uplink, and checks the length and content of the received RLC SDU.
- c) The SS may optionally release the radio bearer.

**Expected sequence**

| Step | Direction |    | Message          | Comments                          |
|------|-----------|----|------------------|-----------------------------------|
|      | UE        | SS |                  |                                   |
| 1    |           |    | RB ESTABLISHMENT | See generic procedures            |
| 2    |           | ←  | DOWNLINK RLC PDU | SDU 1                             |
| 3    |           | ←  | DOWNLINK RLC PDU | SDU 1                             |
| 4    |           | ←  | DOWNLINK RLC PDU | LI=111 1111 1111 1011 and padding |
| 5    |           | →  | UPLINK RLC PDU   | No LIs                            |
| 6    |           | →  | UPLINK RLC PDU   | Check LIs and re-assembled SDU    |
| 7    |           |    | RB RELEASE       | Optional step                     |

**7.2.2.10.5 Test requirements**

- 1. The UE shall return two RLC PDUs. The first shall have no LIs. The second shall have 2 LIs. The first LI shall be an LI indicating that the SDU was one byte short of filling the previous PDU, and the second an LI indicating that the remainder of the PDU contains padding.
- 2. The length of the received SDU should be  $\text{UM\_15\_PayloadSize} - 1$  bytes, and the data content the same as the first  $\text{UM\_15\_PayloadSize} - 1$  bytes of the transmitted SDU.

**7.2.2.11 Reassembly / 15-bit Length Indicators / Invalid LI value****7.2.2.11.1 Definition**

The RLC segments and concatenates SDUs into payload units according to the payload unit size requested by MAC. Length indicators are added to allow correct reconstruction of SDUs. The behaviour of the RLC on reception of an invalid LI value has been specified. Incorrect operation of segmentation, concatenation, or coding of length indicators will result in failure of the UE to communicate.

**7.2.2.11.2 Conformance requirement**

Upon reception of an UMD PDU that contains Length Indicator value 11111111111110 ("piggybacked STATUS PDU") the receiver shall discard that UMD PDU.

**Reference(s)**

TS 25.322 clause 11.2.4.1.

**7.2.2.11.3 Test purpose**

To test that PDUs with invalid length indicators are discarded by the receiving RLC.

**7.2.2.11.4 Method of test****Initial conditions**

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for UM 15-bit length indicator tests in clause 7.2.2.1.

These settings apply to both the uplink and downlink DTCH.

The radio-bearer is placed into loop-back mode 1 with the UL SDU-size set to UM\_15\_PayloadSize + 1 bytes.

#### Test procedure

- a) The SS transmits two RLC SDUs of size UM\_15\_PayloadSize + 1 bytes. In the third PDU for transmission, the SS sets the value of the second (padding) LI to 11111111111110.
- b) The SS checks the length indicator sizes and values of any RLC PDUs returned on the uplink, and checks for the presence of any received RLC SDUs.
- c) The SS may optionally release the radio-bearer.

#### Expected sequence

| Step | Direction |    | Message          | Comments                               |
|------|-----------|----|------------------|----------------------------------------|
|      | UE        | SS |                  |                                        |
| 1    |           |    | RB ESTABLISHMENT | See generic procedures                 |
| 2    |           | ←  | DOWNLINK RLC PDU | SDU 1                                  |
| 3    |           | ←  | DOWNLINK RLC PDU | SDU 1 & SDU 2                          |
| 4    |           | ←  | DOWNLINK RLC PDU | SDU 2 and invalid LI (=11111111111110) |
| 5    |           | →  | UPLINK RLC PDU   | SDU 1                                  |
| 6    |           | →  | UPLINK RLC PDU   | SDU 1: Check Lis and re-assembled-SDU  |
| 7    |           |    | RB RELEASE       | Optional step                          |

#### 7.2.2.11.5 Test requirements

The UE shall return two RLC PDUs. The first shall have no LIs. The second shall have a LI indicating the end of the SDU, and a padding LI.

The length and data content of the received SDU should be the same as the first transmitted SDU. The second SDU should not be returned.

#### 7.2.2.12 Reassembly / 15-bit Length Indicators / LI value > PDU size

##### 7.2.2.12.1 Definition

The RLC segments and concatenates SDUs into payload units according to the payload unit size requested by MAC. Length indicators are added to allow correct reconstruction of SDUs. The behaviour of the RLC on reception of an invalid LI value has been specified. Incorrect operation of segmentation, concatenation, or coding of length indicators will result in failure of the UE to communicate.

##### 7.2.2.12.2 Conformance requirement

If the length indicator of a PDU has a value that is larger than the PDU size—the number of octets containing LIs in the PDU—1 and is not one of the predefined values listed in the table of 3GPP TS 25.322 clause 9.2.2.8, the PDU shall be discarded and treated as a missing PDU.

If a PDU with sequence number < VR(US) is missing then all SDUs that have segments in this PDU shall be discarded.

#### Reference(s)

TS 25.322 clauses 11.2.4.2 and 11.2.3.

##### 7.2.2.12.3 Test purpose

To test that PDUs with length indicators that point beyond the end of the PDU are discarded by the receiving RLC.

#### 7.2.2.12.4 Method of test

##### Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for UM 15-bit length indicator tests in clause 7.2.2.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into loop-back mode 1 with the UL SDU size set to UM\_15\_PayloadSize + 1 bytes.

##### Test procedure

- a) The SS transmits three RLC SDUs of size UM\_15\_PayloadSize + 1 bytes. All the SDUs are concatenated or segmented over successive RLC PDUs. In the third PDU for transmission, the SS sets value of the length indicator to be UM\_15\_PayloadSize + 1 (decimal).
- b) The SS checks the length indicator sizes and values of the RLC PDUs returned on the uplink, and checks the length and content of the received RLC SDUs.
- c) The SS may optionally release the radio bearer.

##### Expected sequence

| Step | Direction |    | Message          | Comments                                          |
|------|-----------|----|------------------|---------------------------------------------------|
|      | UE        | SS |                  |                                                   |
| 1    |           |    | RB ESTABLISHMENT | See generic procedures                            |
| 2    |           | ←  | DOWNLINK RLC PDU | SDU 1                                             |
| 3    |           | ←  | DOWNLINK RLC PDU | SDU 1 & SDU 2                                     |
| 4    |           | ←  | DOWNLINK RLC PDU | SDU 2 & SDU 3, with bad LI                        |
| 5    |           | ←  | DOWNLINK RLC PDU | SDU 3 and padding                                 |
| 6    |           | →  | UPLINK RLC PDU   | SDU 1                                             |
| 7    |           | →  | UPLINK RLC PDU   | SDU 1 and padding: Check Lis and re-assembled SDU |
| 8    |           |    | RB RELEASE       | Optional step                                     |

#### 7.2.2.12.5 Test requirements

The UE shall return two RLC PDUs. The first shall have no LIs. The second shall have a LI indicating the end of an SDU and an LI indicating that the remainder of the PDU contains padding.

The length and data content of the received SDU should be the same as the first transmitted SDU. No further SDUs or PDUs should be received.

#### 7.2.2.13 Reassembly / 15-bit Length Indicators / First data octet LI

##### 7.2.2.13.1 Definition

The RLC segments and concatenates SDUs into payload units according to the payload unit size requested by MAC. Length indicators are added to allow correct reconstruction of SDUs. A special LI is defined to indicate that the start of an SDU is coincident with the start of the PDU. Incorrect operation of segmentation, concatenation, or coding of length indicators will result in failure of the UE to communicate.

##### 7.2.2.13.2 Conformance requirement

LI = 111111111111100, UMD PDU: The first data octet in this RLC PDU is the first octet of a RLC SDU.

##### Reference(s)

TS 25.322 clause 9.2.2.8.

### 7.2.2.13.3 Test purpose

To test that a UE in unacknowledged mode correctly handles a received RLC PDU with a 15-bit length indicator having its value equal to the special length indicator value 11111111111100.

### 7.2.2.13.4 Method of test

#### Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for UM 15-bit length indicator tests in clause 7.2.2.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to 150 bytes.

#### Test procedure

- a) The SS transmits a RLC SDU of size 150 bytes in a PDU which has the 'First Data Octet LI' as the first LI in the PDU.
- b) The SS waits until the SDU has been received back from the UE, and then transmits another SDU of 150 bytes in a PDU which has the 'First Data Octet LI' as the first LI in the PDU.
- c) The SS waits until this SDU has been received back from the UE.
- c) The SS may optionally release the radio bearer.

#### Expected sequence

| Step | Direction |    | Message          | Comments                       |
|------|-----------|----|------------------|--------------------------------|
|      | UE        | SS |                  |                                |
| 1    |           |    | RB ESTABLISHMENT | See generic procedures         |
| 2    | ←         |    | DOWNLINK RLC PDU | SDU 1 with LI = 11111111111100 |
| 3    |           |    | ...              | Wait for loopback              |
| 4    | →         |    | UPLINK RLC PDU   | SDU 1                          |
| 5    | ←         |    | DOWNLINK RLC PDU | SDU 2 with LI = 11111111111100 |
| 6    | →         |    | UPLINK RLC PDU   | SDU 2                          |
| 7    |           |    | RB RELEASE       | Optional step                  |

### 7.2.2.13.5 Test requirements

1. The UE shall return two RLC PDUs.
2. The length and data content of each received SDU should be the same as the transmitted SDU.

## 7.2.3 Acknowledged mode

### 7.2.3.1 General information for AM tests

Two generic Radio Access Bearers are provided for AM tests.

The AM test RAB is set up using the Generic Procedure described in clause 7.1.3 of TS 34.108, and with the default RAB replaced as follows:

- For AM 7-bit length indicator tests: the RB configuration described in 3G TS 34.108 clause 6.11.3 is used. For these tests, let AM\_7\_PayloadSize denote the RAB payload size in octets.
- For AM 15-bit length indicator tests: the RB configuration described in 3G TS 34.108 clause 6.11.4 is used. For these tests, let AM\_15\_PayloadSize denote the RAB payload size in octets.

Unless specified in individual test cases, the default RLC settings are given in table 7.2/1.

**Table 7.2/1: RLC Parameters for AM testing**

|                               |          |
|-------------------------------|----------|
| Uplink RLC                    |          |
| —Transmission RLC discard     |          |
| —Max DAT retransmissions      |          |
| —Max_DAT                      | 4        |
| —Transmission window size     | 128      |
| —Timer_RST                    | 500      |
| —Max_RST                      | 4        |
| —Polling info                 |          |
| —Timer_poll_prohibit          | disabled |
| —Timer_poll                   | disabled |
| —Poll_PU                      | disabled |
| —Poll_SDU                     | disabled |
| —Last transmission PDU poll   | TRUE     |
| —Last retransmission PDU poll | TRUE     |
| —Poll_Window                  | disabled |
| —Timer_poll_periodic          | disabled |
| Downlink RLC                  |          |
| —In-sequence delivery         | TRUE     |
| —Receiving window size        | 128      |
| —Timer_Status_Prohibit        | disabled |
| —Timer_EPC                    | disabled |
| —Missing PDU Indicator        | TRUE     |
| —Timer_STATUS_periodic        | disabled |

The AM test RABs are used in all tests with the following exception:

- Tests that explicitly specify a different Radio Bearer configuration.

All other settings are the same.

### 7.2.3.2 Segmentation and reassembly / Selection of 7 or 15 bit Length Indicators

#### 7.2.3.2.1 Definition

The RLC segments and concatenates SDUs into payload units according to the payload unit size configured by RRC. Length indicators are added to allow correct reconstruction of SDUs. The selection of the size of the length indicator fields used must follow the specified rules. Incorrect operation of segmentation, concatenation, or coding of length indicators will result in failure of the UE to communicate.

#### 7.2.3.2.2 Conformance requirement

The size of the Length Indicator may be either 7 bits or 15 bits.

For AM, 7bit indicators shall be used if the AMD PDU size is  $\leq 126$  octets. Otherwise 15bit indicators shall be used.

The length of the Length Indicator only depends on the size of the largest RLC PDU. The length of the Length Indicator is always the same for all PUs, for one RLC entity.

#### Reference(s)

TS 25.322 clauses 9.2.2.8 and 9.2.2.9.

#### 7.2.3.2.3 Test purpose

To test that if PDU carries a single PDU, and the size of the largest PDU is  $\leq 126$  octets, 7 bit indicators are used, otherwise, 15-bit indicators are used.

#### 7.2.3.2.4 Method of test

##### Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit length indicator tests in clause 7.2.3.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to 10 bytes.

##### Test procedure

- a) The SS transmits an RLC SDU of size 10 bytes. The PDU carrying this SDU is transmitted with a poll for status.
- b) The SS checks the length indicator sizes and values of the RLC PDU returned on the uplink.
- c) The SS releases the RB, and performs the Radio Bearer establishment procedure (clause 7.1.3 of TS 34.108) with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 15-bit length indicator tests in clause 7.2.3.1.

All other settings the same.

- d) The SS transmits an RLC SDUs of size 10 bytes. The PDU carrying this SDU is transmitted with a poll for status.
- e) The SS checks the length indicator sizes and values of the RLC PDU returned on the uplink.
- f) The SS may optionally release the radio bearer.

##### Expected sequence

| Step | Direction |    | Message          | Comments                                                                                              |
|------|-----------|----|------------------|-------------------------------------------------------------------------------------------------------|

| 10   |           |    | RB RELEASE       |                                                                                                       |

#### 7.2.3.2.5 Test requirements

The UE shall send 7 bit length indicators with values that correctly indicate the end of SDU in step b).

The UE shall send 15 bit length indicators with values that correctly indicate the end of SDU in step c).

#### 7.2.3.3 Segmentation and Reassembly / 7-bit Length Indicators / Padding or Piggy-backed Status

##### 7.2.3.3.1 Definition

The RLC segments and concatenates SDUs into payload units according to the payload unit size configured by RRC. Length indicators are added to allow correct reconstruction of SDUs. Incorrect operation of segmentation, concatenation, or coding of length indicators will result in failure of the UE to communicate.

#### 7.2.3.3.2 Conformance requirement

The Length Indicator is used to indicate, each time, the end of an SDU occurs in the PU. The Length Indicator points out the number of octets between the end of the last Length Indicator field and up to and including the octet at the end of an SDU segment.

A PDU that has unused space, to be referred to as padding, shall use a Length Indicator to indicate that this space is used as padding unless the padding size is one octet for PDUs with 15-bit LIs. A padding Length Indicator must be placed after any Length Indicators for a PDU.

Upon reception of a SDU, RLC shall segment the SDU to fit into the fixed size of a PU. The segments are inserted in the data field of a PU. A length indicator shall be added to each PDU that includes a border of an SDU, i.e. if a PDU does not contain an LI, the SDU continues in the next PU. The length indicator indicates where the border occurs in the PU. The data after the indicated border can be either a new SDU, padding or piggybacked information. If padding or piggybacking is added another LI shall be added unless the padding size is one octet for PDUs with 15-bit LIs, see clauses 9.2.2.8 and 9.2.2.9.

#### Reference(s)

TS 25.322 clauses 9.2.2.8 and 11.3.2.1.2.

#### 7.2.3.3.3 Test purpose

1. To test that a large SDU is correctly segmented and padding added at the end.
2. To test that a large SDU is received correctly, whether or not it has piggy-backed status at the end.

#### 7.2.3.3.4 Method of test

##### Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit length indicator tests in clause 7.2.3.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to  $AM\_7\_PayloadSize + 1$  bytes.

##### Test procedure

- a) The SS transmits an RLC SDU (SDU1) of size  $AM\_7\_PayloadSize + 1$  bytes, and polls the receiver for status.
- b) The SS checks the length indicator sizes and values of the RLC PDUs returned on the uplink, and checks the length and content of the received RLC SDU.
- c) The SS transmits another RLC SDU (SDU2) of size  $AM\_7\_PayloadSize + 1$  bytes, and includes piggy-backed status in the second of the 2 PDUs sent. The SS also polls the receiver for status.
- d) The SS checks the length indicator sizes and values of the RLC PDUs returned on the uplink, and checks the length and content of the received RLC SDU.
- e) The SS may optionally release the radio bearer.

## Expected sequence

| Step | Direction |    | Message          | Comments                                |
|------|-----------|----|------------------|-----------------------------------------|

| 4    |           | →  | UPLINK RLC PDU   | No LI                                   |
| 5    |           | →  | UPLINK RLC PDU   | Poll, Check LIs and re-assembled SDU    |
| 5a   |           | →  | STATUS PDU       | If piggy-backed status is not used in 5 |
| 6    |           | ←  | DOWNLINK RLC PDU | SDU 2                                   |
| 7    |           | ←  | DOWNLINK RLC PDU | SDU 2 + poll + piggy-backed status      |
| 8    |           | →  | UPLINK RLC PDU   | No LI                                   |
| 9    |           | →  | UPLINK RLC PDU   | Poll, Check LIs and re-assembled SDU    |
| 9a   |           | →  | STATUS PDU       | If piggy-backed status is not used in 9 |
| 10   |           | ←  | STATUS PDU       |                                         |
| 11   |           |    | RB RELEASE       | Optional step                           |

## 7.2.3.3.5 Test requirements

1. In steps 4 and 5, the UE shall return two RLC PDUs. The first shall have no LIs. The second shall have a LI indicating the PDU contains an SDU boundary after octet 1 of the data field, and the second shall indicate either that the remainder of the PDU contains padding, or that it contains a piggy-backed status PDU.
2. In steps 8 and 9, the UE shall return two RLC PDUs. The first shall have no LIs. The second shall have a LI indicating the PDU contains an SDU boundary after octet 1 of the data field, and the second shall indicate either that the remainder of the PDU contains padding, or that it contains a piggy-backed status PDU.
3. The length and data content of all received SDUs shall be the same as the transmitted SDUs.

## 7.2.3.4 Segmentation and Reassembly / 7-bit Length Indicators / LI = 0

## 7.2.3.4.1 Definition

The RLC segments and concatenates SDUs into payload units according to the payload unit size configured by RRC. A pre-defined length indicator value is used to indicate when an SDUs ends coincident with the end of the previous PU. Incorrect operation of segmentation, concatenation, or coding of length indicators will result in failure of the UE to communicate.

## 7.2.3.4.2 Conformance requirement

If the PDU is exactly filled with the last segment of a SDU and there is no room for an LI field, an LI field set to only 0's shall be included as the first length indicator in the following PDU.

## Reference(s)

TS 25.322 clause 11.3.2.1.

## 7.2.3.4.3 Test purpose

1. To test that where an SDU exactly fills a PDU, an LI of value zero is placed by the transmitter as the first LI in the next PDU.
2. To test that where an SDU exactly fills a PDU, and an LI of value zero is the first LI in the next PDU, the receiver correctly reassembles the SDU.

#### 7.2.3.4.4 Method of test

##### Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit length indicator tests in clause 7.2.3.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to AM\_7\_PayloadSize bytes.

##### Test procedure

- a) The SS transmits an RLC SDU of size  $2 * AM\_7\_PayloadSize$  bytes. The SS polls the receiver for status in the last RLC PDU sent.
- b) The SS checks the length indicator sizes and values of the RLC PDUs returned on the uplink, and checks the length and content of the received RLC SDU.
- c) The SS may optionally release the radio bearer.

##### Expected sequence

| Step | Direction |    | Message          | Comments                                       |
|------|-----------|----|------------------|------------------------------------------------|
|      | UE        | SS |                  |                                                |
| 1    |           |    | RB ESTABLISHMENT | See generic procedures                         |
| 2    |           | ←  | DOWNLINK RLC PDU | SDU 1                                          |
| 3    |           | ←  | DOWNLINK RLC PDU | SDU 1                                          |
| 4    |           | ←  | DOWNLINK RLC PDU | LI=0, poll and padding                         |
| 5    |           | →  | UPLINK RLC PDU   | No Lis                                         |
| 6    |           | →  | UPLINK RLC PDU   | (Poll) Check Lis and re-assembled SDU          |
| 6a   |           | →  | STATUS PDU       | <i>If piggy-backed status is not used in 6</i> |
| 7    |           | ←  | STATUS PDU       |                                                |
| 8    |           |    | RB RELEASE       | Optional step                                  |

#### 7.2.3.4.5 Test requirements

The UE shall return two RLC PDUs. The first shall have no LIs. The second shall have an LI indicating that the SDU exactly filled the previous PU, and an LI indicating either that the remainder of the PDU contains padding, or that it contains a piggy-backed STATUS PDU.

The length of the received SDU should be AM\_7\_PayloadSize bytes, and the data content the same as the first AM\_7\_PayloadSize bytes of the transmitted SDU.

#### 7.2.3.5 Reassembly / 7-bit Length Indicators / Reserved LI value

##### 7.2.3.5.1 Definition

The RLC segments and concatenates SDUs into payload units according to the payload unit size configured by RRC. Length indicators are added to allow correct reconstruction of SDUs. The behaviour of the RLC on reception of a reserved LI value has been specified. Incorrect operation of segmentation, concatenation, or coding of length indicators will result in failure of the UE to communicate.

##### 7.2.3.5.2 Conformance requirement

Upon reception of an AMD PDU that contains Length Indicator value "1111100" or "1111101": PDUs with this coding will be discarded by this version of the protocol.

Reference(s)

TS 25.322 clause 9.2.2.8.

7.2.3.5.3 ~~Test purpose~~

To test that PDUs with reserved length indicators are discarded by the receiving RLC.

7.2.3.5.4 ~~Method of test~~

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit length indicator tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

|                                         |       |
|-----------------------------------------|-------|
| Downlink RLC<br>— Missing PDU Indicator | FALSE |
|-----------------------------------------|-------|

These settings apply to both the uplink and downlink DTCH.

Test procedure

- a) The SS transmits three RLC SDUs of size AM\_7\_PayloadSize + 1 bytes. In the second PDU, the SS sets the value of the LI to 1111100. In the third PDU for transmission, the SS sets the value of the second (padding) LI to 1111101.
- b) The SS waits to receive a status report from the UE.
- c) The SS may optionally release the radio bearer.

Expected sequence

| Step | Direction |    | Message             | Comments                    |
|------|-----------|----|---------------------|-----------------------------|
|      | UE        | SS |                     |                             |
| 1    |           |    | RB ESTABLISHMENT    | See generic procedures      |
| 2    |           | ←  | DOWNLINK RLC PDU #0 | SDU 1                       |
| 3    |           | ←  | DOWNLINK RLC PDU #1 | SDU 1 + SDU 2, LI = 1111100 |
| 4    |           | ←  | DOWNLINK RLC PDU #2 | SDU 2 + SDU 3, LI = 1111101 |
| 5    |           | ←  | DOWNLINK RLC PDU #3 | SDU 3 + poll                |
| 6    |           | →  | STATUS PDU          | Nack PDUs 1 and 2           |
| 7    |           |    | RB RELEASE          | Optional step               |

7.2.3.5.5 ~~Test requirements~~

- 1. The UE shall return a STATUS PDU indicating that PDUs with sequence numbers 1 and 2 were incorrectly received.
- 2. No uplink SDUs shall be received.

7.2.3.6 ~~Reassembly / 7-bit Length Indicators / LI value > PDU size~~

7.2.3.6.1 ~~Definition~~

The RLC segments and concatenates SDUs into payload units according to the payload unit size configured by RRC. Length indicators are added to allow correct reconstruction of SDUs. The behaviour of the RLC on reception of an invalid LI value has been specified. Incorrect operation of segmentation, concatenation, or coding of length indicators will result in failure of the UE to communicate.

7.2.3.6.2 Conformance requirement

If the length indicator of a PDU has a value that is larger than the PDU size—the number of octets containing LIs in the PDU—1 and is not one of the predefined values listed in the table of 3GPP TS 25.322 clause 9.2.2.8, the PDU shall be discarded and treated as a missing PDU.

Reference(s)

TS 25.322 clause 11.3.4.5.

7.2.3.6.3 Test purpose

To test that PDUs with length indicators that point beyond the end of the PDU are discarded by the receiving RLC.

7.2.3.6.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit length indicator tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

|                                       |       |
|---------------------------------------|-------|
| Downlink RLC<br>Missing PDU Indicator | FALSE |
|---------------------------------------|-------|

These settings apply to both the uplink and downlink DTCH.

Test procedure

- a) The SS transmits three RLC SDUs of size AM\_7\_PayloadSize + 1 bytes. All the SDUs are concatenated or segmented over successive RLC PDUs. In the third PDU for transmission, the SS sets value of the length indicator to be AM\_7\_PayloadSize + 1 (decimal).
- b) The SS checks the length indicator sizes and values of the RLC PDUs returned on the uplink, and checks the content of the received STATUS PDU.
- c) The SS may optionally release the radio bearer.

Expected sequence

| Step | Direction |    | Message             | Comments                   |
|------|-----------|----|---------------------|----------------------------|
|      | UE        | SS |                     |                            |
| 1    |           |    | RB ESTABLISHMENT    | See generic procedures     |
| 2    | ←         |    | DOWNLINK RLC PDU #0 | SDU 1                      |
| 3    | ←         |    | DOWNLINK RLC PDU #1 | SDU 1 & SDU 2              |
| 4    | ←         |    | DOWNLINK RLC PDU #2 | SDU 2 & SDU 3, with bad LI |
| 5    | ←         |    | DOWNLINK RLC PDU #3 | SDU 3, poll and padding    |
| 6    | →         |    | STATUS PDU          | Nack PDU #2                |
| 7    |           |    | RB RELEASE          | Optional step              |

7.2.3.6.5 Test requirements

The UE shall indicate that the PDU with sequence number 2 was not received.

### ~~7.2.3.7 Segmentation and Reassembly / 15-bit Length Indicators / Padding or Piggy-backed Status~~

#### ~~7.2.3.7.1 Definition~~

~~The RLC segments and concatenates SDUs into payload units according to the payload unit size configured by RRC. Length indicators are added to allow correct reconstruction of SDUs. Incorrect operation of segmentation, concatenation, or coding of length indicators will result in failure of the UE to communicate.~~

#### ~~7.2.3.7.2 Conformance requirement~~

~~The Length Indicator is used to indicate, each time, the end of an SDU occurs in the PU. The Length Indicator points out the number of octets between the end of the last Length Indicator field and up to and including the octet at the end of an SDU segment~~

~~A PDU that has unused space, to be referred to as padding, shall use a Length Indicator to indicate that this space is used as padding unless the padding size is one octet for PDUs with 15-bit LIs. A padding Length Indicator must be placed after any Length Indicators for a PDU.~~

~~Upon reception of a SDU, RLC shall segment the SDU to fit into the fixed size of a PDU. The segments are inserted in the data field of a PDU. A length indicator shall be added to each PDU that includes a border of an SDU, i.e. if a PDU does not contain an LI, the SDU continues in the next PU. The length indicator indicates where the border occurs in the PU. The data after the indicated border can be either a new SDU, padding or piggybacked information. If padding or piggybacking is added another LI shall be added unless the padding size is one octet for PDUs with 15-bit LIs, see clauses 9.2.2.8 and 9.2.2.9.~~

#### ~~Reference(s)~~

~~TS 25.322 clauses 9.2.2.8 and 11.3.2.1.2.~~

#### ~~7.2.3.7.3 Test purpose~~

- ~~1. To test that a large SDU is correctly segmented and padding added at the end.~~
- ~~2. To test that a large SDU is received correctly, whether or not it has piggy-backed status at the end.~~

#### ~~7.2.3.7.4 Method of test~~

##### ~~Initial conditions~~

~~The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 15-bit length indicator tests in clause 7.2.3.1.~~

~~These settings apply to both the uplink and downlink DTCH.~~

~~The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to AM\_15\_PayloadSize + 1 bytes.~~

##### ~~Test procedure~~

- ~~a) The SS transmits an RLC SDU (SDU1) of size AM\_15\_PayloadSize + 1 bytes, and polls the receiver for status.~~
- ~~b) The SS checks the length indicator sizes and values of the RLC PDU returned on the uplink, and checks the length and content of the received RLC SDU.~~
- ~~c) The SS transmits another RLC SDU (SDU2) of size AM\_15\_PayloadSize + 1 bytes, and includes piggy-backed status in the second of the 2 PDUs sent. The SS also polls the receiver for status.~~
- ~~d) The SS checks the length indicator sizes and values of the RLC PDUs returned on the uplink, and checks the length and content of the received RLC SDU.~~
- ~~e) The SS may optionally release the radio bearer.~~

## Expected sequence

| Step | Direction |    | Message          | Comments                                |
|------|-----------|----|------------------|-----------------------------------------|

## 7.2.3.7.5 Test requirements

1. In steps 4 and 5, the UE shall return two RLC PDUs. The first shall have no LIs. The second shall have a LI indicating the PDU contains an SDU boundary after octet 1 of the data field, and the second shall indicate either that the remainder of the PDU contains padding, or that it contains a piggy-backed status PDU.
2. In steps 8 and 9, the UE shall return two RLC PDUs. The first shall have no LIs. The second shall have a LI indicating the PDU contains an SDU boundary after octet 1 of the data field, and the second shall indicate either that the remainder of the PDU contains padding, or that it contains a piggy-backed status PDU.
3. The length and data content of all received SDUs shall should be the same as the transmitted SDUs.

## 7.2.3.8 Segmentation and Reassembly / 15-bit Length Indicators / LI = 0

## 7.2.3.8.1 Definition

The RLC segments and concatenates SDUs into payload units according to the payload unit size configured by RRC. A pre-defined length indicator value is used to indicate when an SDUs ends coincident with the end of the previous PU. Incorrect operation of segmentation, concatenation, or coding of length indicators will result in failure of the UE to communicate.

## 7.2.3.8.2 Conformance requirement

If the PDU is exactly filled with the last segment of a SDU and there is no room for an LI field, an LI field set to only 0's shall be included as the first length indicator in the following PDU.

## Reference(s)

TS 25.322 clause 11.3.2.1.

## 7.2.3.8.3 Test purpose

1. To test that where an SDU exactly fills a PDU, an LI of value zero is placed by the transmitter as the first LI in the next PDU.
2. To test that where an SDU exactly fills a PDU, and an LI of value zero is the first LI in the next PDU, the receiver correctly reassembles the SDU.

#### 7.2.3.8.4 Method of test

##### Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 15-bit length indicator tests in clause 7.2.3.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to AM\_15\_PayloadSize bytes.

##### Test procedure

- a) The SS transmits an RLC SDU of size  $2 * AM\_15\_PayloadSize$  bytes. The SS polls the receiver for status in the last RLC PDU sent.
- b) The SS checks the length indicator sizes and values of the RLC PDUs returned on the uplink, and checks the length and content of the received RLC SDU.
- c) The SS may optionally release the radio bearer.

##### Expected sequence

| Step | Direction |    | Message          | Comments                                       |
|------|-----------|----|------------------|------------------------------------------------|
|      | UE        | SS |                  |                                                |
| 1    |           |    | RB ESTABLISHMENT | See generic procedures                         |
| 2    |           | ←  | DOWNLINK RLC PDU | SDU 1                                          |
| 3    |           | ←  | DOWNLINK RLC PDU | SDU 1                                          |
| 4    |           | ←  | DOWNLINK RLC PDU | LI=0, poll and padding                         |
| 5    |           | →  | UPLINK RLC PDU   | No Lis                                         |
| 6    |           | →  | UPLINK RLC PDU   | (Poll) Check Lis and re-assembled SDU          |
| 6a   |           | →  | STATUS PDU       | <i>If piggy-backed status is not used in 6</i> |
| 7    |           | ←  | STATUS PDU       |                                                |
| 8    |           |    | RB RELEASE       | Optional step                                  |

#### 7.2.3.8.5 Test requirements

The UE shall return two RLC PDUs. The first shall have no LIs. The second shall have an LI indicating that the SDU exactly filled the previous PU, and an LI indicating either that the remainder of the PDU contains padding, or that it contains a piggy-backed STATUS PDU.

The length of the received SDU should be AM\_15\_PayloadSize bytes, and the data content the same as the first AM\_15\_PayloadSize bytes of the transmitted SDU.

#### 7.2.3.9 Segmentation and reassembly / 15-bit Length Indicators / One octet short LI

##### 7.2.3.9.1 Definition

The RLC segments and concatenates SDUs into payload units according to the payload unit size configured by RRC. A pre-defined length indicator value is used to indicate when an SDUs ends one octet short of the end of the previous PU. Incorrect operation of segmentation, concatenation, or coding of length indicators will result in failure of the UE to communicate.

##### 7.2.3.9.2 Conformance requirement

In the case where the last segment of an RLC SDU is one octet short of exactly filling the last RLC PU, and 15-bit Length Indicators are used, the next Length Indicator shall be placed as the first Length Indicator in the next PDU and have value LI=111 1111 1111 1011.

In the case where a PDU contains a 15-bit LI indicating that an SDU ends with one octet left in the PDU, the last octet of this PDU shall be ignored and shall not be filled with the first octet of the next SDU data.

## Reference(s)

TS 25.322 clause 9.2.2.8.

## 7.2.3.9.3 Test purpose

1. To test that where the UE transmits an SDU, which is one byte short of filling a PDU, an LI indicating one byte short is placed as the first LI in the next PDU.
2. To test that where the UE correctly handles a received PDU containing an LI indicating that an SDU ended one byte short of the end of the previous PDU.

## 7.2.3.9.4 Method of test

## Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 15-bit length indicator tests in clause 7.2.3.1.

These settings apply to both the uplink and downlink DTCH.

The radio bearer is placed into UE test loop mode 1 with the UL SDU size set to AM\_15\_PayloadSize – 1 bytes.

## Test procedure

- a) The SS transmits an RLC SDU of size  $(2 * \text{AM\_15\_PayloadSize}) - 1$  bytes. The SS polls the receiver for status in the last RLC PDU sent.
- b) The SS checks the length indicator sizes and values of the RLC PDUs returned on the uplink, and checks the length and content of the received RLC SDU.
- c) The SS may optionally release the radio bearer.

## Expected sequence

| 7    |           | ←  | STATUS PDU       |                                                                                                                                                                                          |
| 8    |           |    | RB RELEASE       | Optional step                                                                                                                                                                            |

## 7.2.3.9.5 Test requirements

1. The UE shall return two RLC PDUs. The first shall have no LIs. The second shall have 2 LIs. The first LI shall be an LI indicating that the SDU was one byte short of filling the previous PDU, and the second an LI indicating that the remainder of the PDU contains padding.
2. The length of the received SDU should be AM\_15\_PayloadSize – 1 bytes, and the data content the same as the first AM\_15\_PayloadSize – 1 bytes of the transmitted SDU.

### 7.2.3.10 ~~Reassembly / 15-bit Length Indicators / Reserved LI value~~

#### 7.2.3.10.1 ~~Definition~~

The RLC segments and concatenates SDUs into payload units according to the payload unit size configured by RRC. Length indicators are added to allow correct reconstruction of SDUs. The behaviour of the RLC on reception of a reserved LI value has been specified. Incorrect operation of segmentation, concatenation, or coding of length indicators will result in failure of the UE to communicate.

#### 7.2.3.10.2 ~~Conformance requirement~~

Upon reception of an AMD PDU that contains Length Indicator value "111111111111100" or "11111111111101"; PDUs with this coding will be discarded by this version of the protocol.

#### Reference(s)

TS 25.322 clause 9.2.2.8.

#### 7.2.3.10.3 ~~Test purpose~~

To test that PDUs with reserved length indicators are discarded by the receiving RLC.

#### 7.2.3.10.4 ~~Method of test~~

#### Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 15-bit length indicator tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

|                                       |       |
|---------------------------------------|-------|
| Downlink RLC<br>Missing PDU Indicator | FALSE |
|---------------------------------------|-------|

These settings apply to both the uplink and downlink DTCH.

#### Test procedure

- The SS transmits three RLC SDUs of size AM\_15\_PayloadSize + 1 bytes. In the second PDU, the SS sets the value of the LI to 111111111111100. In the third PDU for transmission, the SS sets the value of the second (padding) LI to 11111111111101.
- The SS waits to receive a status report from the UE.
- The SS may optionally release the radio bearer.

#### Expected sequence

| Step | Direction |    | Message             | Comments                            |
|------|-----------|----|---------------------|-------------------------------------|
|      | UE        | SS |                     |                                     |
| 1    |           |    | RB ESTABLISHMENT    | See generic procedures              |
| 2    | ←         |    | DOWNLINK RLC PDU #0 | SDU 1                               |
| 3    | ←         |    | DOWNLINK RLC PDU #1 | SDU 1 + SDU 2, LI = 111111111111100 |
| 4    | ←         |    | DOWNLINK RLC PDU #2 | SDU 2 + SDU 3, LI = 11111111111101  |
| 5    | ←         |    | DOWNLINK RLC PDU #3 | SDU 3 + poll                        |
| 6    | →         |    | STATUS PDU          | Nack PDUs 1 and 2                   |
| 7    |           |    | RB RELEASE          | Optional step                       |

### 7.2.3.10.5 ~~Test requirements~~

- ~~1. The UE shall return a STATUS PDU indicating that PDUs with sequence numbers 1 and 2 were incorrectly received.~~
- ~~2. No uplink SDUs shall be received.~~

### 7.2.3.11 ~~Reassembly / 15-bit Length Indicators / LI value > PDU size~~

#### 7.2.3.11.1 ~~Definition~~

~~The RLC segments and concatenates SDUs into payload units according to the payload unit size configured by RRC. Length indicators are added to allow correct reconstruction of SDUs. The behaviour of the RLC on reception of an invalid LI value has been specified. Incorrect operation of segmentation, concatenation, or coding of length indicators will result in failure of the UE to communicate.~~

#### 7.2.3.11.2 ~~Conformance requirement~~

~~If the length indicator of a PDU has a value that is larger than the PDU size—the number of octets containing LIs in the PDU—1 and is not one of the predefined values listed in the table of 3GPP TS 25.322 clause 9.2.2.8, the PDU shall be discarded and treated as a missing PDU.~~

#### Reference(s)

~~TS 25.322 clause 11.3.4.5.~~

#### 7.2.3.11.3 ~~Test purpose~~

~~To test that PDUs with length indicators that point beyond the end of the PDU are discarded by the receiving RLC.~~

#### 7.2.3.11.4 ~~Method of test~~

#### Initial conditions

~~The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 15-bit length indicator tests in clause 7.2.3.1.~~

~~The following RLC parameter values are used in place of the values in clause 7.2.3.1:~~

|                                  |                  |
|----------------------------------|------------------|
| <del>Downlink RLC</del>          |                  |
| <del>Missing PDU Indicator</del> | <del>FALSE</del> |

~~These settings apply to both the uplink and downlink DTCH.~~

#### Test procedure

- ~~a) The SS transmits three RLC SDUs of size AM\_15\_PayloadSize + 1 bytes. All the SDUs are concatenated or segmented over successive RLC PDUs. In the third PDU for transmission, the SS sets value of the length indicator to be AM\_15\_PayloadSize + 1 (decimal).~~
- ~~b) The SS checks the length indicator sizes and values of the RLC PDUs returned on the uplink, and checks the content of the received STATUS PDUs.~~
- ~~c) The SS may optionally release the radio bearer.~~

Expected sequence

| 7    |           |    | RB RELEASE          | Optional step              |

7.2.3.11.5 Test requirements

The UE shall indicate that the PDU with sequence number 2 was not received.

7.2.3.12 Correct use of Sequence Numbering

7.2.3.12.1 Definition

Peer RLC entities use sequence numbering to detect missing PDUs, and for flow control purposes. Incorrect operation of sequence numbering will result in failure of the UE to communicate.

7.2.3.12.2 Conformance requirement

PDUs are sequentially and independently numbered and may have the value 0 through n minus 1 (where n is the modulus of the sequence numbers). The modulus equals  $2^{12}$  for AM...; the sequence numbers cycle through the entire range: 0 through  $2^{12}-1$  for AM.

If the PDU is transmitted for the first time, the Sequence Number field shall be set equal to VT(S) and VT(S) shall be updated

Reference(s)

TS 25.322, clauses 9.4 and 11.3.2.1.

7.2.3.12.3 Test purpose

1. To verify that the UE transmits the first PDU with the Sequence Number field equal to 0.
2. To verify that the UE increments the Sequence Number field according to the number of PDUs transmitted.
3. To verify that the UE wraps the Sequence Number after transmitting the  $2^{12}$ -1th PDU.
4. To verify that the UE receiver accepts PDUs with SNs that wrap around every  $2^{12}$ -1th PDU.

7.2.3.12.4 Method of test

Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit length indicator tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

|                                         |      |
|-----------------------------------------|------|
| Uplink RLC<br>—Transmission window size | 4095 |
| Downlink RLC<br>—Receiving window size  | 4095 |

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to  $(2 * AM\_7\_PayloadSize) - 1$  bytes.

#### Test procedure

- a) The SS sends 2049 RLC SDUs to the UE, each of  $(2 * AM\_7\_PayloadSize) - 1$  bytes. The SS polls for status on each 128<sup>th</sup> RLC PDU and the last PDU transmitted
- b) The SS checks the sequence numbers of the RLC PDUs it receives in the uplink
- c) The SS checks the content of the SDUs it receives from the UE.
- d) The SS may optionally release the radio bearer.

#### Expected sequence

| Step | Direction |    | Message                | Comments                                                                                   |
|------|-----------|----|------------------------|--------------------------------------------------------------------------------------------|
|      | UE        | SS |                        |                                                                                            |

| 12   |           | →  | UPLINK RLC PDU         | SN should be set to 0                                                                      |
| 13   |           | →  | UPLINK RLC PDU         | SN should be set to 1, Poll                                                                |
| 14   |           | ←  | DOWNLINK STATUS PDU    | Optional step                                                                              |
| 15   |           |    | RB RELEASE             |                                                                                            |

#### 7.2.3.12.5 Test requirements

1. The first PDU received should have the SN field set to 0. The second PDU should have the SN field set to 1, and the 4097<sup>th</sup> PDU should have the SN field set to 0.
2. The size and data content of the received SDUs shall match those of the transmitted SDUs.

#### 7.2.3.13 Control of Transmit Window

##### 7.2.3.13.1 Definition

This test is to check that the UE is able to correctly control its RLC transmission window. Correct operation of RLC windowing is critical for acknowledged mode operation.

##### 7.2.3.13.2 Conformance requirement

The transmitter shall not transmit a PDU with  $SN \geq VT(MS)$ .

The receiver is always allowed to change the Tx window size of the peer entity during a connection, but the minimum and the maximum allowed value is given by RRC configuration. The Rx window of the receiver is not changed.

#### Reference(s)

TS 25.322, clauses 9.2.2.11.3 and 9.4.

#### 7.2.3.13.3 ——— Test purpose

To verify that the UE does not transmit PDUs with sequence numbers outside of the transmit window, even when the transmit window size is changed by the receiver.

#### 7.2.3.13.4 ——— Method of test

#### Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit length indicator tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

|                                           |   |
|-------------------------------------------|---|
| Uplink RLC<br>—— Transmission window size | 8 |
|-------------------------------------------|---|

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to AM\_7\_PayloadSize – 1 bytes.

#### Test procedure

Let W be the size of the transmit window.

The length of all transmitted SDUs is set to AM\_7\_PayloadSize – 1 bytes.

- a) The SS transmits  $3 \cdot W$  RLC SDUs to the UE.
- b) The SS checks the RLC SDUs received on the uplink, but does not reply to poll requests from the UE, or transmit STATUS PDUs for any other reason.
- c) After confirming that the UE has stopped transmitting new RLC SDUs for at least  $(2 \cdot W \cdot TTI)$  ms, the SS transmits a STATUS PDU acknowledging all the RLC PDUs received so far.
- d) The SS again checks the RLC SDUs received on the uplink, but does not reply to poll requests from the UE, or transmit further STATUS PDUs for any other reason.
- e) After confirming that the UE has again stopped transmitting new RLC SDUs for at least  $(2 \cdot W \cdot TTI)$  ms, the SS transmits a STATUS PDU acknowledging all the RLC PDUs received so far, and containing a WINDOW command to reduce the UE transmit window size (W) to half its initial size.
- f) The SS checks the RLC SDUs received on the uplink, but does not reply to poll requests from the UE, or transmit STATUS PDUs for any other reason.
- g) After confirming that the UE has stopped transmitting new RLC SDUs for at least  $(2 \cdot W \cdot TTI)$  ms, the SS transmits a STATUS PDU acknowledging all the RLC PDUs received so far.
- h) The SS checks the RLC SDUs received on the uplink.
- i) The SS may optionally release the radio bearer.

NOTE: — Window arithmetic is carried out modulo 4096.

The test procedure is run with the window transmit window size set to the default (8), and the repeated with the transmit window size set to 1536.

NOTE: — The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity.

## 7.2.3.13.5 — Test requirements

From steps 8 to 11, the SDU contents reassembled from the uplink shall match those of the first W transmitted SDUs.

At step 12 there shall be no further transmission on the uplink DTCH whilst the SS is waiting, except for any repeats of the last transmitted PDU.

After step 13, the UE shall resume transmission of the next W SDUs. The contents of these SDUs shall match those of SDUs W+1 to 2\*W sent on the downlink.

At step 18 there shall be no further transmission on the uplink DTCH whilst the SS is waiting, except for any repeats of the last transmitted PDU.

After step 19, the UE shall resume transmission of the next  $W/2$  SDUs. The contents of these SDUs shall match those of SDUs  $2*W+1$  to  $2*W+W/2$  sent on the downlink.

At step 24 there shall be no further transmission on the uplink DTCH whilst the SS is waiting, except for any repeats of the last transmitted PDU.

After step 25, the UE shall resume transmission of the next  $W/2$  SDUs. The contents of these SDUs shall match those of SDUs  $2*W+W/2+1$  to  $3*W$  sent on the downlink.

### 7.2.3.14 Control of Receive Window

#### 7.2.3.14.1 Definition

This test is to check that the UE is able to correctly control its RLC receive window. Correct operation of RLC windowing is critical for acknowledged mode operation.

This test applies to all UE.

#### 7.2.3.14.2 Conformance requirement

Upon reception of a PDU with  $SN < VR(R)$  or  $SN \geq VR(MR)$  the receiver shall discard the PDU.

#### Reference(s)

TS 25.322, clause 11.3.4.2.

#### 7.2.3.14.3 Test purpose

1. To verify that the UE discards PDUs with sequence numbers outside the upper boundary of the receive window.

#### 7.2.3.14.4 Method of test

##### Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit length indicator tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

|                                                                    |            |
|--------------------------------------------------------------------|------------|
| Uplink RLC<br>— Transmission window size                           | 8          |
| Downlink RLC<br>— Missing PDU Indicator<br>— Receiving window size | FALSE<br>8 |

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to  $AM\_7\_PayloadSize - 1$  bytes.

##### Test procedure

Let  $W$  be the size of the receive window.

The length of all transmitted SDUs is set to  $AM\_7\_PayloadSize - 1$  bytes.

- a) The SS transmits  $W$  RLC SDUs to the UE, polling only on the last RLC PDU.
- b) The SS checks the RLC SDUs received on the uplink, and after receiving the STATUS PDU from the UE it transmits a further RLC SDU. The SS sets the sequence number for the associated RLC PDU above the top of the receive window, for example,  $2*W+1$ .

c) The SS transmits a further RLC SDU with the sequence number set to the value of the next sequence number within the receive window.

d) The SS checks the RLC SDUs received on the uplink.

e) The SS may optionally release the radio bearer.

This test case is run once for the default receive window size (8) and again with the receive window size set to 1536.

#### Expected sequence

| Step | Direction |    | Message          | Comments                          |
|------|-----------|----|------------------|-----------------------------------|
|      | UE        | SS |                  |                                   |

| 3    |           | ←  | DOWNLINK RLC PDU | SDU 2, SN = 1                     |
| 4    |           | ←  | ...              | SS continues to transmit RLC SDUs |
| 5    |           | ←  | DOWNLINK RLC PDU | SDU W + Poll, SN = W-1            |
| 6    |           | →  | STATUS PDU       |                                   |
| 7    |           | →  | UPLINK RLC PDU   | SDU 1                             |
| 8    |           | →  | UPLINK RLC PDU   | SDU 2                             |
| 9    |           |    | ...              | UE continues to transmit RLC SDUs |
| 10   |           | →  | UPLINK RLC PDU   | SDU W                             |
| 11   |           | ←  | DOWNLINK RLC PDU | SDU W+1, SN = 2W+1                |
| 12   |           | ←  | DOWNLINK RLC PDU | SDU W+2, SN = W                   |
| 13   |           | →  | UPLINK RLC PDU   | SDU W+2                           |
| 14   |           |    | RB RELEASE       | Optional step                     |

The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity.

#### 7.2.3.14.5 Test requirements

1. The SS shall receive back SDUs 1 to W, and SDU W + 2 only. No other SDUs shall be looped back.

#### 7.2.3.15 Polling for status / Last PDU in transmission queue

##### 7.2.3.15.1 Definition

This case tests that the UE will poll for a status request on the last PDU in its transmission queue when that mode is enabled. Incorrect operation of polling will cause degradation of service, or at worst service failure.

##### 7.2.3.15.2 Conformance requirement

The Polling bit shall be set to 1 if any of following conditions are fulfilled except when the poll prohibit function is used and the timer Timer\_Poll\_Prohibit is active:

1. Last PDU in buffer is used and the last PDU available for transmission is transmitted.

#### Reference

TS 25.322 clause 11.3.2.1.1.

#### 7.2.3.15.3 Test purpose

1. To verify that a poll is performed when only one PDU is available for transmission, and the poll prohibit timer is function is not used.

2. To verify that a poll is performed when only one PDU is available for transmission, and the poll prohibit timer is function is used, but inactive.

#### 7.2.3.15.4 Method of test

##### Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit length indicator tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

| Uplink RLC                      | First run | Second run |
|---------------------------------|-----------|------------|
| —— Polling info                 |           |            |
| —— Timer_poll_prohibit          | disabled  | 200        |
| —— Last transmission PDU poll   | TRUE      | TRUE       |
| —— Last retransmission PDU poll | FALSE     | FALSE      |

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to  $(2 * AM\_7\_PayloadSize) - 1$  bytes.

##### Test procedure

- The SS transmits an RLC SDU of length  $(4 * AM\_7\_PayloadSize) - 1$  bytes to the UE.
- The SS checks the uplink RLC PDUs for a poll for status flag.
- The SS may optionally release the radio bearer.

The test is repeated using the RLC parameters given in the Second run column of the configuration table for the initial conditions.

##### Expected sequence

| Step | Direction |    | Message          | Comments               |
|------|-----------|----|------------------|------------------------|
|      | UE        | SS |                  |                        |
| 1    |           |    | RB ESTABLISHMENT | See generic procedures |
| 2    | ←         |    | DOWNLINK RLC PDU | SDU 1                  |
| 3    | ←         |    | DOWNLINK RLC PDU | SDU 1                  |
| 4    | ←         |    | DOWNLINK RLC PDU | SDU 1                  |
| 5    | ←         |    | DOWNLINK RLC PDU | SDU 1 + Poll           |
| 6    | →         |    | STATUS PDU       |                        |
| 7    | →         |    | UPLINK RLC PDU   | SDU 1                  |
| 8    | →         |    | UPLINK RLC PDU   | SDU 1 + Poll           |
| 9    | ←         |    | STATUS PDU       |                        |
| 10   |           |    | RB RELEASE       | Optional step          |

#### 7.2.3.15.5 Test requirements

The Poll bit shall be set in the AMD PDU header of the PDU returned in step 8.

#### 7.2.3.16 Polling for status / Last PDU in retransmission queue

##### 7.2.3.16.1 Definition

This case tests that the UE will poll for a status request on the last PDU in its retransmission queue when that mode is enabled. Incorrect operation of polling will cause degradation of service, or at worst service failure.

### 7.2.3.16.2 ~~Conformance requirement~~

The Polling bit shall be set to 1 if any of following conditions are fulfilled except when the poll prohibit function is used and the timer Timer\_Poll\_Prohibit is active:

- ~~1) ...~~
- ~~2) Last PDU in retransmission buffer is used and the last PDU to be retransmitted is transmitted.~~

### Reference

~~25.322 clause 11.3.2.1.1.~~

### 7.2.3.16.3 ~~Test purpose~~

- ~~1. To verify that a poll is performed when only one PDU is available for retransmission, and the poll prohibit timer is function is not used.~~
- ~~2. To verify that a poll is performed when only one PDU is available for retransmission, and the poll prohibit timer is function is used, but inactive.~~

### 7.2.3.16.4 ~~Method of test~~

#### Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit length indicator tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

| Uplink RLC                                | First run | Second run |
|-------------------------------------------|-----------|------------|
| <del>— Polling info</del>                 |           |            |
| <del>— Timer_poll_prohibit</del>          | disabled  | 200        |
| <del>— Last transmission PDU poll</del>   | FALSE     | FALSE      |
| <del>— Last retransmission PDU poll</del> | TRUE      | TRUE       |

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to  $(2 * AM\_7\_PayloadSize) - 1$  bytes.

#### Test procedure

- ~~a) The SS transmits an RLC SDU of length  $(4 * AM\_7\_PayloadSize) - 1$  bytes to the UE.~~
- ~~b) The SS checks the uplink RLC PDUs for a poll for status flag.~~
- ~~c) The SS transmits a STATUS PDU negatively acknowledging the first uplink RLC PDU as missing.~~
- ~~d) The SS waits for the RLC PDU to be retransmitted and then checks the uplink RLC PDU for a poll for status flag.~~
- ~~e) The SS may optionally release the radio bearer.~~

The test is repeated using the RLC parameters given in the Second run column of the configuration table for the initial conditions.

## Expected sequence

| Step | Direction |     | Message          | Comments                |
|------|-----------|-----|------------------|-------------------------|
|      | UE        | SS  |                  |                         |
| 1    |           |     | RB-ESTABLISHMENT | See generic procedures  |
| 2    |           | ←   | DOWNLINK RLC-PDU | SDU 1                   |
| 3    |           | ←   | DOWNLINK RLC-PDU | SDU 1                   |
| 4    |           | ←   | DOWNLINK RLC-PDU | SDU 1                   |
| 5    |           | ←   | DOWNLINK RLC-PDU | SDU 1 + Poll            |
| 6    |           | →   | STATUS-PDU       |                         |
| 7    |           | →   | UPLINK RLC-PDU   | SDU 1, SN=0             |
| 8    |           | →   | UPLINK RLC-PDU   | SDU 1, SN=1             |
| 9    |           | ←   | STATUS-PDU       | NAK: SN=0               |
| 10   |           | ... |                  | Wait for retransmission |
| 11   |           | →   | UPLINK RLC-PDU   | SDU 1, SN=0 + Poll      |
| 12   |           | ←   | STATUS-PDU       |                         |
| 13   |           |     | RB-RELEASE       | Optional step           |

## 7.2.3.16.5 Test requirements

The Poll bit shall be set in the AMD-PDU header of the PDU returned in step 11.

## 7.2.3.17 Polling for status / Poll every Poll\_PDU PDUs

## 7.2.3.17.1 Definition

This case tests that the UE will poll for a status request every Poll\_PDU PDUs when that mode is enabled. Incorrect operation of polling will cause degradation of service, or at worst service failure.

## 7.2.3.17.2 Conformance requirement

VT(PDU) should be incremented for both new and retransmitted PDUs. When it reaches Poll\_PDU a new poll is transmitted and the state variable is set to zero.

The Polling bit shall be set to 1 if ... Every Poll\_PDU PDU is used and when VT(PDU)=Poll\_PDU

## Reference

TS 25.322 clauses 9.4, 9.6 and 11.3.2.1.1.

## 7.2.3.17.3 Test purpose

1. To verify that a poll is performed when VT(PDU) reaches Poll\_PDU.
2. To verify VT(PDU) is incremented for both new and retransmitted PDUs.

#### 7.2.3.17.4 ~~Method of test~~

##### ~~Initial conditions~~

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit length indicator tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

|                                           |       |
|-------------------------------------------|-------|
| Uplink RLC                                |       |
| <del>— Polling info</del>                 |       |
| <del>— Poll_PDU</del>                     | 4     |
| <del>— Last transmission PDU poll</del>   | FALSE |
| <del>— Last retransmission PDU poll</del> | FALSE |

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to  $AM\_7\_PayloadSize - 1$  bytes.

##### ~~Test procedure~~

Let the value of Poll\_PDU be P:

- ~~The SS sends  $3 * P - 2$  RLC SDUs of size  $AM\_7\_PayloadSize - 1$  bytes to the UE in PDUs with sequence numbers that are contiguous, starting from zero.~~
- ~~The SS checks the sequence numbers and polling bits of the RLC SDUs returned on the uplink.~~
- ~~The SS sends a STATUS PDU negatively acknowledging two RLC PDUs with a sequence numbers of already received PDUs. The other PDUs are acknowledged as received correctly.~~
- ~~The SS checks the sequence numbers and polling bits of the RLC SDUs returned on the uplink.~~
- ~~The SS terminates the connection.~~

## Expected sequence

| Step | Direction |    | Message          | Comments                          |
|------|-----------|----|------------------|-----------------------------------|

| 5    | →         |    | UPLINK RLC PDU   | SDU 1                             |
| 6    | →         |    | UPLINK RLC PDU   | SDU 2                             |
| 7    | →         |    | ...              | SS continues to receive RLC SDUs  |
| 8    | →         |    | UPLINK RLC PDU   | SDU P, Poll                       |
| 9    | ←         |    | STATUS PDU       | NAK SN=0 and SN=1                 |
| 10   | →         |    | UPLINK RLC PDU   | SDU 1                             |
| 11   | →         |    | UPLINK RLC PDU   | SDU 2                             |
| 12   | →         |    | UPLINK RLC PDU   | SDU P+1                           |
| 13   | →         |    | ...              | SS continues to receive RLC SDUs  |
| 14   | →         |    | UPLINK RLC PDU   | SDU 2P—2, Poll                    |
| 15   | →         |    | ...              | SS continues to receive RLC SDUs  |
| 16   | →         |    | UPLINK RLC PDU   | SDU 3P—2, Poll                    |
| 17   |           |    | RB RELEASE       | Optional step                     |

The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity.

## 7.2.3.17.5 — Test requirements

The SS shall receive a poll for status in the RLC PDUs sent on the uplink in steps 8, 14 and 16 above.

## 7.2.3.18 — Polling for status / Poll every Poll\_SDU SDUs

## 7.2.3.18.1 — Definition

This case tests that the UE will poll for a status request every Poll\_SDU SDUs when that mode is enabled. Incorrect operation of polling will cause degradation of service, or at worst service failure.

## 7.2.3.18.2 — Conformance requirement

The state variable VT(SDU) is used when the poll every Poll\_SDU SDUs function is used. It is incremented with 1 for each SDU that is transmitted. When it reaches Poll\_SDU a new poll is transmitted and the state variable is set to zero. The poll bit should be set in the PDU that contains the last segment of the SDU. The initial value of this variable is 0.

The Polling bit shall be set to 1 if ... Every Poll\_SDU is used and VT(SDU)=Poll\_SDU and the PDU contains the last segment that SDU

## Reference

TS 25.322 clauses 9.4, 9.6 and 11.3.2.1.1.

## 7.2.3.18.3 — Test purpose

1. To verify that a poll is performed when VT(SDU) reaches Poll\_SDU.
2. To verify that the poll is sent in the last PDU of the SDU.

#### 7.2.3.18.4 Method of test

##### Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM-7-bit length indicator tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

|                              |       |
|------------------------------|-------|
| Uplink RLC                   |       |
| — Polling info               |       |
| — Last transmission PDU poll | FALSE |
| — Poll_SDU                   | 1     |

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to  $(4 * AM\_7\_PayloadSize) - 1$  bytes.

Let the value of Poll\_SDU be P.

- The SS sends  $2 * P$  RLC SDUs of size  $AM\_7\_PayloadSize - 1$  bytes to the UE in PDUs with sequence numbers that are contiguous, starting from zero.
- The SS checks the sequence numbers and polling bits of the RLC SDUs returned on the uplink.
- The SS terminates the connection.

The test is repeated with Poll\_SDU set to 64.

##### Expected sequence

| 9    | ←         |    | STATUS PDU       |                                                                           |
| 10   | →         |    | UPLINK RLC PDU   | SDU P+1 Expanded to $(4 * AM\_7\_PayloadSize) - 1$ bytes by test function |
| 11   | →         |    | UPLINK RLC PDU   |                                                                           |
| 12   | →         |    | ...              | SS continues to receive RLC SDUs                                          |
| 13   | →         |    | UPLINK RLC PDU   | SDU 2P, Poll                                                              |
| 14   |           |    | RB RELEASE       | Optional step                                                             |

The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity.

#### 7.2.3.18.5 Test requirements

The UE shall return uplink PDUs that contain polls for status in sequence numbers  $4 * P - 1$  and  $8 * P - 1$ . No other PDUs should poll for status.

### 7.2.3.19 ~~————~~ Polling for status / Timer triggered polling (Timer\_Poll\_Periodic)

#### 7.2.3.19.1 ~~————~~ Definition

This case tests that the UE will poll for a status request every Timer\_Poll\_Periodic ms when that mode is enabled. Incorrect operation of polling will cause degradation of service, or at worst service failure.

#### 7.2.3.19.2 ~~————~~ Conformance requirement

Each time the timer expires, the timer is restarted and a poll is triggered (either by the transmission of a PDU which was not yet sent, or by a retransmission). If there is no PDU to be transmitted and all PDUs have already been acknowledged, a poll shall not be triggered and the timer shall only be restarted. The value of the timer is signalled by RRC.

The Polling bit shall be set to 1 if ... timer-based polling is used and Timer\_Poll\_Periodic has expired.

#### Reference

TS 25.322 clauses 9.5 and 11.3.2.1.1.

#### 7.2.3.19.3 ~~————~~ Test purpose

1. To verify that the UE polls the SS in the next PDU to be transmitted or retransmitted each time the Timer\_Poll\_Periodic timer expires.
2. To verify that if there is no PDU to be transmitted, and all the PDUs have already been acknowledged, the timer is restarted, but no poll is sent.

#### 7.2.3.19.4 ~~————~~ Method of test

##### Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit length indicator tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

|                               |           |            |
|-------------------------------|-----------|------------|
| Uplink RLC                    | First run | Second run |
| —— Polling info               |           |            |
| —— Last transmission PDU poll | FALSE     | FALSE      |
| —— Timer_poll_periodic        | 100       | 2000       |

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to AM\_7\_PayloadSize – 1 bytes.

##### Test procedure

Let T be the value of Timer\_Poll\_Periodic:

- a) The SS waits for at least 2\*T ms before starting any transmissions, and monitors the uplink.
- b) The SS sends  $T * 0.1$  RLC SDUs of size AM\_7\_PayloadSize – 1 bytes to the UE.
- c) The SS waits for the first PDU to be received with the P bit set, records the arrival time ( $T_1$ ) and responds with a STATUS PDU normally.
- d) The SS waits for the reception of the next PDU with the P bit set, records the arrival time ( $T_2$ ), and then transmits a STATUS PDU reporting that none of the uplink PDUs were correctly received, except for the PDU with  $SN = \text{ceil}(2T/TTI)$  which is acknowledged.

- e) The SS waits for the next PDU received with the P bit set, and records the arrival time ( $T_3$ ).
- f) The SS waits for the reception of the next PDU with the P bit set and records the arrival time ( $T_4$ ).
- g) The SS may optionally release the radio bearer.

#### Expected sequence

| Step | Direction |    | Message          | Comments                                          |
|------|-----------|----|------------------|---------------------------------------------------|
|      | UE        | SS |                  |                                                   |

| 14   |           | →  | UPLINK RLC PDU   |                                                   |
| 15   |           | →  | ...              | SS continues to receive RLC PDUs                  |
| 16   |           | →  | UPLINK RLC PDU   | Poll: Note $T_3$                                  |
| 17   |           | ←  | STATUS PDU       | Normal                                            |
| 18   |           | →  | ...              | SS continues to receive RLC PDUs                  |
| 19   |           | →  | UPLINK RLC PDU   | Poll: Note $T_4$                                  |
| 20   |           |    | RB RELEASE       | Optional step                                     |

The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity.

#### 7.2.3.19.5 Test requirements

Time  $T_2 - T_1$  should be  $T$ .

Time  $T_3 - T_2$  should be  $T$ .

Time  $T_4 - T_3$  should be  $T$ .

#### 7.2.3.20 Polling for status / Polling on Poll\_Window% of transmission window

##### 7.2.3.20.1 Definition

This case tests that the UE will poll for a status request when it has reached Poll\_Window% of the transmission window, when that mode is enabled. Incorrect operation of polling will cause degradation of service, or at worst service failure.

This test applies to all UE.

##### 7.2.3.20.2 Conformance requirement

The Polling bit shall be set to 1 if ... Window based polling is used, , and  $J \geq \text{Poll\_Window}$ , where J is:

—  $J \geq \text{Poll\_Window}$ , where  $J$  is the window transmission percentage defined by

$$J = \frac{(4096 + VT(S) - VT(A)) \bmod 4096}{VT(WS)} * 100,$$

where the constant 4096 is the modulus for AM described in 3GPP TS 25.322 clause 9.4.

## Reference

25.322 clauses 9.6 and 11.3.2.1.1.

### 7.2.3.20.3 Test purpose

1. To verify that the UE polls the SS once the window-based polling equation is satisfied.

### 7.2.3.20.4 Method of test

#### Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit length indicator tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

|                              |       |
|------------------------------|-------|
| Uplink RLC                   |       |
| — Polling info               |       |
| — Last transmission PDU poll | FALSE |
| — Poll_Window                | 50    |
| — Transmission window size   | 8     |
| Downlink RLC                 |       |
| — Receiving window size      | 8     |

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to  $\text{AM\_7\_PayloadSize} - 1$  bytes.

#### Test procedure

Let  $W$  be the size of the transmission window.

- a) The SS transmits  $(W/2) + 2$  RLC SDUs of size  $\text{AM\_7\_PayloadSize} - 1$  bytes.
- b) The SS checks the sequence number of the first uplink PDU to be received with the P bit set.
- c) The SS sends another RLC SDU of size  $\text{AM\_7\_PayloadSize} - 1$  bytes.
- d) The SS checks the sequence number of the next uplink PDU to be received with the P bit set.
- e) The SS shall wait until no more new PDUs are received.
- f) The SS sends a STATUS PDU acknowledging the first five RLC PDUs received, followed by two further RLC SDUs.
- g) The SS checks the sequence number of the next uplink PDU to be received with the P bit set.
- h) The SS may optionally release the radio bearer.

## Expected sequence

| Step | Direction |    | Message          | Comments                                     |
|------|-----------|----|------------------|----------------------------------------------|
|      | UE        | SS |                  |                                              |
| 1    | ←         |    | DOWNLINK RLC PDU | SDU 1                                        |

| 3    | ←         |    | DOWNLINK RLC PDU | SDU W/2+2                                    |
| 4    | →         |    | UPLINK RLC PDU   | SDU 1                                        |
| 5    | →         |    | UPLINK RLC PDU   | SDU 2                                        |
| 6    | →         |    | ...              | SS continues to receive RLC PDUs             |
| 7    | →         |    | UPLINK RLC PDU   | SN = W/2-1, Poll                             |
| 8    | ←         |    | DOWNLINK RLC PDU |                                              |
| 9    | →         |    | UPLINK RLC PDU   | SN = W/2, Poll                               |
| 9a   |           |    |                  | SS waits until no more new PDUs are received |
| 10   | ←         |    | STATUS PDU       | ACK SN 0 to 4                                |
| 11   | ←         |    | DOWNLINK RLC PDU |                                              |
| 12   | ←         |    | DOWNLINK RLC PDU |                                              |
| 13   | →         |    | UPLINK RLC PDU   | SN = W/2+3                                   |
| 14   | →         |    | UPLINK RLC PDU   | SN = W/2+4, Poll                             |
| 15   |           |    | RB RELEASE       | Optional step                                |

The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity.

## 7.2.3.20.5 Test requirements

The SS shall receive RLC PDUs with the P bit set in PDUs with sequence numbers of 3, 4, and 8. No other PDUs should have their P bits set.

## 7.2.3.21 Polling for status / Operation of Timer\_Poll timer / Timer expiry

## 7.2.3.21.1 Definition

This case tests that the UE will retransmit a poll for status if it does not receive a STATUS PDU within Timer\_Poll ms after a poll for status is transmitted. Incorrect operation of polling will cause degradation of service, or possible service failure.

## 7.2.3.21.2 Conformance requirement

The Polling bit shall be set to 1 if any of following conditions are fulfilled except when the poll prohibit function is used and the timer Timer\_Poll\_Prohibit is active.

...

3) Poll timer is used and timer Timer\_Poll has expired.

Upon expiry of the Timer\_Poll the sender shall retransmit the poll. The poll can be retransmitted in either a new PDU or a retransmitted PDU.

## Reference

TS 25.322 clauses 11.3.2.1.1 and 11.3.4.1.

## 7.2.3.21.3 Test purpose

1. To verify that if the timer expires and no STATUS PDU containing an acknowledgement or negative acknowledgement of the AMD PDUs up to that which triggered the timer has been received, the receiver is polled once more.

#### 7.2.3.21.4 Method of test

##### Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit length indicator tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

| Uplink RLC                   | First-run | Second-run |
|------------------------------|-----------|------------|
| — Polling info               |           |            |
| — Last transmission PDU poll | FALSE     | FALSE      |
| — Timer_poll                 | 500       | 1000       |
| — Timer_Poll_Periodic        | 2000      | 2000       |

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to AM\_7\_PayloadSize – 1 bytes.

##### Test procedure

Let T be the value of the Timer\_Poll\_Periodic timer.

- The SS transmits at least  $2 * T / TTI$  SDUs of size AM\_7\_PayloadSize – 1 bytes.
- The SS receives PDUs from the UE, and notes the time on receiving the first PDU with the P bit set, but does not respond. This time will be recorded as  $T_1$ .
- The SS continues to receive PDUs from the UE and notes the time on receipt of the next PDU with the P bit set. This time will be recorded as  $T_2$ .
- The SS may optionally release the radio bearer.

The test case is run once for each set of initial RLC parameters.

##### Expected sequence

| Step | Direction |    | Message          | Comments                           |
|------|-----------|----|------------------|------------------------------------|
|      | UE        | SS |                  |                                    |
| 1    |           | ←  | DOWNLINK RLC PDU | SDU 1                              |
| 2    |           | ←  | ...              | SS continues to transmit RLC SDUs  |
| 3    |           | ←  | DOWNLINK RLC PDU | SDU ceil(2T/TTI)                   |
| 4    | →         |    | UPLINK RLC PDU   | SDU 1                              |
| 5    | →         |    | UPLINK RLC PDU   | SDU 2                              |
| 6    |           | →  | ...              | SS continues to receive RLC PDUs   |
| 7    | →         |    | UPLINK RLC PDU   | SN = ceil(T/TTI), Poll: Note $T_1$ |
| 8    | →         |    | UPLINK RLC PDU   | SN = ceil(T/TTI)+1                 |
| 9    |           | →  | ...              | SS continues to receive RLC PDUs   |
| 10   | →         |    | UPLINK RLC PDU   | Poll: Note $T_2$                   |
| 11   |           |    | RB RELEASE       | Optional step                      |

The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity.

### 7.2.3.21.5 ~~Test requirements~~

For the first run, the measured time  $T_2 - T_1$  should be 500 ms.

For the second run, the measured time  $T_2 - T_1$  should be 1000 ms.

### 7.2.3.22 ~~Polling for status / Operation of Timer\_Poll timer / Stopping Timer\_Poll timer~~

#### 7.2.3.22.1 ~~Definition~~

This case tests that the UE will stop the Timer\_Poll timer if it receives a STATUS PDU within Timer\_Poll ms after a poll for status is transmitted. Incorrect operation of polling will cause degradation of service, or possible service failure.

#### 7.2.3.22.2 ~~Conformance requirement~~

The timer is stopped when receiving a STATUS PDU that contains an acknowledgement of all AMD PDUs with SN up to and including VT(S)-1 at the time the poll was submitted to lower layer, or when a negative acknowledgement of the same PDU is received.

#### Reference

TS 25.322 clause 9.5.

#### 7.2.3.22.3 ~~Test purpose~~

1. ~~To verify that the Timer\_Poll timer is stopped when receiving a STATUS PDU that acknowledges all AMD PDUs with SN up to and including VT(S)-1 at the time the poll was transmitted.~~

#### 7.2.3.22.4 ~~Method of test~~

#### Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit length indicator tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

| Uplink RLC<br><del>— Polling info</del> | First run | Second run |
|-----------------------------------------|-----------|------------|
| <del>— Last transmission PDU poll</del> | FALSE     | FALSE      |
| <del>— Timer_poll</del>                 | 500       | 1000       |
| <del>— Timer_Poll_Periodic</del>        | 2000      | 2000       |

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to AM\_7\_PayloadSize – 1 bytes.

#### Test procedure

Let T be the value of the Timer\_Poll\_Periodic timer.

- a) The SS transmits at least  $2 * T / TTI$  SDUs of size AM\_7\_PayloadSize – 1 bytes.
- b) The SS receives PDUs from the UE, and notes the time on receiving the first PDU with the P bit set. This time will be recorded as  $T_1$ .
- c) The SS sends a STATUS PDU acknowledging all the PDUs up to and including the PDU carrying the poll request.
- d) The SS continues to receive PDUs from the UE and notes the time on receipt of the next PDU with the P bit set. This time will be recorded as  $T_2$ .

e) The SS may optionally release the radio bearer.

The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity.

#### 7.2.3.22.5 Test requirements

For both execution runs, the measured time  $T_2 - T_1$  should be 2000 ms.

#### 7.2.3.23 Polling for status / Operation of Timer\_Poll timer / Restart of the Timer\_Poll timer

##### 7.2.3.23.1 Definition

This case tests that the UE will restart the Timer\_Poll timer if another poll request is transmitted whilst the timer is running. Incorrect operation of polling will cause degradation of service, or possible service failure.

This test applies to all UE.

##### 7.2.3.23.2 Conformance requirement

If a new poll is sent when the timer is running it is restarted, with a new value of  $VT(S)-1$ .

#### Reference

TS 25.322 clause 9.5.

##### 7.2.3.23.3 Test purpose

1. To verify that if a new poll is sent when the timer is running it is restarted.

##### 7.2.3.23.4 Method of test

#### Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit length indicator tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

|                              |       |
|------------------------------|-------|
| Uplink RLC                   |       |
| — Polling info               |       |
| — Last transmission PDU poll | FALSE |
| — Timer_poll                 | 200   |
| — Poll_PDU                   | 8     |

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to AM\_7\_PayloadSize – 1 bytes.

### Test procedure

Let T be the value of the Timer\_Poll timer.

- The SS starts transmission of at least  $2 * \text{Poll\_PDU} + \text{ceil}(T / \text{TTI})$  numbers of SDUs of size AM\_7\_PayloadSize – 1 bytes.
- Whilst transmitting, the SS receives PDUs from the UE, and notes the time on receiving the third PDU with the P bit set. This time will be recorded as  $T_1$ .
- The SS sends a STATUS PDU acknowledging all the PDUs received so far.
- The SS continues to receive PDUs from the UE and notes the time on receipt of the next or fourth PDU with the P bit set. This time will be recorded as  $T_2$ .
- The SS may optionally release the radio bearer.

| 14   | →         |    | ...              | SS continues to receive RLC PDUs                                                                               |
| 15   | →         |    | UPLINK RLC PDU   | SN = $2 * \text{Poll\_PDU} + \text{ceil}(T / \text{TTI}) - 1$ , 4th Poll, Timer_Poll expired: Note T2          |
| 16   |           |    | RB RELEASE       | Optional step                                                                                                  |

The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity.

### 7.2.3.23.5 ~~Test requirements~~

The measured time  $T_2 - T_1$  should be 200 ms.

## 7.2.3.24 ~~Polling for status / Operation of timer Timer\_Poll\_Prohibit~~

### 7.2.3.24.1 ~~Definition~~

This case tests that the UE will not send a poll request within Timer\_Poll\_Prohibit ms of a previous poll request when this mode of operation is enabled. Incorrect operation of polling will cause degradation of service, or possible service failure.

### 7.2.3.24.2 ~~Conformance requirement~~

This timer is only used when the poll prohibit function is used. It is used to prohibit transmission of polls within a certain period. The timer shall be started when the successful or unsuccessful transmission of a PDU containing a poll is indicated by lower layer (in UE) or a PDU containing a poll is submitted to lower layer (in UTRAN). The prohibit time is calculated from the time a PDU containing a poll is submitted to lower layer until the timer has expired. A poll shall be delayed until the prohibit time expires if a poll is triggered during the prohibit time. Only one poll shall be transmitted when the prohibit time expires even if several polls were triggered during the prohibit time. This timer will not be stopped by a received STATUS PDU.

The Polling bit shall be set to 1 if any of conditions in 3GPP TS 25.322 clause 11.3.2.1.1 are fulfilled except when the poll prohibit function is used and the timer Timer\_Poll\_Prohibit is active.

### Reference

TS 25.322 clauses 9.5 and 11.3.2.1.1.

### 7.2.3.24.3 ~~Test purpose~~

1. To verify that no poll is transmitted if one or several polls are triggered when the Timer\_Poll\_Prohibit timer is active and has not expired.
2. To verify that the UE polls only once after Timer\_Poll\_Prohibit expires even though triggered several times during the prohibit time.

### 7.2.3.24.4 ~~Method of test~~

### Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit length indicator tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

|                              |       |
|------------------------------|-------|
| Uplink RLC                   |       |
| — Polling info               |       |
| — Timer_poll_prohibit        | 500   |
| — Last transmission PDU poll | FALSE |
| — Poll_PU                    | 8     |
| — Poll_Window                | 50    |
| — Timer_poll_periodic        | 400   |
| — Transmission window size   | 32    |
| Downlink RLC                 |       |
| — Receiving window size      | 32    |

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to AM\_7\_PayloadSize – 1 bytes.

## Test procedure

Let  $T$  be the value of the `Timer_Poll_Prohibit` timer.

- a) The SS starts transmission of at least  $(2 \cdot \text{Poll\_PDU}) + \text{ceil}(T / \text{TTI})$  SDUs of size `AM_7_PayloadSize` – 1 bytes.
- b) Whilst transmitting, the SS receives PDUs from the UE, and notes the time on receiving the first PDU with the P bit set. This time will be recorded as  $T_1$ .
- c) The SS does not respond to the poll request.
- d) The SS continues to receive PDUs from the UE and notes the time on receipt of the next PDU with the P bit set. This time will be recorded as  $T_2$ .
- e) The SS may optionally release the radio bearer.

## Expected sequence

| 6    | →         |    | ...              | SS continues to receive RLC PDUs                                                    |
| 7    | →         |    | UPLINK RLC PDU   | $\text{SN} = \text{Poll\_PDU} - 1$ , Poll: Note $T_1$                               |
| 8    | →         |    | ...              | SS continues to receive RLC PDUs                                                    |
| 9    | →         |    | UPLINK RLC PDU   | $\text{SN} = \text{ceil}(\text{Timer\_poll\_periodic} / \text{TTI}) - 1$ , No Poll  |
| 10   | →         |    | UPLINK RLC PDU   | $\text{SN} = (\text{Transmission Window Size} / 2) - 1$ , No Poll                   |
| 11   | →         |    | ...              | SS continues to receive RLC PDUs                                                    |
| 12   | →         |    | UPLINK RLC PDU   | $\text{SN} = \text{Poll\_PDU} + \text{ceil}(T / \text{TTI}) - 1$ , Poll: Note $T_2$ |
| 13   |           |    | RB RELEASE       | Optional step                                                                       |

The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity.

### 7.2.3.24.5 Test requirements

1. The measured time  $T_2 - T_1$  should be 500 ms.
2. Only one poll shall be received from the UE in step 12.
3. After step 12 no further poll shall be received from the UE for the next 500 ms.

### 7.2.3.25 Receiver Status Triggers / Detection of missing PDUs

#### 7.2.3.25.1 Definition

This case tests that the UE transmits a status report whenever it detects that a PDU is missing, if this mode of operation is enabled. Incorrect operation of status reporting will cause degradation of service, or possible service failure.

~~7.2.3.25.2 Conformance requirement~~

~~The receiver in any of following cases initiates this procedure ... Detection of missing PDUs is used and a missing PDU is detected.~~

~~Reference~~

~~TS 25.322 clause 11.5.2.~~

~~7.2.3.25.3 Test purpose~~

- ~~1. To verify that a status report is transmitted if there are one or more missing PDUs.~~

~~7.2.3.25.4 Method of test~~~~Initial conditions~~

~~The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit length indicator tests in clause 7.2.3.1.~~

~~These settings apply to both the uplink and downlink DTCH.~~

~~Test procedure~~

- ~~a) The SS transmits 7 SDUs, each of size AM\_7\_PayloadSize – 1 bytes, in PDUs with consecutive sequence numbers starting from 0, followed by 5 SDUs in PDUs with consecutive sequence numbers starting from 8, followed by an SDU in a PDU with a sequence number of 15.~~
- ~~b) While transmitting, the SS monitors the uplink for STATUS PDUs.~~
- ~~c) The SS may optionally release the radio bearer~~

~~Expected sequence~~

| Step | Direction |    | Message          | Comments                          |

| 10   |           | →  | STATUS PDU       |                                   |
| 11   |           |    | RB RELEASE       | Optional step                     |

~~7.2.3.25.5 Test requirements~~

~~A STATUS PDU should be received from the UE after step 4, indicating that the PDU with sequence number 7 was missing.~~

~~A STATUS PDU should be received from the UE after step 9, indicating that the PDUs with sequence numbers 7, 13 and 14 were missing.~~

### ~~7.2.3.26 Receiver Status Triggers / Operation of timer Timer\_Status\_Periodic~~

#### ~~7.2.3.26.1 Definition~~

~~This case tests that the UE transmits a status report every Timer\_Status\_Periodic ms when this mode of operation is enabled. Incorrect operation of status reporting will cause degradation of service, or possible service failure.~~

#### ~~7.2.3.26.2 Conformance requirement~~

~~The timer is started when the successful or unsuccessful transmission of the last STATUS PDU in a status report is indicated by lower layer.~~

~~The receiver in any of following cases initiates this procedure ... The timer based STATUS transfer is used and the timer Timer\_Status\_Periodic has expired.~~

#### ~~Reference~~

~~TS 25.322 clauses 9.5, 9.7.2 and 11.5.2.~~

#### ~~7.2.3.26.3 Test purpose~~

- ~~1. To verify that a status report is transmitted each time the Timer\_Status\_Periodic timer expires.~~

#### ~~7.2.3.26.4 Method of test~~

##### ~~Initial conditions~~

~~The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit length indicator tests in clause 7.2.3.1.~~

~~The following RLC parameter values are used in place of the values in clause 7.2.3.1:~~

|                                                   |                |
|---------------------------------------------------|----------------|
| <del>Downlink RLC<br/>Timer_STATUS_periodic</del> | <del>100</del> |
|---------------------------------------------------|----------------|

~~These settings apply to both the uplink and downlink DTCH.~~

##### ~~Test procedure~~

~~Let T be the value of the Timer\_STATUS\_periodic timer.~~

- ~~a) The SS starts transmission of at least  $\text{ceil}(2 * T / \text{TTI})$  SDUs of size AM\_7\_PayloadSize - 1 bytes.~~
- ~~b) The SS waits to receive a STATUS PDU and notes the time. This time will be recorded as T<sub>1</sub>.~~
- ~~c) The SS waits to receive a second STATUS PDU and notes the time. This time will be recorded as T<sub>2</sub>.~~
- ~~d) The SS may optionally release the radio bearer.~~

## Expected sequence

| Step | Direction |    | Message          | Comments                           |

| 7    |           | ←  | DOWNLINK RLC PDU | SDU $\text{ceil}(2T/\text{TTI})-1$ |
| 8    |           | →  | STATUS PDU       | Note T <sub>2</sub>                |
| 9    |           |    | RB RELEASE       | Optional step                      |

## 7.2.3.26.5 Test requirements

The measured time  $T_2 - T_1$  should be 100 ms.

## 7.2.3.27 Receiver Status Triggers / Operation of timer Timer\_Status\_Prohibit

## 7.2.3.27.1 Definition

This case tests that the UE transmits a status report every Timer\_Status\_Prohibit ms when this mode of operation is enabled. Incorrect operation of status reporting will cause degradation of service, or possible service failure.

## 7.2.3.27.2 Conformance requirement

The sending of a status report shall be delayed, if ... STATUS prohibit is used and the timer Timer\_Status\_Prohibit is active.

The status report shall be transmitted after the Timer\_Status\_Prohibit has expired. The receiver shall send only one status report, even if there are several triggers when the timer is active. The rules for when the timer Timer\_status\_Prohibit is active are defined in 3GPP TS 25.322 clause 9.5.

## Reference

TS 25.322 clause 11.5.2.

## 7.2.3.27.3 Test purpose

1. To verify that a status report is not transmitted while the Timer\_Status\_Prohibit timer is active.
2. To verify that only one status report is sent on the expiry of the Timer\_Status\_Prohibit timer if several triggers occur while it is active.

## 7.2.3.27.4 Method of test

## Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit length indicator tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

|                        |     |
|------------------------|-----|
| Downlink RLC           |     |
| —Timer_Status_Prohibit | 500 |
| —Timer_STATUS_periodic | 200 |

These settings apply to both the uplink and downlink DTCH.

#### Test procedure

Let  $T_{pro}$  be the value of the Timer\_Status\_Prohibit timer, and  $T_{per}$  be the value of the Timer\_Status\_Periodic timer.

- The SS starts transmission of at least  $\text{ceil}(2 * T_{pro} / TTI) + \text{ceil}(T_{per} / TTI)$  SDUs of size  $AM\_7\_PayloadSize - 1$  bytes.
- Whilst transmitting, the SS monitors the uplink for a STATUS PDU and notes the time. This time will be recorded as  $T_1$ .
- The SS sets the P bit in a downlink PDU transmitted within the next  $\text{floor}(T_{pro} / TTI)$  PDUs.
- The SS waits to receive a second STATUS PDU and notes the time. This time will be recorded as  $T_2$ .
- The SS may optionally release the radio bearer.

#### Expected sequence

| Step | Direction |    | Message          | Comments                                                      |
|------|-----------|----|------------------|---------------------------------------------------------------|
|      | UE        | SS |                  |                                                               |
| 1    |           | ←  | DOWNLINK RLC PDU | SDU 1                                                         |
| 2    |           | ←  | ...              | SS continues to transmit RLC SDUs                             |
| 3    |           | ←  | DOWNLINK RLC PDU | SDU $\text{ceil}(T_{per} / TTI)$                              |
| 4    |           | →  | STATUS PDU       | Note $T_1$                                                    |
| 5    |           | ←  | DOWNLINK RLC PDU | Poll                                                          |
| 6    |           | ←  | ...              | SS continues to transmit RLC PDUs                             |
| 7    |           | ←  | DOWNLINK RLC PDU | SDU $\text{ceil}(T_{pro} / TTI) + \text{ceil}(T_{per} / TTI)$ |
| 8    |           | →  | STATUS PDU       | Note $T_2$                                                    |
| 9    |           |    | RB RELEASE       | Optional step                                                 |

#### 7.2.3.27.5 Test requirements

- The measured time  $T_2 - T_1$  should be 500 ms.
- Only one STATUS PDU shall be received in step 8, after Timer\_Status\_Prohibit expiry.

#### 7.2.3.28 Status reporting / Abnormal conditions / Reception of LIST SUFI with Length set to zero

##### 7.2.3.28.1 Definition

Peer RLCs use STATUS PDUs to manage flow control and retransmission. On a STATUS report PDU with an invalid LIST SUFI the RLC must behave as specified. Incorrect behaviour may result in degradation of QoS, or failure of the UE to communicate.

##### 7.2.3.28.2 Conformance requirement

The LENGTH field of the LIST SUFI is defined as:

The number of  $(SN_i, L_i)$  pairs in the super-field of type LIST. The value "0000" is invalid and the list is discarded.

## Reference

TS 25.322 clause 9.2.2.11.4.

### 7.2.3.28.3 ~~Test purpose~~

To verify that if a STATUS PDU is received with a LIST SUFI and the LENGTH field is set to "0000" that the list is discarded.

### 7.2.3.28.4 ~~Method of test~~

#### Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit length indicator tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

|                           |    |
|---------------------------|----|
| Uplink RLC                |    |
| <del>— Polling info</del> |    |
| <del>— Poll_PDU</del>     | 84 |

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to  $(2 * \text{Poll\_PDU} * \text{AM\_7\_PayloadSize}) - 1$  bytes.

#### Test procedure

- ~~The SS sends an SDU of size  $(2 * \text{Poll\_PDU} * \text{AM\_7\_PayloadSize}) - 1$ .~~
- ~~The SS monitors the received (looped back) PDUs for a poll request.~~
- ~~The SS responds to the poll request by transmitting a STATUS PDU with a LIST SUFI. The list contains an indication that two PDUs were not received, but has the length field set to "0000".~~
- ~~The SS continues to monitor the received PDUs to verify that none are retransmitted.~~
- ~~The SS may optionally release the radio bearer.~~

## Expected sequence

| Step                                                                                       | Direction |    | Message          | Comments                              |
|--------------------------------------------------------------------------------------------|-----------|----|------------------|---------------------------------------|
|                                                                                            | UE        | SS |                  |                                       |

| NOTE: — The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. |           |    |                  |                                       |

## 7.2.3.28.5 — Test requirements

No RLC PDUs should be retransmitted by the UE.

## 7.2.3.29 — Timer based discard, with explicit signalling / Expiry of Timer\_Discard

## 7.2.3.29.1 — Definition

This case tests that when the transmission of an SDU exceeds a time limit, the SDU is discarded by the sender, and the discard is signalled to the receiver. SDU discard is used to keep network delays within limits, and incorrect operation will effect the quality of service.

## 7.2.3.29.2 — Conformance requirement

If the transmission time exceeds a predefined value for a SDU in acknowledged mode RLC, this SDU is discarded in the transmitter and a Move Receiving Window (MRW) command is sent to the receiver so that AMD PDUs carrying that SDU are discarded in the receiver and the receiver window is updated accordingly.

This procedure is initiated by the sender when the following conditions are fulfilled ... Timer based SDU discard with explicit signalling is used, and Timer\_Discard expires for an SDU.

This status report is sent even if the 'STATUS prohibit' is used and the timer 'Timer\_Status\_Prohibit' is active.

The STATUS PDUs have higher priority than data PDUs.

## Reference

TS 25.322 clauses 9.7.3.1, 11.3.4.3.1 and 11.6.

## 7.2.3.29.3 — Test purpose

1. To verify that if the transmission time for an SDU exceeds Timer\_Discard, the SDU is discarded in the transmitter and the MRW procedure is invoked.
2. ...

#### 7.2.3.29.4 Method of test

##### Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit length indicator tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

|                                       |      |
|---------------------------------------|------|
| Uplink RLC                            |      |
| —Transmission RLC discard             |      |
| —Timer based with explicit signalling |      |
| —Timer_Discard                        | 1000 |

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to AM\_7\_PayloadSize—1 bytes.

##### Test procedure

- The SS sends at least 2 RLC SDUs of size AM\_7\_PayloadSize—1 bytes.
- The SS notes the time that the first RLC PDU is received on the uplink. This time will be recorded as  $T_1$ .
- The SS checks the RLC PDUs received on the uplink and responds to all poll requests with a STATUS PDU, negatively acknowledging the RLC PDU with sequence number 0, and positively acknowledging all other RLC PDUs received.
- The SS monitors received STATUS PDUs for the presence of a MRW-SUFI, noting the time it was received. This time will be recorded as  $T_2$ .
- The SS responds to the MRW command with a correct MRW-ACK.
- Void.
- The SS may optionally release the radio bearer.

##### Expected sequence

| Step | Direction |    | Message          | Comments                                         |

| 7    |           | →  | ...              | SS continues to receive RLC PDU with SN=0 + Poll |
| 8    |           | ←  | ...              | STATUS PDU, SS continues to NAK PDU with SN=0    |
| 9    |           | →  | STATUS PDU       | MRW Command: Note $T_2$                          |
| 10   |           | ←  | STATUS PDU       | MRW-ACK                                          |
| 11   |           |    | RB RELEASE       | Optional step                                    |

#### 7.2.3.29.5 Test requirements

- The measured time  $T_2 - T_1$  should be 1000 ms.

2. The STATUS PDU received in step 9 shall contain a MRW-SUFI indicating that the first three PDUs should be discarded, and that the data indicated in the fourth PDU by the first LI should also be discarded.

### ~~7.2.3.29a~~ ~~Timer based discard, with explicit signalling / Expiry of Timer\_Discard when Timer\_STATUS\_prohibit is active~~

#### ~~7.2.3.29a.1~~ ~~Definition~~

~~This case tests that when the transmission of an SDU exceeds a time limit, the SDU is discarded by the sender, and the discard is signalled to the receiver while the Timer\_STATUS-Prohibit is active. SDU discard is used to keep network delays within limits, and incorrect operation will effect the quality of service.~~

~~This test applies to all UE.~~

#### ~~7.2.3.29a.2~~ ~~Conformance requirement~~

~~If the transmission time exceeds a predefined value for a SDU in acknowledged mode RLC, this SDU is discarded in the transmitter and a Move-Receiving Window (MRW) command is sent to the receiver so that AMD-PDUs carrying that SDU are discarded in the receiver and the receiver window is updated accordingly.~~

~~Upon expiry of Timer\_Discard the sender shall initiate the SDU discard with explicit signalling procedure.~~

~~This status report is sent even if the 'STATUS-prohibit' is used and the timer 'Timer\_Status-Prohibit' is active.~~

~~The STATUS PDUs have higher priority than data PDUs.~~

#### ~~Reference~~

~~TS 25.322 clauses 9.7.3.1, 11.3.4.3.1 and 11.6.~~

#### ~~7.2.3.29a.3~~ ~~Test purpose~~

~~1....~~

- ~~2. To verify that the MRW procedure status report is sent even if the 'STATUS-prohibit' is used and the timer 'Timer\_Status-Prohibit' is active.~~

#### ~~7.2.3.29a.4~~ ~~Method of test~~

~~TBD~~

#### ~~7.2.3.29a.5~~ ~~Test requirements~~

~~TBD~~

### ~~7.2.3.30~~ ~~Timer based discard, with explicit signalling / Obsolete MRW\_ACK~~

#### ~~7.2.3.30.1~~ ~~Definition~~

~~This case tests the ability of the receiving AM-RLC entity to handle obsolete information that can be received during a failure of the SDU discard procedure. SDU discard is used to keep network delays within limits, and incorrect operation will effect the quality of service.~~

#### ~~7.2.3.30.2~~ ~~Conformance requirement~~

~~If Timer\_MRW expires before the discard procedure is terminated, the MRW-SUFI shall be retransmitted, VT(MRW) is incremented by one and Timer\_MRW restarted. MRW-SUFI shall be exactly the same as previously transmitted even though some new SDUs would have been discarded during the running of the Timer\_MRW.~~

~~The received MRW\_ACK shall be discarded in the following cases:~~

1. ~~...~~
2. ~~If the SN\_ACK field in the received MRW\_ACK < SN\_MRW\_LENGTH in the transmitted MRW SUFI.~~
3. ~~If the SN\_ACK field in the received MRW\_ACK is equal to the SN\_MRW\_LENGTH in the transmitted MRW SUFI and the N field in the received MRW\_ACK is not equal to the N\_LENGTH field in the transmitted MRW SUFI~~
4. ~~If the SN\_ACK field in the received MRW\_ACK > SN\_MRW\_LENGTH in the transmitted MRW SUFI and the N field in the received MRW\_ACK is not equal to zero.~~

## Reference

TS 25.322 clauses 11.6.5 and 11.6.6.3.

### 7.2.3.30.3 ~~Test purpose~~

1. ~~To verify that the MRW SUFI is retransmitted if Timer\_MRW expires before a valid MRW\_ACK is received.~~
2. ~~To verify that the MRW\_ACK is discarded if the SN\_ACK field < SN\_MRW\_LENGTH.~~
3. ~~To verify that the MRW\_ACK is discarded if the N field is not equal to N\_LENGTH transmitted in the MRW SUFI.~~
4. ~~To verify that the MRW\_ACK is discarded if the N field is not zero and the SN\_ACK field > SN\_MRW\_LENGTH in the transmitted MRW SUFI.~~

### 7.2.3.30.4 ~~Method of test~~

#### Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit length indicator tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

|                                                  |      |
|--------------------------------------------------|------|
| Uplink RLC                                       |      |
| <del>—Transmission RLC discard</del>             |      |
| <del>—MaxDAT Retransmissions</del>               |      |
| <del>—MaxDAT</del>                               | 40   |
| <del>—Timer based with explicit signalling</del> |      |
| <del>—Timer_MRW</del>                            | 500  |
| <del>—Timer_Discard</del>                        | 1000 |
| <del>—MaxMRW</del>                               | 4    |

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to AM\_7\_PayloadSize — 1 bytes.

#### Test procedure

- a) ~~The SS sends at least 2 RLC SDUs of size AM\_7\_PayloadSize — 1 bytes.~~
- b) ~~The SS checks the RLC PDUs received on the uplink and responds to all poll requests with a STATUS PDU, negatively acknowledging the RLC PDU with sequence number 0, and positively acknowledging all other RLC PDUs received.~~
- c) ~~The SS monitors received STATUS PDUs for the presence of a MRW SUFI, noting the time it was received. This time will be recorded as T<sub>1</sub>.~~
- d) ~~The SS responds to the MRW command with an MRW\_ACK with the SN\_ACK field set to SN\_MRW\_LENGTH — 1.~~
- e) ~~The SS monitors received STATUS PDUs for another MRW SUFI, noting the time it was received. This time will be recorded as T<sub>2</sub>.~~

- f) The SS responds to the MRW command with an MRW\_ACK with the SN\_ACK field set to SN\_MRW<sub>LENGTH</sub> and the N field set to (N<sub>LENGTH</sub> + 1) modulo 4.
- g) The SS monitors received STATUS PDUs for another MRW SUFI, noting the time it was received. This time will be recorded as T<sub>3</sub>.
- h) The SS responds to the MRW command with an MRW\_ACK with the SN\_ACK field set to SN\_MRW<sub>LENGTH</sub> + 1, and the N field set to 1.
- i) The SS monitors received STATUS PDUs for another MRW SUFI.
- j) The SS responds to the MRW command with a correct MRW\_ACK.
- k) The SS may optionally release the radio bearer.

#### Expected sequence

| Step | Direction |    | Message          | Comments                                                    |
|------|-----------|----|------------------|-------------------------------------------------------------|
|      | UE        | SS |                  |                                                             |
| 1    | ←         |    | DOWNLINK RLC PDU | SDU 1                                                       |
| 2    | ←         |    | DOWNLINK RLC PDU | SDU 2                                                       |
| 3    | →         |    | UPLINK RLC PDU   | SDU 1                                                       |
| 4    | →         |    | UPLINK RLC PDU   | SDU 2 + Poll                                                |
| 5    | ←         |    | STATUS PDU       | NAK SN=0                                                    |
| 6    | →         |    | ...              | SS continues to receive RLC PDU with SN=0 + Poll            |
| 7    | ←         |    | ...              | STATUS PDU, SS continues to NAK PDU with SN=0               |
| 8    | →         |    | STATUS PDU       | MRW Command: Note T <sub>1</sub>                            |
| 9    | ←         |    | STATUS PDU       | MRW_ACK, SN_ACK = SN_MRW <sub>LENGTH</sub> - 1              |
| 10   | →         |    | STATUS PDU       | MRW Command: Note T <sub>2</sub>                            |
| 11   | ←         |    | STATUS PDU       | MRW_ACK, N field = (N <sub>LENGTH</sub> + 1) modulo 4       |
| 12   | →         |    | STATUS PDU       | MRW Command: Note T <sub>3</sub>                            |
| 13   | ←         |    | STATUS PDU       | MRW_ACK, SN_ACK = SN_MRW <sub>LENGTH</sub> + 1, N field = 1 |
| 14   | →         |    | STATUS PDU       | MRW Command                                                 |
| 15   | ←         |    | STATUS PDU       | MRW_ACK                                                     |
| 16   |           |    | RB RELEASE       | Optional step                                               |

#### 7.2.3.30.5 Test requirements

1. The measured time T<sub>2</sub> - T<sub>1</sub> should be 500 ms.
2. The measured time T<sub>3</sub> - T<sub>2</sub> should be 500 ms.
3. The STATUS PDUs received in steps 8, 10, 12 and 14 shall contain an identical MRW SUFI.

#### 7.2.3.31 Timer based discard, with explicit signalling / Failure of MRW procedure

##### 7.2.3.31.1 Definition

This case tests that if a failure occurs during the signalling of an SDU discard to the receiver, the retransmission protocol operates correctly. SDU discard is used to keep network delays within limits, and incorrect operation will effect the quality of service.

##### 7.2.3.31.2 Conformance requirement

If the number of retransmission of a MRW command (i.e. VT(MRW)) reaches MaxMRW, an error indication shall be passed to RRC and RESET procedure shall be performed.

## Reference

TS 25.322 clause 11.6.6.2.

### 7.2.3.31.3 Test purpose

1. To verify that when the number of retransmissions of a MRW command reaches MaxMRW, an error indication is passed to RRC and RESET procedure is initiated.

### 7.2.3.31.4 Method of test

#### Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit length indicator tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

|                                                                                                 |              |
|-------------------------------------------------------------------------------------------------|--------------|
| Uplink RLC                                                                                      |              |
| — Transmission RLC discard                                                                      |              |
| — MaxDAT Retransmissions                                                                        |              |
| — MaxDAT                                                                                        | 40, See Note |
| — Timer based with explicit signalling                                                          |              |
| — Timer_MRW                                                                                     | 500          |
| — Timer_Discard                                                                                 | 500          |
| — MaxMRW                                                                                        | 4            |
| — Polling info                                                                                  |              |
| — Poll_PDU                                                                                      | 2            |
| Note: — MaxDat is set to 40 to avoid SDU discard during the test due to $VT(DAT) \geq MaxDAT$ . |              |

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to  $(2 * AM\_7\_PayloadSize) - 1$  bytes.

#### Test procedure

- a) The SS sends 4 RLC SDUs of size  $(2 * AM\_7\_PayloadSize) - 1$  bytes.
- b) The SS checks the RLC PDUs received on the uplink and responds to all poll requests as follows: While the VR(H) is 4 or less, with a STATUS PDU, negatively acknowledging the RLC PDU with sequence number 0, and positively acknowledging all other RLC PDUs received. While the VR(H) is greater than 4, a STATUS PDU negatively acknowledging RLC PDUs with sequence numbers 0 and 4, and positively acknowledging all others.
- c) The SS monitors received STATUS PDUs for the presence of an MRW SUFI, noting the time it was received. This time will be recorded as  $T_1$ .
- d) The SS makes no response, but monitors for the next STATUS PDU containing an MRW SUFI, noting the time it was received. This time will be recorded as  $T_2$ .
- e) The SS sends a STATUS PDU with an MRW\_ACK indicating the discard of SDU 1 moving VR(R) to 4.
- f) The SS monitors for further STATUS PDUs containing an MRW SUFI, or for a RESET PDU. The SS records the number of STATUS PDUs it received with MRW SUFI before it received the RESET PDU.
- g) The SS checks any RLC SDUs reassembled from the uplink.
- h) The SS may optionally release the radio bearer.

## Expected sequence

| Step | Direction |    | Message          | Comments                         |
|------|-----------|----|------------------|----------------------------------|
|      | UE        | SS |                  |                                  |
| 1    | ←         |    | DOWNLINK RLC PDU | SDU 1                            |
| 2    | ←         |    | DOWNLINK RLC PDU | SDU 1                            |

| 6    | →         |    | UPLINK RLC PDU   | SDU 1                            |
| 7    | →         |    | ...              | SS continues to receive RLC PDUs |
| 8    | →         |    | UPLINK RLC PDU   | Poll                             |
| 9    | ←         |    | STATUS PDU       | NAK SN=0                         |
| 10   | →         |    | ...              | SS continues to receive RLC PDUs |
| 11   | →         |    | UPLINK RLC PDU   | Poll                             |
| 12   | ←         |    | STATUS PDU       | NAK SN=0, 4                      |
| 13   | →         |    | ...              | SS continues to receive RLC PDUs |
| 14   | →         |    | STATUS PDU       | MRW Command: Note T <sub>1</sub> |
| 15   | →         |    | STATUS PDU       | MRW Command: Note T <sub>2</sub> |
| 16   | ←         |    | STATUS PDU       | MRW_ACK indicating VR(R) = 4     |
| 17   | →         |    | STATUS PDU       | MRW Command, discard SDU 3       |
| 18   | →         |    | STATUS PDU       | MRW Command                      |
| 19   | →         |    | STATUS PDU       | MRW Command                      |
| 20   | →         |    | STATUS PDU       | MRW Command                      |
| 21   | →         |    | RESET PDU        |                                  |
| 22   | ←         |    | RESET ACK PDU    |                                  |
| 23   |           |    | RB RELEASE       | Optional step                    |

The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity.

## 7.2.3.31.5 — Test requirements

The measured time T<sub>2</sub>—T<sub>4</sub> should be 500 ms.

After step 17, the SS should detect 3 repeats of the MRW command sent in step 17 before a RESET PDU is sent.

## 7.2.3.32 — SDU discard after MaxDAT number of retransmissions

## 7.2.3.32.1 — Definition

This case tests that if a PDU is unsuccessfully transmitted MaxDAT times, the SDU it carries, and therefore all other associated PDUs, are discarded by the transmitter and receiver. This mode of SDU discard is used to minimize data loss, and incorrect operation will effect the quality of service.

## 7.2.3.32.2 — Conformance requirement

There is one VT(DAT) for each PDU and it is incremented each time the PDU is transmitted. The initial value of this variable is 0.

If SDU discard after MaxDAT number of retransmission is used and VT(DAT) ≥ MaxDAT for any PDU, the sender shall initiate the SDU discard with explicit signalling procedure for the SDUs to which the PDU with VT(DAT) ≥ MaxDAT belongs.

## Reference

TS 25.322 clauses 9.4 and 11.3.4.4.

### 7.2.3.32.3 Test purpose

1. To verify that if  $VT(DAT) \geq MaxDAT$  for any PDU the sender initiates the SDU discard with explicit signalling procedure.

### 7.2.3.32.4 Method of test

#### Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit length indicator tests in clause 7.2.3.1.

These settings apply to both the uplink and downlink DTCH.

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to  $(2 * AM\_7\_PayloadSize) - 1$  bytes.

#### Test procedure

- a) The SS sends 2 RLC SDUs of size  $(2 * AM\_7\_PayloadSize) - 1$  bytes.
- b) The SS checks the RLC PDUs received on the uplink and responds to all poll requests with a STATUS PDU negatively acknowledging the RLC PDU with sequence number 0, and positively acknowledging all other RLC PDUs received.
- c) The SS monitors received STATUS PDUs for the presence of an MRW-SUFI.
- d) The SS responds with a STATUS PDU containing a valid MRW-ACK-SUFI.
- e) The SS checks any RLC SDUs reassembled from the uplink.
- f) The SS may optionally release the radio bearer.

#### Expected sequence

| Step | Direction |    | Message          | Comments                         |

| 5    |           | →  | UPLINK RLC PDU   | SDU 1                            |
| 6    |           | →  | ...              | SS continues to receive RLC PDUs |
| 7    |           | →  | UPLINK RLC PDU   | SDU 2, Poll                      |
| 8    |           | ←  | STATUS PDU       | NAK SN=0                         |
| 9    |           | →  | UPLINK RLC PDU   | Retransmit SN=0, Poll            |
| 10   |           | ←  | STATUS PDU       | NAK SN=0                         |
| 11   |           | →  | UPLINK RLC PDU   | Retransmit SN=0, Poll            |
| 12   |           | ←  | STATUS PDU       | NAK SN=0                         |
| 13   |           | →  | UPLINK RLC PDU   | Retransmit SN=0, Poll            |
| 14   |           | ←  | STATUS PDU       | NAK SN=0                         |
| 15   |           | →  | STATUS PDU       | MRW Command                      |
| 16   |           | ←  | STATUS PDU       | MRW-ACK                          |
| 17   |           |    | RB RELEASE       | Optional step                    |

NOTE: The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity.

### 7.2.3.32.5 Test requirements

The uplink RLC PDU with sequence number 0 shall be retransmitted three times, then the SS shall detect a STATUS PDU with an MRW command.

### ~~7.2.3.33 Operation of the RLC Reset procedure / UE Originated~~

#### ~~7.2.3.33.1 Definition~~

~~This case tests that when an unrecoverable protocol error occurs the UE will initiate and perform the RLC Reset procedure. Incorrect operation of this procedure may cause loss of service.~~

#### ~~7.2.3.33.2 Conformance requirement~~

~~The procedure shall be initiated when a protocol error occurs.~~

~~The sender sends the RESET PDU when it is in data transfer ready state and enters reset pending state. The sender shall start the timer Timer\_RST and increase VT(RST) with 1.~~

~~The RSN field shall indicate the sequence number of the RESET PDU. This sequence number is incremented every time a new RESET PDU is transmitted, but not when a RESET PDU is retransmitted.~~

~~Upon reception of a RESET PDU the receiver shall respond with a RESET ACK PDU. The receiver resets the state variables to their initial value and resets configurable parameters to their configured value. Both the transmitter and receiver side of the AM RLC entity are reset. All RLC PDUs in the AM RLC receiver shall be discarded. The RLC SDUs in the AM RLC transmitter that were transmitted before the reset shall be discarded.~~

~~When a RESET PDU is received, the receiver shall set the HFN (DL HFN when the RESET is received in UE or UL HFN when the RESET is received in UTRAN) equal to the HFNI field in the received RESET PDU.~~

~~Upon reception of a RESET ACK the Timer\_RST shall be stopped. The sender resets the state variables to their initial value and resets configurable parameters to their configured value. The sender shall enter data transfer ready state.~~

~~Upon expiry of Timer\_RST the sender shall retransmit the RESET PDU and increase VT(RST) with 1.~~

~~If VT(RST) becomes larger or equal to MaxRST the RRC layer shall be informed.~~

#### ~~Reference~~

~~TS 25.322 clause 11.4.~~

#### ~~7.2.3.33.3 Test purpose~~

- ~~1. To verify that the Reset procedure is initiated when a protocol error occurs.~~
- ~~2. To verify that the sender resets state variables to their initial value and resets configurable parameters to their configured value.~~
- ~~3. To verify that RSN is updated correctly.~~
- ~~4. To verify operation of Timer\_RST.~~

#### ~~7.2.3.33.4 Method of test~~

##### ~~Initial conditions~~

~~The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit length indicator tests in clause 7.2.3.1.~~

~~The following RLC parameter values are used in place of the values in clause 7.2.3.1:~~

|                                                        |  |
|--------------------------------------------------------|--|
| Uplink RLC<br>—Transmission RLC discard<br>—No discard |  |
|--------------------------------------------------------|--|

~~These settings apply to both the uplink and downlink DTCH.~~

The Radio Bearer is placed in UE test loop mode 1 with the UL SDU size set to  $(2 * AM\_7\_PayloadSize) - 1$  bytes.

#### Test procedure

- a) ~~The SS sends 2 RLC SDUs of size  $(2 * AM\_7\_PayloadSize) - 1$  bytes.~~
- b) ~~The SS checks the RLC PDUs received on the uplink and responds to all poll requests with a STATUS PDU negatively acknowledging the RLC PDU with sequence number 0, and positively acknowledging all other RLC PDUs received.~~
- c) ~~The SS notes the time that the RESET PDU is received. This time will be recorded as  $T_1$ . The SS notes the value of the RSN bit.~~
- d) ~~The SS makes no response, and notes the time that the next RESET PDU is received. This time will be recorded as  $T_2$ . The SS notes the value of the RSN bit.~~
- e) ~~The SS sends a RESET ACK PDU with the RSN bit set to the same value as received in the RESET PDU received in step d).~~
- f) ~~The SS sends an RLC SDU of size  $(2 * AM\_7\_PayloadSize) - 1$  bytes.~~
- g) ~~The SS checks the RLC PDUs received on the uplink and responds to all poll requests with a STATUS PDU negatively acknowledging the RLC PDU with sequence number 0, and positively acknowledging all other RLC PDUs received.~~
- h) ~~The SS notes the value of the RSN bit of the RESET PDU received.~~
- i) ~~The SS sends a RESET ACK PDU with the RSN bit set to the value received in the RESET PDU in step c (the incorrect value).~~
- j) ~~The SS waits to receive another RESET PDU and checks the RSN bit.~~
- k) ~~The SS sends a RESET ACK PDU with the correct RSN bit.~~
- l) ~~The SS checks any RLC SDU received on the uplink.~~
- m) ~~The SS may optionally release the radio bearer.~~

## Expected sequence

| Step | Direction |    | Message          | Comments                         |

| 27   | →         |    | UPLINK RLC PDU   | Retransmit SN=0, Poll            |
| 28   | ←         |    | STATUS PDU       | NAK SN=0                         |
| 29   | →         |    | RESET PDU        | Check RSN                        |
| 30   | ←         |    | RESET ACK PDU    | RSN = 0                          |
| 31   | →         |    | RESET PDU        | Check RSN                        |
| 32   | ←         |    | RESET ACK PDU    | RSN = 1                          |
| 33   |           |    | RB RELEASE       | Optional step                    |

NOTE: — The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity.

## 7.2.3.33.5 — Test requirements

1. The measured time  $T_2 - T_1$  should be 500 ms.
2. In steps 20 to 21 the SS shall receive an RLC SDU with contents that match the third RLC SDU sent to the UE. The first RLC PDU containing that SDU shall have sequence number 0.
3. The RSN bit of the first and second RESET PDUs received should be set to 0. The RSN bit of the third and fourth RESET PDU should be set to 1.

## 7.2.3.34 — Operation of the RLC Reset procedure / UE Terminated

## 7.2.3.34.1 — Definition

This case tests that when an unrecoverable protocol error occurs the UE responds correctly to the RLC Reset procedure initiated by the network. Incorrect operation of this procedure may cause loss of service.

## 7.2.3.34.2 — Conformance requirement

Upon reception of a RESET PDU the receiver shall respond with a RESET ACK PDU. The receiver resets the state variables to their initial value and resets configurable parameters to their configured value. Both the transmitter and receiver side of the AM RLC entity are reset. All RLC PDUs in the AM RLC receiver shall be discarded. The RLC SDUs in the AM RLC transmitter that were transmitted before the reset shall be discarded.

## Reference

TS 25.322 clause 11.4.3.

## 7.2.3.34.3 Test purpose

1. To verify that upon reception of a RESET PDU the receiver responds with a RESET ACK PDU.
2. To verify that the receiver resets its state variables to their initial value and resets configurable parameters to their configured value.

## 7.2.3.34.4 Method of test

## Initial conditions

The generic procedure for Radio Bearer establishment (clause 7.1.3 of TS 34.108) is executed, with all the parameters as specified in the procedure, with the exception that the default Radio Access Bearer is replaced with the RAB defined for AM 7-bit length indicator tests in clause 7.2.3.1.

The following RLC parameter values are used in place of the values in clause 7.2.3.1:

|                           |  |
|---------------------------|--|
| Uplink RLC                |  |
| —Transmission RLC discard |  |
| —No discard               |  |

These settings apply to both the uplink and downlink DTCH.

## Test procedure

- a) The SS sends 2 RLC SDUs of size (2 \* AM\_7\_PayloadSize) — 1 bytes, and polls on the last PDU sent.
- b) The SS checks the STATUS PDUs received on the uplink until both SDUs have been acknowledged.
- c) The SS transmits a RESET PDU.
- d) The SS monitors the uplink for a RESET ACK PDU.
- e) The SS sends an RLC SDU of size (2 \* AM\_7\_PayloadSize) — 1 bytes, and polls on the last PDU sent.
- f) The SS checks for STATUS PDUs received on the uplink until the SDU has been acknowledged.
- g) The SS may optionally release the radio bearer.

## Expected sequence

| Step                                                                                       | Direction |    | Message          | Comments             |
|--------------------------------------------------------------------------------------------|-----------|----|------------------|----------------------|
|                                                                                            | UE        | SS |                  |                      |
| 1                                                                                          |           | ←  | DOWNLINK RLC PDU | SDU 1                |
| 2                                                                                          |           | ←  | DOWNLINK RLC PDU | SDU 1                |
| 3                                                                                          |           | ←  | DOWNLINK RLC PDU | SDU 2                |
| 4                                                                                          |           | ←  | DOWNLINK RLC PDU | SDU 2, poll          |
| 5                                                                                          |           | →  | STATUS PDU       | ACK SN=0, 1, 2 and 3 |
| 6                                                                                          |           | ←  | RESET PDU        |                      |
| 7                                                                                          |           | →  | RESET ACK PDU    |                      |
| 8                                                                                          |           | ←  | DOWNLINK RLC PDU | SDU 3                |
| 9                                                                                          |           | ←  | DOWNLINK RLC PDU | SDU 3, poll          |
| 10                                                                                         |           | →  | STATUS PDU       | ACK SN=0 and 1       |
| 11                                                                                         |           |    | RB RELEASE       | Optional step        |
| NOTE: — The UPLINK and DOWNLINK PDU flows may overlap, but are shown separate for clarity. |           |    |                  |                      |

## 7.2.3.34.5 Test requirements

1. The SS shall receive a RESET ACK PDU in step 7.

2. The SS shall receive a STATUS PDU in step 10 acknowledging for the third RLC SDU transmitted with PDUs starting at SN=0.

## ~~7.3 PDCCP~~

### ~~7.3.1 General~~

#### ~~7.3.1.1 General assumptions~~

If not otherwise mentioned, the same procedures as used in RRC test specification (TS 34.123-1) or in the Generic procedure (TS 34.108) applies to reach Initial conditions for PDCCP testing. In this test description, common test sequences for PDCCP (clause 7.3.4.1) are defined and are applied either as preamble or post amble to establish or release a Packet Switched (PS) connection for a test case.

If not explicitly described, the same message contents and settings are applied as described in the RRC test description default settings.

Detailed IP header compression coding mechanism as well as mechanism related error recovery and packet reordering described in IETF RFC 2507 are not verified.

For PDCCP testing TCP/IP data type and UDP/IP data type as Non-TCP/IP data types are applied for IP data.

An UE supporting IP Header compression protocol RFC 2507 shall be capable to store a header compression context of at least 512 bytes (Integer).

It shall be possible to reconfigure PDCCP settings while UE test loop mode 1. With the applied test method using UE test loop mode 1, the UE as Originator and Receiver of PDCCP SDUs (concurrent transmission) is tested.

#### ~~7.3.1.2 Common Test sequences and Default message contents for PDCCP~~

##### ~~General~~

The settings and parameter used in the "Common Test sequences for PDCCP" are described in the "Default PDCCP Message Contents". If not explicitly shown there, the message contents are identical with the default contents for the same message type of layer 3 messages for RRC tests, to establish a packet switched session or connection. The contents of test case specific message parameters are described in the test case (Expected Sequence). If not explicitly shown, default settings and parameter are used as message content for all Common Test sequences.

##### ~~7.3.1.2.1 Common Test sequences for PDCCP~~

###### ~~7.3.1.2.1.1 Setup a UE terminated PS session using IP Header compression in AM RLC (using UE Test loop test mode 1)~~

##### ~~Initial Conditions~~

UE is in Idle mode.

##### ~~Test procedure~~

After having received the System Information, the SS starts to setup a RRC connection. After connection establishment and Radio Bearer Setup, the UE test loop mode 1 is activated and the UE test loop mode 1 is closed.

## Expected Sequence

## Specific message contents

The contents of test case specific message parameters are described in the test case (Expected Sequence). Default contents of messages are described in the clause Default PDCP Message Contents.

7.3.1.2.1.2 ——— Setup a UE terminated PS session using IP Header compression in UM RLC (using UE Test loop test mode 1)

## Initial Conditions

UE is in idle mode.

## Test procedure

After having received the System Information, the SS starts to setup a RRC connection. After connection establishment and Radio Bearer Setup, the UE test loop mode 1 is activated and the UE test loop mode 1 is closed.

## Expected Sequence

## Specific message contents

The contents of test case specific message parameters are described in the test case (Expected Sequence) Default contents of messages are described in the clause Default PDCP Message Contents.

### 7.3.1.2.1.3 Deactivate a UE terminated PS session using IP Header compression (using UE test loop mode 1)

## Initial Conditions

UE is in connected mode, a UE test loop mode 1 for PDCP is activated, and the UE loop mode 1 is "closed".

## Test procedure

The UE opens the UE test loop mode 1, deactivates the test mode and the PS session, releases the Radio Bearer and enters Idle mode.

## Specific message contents

The contents of test case specific message parameter is described in the test case (Expected Sequence). Default contents of messages are described in the clause Default PDCP Message Contents.

### 7.3.1.2.2 Default PDCP Message Contents

This clause contains the default values of RRC messages used for PDCP testing, other than those specified in TS 34.108 clauses 6 and 9, and default values of PDCP messages. Unless indicated otherwise in specific test cases, only PDCP related specific message contents are described here which shall be transmitted by the system simulator in RRC messages, and which are required to be received from the UE under test. If not explicitly described, the message contents are identical with the default contents for the same message type of layer 3 messages for RRC tests, to establish a packet switched session or connection.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements which are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

In this clause, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

#### Default SYSTEM INFORMATION:

NOTE:—SYSTEM INFORMATION BLOCK TYPE 1 (except for PLMN type "GSM-MAP"), SYSTEM INFORMATION BLOCK TYPE 8, SYSTEM INFORMATION BLOCK TYPE 9, SYSTEM INFORMATION BLOCK TYPE 10, SYSTEM INFORMATION BLOCK TYPE 14, SYSTEM INFORMATION BLOCK TYPE 15 and INFORMATION BLOCK TYPE 16 messages are not used.

#### Contents of CONNECTION SETUP message:

| Information Element                                     | Value/remark              |
|---------------------------------------------------------|---------------------------|
| Capability update requirement                           |                           |
| ———> UE radio access capability update requirement      | TRUE                      |
| ———> System specific capability update requirement list | UE only supports 1 system |

#### Contents of CONNECTION SETUP COMPLETE message:

## 7.3.2 IP Header Compression and PID assignment

### 7.3.2.1 UE in RLC AM

#### 7.3.2.1.1 Transmission of uncompressed Header

##### 7.3.2.1.1.1 Definition and applicability

Applicable for all UEs supporting RLC AM and a Radio Bearer as described in the Common Test Sequences. The UE shall be capable to deal with TCP/IP and UDP/IP data packets with uncompressed IP header.

##### 7.3.2.1.1.2 Conformance requirement

Packet Data Convergence Protocol shall perform the following functions:

—...

—transfer of user data. Transmission of user data means that PDCP receives PDCP SDU from the NAS and forwards it to the RLC layer and vice versa;

—PDCP shall be able (...) to handle them with a correct header compression protocol and furthermore to indicate the type of the packet within a certain protocol.

—PID value 0 is reserved permanently for no compression

#### Reference(s)

TS 25.323 clause 5.

TS 25.323 clause 5.1.1.

##### 7.3.2.1.1.3 Test purpose

The test case consists of two test procedures:

The first test procedure verifies, that the "PDCP Data" PDU is used for uncompressed IP header packets, if no IP header compression is configured by higher layers. The second test procedure verifies, that the "PDCP No header" PDU is used for uncompressed IP header packets, if no IP header compression is configured by higher layers.

1. To verify, that the UE transmits and receives in acknowledged mode (RLC AM) TCP/IP and UDP/IP data packets without IP header compression as configured by higher layers.

2. To verify, that PID assignment rules are correctly applied, if usage of "PDCP Data" PDU are negotiated, i.e. the UE shall recognize PID value = 0 for a received TCP/IP and UDP/IP data packet and it shall use PID=0 to transmit IP data packets, if no IP header compression is negotiated. If usage of "PDCP No Header" PDU is negotiated, no PID assignment is used for transmitting and receiving TCP/IP and UDP/IP data packets.

##### 7.3.2.1.1.4 Method of test

#### Initial conditions

UE is in idle mode.

Test procedure 1: Usage of "PDCP Data" PDU and no IP header compression is configured.

Test procedure 2: No IP header compression is configured.

~~Related ICS/IXIT Statement(s)~~

~~Support of PS— Yes/No~~

~~PIXIT: Test\_PDCP\_TCP/IP\_Packet1~~

~~PIXIT: Test\_PDCP\_UDP/IP\_Packet1~~

~~Test procedure 1: Transmission of uncompressed IP header packets using PDCP Data PDU~~

- ~~a) The SS setups a packet switched session including radio bearer and UE test loop mode 1 in RLC AM using Common test procedures for mobile terminated PS switched sessions. Usage of "PDCP Data" PDU has been configured by higher layers.~~
- ~~b) The SS sends a TCP/IP data packet with uncompressed IP Header.~~
- ~~c) After having received the TCP/IP data packet, the PDCP entity of the UE shall recognize the PDCP PDU type and shall handle the received data packet with the appropriate decoding method. Then it forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its PDCP configuration using PDCP Data PDU.~~
- ~~d) The SS receives and decodes the TCP/IP data packet. The decoded data packet shall be identical with the data as sent before.~~
- ~~e) Step b) to d) shall be repeated by using a UDP/IP data packet with uncompressed IP Header.~~

~~The SS deactivates the UE test loop mode and terminates the connection.~~

~~Expected sequence~~

**Test procedure 2: Transmission of uncompressed IP header packets using No Header PDU**

- a) The SS setups a packet-switched session including radio bearer and UE test loop mode 1 in RLC AM using Common test procedures for mobile terminated PS-switched sessions. Usage of "PDCP No Header" PDU has been configured by higher layers.
- b) The SS sends a TCP/IP data packet with uncompressed IP Header.

- c) After having received the TCP/IP data packet, the PDCP entity of the UE shall recognize the PDCP PDU type and shall handle the received data packet with the appropriate decoding method. Then it forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its PDCP configuration using PDCP No Header PDU.
- d) The SS receives and decodes the TCP/IP data packet. The decoded data packet shall be identical with the data as sent before.
- e) Step b) to d) shall be repeated by using a UDP/IP data packet with uncompressed IP Header.
- f) The SS deactivates the UE test loop mode and terminates the connection.

#### Expected sequence

### 7.3.2.1.1.5 ——— Test requirements

#### 1. — Test requirements: Transmission of uncompressed IP header packets using PDCP Data PDU

The UE shall return the TCP/IP and UDP/IP data packets as indication, that the previous packets have been received and handled correctly (PDCP Data PDU). This verifies, that the PDCP configuration on UE side works as negotiated by the RRC.

#### 2. — Test requirements: Transmission of uncompressed IP header packets using PDCP No Header PDU

The UE shall return the TCP/IP and UDP/IP data packets as indication, that the previous packets have been received and handled correctly (PDCP No Header PDU). This verifies, that the PDCP configuration on UE side works as negotiated by the RRC.

### ~~7.3.2.1.2 Transmission of compressed Header~~

#### ~~7.3.2.1.2.1 Definition and applicability~~

~~Applicable for all UEs supporting RLC AM and a Radio Bearer as described in the Common Test Sequences.~~

~~The UE shall be capable to deal with compressed TCP/IP and UDP/IP data packets and furthermore to establish a PDCP entity which applies IP header compression protocol RFC 2507.~~

#### ~~7.3.2.1.2.2 Conformance requirement~~

~~Packet Data Convergence Protocol shall perform the following functions:~~

~~—...~~

~~—transfer of user data. Transmission of user data means that PDCP receives PDCP SDU from the NAS and forwards it to the RLC layer and vice versa;~~

~~—PDCP shall be able (...) to handle them with a correct header compression protocol and furthermore to indicate the type of the packet within a certain protocol.~~

#### ~~Reference(s)~~

~~TS 25.323 clause 5.~~

~~TS 25.323 clause 5.1.1.~~

#### ~~7.3.2.1.2.3 Test purpose~~

- ~~1. To verify, that the UE transmits and receives in acknowledged mode (RLC AM) TCP/IP and UDP/IP data packets by using IP header compression protocol as described in RFC2507 as configured by higher layers.~~
- ~~2. To verify, that the PID assignment rules are correctly applied by the UE. The UE as shall use the correct PID value for the applied optimisation method for transmitting and receiving TCP/IP and UDP/IP data packets.~~

#### ~~7.3.2.1.2.4 Method of test~~

##### ~~Initial conditions~~

~~UE is in Idle mode. Usage of "PDCP Data" PDU and IP header compression is configured.~~

##### ~~Related ICS/IXIT Statement(s)~~

~~Support of IP header compression protocol RFC 2507 – YES/NO.~~

~~Support of PS – Yes/No~~

##### ~~Test procedure~~

- ~~a) The SS setups a packet switched session including radio bearer and UE test loop mode 1 in RLC AM using Common test procedures for mobile terminated PS switched sessions. Usage of "PDCP Data" PDU has been configured by higher layers.~~
- ~~b) The SS sends a "normal" TCP/IP data packet (no compression packet type), PID=0.~~

- c) After having received the TCP/IP data packet, the PDCP entity of the UE shall recognize the PID value and shall handle the received data packet with the correct decompression protocol. Then, it forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its PDCP configuration.
  - d) The SS receives and decodes the TCP/IP data packet according to the inserted PID. The decoded data packet shall be identical with the data as sent before.
  - e) The SS sends a TCP/IP data packet with packet type: Full\_Header, PID=1.
- NOTE:—According to the compression protocol RFC 2507, this is necessary to transmit the created CONTEXT and the assigned CID.
- f) After having received the TCP/IP data packet, the PDCP entity of the UE shall recognize the PID value and shall handle the received data packet with the correct decompression protocol. Then, it forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its PDCP configuration.
  - g) The SS receives and decodes the TCP/IP data packet according to the inserted PID. The decoded data packet shall be identical with the data as sent before.
  - h) The SS sends a TCP/IP data packet with packet type: Compressed\_TCP, PID=2.
  - i) After having received the TCP/IP data packet, the PDCP entity of the UE shall recognize the PID value and shall handle the received data packet with the correct decompression protocol. Then, it forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its PDCP configuration.
  - j) The SS receives and decodes the TCP/IP data packet according to the inserted PID. The decoded data packet shall be identical with the data as sent before.
  - k) Step b) to d) is repeated for a "normal" UDP/IP data packet, PID=0.
  - l) Step e) to g) is repeated for a UDP/IP data packet with packet type: Full\_Header, PID=1.
  - m) The SS sends a UDP/IP data packet with packet type: Compressed\_non\_TCP, PID=4.
  - n) After having received the TCP/IP data packet, the PDCP entity of the UE shall recognize the PID value and shall handle the received data packet with the correct decompression protocol. Then, it forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its PDCP configuration.
  - o) The SS receives and decodes the UDP/IP data packet according to the inserted PID. The decoded data packet shall be identical with the data as sent before.
  - p) The SS deactivates the UE tests loop mode 1 and terminates the connection.

| Data                | PDCP test data type #2: UDP/IP data packet without IP header compression with any data content. The data shall be limited to 1500 bytes. |

#### ~~7.3.2.1.2.5 Test requirements~~

~~The UE shall return the TCP/IP and UDP/IP data packets as indication, that the previous packets have been received and handled with the correct compression protocol. This verifies, that the PDCP configuration on UE side works as negotiated by the RRC.~~

#### ~~7.3.2.2 UE in RLC UM~~

##### ~~7.3.2.2.1 Transmission of uncompressed Header~~

###### ~~7.3.2.2.1.1 Definition and applicability~~

~~Applicable for all UEs supporting RLC UM and a Radio Bearer as described in the Common Test Sequences.~~

~~The UE shall be capable to deal with TCP/IP and UDP/IP data packets with uncompressed IP header.~~

###### ~~7.3.2.2.1.2 Conformance requirement~~

~~Packet Data Convergence Protocol shall perform the following functions:~~

~~—...~~

~~—transfer of user data. Transmission of user data means that PDCP receives PDCP SDU from the NAS and forwards it to the RLC layer and vice versa;~~

~~—PDCP shall be able (...) to handle them with a correct header compression protocol and furthermore to indicate the type of the packet within a certain protocol;~~

~~—PID value 0 is reserved permanently for no compression.~~

#### ~~Reference(s)~~

~~TS 25.323 clause 5.~~

~~TS 25.323 clause 5.1.1.~~

###### ~~7.3.2.2.1.3 Test purpose~~

~~The test case consists of two test procedures:~~

~~The first test procedure verifies, that the "PDCP Data" PDU is used for uncompressed IP header packets, if no IP header compression is configured by higher layers. The second test procedure verifies, that the "PDCP No header" PDU is used for uncompressed IP header packets, if no IP header compression is configured by higher layers.~~

~~1. To verify, that the UE transmits and receives in unacknowledged mode (RLC UM) TCP/IP and UDP/IP data packets without IP header compression as configured by higher layers.~~

~~2. To verify, that PID assignment rules are correctly applied, if usage of "PDCP Data" PDU are negotiated, i.e. the UE shall recognize PID value = 0 for a received TCP/IP and UDP/IP data packet and it shall use PID=0 to transmit IP data packets, if no IP header compression is negotiated. If usage of "PDCP No Header" PDU is negotiated, no PID assignment is used for transmitting and receiving TCP/IP and UDP/IP data packets.~~

###### ~~7.3.2.2.1.4 Method of test~~

#### ~~Initial conditions~~

~~UE is in Idle mode.~~

~~Test procedure 1: Usage of "PDCP Data" PDU and no IP header compression is configured.~~

~~Test procedure 2: no IP header compression is configured.~~

#### Related ICS/IXIT Statement(s)

Support of PS — Yes/No

PIXIT: Test\_PDCP\_TCP/IP\_Packet1

PIXIT: Test\_PDCP\_UDP/IP\_Packet1

#### Test procedure 1: Transmission of uncompressed IP header packets using PDCP Data PDU

- a) The SS setups a packet switched session including radio bearer and UE test loop mode 1 in RLC UM using Common test procedures for mobile terminated PS switched sessions. Usage of "PDCP Data" PDU has been configured by higher layers.
- b) The SS sends a TCP/IP data packet with uncompressed IP Header.
- c) After having received the TCP/IP data packet, the PDCP entity of the UE shall recognize the PDCP PDU type and shall handle the received data packet with the appropriate decoding method. Then it forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its PDCP configuration using PDCP Data PDU.
- d) The SS receives and decodes the TCP/IP data packet. The decoded data packet shall be identical with the data as sent before.
- e) Step b) to d) shall be repeated by using a UDP/IP data packet with uncompressed IP Header.

The SS deactivates the UE test loop mode and terminates the connection.

## Expected sequence

### Test procedure 2: Transmission of uncompressed IP header packets using No Header PDU

- a) The SS setups a packet switched session including radio bearer and UE test loop mode 1 in RLC UM using Common test procedures for mobile terminated PS switched sessions. Usage of "PDCP No Header" PDU has been configured by higher layers.
- b) The SS sends a TCP/IP data packet with uncompressed IP Header.
- c) After having received the TCP/IP data packet, the PDCP entity of the UE shall recognize the PDCP PDU type and shall handle the received data packet with the appropriate decoding method. Then it forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its PDCP configuration using PDCP No Header PDU.
- d) The SS receives and decodes the TCP/IP data packet. The decoded data packet shall be identical with the data as sent before.
- e) Step b) to d) shall be repeated by using a UDP/IP data packet with uncompressed IP Header.
- f) The SS deactivates the Loop back test mode and terminates the connection.

### Expected sequence

| Data                | PDCP test data type #2: UDP/IP data packet without IP<br>header compression with any data content. The data<br>shall be limited to 1500 bytes. |

### 7.3.2.2.1.5 Test requirements

#### 1. Test requirements: Transmission of uncompressed IP header packets using PDCP Data PDU

The UE shall return the TCP/IP and UDP/IP data packets as indication, that the previous packets have been received and handled correctly (PDCP Data PDU). This verifies, that the PDCP configuration on UE side works as negotiated by the RRC.

#### 2. Test requirements: Transmission of uncompressed IP header packets using PDCP No Header PDU

The UE shall return the TCP/IP and UDP/IP data packets as indication, that the previous packets have been received and handled correctly (PDCP No Header PDU). This verifies, that the PDCP configuration on UE side works as negotiated by the RRC.

~~7.3.2.2.2 Transmission of compressed Header~~~~7.3.2.2.2.1 Definition and applicability~~

~~Applicable for all UEs supporting RLC UM and a Radio Bearer as described in the Common Test Sequences.~~

~~The UE shall be capable to deal with compressed TCP/IP and UDP/IP data packets and furthermore to establish a PDCP entity which applies IP header compression protocol RFC 2507.~~

~~7.3.2.2.2.2 Conformance requirement~~

~~Packet Data Convergence Protocol shall perform the following functions:~~

~~—...~~

~~—transfer of user data. Transmission of user data means that PDCP receives PDCP SDU from the NAS and forwards it to the RLC layer and vice versa;~~

~~—PDCP shall be able (...) to handle them with a correct header compression protocol and furthermore to indicate the type of the packet within a certain protocol.~~

~~Reference(s)~~

~~TS 25.323 clause 5.~~

~~TS 25.323 clause 5.1.1.~~

~~7.3.2.2.2.3 Test purpose~~

- ~~1. To verify, that the UE transmits and receives in unacknowledged mode (RLC UM) TCP/IP and UDP/IP data packets by using IP header compression protocol as described in RFC2507 as configured by higher layers.~~
- ~~2. To verify, that the PID assignment rules are correctly applied by the UE. The UE as shall use the correct PID value for the applied optimisation method for transmitting and receiving TCP/IP and UDP/IP data packets.~~

~~7.3.2.2.2.4 Method of test~~~~Initial conditions~~

~~UE is in Idle mode. Usage of "PDCP Data" PDU and no IP header compression is configured.~~

~~Test procedure~~

- ~~a) The SS setups a packet switched session including radio bearer and UE test loop mode 1 in RLC UM using Common test procedures for mobile terminated PS switched sessions. Usage of "PDCP Data" PDU has been configured by higher layers.~~
- ~~b) The SS sends a "normal" TCP/IP data packet (no compression packet type), PID=0.~~

- c) After having received the TCP/IP data packet, the PDCP entity of the UE shall recognize the PID value and shall handle the received data packet with the correct decompression protocol. Then, it forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its PDCP configuration.
  - d) The SS receives and decodes the TCP/IP data packet according to the inserted PID. The decoded data packet shall be identical with the data as sent before.
  - e) The SS sends a TCP/IP data packet with packet type: Full\_Header, PID=1.
- NOTE:—According to the compression protocol RFC 2507, this is necessary to transmit the created CONTEXT and the assigned CID.
- f) After having received the TCP/IP data packet, the PDCP entity of the UE shall recognize the PID value and shall handle the received data packet with the correct decompression protocol. Then, it forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its PDCP configuration.
  - g) The SS receives and decodes the TCP/IP data packet according to the inserted PID. The decoded data packet shall be identical with the data as sent before.
  - h) The SS sends a TCP/IP data packet with packet type: Compressed\_TCP, PID=2.
  - i) After having received the TCP/IP data packet, the PDCP entity of the UE shall recognize the PID value and shall handle the received data packet with the correct decompression protocol. Then, it forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its PDCP configuration.
  - j) The SS receives and decodes the TCP/IP data packet according to the inserted PID. The decoded data packet shall be identical with the data as sent before.
  - k) Step b) to d) is repeated for a "normal" UDP/IP data packet, PID=0.
  - l) Step e) to g) is repeated for a UDP/IP data packet with packet type: Full\_Header, PID=1.
  - m) The SS sends a UDP/IP data packet with packet type: Compressed\_non\_TCP, PID=4.
  - n) After having received the TCP/IP data packet, the PDCP entity of the UE shall recognize the PID value and shall handle the received data packet with the correct decompression protocol. Then, it forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its PDCP configuration.
  - o) The SS receives and decodes the UDP/IP data packet according to the inserted PID. The decoded data packet shall be identical with the data as sent before.
  - p) The SS deactivates the UE test loop test mode and terminates the connection.

| Data                | PDCP test data type #2: UDP/IP data packet without IP header compression with any data content. The data shall be limited to 1500 bytes. |

## 7.3.2.2.2.5 ——— Test requirements

The UE shall return the TCP/IP and UDP/IP data packets as indication, that the previous packets have been received and handled with the correct compression method. This verifies, that the PDCP configuration on UE side works as negotiated by the RRC.

## 7.3.2.2.3 ——— Extension of used compression methods

## 7.3.2.2.3.1 ——— Definition and applicability

Applicable for all UEs supporting RLC UM and a Radio Bearer as described in the Common Test Sequences.

The UE shall be capable to deal with compressed TCP/IP data packets and furthermore to establish a PDCP entity which applies IP header compression protocol: RFC 2507.

## 7.3.2.2.3.2 ——— Conformance requirement

Packet Data Convergence Protocol shall perform the following functions:

———

—— transfer of user data. Transmission of user data means that PDCP receives PDCP SDU from the NAS and forwards it to the RLC layer and vice versa;

- PDCP shall be able (...) to handle them with a correct header compression protocol and furthermore to indicate the type of the packet within a certain protocol.

The PDCP layer shall be able to support several header compression protocols and it shall always be possible to extend the list of supported protocols in the future.

The table (PID value allocation table) is reconfigured every time the PDCP entity is reconfigured, with a change in the supported header compression protocols.

The assignment of the PID values follow the general rules listed below:

- PID values are reassigned for the PDCP entity after renegotiation of the header compression protocols;
- the list of negotiated (or re-negotiated) header compression entities shall be examined, starting from the first one in the list. The number of PID values to be assigned is specified in the clause for this protocol.

TS 25.323 clause 5.

TS 25.323 clause 5.1.1.

TS 25.323 clause 5.1.

#### 7.3.2.2.3.3 — Test purpose

1. To verify, that the UE is able to handle an extended PID value allocation table after PDCP reconfiguration as configured by RRC.

#### 7.3.2.2.3.4 — Method of test

#### Initial conditions

UE is in Idle mode. Usage of "PDCP Data" PDU and no IP header compression is configured.

#### Related ICS/IXIT Statement(s)

Support of IP header compression protocol RFC 2507 — YES/NO

Support of PS — Yes/No

PIXIT: Test\_PDCP\_TCP/IP\_Packet2

#### Test procedure

- a) The SS setups a packet-switched session including radio bearer and UE test loop mode 1 in RLC-UM using Common test procedures for mobile terminated PS-switched sessions (with the UE test loop mode 1). Usage of "PDCP Data PDU" and no optimisation method has been configured by higher layers.
- b) The SS sends a TCP/IP data packet (no compression packet type), PID=0.
- c) After having received the TCP/IP data packet, the PDCP entity of the UE shall recognize the PID value and shall handle the received data packet correctly. Afterwards it forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its PDCP configuration.
- d) The SS receives and decodes the TCP/IP data packet according to the inserted PID. The decoded data packet shall be identical with the data as sent before.
- e) The SS reconfigures (using RRC Radio Bearer Reconfiguration message) the PDCP entity by extending the PID value allocation table and therefore the applied optimisation method with the IP header compression protocol RFC 2507. The UE test loop mode 1 in RLC-UM is still active.

- ~~f) The SS sends a TCP/IP data packet (no compression packet type), PID=0.~~
- ~~g) After having received the TCP/IP data packet, the PDCP entity of the UE shall recognize the PID value and shall handle the received data packet correctly. Afterwards it forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its PDCP configuration.~~
- ~~h) The SS receives and decodes the TCP/IP data packet according to the inserted PID. The decoded data packet shall be identical with the data as sent before.~~
- ~~i) The SS sends a TCP/IP data packet with packet type: Full\_Header, PID=1.~~
- ~~j) After having received the TCP/IP data packet, the PDCP entity of the UE shall recognize the PID value and shall handle the received data packet correctly. Afterwards it forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its PDCP configuration.~~
- ~~k) The SS receives and decodes the TCP/IP data packet according to the inserted PID. The decoded data packet shall be identical with the data as sent before.~~
- ~~l) The SS deactivates the UE test loop mode and terminates the connection.~~

#### 7.3.2.2.3.5 ——— Test requirements

After PDCP reconfiguration, the UE shall return the TCP/IP data packets as indication, that the extension of used optimisation method are applied by UE. This verifies, that the PDCP configuration on UE side works as negotiated by the RRC.

#### 7.3.2.2.4 ——— Compression type used for different entities

##### 7.3.2.2.4.1 ——— Definition and applicability

Applicable only for an UE supporting the establishment of more than one PDCP entity in parallel, i.e. it shall be possible to configure more than one Radio Bearer Loop Back entities (each PDCP entity are assigned via PDCP-SAP to its own Radio Bearer Loop Back entity).

Applicable for all UEs supporting two Radio Bearers in RLC UM and RLC AM as described in this test case, clause

##### 7.3.2.2.4.6 Combined PDCP Acknowledged and Unacknowledged mode configuration:

The UE shall be capable to deal with compressed TCP/IP data packets and furthermore it shall apply IP header compression protocol RFC 2507.

##### 7.3.2.2.4.2 ——— Conformance requirement

Packet Data Convergence Protocol shall perform the following functions:

—...

—transfer of user data. Transmission of user data means that PDCP receives PDCP SDU from the NAS and forwards it to the RLC layer and vice versa;

—PDCP shall be able (...) to handle them with a correct header compression protocol and furthermore to indicate the type of the packet within a certain protocol.

The assignment of the PID values follow the general rules listed below:

—PID values are assigned independently to each PDCP entity;

Different PDCP entities may include header compression protocols of the same type

#### Reference(s)

TS 25.323 clause 5.

TS 25.323 clause 5.1.1.

TS 25.323 clause 5.1.

##### 7.3.2.2.4.3 ——— Test purpose

NOTE:—For this test case, the SS shall be configured to handle more than one received PDCP messages.

1. To verify, that a configured IP header compression protocol are applied to compress and decompress TCP/IP data packets by several PDCP entities in parallel, if more than one entities are established, i.e. the UE uses the same PID to transmit two TCP/IP data packets with the same content in parallel using two Radio Bearer configurations.

##### 7.3.2.2.4.4 ——— Method of test

#### Initial conditions

UE is in Idle mode. Usage of "PDCP Data" PDU and IP header compression is configured for both PDCP entities.

### Related ICS/IXIT Statement(s)

~~Establishment of more than one PDCP entities – YES/NO.~~

~~Support of IP header compression protocol RFC 2507 – YES/NO~~

~~Support of UM RB and AM RB~~

~~Support of PS – Yes/No~~

~~IXIT: Test\_PDCP\_TCP/IP\_Packet1~~

~~IXIT: Test\_PDCP\_TCP/IP\_Packet2~~

### Test procedure

- ~~a) The SS setups a packet switched session including two radio bearer configurations in parallel in UE test loop mode 1 and in RLC UM using Common test procedures for mobile terminated PS switched sessions. Usage of IP header compression protocol RFC 2507 has been configured by higher layers.~~
- ~~b) The SS sends two successive a "normal" TCP/IP data packet, PID=0 via both PDCP configurations to their peer entities.~~
- ~~c) After having received the TCP/IP data packets, the PDCP entities of the UE shall recognize the PID value and shall handle the received data packet independent of the used PID with the correct decompression method. Then they forward the data to their Radio Bearer Loop Back entity. Both received data shall be returned by each Radio Bearer Loop Back entity.~~
- ~~d) The SS receives and decodes TCP/IP data packets according to the inserted PID. The decoded data packets shall be identical with the data as sent before.~~
- ~~e) After having received the TCP/IP data packets, the PDCP entities of the UE shall recognize the PID value and shall handle the received data packets independent of the used PID with the correct decompression method. Then they forward the data to their Radio Bearer Loop Back entity. Both received data shall be returned by each Radio Bearer Loop Back entity.~~
- ~~f) The SS receives and decodes TCP/IP data packets according to the inserted PID. The decoded data packets shall be identical with the data as sent before.~~
- ~~g) The SS deactivates the UE test loop mode and terminates the connection.~~

## Content of both PDCP Data PDU (Step 1)

| Information Element | Value/remark                                          |
|---------------------|-------------------------------------------------------|
| PDU type            | 000                                                   |
| PID                 | 00000 (No header compression, PID = 0)                |
| Data                | PDCP test data type #1: TCP/IP data packet without IP |
|                     | header compression with any data content. The data    |
|                     | shall be limited to 1500 bytes.                       |

## Content of both PDCP Data PDU (Step 3)

| Information Element | Value/remark                                                                                                                             |
|---------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| PDU type            | 000                                                                                                                                      |
| PID                 | 00001 (Full_Header, PID = 1)                                                                                                             |
| Data                | PDCP test data type #1: TCP/IP data packet without IP header compression with any data content. The data shall be limited to 1500 bytes. |

## 7.3.2.2.4.5 Test requirements

The UE shall return both TCP/IP data packets as indication that the previous received data packets associated with the same PID value are handled in parallel with the same decompression protocol. This verifies, that more than one PDCP configuration on UE side using the same compression protocol is able to apply it in parallel.

## 7.3.2.2.4.6 Combined PDCP Acknowledged and Unacknowledged mode configuration

This configuration is based on the interactive or background / UL:64 DL 64 kbps / PS RAB. The SRB configurations are UL:3.4 DL:3.4 kbps for DCCH aligned to this combined RABs are described for SRB DL 3.4 kbps in TS 34.108, clause 6.10.2.4.1.2.2 and for SRB DL 3.4 kbps in TS 34.108, clause 6.10.2.4.1.2.1. The TFCS refer to TS34.108, clause 6.10.2.4.1.24.1.1.3 for UL and clause 6.10.2.4.1.25.2.1.3 for DL, the Physical channel parameters refer to TS 34.108, clause 6.10.2.4.1.24.1.2 for UL clause 6.10.2.4.1.25.2.2 and for DL accordingly. The configuration is applied to PDCP test cases using both the acknowledged and unacknowledged mode.

### 7.3.2.2.5 ~~Reception of not defined PID values~~

#### 7.3.2.2.5.1 ~~Definition and applicability~~

Applicable for all UEs supporting RLC UM and a Radio Bearer as described in the Common Test Sequences.

The UE shall be capable to deal with compressed TCP/IP data packets and furthermore to establish a PDCP entity, which applies PDCP Data PDU if no IP header compression protocol, is negotiated.

The UE shall not forward invalid PDCP PDU data contents to its Radio Bearer.

#### 7.3.2.2.5.2 ~~Conformance requirement~~

PDCP shall be able (...) to handle them with a correct header compression protocol and furthermore to indicate the type of the packet within a certain protocol;

PID values that are used and are not defined invalidate the PDCP PDU;

#### Reference(s)

TS 25.323 clause 5.1.1.

TS 25.323 clause 5.1.2.1.

#### 7.3.2.2.5.3 ~~Test purpose~~

1. ~~To verify, that a UE considers a received PDCP PDU message with not defined PID value as invalid, i.e. such an invalid PDCP PDU is not forwarded to the Radio Bearer entity on UE side. Therefore the UE using test loop mode 1 does not return such data packet to the SS.~~

#### 7.3.2.2.5.4 ~~Method of test~~

##### Initial conditions

UE is in Idle mode. Usage of "PDCP Data" PDU and no IP header compression is configured.

##### Related ICS/IXIT Statement(s)

Support of IP header compression protocol RFC 2507 – YES/NO

Support of PS – Yes/No

IXIT: Test\_PDCP\_TCP/IP\_Packet1

IXIT: Test\_PDCP\_TCP/IP\_Packet2

## Test procedure

- a) The SS setups a packet-switched session including radio bearer and UE test loop mode 1 in RLC UM using Common test procedures for mobile-terminated PS-switched sessions. Usage of "PDCP Data PDU" and no PDCP IP header compression protocol has been configured by higher layers.
- b) The SS sends a "normal" TCP/IP data packet (no compression packet type), PID=0.
- c) After having received the TCP/IP data packet, the PDCP entity of the UE shall recognize the PID value and shall handle the received data packet with the correct decoding method. Afterwards it forwards the data to its Radio Bearer Loop-Back entity. The received data shall be returned by the UE via its PDCP configuration.
- d) The SS receives and decodes TCP/IP data packets according to the inserted PID. The decoded data packets shall be identical with the data as sent before.
- e) The SS sends a TCP/IP data packet with packet type: Full\_Header, PID=1.
- f) After having received the TCP/IP data packet, the PDCP entity of the UE shall recognize the PID value and shall handle the received data packet with the correct decoding method.
- g) The SS waits an amount of time to make sure, that no returned data packet was sent by UE.
- h) The SS deactivates the UE test loop mode and terminates the connection.

## Expected sequence

### Specific Message Contents

#### RRC CONNECTION SETUP message

The contents of the RRC CONNECTION SETUP message applied in the preamble "Setup a UE-terminated PS session using IP-Header compression in UM RLC" of this test case is identical to those of the default contents of layer-3 messages for RRC tests [TS 34.123-1] (PS connection for UM) with the following exceptions:

| Information Element                                                              | Value/remark                                                                                                                                      |
|----------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| Capability update requirement<br>— UE radio access capability update requirement | TRUE<br>NOTE: Value will be checked. Stated capability must be compatible with 34.123-2 (c.f. PICS/PIXIT statements in GSM) and the user settings |

#### RADIO BEARER SETUP message

The contents of the RADIO BEARER SETUP message applied in the preamble "Setup a UE-terminated PS session using IP-Header compression in UM RLC" of this test case is identical to those of the default contents of layer-3 messages for RRC tests [TS 34.123-1] (PS connection for UM) which fit to the here-described parameters with the following exceptions:

| Information Element                                                                                                                                                                                                                | Value/remark                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

#### 7.3.2.2.5.5 — Test requirements

The UE shall return the received TCP/IP data packet using the PDCP Data PDU with PID = 0 as indication, that the UE works as configured.

The UE shall not return the TCP/IP data packet using the PDCP Data PDU with PID = 1 as indication, that this PDU was considered as invalid by the UE. This verifies, that the PDCP configuration on UE side has considered this PDU as invalid.

### 7.3.3 — PDCP sequence numbering when lossless SRNS Relocation

#### 7.3.3.1 — Data transmission if lossless SRNS Relocation is supported

##### 7.3.3.1.1 — Definition and applicability

Applicable for all UEs supporting RLC AM, RLC in-sequence delivery, a Radio Bearer as described in the Common Test Sequences and lossless SRNS relocation.

The UE shall be capable to deal with uncompressed TCP/IP data packets and furthermore to establish a PDCP entity which applies PDCP Sequence Numbering

### 7.3.3.1.2 ~~Conformance requirement~~

The PDCP layer shall carry out the following functions during lossless SRNS relocation:

- ~~—support PDCP sequence numbering as specified in clause 5.4.1.~~

The PDCP layer shall carry out the following during lossless SRNS relocation:

- ~~—provide unconfirmed PDCP SDUs and sequence numbers for forwarding to the target RNC.~~

### Reference(s)

~~TS 25.323 clause 5.4.~~

### 7.3.3.1.3 ~~Test purpose~~

- ~~1. To verify, that a UE supporting lossless SRNS relocation is able to receive and to send IP data packets by using PDCP Sequence Numbering as configured by higher layers.~~

### 7.3.3.1.4 ~~Method of test~~

#### Initial conditions

~~SS: 2 cells – Cell A belonging to the valid SRNS (Source SRNS), Cell B belonging to the DRNS (Target SRNS). Both cells are neighbour cells. Cell A has a higher RF power level than Cell B such that an UE shall find Cell A more suitable for service.~~

~~UE: It is in Idle mode and has selected cell A with valid SRNS (Source SRNS). Usage of "PDCP Data" PDU and no IP header compression is configured.~~

#### Related ICS/IXIT Statement(s)

~~Support of lossless SRNS Relocation – YES/NO~~

~~Support of PS – Yes/No~~

~~IXIT: Test\_PDCP\_TCP/IP\_Packet1~~

~~IXIT: Test\_PDCP\_TCP/IP\_Packet2~~

#### Test procedure

- ~~a) The SS setups a packet switched session including Radio Bearer and UE test loop mode 1 in RLC AM and in-sequence delivery using Common test procedures for mobile terminated PS switched sessions in Cell A. Usage of "PDCP Data" PDU, support of lossless SRNS relocation and no IP header compression has been configured by higher layers. The PDCP SN window size has been negotiated by RRC.~~
- ~~b) The SS sends a TCP/IP data packet (no compression packet type), PID=0.~~
- ~~c) After having received the TCP/IP data packet, the PDCP entity of the UE shall recognize the PID value and shall handle the received data packet correctly. Afterwards it forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its PDCP configuration.~~
- ~~d) The SS receives and decodes the TCP/IP data packet according to the inserted PID. The decoded data packet shall be identical with the data as sent before.~~
- ~~e) The SS starts to broadcast BCCH messages on the primary CPICH in cell B with a power level higher than in cell A. The UE shall chose cell B to be more suitable for service and hence perform a cell reselection.~~
- ~~f) After completion of cell reselection, the UE transmits a CELL UPDATE message to the SS on the uplink CCCH of cell B with the Cell update cause "Cell Reselection".~~

- ~~g) After having performed SRNS relocation (target RNC allocated with new S-RNTI for the UE), the Target SRNS is the valid SRNS and the SS sends a "CELL UPDATE CONFIRM" message with new RNC\_ID to indicate the completion of the cell update.~~
- ~~h) The UE shall confirm the reallocation.~~
- ~~i) The SS sends the next TCP/IP data packet (no compression packet type), PID=0 using the "PDCP Data" PDU to the UE.~~
- ~~j) After having received the TCP/IP data packet, the UE shall recognize the PID value and shall handle the received data packet correctly. Afterwards it forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its PDCP configuration.~~
- ~~k) The SS receives and decodes TCP/IP data packets according to the inserted PID. The decoded data packets shall be identical with the data as sent before.~~
- ~~l) The SS deactivates the UE test loop mode and terminates the connection.~~

## Expected sequence

**7.3.3.1.5 Test requirements**

After having sent the "RRC RNTI REALLOCATION COMPLETE", the UE shall return the received TCP/IP data packets as indication, that it supports lossless SRNS relocation. This implicitly verifies, that Sequence Numbering is used for lossless SRNS relocation.

### ~~7.3.3.2 Synchronisation of PDCP sequence numbers~~

#### ~~7.3.3.2.1 Definition and applicability~~

~~Applicable for all UEs supporting RLC AM, RLC in-sequence delivery, a Radio Bearer as described in the Common Test Sequences.~~

~~The UE shall be capable to deal with compressed TCP/IP and UDP/IP data packets and furthermore it shall be capable to use IP Header compression protocol RFC 2507.~~

#### ~~7.3.3.2.2 Conformance requirement~~

~~The PDCP SeqNum PDU shall be sent by the peer PDCP entities when synchronisation of the PDCP SN is required. (...) Synchronisation of PDCP SN is required after (...) RB reconfiguration.~~

#### ~~Reference(s)~~

~~TS 25.323 clause 5.4.~~

#### ~~7.3.3.2.3 Test purpose~~

- ~~1. To verify, that the UE supporting lossless SRNS relocation as configured by higher layers is able to handle the "PDCP SeqNum" PDU to synchronize the used PDCP Sequence Number after reconfiguration of the Radio Bearer.~~

#### ~~7.3.3.2.4 Method of test~~

##### ~~Initial conditions~~

~~SS: 2 cells – Cell A belonging to the valid SRNS (Source SRNS), Cell B belonging to the DRNS (Target SRNS). Both cells are neighbour cells. Cell A has a higher RF power level than Cell B such that an UE shall find Cell A more suitable for service.~~

~~UE: It is in Idle mode and has selected cell A with valid SRNS (Source SRNS). Usage of "PDCP Data" PDU, "PDCP SeqNum" PDU and no IP header compression is configured.~~

##### ~~Related ICS/IXIT Statement(s)~~

~~Support of lossless SRNS relocation – YES/NO~~

~~Support of RLC in-sequence delivery – YES/NO~~

##### ~~Test procedure~~

- ~~a) The SS setups a packet switched session including Radio Bearer and UE test loop mode 1 in RLC AM and in-sequence delivery using Common test procedures for mobile terminated PS switched sessions in Cell A. Usage of "PDCP Data" PDU, support of lossless SRNS relocation and no IP header compression has been configured by higher layers. The PDCP SN window size has been negotiated by RRC.~~
- ~~b) The SS sends a TCP/IP data packet (no compression packet type), PID=0.~~
- ~~c) After having received the TCP/IP data packet, the PDCP entity of the UE shall recognize the PID value and shall handle the received data packet correctly. Afterwards it forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its PDCP configuration.~~
- ~~d) The SS receives and decodes the TCP/IP data packet according to the inserted PID. The decoded data packet shall be identical with the data as sent before.~~
- ~~e) The SS reconfigures (using RRC Radio Bearer Reconfiguration message) the PDCP entity by extending the PID value allocation table and therefore the applied optimisation method with the IP header compression protocol RFC 2507. The UE test loop mode 1 in RLC AM is still active.~~

- f) The SS sends the next TCP/IP data packet (no compression packet type), PID=0 using the "PDCP SeqNum" PDU including the current PDCP Sequence Number value to the UE.
- g) After having received the TCP/IP data packet, the UE shall recognize the PID value and shall handle the received data packet correctly. Afterwards it forwards the data to its Radio Bearer Loop Back entity. The received data shall be returned by the UE via its PDCP configuration.
- h) The SS receives and decodes TCP/IP data packets according to the inserted PID. The decoded data packets shall be identical with the data as sent before.
- i) The SS deactivates the UE test loop mode and terminates the connection.

#### Expected sequence

| Sequence number     | (16 Bit value) valid Sequence Number of the SS                                                                                           |
| Data                | PDCP test data type #1: TCP/IP data packet without IP header compression with any data content. The data shall be limited to 1500 bytes. |

### 7.3.3.2.5 Test requirements

After having received the TCP/IP data packet conveyed with the "PDCP SeqNum" PDU, the UE shall return the TCP/IP data packets as indication, that the UE is able to handle a Sequence Number synchronisation.

## 7.4 BMC

### General

For BMC testing, the UE manufacturers shall define CB data as PIXIT (CB-Data 1 and 2) for different CB message types and for CB-Data41 (ANSI-41 data) and it shall describe how the reception is indicated in a clear way on UE side.

Only Cell Broadcast Services (CBS) as distributed BMC service is applied. For a UE supporting BMC, it is assumed, that there is a BMC entity established, if Initial conditions are reached.

If not otherwise mentioned, the same procedures as used in RRC test specification [TS 34.123-1] are applied to reach Initial conditions for BMC testing.

It shall be possible to activate and deactivate a CB message types by using the Message ID of CB data 1, 2 and CB41 data 1 on UE side.

\* MAC header size and RLC payload size depend on use of U-RNTI or C-RNTI.

#### 7.4.1.2 TFCS

|           |                                                            |
|-----------|------------------------------------------------------------|
| TFCS size | 4                                                          |
| TFCS      | (BMC RAB and SRBs for CCCH/DCCH/BCCH) = TF0, TF1, TF2, TF3 |

### 7.4.1.3 Physical channel parameters

|        |                           |          |
|--------|---------------------------|----------|
| SCCPCH | DTX position              | Flexible |
|        | Spreading factor          | 64       |
|        | Number of TFCI bits/slot  | 8        |
|        | Number of Pilot bits/slot | 0        |
|        | Number of data bits/slot  | 72       |
|        | Number of data bits/frame | 1080     |

### 7.4.2 General BMC message reception

#### 7.4.2.1 UE in RRC Idle mode

##### 7.4.2.1.1 Definition and applicability

Applicable only for a UE supporting Cell Broadcast Services (CBS) as a type of Broadcast/Multicast Services.

It shall be possible to indicate the reception of certain CBS message contents carried with certain activated CB message types in a clear way on UE side.

##### 7.4.2.1.2 Conformance requirement

A UE supporting Cell Broadcast Services shall be capable to receive BMC messages in the RRC Idle mode.

##### Reference(s)

TS 25.324 clause 9.1

##### 7.4.2.1.3 Test purpose

To verify, that a BMC configuration for a UE is able to receive activated CBS messages when in RRC Idle mode.

##### 7.4.2.1.4 Method of test

##### Initial conditions

UE is in RRC Idle mode; BMC entity is established

SS: 1 cell,

NOTE: The CB message ID stored on the SIM shall be known for this test (parameter for CBS PDU's). The CBS data type shall be allocated and activated in the UE.

##### Related ICS/IXIT Statement(s)

Support of BMC—Yes/No

Support of PS—Yes/No

ICS: CBS message support—YES/No

IXIT: CBS-Data 1: Octetstring of N (where  $N \geq 1$  and less than 1246)

NOTE: For CB-Data 1 IXIT, the manufacturer shall define CBS data as Octetstring together with the CB message ID used for transmitting this CB data, which is indicated by the UE after reception in a clear way according to the capabilities stored on the SIM. Furthermore, the manufacturer shall describe the indication on UE side (e.g. certain CBS traffic information)

### Test procedure

- a) The UE in RRC Idle mode is triggered to wait for the next system information. The UE is activated to receive CBS messages;
- b) The UE and the SS have configured their RLC, MAC and PHYs layers with all CB related system information, broadcasted by SS
- c) The SS sends the CBS message containing an activated CBS message type according to CB-Data 1 to the UE; this shall be repeated for "CPREP" times (indicated by parameter "repetition period")
- d) The UE indicates in an unambiguous way, that this message was received, by certain clear indications (e.g. a unique part of the CB data contents)

### Expected sequence

| Step | Direction |    | Message            | Comments                                                                                                                                                                                                                                                                                                            |
|------|-----------|----|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                    |                                                                                                                                                                                                                                                                                                                     |
| 1    |           | ←  | SYSTEM INFORMATION | Transmit this message as described below on the BCCH, in addition to the regular BCCH transmissions (see RRC test description). Included are CB related system information parameter of the CBS:<br>- CTCH ID,<br>- FACH ID and associated format set,<br>- S-CCPCH ID,<br>- BMC Schedule Level 1 information (N,K) |
| 2    |           |    |                    | The SS waits for about 10 s to make sure, that the UE is configured to receive CBS data                                                                                                                                                                                                                             |
| 3    |           | ←  | BMC CBS Message    | Activated CBS message with CB Data 1 message content as described by the manufacturer. This message shall be repeated "CPREP" times, Parameter:<br>- Message_ID,<br>- Serial-No,<br>- Data coding scheme,<br>- CB-Data 1,                                                                                           |
| 4    |           |    |                    | After having received the BMC CBS message the UE shall indicate the reception of CB Data 1 in a clear way.                                                                                                                                                                                                          |

**7.4.2.1.5 Test requirements**

The UE shall store and decode a received activated CBS message.

**7.4.2.2 UE in RRC Connected mode, state CELL\_PCH****7.4.2.2.1 Definition and applicability**

Applicable only for a UE supporting Cell Broadcast Services (CBS) as a type of Broadcast/Multicast Services.

It shall be possible to indicate the reception of certain CBS message contents carried with certain activated CB message types in a clear way on UE side.

**7.4.2.2.2 Conformance requirement**

A UE supporting Cell Broadcast Service (CBS) shall be capable to receive BMC messages (...) in CELL\_PCH RRC-state of Connected mode.

**Reference(s)**

TS 25.324 clause 9.1

**7.4.2.2.3 Test purpose**

To verify, that a BMC configuration for a UE is able to receive activated CBS messages when in RRC Connected mode, state CELL\_PCH.

**7.4.2.2.4 Method of test****Initial conditions**

UE is in Connected mode state CELL\_PCH; BMC entity is established

SS: 1 cell,

NOTE: The CB message ID stored on the SIM shall be known for this test (parameter for CBS PDU's). The CBS data type shall be allocated and activated in the UE.

**Related ICS/IXIT Statement(s)**

ICS:

Support of BMC—Yes/No

Support of PS—Yes/No

CBS message support—YES/No

IXIT: CBS-Data 1: Octetstring of N (where  $N \geq 1$  and less than 1246)

NOTE:—For CB-Data 1 IXIT, the manufacturer shall define CBS data as Octetstring together with the CB message ID used for transmitting this CB data, which is indicated by the UE after reception in a clear way according to the capabilities stored on the SIM. Furthermore, the manufacturer shall describe the indication on UE side (e.g. certain CBS traffic information)

**Test procedure**

- a) The UE in RRC CELL\_PCH is triggered to wait for the next system information. The UE is activated to receive CBS messages.
- b) The UE and the SS have configured their RLC, MAC and PHYs layers with all CB-related system information, broadcasted by SS.
- c) The SS sends the CBS message containing an activated CBS message type according to CB-Data 1 to the UE; this shall be repeated for "CPREP" times (indicated by parameter "repetition period").
- d) The UE indicates in an unambiguous way, that this message was received, by certain clear indications (e.g. a unique part of the CB data contents).

**Expected sequence**

| Data Coding Scheme                  | Bitstring (16) ID of the alphabet/coding and the applied language [see TS 23.041]                                                                                                   |
| CB-Data                             | Octetstring, [see IXIT value: CB-Data-1]                                                                                                                                            |

#### 7.4.2.2.5 Test requirements

The UE shall store and decode a received activated CBS message.

#### 7.4.2.3 UE in RRC Connected mode, state URA\_PCH

##### 7.4.2.3.1 Definition and applicability

Applicable only for a UE supporting Cell Broadcast Services (CBS) as a type of Broadcast/Multicast Services.

It shall be possible to indicate the reception of certain CBS message contents carried with certain activated CB message types in a clear way on UE side.

##### 7.4.2.3.2 Conformance requirement

A UE supporting Cell Broadcast Service (CBS) shall be capable to receive BMC messages (...) in CELL\_PCH and URA\_PCH RRC-state of Connected mode.

### Reference(s)

TS 25.324 clause 9.1.

#### ~~7.4.2.3.3 Test purpose~~

~~To verify, that a BMC configuration for a UE is able to receive activated CBS messages when in RRC Connected mode, state URA\_PCH.~~

#### ~~7.4.2.3.4 Method of test~~

##### ~~Initial conditions~~

~~UE is in Connected mode state URA\_PCH; BMC entity is established~~

~~SS: 1 cell.~~

~~NOTE:—The CB message ID stored on the SIM shall be known for this test (parameter for CBS PDU's). The CBS data type shall be allocated and activated in the UE.~~

##### ~~Related ICS/IXIT Statement(s)~~

~~ICS:~~

~~Support of BMC—Yes/No~~

~~Support of PS—Yes/No~~

~~CBS message support—YES/No.~~

~~IXIT: CBS-Data 1: Octetstring of N (where  $N \geq 1$  and less than 1246).~~

~~NOTE:—For CB-Data 1 IXIT, the manufacturer shall define CBS data as Octetstring together with the CB message ID used for transmitting this CB data, which is indicated by the UE after reception in a clear way according to the capabilities stored on the SIM. Furthermore, the manufacturer shall describe the indication on UE side (e.g. certain CBS traffic information)~~

##### ~~Test procedure~~

- ~~a) The UE in RRC URA\_PCH is triggered to wait for the next system information. The UE is activated to receive CBS messages.~~
- ~~b) The UE and the SS have configured their RLC, MAC and PHYs layers with all CB-related system information, broadcasted by SS.~~
- ~~c) The SS sends the CBS message containing an activated CBS message type according to CB-Data 1 to the UE, this shall be repeated for "CPREP" times (indicated by parameter "repetition period").~~
- ~~d) The UE indicates in an unambiguous way, that this message was received, by certain clear indications (e.g. a unique part of the CB data contents).~~

**7.4.2.3.5 Test requirements**

The UE shall store and decode a received activated CBS message.

**7.4.2.4 UE in RRC Idle mode (ANSI-41 CB data)****7.4.2.4.1 Definition and applicability**

Applicable only for a UE supporting Cell Broadcast Services (CBS) for ANSI-41 CB data as a type of Broadcast/Multicast Services.

It shall be possible to indicate the reception of a certain CBS41 message content carried with certain activated CB41 message types in a clear way on UE side.

**7.4.2.4.2 Conformance requirement**

A UE supporting Cell Broadcast Services shall be capable to receive BMC messages in RRC Idle mode. (...)BMC messages are identified: (...), CBS41 Message

**Reference(s)**

TS 25.324 clause 9.1.

**7.4.2.4.3 Test purpose**

To verify, that a BMC configuration supporting ANSI-41 CB Data is able to receive activated CBS41 messages when in RRC Idle mode.

**7.4.2.4.4 Method of test****Initial conditions**

UE is in RRC Idle mode; BMC entity is established.

SS: 1 cell,

NOTE: The CB message ID stored on the SIM shall be known for this test (parameter for CBS41 PDU's). The CBS41 data type shall be allocated and activated in the UE.

**Related ICS/IXIT Statement(s)**

ICS:

Support of BMC—Yes/No

Support of PS—Yes/No

CBS41 message support—YES/No.

IXIT: CB41-Data 1: Octetstring of N (where  $N \geq 1$  and less than 1246).

NOTE:—For CB41-Data 1 IXIT, the manufacturer shall define CBS data as Octetstring together with the CB message ID used for transmitting this CB41 data, which is indicated by the UE after reception in a clear way according to the capabilities stored on the SIM. Furthermore, the manufacturer shall describe the indication on UE side (e.g. certain CBS41 traffic information)

**Test procedure**

- a) The UE in RRC Idle mode is triggered to wait for the next system information. The UE is activated to receive expected CBS41 messages as described by the manufacturer.
- b) The UE and the SS have configured their RLC, MAC and PHYs layers with all CB-related system information, broadcasted by SS.
- c) The SS sends the CBS41 message containing an activated CBS41 message type according to CB41-Data 1 to the UE; this shall be repeated for "CPREP" times (indicated by parameter "repetition period").
- d) The UE indicates in an unambiguous way, that this message was received, by certain clear indications (e.g. a unique part of the CB41 data contents).

#### 7.4.2.4.5 Test requirements

The UE shall store and decode a received activated CBS41 message.

#### 7.4.2.5 UE in RRC Connected mode, state CELL\_PCH (ANSI-41 CB data)

##### 7.4.2.5.1 Definition and applicability

Applicable only for a UE supporting Cell Broadcast Services (CBS) for ANSI-41 CB data as a type of Broadcast/Multicast Services.

It shall be possible to indicate the reception of certain CBS41 message contents carried with certain activated CB41 message types in a clear way on UE side.

#### 7.4.2.5.2 ~~Conformance requirement~~

~~A UE supporting Cell Broadcast Service (CBS) shall be capable to receive BMC messages (...) in CELL\_PCH RRC-state of Connected mode. (...) BMC messages are identified: (...), CBS41 Message.~~

#### Reference(s)

~~TS 25.324 clause 9.1.~~

#### 7.4.2.5.3 ~~Test purpose~~

~~To verify, that a BMC configuration supporting ANSI-41 CB Data is able to receive activated CBS41 messages when in RRC Connected mode, state CELL\_PCH.~~

#### 7.4.2.5.4 ~~Method of test~~

##### Initial conditions

~~UE is in Connected mode state CELL\_PCH; BMC entity is established.~~

~~SS: 1 cell,~~

~~NOTE:—The CB41 message ID stored on the SIM shall be known for this test (parameter for CBS41 PDU's). The CBS41 data type shall be allocated and activated in the UE.~~

##### Related ICS/IXIT Statement(s)

~~ICS:~~

~~Support of BMC—Yes/No~~

~~Support of PS—Yes/No~~

~~CBS41 message support—YES/No.~~

~~IXIT: CBS41-Data 1: Octetstring of N (where  $N \geq 1$  and less than 1246).~~

~~NOTE:—For CB41-Data 1 IXIT, the manufacturer shall define CBS data as Octetstring together with the CB message ID used for transmitting this CB41 data, which is indicated by the UE after reception in a clear way according to the capabilities stored on the SIM. Furthermore, the manufacturer shall describe the indication on UE side~~

##### Test procedure

- ~~a) The UE in RRC CELL\_PCH is triggered to wait for the next system information. The UE is activated to receive expected CBS41 messages as described by the manufacturer.~~
- ~~b) The UE and the SS have configured their RLC, MAC and PHYs layers with all CB41 related system information, broadcasted by SS.~~
- ~~c) The SS sends the CBS41 message containing an activated CBS41 message type according to CB41-Data 1 to the UE; this shall be repeated for "CPREP" times (indicated by parameter "repetition period").~~
- ~~d) The UE indicates in an unambiguous way, that this message was received, by certain clear indications (e.g. a unique part of the CB41 data contents).~~

#### 7.4.2.5.5 Test requirements

The UE shall store and decode a received activated CBS41 message.

#### 7.4.2.6 UE in RRC Connected mode, state URA\_PCH (ANSI-41 CB data)

##### 7.4.2.6.1 Definition and applicability

Applicable only for a UE supporting Cell Broadcast Services (CBS) for ANSI-41 CB data as a type of Broadcast/Multicast Services.

It shall be possible to indicate the reception of a certain CBS41 message content carried with certain activated CB41 message types in a clear way on UE side.

##### 7.4.2.6.2 Conformance requirement

A UE supporting Cell Broadcast Service (CBS) shall be capable to receive BMC messages (...) in URA\_PCH RRC-state of Connected mode. (...)BMC messages are identified: (...), CBS41 Message.

#### Reference(s)

TS 25.324 clause 9.1.

##### 7.4.2.6.3 Test purpose

To verify, that a BMC configuration supporting ANSI-41 CB Data is able to receive activated CBS41 messages when in RRC Connected mode, state URA\_PCH.

##### 7.4.2.3.4 Method of test

#### Initial conditions

UE is in Connected mode state URA\_PCH; BMC entity is established.

SS: 1 cell,

NOTE:—The CB41 message ID stored on the SIM shall be known for this test (parameter for CBS41 PDU's). The CBS41 data type shall be allocated and activated in the UE.

**Related ICS/IXIT Statement(s)**

ICS:

Support of BMC—Yes/No

Support of PS—Yes/No

CBS41 message support—YES/No.

IXIT: CBS41-Data 1: Octetstring of N (where  $N \geq 1$  and less than 1246).

NOTE:—For CB41-Data 1 IXIT, the manufacturer shall define CBS data as Octetstring together with the CB message ID used for transmitting this CB41 data, which is indicated by the UE after reception in a clear way according to the capabilities stored on the SIM. Furthermore, the manufacturer shall describe the indication on UE side (e.g. certain CBS41 traffic information).

**Test procedure**

- a) The UE in RRC URA\_PCH is triggered to wait for the next system information. The UE is activated to receive expected CBS41 messages as described by the manufacturer.
- b) The UE and the SS have configured their RLC, MAC and PHYs layers with all CB related system information, broadcasted by SS.
- c) The SS sends the CBS41 message containing an activated CBS41 message type according to CB41-Data 1 to the UE, this shall be repeated for "CPREP" times (indicated by parameter "repetition period").
- d) The UE indicates in an unambiguous way, that this message was received, by certain clear indications (e.g. a unique part of the CB41 data contents).

| -FACH/PCH information        | (see RRC default test settings) |
| -TFS                         | TRUE                            |
| -CTCH indicator              | (see RRC default test settings) |

### SYSTEM INFORMATION TYPE 13

The contents of SYSTEM INFORMATION TYPE 13 Information Element in this test case are identical to those of the default contents of layer 3 messages for RRC tests [TS 34.123-1] with the following exceptions:

| Information Element                 | Value/remark |
|-------------------------------------|--------------|
| CHOICE CN Type                      | ANSI-41      |
| -CN domain specific NAS information |              |
| -NAS (ANSI-41) system information   | T.B.D        |

### BMC CBS41 Message

| Information Element | Value/remark                                        |
|---------------------|-----------------------------------------------------|
| Message Type        | 3 (CBS41 Message)                                   |
| Broadcast Address   | Bitstring (40) Address Information of higher layer  |
| CB Data41           | Octetstring, [see IXT value: CB41-Data 1] (ANSI-41) |

#### 7.4.2.6.5 Test requirements

The UE shall store and decode a received activated CBS41 message.

### 7.4.3 BMC message reception procedure

#### 7.4.3.1 Reception of certain CBS message types

##### 7.4.3.1.1 Definition and applicability

Applicable only for a UE supporting Cell Broadcast Services (CBS) as type of Broadcast/Multicast Services.

It shall be possible to indicate the reception of two different CBS message contents carried with different activated CB message types in a clear way on UE side.

It shall be possible to activate/deactivate the CBS message types used to receive CB Data 1 or 2.

#### 7.4.3.1.2 ~~Conformance requirement~~

A UE supporting Cell Broadcast Service (CBS) shall be capable to receive BMC messages in RRC Idle mode.

The BMC entity on UE side evaluates received BMC Schedule Messages and takes decisions which BMC messages are received.

If not otherwise requested by upper layers, only those CB messages received in BMC CBS Messages should be delivered to upper layers for which the Serial Number associated with the CB message has changed. This implies that the BMC has to store the last received Serial Number of each CB message activated by upper layers.

#### Reference(s)

TS 25.324 clause 9.1.

TS 25.324 clause 9.4.

#### 7.4.3.1.3 ~~Test purpose~~

1. ~~To verify, that a UE supporting CBS ignores a deactivated CBS message type which has been broadcasted by SS.~~
2. ~~To verify, that a UE only stores Serial Numbers of a newly transmitted CBS messages. This shall be verified by indication of a received CBS message with changed Serial Number as indication for the storage of Serial Numbers.~~

#### 7.4.3.1.4 ~~Method of test~~

#### ~~Initial conditions~~

~~UE is in RRC Idle mode.~~

~~SS: 1 cell,~~

~~NOTE: The CB message ID stored on the SIM shall be known for this test (as parameter for the CBS message PDU). The CBS data type shall be allocated and in the UE. It shall be possible to activate/deactivate such CBS data type.~~

#### Related ICS/IXIT Statement(s)

ICS:

Support of BMC—Yes/No

Support of PS—Yes/No

CBS message support—YES/No.

IXIT:

~~—CBS-Data 1: Octetstring of N (where  $N \geq 1$  and less than 1246), with used CB message ID for CB-Data 1.~~

~~—CBS-Data 2: Octetstring of N (where  $N \geq 1$  and less than 1246), with used CB message ID for CB-Data 2 (CB message ID for CB-Data 1 shall be different to CB message ID for CB-Data 2).~~

~~NOTE: For CBS data IXIT's, the manufacturer shall define CBS data as Octetstring as described in the IXIT, which is indicated by the UE after reception in a clear way according to the capabilities stored on the SIM. The manufacturer shall describe the indication on UE side for both CBS data types (e.g. certain CBS broadcast information shown in the display of the UE).~~

### Test procedure

- a) ~~The UE in RRC Idle mode is triggered to wait for the next system information. The UE is activated to receive CBS data 1, CBS data 2) are deactivated.~~
- b) ~~The UE and the SS have configured their RLC, MAC and PHYs layers with all CB related system information, broadcasted by SS.~~
- c) ~~The SS sends the first BMC CBS schedule message to predict the next CBS messages to the UE.~~
- d) ~~The SS sends the CBS message containing CB Data 1 to the UE, together with the CBS schedule message to predict the next CBS messages (repetition of CB Data 1, and the next CBS schedule message).~~
- e) ~~The UE indicates on an unambiguous way, that this CB Data 1 has been received by the UE (e.g. a unique part of the CBS data contents shown on the display).~~
- f) ~~The SS sends the repeated CB Data 1, and the next CBS schedule message to predict the next CBS messages to the UE. (CBS schedule message predicts the first repetition of CB Data).~~
- g) ~~The UE indicates on an unambiguous way, that CB Data 2 has been received by the UE (e.g. a unique part of the CBS data contents shown in the display).~~
- h) ~~The UE deactivates the CB Message type ID used for CB Data 1.~~
- i) ~~The SS sends the CB Data 2 (as deactivated CB Data type) to the UE.~~
- j) ~~The UE ignores the newly received CB Data 2, i.e. there is no indication for this CB Data 2 as described in step e).~~

| Message ID                          | Bitstring (16) CB message ID, it shall fit to the stored Message ID in the SIM inserted in the UE (source and type) [see TS 23.041] |
| Serial Number                       | [see TS 23.041]                                                                                                                     |
| —Geographic Scope Indicator (2 bit) | 11 (Normal Cell wide)                                                                                                               |
| —Message Code (10 bit)              | according with the Message ID                                                                                                       |
| —Update Number (4 bit)              | for a new message: 0000, incremented by one for each repetition                                                                     |
| Data Coding Scheme                  | Bitstring (16) ID of the alphabet/coding and the applied language [see TS 23.041]                                                   |
| CB Data                             | Octetstring, [see IXIT value: CB-Data 2]                                                                                            |

## BMC Schedule Message (Step 3, 6 and Step 9)

The parameters for BMC Schedule Message (inband schedule message) in Step 5 are inserted for CB-Data 2 and in Step 8 for CB-Data 1.

| Information Element                               | Value/remark                                                                                                  |
|---------------------------------------------------|---------------------------------------------------------------------------------------------------------------|
| Message Type                                      | 2 (Schedule message)                                                                                          |
| Offset to begin CTCH-BS index                     | calculated offset value of the BS (Integer: 0...255) as recommended in TR 25.925                              |
| Length of CBS Schedule Period                     | Number of consecutive CTCH-BS of the next CBS Schedule Period, (Integer: 1...255) as recommended in TR 25.925 |
| New Message Bitmap                                | Bitmap ( $N \times 8$ ), $N$ = Length of CBS Schedule Period as recommended in TR 25.925                      |
| Message Description                               | 1 for new message (see TS 25.324, Table 11.9-3)                                                               |
| - Message Description Type                        | 5 for old message (see TS 25.324, Table 11.9-3)                                                               |
| - Message ID                                      | CB message ID used for the next CB data                                                                       |
| - Offset to CTCH (BS index of first transmission) | for Message description type 1 or 5: CB message ID IE included (see TS 23.041)                                |

#### 7.4.3.1.5 ——— Test requirements

After having received the CB-Data 1 message (step 4), the UE shall store the Serial Number of this message and indicate the reception of the CBS message as described by the manufacturer.

After CB-Data 2 message was newly broadcasted (step 10), the UE shall not indicate the reception for the deactivated CBS message (CB-Data 1).

## 8 Radio Resource Control RRC

### 8.1 RRC Connection Management Procedure

#### 8.1.1 Paging

##### 8.1.1.1 Paging for Connection in idle mode

###### 8.1.1.1.1 Definition

###### 8.1.1.1.2 Conformance requirement

In idle mode, UE monitors the paging occasions determined using parameters from SYSTEM INFORMATION BLOCK messages. When the UE receives a PAGING TYPE 1 message transmitted on PCCH during one of its assigned paging occasions, it shall attempt to establish an RRC connection.

###### Reference

3GPP TS 25.331 clause 8.1.2, 3GPP TS 25.211 clause 5.3.3.7 (FDD), 3GPP TS 25.221 (TDD), 3GPP TS 25.304 clause 8.

###### 8.1.1.1.3 Test purpose

To confirm that the UE establishes an RRC connection after it receives a PAGING TYPE 1 message which includes IE "UE identity" (in IE "Paging Record") set to the IMSI of the UE.

###### 8.1.1.1.4 Method of test

###### Initial Condition

System Simulator: 1 cell

UE: Idle state (state 2 or state 3 or state 7) as specified in clause 7.4 of TS 34.108 with a CN UE identity (set to IMSI), depending on the CN domain(s) supported by the UE.

###### Test Procedure

SS transmits SYSTEM INFORMATION BLOCK TYPE 1 or 13 messages, depending on the CN type supported by the UE. The SS transmits a PAGING TYPE 1 message, which includes an unmatched CN UE identity for the UE in the idle state. The UE shall not change its state. The SS transmits a PAGING TYPE 1 message, which includes a matched CN UE identity for the UE in the idle state. During transmission of PAGING TYPE 1 messages, SS selects the correct paging indicator on the PICH in order to allow the UE to respond to paging. Then the UE transmits an RRC CONNECTION REQUEST to the SS, the SS transmits an RRC CONNECTION SETUP to the UE. When the UE receives this message, the UE establishes an RRC connection and transmits an RRC CONNECTION SETUP COMPLETE message on the uplink DCCH.

NOTE: For UEs supporting GSM-MAP CN type only, SYSTEM INFORMATION TYPE 1 messages are to be sent by SS in this test case. On the other hand, SS transmits SYSTEM INFORMATION TYPE 13 messages if the UE under test supports only ANSI-41 CN type.

## Expected sequence

| Step | Direction |    | Message                                                             | Comment                                                                                                                    |
|------|-----------|----|---------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                                                     |                                                                                                                            |
| 1    |           | ←  | SYSTEM INFORMATION BLOCK TYPE 13 or SYSTEM INFORMATION BLOCK TYPE 1 | Transmit these messages on the BCCH, in addition to the normal BCCH transmissions. See specific message contents.          |

## PAGING TYPE 1 (Step 2)

| Information Element         | Value/remark                                                                                                            |
|-----------------------------|-------------------------------------------------------------------------------------------------------------------------|
| Message Type                |                                                                                                                         |
| Paging record list          | Only 1 entry                                                                                                            |
| Paging record               |                                                                                                                         |
| CHOICE Used paging identity | CN identity                                                                                                             |
| Paging cause                | Terminating Call with one of the supported services                                                                     |
| CN domain identity          | Supported Domain (PS Domain or CS Domain)                                                                               |
| CHOICE UE Identity          | IMSI                                                                                                                    |
| IMSI                        | Set to an arbitrary octet string of length 7 bytes which is different from the IMSI value stored in the TEST USIM card. |
| BCCH modification info      | Not Present                                                                                                             |

## PAGING TYPE 1 (Step 3)

| Information Element         | Value/remark                                                             |
|-----------------------------|--------------------------------------------------------------------------|
| Message Type                |                                                                          |
| Paging record list          | Only 1 entry                                                             |
| Paging record               |                                                                          |
| CHOICE Used paging identity | CN identity                                                              |
| Paging cause                | Terminating Call with one of the supported services                      |
| CN domain identity          | Supported Domain (PS Domain or CS Domain)                                |
| CHOICE UE Identity          | IMSI                                                                     |
| IMSI                        | Set to the same octet string as in the IMSI stored in the TEST USIM card |
| BCCH modification info      | Not Present                                                              |

## RRC CONNECTION REQUEST (Step 4)

| Information Element      | Value/remark                                                                                                         |
|--------------------------|----------------------------------------------------------------------------------------------------------------------|
| Message type             |                                                                                                                      |
| Initial UE identity      | Same as the IMSI stored in the TEST USIM card, or the registered TMSI or P-TMSI                                      |
| Establishment Cause      | Check to see if it is set to the same value as "Paging Cause" IE in the PAGING TYPE 1 message transmitted on step 3. |
| Protocol Error Indicator | Check to see if it is set to FALSE                                                                                   |
| Measured results on RACH | Not checked.                                                                                                         |

## 8.1.1.1.5 Test requirement

After step 2 the UE shall not transmit on the uplink CCCH in order to establish a RRC connection.

After step 5 the UE shall have an RRC connection based on dedicated physical channel resources and transmit an RRC CONNECTION SETUP COMPLETE message on the uplink DCCH.

## 8.1.1.2 Paging for Connection in connected mode (CELL\_PCH)

## 8.1.1.2.1 Definition

## 8.1.1.2.2 Conformance requirement

In CELL\_PCH state, a UE can respond to a paging request from UTRAN. In this case, the UTRAN has requested to establish a connection with the UE. The UE shall then attempt to perform a cell update procedure and move to CELL\_FACH state in order to respond to the paging using uplink CCCH.

## Reference

3GPP TS 25.331 clause 8.1.2.

### 8.1.1.2.3 Test purpose

To confirm that the UE enters the CELL\_FACH state after it receives a PAGING TYPE 1 message which indicates that the paging has originated from UTRAN. To verify that the UE performs cell update procedure after entering the CELL\_FACH state.

### 8.1.1.2.4 Method of test

#### Initial Condition

System Simulator: 1 cell

UE: CELL\_PCH state (state 6-12) as specified in clause 7.4 of TS 34.108, with a valid U-RNTI already assigned by the SS.

#### Test Procedure

SS transmits SYSTEM INFORMATION BLOCK TYPE 1 or 13 messages, depending on the CN type supported by the UE. The SS transmits a PAGING TYPE 1 message, which includes an unmatched U-RNTI. The UE does not change its state. Then SS transmits a PAGING TYPE 1 message with a matched identifier but originates from the CN instead of UTRAN. The UE shall not change state after receiving this message. The SS transmits a PAGING TYPE 1 message, which includes a matched U-RNTI. Then the UE enters the CELL\_FACH state and performs the cell updating procedure.

NOTE: For UEs supporting GSM-MAP CN type only, SYSTEM INFORMATION TYPE 1 messages are to be sent by SS in this test case. On the other hand, SS transmits SYSTEM INFORMATION TYPE 13 messages if the UE under test supports only ANSI-41 CN type.

#### Expected sequence

| Step | Direction |    | Message                                                             | Comment                                                                                                                                                               |
|------|-----------|----|---------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                                                     |                                                                                                                                                                       |
| 1    |           | ←  | SYSTEM INFORMATION BLOCK TYPE 13 or SYSTEM INFORMATION BLOCK TYPE 1 | Transmit these messages on the BCCH, in addition to the normal BCCH transmissions. See specific message contents                                                      |
| 2    |           | ←  | PAGING TYPE 1                                                       | The SS transmits a message including an unmatched identifier. UE shall not respond to the paging.                                                                     |

| —— U-RNTI                                  |                                                       |
| —— SRNC Identity                           | Set to the same SRNC identity as previously assigned. |
| —— S-RNTI                                  | Set to the same S-RNTI as previously assigned.        |
| —— CN originated page to connected mode UE | Not Present                                           |
| BCCH modification info                     | Not Present                                           |

## SYSTEM INFORMATION BLOCK TYPE 13

Use the same SYSTEM INFORMATION BLOCK TYPE 13 message as specified in clause 8.1.1.1.4.

## SYSTEM INFORMATION BLOCK TYPE 1

Use the same SYSTEM INFORMATION BLOCK TYPE 1 message as specified in clause 8.1.1.1.4.

## 8.1.1.2.5 ——— Test requirement

After step 2 the UE shall not respond to the PAGING TYPE 1 message sent in step 2.

After step 3 the UE shall not respond to the PAGING TYPE 1 message sent in step 3.

After step 4 the UE shall enter the CELL\_FACH state and send a CELL\_UPDATE message with "Cell Update Cause" IE set to "paging response".

After step 6 the UE shall be in the CELL\_FACH state.

## 8.1.1.3 ——— Paging for Connection in connected mode (URA\_PCH)

## 8.1.1.3.1 ——— Definition

## 8.1.1.3.2 ——— Conformance requirement

This procedure is used to transmit a PAGING TYPE 1 message from the network to selected UEs in URA\_PCH state using the paging control channel (PCCH). The UE listens to it and then enters the CELL\_FACH state.

## Reference

3GPP TS 25.331 clause 8.1.2.

## 8.1.1.3.3 Test purpose

To confirm that the UE enters the CELL\_FACH state after it receives a PAGING TYPE 1 message which is set to "UTRAN identity" in IE "Used paging identity" and the U-RNTI value assigned to UE in the IE "U-RNTI".

## 8.1.1.3.4 Method of test

## Initial Condition

System Simulator: 1 cell.

UE: URA\_PCH state (state 6-13) as specified in clause 7.4 of TS 34.108, with a valid U-RNTI assigned by the SS.

## Test Procedure

The SS transmits a PAGING TYPE 1 message, which includes an unmatched U-RNTI. The UE does not change its current state. The SS transmits a PAGING TYPE 1 message which includes a matched U-RNTI. Then the UE listens to it and enters the CELL\_FACH state to transmit a CELL\_UPDATE message using uplink CCCH in respond to the paging.

## Expected sequence

| Step | Direction |    | Message             | Comment                                                                                               |

## 8.1.1.3.5 Test requirement

After step 1 the UE shall not respond to the paging.

After step 2 the UE shall enter the CELL\_FACH state, and transmit CELL\_UPDATE message to initiate the cell updating procedure with the paging cause set to "paging response".

After step 4 the UE shall be in the CELL\_FACH state.

## 8.1.1.4 Paging for Notification in idle mode

## 8.1.1.4.1 Definition

## 8.1.1.4.2 Conformance requirement

When a system information block on the BCCH is modified, the PAGING TYPE 1 message can be sent on the PCCH to inform UE in the idle mode about the changes, which are currently taking place. The PAGING TYPE 1 message includes the IE "BCCH Modification Information". Upon receiving this notification from the UTRAN, the UE shall read the relevant MIB and/or SIB(s) subsequently during idle mode.

## Reference

3GPP TS 25.331 clause 8.1. 2.

## 8.1.1.4.3 Test purpose

To confirm that the UE checks the new value tag of the master information block and reads the updated SYSTEM INFORMATION BLOCK messages after it receives a PAGING TYPE 1 message which includes the IE "BCCH Modification Information".

## 8.1.1.4.4 Method of test

## Initial Condition

System Simulator: 1 cell.

UE: Idle state (state 2 or state 3 or state 7) as specified in clause 7.4 of TS 34.108 with a CN UE identity, depending on the CN domain(s) supported by the UE.

## Test Procedure

The SS transmits a PAGING TYPE 1 message on the paging occasions assigned to the UE. The message shall include the IE "BCCH Modification Information" indicating the time when the first modified master information block is available. Before the starting time, SS continuously broadcast the original MASTER INFORMATION BLOCK and various types of SYSTEM INFORMATION BLOCK on the BCCH mapped to BCH transport channel. SS maintains this status until the SFN which corresponds to the modification time is reached. Then it transmits the new master information block followed by the new SYSTEM INFORMATION BLOCK TYPE 5 message. In the new SIB TYPE 5 message, the IE "Available Signature" is different when compared to the original SIB TYPE 5 message. At the paging occasion, SS transmits a new PAGING TYPE 1 message. This message addresses the UE using its IMSI and the "paging cause" IE set to a terminating call type that is supported by the UE. The UE shall respond with RRC CONNECTION REQUEST message. Then SS shall transmit RRC CONNECTION REJECT message to UE.

## Expected sequence

| Step | Direction |    | Message                         | Comment                                                                                                                                                                                                                                                                                                                                                                                                     |

**RRC CONNECTION REJECT**

Use the same message type found in clause Annex A.

**8.1.1.4.5 — Test requirement**

After step 4 the UE shall transmit RRC CONNECTION REQUEST messages in response to the PAGING TYPE 1 messages sent in step 4.

**8.1.1.5 — Paging for Notification in connected mode (CELL\_PCH)****8.1.1.5.1 — Definition****8.1.1.5.2 — Conformance requirement**

When a system information block on the BCCH is modified, the message PAGING TYPE 1 can be sent on the PCCH to inform UE in the CELL\_PCH state about this change. This message includes the IE "BCCH Modification Information". Upon receiving this notification from the UTRAN, the UE shall read the relevant MIB and/or SIB(s) subsequently while in CELL\_PCH state.

**Reference**

3GPP TS 25.331 clause 8.1. 2.

**8.1.1.5.3 — Test purpose**

To confirm that the UE, checks the new value tag of the master information block, and read the SYSTEM INFORMATION messages after it receives a PAGING TYPE 1 message which includes the IE "BCCH Modification Information".

#### 8.1.1.5.4 Method of test

##### Initial Condition

System Simulator: 1 cell.

UE: CELL\_PCH state (state 6-12) as specified in clause 7.4 of TS 34.108 with valid a U-RNTI assigned to it.

##### Test Procedure

The SS transmits a PAGING TYPE 1 message on the paging occasions assigned to the UE. The message shall include the IE "BCCH Modification Information" indicating the time when the first modified master information block is available. Before the starting time, SS continuously broadcast the original MASTER INFORMATION BLOCK and various types of SYSTEM INFORMATION BLOCK on the BCCH mapped to BCH transport channel. SS maintains this status until the SFN, which corresponds to the modification time, is reached. Then it transmits the new master information block followed by the new SYSTEM INFORMATION BLOCK TYPE 5 message. In the new SIB TYPE 5 message, the IE "Available Signature" is different when compared to the original SIB TYPE 5 message. At the paging occasion, SS transmits a new PAGING TYPE 1 message. This message addresses the UE using its U-RNTI. The UE shall respond with a CELL UPDATE message and set IE "cell update cause" to "paging response".

## CELL UPDATE (Step 5)

Check to see if the same message type found in Annex A is received, with the following exceptions:

| Information Element | Value/remark                                                |
|---------------------|-------------------------------------------------------------|
| U-RNTI              | Checked to see if it is set to the same values as in step 4 |
| —— SRNC identity    |                                                             |
| —— S-RNTI           |                                                             |
| Cell update cause   | Paging response                                             |

## CELL UPDATE CONFIRM (Step 6)

Use the same message type found in clause Annex A.

## 8.1.1.5.5 ——— Test requirement

After step 4 the UE shall transmit a CELL UPDATE message with IE "cell update cause" set to "paging response".

### ~~8.1.1.6 Paging for Notification in connected mode (URA\_PCH)~~

#### ~~8.1.1.6.1 Definition~~

#### ~~8.1.1.6.2 Conformance requirement~~

~~When a system information block on the BCCH is modified, the UTRAN can send a PAGING TYPE 1 message on the PCCH to inform UE about the changes while the UE is in the URA\_PCH state. This message includes the IE "BCCH Modification Information". When receiving this message in URA\_PCH state, the UE shall read the relevant MIB and/or SIB(s).~~

#### ~~Reference~~

~~3GPP TS 25.331 clause 8.1.2.~~

#### ~~8.1.1.6.3 Test purpose~~

~~To confirm that the UE checks the included new value tag of the master information block and reads the relevant SYSTEM INFORMATION block(s) after it receives a PAGING TYPE 1 message which includes the IE "BCCH Modification Information".~~

#### ~~8.1.1.6.4 Method of test~~

#### ~~Initial Condition~~

~~System Simulator: 1 cell~~

~~UE: URA\_PCH state (state 6-13) as specified in clause 7.4 of TS 34.108 with a valid U-RNTI assigned.~~

#### ~~Test Procedure~~

~~The SS transmits a PAGING TYPE 1 message on the paging occasions assigned to the UE. The message shall include the IE "BCCH Modification Information" indicating the time when the first modified master information block is available. Before the starting time, SS continuously broadcast the original MASTER INFORMATION BLOCK and various types of SYSTEM INFORMATION BLOCK on the BCCH mapped to BCH transport channel. SS maintains this status until the SFN which corresponds to the modification time is reached. Then it transmits the new master information block followed by the new SYSTEM INFORMATION BLOCK TYPE 5 message. In the new SIB TYPE 5 message, the IE "Available Signature" is different when compared to the original SIB TYPE 5 message. At the next paging occasion, SS transmits a new PAGING TYPE 1 message. This message addresses the UE using its U-RNTI and the "paging cause" IE set to a terminating call type that is supported by the UE. The UE shall respond with a CELL UPDATE message and set IE "cell update cause" to "paging response".~~

## Expected sequence

| —— CN originated page to connected mode UE |                                                         |
| BCCH modification info                     | Not Present                                             |

**CELL UPDATE (Step 5)**

Check to see if the same message type found in Annex A is received, with the following exceptions:

| Information Element | Value/remark                                                |
|---------------------|-------------------------------------------------------------|
| U-RNTI              | Checked to see if it is set to the same values as in step 4 |
| —— SRNC identity    |                                                             |
| —— S-RNTI           |                                                             |
| Cell update cause   | Paging response                                             |

**CELL UPDATE CONFIRM (Step 6)**

Use the same message type found in clause Annex A.

**8.1.1.6.5 — Test requirement**

After step 4, the UE shall transmit a CELL UPDATE message with IE "cell update cause" set to "paging response".

**8.1.1.7 — Paging for Connection in connected mode (CELL\_DCH)****8.1.1.7.1 — Definition****8.1.1.7.2 — Conformance requirement**

This procedure is used to transmit a PAGING TYPE 2 message from the network to selected UE in CELL\_DCH state using the dedicated control channel (DCCH). The UE listens to it and responds to this message accordingly.

When UE receives an invalid PAGING TYPE 2 message, UE shall perform procedure specific error handling.

**Reference**

3GPP TS 25.331 clause 8.1.11.

**8.1.1.7.3 — Test purpose**

To confirm that the UE responds to a PAGING TYPE 2 message which includes IE "Paging Record Type Identifier" for the UE.

To confirm that the UE responds with a RRC STATUS message after it received an invalid PAGING TYPE 2 message.

**8.1.1.7.4 — Method of test****Initial Condition**

System Simulator: 1 cell.

UE: CELL\_DCH state (state 6-9 or state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE, after executing a location registration or attach procedure followed by the release of the TMSI of P-TMSI allocated.

### Test Procedure

The SS transmits an invalid PAGING TYPE 2 message. UE shall respond by transmitting a RRC STATUS message on the DCCH using RLC-AM mode. Finally, SS transmits a PAGING TYPE 2 message, which includes a matched Paging Record Type Identifier. Then the UE shall responds to this message by the transmission of an upper layer message.

### Expected sequence

| Step | Direction |    | Message                | Comment                                                                       |
|------|-----------|----|------------------------|-------------------------------------------------------------------------------|
|      | UE        | SS |                        |                                                                               |
| 1    |           |    | Void                   |                                                                               |
| 2    |           | ←  | PAGING TYPE 2          | See message content.                                                          |
| 3    |           | →  | RRC STATUS             | The UE shall respond by reporting the protocol error to the SS.               |
| 4    |           | ←  | PAGING TYPE 2          | SS pages the UE with a matched identifier and with a valid "paging cause" IE. |
| 5    |           | →  | UPLINK DIRECT TRANSFER | The UE shall respond to the paging message sent in step 3.                    |

### Specific Message Contents

#### PAGING TYPE 2 (Step 2)

| Information Element | Value/remark |
|---------------------|--------------|
| All IEs             | Not Present  |

#### RRC STATUS (Step 3)

Use the same message type found in Annex A, with the following exception.

| Information Element        | Value/remark                                                 |
|----------------------------|--------------------------------------------------------------|
| Protocol error information | Checked to see if set to "ASN.1 violation or encoding error" |

#### PAGING TYPE 2 (Step 4)

Use the same message type found in Annex A, with the following exception.

| Information Element           | Values/Remarks                                                                                                                       |
|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------|
| Paging cause                  | Terminating Call supported by the UE                                                                                                 |
| CN domain identity            | Domain supported by the UE                                                                                                           |
| Paging record type identifier | Set to "IMSI (GSM-MAP)" for UEs supporting GSM-MAP core network type or "IMSI (DS-41)" for UEs supporting ANSI-41 core network type. |

#### UPLINK DIRECT TRANSFER (Step 5)

Only the message type IE for this message is checked.

8.1.1.7.5 ~~Test requirement~~

~~After step 2 the UE shall respond to the paging message by transmitting RRC STATUS on the DCCH, stating the protocol error as "ASN.1 violation or encoding error".~~

~~After step 4 the UE shall respond to the paging message by transmitting an UPLINK DIRECT TRANSFER message on the uplink DCCH.~~

8.1.1.8 ~~Paging for Connection in connected mode (CELL\_FACH)~~

8.1.1.8.1 ~~Definition~~

8.1.1.8.2 ~~Conformance requirement~~

~~This procedure is used to transmit a PAGING TYPE 2 message from the network to selected UE in CELL\_FACH state using the dedicated control channel (DCCH). The UE shall listen to it and responds to this message accordingly.~~

Reference

~~3GPP TS 25.331 clause 8.1.11.~~

8.1.1.8.3 ~~Test purpose~~

~~To confirm that the UE responds to a PAGING TYPE 2 message, which includes a matching value for IE "Paging Record Type Identifier".~~

8.1.1.8.4 ~~Method of test~~

Initial Condition

System Simulator: 1 cell.

UE: CELL\_FACH state (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

The SS transmits a PAGING TYPE 2 message. Then the UE shall respond by transmitting an upper layer message to answer this page.

Expected sequence

| Step | Direction |    | Message                | Comment                                                     |
|------|-----------|----|------------------------|-------------------------------------------------------------|
|      | UE        | SS |                        |                                                             |
| 1    |           |    | Void                   |                                                             |
| 2    |           | ←  | PAGING TYPE 2          | The SS transmits the message includes a matched identifier. |
| 3    |           | →  | UPLINK DIRECT TRANSFER | The UE responds by sending an upper layer message.          |

Specific Message Content

PAGING TYPE 2 (Step 1)

Use the same message content as in step 1 from 8.1.1.7.4.

UPLINK DIRECT TRANSFER (Step 2)

Only the message type IE for this message is checked.

#### 8.1.1.8.5 ~~Test requirement~~

~~After step 1 the UE shall respond to the PAGING TYPE 2 message by transmitting an UPLINK DIRECT TRANSFER message on the uplink DCCH.~~

### 8.1.2 ~~RRC Connection Establishment~~

#### 8.1.2.1 ~~RRC Connection Establishment in CELL\_DCH state: Success~~

##### 8.1.2.1.1 ~~Definition~~

##### 8.1.2.1.2 ~~Conformance requirement~~

- ~~1. The RRC connection establishment is initiated by the UE, which leaves the idle mode and transmits an RRC CONNECTION REQUEST message. This message shall include the IE "Initial UE identity" and is to be transmitted on the uplink CCCH.~~
- ~~2. After the UE receives an RRC CONNECTION SETUP message which includes the same value of the IE "initial UE identity", radio resource parameters (i.e. Signalling radio bearers and multiplexing info) and U-RNTI, UE then configures the layer 2 and layer 1 so as to support the DCCH according to the radio resource parameters specified. The procedure successfully ends when the network receives an RRC CONNECTION SETUP COMPLETE message on the uplink DCCH.~~

#### Reference

~~3GPP TS 25.331 clause 8.1.3.~~

##### 8.1.2.1.3 ~~Test purpose~~

~~To confirm that the UE leaves the Idle Mode and correctly establishes signalling radio bearers on the DCCH.~~

##### 8.1.2.1.4 ~~Method of test~~

#### Initial Condition

System Simulator: 1 cell.

UE: Idle state (state 2 or state 3 or state 7) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

#### Test Procedure

The UE transmits an RRC CONNECTION REQUEST message to the SS on the uplink CCCH by attempting to make an outgoing call. After SS receives this message, it assigns the necessary radio resources and U-RNTI to be used by the UE. SS then transmits an RRC CONNECTION SETUP message containing an IE "Initial UE Identity" that does not match the IE "Initial UE Identity" in the most recent RRC CONNECTION REQUEST message sent by the UE. UE receives the RRC CONNECTION SETUP message before timer T300 expires but discards it due to a IE "Initial UE Identity" mismatch. UE shall wait for timer T300 to time out before re-transmitting a RRC CONNECTION REQUEST message to the SS. SS again assigns the necessary radio resources and U-RNTI. SS then transmits a RRC CONNECTION SETUP message containing an IE "Initial UE Identity" that matches the IE "Initial UE Identity" in the most recent RRC CONNECTION REQUEST sent by the UE. SS then waits for the UE to transmit an RRC CONNECTION SETUP COMPLETE message on the DCCH.

## Expected sequence

| Step | Direction |    | Message                       | Comment                                                                              |
|------|-----------|----|-------------------------------|--------------------------------------------------------------------------------------|
|      | UE        | SS |                               |                                                                                      |
| 1    | →         |    | RRC CONNECTION REQUEST        | By outgoing call operation                                                           |
| 2    | ←         |    | RRC CONNECTION SETUP          | This message is not addressed to the UE.                                             |
| 3    | →         |    | RRC CONNECTION REQUEST        | UE shall re-transmit the request message again after a time out of T300 from step 1. |
| 4    | ←         |    | RRC CONNECTION SETUP          |                                                                                      |
| 5    |           |    |                               | The UE configures the layer 2 and layer 1.                                           |
| 6    | →         |    | RRC CONNECTION SETUP COMPLETE |                                                                                      |

## Specific Message Content

## RRC CONNECTION SETUP (Step 2)

Use the same message type found in clause 9 of TS 34.108, with the following exception.

| Information Element | Value/remark                                                                             |
|---------------------|------------------------------------------------------------------------------------------|
| Initial UE Identity | Set to the same type as in the RRC CONNECTION REQUEST message but with a different value |

## 8.1.2.1.5 ——— Test requirement

After step 2 the UE shall re-transmit the RRC CONNECTION REQUEST message again in order to continue the RRC connection establishment procedure.

After step 6 the UE shall establish an RRC connection and continue the procedure of the outgoing call on the DCCH.

## 8.1.2.2 ——— RRC Connection Establishment: Success after T300 timeout

## 8.1.2.2.1 ——— Definition

## 8.1.2.2.2 ——— Conformance requirement

1. The RRC connection establishment is initiated by the UE, which leaves the idle mode. The UE shall transmit an RRC CONNECTION REQUEST message which includes the IE "Initial UE identity". This message shall be sent on the uplink CCCH.
  - When there are more than one PRACHs available, the UE shall select one PRACH randomly and transmit an RRC CONNECTION REQUEST message by use of selected PRACH.
2. In the case of a failure to establish the RRC connection at the expiry of timer T300, the UE retries to establish the RRC connection until V300 is greater than N300

## Reference

3GPP TS 25.331 clause 8.1.3.

## 8.1.2.2.3 ——— Test purpose

To confirm that the UE retries to establish the RRC connection until V300 is greater than N300 after the expiry of timer T300 when the SS transmits no response for an RRC CONNECTION REQUEST message.

#### 8.1.2.2.4 ~~Method of test~~

##### ~~Initial Condition~~

~~System Simulator: 1 cell.~~

~~UE: Idle state (state 2 or state 3 or state 7) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.~~

##### ~~Test Procedure~~

~~Before the test starts, SYSTEM INFORMATION BLOCK TYPE 5 message is modified and this modification is notified to the UE. An internal counter K in SS is initialized to a value = 0. Following this, the UE shall transmit an RRC CONNECTION REQUEST message to the SS on the uplink CCCH by use of selected PRACH from the available PRACH No.1 and PRACH No.2, after the operator attempts to make an outgoing call. SS ignores this message, increments K every time such a message is received and waits for T300 timer to expire. This cycle is repeated until K reaches N300. When K is equal to N300, the SS transmits the RRC CONNECTION SETUP message specified in step 6 to the UE. The UE shall send another RRC CONNECTION REQUEST message on the uplink CCCH. SS replies with a valid RRC CONNECTION SETUP message. The UE shall then acknowledge the establishment of RRC connection by sending the RRC CONNECTION SETUP COMPLETE message on uplink DCCH.~~

## Expected sequence

### RRC CONNECTION SETUP (Step 6)

| Information Element | Value/remark |
|---------------------|--------------|
| All IEs             | Not Present  |

#### 8.1.2.2.5 ————— Test requirement

After step 2 the UE shall select either PRACH No.1 or PRACH No.2 and transmit an RRC CONNECTION REQUEST message.

After step 6 the UE shall re-send another RRC CONNECTION REQUEST message.

After step 9 the UE shall transmit an RRC CONNECTION SETUP COMPLETE message and establish an RRC connection on the DCCH logical channel.

### 8.1.2.3 ————— RRC Connection Establishment: Failure (V300 is greater than N300)

#### 8.1.2.3.1 ————— Definition

#### 8.1.2.3.2 ————— Conformance requirement

1. The RRC connection establishment is initiated by the UE, which leaves the idle mode and transmits an RRC CONNECTION REQUEST message. This message shall include the IE "Initial UE identity" on the uplink CCCH.
2. In the case of a failure to establish the RRC connection after (N300+1) attempts, the UE goes back to idle mode.

#### Reference

3GPP TS 25.331 clause 8.1.3.

#### 8.1.2.3.3 ————— Test purpose

To confirm that the UE stops retrying to establish the RRC connection if V300 is greater than N300 and goes back to idle mode.

#### 8.1.2.3.4 ————— Method of test

#### Initial Condition

System Simulator: 1 cell

UE: Idle state (state 2 or state 3 or state 7) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

## Test Procedure

Before the test starts, SS initializes an internal counter K to 0. The UE transmits an RRC CONNECTION REQUEST message to the SS on the uplink CCCH by an outgoing call operation. SS shall not respond to any RRC CONNECTION REQUEST message, instead the counter K is increased by 1 every time such a message is received. To arrive at the verdict, the SS checks that a total of (N300+1) such messages are received.

## Expected sequence

| Step | Direction |    | Message                | Comment                                                                                                                                                                                                                             |
|------|-----------|----|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                        |                                                                                                                                                                                                                                     |
| 1    |           |    |                        | SS initializes counter K to 0 and then prompts the operator to make an outgoing call.                                                                                                                                               |
| 2    |           | →  | RRC CONNECTION REQUEST |                                                                                                                                                                                                                                     |
| 3    |           |    |                        | SS increments K by 1.                                                                                                                                                                                                               |
| 4    |           |    |                        | If K is greater than N300, goes to step 5 else proceed to step 2.                                                                                                                                                                   |
| 5    |           |    |                        | SS monitor the uplink CCCH for a time period enough for UE to goes back to idle state. The exact amount of time to wait shall be derived from TS related to cell selection. If any uplink transmission is detected, the test fails. |

## Specific Message Contents

None

### 8.1.2.3.5 Test requirement

After step 5, counter K shall be equal to (N300+1) and there shall be no uplink transmission in the monitoring period specified in step 5.

### 8.1.2.4 RRC Connection Establishment: Reject ("wait time" is not equal to 0)

#### 8.1.2.4.1 Definition

#### 8.1.2.4.2 Conformance requirement

1. The RRC connection establishment is initiated by the UE, which leaves the idle mode and transmits an RRC CONNECTION REQUEST message. This message shall include the IE "Initial UE identity" and is to be sent on the uplink CCCH.
2. After the UE receives an RRC CONNECTION REJECT message which includes IE "wait time" not set to 0, and neither IE "frequency info" nor IE "system info" is present, the UE shall wait for a period specified in the IE "wait time". Thereafter re-transmit an RRC CONNECTION REQUEST message to attempt to establish the RRC connection again.
3. After the UE receives an RRC CONNECTION REJECT message which includes IE "wait time" not set to 0, and either IE "frequency info" or IE "system info" is available in the message, the UE shall attempt to perform cell reselection using these information. Thereafter re-transmit an RRC CONNECTION REQUEST message to attempt to establish the RRC connection again.

## Reference

3GPP TS 25.331 clause 8.1.3.

### 8.1.2.4.3 Test purpose

To confirm that the UE retries to establish the RRC connection after the "wait time" lapses, if the UE receives an RRC CONNECTION REJECT message which includes the IE "wait time" not set to 0.

To confirm that the UE performs a cell reselection when receiving an RRC CONNECTION REJECT message, containing relevant frequency information of the target cell to be re-selected.

### 8.1.2.4.4 Method of test

#### Initial Condition

System Simulator: 2 cells—both cell 1 and cell 2 are active and suitable for camping, but cell 1 is transmitted using a larger power. Cell 1 and cell 2 are being transmitted from different 2 UARFCNs. The transmission power of cell 2 is 15 dB smaller than cell 1.

**Table 8.1.2.4**

| Parameter                  | Unit         | Cell 1 | Cell 2 |
|----------------------------|--------------|--------|--------|
| UTRA—RF Channel Number     |              | Ch. 1  | Ch. 2  |
| CPICH—E <sub>c</sub> (FDD) | dBm/3.84 MHz | -60    | -75    |
| P-CCPCH (TDD)              | dBm          | -60    | -75    |

UE: Idle state (state 2 or state 3 or state 7) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

#### Test Procedure

The UE transmits an RRC CONNECTION REQUEST message to the SS on the uplink CCCH by an outgoing call operation in cell 1. SS rejects the first request by transmitting an RRC CONNECTION REJECT message which indicates a non-zero wait time. In this message, frequency information for cell 2 is available. SS then waits for RRC CONNECTION REQUEST message on the uplink CCCH of cell 2. SS will also monitor the uplink of cell 1 simultaneously to ensure that all transmission activities from cell 1 have ceased. When the UE has successfully camp onto cell 2, it shall send an RRC CONNECTION REQUEST with the same establishment cause as its previous attempt in cell 1. SS responds with an RRC CONNECTION REJECT message, indicating a non-zero "wait time" and omitting the IE "Redirection Info". The UE shall observe the wait time period indicated. After the wait time has elapsed, the UE shall re-transmit RRC CONNECTION REQUEST again. Finally, SS transmits an RRC CONNECTION SETUP message to establish an RRC connection with the UE, and the UE replies with an RRC CONNECTION SETUP COMPLETE message and enters CELL\_DCH state.

## Expected sequence

| Step | Direction |    | Message                       | Comment                                                                                                                                                                    |
|------|-----------|----|-------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                               |                                                                                                                                                                            |
| 1    | —→        |    | RRC CONNECTION REQUEST        | SS prompts the operator to make an outgoing call in cell 1.                                                                                                                |
| 2    | —←        |    | RRC CONNECTION REJECT         | This message shall includes the IE "wait time" set to 15 seconds and IE "frequency info" set to the UARFCN of cell 2.                                                      |
| 3    |           |    |                               | SS waits for a period of time sufficient for UE to reselect to cell 2. At the same time, it monitors the uplink of cell 1 to make sure that all transmissions have ceased. |
| 4    | —→        |    | RRC CONNECTION REQUEST        | UE shall attempt to re-start an RRC connection establishment procedure in cell 2. The establishment cause shall remain unchanged.                                          |
| 5    | —←        |    | RRC CONNECTION REJECT         | This message shall include the IE "wait time" set to 15 seconds, but with IE "Redirection Info" absent.                                                                    |
| 6    | —→        |    | RRC CONNECTION REQUEST        | SS waits until the duration specified in IE "wait time" has elapsed and then listens to the uplink CCCH for a second RRC CONNECTION REQUEST message.                       |
| 7    | —←        |    | RRC CONNECTION SETUP          | SS sends the message to UE to setup an RRC connection with the UE.                                                                                                         |
| 8    |           |    |                               | The UE shall configure the layer 2 and layer 1 in order to access the uplink and downlink DCCH assigned.                                                                   |
| 9    | —→        |    | RRC CONNECTION SETUP COMPLETE |                                                                                                                                                                            |

## Specific Message Contents

## RRC CONNECTION REQUEST (Step 1)

Use the same message type found in clause 9 of TS 34.108, with the following exception.

| Information Element | Value/remark                                                                    |
|---------------------|---------------------------------------------------------------------------------|
| Initial UE Identity | Same as the IMSI stored in the TEST USIM card, or the registered TMSI or P-TMSI |
| Establishment Cause | Must be "Originating Call"                                                      |

## RRC CONNECTION REJECT (Step 2) – FDD

Use the same message type found in Annex A, with the following exception.

| Information Element  | Value/remark                                   |
|----------------------|------------------------------------------------|
| Wait time            | 15 seconds                                     |
| Redirection Info     |                                                |
| Frequency Info       |                                                |
| —CHOICE mode         | FDD                                            |
| UARFCN uplink (Nu)   | Not present                                    |
| UARFCN downlink (Nd) | Set to the UARFCN for uplink carrier of cell 2 |

**RRC CONNECTION REJECT (Step 2) — TDD**

| Information Element | Value/remark                                         |
|---------------------|------------------------------------------------------|
| Wait time           | 15 seconds                                           |
| —Redirection Info   |                                                      |
| —Frequency Info     |                                                      |
| —CHOICE Mode        | TDD                                                  |
| —UARFCN (Nt)        | Set to a different UARFCN from the carrier of cell 1 |

**RRC CONNECTION REQUEST (Step 4 and step 6)**

Same requirement as in step 1.

**RRC CONNECTION REJECT (Step 5)**

Use the same message type found in Annex A, with the following exception.

| Information Element | Value/remark |
|---------------------|--------------|
| Wait time           | 15 seconds   |

**8.1.2.4.5 — Test requirement**

After step 3 the UE shall have successfully re-selected to cell 2, using information transmitted in IE "frequency info" of RRC CONNECTION REJECT message. UE shall trigger the start of RRC connection establishment by transmitting RRC CONNECTION REQUEST. The establishment cause shall be similar to the message sent in step 1.

After step 5 the UE shall observe the period specified in IE "wait time" of an RRC CONNECTION REJECT message and not transmit an RRC CONNECTION REQUEST message in this period.

After step 7 the UE shall transmit an RRC CONNECTION SETUP COMPLETE message to SS on uplink DCCH and then establish an RRC connection.

**8.1.2.5 — RRC Connection Establishment: Reject ("wait time" is not equal to 0 and  $V_{300}$  is greater than  $N_{300}$ )****8.1.2.5.1 — Definition****8.1.2.5.2 — Conformance requirement**

The RRC connection establishment is initiated by the UE, which leaves the idle mode and transmits an RRC CONNECTION REQUEST message. This message shall include the IE "Initial UE identity" and is to be sent on the uplink CCCH.

After the UE receives an RRC CONNECTION REJECT message which includes IE "wait time" not set to 0, and neither IE "frequency info" nor IE "system info" is present, the UE shall wait for a period specified in the IE "wait time". Thereafter it re-transmits an RRC CONNECTION REQUEST message to attempt to establish the RRC connection again. In the case of a failure to establish the RRC connection after  $(N_{300}+1)$  attempts, the UE goes back to idle mode.

**Reference**

3GPP TS 25.331 clause 8.1.3.

**8.1.2.5.3 — Test purpose**

To confirm that the UE retries to establish the RRC connection after the "wait time" elapses if the UE receives an RRC CONNECTION REJECT message which specifies a non-zero IE "wait time".

To confirm that the UE stops retrying to establish the RRC connection if V300 is greater than N300 and goes back to idle mode.

#### 8.1.2.5.4 Method of test

##### Initial Condition

System Simulator: 1 cell.

UE: Idle state (state 2 or state 3 or state 7) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE

##### Test Procedure

Before the test starts, SS initializes an internal counter K to 0. The UE transmits an RRC CONNECTION REQUEST message to the SS on the uplink CCCH, triggered by an outgoing data call operation. SS rejects all requests by transmitting an RRC CONNECTION REJECT message which indicates a non-zero wait time and the counter K is increased by 1 every time such a message is received. To arrive at the verdict, the SS checks that a total of (N300+1) such messages are received and the UE enters idle state.

##### Expected sequence

| Step | Direction |    | Message                | Comment                                                                                                                                                                                                                             |
|------|-----------|----|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                        |                                                                                                                                                                                                                                     |
| 1    |           |    |                        | SS initializes counter K to 0 and then prompts the operator to make an outgoing data call.                                                                                                                                          |
| 2    | —→        |    | RRC CONNECTION REQUEST | Shall be sent on CCCH and contain the correct establishment cause.                                                                                                                                                                  |
| 3    |           | —← | RRC CONNECTION REJECT  | This message includes the IE "wait time" set to 15 seconds.                                                                                                                                                                         |
| 4    |           |    |                        | SS increments K by 1.                                                                                                                                                                                                               |
| 5    |           |    |                        | If K is greater than N300, goes to step 6. Else SS waits for 15 sec before proceeding to step 2.                                                                                                                                    |
| 6    |           |    |                        | SS monitor the uplink CCCH for a time period enough for UE to goes back to idle state. The exact amount of time to wait shall be derived from TS related to cell selection. If any uplink transmission is detected, the test fails. |

##### Specific Message Contents

##### RRC CONNECTION REQUEST (Step 2)

Use the same message type found in clause 9 of TS 34.108, with the following exception.

| Information Element | Value/remark                                                                    |
|---------------------|---------------------------------------------------------------------------------|
| Initial UE Identity | Same as the IMSI stored in the TEST USIM card, or the registered TMSI or P-TMSI |
| Establishment Cause | Must be "Originating Call"                                                      |

##### RRC CONNECTION REJECT (Step 3)

Use the same message type found in Annex A, with the following exception.

| Information Element | Value/remark |
|---------------------|--------------|
| Wait time           | 15 seconds   |

#### 8.1.2.5.5 ~~Test requirement~~

~~After step 6, counter K shall be equals to (N300+1) and there shall be no uplink transmission in the monitoring period specified in step 6.~~

#### 8.1.2.6 ~~RRC Connection Establishment: Reject ("wait time" is set to 0)~~

##### 8.1.2.6.1 ~~Definition~~

##### 8.1.2.6.2 ~~Conformance requirement~~

- ~~1. The RRC connection establishment is initiated by the UE, which leaves the idle mode and transmits an RRC CONNECTION REQUEST message on the uplink CCCH.~~
- ~~2. In the case of a failure to establish the RRC connection by the reception of a RRC CONNECTION REJECT message which contains IE "wait time" equals to 0, the UE shall go back to idle mode immediately.~~

#### Reference

~~3GPP TS 25.331 clause 8.1.3.~~

##### 8.1.2.6.3 ~~Test purpose~~

~~To confirm that the UE goes back to idle mode, if the SS transmits an RRC CONNECTION REJECT message which includes IE "wait time" set to 0. To confirm that the UE ignores an RRC CONNECT REJECT message not addressed to it. To confirm that the UE is capable of handling an erroneous RRC CONNECTION REJECT message correctly.~~

##### 8.1.2.6.4 ~~Method of test~~

#### Initial Condition

~~System Simulator: 1 cell.~~

~~UE: Idle state (state 2 or state 3 or state 7) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.~~

#### Test Procedure

~~The UE transmits an RRC CONNECTION REQUEST message to the SS on the uplink CCCH by making an outgoing call. After the SS receives this message, it transmits an RRC CONNECTION REJECT message which is not addressed to the UE. The UE shall disregard this message and proceed to re-transmit RRC CONNECTION REQUEST message upon T300 timer expiry. SS answers the second RRC CONNECTION REQUEST message by transmitting an invalid RRC CONNECTION REJECT message. The UE shall continue to send the third RRC CONNECTION REQUEST message upon expiry of T300 timer. Next, the SS sends a legal RRC CONNECTION REJECT message which includes IE "wait time" which is set to '0'. To confirm that the UE goes back to idle mode immediately after receiving the reject message, SS shall monitor the uplink CCCH for the next 60 seconds and verify that there is no further transmission in the uplink direction.~~

## Expected sequence

| Step | Direction |    | Message                | Comment                                                                                          |

| 5    | —→        |    | RRC CONNECTION REQUEST | UE shall send this message after T300 expires.                                                   |
| 6    | —←        |    | RRC CONNECTION REJECT  | IE "wait time" is set to 0.                                                                      |
| 7    |           |    |                        | The UE goes back to idle mode.                                                                   |

## Specific Message Contents

## RRC CONNECTION REQUEST (Step 1, 3 and 5)

| Information Element      | Value/remark                                                                    |
|--------------------------|---------------------------------------------------------------------------------|
| Message Type             |                                                                                 |
| Initial UE Identity      | Same as the IMSI stored in the TEST USIM card, or the registered TMSI or P-TMSI |
| Establishment Cause      | Checked to see if set to one of the supported originating call types            |
| Protocol Error Indicator | Checked to see if set to "FALSE"                                                |
| Measured Results on RACH | Checked to see if it is absent                                                  |

## RRC CONNECTION REJECT (Step 2)

Use the same message type found in Annex A, with the following exception:

| Information Element | Value/remark                                                                                   |
|---------------------|------------------------------------------------------------------------------------------------|
| Initial UE Identity | Set to the same type as in RRC CONNECTION REQUEST message (step 1) but with a different value. |

## RRC CONNECTION REJECT (Step 4)

| Information Element | Value/remark |
|---------------------|--------------|
| All IEs             | Not Present  |

## RRC CONNECTION REJECT (Step 6)

Use the same message type found in Annex A, with the following exception:

| Information Element | Value/remark                                                                  |
|---------------------|-------------------------------------------------------------------------------|
| Initial UE Identity | Same as the type and value defined in RRC CONNECTION REQUEST message (step 5) |
| Reject Cause        | Congestion                                                                    |
| Wait time           | 0 second                                                                      |

## 8.1.2.6.5 ————— Test requirement

After step 2 the UE shall transmit an RRC CONNECTION REQUEST message on uplink CCCH upon expiry of T300 timer.

After step 4 the UE shall re-transmit an RRC CONNECTION REQUEST message on the uplink CCCH upon expiry of T300 timer.

After step 6 the UE shall stop sending an RRC CONNECTION REQUEST message, go back to idle mode immediately and not transmit in the uplink direction again.

### 8.1.2.7 RRC Connection Establishment in CELL\_FACH state: Success

#### 8.1.2.7.1 Definition

#### 8.1.2.7.2 Conformance requirement

During the RRC connection establishment, the UTRAN might assign common physical resource to the UE using an RRC CONNECTION SETUP message. When no information about the physical channels accessible is available from the message, the UE shall utilize the PRACH and S-CCPCH information transmitted on the BCCH and then enter CELL\_FACH state. Subsequently, the UE shall establish the required signalling radio bearers with the UTRAN using common physical resources.

#### Reference

3GPP TS 25.331 clause 8.1.3.

#### 8.1.2.7.3 Test Purpose

To confirm that the UE is able to enter CELL\_FACH state and setup signalling radio bearers using common physical channels.

#### 8.1.2.7.4 Method of test

#### Initial Condition

System Simulator: 1 cell.

UE: Idle state (state 2 or state 3 or state 7) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

#### Test Procedure

The UE transmits an RRC CONNECTION REQUEST message to the SS on the uplink CCCH by attempting to make an outgoing call. After the SS receives this message, it assigns the necessary radio resources and U-RNTI to be used by the UE, and then transmits an RRC CONNECTION SETUP message to the UE within timer T300. SS then waits for the UE to transmit an RRC CONNECTION SETUP COMPLETE message on the DCCH.

#### Expected sequence

| Step | Direction |    | Message                       | Comment                                                                                                                              |
|------|-----------|----|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                               |                                                                                                                                      |
| 1    | →         |    | RRC CONNECTION REQUEST        | Test operator is requested to make an outgoing call. The UE shall transmit this message, indicating the correct establishment cause. |
| 2    | ←         |    | RRC CONNECTION SETUP          | SS omits both IE "Uplink DPCCH Info" and IE "Downlink DPCCH Info" from the message.                                                  |
| 3    |           |    |                               | The UE shall configure the layer 2 and layer 1.                                                                                      |
| 4    | →         |    | RRC CONNECTION SETUP COMPLETE | UE shall send this message on the DCCH, carried by the assigned PRACH resources.                                                     |

## Specific Message Content

### RRC CONNECTION REQUEST

Use the same message type found in clause 9 of TS 34.108, with the following exception:

| Information Element | Value/remark                                                                              |
|---------------------|-------------------------------------------------------------------------------------------|
| Initial UE identity | Same as the IMSI stored in the TEST USIM card, or the registered TMSI or P-TMSI           |
| Establishment Cause | Originating Interactive Call or Originating Background Call or Originating Streaming Call |

### RRC CONNECTION SETUP

For this message, the contents of the message to be used are basically identical to the message sub-type entitled "RRC CONNECTION SETUP message (Transition to CELL\_FACH)" found in Annex A with the following exception:

| Information Element                                                              | Value/remark |
|----------------------------------------------------------------------------------|--------------|
| Capability update requirement<br>– UE radio access capability update requirement | TRUE         |

### RRC CONNECTION SETUP COMPLETE

Use the same message type found in clause 9 of TS 34.108, with the following exception:

| Information Element                  | Value/remark                                                                      |
|--------------------------------------|-----------------------------------------------------------------------------------|
| UE Radio Access Capability           | Checked to see if compatible with the stated capability in PIXIT/PICS statements. |
| UE radio access capability extension | Checked to see if compatible with the stated capability in PIXIT/PICS statements. |
| UE system specific Capability        | Checked to see if compatible with the stated capability in PIXIT/PICS statements. |

#### 8.1.2.7.5 Test requirements

After step 3 the UE shall establish the RRC connection, and transmit RRC CONNECTION SETUP COMPLETE message on the DCCH using PRACH physical resource specified in system information block messages.

#### 8.1.2.8 Void

#### 8.1.2.9 RRC Connection Establishment: Success after Physical channel failure and Invalid configuration

##### 8.1.2.9.1 Definition

##### 8.1.2.9.2 Conformance requirement

1. The RRC connection establishment is initiated by the UE, which leaves the idle mode. The UE shall transmit an RRC CONNECTION REQUEST message which includes the IE "Initial UE identity". This message shall be sent on the uplink CCCH.
2. In the case of a failure to establish the RRC connection due to a physical channel failure after the UE receives an RRC CONNECTION SETUP message, the UE retries to establish the RRC connection until V300 is greater than N300
3. In the case of a RRC CONNECTION SETUP message is received by UE causes invalid configuration, the UE retries to establish the RRC connection until V300 is greater than N300.

## Reference

3GPP TS 25.331 clause 8.1.3.

### 8.1.2.9.3 ——— Test purpose

To confirm that the UE retries to establish the RRC connection until V300 is greater than N300 when a physical channel failure occurs because SS does not configure the physical channel that is specified in the transmitted RRC CONNECTION SETUP message. To confirm that the UE retries to establish the RRC connection until V300 is greater than N300 when the transmitted RRC CONNECTION SETUP message causes invalid configuration in the UE.

### 8.1.2.9.4 ——— Method of test

#### Initial Condition

System Simulator: 1 cell

UE: Idle state (state 2 or state 3 or state 7) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE

#### Test Procedure

Before the test starts, an internal counter K in SS is initialised to a value = 0. Following this, the UE shall transmit an RRC CONNECTION REQUEST message to the SS on the uplink CCCH, after the operator attempts to make an outgoing call. SS increments K every time such a message is received. Then, SS shall send a RRC CONNECTION SETUP message that contains an invalid configuration. UE shall then send RRC CONNECTION REQUEST message to SS again. Next SS transmits an RRC CONNECTION SETUP message to make the UE configure the physical channel in order to communicate on the DCCH but SS does not configure the physical channel. Then the UE detects the physical channel failure and transmits an RRC CONNECTION REQUEST message. This cycle is repeated until K reaches N300. When K is equal to N300, the SS transmits the RRC CONNECTION SETUP message and configures the physical channel. The UE shall detect "in-sync" from physical layer and then acknowledge the establishment of RRC connection by sending the RRC CONNECTION SETUP COMPLETE message on uplink DCCH.

## Expected sequence

| Step | Direction |    | Message                       | Comment                                                                                                                                    |
|------|-----------|----|-------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                               |                                                                                                                                            |
| 1    |           |    |                               | SS initialises counter K to 0. Operator is asked to make an outgoing call and SS starts to wait for RRC CONNECTION REQUEST on uplink CCCH. |
| 2    |           | →  | RRC CONNECTION REQUEST        |                                                                                                                                            |
| 2a   |           |    |                               | SS increments K by 1 for every RRC CONNECTION REQUEST message received in step 2                                                           |
| 3    |           |    |                               | SS checks to see if K is equal to N300+1. If so, goes to step 6. Else, continues to execute step 4.                                        |
| 4    |           | ←  | RRC CONNECTION SETUP          | See message content below. SS does not configure the physical channel.                                                                     |
| 5    |           |    |                               | The next step is step 2.                                                                                                                   |
| 6    |           | ←  | RRC CONNECTION SETUP          | See the clause 9 in TS 34.108 on default message content for RRC. SS configures the physical channel.                                      |
| 7    |           |    |                               | The UE configures the layer 1 and layer 2.                                                                                                 |
| 8    |           | →  | RRC CONNECTION SETUP COMPLETE |                                                                                                                                            |

## Specific Message Contents

## RRC CONNECTION SETUP (Step 4 and K=1)

Use the same message sub-type found in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark |
|---------------------|--------------|
| RRC State Indicator | CELL_DCH     |
| Uplink DPCH info    | Not present  |

## RRC CONNECTION SETUP (Step 4 and K&gt;1)

Use the same message sub-type found in clause 9 of TS 34.108.

## RRC CONNECTION REQUEST (Step 2 and K=1)

Use the same message sub-type found in clause 9 of TS 34.108, with the following exceptions:

| Information Element      | Value/remark                                                                              |
|--------------------------|-------------------------------------------------------------------------------------------|

| Establishment Cause      | Originating Interactive Call or Originating Background Call or Originating Streaming Call |
| Protocol error indicator | TRUE                                                                                      |

#### ~~8.1.2.9.5 Test requirement~~

~~After step 4 the UE shall re-send RRC CONNECTION REQUEST message.~~

~~After step 8 the UE shall transmit an RRC CONNECTION SETUP COMPLETE message and establish an RRC connection.~~

### ~~8.1.3 RRC Connection Release~~

#### ~~8.1.3.1 RRC Connection Release in CELL\_DCH state: Success~~

##### ~~8.1.3.1.1 Definition~~

##### ~~8.1.3.1.2 Conformance requirement~~

- ~~1. The UE shall receive and act on an RRC CONNECTION RELEASE message in states CELL\_DCH and CELL\_FACH. Furthermore this procedure can interrupt any ongoing procedures with the UE in the above listed states.~~

~~When the UE receives the first RRC CONNECTION RELEASE message, it shall:~~

~~...~~

~~— in state CELL\_DCH:~~

~~— initialise the counter V308 to zero;~~

~~...~~

~~— submit an RRC CONNECTION RELEASE COMPLETE message to the lower layers for transmission using UM RLC on the DCCH to the UTRAN;~~

~~...~~

~~— start timer T308 when the RRC CONNECTION RELEASE COMPLETE message is sent on the radio interface.~~

- ~~2. When in state CELL\_DCH and the timer T308 expires, the UE shall:~~

~~— increment V308 by one;~~

~~— if V308 is equal to or smaller than N308:~~

~~— retransmit the RRC CONNECTION RELEASE COMPLETE message, without incrementing "Uplink RRC Message sequence number" for signalling radio bearer RB1 in the variable INTEGRITY\_PROTECTION\_INFO;~~

~~— if V308 is greater than N308:~~

~~— release all its radio resources;~~

~~...~~

~~— enter idle mode;~~

~~— perform the actions specified in TS 25.331 clause 8.5.2 when entering idle mode;~~

~~— and the procedure ends.~~

## Reference

3GPP TS 25.331 clause 8.1.4.3, 8.1.4.6

## 8.1.3.1.3 Test purpose

To verify:

1. that the UE when receiving an RRC CONNECTION RELEASE message transmits N308+1 RRC CONNECTION RELEASE COMPLETE messages before release of radio resources and entering into idle mode
2. that the time between UE transmissions of the RRC CONNECTION RELEASE COMPLETE message is equal to the value of the T308 timer.

## 8.1.3.1.4 Method of test

## Initial Condition

System Simulator: 1 cell

UE: CELL\_DCH state (state 6-1 or state 6-3) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE

## Test Procedure

The UE is brought to the CELL\_DCH state by prompting the operator to initiate an outgoing call. After the DCCH is established, SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the connection. SS then waits for the UE to transmit an RRC CONNECTION RELEASE COMPLETE message using unacknowledged mode. SS checks to see if P + 1 such messages has been received at each expiry of T308 timer. P is equal to the value of IE "N308" in an RRC CONNECTION RELEASE message.

## Expected sequence

| Step | Direction |    | Message                         | Comment                                                                                                                            |
|------|-----------|----|---------------------------------|------------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                 |                                                                                                                                    |
| 1    |           |    |                                 | The UE is in the CELL_DCH state after a successful RRC connection establishment by virtue of the operator making an outgoing call. |
| 2    |           | ←  | RRC CONNECTION RELEASE          | SS disconnect the connection established. The value in IE "N308" is arbitrarily chosen from 1 to 8 and denoted by P.               |
| 3    |           | →  | RRC CONNECTION RELEASE COMPLETE | SS waits for the arrival of N308 + 1 such message at the expiry of each T308 timer, using unacknowledged mode.                     |
| 4    |           |    |                                 | SS verifies that the UE release its L2 signalling radio bearer and dedicated resources and enters idle mode.                       |

## Specific Message Content

## RRC CONNECTION RELEASE (Step 2)

Use the same message type found in clause 9 of TS 34.108, with the following exceptions:

| Information Element | Value/remark                       |
|---------------------|------------------------------------|
| N308                | Arbitrarily chosen between 1 and 8 |

### 8.1.3.1.5 ~~Test requirement~~

After step 2 the UE shall transmit  $P + 1$  RRC CONNECTION RELEASE COMPLETE messages. The time between the transmissions shall be equal to the T308 timer value.

After step 3 the UE shall initiate the release of the L2 signalling radio bearer and dedicated resources and enter idle mode.

### 8.1.3.2 ~~RRC Connection Release using on DCCH in CELL\_FACH state: Success~~

#### 8.1.3.2.1 ~~Definition~~

#### 8.1.3.2.2 ~~Conformance requirement~~

In CELL\_FACH state, the RRC layer entity in the network may issue an RRC CONNECTION RELEASE message using unacknowledged mode on the DCCH. Upon the reception of this message, the UE transmits an RRC CONNECTION RELEASE COMPLETE message using acknowledged mode to UTRAN on the DCCH and goes back to idle mode after it receives an RLC confirmation from the UTRAN.

#### Reference

3GPP TS 25.331 clause 8.1.4.

#### 8.1.3.2.3 ~~Test purpose~~

To confirm that the UE releases the L2 signalling radio bearer and resources and goes back to the idle state after it receives an RRC CONNECTION RELEASE message on downlink DCCH from the SS. It shall transmit an RRC CONNECTON RELEASE COMPLETE message using acknowledged mode on uplink DCCH to the SS.

#### 8.1.3.2.4 ~~Method of test~~

#### Initial Condition

System Simulator: 1 cell.

UE: CELL\_FACH state (state 6-2 or state 6-4) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

#### Test Procedure

The UE is brought to an initial state of CELL\_FACH. After the successful establishment of the RRC connection, the SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the radio link. When the UE receives this message the UE transmits an RRC CONNECTION RELEASE COMPLETE message using acknowledged mode to the SS. Finally, SS checks that the UE performs proper release of all radio resources and then goes back to idle mode.

#### Expected sequence

| Step | Direction |    | Message                         | Comment                                                                                        |
|------|-----------|----|---------------------------------|------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                 |                                                                                                |
| 1    |           |    |                                 | The UE is brought to the CELL_FACH state.                                                      |
| 2    |           | ←  | RRC CONNECTION RELEASE          | SS sends this message using unacknowledged mode RLC operations on the uplink DCCH.             |
| 3    |           | →  | RRC CONNECTION RELEASE COMPLETE | The UE transmits this message using acknowledged mode.                                         |
| 4    |           |    |                                 | The UE releases L2 signalling radio bearer and radio resources. Then the UE goes to idle mode. |

## Specific Message Contents

None.

### 8.1.3.2.5 ~~Test requirement~~

~~After step 2 the UE shall transmit an RRC CONNECTION RELEASE COMPLETE message using acknowledged mode then it shall receive a response for this message from the SS-RLC.~~

~~After step 3 the UE shall release its L2 signalling radio bearers and radio resources, then it shall go back to idle mode.~~

### 8.1.3.3 ~~RRC Connection Release using on CCCH in CELL\_FACH state: Success~~

#### 8.1.3.3.1 ~~Definition~~

#### 8.1.3.3.2 ~~Conformance requirement~~

~~In CELL\_FACH state, the RRC layer entity in the network may issue an RRC CONNECTION RELEASE message using unacknowledged mode on the CCCH. Upon the reception of this message, the UE shall release the RRC connection immediately, without replying with a RRC CONNECTION RELEASE COMPLETE message on the uplink.~~

## Reference

~~3GPP TS 25.331 clause 8.1.4.~~

#### 8.1.3.3.3 ~~Test purpose~~

~~To confirm that the UE releases all its radio resources upon the reception of a RRC CONNECTION RELEASE message on the downlink CCCH, without transmitting RRC CONNECTION RELEASE COMPLETE message on the uplink.~~

#### 8.1.3.3.4 ~~Method of test~~

## Initial Condition

System Simulator: 1 cell.

UE: CELL\_FACH state (state 6-2 or state 6-4) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

## Test Procedure

The UE is brought to an initial state of CELL\_FACH. After the successful establishment of the RRC connection, SS transmits an RRC CONNECTION RELEASE message on the downlink CCCH. The UE shall terminate the RRC connection and release all radio resources allocated to it. SS monitors the uplink DCCH and CCCH to verify that no transmission is detected.

## Expected sequence

| Step | Direction |    | Message                | Comment                                                                                                                                                                                                    |
|------|-----------|----|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                        |                                                                                                                                                                                                            |
| 1    |           |    |                        | The UE is brought to the CELL_FACH state.                                                                                                                                                                  |
| 2    |           | ←  | RRC CONNECTION RELEASE | SS transmits this message with the contents identical to that found in TS 34.108 clause 9 on downlink CCCH.                                                                                                |
| 3    |           |    |                        | SS waits for a period equivalent to 60 seconds. The UE shall not send any response message on uplink direction during this period. It shall release the radio resources allocated and return to idle mode. |

## Specific Message Contents

None.

## 8.1.3.3.5 — Test requirement

After step 2 the UE shall release all its radio resources, return to idle mode, without transmitting RRC CONNECTION RELEASE COMPLETE message on the uplink direction.

## 8.1.3.4 — RRC Connection Release in CELL\_FACH state: Failure

## 8.1.3.4.1 — Definition

## 8.1.3.4.2 — Conformance requirement

In case of RRC connection release from CELL\_FACH state, the RRC layer entity in the network issues an RRC CONNECTION RELEASE message using unacknowledged mode on the DCCH. When the UE does not succeed to transmit the RRC CONNECTION RELEASE COMPLETE message using acknowledged mode, it shall release all its radio resources, enter idle mode and the procedure ends on the UE side.

## Reference

3GPP TS 25.331 clause 8.1.4

## 8.1.3.4.3 — Test purpose

To confirm that the UE releases all its radio resources and enters idle mode when the UE does not succeed in transmitting the RRC CONNECTION RELEASE COMPLETE message using acknowledged mode to the SS (i.e. the UE RLC cannot receive acknowledgement for the transmission of the RRC CONNECTION RELEASE COMPLETE message from SS).

## 8.1.3.4.4 — Method of test

## Initial Condition

System Simulator: 1 cell

UE: CELL\_FACH state (state 6-2 or state 6-4) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE

## Test Procedure

At the start of the test, the UE is brought to CELL\_FACH state. When the RRC connection has been established, the SS transmits an RRC CONNECTION RELEASE message to the UE to disconnect the radio link. When the UE receives this message the UE transmits an RRC CONNECTION RELEASE COMPLETE message using acknowledged mode to the SS. The SS ignores the message and does not transmit a STATUS PDU of RLC for this message. SS checks to see that UE continues to release all its radio resources and then enters idle mode.

## Expected sequence

| Step | Direction |    | Message                         | Comment                                                                                                                                         |
|------|-----------|----|---------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|

| 1    |           |    |                                 | The UE is brought into CELL_FACH state by asking the operator to perform an outgoing call attempt.                                              |
| 2    |           | ←  | RRC CONNECTION RELEASE          | SS ask to disconnect the radio link                                                                                                             |
| 3    | →         |    | RRC CONNECTION RELEASE COMPLETE | The UE transmits this message using acknowledged mode. The SS ignores this message and shall not transmit a STATUS PDU of RLC for this message. |
| 4    |           |    |                                 | SS checks to make sure that UE releases its all radio resources and enter idle mode.                                                            |

## Specific Message Contents

None

### 8.1.3.4.5 Test requirement

After step 3 the UE shall release its L2 signalling radio bearers and radio resources then it shall go to idle mode.

## 8.1.3.5 RRC Connection Release in CELL\_FACH state: Invalid message

### 8.1.3.5.1 Definition

### 8.1.3.5.2 Conformance requirement

In CELL\_FACH state, the RRC layer entity in UTRAN may issue an RRC CONNECTION RELEASE message using unacknowledged mode on the DCCH. If an invalid RRC CONNECTION RELEASE message is received by the UE, the UE shall activate the appropriate error handling mechanism and report the error to the UTRAN.

## Reference

3GPP TS 25.331 clause 8.1.4

### 8.1.3.5.3 Test purpose

When the UE receives an invalid RRC CONNECTION RELEASE message on the downlink DCCH, it shall transmit an RRC STATUS message that includes the appropriate error cause on the uplink DCCH.

### 8.1.3.5.4 Method of test

## Initial Condition

System Simulator: 1 cell

UE: "Registered idle mode on PS" (state 3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE. If the UE supports both CS and PS domains, the initial UE state shall be "Registered idle mode on CS/PS" (state 7).

### Test Procedure

The UE is initially at idle mode. The System Information Block type 11 messages are modified with respect to the default. In the System Information type 11 messages, reporting of CPICH RSCP is required for intra-frequency reporting when transmitting RACH messages.

SS prompts the operator to make an outgoing call for one of the traffic classes supported by the UE. SS and UE shall execute procedure P6. Next SS and UE shall execute procedure P10. Then SS and UE shall execute procedure P14. The UE shall transmit a RRC CONNECTION REQUEST message on the uplink CCCH, SS replies with RRC CONNECTION SETUP message and allocates PRACH and S-CCPCH physical channels for uplink and downlink usage. UE shall then enter CELL\_FACH state. SS starts timer T305 and waits until timer T305 expires, the UE shall send a CELL UPDATE message on the CCCH which includes the measurement reading of current cell CPICH RSCP values in IE "Measured results on RACH". SS then replies with CELL UPDATE CONFIRM message on the downlink DCCH. SS transmits an invalid RRC CONNECTION RELEASE message on the DCCH to request to disconnect the RRC connection. The UE shall transmit an RRC STATUS message on the uplink DCCH, which includes the IE "Protocol Error Information". This IE shall contain "Protocol error information" IE which is set to "ASN.1 violation or encoding error". Then SS waits until timer T305 expires, the UE shall send a CELL UPDATE message on the CCCH which includes the measurement reading of current cell CPICH RSCP values in IE "Measured results on RACH". SS then replies with CELL UPDATE CONFIRM message on the downlink DCCH.

### Expected sequence

| Reporting interval                             | 12 seconds                                                                                                                    |
| Reporting Cell Status                          |                                                                                                                               |
| CHOICE reported cell                           | Report cells within active and/or monitored set on used frequency or within active and/or monitored set on non-used frequency |
| Maximum number of reported cells               | 2                                                                                                                             |
| Inter-frequency measurement system information | Not Present                                                                                                                   |
| Traffic volume measurement system information  | Not Present                                                                                                                   |
| UE internal measurement system information     | Not Present                                                                                                                   |

## CELL UPDATE (Step 6 and 11)

| Information Element                     | Value/Remarks                                                                       |
|-----------------------------------------|-------------------------------------------------------------------------------------|
| U-RNTI                                  | Check to see if set to same U-RNTI value assigned in the execution of procedure P6. |
| Cell update cause                       | Check to see if set to 'Periodic cell updating'                                     |
| Protocol error indicator                | Check to see if set to 'FALSE'                                                      |
| Measured results on RACH                |                                                                                     |
| Measurement result for current cell     |                                                                                     |
| CHOICE measurement quantity             | Check to see if set to 'CPICH RSCP'                                                 |
| CPICH RSCP                              | Checked to see if set to within an acceptable range.                                |
| Measurement results for monitored cells | Checked to see if this IE is absent.                                                |
| Protocol error information              | Check to see if set to 'FALSE'                                                      |

## RRC CONNECTION RELEASE (Step 8)

| Information Element | Value/remark |
|---------------------|--------------|
| All IEs             | Not Present  |

## RRC STATUS (Step 9)

Check to see if the same message type found in clause A is received, with the following exceptions:

| Information Element        | Value/remark                      |
|----------------------------|-----------------------------------|
| Protocol error information |                                   |
| Protocol error cause       | ASN.1 violation or encoding error |

## 8.1.3.5.5 Test requirement

After step 5 and 10, the UE shall initiate cell update procedure by transmitting CELL UPDATE message on CCCH. In this message, IE "cell update cause" shall be set to "periodic cell updating". It shall include IE "measured results on RACH", containing the measurement value for current cell CPICH RSCP.

After step 8 the UE shall transmit an RRC STATUS message which includes the appropriate cause values in IE "Protocol error information".

#### ~~8.1.4~~ ~~Void~~

#### ~~8.1.5~~ ~~UE capability~~

##### ~~8.1.5.1~~ ~~UE Capability in CELL\_DCH state: Success~~

###### ~~8.1.5.1.1~~ ~~Definition~~

###### ~~8.1.5.1.2~~ ~~Conformance requirement~~

- ~~1. The UE CAPABILITY ENQUIRY message is sent by the UTRAN to request the UE to transmit its capability information related to any radio access network that is supported by the UE or if the UTRAN needs an update of the UE's UMTS capability information or of its inter-system classmark.~~
- ~~2. When the UE receives a UE CAPABILITY ENQUIRY message, the UE transmits a UE CAPABILITY INFORMATION message on the uplink DCCH. Then the UTRAN transmits a UE CAPABILITY INFORMATION CONFIRM message.~~
- ~~3. If during the execution of UE capability update procedure, an invalid UE CAPABILITY INFORMATION CONFIRM is received, the UE shall respond with RRC STATUS message and decide whether to re-transmit UE CAPABILITY INFORMATION message by comparing its internal counter against N304.~~

#### ~~Reference~~

~~3GPP TS 25.331 clauses 8.1.6 and 8.1.7.~~

###### ~~8.1.5.1.3~~ ~~Test purpose~~

~~To confirm that the UE transmits a UE CAPABILITY INFORMATION message after it receives a UE CAPABILITY ENQUIRY message from the SS. To confirm that the UE indicates an invalid message reception when invalid UE CAPABILITY ENQUIRY and UE CAPABILITY INFORMATION CONFIRM messages are received. The UE shall transmit RRC STATUS message with the correct error cause value to SS.~~

###### ~~8.1.5.1.4~~ ~~Method of test~~

#### ~~Initial Condition~~

~~System Simulator: 1 cell.~~

~~UE: CELL\_DCH state (state 6-9 or state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.~~

#### ~~Test Procedure~~

~~The UE is brought to the CELL\_DCH state after a successful outgoing call attempt. The SS transmits an invalid UE CAPABILITY ENQUIRY message. This message lacks all IEs except IE "Message Type". After receiving such a message, the UE shall report the error using RRC STATUS message with the appropriate error cause specified. Then SS transmits a correct UE CAPABILITY ENQUIRY message, the UE receives this message and transmits a UE CAPABILITY INFORMATION message on the uplink DCCH which includes the "UE radio access capability" IE. The SS transmits a UE CAPABILITY INFORMATION CONFIRM message to the UE to complete the test. Then SS initiates another UE capability enquiry procedure. The UE shall reply with a UE CAPABILITY INFORMATION message on the uplink DCCH. When SS receives this message, it transmits an invalid UE CAPABILITY INFORMATION CONFIRM message. This message lacks all IEs except IE "Message Type". The UE shall detect a protocol error and send RRC STATUS message to report this event. After receiving RLC acknowledgement for this message, the UE shall re-transmit UE CAPABILITY INFORMATION message on the uplink DCCH after the expiry of~~

T304. SS completes this test by transmitting an error-free UE CAPABILITY INFORMATION CONFIRM message similar to the message sent in step 6.

#### Expected sequence

| Step | Direction |    | Message                           | Comment                                                                                                                    |
|------|-----------|----|-----------------------------------|----------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                   |                                                                                                                            |
| 1    |           |    |                                   | The UE is brought to CELL_DCH state after an outgoing call has been established successfully.                              |

| Information Element | Value/remark |
|---------------------|--------------|
| All IEs             | Not Present  |

##### RRC STATUS (Step 3)

Check to see if the same message type found in Annex A is received, with the following exceptions:

| Information Element                                  | Value/remark                      |
|------------------------------------------------------|-----------------------------------|
| Protocol Error Information<br>→ Protocol Error Cause | ASN.1 violation or encoding error |

##### UE CAPABILITY INFORMATION CONFIRM (Step 9)

| Information Element | Value/remark |
|---------------------|--------------|
| All IEs             | Not Present  |

## RRC STATUS (Step 10)

Check to see if the same message type found in Annex A is received, with the following exceptions:

| Information Element                                    | Value/remark                      |
|--------------------------------------------------------|-----------------------------------|
| Protocol Error Information<br>——→ Protocol Error Cause | ASN.1 violation or encoding error |

### 8.1.5.1.5 ——— Test requirement

After step 2, the UE shall transmit a RRC STATUS message on the uplink DCCH, reporting the error with protocol error cause set to "ASN.1 violation or encoding error".

After step 4 and 7 the UE shall transmit a UE CAPABILITY INFORMATION message on the uplink DCCH to respond to the UE CAPABILITY ENQUIRY message.

After step 9, the UE shall transmit a RRC STATUS message on the uplink DCCH. The protocol error cause shall be set to "ASN.1 violation or encoding error".

After step 10, the UE shall re-transmit the UE CAPABILITY INFORMATION message with a similar content as in step 8 after the expiry of T304.

## 8.1.5.2 ——— UE Capability in CELL\_DCH state: Success after T304 timeout

### 8.1.5.2.1 ——— Definition

### 8.1.5.2.2 ——— Conformance requirement

1. The UE CAPABILITY ENQUIRY message is sent by the UTRAN to request the UE to transmit its capability information related to any radio access network that is supported by the UE, if the UTRAN needs an update of the UE's UMTS capability information or of its inter-system classmark.
2. After the UE receives a UE CAPABILITY ENQUIRY message, it transmits a UE CAPABILITY INFORMATION message on the uplink DCCH. If it fails to receive a UE CAPABILITY INFORMATION CONFIRM message, the UE re-transmits another UE CAPABILITY INFORMATION message after T304 expires until V304 is greater than N304.

## Reference

3GPP TS 25.331 clause 8.1.6 and 8.1.7.

### 8.1.5.2.3 ——— Test purpose

To confirm that the UE re-transmits a UE CAPABILITY INFORMATION message until V304 is greater than N304, after the expiry of timer T304 when the UE cannot receive a UE CAPABILITY INFORMATION CONFIRM message in response to a UE CAPABILITY INFORMATION message.

### 8.1.5.2.4 ——— Method of test

## Initial Condition

System Simulator: 1 cell.

UE: CELL\_DCH state (state 6-9 or state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

## Test Procedure

The UE is brought to CELL\_DCH state. When the SS transmits a UE CAPABILITY ENQUIRY message which includes the "Capability update requirement" IE, the UE shall reply with a UE CAPABILITY INFORMATION

message on the uplink DCCH which includes the "UE radio access capability" IE. The SS does not transmit a UE CAPABILITY INFORMATION CONFIRM message to the UE, resulting in the T304 timer to expire. SS shall observe that the UE attempts to transmit a UE CAPABILITY INFORMATION message again. The UE shall re-transmit N304 times, and SS transmits a UE CAPABILITY INFORMATION CONFIRM message to answer the last request and completes this test procedure.

#### Expected sequence

| Step | Direction |    | Message                           | Comment                                                                                          |
|------|-----------|----|-----------------------------------|--------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                   |                                                                                                  |
| 1    |           |    |                                   | The UE is brought to CELL_DCH state. SS sets internal counter K=0                                |
| 2    |           | ←  | UE CAPABILITY ENQUIRY             | Including the IE "Capability update requirement".                                                |
| 3    | →         |    | UE CAPABILITY INFORMATION         | Including the "UE radio access capability".                                                      |
| 4    |           |    |                                   | If K is equal to N304, then proceed to step 6.                                                   |
| 5    |           |    |                                   | The SS does not transmit a response and wait for T304 timer to expire. K=K+1 and goes to step 3. |
| 6    |           | ←  | UE CAPABILITY INFORMATION CONFIRM | Use default message contents                                                                     |

#### Specific Message Contents

None

#### 8.1.5.2.5 Test requirement

After step 3 the UE shall re-transmits a UE CAPABILITY INFORMATION message on the uplink DCCH, after each expiry of timer T304. The UE CAPABILITY INFORMATION message shall contain IE "UE radio access capability" indicating the settings found in PIC/PIXIT statements. After (N304) re-transmissions, the UE shall receive a UE CAPABILITY INFORMATION CONFIRM message.

#### 8.1.5.3 UE Capability in CELL\_DCH state: Failure (After N304 re-transmissions)

##### 8.1.5.3.1 Definition

##### 8.1.5.3.2 Conformance requirement

1. The UE CAPABILITY ENQUIRY message is sent by the UTRAN to request the UE to transmit its capability information related to any radio access network that is supported by the UE if the UTRAN needs an update of the UE's UMTS capability information or of its inter-system classmark.
2. If UE re-transmits UE CAPABILITY INFORMATION in excess of N304 times, the UE initiates the cell update procedure.

#### Reference

3GPP TS 25.331 clauses 8.1.6 and 8.1.7.

##### 8.1.5.3.3 Test purpose

To confirm that the UE stops retrying to transmit a UE CAPABILITY INFORMATION message if V304 is greater than N304. It then initiates cell update procedure.

#### 8.1.5.3.4 Method of test

##### Initial Condition

System Simulator: 1 cell.

UE: CELL\_DCH state (state 6-9 or state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

##### Test Procedure

The UE is brought to CELL\_DCH state. When the SS transmits a UE CAPABILITY ENQUIRY message which includes the "Capability update requirement" IE, the UE receives this message and transmits a UE CAPABILITY INFORMATION message on the uplink DCCH which includes the "UE radio access capability" IE. The SS does not respond with a UE CAPABILITY INFORMATION CONFIRM message but keeps a count on the number of messages received. When the T304 timer expires, the UE shall transmit a UE CAPABILITY INFORMATION message again. After sending (N304+1) messages, the UE shall stop sending UE CAPABILITY INFORMATION messages and initiates the cell update procedure. SS allows UE to return to "connected state" by issuing CELL UPDATE CONFIRM message on the downlink DCCH. Then UE shall reconfigured its physical channel according to the CELL UPDATE CONFIRM message and respond with PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to SS.

##### Expected sequence

| Step | Direction |    | Message                                   | Comment                                                                                                                                                        |
|------|-----------|----|-------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                           |                                                                                                                                                                |
| 1    |           |    |                                           | The UE starts from CELL_DCH state. SS sets counter K to 0                                                                                                      |
| 2    | ←         |    | UE CAPABILITY ENQUIRY                     | Use default message                                                                                                                                            |

#### 8.1.5.3.5 — Test requirement

After step 2, the UE shall transmit a UE CAPABILITY INFORMATION message on the uplink DCCH. The UE shall re-transmit this message for N304 times.

After step 4, the UE shall initiate the cell update procedure.

After step 6, UE shall respond with a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message after it has configured L1 according to the CELL UPDATE CONFIRM message in step 6.

### 8.1.5.4 — UE Capability in CELL\_FACH state: Success

#### 8.1.5.4.1 — Definition

#### 8.1.5.4.2 — Conformance requirement

1. The UE CAPABILITY ENQUIRY message is sent by the UTRAN to request the UE to transmit its capability information related to any radio access network(s) supported by the UE. UTRAN initiates this procedure when it needs an update of the UE's UMTS capability information or of its inter-system classmark.
2. When the UE receives a UE CAPABILITY ENQUIRY message, the UE shall transmit a UE CAPABILITY INFORMATION message on the uplink DCCH.
3. If during the execution of UE capability update procedure, an invalid UE CAPABILITY INFORMATION CONFIRM is received, the UE shall respond with RRC STATUS message and decide whether to re-transmit UE CAPABILITY INFORMATION message by comparing its internal counter against N304.

#### Reference

3GPP TS 25.331 clauses 8.1.6 and 8.1.7.

#### 8.1.5.4.3 ~~Test purpose~~

~~To confirm that the UE transmits a UE-CAPABILITY INFORMATION message after it receives a UE-CAPABILITY ENQUIRY message from the SS. To confirm that the UE indicates an invalid message reception when invalid UE-CAPABILITY ENQUIRY and UE-CAPABILITY INFORMATION CONFIRM messages are received. The UE shall transmit RRC STATUS message with the correct error-cause value to SS.~~

#### 8.1.5.4.4 ~~Method of test~~

##### ~~Initial Condition~~

~~System Simulator: 1-cell.~~

~~UE: CELL\_FACH state (state 6-11) as specified in clause 7.4 of TS 34.108.~~

##### ~~Test Procedure~~

~~The UE is brought to the CELL\_FACH state after a successful outgoing call attempt. The SS transmits an invalid UE-CAPABILITY ENQUIRY message. After receiving such a message, the UE shall report an error using RRC STATUS message with the appropriate error-cause specified. Then SS transmits a UE-CAPABILITY ENQUIRY message which includes the IE "Capability update requirement". After UE receives this message, it transmits a UE-CAPABILITY INFORMATION message on the uplink DCCH, which includes the IE "UE radio access capability". The SS transmits a UE-CAPABILITY INFORMATION CONFIRM message to the UE to complete the UE-capability enquiry procedure. Then SS initiates another UE-capability enquiry procedure. The UE shall reply with a UE-CAPABILITY INFORMATION message on the uplink DCCH. When SS receives this message, it transmits an invalid UE-CAPABILITY INFORMATION CONFIRM message. This message lacks all IEs except IE "Message Type". The UE shall detect a protocol error and send RRC STATUS message to report this event. After receiving the RLC layer acknowledgement PDU for this message, the UE shall re-transmit UE-CAPABILITY INFORMATION message on the uplink DCCH upon the expiry of T304. SS completes this test by sending an error-free UE-CAPABILITY INFORMATION CONFIRM message similar to the message sent in step 6.~~

## Expected sequence

| Step | Direction |    | Message                           | Comment                                                                                                                    |
|------|-----------|----|-----------------------------------|----------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                   |                                                                                                                            |
| 1    |           |    |                                   | The UE is brought to CELL_FACH state after an outgoing call has been established successfully.                             |
| 2    |           | ←  | UE CAPABILITY ENQUIRY             | See specific message contents for this message                                                                             |
| 3    |           | →  | RRC STATUS                        | The IE "Protocol error cause" found in IE "Protocol error information" shall be set to "ASN.1 violation or encoding error" |
| 4    |           | ←  | UE CAPABILITY ENQUIRY             | Use default message.                                                                                                       |
| 5    |           | →  | UE CAPABILITY INFORMATION         | Use default message.                                                                                                       |
| 6    |           | ←  | UE CAPABILITY INFORMATION CONFIRM | Use default message.                                                                                                       |

## RRC STATUS (Step 10)

Check to see if the same message type found in Annex A is received, with the following exceptions:

| Information Element                                   | Value/remark                       |
|-------------------------------------------------------|------------------------------------|
| Protocol Error Information<br>—— Protocol Error Cause | ASN.1 violation or encoding error" |

#### 8.1.5.4.5 ——— Test requirement

After step 2, the UE shall transmit a RRC STATUS message on the uplink DCCH, reporting the error with protocol error cause set to "ASN.1 violation or encoding error".

After step 4 and 7 the UE shall transmit a UE CAPABILITY INFORMATION message on the uplink DCCH to respond to the downlink UE CAPABILITY ENQUIRY message.

After step 9, the UE shall transmit a RRC STATUS message on the uplink DCCH. The protocol error cause shall be set to "ASN.1 violation or encoding error".

After step 10, the UE shall re-transmit the UE CAPABILITY INFORMATION message with a similar content as in step 8 upon the expiry of T304.

### 8.1.5.5 ——— UE Capability in CELL\_FACH state: Success after T304 timeout

#### 8.1.5.5.1 ——— Definition

#### 8.1.5.5.2 ——— Conformance requirement

1. The UE CAPABILITY ENQUIRY message is sent by the UTRAN to request the UE to transmit its capability information related to any radio access network(s) supported by the UE. UTRAN initiates this action when it needs an update of the UE's UMTS capability information or of its inter-system classmark.
2. After the UE receives a UE CAPABILITY ENQUIRY message, it transmits a UE CAPABILITY INFORMATION message on the uplink DCCH. If it fails to receive a UE CAPABILITY INFORMATION CONFIRM message, the UE re-transmits another UE CAPABILITY INFORMATION message until its internal counter V304 is greater than N304.

#### Reference

3GPP TS 25.331 clauses 8.1.6 and 8.1.7.

#### 8.1.5.5.3 ——— Test purpose

To confirm that the UE re-transmits a UE CAPABILITY INFORMATION message until V304 is greater than N304, after the expiry of timer T304 when it fails to receive a downlink UE CAPABILITY INFORMATION CONFIRM message in response to the uplink UE CAPABILITY INFORMATION message sent.

#### 8.1.5.5.4 ——— Method of test

#### Initial Condition

System Simulator: 1 cell.

UE: CELL\_FACH state (state 6-11) as specified in clause 7.4 of TS 34.108.

#### Test Procedure

The UE is brought to CELL\_FACH state. When the SS transmits a UE CAPABILITY ENQUIRY message which includes the IE "Capability update requirement", the UE shall reply with a UE CAPABILITY INFORMATION message on the uplink DCCH that contains the IE "UE radio access capability". The SS waits and does not transmit a UE CAPABILITY INFORMATION CONFIRM message to the UE, resulting in the T304 timer to expire. SS shall observe that the UE attempts to transmit a UE CAPABILITY INFORMATION message again. The UE shall

re-transmit N304 times, and SS transmits a UE CAPABILITY INFORMATION CONFIRM message to answer the last request and completes this test procedure.

#### Expected sequence

| Step | Direction |    | Message                           | Comment                                                                                          |
|------|-----------|----|-----------------------------------|--------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                   |                                                                                                  |
| 1    |           |    |                                   | The UE is brought to CELL_FACH state. SS sets internal counter K = 0                             |
| 2    |           | ←  | UE CAPABILITY ENQUIRY             | Including the IE "Capability update requirement".                                                |
| 3    |           | →  | UE CAPABILITY INFORMATION         | Including the IE "UE radio access capability".                                                   |
| 4    |           |    |                                   | If K equals N304, then proceeds to step 6. Else, continue with step 5.                           |
| 5    |           |    |                                   | The SS does not transmit a response and wait for T304 timer to expire. K=K+1 and goes to step 3. |
| 6    |           | ←  | UE CAPABILITY INFORMATION CONFIRM | Use default message contents                                                                     |

#### Specific Message Contents

None

#### 8.1.5.5.5 Test requirement

After step 3 the UE shall re-transmit a UE CAPABILITY INFORMATION message on the uplink DCCH, after each expiry of timer T304. The UE CAPABILITY INFORMATION message shall contain IE "UE radio access capability" with the value matching those stated in the ICS/IXIT statements. After (N304) re-transmissions, the UE shall receive a UE CAPABILITY INFORMATION CONFIRM message.

### 8.1.6 Direct Transfer

#### 8.1.6.1 Direct Transfer in CELL\_DCH state (invalid message reception and no signalling connection exists)

##### 8.1.6.1.1 Definition

##### 8.1.6.1.2 Conformance requirement

The UE shall transmit an RRC STATUS message stating the value "ASN.1 violation or encoding error" in IE "Protocol error cause" when the UE receives a DOWNLINK DIRECT TRANSFER message, which does not include any IEs except IE "Message Type". The UE shall transmit an RRC STATUS message including the IE "Protocol error information" with the IE "Protocol error cause" set to "Message not compatible with receiver state" when the UE receives a DOWNLINK DIRECT TRANSFER message, with invalid IE "CN domain identity".

#### Reference

3GPP TS 25.331 clause 8.1.9.

##### 8.1.6.1.3 Test purpose

To confirm that the UE transmits an RRC STATUS message on the DCCH using AM RLC if it receives a DOWNLINK DIRECT TRANSFER message which does not include any IEs except IE "Message Type". To confirm

that the UE transmits an RRC STATUS message on the DCCH using AM RLC if it receives a DOWNLINK DIRECT TRANSFER message which includes an invalid IE "CN domain identity".

#### 8.1.6.1.4 Method of test

##### Initial Condition

System Simulator: 1 cell.

UE: CELL\_DCH (state 6-9 or state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

##### Test Procedure

The UE is in the CELL\_DCH state. The SS transmits an invalid DOWNLINK DIRECT TRANSFER message to the UE. The UE shall transmit an RRC STATUS message on the DCCH using AM RLC. The error type "ASN.1 violation or encoding error" shall also be indicated in IE "Protocol error cause". The SS transmits a DOWNLINK DIRECT TRANSFER message that contains an invalid IE "CN domain identity" to the UE. The UE shall transmit an RRC STATUS message on the DCCH using AM RLC. The error type "Message not compatible with receiver state" shall also be indicated in IE "Protocol error cause".

##### Expected sequence

| Step | Direction |    | Message                  | Comment                        |
|------|-----------|----|--------------------------|--------------------------------|
|      | UE        | SS |                          |                                |
| 1    | —         | ←  | DOWNLINK DIRECT TRANSFER | Only message type is provided. |
| 2    | —         | →  | RRC STATUS               |                                |
| 3    | —         | ←  | DOWNLINK DIRECT TRANSFER |                                |
| 4    | —         | →  | RRC STATUS               |                                |

#### 8.1.6.1.5 ——— Test requirement

After step 1 the UE shall transmit an RRC STATUS message on the DCCH using AM RLC setting "ASN.1 violation or encoding error" in IE "Protocol error cause".

After step 3 the UE shall transmit a n RRC STATUS message on the DCCH using AM RLC setting "Message not compatible with receiver state" in IE "Protocol error cause".

#### 8.1.6.2 ——— Direct Transfer in CELL\_FACH state (invalid message reception and no signalling connection exists)

##### 8.1.6.2.1 ——— Definition

##### 8.1.6.2.2 ——— Conformance requirement

The UE shall transmit an RRC STATUS message stating the value "ASN.1 violation or encoding error" in IE "Protocol error cause" when the UE receives a DOWNLINK DIRECT TRANSFER message, which does not include any IEs except IE "Message Type". The UE shall transmit an RRC STATUS message including the IE "Protocol error information" with the IE "Protocol error cause" set to "Message not compatible with receiver state" when the UE receives a DOWNLINK DIRECT TRANSFER message, with invalid IE "CN domain identity".

#### Reference

3GPP TS 25.331 clause 8.1.9.

##### 8.1.6.2.3 ——— Test purpose

To confirm that the UE transmits an RRC STATUS message on the DCCH using AM RLC if it receives a DOWNLINK DIRECT TRANSFER message which does not include any IEs except IE "Message Type". To confirm that the UE transmits an RRC STATUS message on the DCCH using AM RLC if it receives a DOWNLINK DIRECT TRANSFER message which includes an invalid IE "CN domain identity".

##### 8.1.6.2.4 ——— Method of test

#### Initial Condition

System Simulator: 1 cell.

UE: CELL\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

## Test Procedure

The UE is in the CELL\_FACH state. The SS transmits a DOWNLINK DIRECT TRANSFER message to the UE and does not include all IEs except IE "Message Type". The UE shall transmit an RRC STATUS message on the DCCH using AM RLC. The error type "ASN.1 violation or encoding error" shall also be indicated in IE "Protocol error cause". The SS transmits a DOWNLINK DIRECT TRANSFER message that contains an invalid IE "CN domain identity" to the UE. The UE shall transmit an RRC STATUS message on the DCCH using AM RLC. The error type "Message not compatible with receiver state" shall also be indicated in IE "Protocol error cause".

## Expected sequence

| Step | Direction |    | Message                  | Comment                       |
|------|-----------|----|--------------------------|-------------------------------|
|      | UE        | SS |                          |                               |
| 1    | —←        |    | DOWNLINK DIRECT TRANSFER | Only message type is provided |
| 2    | —→        |    | RRC STATUS               |                               |
| 3    | —←        |    | DOWNLINK DIRECT TRANSFER |                               |
| 4    | —→        |    | RRC STATUS               |                               |

## Specific Message Contents

### DOWNLINK DIRECT TRANSFER (Step 1)

| Information Element | Value/remark |
|---------------------|--------------|
| All IEs             | Not Present  |

### RRC STATUS (Step 2)

Check to see if the same message type found in Annex A is received, with the following exceptions:

| Information Element                                 | Value/remark                       |

#### ~~8.1.6.2.5 Test requirement~~

~~After step 1 the UE shall transmit an RRC STATUS message on the DCCH using AM RLC setting "ASN.1 violation or encoding error" in IE "Protocol error cause".~~

~~After step 3 the UE shall transmit a n RRC STATUS message on the DCCH using AM RLC setting "Message not compatible with receiver state" in IE "Protocol error cause".~~

### ~~8.1.7 Security mode command~~

#### ~~8.1.7.1 Security mode command in CELL\_DCH state~~

##### ~~8.1.7.1.1 Definition~~

##### ~~8.1.7.1.2 Conformance requirement~~

- ~~1. This procedure is used to trigger the stop or start of ciphering or to command the restart of ciphering with the new ciphering configuration for the signalling radio bearers and any of radio bearers. It is also used to start integrity protection or modify integrity protection configuration for the signalling radio bearers.~~
- ~~2. When the UE receives a SECURITY MODE COMMAND message from the UTRAN, which indicates the downlink activation time and new ciphering mode configuration, the UE shall apply the old ciphering configuration before the stated downlink activation time. It shall start to decipher using the new ciphering configuration at the downlink activation time.~~
- ~~3. After the UE has transmitted a SECURITY MODE COMPLETE message using the new integrity protection configuration which includes uplink activation time, it shall start to cipher transmission in the uplink using the new configuration at the uplink activation time.~~

#### Reference

3GPP TS 25.331 clause 8.1.12.

##### ~~8.1.7.1.3 Test purpose~~

~~To confirm that the UE activates the new ciphering configurations after the stated activation time. To confirm that after the UE receives a SECURITY MODE COMMAND message, it transmits a SECURITY MODE COMPLETE message to the UTRAN using the old ciphering configuration together with the application of the new integrity protection configuration. To confirm that UE sends a SECURITY MODE FAILURE message when SS transmits an incompatible simultaneous SECURITY MODE COMMAND messages to UE. To confirm that UE send SECURITY MODE FAILURE message when SS transmits a SECURITY MODE COMMAND message that causes invalid configuration. To confirm that UE send SECURITY MODE FAILURE message when UE receives an invalid SECURITY MODE COMMAND message.~~

##### ~~8.1.7.1.4 Method of test~~

#### Initial Condition

System Simulator: 1 cell.

UE: CELL\_DCH (state 6-9 or state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

#### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a SECURITY MODE COMMAND message which does not include any IEs except IE "Message Type". The UE shall respond by sending SECURITY MODE FAILURE message on the DCCH. Then SS transmits a SECURITY MODE COMMAND message with IE "Ciphering mode command" set to "stop". Again the UE shall not trigger any ciphering algorithm and it shall respond by sending SECURITY MODE FAILURE message on the DCCH. Next, SS transmits a valid SECURITY MODE COMMAND message which

includes the "Downlink activation time" IE for RB2 and "Integrity check info" IE. Following that, SS immediately transmit another valid SECURITY MODE COMMAND message to UE. Then the UE shall check the integrity check info and shall start to configure ciphering in downlink according to the first valid SECURITY MODE COMMAND message. Upon the reception of the subsequent SECURITY MODE COMMAND message, the UE shall transmit SECURITY MODE FAILURE message to SS with IE "failure cause" set to "incompatible simultaneous reconfiguration". Then UE shall transmit a SECURITY MODE COMPLETE message which contains the uplink activation time for RB2 and also "Integrity check info" IE using the new integrity protection configuration. SS records the uplink ciphering activation time for RB 2. Next, SS transmits UE CAPABILITY ENQUIRY message repeatedly on the downlink DCCH using RLC-AM mode. The UE shall respond to each downlink message with a UE CAPABILITY INFORMATION message on the uplink DCCH using RLC-AM. SS then send UE CAPABILITY INFORMATION CONFIRM message to UE. This cycle repeats itself until both the uplink and downlink ciphering activation time for RB 2 has elapsed. SS checks all uplink UE CAPABILITY INFORMATION messages are integrity-protected by UIA algorithm, and that the messages contain the correct values for "Integrity check info" IE. This can be verified in SS through the reception of a correctly ciphered and integrity-protected UE CAPABILITY INFORMATION message.

#### Expected sequence

| Step | Direction |    | Message                           | Comment                                                                                                                                                                                                                      |
|------|-----------|----|-----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

##### 8.1.7.1.5 — Test requirement

After step 2 the UE shall transmit a SECURITY MODE FAILURE message to report the protocol error detected in the first SECURITY MODE COMMAND message.

After step 4 the UE shall transmit a SECURITY MODE FAILURE message to report on the invalid configuration detected in the second SECURITY MODE COMMAND message.

After step 7, UE shall transmit SECURITY MODE FAILURE to SS to indicate an error due to incompatible simultaneous reconfiguration.

After step 8 the UE shall RLC-acknowledge the receipt of the first valid SECURITY MODE COMMAND message using unciphered mode and which includes calculated integrity check info. SS checks that the SECURITY MODE COMPLETE message is received unciphered and that the calculated "integrity check info" IE is correct.

After step 9 SS verifies that all uplink signalling messages on RB2 are integrity protected with UIA1 algorithm.

After uplink ciphering activation time has lapsed, SS verifies that the UE CAPABILITY INFORMATION message received is integrity protected with UIA algorithm and ciphered with the algorithm indicated in the SECURITY MODE COMMAND (Step 6) message.

After downlink ciphering activation time has lapsed, SS shall apply ciphering to all downlink messages. At least one more cycle between step 10 and step 12 shall be repeated correctly after activation time on both directions has lapsed and the messages on both direction shall be ciphered and integrity protected.

### 8.1.7.2 Security mode command in CELL\_FACH state

#### 8.1.7.2.1 Definition

#### 8.1.7.2.2 Conformance requirement

1. This procedure is used to trigger the stop or start of ciphering, or to command the restart of ciphering with the new ciphering configuration for the signalling radio bearers and any of radio bearers. It is also used to start integrity protection or modify integrity protection configuration for signalling radio bearers.
2. When the UE receives a SECURITY MODE COMMAND message from the UTRAN, which indicates the downlink activation time and new ciphering mode configuration, the UE shall apply the old ciphering configuration before the stated downlink activation time. It shall start to decipher using the new ciphering configuration at the downlink activation time.
3. The UE shall transmit SECURITY MODE COMPLETE message using the new integrity protection configuration stated in the received SECURITY MODE COMMAND message. The SECURITY MODE COMPLETE message shall include the ciphering uplink activation time. The UE shall start to apply the new ciphering configuration on the uplink direction, after the uplink activation time has elapsed.

#### Reference

3GPP TS 25.331 clause 8.1.12.

#### 8.1.7.2.3 Test purpose

To confirm that after the UE receives a SECURITY MODE COMMAND message, it transmits a SECURITY MODE COMPLETE message to the UTRAN using the old ciphering configuration together with the application of the new integrity protection configuration. To confirm that the UE applies the old ciphering configuration in the downlink prior to the activation time; and uses the new ciphering configuration on and after the activation time. To confirm that the UE starts to cipher its uplink transmissions after the uplink activation time stated in SECURITY MODE COMPLETE message is reached. To confirm that UE send SECURITY MODE FAILURE message when UE receives an invalid SECURITY MODE COMMAND message.

#### 8.1.7.2.4 Method of test

##### Initial Condition

System Simulator: 1 cell.

UE: CELL\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

### Test Procedure

The UE is in CELL\_FACH state. The SS transmits a SECURITY MODE COMMAND message which does not include any IEs except IE "Message Type". The UE shall respond by sending SECURITY MODE FAILURE message on the DCCH. Next, SS transmits a valid SECURITY MODE COMMAND message which includes IE "Downlink activation time" for RB2 and IE "Integrity check info". The UE shall check the integrity check info. It shall start to configure ciphering in downlink and transmit a SECURITY MODE COMPLETE message, which contains the uplink activation time for RB2 using the new integrity protection configuration. This message shall contain the IE "Integrity check info". SS records the uplink ciphering activation time for RB 2. Next, SS transmits UE CAPABILITY ENQUIRY message repeatedly on the downlink DCCH using RLC-AM mode. The UE shall respond to each downlink message with a UE CAPABILITY INFORMATION message on the uplink DCCH using RLC-AM. SS checks all uplink messages are integrity-protected by UIA1 algorithm, and that the messages contain the correct values for "Integrity check info" IE. This cycle repeats itself until both the uplink and downlink ciphering activation time for RB 2 have elapsed. After both the uplink and downlink ciphering activation time for RB 2 have passed, the UE shall be able to communicate with the SS using the new ciphering configurations. This can be verified in SS through the reception of a correctly ciphered and integrity-protected UE CAPABILITY INFORMATION message.

### Expected sequence

| Step | Direction |    | Message                           | Comment                                                                                                                                                                                                                     |

## 8.1.7.2.5 — Test requirement

After step 2 the UE shall transmit a SECURITY MODE FAILURE message to report the protocol error detected in the first SECURITY MODE COMMAND message.

After step 8 the UE shall RLC acknowledge the receipt of the SECURITY MODE COMMAND message using unciphered mode and which includes calculated integrity check info. SS checks that the SECURITY MODE

COMPLETE message is received unciphered and that the calculated MAC-I values in "integrity check info" IE is correct.

After step 9 SS verifies that all uplink signalling messages on RB2 are integrity protected with UIA1 algorithm.

After uplink ciphering activation time has lapsed, SS verifies that the UE CAPABILITY INFORMATION message received is integrity protected with UIA algorithm and ciphered with the algorithm indicated in the SECURITY MODE COMMAND (Step 8) message.

After downlink ciphering activation time has lapsed, SS shall apply ciphering to all downlink messages. At least one more cycle between step 10 and step 12 shall be repeated correctly after activation time on both directions has lapsed and the messages on both directions shall be ciphered and integrity protected.

## 8.1.8 Counter check

### 8.1.8.1 Counter check in CELL\_DCH state

#### 8.1.8.1.1 Definition

#### 8.1.8.1.2 Conformance requirement

When the UE receives a COUNTER CHECK message that includes matched COUNT-C MSB values, the UE shall transmit a COUNTER CHECK RESPONSE message on the uplink DCCH and omitting "RB COUNT-C information" IE in this message.

When the UE receives a COUNTER CHECK message that includes any mismatched COUNT-C MSB values, the UE shall transmit a COUNTER CHECK RESPONSE message on the uplink DCCH and specifies the current COUNT-C information of the RAB(s) with mismatched values.

When the UE receives an invalid COUNTER CHECK message, the UE shall perform procedure specific error handling.

#### Reference

3GPP TS 25.331 clause 8.1.15.

#### 8.1.8.1.3 Test purpose

To confirm that the UE transmits a COUNTER CHECK RESPONSE message after it receives a COUNTER CHECK message from the SS. To confirm that the UE responds to the reception of an invalid downlink COUNTER CHECK message by transmitting a RRC STATUS message on the uplink DCCH, stating the correct error cause value in message.

#### 8.1.8.1.4 Method of test

#### Initial Condition

System Simulator: 1 cell

UE: CELL\_DCH state (state 6-10) as specified in clause 7.4 of TS 34.108.

#### Test Procedure

The UE is brought to the CELL\_DCH state after a successful outgoing call attempt. The SS transmits an invalid COUNTER CHECK message. This message lacks all IEs except IE "Message Type". The UE shall detect a protocol error and send RRC STATUS message to report this event. Next, the SS transmits a COUNTER CHECK message that includes the current COUNT-C MSB information in each radio access bearer. The UE shall react by sending a COUNTER CHECK RESPONSE message on the uplink DCCH, which does not include "RB COUNT-C information" IE. The SS transmits a COUNTER CHECK message which includes the current COUNT-C MSB information reversed all the bits in each radio bearer. The UE shall send a COUNTER CHECK RESPONSE message on the uplink DCCH, specifying the current COUNT-C information for each radio access bearer established. The SS transmits a COUNTER

CHECK message which includes a different radio bearer. The UE shall send a COUNTER CHECK RESPONSE message on the uplink DCCH, specifying the current COUNT-C information for each radio access bearer established.

| —— COUNT-C downlink        | Check to see if COUNT-C MSB is set to COUNT-C MSB in downlink for RB#25 in step 8 and LSB is fill with '0' |

**8.1.8.1.5 ——— Test requirement**

After step 2, the UE shall transmit a RRC STATUS message on the uplink DCCH. The protocol error cause shall be set to "ASN.1 violation or encoding error".

After step 4 the UE shall transmit a COUNTER CHECK RESPONSE message which does not includes the IE "RB COUNT-C information" to indicates that a matched comparison result is obtained.

After step 6, the UE shall transmit a COUNTER CHECK RESPONSE message which includes the IE "RB COUNT-C information" to report that a mismatch in COUNT-C value is detected in RB#20.

After step 8, the UE shall transmit a COUNTER CHECK RESPONSE message which includes the IE "RB COUNT-C information" to report that RB#25 is not found in variable ESTABLISHED\_RABS and RB#20 is not found in IE "RB COUNT-C MSB information".

**8.1.8.2 ——— Counter check in CELL\_FACH state****8.1.8.2.1 ——— Definition****8.1.8.2.2 ——— Conformance requirement**

When the UE receives a COUNTER CHECK message that includes matched COUNT-C MSB values, the UE shall transmit a COUNTER CHECK RESPONSE message on the uplink DCCH and omitting "RB COUNT-C information" IE in this message.

When the UE receives a COUNTER CHECK message that includes any mismatched COUNT-C MSB values, the UE shall transmit a COUNTER CHECK RESPONSE message on the uplink DCCH and specifies the current COUNT-C information of the RAB(s) with mismatched values.

When the UE receives an invalid COUNTER CHECK message, the UE shall perform procedure specific error handling.

**Reference**

3GPP TS 25.331 clause 8.1.15.

**8.1.8.2.3 ——— Test purpose**

To confirm that the UE transmits a COUNTER CHECK RESPONSE message after it receives a COUNTER CHECK message from the SS. To confirm that the UE responds to the reception of an invalid downlink COUNTER CHECK message by transmitting a RRC STATUS message on the uplink DCCH, stating the correct error cause value in message.

#### 8.1.8.2.4 Method of test

##### Initial Condition

System Simulator: 1 cell.

UE: CELL\_FACH state (state 6-11) as specified in clause 7.4 of TS 34.108.

##### Test Procedure

The UE is brought to the CELL\_FACH state after a successful outgoing call attempt. The SS transmits an invalid COUNTER CHECK message. This message lacks all IEs. The UE shall detect a protocol error and send RRC STATUS message to report this event. Next, the SS transmits a COUNTER CHECK message that includes the current COUNT-C MSB information in each radio access bearer. The UE shall react by sending a COUNTER CHECK RESPONSE message on the uplink DCCH, which does not include "RB COUNT-C information" IE. The SS transmits a COUNTER CHECK message, which includes the current COUNT-C MSB information for each radio bearer but with all the bits reversed. The UE shall send a COUNTER CHECK RESPONSE message on the uplink DCCH, specifying the current COUNT-C information for each radio access bearer established. The SS transmits a COUNTER CHECK message which includes a different radio bearer. The UE shall send a COUNTER CHECK RESPONSE message on the uplink DCCH, specifying the current COUNT-C information for each radio access bearer established.

| ——→ RB identity            | Check to see if set to 20                                                                                  |
| ——→ COUNT-C uplink         | Check to see if set to Current COUNT-C for RB#20 in uplink                                                 |
| ——→ COUNT-C downlink       | Check to see if set to COUNT-C for RB#20 in downlink                                                       |
| ——→ RB identity            | Check to see if set to 25                                                                                  |
| ——→ COUNT-C uplink         | Check to see if COUNT-C MSB is set to COUNT-C MSB in uplink for RB#25 in step 8 and LSB is fill with '0'   |
| ——→ COUNT-C downlink       | Check to see if COUNT-C MSB is set to COUNT-C MSB in downlink for RB#25 in step 8 and LSB is fill with '0' |

**8.1.8.2.5 ——— Test requirement**

After step 2, the UE shall transmit a RRC STATUS message on the uplink DCCH. The protocol error cause shall be set to "ASN.1 violation or encoding error".

After step 4 the UE shall transmit a COUNTER CHECK RESPONSE message which does not includes the IE "RB COUNT-C information" to indicates that a matched comparison result is obtained.

After step 6, the UE shall transmit a COUNTER CHECK RESPONSE message which includes the IE "RB COUNT-C information" to report that a mismatch in COUNT-C value is detected in RB#20.

After step 8, the UE shall transmit a COUNTER CHECK RESPONSE message which includes the IE "RB COUNT-C information" to report that RB#25 is not found in variable ESTABLISHED\_RABS and RB#20 is not found in IE "RB COUNT-C MSB information".

## 8.1.9 Signalling Connection Release Request

### 8.1.9.1 Definition

### 8.1.9.2 Conformance requirement

The UE shall initiate the signalling connection release procedure when the higher layer entities in the UE request to release one or more signalling session (one example of such case is location update failure). In this case, the UE shall transmit a SIGNALLING CONNECTION RELEASE REQUEST message, which includes the CN domain identity of the connection flow to be released.

### Reference

3GPP TS 25.331 clause 8.1.14.

### 8.1.9.3 Test purpose

To confirm that the UE transmits a SIGNALLING CONNECTION RELEASE REQUEST message after it fails to receive a response for the LOCATION UPDATING REQUEST message.

### 8.1.9.4 Method of test

#### Initial Condition

System Simulator: 1 cell.

UE: Switched off (state 1) as specified in clause 7.4 of TS 34.108.

#### Test Procedure

The UE is turned on and it shall find a suitable cell to camp on. The UE shall initiate a location updating procedure. The UE shall establish an RRC connection and transmit a LOCATION UPDATING REQUEST message using the INITIAL DIRECT TRANSFER message. The SS does not respond to this message, and the UE shall send a SIGNALLING CONNECTION RELEASE REQUEST message which includes the CN domain identity with the same value as that in the INITIAL DIRECT TRANSFER message.

#### Expected sequence

| Step | Direction |    | Message                                             | Comment                                                                                  |
|------|-----------|----|-----------------------------------------------------|------------------------------------------------------------------------------------------|
|      | UE        | SS |                                                     |                                                                                          |
| 1    |           |    |                                                     | The UE is powered on.                                                                    |
| 2    | —→        |    | RRC CONNECTION REQUEST                              | UE shall initiate the location updating procedure.                                       |
| 3    | —←        |    | RRC CONNECTION SETUP                                |                                                                                          |
| 4    |           |    |                                                     | The UE configures the layer 2 and layer 1.                                               |
| 5    | —→        |    | RRC CONNECTION SETUP COMPLETE                       |                                                                                          |
| 6    | —→        |    | INITIAL DIRECT TRANSFER (LOCATION UPDATING REQUEST) | LOCATION UPDATE REQUEST is embedded in this message transmission.                        |
| 7    |           |    |                                                     | The SS does not respond and waits until the timer for location update procedure expires. |
| 8    | —→        |    | SIGNALLING CONNECTION RELEASE REQUEST               |                                                                                          |

## Specific Message Content

## SIGNALLING CONNECTION RELEASE REQUEST (Step 8)

| Information Element | Value/remark                                                                                |
|---------------------|---------------------------------------------------------------------------------------------|
| CN domain identity  | Check to see if this value is the as same as in the uplink INITIAL DIRECT TRANSFER message. |

## 8.1.9.5 Test requirement

After step 1 the UE shall initiate the LOCATION UPDATING procedure and establish an RRC connection.

After step 7 the UE shall transmit a SIGNALLING CONNECTION RELEASE REQUEST message which includes the same CN domain identity as that found in the INITIAL DIRECT TRANSFER message.

## 8.1.10 Broadcast of system information

## 8.1.10.1 Dynamic change of segmentation, concatenation &amp; scheduling and handling of unsupported information blocks

## 8.1.10.1.1 Definition

## 8.1.10.1.2 Conformance requirement

1. The RRC layer in the UE shall perform re-assembly of segments. All segments belonging to the same master information block, scheduling block or system information block shall be assembled in ascending order with respect to the segment index. When all segments of the master information block, scheduling block or a system information block have been received, the UE shall perform decoding of the complete master information block, scheduling block or system information block.

NOTE: There are 4 segment types and 11 different SYSTEM INFORMATION messages to interpret when re-assembling segments. There are many alternative SIB position offsets and repetition rates.

2. For all system information blocks or scheduling blocks that are supported by the UE referenced in the master information block or the scheduling blocks, the UE shall perform the following actions:

.....

- read and store the IEs of that system information block;

NOTE: There are options with and without scheduling blocks.

3. For system information blocks, not supported by the UE.....

- skip reading this system information block;
- skip monitoring changes to this system information block.

4. However, to enable future introduction of new system information blocks, the UE shall also be able to receive system information blocks other than the ones indicated within the scheduling information. The UE may ignore contents of such system information block.

## Reference

3GPP TS 25.331 clause 8.1.1.1.3, 8.1.1.1.4, 8.1.1.1.5, 8.1.1.5 and 8.1.1.6.

## 8.1.10.1.4 Test Purpose

1. To verify that dynamic change of System Information is identified, new information read and used.

- ~~2. To verify that the UE can use "all" combinations of segmentation, concatenation and scheduling.~~
- ~~3. To verify that the UE can dynamically use different configurations~~
- ~~4. To verify that the UE properly uses combinations of Default and assigned values.~~

#### ~~8.1.10.1.5 Method of test~~

~~Alternate two sets of System Information and generate a call after one or the other set has been broadcasted.~~

~~One set contains a "minimum" of data and the other a "maximum". The "maximum" set contains all information blocks including one not yet defined in the R99 release. It also includes all 4 segment types and 11 different SYSTEM INFORMATION messages plus a combination of default and non-default values.~~

~~NOTE: The decoding of system information in the UE is only measurable by functional tests. A large number of functions utilize system information. An extensive test of the system information decoding thus creates a large number of functional tests, which is impractical. This test specification uses a "sample test", where only a few functions are invoked.~~

#### ~~Initial Condition~~

~~System Simulator: 2 cells~~

~~UE: Idle state (state 2 or state 3 or state 7) as specified in clause 7.4 of TS 34.108 with a CN UE identity (set to IMSI), depending on the CN domain(s) supported by the UE.~~

#### ~~Test procedure~~

- ~~a) SS broadcasts the "Minimum" system information.~~
- ~~b) RRC Connection establishment according to clause 8.1.2.1.4.~~
- ~~c) Call setup according to clause 10.1.3, procedure 1.~~
- ~~d) Disconnect call according to clause 10.1.2.6.4. UE shall enter Cell\_PCH state.~~
- ~~e) SS broadcasts the "Maximum" system information and notifies the UE as described in clause 8.1.1.5.~~
- ~~f) Call Setup according to clause 10.1.3, procedure 1.~~

#### ~~Specific message content for "Minimum" configuration~~

~~The minimum set has:~~

- ~~— "minimum" number of system information blocks~~
- ~~— no "unknown future" blocks~~
- ~~— no scheduling blocks~~
- ~~— separate FACH and PCH channels~~
- ~~— There is no SIB4. SIB3 data contains Cell 1 data with default values and Cell 2 data with assigned values, so that Cell1 shall be selected.~~

Default settings for cell No.1 (FDD):

| Information Element          | Value/remark                               |
|------------------------------|--------------------------------------------|
| Downlink input level         | Reference to clause 6.10 Parameter Set     |
| Uplink output power          | Minimum supported by the UE's power class. |
| PCCPCH/PCPICH carrier number | Reference to clause 6.10 Parameter Set     |
| Cell Channel Description     |                                            |
| ——→ Primary CPICH info       |                                            |
| ——→ Primary scrambling code  | 100                                        |

#### Cell No.2

The contents of SYSTEM INFORMATION BLOCK TYPE 1 to 16 messages for cell No.2 are identical to those of cell No.1 with the following exceptions:

| Information Element | Value/remark                        |
|---------------------|-------------------------------------|
| Cell identity       | 0000-0000-0000-0000-0000-0000-0010B |
| URA identity        | 0000-0000-0000-0001B                |

Default settings for cell No.2 (FDD):

| Information Element          | Value/remark                               |
|------------------------------|--------------------------------------------|
| Downlink input level         | Reference to clause 6.10 Parameter Set     |
| Uplink output power          | Minimum supported by the UE's power class. |
| PCCPCH/PCPICH carrier number | Reference to clause 6.10 Parameter Set     |
| Cell Channel Description     |                                            |
| ——→ Primary CPICH info       |                                            |
| ——→ Primary scrambling code  | 150                                        |

#### Cell No.3

The contents of SYSTEM INFORMATION BLOCK TYPE 1 to 16 messages for cell No.3 are identical to those of cell No.1 with the following exceptions:

| Information Element | Value/remark                        |
|---------------------|-------------------------------------|
| Cell identity       | 0000-0000-0000-0000-0000-0000-0011B |
| URA identity        | 0000-0000-0000-0010B                |

Default settings for cell No.3 (FDD):

| Information Element          | Value/remark                               |
|------------------------------|--------------------------------------------|
| Downlink input level         | Reference to clause 6.10 Parameter Set     |
| Uplink output power          | Minimum supported by the UE's power class. |
| PCCPCH/PCPICH carrier number | Reference to clause 6.10 Parameter Set     |
| Cell Channel Description     |                                            |
| ——→ Primary CPICH info       |                                            |
| ——→ Primary scrambling code  | 200                                        |

#### Cell No.4

The contents of SYSTEM INFORMATION BLOCK TYPE 1 to 16 messages for cell No.4 are identical to those of cell No.1 with the following exceptions:

| Information Element | Value/remark                        |
|---------------------|-------------------------------------|
| Cell identity       | 0000-0000-0000-0000-0000-0000-0100B |
| URA identity        | 0000-0000-0000-0010B                |

Default settings for cell No.4 (FDD):

| Information Element          | Value/remark                               |
|------------------------------|--------------------------------------------|
| Downlink input level         | Reference to clause 6.10 Parameter Set     |
| Uplink output power          | Minimum supported by the UE's power class. |
| PCCPCH/PCPICH carrier number | Reference to clause 6.10 Parameter Set     |
| Cell Channel Description     |                                            |
| ——→ Primary CPICH info       |                                            |
| ——→ Primary scrambling code  | 250                                        |

#### Cell No.5

The contents of SYSTEM INFORMATION BLOCK TYPE 1 to 16 messages for cell No.5 are identical to those of cell No.1 with the following exceptions:

| Information Element | Value/remark                        |
|---------------------|-------------------------------------|
| Cell identity       | 0000-0000-0000-0000-0000-0000-0101B |
| URA identity        | 0000-0000-0000-0011B                |

Default settings for cell No.5 (FDD):

| Information Element          | Value/remark                               |
|------------------------------|--------------------------------------------|
| Downlink input level         | Reference to clause 6.10 Parameter Set     |
| Uplink output power          | Minimum supported by the UE's power class. |
| PCCPCH/PCPICH carrier number | Reference to clause 6.10 Parameter Set     |
| Cell Channel Description     |                                            |
| ——→ Primary CPICH info       |                                            |

#### Cell No.6

The contents of SYSTEM INFORMATION BLOCK TYPE 1 to 16 messages for cell No.6 are identical to those of cell No.1 with the following exceptions:

| Information Element | Value/remark                        |
|---------------------|-------------------------------------|
| Cell identity       | 0000-0000-0000-0000-0000-0000-0110B |
| URA identity        | 0000-0000-0000-0011B                |

Default settings for cell No.6 (FDD):

| Information Element          | Value/remark                               |
|------------------------------|--------------------------------------------|
| Downlink input level         | Reference to clause 6.10 Parameter Set     |
| Uplink output power          | Minimum supported by the UE's power class. |
| PCCPCH/PCPICH carrier number | Reference to clause 6.10 Parameter Set     |
| Cell Channel Description     |                                            |
| ——→ Primary CPICH info       |                                            |
| ——→ Primary scrambling code  | 350                                        |

#### Cell No.7

The contents of SYSTEM INFORMATION BLOCK TYPE 1 to 16 messages for cell No.7 are identical to those of cell No.1 with the following exceptions:

| Information Element | Value/remark                        |
|---------------------|-------------------------------------|
| Cell identity       | 0000-0000-0000-0000-0000-0000-0111B |
| URA identity        | 0000-0000-0000-0100B                |

Default settings for cell No.7 (FDD):

| Information Element          | Value/remark                               |
|------------------------------|--------------------------------------------|
| Downlink input level         | Reference to clause 6.10 Parameter Set     |
| Uplink output power          | Minimum supported by the UE's power class. |
| PCCPCH/PCPICH carrier number | Reference to clause 6.10 Parameter Set     |
| Cell Channel Description     |                                            |
| — Primary CPICH info         |                                            |
| — Primary scrambling code    | 400                                        |

#### Cell No.8

The contents of SYSTEM INFORMATION BLOCK TYPE 1 to 16 messages for cell No.8 are identical to those of cell No.1 with the following exceptions:

| Information Element | Value/remark                        |
|---------------------|-------------------------------------|
| Cell identity       | 0000-0000-0000-0000-0000-0000-1000B |
| URA identity        | 0000-0000-0000-0100B                |

Default settings for cell No.8 (FDD):

| Information Element          | Value/remark                               |
|------------------------------|--------------------------------------------|
| Downlink input level         | Reference to clause 6.10 Parameter Set     |
| Uplink output power          | Minimum supported by the UE's power class. |
| PCCPCH/PCPICH carrier number | Reference to clause 6.10 Parameter Set     |
| Cell Channel Description     |                                            |
| — Primary CPICH info         |                                            |
| — Primary scrambling code    | 450                                        |

The mapping of SIB's on segments and SYSTEM INFORMATION messages shall be inserted here, but is currently FFS.

#### Specific message content for "Maximum" configuration

The maximum set has:

- "maximum" number of system information blocks
- one "unknown future" blocks
- scheduling blocks
- combined FACH and PCH channels
- SIB 3 is as in "minimum" set, but SIB4 is included with information as follows. Cell 1 has assigned values and Cell 2 default values, so that Cell2 shall be selected.

Contents of Master Information Block PLMN type is the case of GSM-MAP

## Contents of System Information Block type 18

| Information Element                 | Value/remark                              |
|-------------------------------------|-------------------------------------------|
| Idle mode PLMN identities           |                                           |
| PLMNs of intra-frequency cells list |                                           |
| PLMN identity                       | Set to the same value as indicated in MIB |
| PLMNs of inter-frequency cells list | Not present                               |
| PLMNs of inter-RAT cells list       | Not present                               |
| Connected mode PLMN identities      | Not present                               |

## Default settings for cell No.1 (FDD):

| Information Element          | Value/remark                               |
|------------------------------|--------------------------------------------|
| Downlink input level         | Reference to clause 6.10 Parameter Set     |
| Uplink output power          | Minimum supported by the UE's power class. |
| PCCPCH/PCPICH carrier number | Reference to clause 6.10 Parameter Set     |
| Cell Channel Description     |                                            |
| Primary CPICH info           |                                            |
| Primary scrambling code      | 100                                        |

## Cell No.2

The contents of SYSTEM INFORMATION BLOCK TYPE 1 to 16 messages for cell No.2 are identical to those of cell No.1 with the following exceptions:

| Information Element | Value/remark                        |
|---------------------|-------------------------------------|
| Cell identity       | 0000-0000-0000-0000-0000-0000-0010B |
| URA identity        | 0000-0000-0000-0001B                |

## Default settings for cell No.2 (FDD):

| Information Element          | Value/remark                               |
|------------------------------|--------------------------------------------|
| Downlink input level         | Reference to clause 6.10 Parameter Set     |
| Uplink output power          | Minimum supported by the UE's power class. |
| PCCPCH/PCPICH carrier number | Reference to clause 6.10 Parameter Set     |
| Cell Channel Description     |                                            |
| Primary CPICH info           |                                            |
| Primary scrambling code      | 150                                        |

## Cell No.3

The contents of SYSTEM INFORMATION BLOCK TYPE 1 to 16 messages for cell No.3 are identical to those of cell No.1 with the following exceptions:

| Information Element | Value/remark                        |
|---------------------|-------------------------------------|
| Cell identity       | 0000-0000-0000-0000-0000-0000-0011B |
| URA identity        | 0000-0000-0000-0010B                |

## Default settings for cell No.3 (FDD):

| Information Element          | Value/remark                               |
|------------------------------|--------------------------------------------|
| Downlink input level         | Reference to clause 6.10 Parameter Set     |
| Uplink output power          | Minimum supported by the UE's power class. |
| PCCPCH/PCPICH carrier number | Reference to clause 6.10 Parameter Set     |
| Cell Channel Description     |                                            |
| Primary CPICH info           |                                            |
| Primary scrambling code      | 200                                        |

## Cell No.4

The contents of SYSTEM INFORMATION BLOCK TYPE 1 to 16 messages for cell No.4 are identical to those of cell No.1 with the following exceptions:

| Information Element | Value/remark                        |
|---------------------|-------------------------------------|
| Cell identity       | 0000-0000-0000-0000-0000-0000-0100B |
| URA identity        | 0000-0000-0000-0010B                |

Default settings for cell No.4 (FDD):

| Information Element          | Value/remark                               |
|------------------------------|--------------------------------------------|
| Downlink input level         | Reference to clause 6.10 Parameter Set     |
| Uplink output power          | Minimum supported by the UE's power class. |
| PCCPCH/PCPICH carrier number | Reference to clause 6.10 Parameter Set     |
| Cell Channel Description     |                                            |
| → Primary CPICH info         |                                            |
| → Primary scrambling code    | 250                                        |

## Cell No.5

The contents of SYSTEM INFORMATION BLOCK TYPE 1 to 16 messages for cell No.5 are identical to those of cell No.1 with the following exceptions:

| Information Element | Value/remark                        |
|---------------------|-------------------------------------|
| Cell identity       | 0000-0000-0000-0000-0000-0000-0101B |
| URA identity        | 0000-0000-0000-0011B                |

Default settings for cell No.5 (FDD):

| Information Element          | Value/remark                               |
|------------------------------|--------------------------------------------|
| Downlink input level         | Reference to clause 6.10 Parameter Set     |
| Uplink output power          | Minimum supported by the UE's power class. |
| PCCPCH/PCPICH carrier number | Reference to clause 6.10 Parameter Set     |
| Cell Channel Description     |                                            |
| → Primary CPICH info         |                                            |
| → Primary scrambling code    | 300                                        |

## Cell No.6

The contents of SYSTEM INFORMATION BLOCK TYPE 1 to 16 messages for cell No.6 are identical to those of cell No.1 with the following exceptions:

| Information Element | Value/remark                        |
|---------------------|-------------------------------------|
| Cell identity       | 0000-0000-0000-0000-0000-0000-0110B |
| URA identity        | 0000-0000-0000-0011B                |

Default settings for cell No.6 (FDD):

| Information Element          | Value/remark                               |
|------------------------------|--------------------------------------------|
| Downlink input level         | Reference to clause 6.10 Parameter Set     |
| Uplink output power          | Minimum supported by the UE's power class. |
| PCCPCH/PCPICH carrier number | Reference to clause 6.10 Parameter Set     |
| Cell Channel Description     |                                            |
| → Primary CPICH info         |                                            |
| → Primary scrambling code    | 350                                        |

## Cell No.7

The contents of SYSTEM INFORMATION BLOCK TYPE 1 to 16 messages for cell No.7 are identical to those of cell No.1 with the following exceptions:

| Information Element | Value/remark                        |
|---------------------|-------------------------------------|
| Cell identity       | 0000-0000-0000-0000-0000-0000-0111B |
| URA identity        | 0000-0000-0000-0100B                |

Default settings for cell No.7 (FDD):

| Information Element          | Value/remark                               |
|------------------------------|--------------------------------------------|
| Downlink input level         | Reference to clause 6.10 Parameter Set     |
| Uplink output power          | Minimum supported by the UE's power class. |
| PCCPCH/PCPICH carrier number | Reference to clause 6.10 Parameter Set     |
| Cell Channel Description     |                                            |
| ——→ Primary CPICH info       |                                            |
| ——→ Primary scrambling code  | 400                                        |

## Cell No.8

The contents of SYSTEM INFORMATION BLOCK TYPE 1 to 16 messages for cell No.8 are identical to those of cell No.1 with the following exceptions:

| Information Element | Value/remark                        |
|---------------------|-------------------------------------|
| Cell identity       | 0000-0000-0000-0000-0000-0000-1000B |
| URA identity        | 0000-0000-0000-0100B                |

Default settings for cell No.8 (FDD):

| Information Element          | Value/remark                               |
|------------------------------|--------------------------------------------|
| Downlink input level         | Reference to clause 6.10 Parameter Set     |
| Uplink output power          | Minimum supported by the UE's power class. |
| PCCPCH/PCPICH carrier number | Reference to clause 6.10 Parameter Set     |
| Cell Channel Description     |                                            |
| ——→ Primary CPICH info       |                                            |
| ——→ Primary scrambling code  | 450                                        |

The mapping of system information blocks on segments and SYSTEM INFORMATION messages are FFS.

## 8.1.10.1.6 ————— Test requirement

After step 3 the UE shall be in Connected state U10 in Cell 1.

After step 6 the UE shall be in Connected state U10 in Cell 2.

## 8.2 Radio Bearer control procedure

### 8.2.1 Radio Bearer Establishment

#### 8.2.1.1 Radio Bearer Establishment for transition from CELL\_DCH to CELL\_DCH: Success

##### 8.2.1.1.1 Definition

##### 8.2.1.1.2 Conformance requirement

The UE shall correctly set up a new radio bearer according to a RADIO BEARER SETUP message and responds with a RADIO BEARER SETUP COMPLETE message on the DCCH using AM RLC.

##### Reference

3GPP TS 25.331 clause 8.2.1.

##### 8.2.1.1.3 Test purpose

To confirm that the UE establishes a new radio bearer according to a RADIO BEARER SETUP message.

##### 8.2.1.1.4 Method of test

##### Initial Condition

System Simulator: 1 cell

UE: CS\_DCCH\_DCH (state 6-5) or PS\_DCCH\_DCH (state 6-7) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

##### Test Procedure

The UE is in CELL\_DCH state, after the test operator is prompted to make an out-going call. Before step 1, only signalling radio bearers have been established. The SS transmits a RADIO BEARER SETUP message to the UE. This message requests the establishment of radio access bearer. After the UE receives this message, it configures them and establishes a radio access bearer. Finally the UE transmits a RADIO BEARER SETUP COMPLETE message using AM RLC.

##### Expected sequence

| Step | Direction |    | Message                     | Comment                                                                                    |
|------|-----------|----|-----------------------------|--------------------------------------------------------------------------------------------|
|      | UE        | SS |                             |                                                                                            |
| 1    |           | ←  | RADIO BEARER SETUP          | This message do not contain IE "integrity check info" and "integrity protection mode info" |
| 2    |           | →  | RADIO BEARER SETUP COMPLETE | This message do not contain "integrity check info" and "Uplink integrity activation info"  |
|      |           |    |                             |                                                                                            |

##### Specific Message Contents

None.

8.2.1.1.5 ~~Test requirement~~

~~After step 1 the UE shall transmit a RADIO BEARER SETUP COMPLETE message.~~

Failure (Unsupported configuration)~~

8.2.1.3.1 ~~Definition~~

8.2.1.3.2 ~~Conformance requirement~~

~~The UE shall keep its current configuration when the UE receives a RADIO BEARER SETUP message which includes unsupported configuration parameters and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to "configuration unsupported" in IE "failure cause".~~

Reference

3GPP TS 25.331 clause 8.2.1.

8.2.1.3.3 ~~Test purpose~~

~~To confirm that the UE keeps its configuration and transmits a RADIO BEARER SETUP FAILURE message in case of receiving a RADIO BEARER SETUP message which includes parameters of its unsupported configuration.~~

8.2.1.3.4 ~~Method of test~~

Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH\_DCH (state 6-5) or PS-DCCH\_DCH (state 6-7) as specified in clause 7.4 of TS 34.108, depending on the domain(s) supported by the UE.

Test Procedure

The UE is in CELL\_DCH state. The SS transmits a RADIO BEARER SETUP message in which the frequency cannot be supported by the UE. After the UE receives this message, it transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to "configuration unsupported" in IE "failure cause".

Expected sequence

| Step | Direction |    | Message                    | Comment                                             |
|------|-----------|----|----------------------------|-----------------------------------------------------|
|      | UE        | SS |                            |                                                     |
| 1    | ←         |    | RADIO BEARER SETUP         | Including the unsupported configuration for the UE. |
| 2    | →         |    | RADIO BEARER SETUP FAILURE | The UE does not change the configuration.           |

Specific Message Contents

RADIO BEARER SETUP

The contents of RADIO BEARER SETUP message in this test case is indicated as "Non-speech in CS" as found in Annex A or the RADIO BEARER SETUP message as found in clause 9 of TS 34.108 with the following exceptions:

**RADIO BEARER SETUP (FDD)**

| Information Element   | Value/remark |
|-----------------------|--------------|
| Frequency info        |              |
| —CHOICE mode          | FDD          |
| —UARFCN uplink (Nu)   | 0            |
| —UARFCN downlink (Nd) | 950          |

**RADIO BEARER SETUP (TDD)**

| Information Element | Value/remark |
|---------------------|--------------|
| Frequency info      |              |
| —CHOICE mode        | TDD          |
| —UARFCN (Nt)        | 0            |

**RADIO BEARER SETUP FAILURE**

The contents of RADIO BEARER SETUP FAILURE message in this test case is the same as the RADIO BEARER SETUP FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark              |
|---------------------|---------------------------|
| Message Type        |                           |
| Failure cause       | Configuration unsupported |

**8.2.1.3.5 ————— Test requirement**

After step 1 the UE transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to "configuration unsupported" in IE "failure cause".

**8.2.1.4 ————— Radio Bearer Establishment for transition from CELL\_DCH to CELL\_DCH:  
Failure (Physical channel Failure and successful reversion to old  
configuration)****8.2.1.4.1 ————— Definition****8.2.1.4.2 ————— Conformance requirement**

The UE shall revert to the old configuration when the UE fails to configure the new radio bearer before T312 expires and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to "physical channel failure" in IE "failure cause".

**Reference**

3GPP TS 25.331 clause 8.2.1.

**8.2.1.4.3 ————— Test purpose**

To confirm that the UE reverts to the old configuration and transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC, if the UE fails to reconfigure the radio bearer according to the RADIO BEARER RECONFIGURATION message before timer T312 expires.

**8.2.1.4.4 ————— Method of test****Initial Condition**

System Simulator: 1 cell

UE: CS\_DCCH\_DCH (state 6-5) or PS\_DCCH\_DCH (state 6-7) as specified in clause 7.4 of TS 34.108, depending on the domain(s) supported by the UE.

### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a RADIO BEARER SETUP message to the UE and SS keep its old dedicated channel configuration. Then after T312 expiry, the UE reverts to the old configuration and transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to "physical channel failure" in IE "failure cause".

### Expected sequence

| Step | Direction |    | Message                    | Comment                                                                                     |
|------|-----------|----|----------------------------|---------------------------------------------------------------------------------------------|
|      | UE        | SS |                            |                                                                                             |
| 1    |           | ←  | RADIO BEARER SETUP         | The SS keeps its old L1 configuration after transmitting this message.                      |
| 2    |           |    |                            | The UE does not configure the new radio access bearer and reverts to the old configuration. |
| 3    |           | →  | RADIO BEARER SETUP FAILURE | UE shall transmit this message using the old configuration.                                 |

### Specific Message Contents

#### RADIO BEARER SETUP

The contents of RADIO BEARER SETUP message in this test case is indicated as "Non-speech in CS" as found in annex A or the RADIO BEARER SETUP message as found in clause 9 of TS 34.108.

#### RADIO BEARER SETUP FAILURE

The contents of RADIO BEARER SETUP FAILURE message in this test case is the same as the RADIO BEARER SETUP FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark             |
|---------------------|--------------------------|
| Failure cause       | Physical channel failure |

#### 8.2.1.4.5 ——— Test requirement

After step 2 the UE shall transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to "physical channel failure" in IE "failure cause".

#### 8.2.1.5 ——— Radio Bearer Establishment for transition from CELL\_DCH to CELL\_DCH: Failure (Physical channel Failure and reversion failure)

##### 8.2.1.5.1 ——— Definition

##### 8.2.1.5.2 ——— Conformance requirement

The UE shall perform a cell update procedure when the UE fails to revert to the old configuration after the detection of physical channel failure in the radio bearer establishment procedure. After the UE complete cell update procedure, the UE transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to "physical channel failure" in IE "failure cause".

### Reference

3GPP TS 25.331 clause 8.2.1.

### 8.2.1.5.3 ~~Test purpose~~

To confirm that UE transmits ~~RADIO BEARER SETUP FAILURE~~ message after it completes a cell update procedure due to a physical channel failure in the radio bearer establishment procedure.

### 8.2.1.5.4 ~~Method of test~~

#### ~~Initial Condition~~

System Simulator: 1 cell.

UE: CS-DCCH\_DCH (state 6-5) or PS-DCCH\_DCH (state 6-7) as specified in clause 7.4 of TS 34.108, depending on the domain(s) supported by the UE.

#### ~~Test Procedure~~

The UE is in CELL\_DCH state. SS transmits a RADIO BEARER SETUP message to the UE. After transmitting the RADIO BEARER SETUP message, the SS shall not configure its dedicated physical channel in accordance with the settings in the message and release the old configuration after the RLC acknowledgement. The UE recognizes that it cannot synchronise on the new physical channel and wants to revert to the old configuration, but the UE cannot revert to the old configuration. The UE transmits a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "radio link failure". The SS shall transmit a CELL UPDATE CONFIRM message on downlink CCCH after receiving a CELL UPDATE message. The UE transmits PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC and subsequently transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC, setting the value of IE "failure cause" to "physical channel failure".

#### ~~Expected sequence~~

| Step | Direction |    | Message                                   | Comment                                                                                                                                                   |
|------|-----------|----|-------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                           |                                                                                                                                                           |
| 1    | ←         |    | RADIO BEARER SETUP                        |                                                                                                                                                           |
| 2    |           |    |                                           | The SS does not configure new radio access bearer and shall release the configuration.                                                                    |
| 3    | →         |    | CELL UPDATE                               | The value "radio link failure" shall be set in IE "Cell update cause".                                                                                    |
| 4    | ←         |    | CELL UPDATE CONFIRM                       | This message includes IE "Physical channel information elements".                                                                                         |
| 5    |           |    |                                           | The SS configures the dedicated physical channel according to the IE "Physical channel information elements" included in the CELL UPDATE CONFIRM message. |
| 6    | →         |    | PHYSICAL CHANNEL RECONFIGURATION COMPLETE |                                                                                                                                                           |
| 7    | →         |    | RADIO BEARER SETUP FAILURE                | The IE "failure cause" shall be set to "physical channel failure"                                                                                         |

#### ~~Specific Message Contents~~

##### ~~RADIO BEARER SETUP (Step 1)~~

The contents of RADIO BEARER SETUP message in this test case is indicated as "Non-speech in CS" as found in Annex A or the RADIO BEARER SETUP message as found in clause 9 of TS 34.108.

##### ~~CELL UPDATE (Step 3)~~

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in Annex A with the following exceptions:

| Information Element | Value/remark         |
|---------------------|----------------------|
| Cell Update Cause   | "radio-link-failure" |

#### CELL UPDATE CONFIRM (Step 4) (FDD)

The contents of CELL UPDATE CONFIRM message is identical as "CELL UPDATE CONFIRM message" as found in Annex A with the following exceptions:

| Information Element                       | Value/remark                                                           |
|-------------------------------------------|------------------------------------------------------------------------|
| RRC State indicator                       | CELL_DCH                                                               |
| UplinkDPCH Info                           | Same as RRC CONNECTION SETUP message used to move to initial condition |
| Downlink information for each radio links | Same as RRC CONNECTION SETUP message used to move to initial condition |

#### CELL UPDATE CONFIRM (Step 4) (TDD)

The contents of CELL UPDATE CONFIRM message is identical as "CELL UPDATE CONFIRM message" as found in Annex A with the following exceptions:

| Information Element                       | Value/remark                                                         |
|-------------------------------------------|----------------------------------------------------------------------|
| RRC State Indicator                       | CELL_DCH                                                             |
| Uplink DPCH timeslots and codes           | Same as RADIO BEARER SETUP message used to move to initial condition |
| Downlink information for each radio links | Same as RADIO BEARER SETUP message used to move to initial condition |

#### RADIO BEARER SETUP FAILURE (Step 7)

The contents of RADIO BEARER SETUP FAILURE message in this test case is the same as the RADIO BEARER SETUP FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark                 |
|---------------------|------------------------------|
| Message Type        | "RADIO BEARER SETUP FAILURE" |
| Failure cause       | "physical channel failure"   |

#### 8.2.1.5.5 Test requirement

After step 2 the UE shall transmit CELL UPDATE message on the CCCH with IE "Cell update cause" set to "radio-link failure".

After step 5 the UE shall transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 6 the UE shall transmit RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC, setting the IE "failure cause" to "physical channel failure".

#### 8.2.1.6 Radio Bearer Establishment for transition from CELL\_DCH to CELL\_DCH: Failure (Incompatible simultaneous reconfiguration)

##### 8.2.1.6.1 Definition

##### 8.2.1.6.2 Conformance requirement

If the UE receives a RADIO BEARER SETUP message during a reconfiguring procedure due to a radio bearer message other than RADIO BEARER SETUP message, it shall transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC.

## Reference

3GPP TS 25.331 clause 8.2.1, clause 8.6.3.11.

### 8.2.1.6.3 Test purpose

To confirm that if the UE receives a RADIO BEARER SETUP message during a reconfiguring procedure due to a radio bearer message other than RADIO BEARER SETUP, it shall keep its configuration as if the RADIO BEARER SETUP message had not been received and complete the reconfiguration procedure according to the previously received message.

### 8.2.1.6.4 Method of test

#### Initial Condition

System Simulator: 1 cell.

UE: CS\_DCCH+DTCH\_DCH (state 6-9) or PS\_DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

#### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. The SS transmits a RADIO BEARER SETUP message before the "activation time" indicated in the RADIO BEARER RECONFIGURATION message expires. When the UE receives the RADIO BEARER SETUP message, the UE shall keep its current configuration as if it had not received the RADIO BEARER SETUP message and shall transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC with IE "failure cause" set to "incompatible simultaneous reconfiguration". After the SS acknowledges the RADIO BEARER SETUP FAILURE message, the UE reconfigures the new physical channel parameters upon the specified activation time and transmits a RADIO BEARER RECONFIGURATION COMPLETE message on DCCH using AM RLC.

#### Expected sequence

| Step | Direction |    | Message                               | Comment                                                                                           |
|------|-----------|----|---------------------------------------|---------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                       |                                                                                                   |
| 1    |           | ←  | RADIO BEARER RECONFIGURATION          | Including IE "Activation Time"                                                                    |
| 2    |           | ←  | RADIO BEARER SETUP                    | The SS send this message before the expiry of activation time specified in the message of step 1. |
| 3    |           | →  | RADIO BEARER SETUP FAILURE            | The UE does not change the configuration according to the RADIO BEARER SETUP message.             |
| 4    |           | →  | RADIO BEARER RECONFIGURATION COMPLETE | This message is on DCCH using AM RLC.                                                             |

#### Specific Message Contents

##### RADIO BEARER RECONFIGURATION (Step 1)

For RADIO BEARER RECONFIGURATION message in step 1, use the message sub-type indicated as "Speech in CS" or "Non-speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A, with the exception of the following Information Elements:

| Information Element                          | Value/remark                                     |
|----------------------------------------------|--------------------------------------------------|
| Activation Time                              | [256+Current CFN-[current CFN mod 8 + 8]]MOD 256 |
| Uplink DPCH Info<br>— Scrambling code number | 1                                                |

### RADIO-BEARER-SETUP (Step 2)

The contents of RADIO-BEARER-SETUP message in this test case is indicated as "Non-speech in CS" as found in Annex A or the RADIO-BEARER-SETUP message as found in clause 9 of TS 34.108 with the following exceptions:

| Information Element                           | Value/remark |
|-----------------------------------------------|--------------|
| Activation-Time                               | Not Present  |
| Uplink DPCH Info<br>-- Scrambling code number | 2            |

### RADIO-BEARER-SETUP FAILURE

The contents of RADIO-BEARER-SETUP FAILURE message in this test case is the same as the RADIO-BEARER-SETUP FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark                              |
|---------------------|-------------------------------------------|
| Message Type        |                                           |
| Failure case        | Incompatible simultaneous reconfiguration |

#### 8.2.1.6.5 Test requirement

After step 2 the UE shall keep its configuration as if the UE had not received the RADIO-BEARER-SETUP message and shall transmit a RADIO-BEARER-SETUP FAILURE message on the DCCH using AM RLC with IE "failure cause" set to "Incompatible simultaneous reconfiguration".

After step 3 the UE shall transmit a RADIO-BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

#### 8.2.1.7 Radio Bearer Establishment for transition from CELL\_DCH to CELL\_DCH: Failure (Invalid message reception and Invalid configuration)

##### 8.2.1.7.1 Definition

##### 8.2.1.7.2 Conformance requirement

The UE shall keep its old configuration when the UE receives an invalid RADIO-BEARER-SETUP message, which does not includes any IEs except IE "Message Type". Then it transmits a RADIO-BEARER-SETUP FAILURE message which is set to "protocol error" in IE "failure cause" and is set to "ASN.1 violation or encoding error" in IE "Protocol error cause".

The UE shall keep existing configuration upon reception of a RADIO-BEARER-SETUP message which includes some IEs set to give an invalid configuration, and then the UE shall transmit a RADIO-BEARER-SETUP FAILURE message including IE "failure cause" set to "invalid configuration".

#### Reference

3GPP TS 25.331 clause 8.2.1

##### 8.2.1.7.3 Test purpose

To confirm that the UE transmits a RADIO-BEARER-SETUP FAILURE message on the DCCH using AM RLC if it receives an invalid RADIO-BEARER-SETUP message which does not include any IEs except IE "Message Type".

To confirm that the UE transmits a RADIO-BEARER-SETUP FAILURE message on the DCCH using AM RLC if it receives a RADIO-BEARER-SETUP message including some IEs set to give an invalid configuration.

#### 8.2.1.7.4 Method of test

##### Initial Condition

System Simulator: 1 cell

UE: CS-DCCH\_DCH (state 6-5) or PS-DCCH\_DCH (state 6-7) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

##### Test Procedure

The UE is in CELL\_DCH state. The SS transmits an invalid RADIO BEARER SETUP message to the UE which does not include any IEs except IE "Message Type". The UE keeps the old configuration and transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to "protocol error" in IE "failure cause", and is set to "ASN.1 violation or encoding error" in IE "Protocol error cause". The UE keeps current configuration after SS transmits a RADIO BEARER SETUP message including some IEs set to give an invalid configuration. Then UE transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC, setting the value "invalid configuration" to IE "failure cause".

##### Expected sequence

| Step | Direction |    | Message                    | Comment                                        |
|------|-----------|----|----------------------------|------------------------------------------------|
|      | UE        | SS |                            |                                                |
| 1    |           | ←  | RADIO BEARER SETUP         | See specific message content.                  |
| 2    |           | →  | RADIO BEARER SETUP FAILURE | The UE does not change its configuration.      |
| 3    |           | ←  | RADIO BEARER SETUP         | This message includes IE set to invalid value. |
| 4    |           | →  | RADIO BEARER SETUP FAILURE | The UE does not change its configuration.      |

##### Specific Message Contents

##### RADIO BEARER SETUP (Step 1)

| Information Element | Value/remark |
|---------------------|--------------|
| All IEs             | Not Present  |

##### RADIO BEARER SETUP FAILURE (Step 2)

| Information Element        | Value/remark                      |
|----------------------------|-----------------------------------|
| Message Type               |                                   |
| Failure cause              |                                   |
| Failure cause              | Protocol error                    |
| Protocol error information |                                   |
| Protocol error cause       | ASN.1 violation or encoding error |
| Other information element  | Not checked                       |

##### RADIO BEARER SETUP (Step 3)

The contents of RADIO BEARER SETUP message in this test case is identical as "Non-speech in CS" as found in Annex A or the RADIO BEARER SETUP message as found in clause 9 of TS 34.108 with the following exceptions:

**RADIO BEARER SETUP (Step 3) (FDD)**

| Information Element                   | Value/remark |
|---------------------------------------|--------------|
| <del>Default DPCCH Offset Value</del> | 512          |
| <del>DPCCH frame offset</del>         | 1024         |

**RADIO BEARER SETUP (Step 3) (TDD)**

| Information Element   | Value/remark |
|-----------------------|--------------|
| <del>PRACH TFCS</del> | Present      |

**RADIO BEARER SETUP FAILURE (Step 5)**

The contents of RADIO BEARER SETUP FAILURE message in this test case is the same as the RADIO BEARER SETUP FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark          |
|---------------------|-----------------------|
| Message Type        |                       |
| Failure cause       | Invalid configuration |

**8.2.1.7.5 ~~Test requirement~~**

After step 1 the UE shall keep its old configuration and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to "protocol error" in IE "failure cause" and set to "ASN.1 violation or encoding error" in IE "Protocol error cause".

After step 3 the UE shall keep its old configuration and transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC, setting the value "invalid configuration" to IE "failure cause".

**8.2.1.8 ~~Radio Bearer Establishment for transition from CELL\_DCH to CELL\_FACH:~~  
Success****8.2.1.8.1 ~~Definition~~****8.2.1.8.2 ~~Conformance requirement~~**

The UE shall correctly set up a radio bearer according to a RADIO BEARER SETUP message and responds with a RADIO BEARER SETUP COMPLETE message on the DCCH using AM RLC.

**Reference**

3GPP TS 25.331 clause 8.2.1.

**8.2.1.8.3 ~~Test purpose~~**

To confirm that the UE establishes a new radio bearer according to a RADIO BEARER SETUP message.

**8.2.1.8.4 ~~Method of test~~****Initial Condition**

System Simulator: 1 cell.

UE: PS-DCCH\_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

### Test Procedure

The UE is in CELL\_DCH state, after the test operator is asked to initiate a packet-switched data call. The SS transmits a RADIO BEARER SETUP message to the UE. After the UE receives this message, it transits from CELL\_DCH to CELL\_FACH state. Finally the UE transmits a RADIO BEARER SETUP COMPLETE message using AM RLC. Then the UE and the SS enters the communicating state.

### Expected sequence

| Step | Direction |    | Message                     | Comment                                                                                    |
|------|-----------|----|-----------------------------|--------------------------------------------------------------------------------------------|
|      | UE        | SS |                             |                                                                                            |
| 1    |           | ←  | RADIO BEARER SETUP          | SS requests test operator to make an outgoing packet-switched data call.                   |
| 2    |           | →  | RADIO BEARER SETUP COMPLETE | The UE selects PRACH and S-CCPCH indicated in SIB5 or SIB6 after entering CELL_FACH state. |

### Specific Message Contents

For RADIO BEARER SETUP message in step 1, use the message sub-type indicated as "Packet to CELL\_FACH from CELL\_DCH in PS" found in Annex A with the following exception:

| Information Element | Value/remark         |
|---------------------|----------------------|
| New C-RNTI          | 0000-0000-0000-0001B |

#### 8.2.1.8.5 Test requirement

After step 1 the UE shall transmit a RADIO BEARER SETUP COMPLETE message.

### 8.2.1.9 Radio Bearer Establishment for transition from CELL\_DCH to CELL\_FACH: Success (Cell re-selection)

#### 8.2.1.9.1 Definition

#### 8.2.1.9.2 Conformance requirement

1. If after state transition the UE enters CELL\_FACH state, the UE shall, after the state transition:

.....

- if the contents of the variable C\_RNTI is empty:
  - perform a cell update procedure according to clause 8.3.1 using the cause "Cell reselection";

2. If the CELL\_UPDATE\_CONFIRM message

- does not include "RB information elements"; and
- does not include "Transport channel information elements"; and
- does not include "Physical channel information elements"; and
- includes "CN information elements"; or
- includes the IE "Ciphering mode info"; or
- includes the IE "Integrity protection mode info"; or
- includes the IE "New C-RNTI"; or

— includes the IE "New U-RNTI";

the UE shall:

— transmit a UTRAN MOBILITY INFORMATION CONFIRM as response message using AM RLC.

3. In case the procedure was triggered by reception of a RADIO BEARER SETUP message, the UE shall:

— transmit a RADIO BEARER SETUP COMPLETE as response message on the uplink DCCH using AM RLC;

## Reference

3GPP TS 25.331 clause 8.2.2.3, 8.3.1, 8.2.2.4.

### 8.2.1.9.3 Test purpose

1. To verify that the UE when receiving a RADIO BEARER SETUP message not including a value for C-RNTI initiate a cell update procedure and indicating the cause "Cell reselection".
2. To verify that the UE when the CELL UPDATE CONFIRM message does not include "RB information elements", "Transport channel information elements" nor "Physical channel information elements" but include the IE "New C-RNTI" transmit a UTRAN MOBILITY INFORMATION CONFIRM message.
3. To confirm that the UE transmits RADIO BEARER SETUP COMPLETE message after it completes the cell update procedure.

### 8.2.1.9.4 Method of test

#### Initial Condition

System Simulator: 1 cell-Cell 1 is active.

UE: PS-DCCH\_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

#### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a RADIO BEARER SETUP message which includes IE "Primary CPICH info" and no dedicated physical channel information, to request the UE to transit from CELL\_DCH to CELL\_FACH. Due to absence of the C-RNTI in the RADIO BEARER SETUP message the UE shall initiate the cell update procedure even if the UE selects the same cell as indicated by the IE "Primary CPICH info" (for FDD) or "Primary CCPCH info" (for TDD). The UE transmits a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "cell reselection". The SS shall transmit a CELL UPDATE CONFIRM message on downlink CCCH after receiving CELL UPDATE message. The UE transmits a UTRAN MOBILITY UPDATE CONFIRM message on the DCCH using AM RLC. The UE transmits a RADIO BEARER SETUP COMPLETE message on the DCCH using AM RLC.

#### Expected sequence

| Step | Direction |    | Message                            | Comment                                                     |
|------|-----------|----|------------------------------------|-------------------------------------------------------------|
|      | UE        | SS |                                    |                                                             |
| 1    |           |    | Void                               |                                                             |
| 2    |           |    | Void                               |                                                             |
| 3    |           | ←  | RADIO BEARER SETUP                 | Assigned the transition from CELL_DCH to CELL_FACH          |
| 4    |           | →  | CELL UPDATE                        | The value "cell reselection" set in IE "Cell update cause". |
| 5    |           | ←  | CELL UPDATE CONFIRM                | C-RNTI included                                             |
| 6    |           | →  | UTRAN MOBILITY INFORMATION CONFIRM |                                                             |
| 7    |           | →  | RADIO BEARER SETUP COMPLETE        |                                                             |

## Specific Message Contents

### RADIO BEARER SETUP (Step 3) (FDD)

The contents of RADIO BEARER SETUP message in this test case is identical as "Packet to CELL\_FACH from CELL\_DCH in PS" as found in Annex A.

### RADIO BEARER SETUP (Step 3) (TDD)

The contents of RADIO BEARER SETUP message in this test case is identical as "Packet to CELL\_FACH from CELL\_DCH in PS" as found in Annex A with the following exceptions:

| Information Element                                                                         | Value/remark |
|---------------------------------------------------------------------------------------------|--------------|

|      | UE        | SS |                            |                                                                                    |
| 1    |           | ←  | RADIO BEARER SETUP         | The SS keep its old configuration.                                                 |
| 2    |           | →  | RADIO BEARER SETUP FAILURE | The UE does not configure a new radio bearer and reverts to the old configuration. |

## Specific Message Contents

### RADIO BEARER SETUP

The contents of RADIO BEARER SETUP message in this test case is identical the message sub-type indicated by "Packet to CELL\_DCH from CELL\_FACH in PS" in Annex A.

### RADIO BEARER SETUP FAILURE

The contents of RADIO BEARER SETUP FAILURE message in this test case is the same as the RADIO BEARER SETUP FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark             |
|---------------------|--------------------------|
| Message Type        |                          |
| Failure cause       | Physical channel failure |

### 8.2.1.12.5 — Test requirement

After step 1 the UE shall transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to "physical channel failure" in IE "failure cause".

### 8.2.1.13 — Radio Bearer Establishment for transition from CELL\_FACH to CELL\_DCH: Failure (Physical channel Failure and reversion failure)

#### 8.2.1.13.1 — Definition

#### 8.2.1.13.2 — Conformance requirement

The UE shall perform a cell update procedure when the UE selects another cell after the detection of physical channel failure in the radio bearer establishment procedure. After the UE completes cell update procedure, the UE transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC which is set to "physical channel failure" in IE "failure cause".

## Reference

3GPP TS 25.331 clause 8.2.1.

#### 8.2.1.13.3 — Test purpose

To confirm that the UE transmit a RADIO BEARER SETUP FAILURE message after it completes a cell update for the physical channel failure in the radio bearer establishment procedure.

## 8.2.1.13.4 Method of test

## Initial Condition

System Simulator: 2 cells – Cell 1 and 2 are active.

UE: PS-DCCH\_FACH (state 6-8) as specified in clause 7.4 of TS 34.108 in cell 1.

## Test Procedure

Table 8.2.1.13

| Parameter              | Unit         | Cell 1 |     | Cell 2 |     |
|------------------------|--------------|--------|-----|--------|-----|
|                        |              | T0     | T1  | T0     | T1  |
| UTRA-RF Channel Number |              | Ch. 1  |     | Ch. 1  |     |
| CPICH Ec (FDD)         | dBm/3.84 MHz | -60    | -75 | -75    | -60 |
| P-CCPICH RSCP (TDD)    | dBm          | -60    | -75 | -75    | -60 |

Table 8.2.1.13 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies reverse of the transmission power settings for cell 1 and cell 2.

The UE is in CELL\_FACH state in cell 1. The SS transmits a RADIO BEARER SETUP message to the UE. After transmitting the RADIO BEARER SETUP message, the SS shall not configure its DL dedicated physical channel in accordance with the setting in the message and release its current configuration. At the same time, the SS configures its downlink transmission power settings according to columns "T1" in table 8.2.1.13. The UE recognize that it cannot synchronize with the SS on the new radio bearer. The UE performs cell re-selection and transmits a CELL UPDATE message on uplink CCCH with IE "Cell update cause" which is set to "cell reselection". The SS shall transmit a CELL UPDATE CONFIRM message on downlink CCCH after receiving a CELL UPDATE message. The UE transmits a UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH using AM RLC and subsequently transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC, setting the value "physical channel failure" to IE "failure cause".

## Expected sequence

| Step | Direction |    | Message                            | Comment                                                                                                                                                                                                        |
|------|-----------|----|------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                    |                                                                                                                                                                                                                |
| 1    | ←         |    | RADIO BEARER SETUP                 |                                                                                                                                                                                                                |
| 2    |           |    |                                    | The SS does not configure the new radio bearer in accordance with the settings in the message and applies the downlink transmission power settings, according to the values in columns "T1" of table 8.2.1.13. |
| 3    |           |    | Void                               |                                                                                                                                                                                                                |
| 4    |           |    |                                    | The UE select the cell 2.                                                                                                                                                                                      |
| 5    | →         |    | CELL UPDATE                        | The value "cell reselection" shall be set in IE "Cell update cause".                                                                                                                                           |
| 6    | ←         |    | CELL UPDATE CONFIRM                | This message include IE "new U-RNTI" and IE "new C-RNTI".                                                                                                                                                      |
| 7    | →         |    | UTRAN MOBILITY INFORMATION CONFIRM |                                                                                                                                                                                                                |
| 8    | →         |    | RADIO BEARER SETUP FAILURE         | The IE "failure cause" shall be set to "physical channel failure"                                                                                                                                              |

### Specific Message Contents

#### RADIO BEARER SETUP (Step 1)

The contents of RADIO BEARER SETUP message in this test case is identical to the message sub-type "Packet to CELL\_DCH from CELL\_FACH in PS" found in Annex A.

#### CELL UPDATE (Step 5)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in Annex A with the following exceptions:

| Information Element | Value/remark       |
|---------------------|--------------------|
| Cell Update Cause   | "cell reselection" |

#### CELL UPDATE CONFIRM (Step 6)

The contents of CELL UPDATE CONFIRM message is identical as "CELL UPDATE CONFIRM" message as found in Annex A with the following exceptions:

| Information Element | Value/remark                          |
|---------------------|---------------------------------------|
| U-RNTI              | Same as CELL UPDATE message in step 5 |
| New U-RNTI          |                                       |
| -SRNC Identity      |                                       |
| -S-RNTI             |                                       |
| New C-RNTI          | '0000-0000-0000-0001'                 |
|                     | Different from previous S-RNTI        |
|                     | Different from previous C-RNTI        |

#### RADIO BEARER SETUP FAILURE (Step 8)

The contents of RADIO BEARER SETUP FAILURE message in this test case is the same as the RADIO BEARER SETUP FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark                           |
|---------------------|----------------------------------------|
| Message Type        | "RADIO BEARER RECONFIGURATION FAILURE" |
| Failure cause       | "physical channel failure"             |

#### 8.2.1.13.5 Test requirement

After step 4 the UE shall transmit a CELL UPDATE message on the CCCH with IE "Cell update cause" set to "cell reselection".

After step 6 the UE shall transmit a UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH using AM RLC.

After step 7 the UE shall transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC, setting the IE "failure cause" to "physical channel failure".

#### 8.2.1.14 Radio Bearer Establishment for transition from CELL\_FACH to CELL\_DCH: Failure (Incompatible simultaneous reconfiguration)

##### 8.2.1.14.1 Definition

##### 8.2.1.14.2 Conformance requirement

If the UE receives a RADIO BEARER SETUP message during a reconfiguring procedure due to a radio bearer message other than RADIO BEARER SETUP message, it shall transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC.

## Reference

3GPP TS 25.331 clause 8.2.1, clause 8.6.3.11.

## 8.2.1.14.3 Test purpose

To confirm that if the UE receives a RADIO BEARER SETUP message during a reconfiguring procedure due to a radio bearer message other than RADIO BEARER SETUP, it shall keep its configuration as if the RADIO BEARER SETUP message had not been received and complete the reconfiguration procedure according to the previously received message.

## 8.2.1.14.4 Method of test

## Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

## Test Procedure

The UE is in CELL\_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. The SS transmits a RADIO BEARER SETUP message before the "activation time" indicated in the RADIO BEARER RECONFIGURATION message expires. When the UE receives the RADIO BEARER SETUP message, the UE shall keep its current configuration as if it had not received the RADIO BEARER SETUP message and shall transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC with IE "failure cause" set to "incompatible simultaneous reconfiguration". After the SS acknowledges the RADIO BEARER SETUP FAILURE message, the UE reconfigures the new physical channel parameters upon the specified activation time and transmits a RADIO BEARER RECONFIGURATION COMPLETE message on DCCH using AM RLC.

## Expected sequence

| Step | Direction |    | Message                               | Comment                                                                                                                                                                                 |
|------|-----------|----|---------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                       |                                                                                                                                                                                         |
| 1    |           | ←  | RADIO BEARER RECONFIGURATION          | Including IE "Activation Time"                                                                                                                                                          |
| 2    |           | ←  | RADIO BEARER SETUP                    | The SS send this message before the expiry of activation time specified in the message of step 1.                                                                                       |
| 3    |           | →  | RADIO BEARER SETUP FAILURE            | The UE does not change the configuration because of the RADIO BEARER SETUP message, and transmit this message on its uplink DCCH using the same RLC-AM mode radio bearer before step 1. |
| 4    |           | →  | RADIO BEARER RECONFIGURATION COMPLETE | This message is on DCCH using AM RLC.                                                                                                                                                   |

## Specific Message Contents

## RADIO BEARER RECONFIGURATION (Step 1) (FDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case are identical as "Packet to CELL\_DCH from CELL\_FACH in PS" as found in Annex A with the following exceptions:

| Information Element                          | Value/remark                        |
|----------------------------------------------|-------------------------------------|
| Activation Time                              | Current CFN-[current CFN mod 8 + 8] |
| Uplink DPCH Info<br>— Scrambling code number | 1                                   |

**RADIO BEARER RECONFIGURATION (Step 1) (TDD)**

The contents of RADIO BEARER RECONFIGURATION message in this test case are identical as "Packet to CELL\_DCH from CELL\_FACH in PS" as found in Annex A with the following exceptions:

| Information Element                                             | Value/remark                        |
|-----------------------------------------------------------------|-------------------------------------|
| Activation Time                                                 | Current CFN-[current CFN mod 8 + 8] |
| - Uplink DPCH timeslots and codes<br>- First timeslot code list | Assigned in step 1                  |

**RADIO BEARER SETUP (for Step 2) (FDD)**

For this message, use the message sub-type entitled "Packet to CELL\_DCH from CELL\_FACH in PS" in the default message content. Information element(s) to be changed are listed below:

| Information Element                          | Value/remark |
|----------------------------------------------|--------------|
| Activation Time                              | Not present  |
| Uplink DPCH Info<br>- Scrambling code number | 2            |

**RADIO BEARER SETUP (for Step 2) (TDD)**

For this message, use the message sub-type entitled "Packet to CELL\_DCH from CELL\_FACH in PS" in the default message content. Information element(s) to be changed are listed below:

| Information Element                                             | Value/remark                                         |
|-----------------------------------------------------------------|------------------------------------------------------|
| Activation Time                                                 | Not Present                                          |
| - Uplink DPCH timeslots and codes<br>- First timeslot code list | A different code combination to that used in step 1. |

**RADIO BEARER SETUP FAILURE**

The contents of RADIO BEARER SETUP FAILURE message in this test case is the same as the RADIO BEARER SETUP FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark                              |
|---------------------|-------------------------------------------|
| Message Type        |                                           |
| Failure cause       | Incompatible simultaneous reconfiguration |

**8.2.1.14.5 Test requirement**

After step 2 the UE shall transmit a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC with IE "failure cause" set to "Incompatible simultaneous reconfiguration".

After step 3 the UE shall configure the new configuration on the activation time and transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

**8.2.1.15 Radio Bearer Establishment for transition from CELL\_FACH to CELL\_DCH: Failure (Invalid message reception and Invalid configuration)****8.2.1.15.1 Definition****8.2.1.15.2 Conformance requirement**

The UE shall keep its old configuration when the UE receives an invalid RADIO BEARER SETUP message, which does not includes any IEs except IE "Message Type". It shall transmit a RADIO BEARER SETUP FAILURE message which set value "protocol error" in IE "failure cause" and also value "ASN.1 violation or encoding error" in IE

"Protocol error cause". The UE shall keep the old configuration upon reception of a RADIO BEARER SETUP message, which includes some IEs set to give an invalid configuration, and then the UE shall transmit a RADIO BEARER SETUP FAILURE including IE "failure cause" set to "invalid configuration".

## Reference

3GPP TS 25.331 clause 8.2.1.

### 8.2.1.15.3 Test purpose

To confirm that the UE transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC if it receives an invalid RADIO BEARER SETUP message which does not include any IEs except IE "Message Type".

To confirm that the UE transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC if it receives a RADIO BEARER SETUP message including some IEs set to give an invalid configuration.

### 8.2.1.15.4 Method of test

## Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH\_FACH (state 6-8) as specified in clause 7.4 of TS 34.108.

## Test Procedure

The UE is in CELL\_FACH state. The SS transmits an invalid RADIO BEARER SETUP message to the UE which does not include all IEs except IE "Message Type". The UE keeps the old configuration and transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC. This message shall specify "protocol error" in IE "failure cause" and also set the value "ASN.1 violation or encoding error" in IE "Protocol error cause". The UE keeps current configuration after SS transmits RADIO BEARER SETUP message including some IEs set to give an invalid configuration. Then UE transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC, setting the value "invalid configuration" to IE "failure cause".

## Expected sequence

| Step | Direction |    | Message                    | Comment                                                        |
|------|-----------|----|----------------------------|----------------------------------------------------------------|
|      | UE        | SS |                            |                                                                |
| 1    |           | ←  | RADIO BEARER SETUP         | See specific message content.                                  |
| 2    |           | →  | RADIO BEARER SETUP FAILURE | The UE does not change the configuration.                      |
| 3    |           | ←  | RADIO BEARER SETUP         | This message includes IE set to give an invalid configuration. |
| 4    |           | →  | RADIO BEARER SETUP FAILURE | The UE does not change the configuration.                      |

## Specific Message Contents

### RADIO BEARER SETUP (Step 1)

| Information Element | Value/remark |
|---------------------|--------------|
| All IEs             | Not Present  |

### RADIO BEARER SETUP FAILURE (Step 2)

The contents of RADIO BEARER SETUP FAILURE message in this test case is the same as the RADIO BEARER SETUP FAILURE message as found in Annex A, with the following exceptions:

| Information Element                   | Value/remark                      |
|---------------------------------------|-----------------------------------|
| <del>Failure-cause</del>              |                                   |
| <del>Failure-cause</del>              | Protocol-error                    |
| <del>Protocol-error information</del> |                                   |
| <del>Protocol-error cause</del>       | ASN.1-violation-or-encoding-error |

### ~~RADIO BEARER SETUP (Step 3)~~

The contents of RADIO BEARER SETUP message in this test case is identical as "Packet to CELL\_DCH from CELL\_FACH in PS" as found in Annex A with the following exceptions:

### ~~RADIO BEARER SETUP (Step 3) (FDD)~~

| Information Element                  | Value/remark |
|--------------------------------------|--------------|
| <del>Default DPCH Offset Value</del> | 512          |
| <del>DPCH frame offset</del>         | 1024         |

### ~~RADIO BEARER SETUP (Step 3) (TDD)~~

| Information Element   | Value/remark |
|-----------------------|--------------|
| <del>PRACH TFCS</del> | Present      |

### ~~RADIO BEARER SETUP FAILURE (Step 4)~~

The contents of RADIO BEARER SETUP FAILURE message in this test case is the same as the RADIO BEARER SETUP FAILURE message as found in Annex A, with the following exceptions:

| Information Element      | Value/remark          |
|--------------------------|-----------------------|
| <del>Failure-cause</del> | Invalid-configuration |

### 8.2.1.15.5 ~~Test requirement~~

After step 1 the UE shall transmits a RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC. The message shall indicate the reason of failure as "protocol-error" in IE "failure-cause" and set the value "ASN.1-violation-or-encoding-error" in IE "Protocol-error-cause".

After step 3 the UE shall transmit RADIO BEARER SETUP FAILURE message on the DCCH using AM RLC, setting the value of IE "failure-cause" to "invalid-configuration".

### 8.2.1.16 ~~Radio Bearer Establishment for transition from CELL\_FACH to CELL\_FACH: Success~~

#### 8.2.1.16.1 ~~Definition~~

#### 8.2.1.16.2 ~~Conformance requirement~~

The UE shall correctly set up a radio access bearer according to a RADIO BEARER SETUP message and responds with a RADIO BEARER SETUP COMPLETE message on the DCCH using AM RLC.

#### Reference

3GPP TS 25.331 clause 8.2.1.

#### 8.2.1.16.3 ~~Test purpose~~

To confirm that the UE establishes a new radio access bearer according to a RADIO BEARER SETUP message.

8.2.1.16.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: PS-DCH-FACH (state 6-8) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in CELL\_FACH state, after the test operator is being prompted to make an outgoing packet-switched call. The SS transmits a RADIO BEARER SETUP message to the UE. After the UE receives this message, it configures them and establishes a new radio access bearer. Finally the UE transmits a RADIO BEARER SETUP COMPLETE message on the DCH using AM RLC.

Expected sequence

| Step | Direction |    | Message                     | Comment                                             |
|------|-----------|----|-----------------------------|-----------------------------------------------------|
|      | UE        | SS |                             |                                                     |
| 1    |           | ←  | RADIO BEARER SETUP          |                                                     |
| 2    |           | →  | RADIO BEARER SETUP COMPLETE | The UE select PRACH and S-CCPCH using SIB5 or SIB6. |

Specific Message Contents

RADIO BEARER SETUP

For this message, use the message sub-type entitled "Packet to CELL\_FACH from CELL\_FACH in PS" in Annex A.

8.2.1.16.5 Test requirement

After step 1, the UE shall transmit a RADIO BEARER SETUP COMPLETE message.

8.2.1.17 Radio Bearer Establishment for transition from CELL\_DCH to CELL\_DCH: success (Subsequently received)

8.2.1.17.1 Definition

8.2.1.17.2 Conformance requirement

If the UE receives a RADIO BEARER SETUP message before the UE completes the configuration of the radio bearers according to the previous RADIO BEARER SETUP message, the UE shall ignore the new RADIO BEARER SETUP message and configure according to the previous RADIO BEARER SETUP message. Finally, the UE shall transmit a RADIO BEARER SETUP COMPLETE message on the DCH using AM RLC.

Reference

3GPP TS 25.331 clause 8.2.1, clause 8.6.3.11.

8.2.1.17.3 Test purpose

To confirm that if the UE receives a new RADIO BEARER SETUP message before the UE completes the configuration of the radio bearer according to a previous RADIO BEARER SETUP message, it ignores the new RADIO BEARER SETUP message and configures according to the previous RADIO BEARER SETUP message received.

#### 8.2.1.17.4 Method of test

##### Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH\_DCH (state 6-5) or PS-DCCH\_DCH (state 6-7) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

##### Test Procedure

The UE is in CELL\_DCH state. SS transmits a RADIO BEARER SETUP message to the UE before the UE completes the configuration of the radio bearer according to the RADIO BEARER SETUP message prior to this new message. The UE ignores the new RADIO BEARER SETUP message and configures according to the former RADIO BEARER SETUP message. On completion of radio bearer configuration, the UE shall transmit a RADIO BEARER SETUP COMPLETE message on the DCCH using AM RLC.

##### Expected sequence

| Step | Direction |    | Message                     | Comment                                                                                                                                                                                                                                             |
|------|-----------|----|-----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                             |                                                                                                                                                                                                                                                     |
| 1    |           | ←  | RADIO BEARER SETUP          | The "Secondary scrambling code is set to "1" for FDD mode.                                                                                                                                                                                          |
| 2    |           | ←  | RADIO BEARER SETUP          | SS send this message before the expiry of activation time specified in RADIO BEARER SETUP message of step 1. For TDD the IE "Secondary scrambling code" is set to "2" and for TDD mode a different code combination to that used in step 1 is used. |
| 3    |           | →  | RADIO BEARER SETUP COMPLETE | The UE ignores the RADIO BEARER SETUP message in step 2 and completes configuration according to the RADIO BEARER SETUP message in step 1.                                                                                                          |

##### Specific Message Contents

##### RADIO BEARER SETUP (Step 1) (FDD)

For RADIO BEARER SETUP in step 1, use the message sub-type indicated as "Non speech in CS" found in Annex A or the RADIO BEARER SETUP message as found in clause 9 of TS 34.108, with the exception of the following Information Elements:

| Information Element                               | Value/remark                                                                   |
|---------------------------------------------------|--------------------------------------------------------------------------------|
| Activation Time                                   | $[256 + \text{Current CFN} - [\text{current CFN mod } 8 + 8]] \text{MOD } 256$ |
| - Uplink DPCH Info<br>- Secondary scrambling code | 1                                                                              |

##### RADIO BEARER SETUP (Step 1) (TDD)

For RADIO BEARER SETUP in step 1, use the message sub-type indicated as "Non speech in CS" found in Annex A or the RADIO BEARER SETUP message as found in clause 9 of TS 34.108, with the exception of the following Information Elements:

| Information Element              | Value/remark                                     |
|----------------------------------|--------------------------------------------------|
| Activation-Time                  | [256+Current CFN-[current CFN mod 8 + 8]]MOD 256 |
| -Uplink DPCH timeslots and codes |                                                  |
| -First timeslot code list        | Assigned in step 1                               |

### RADIO BEARER SETUP (Step 2) (FDD)

For RADIO BEARER SETUP in step 2, use the message sub-type indicated as "Non speech in CS" found in Annex A or the RADIO BEARER SETUP message as found in clause 9 of TS 34.108, with the exception of the following:

| Information Element        | Value/remark |
|----------------------------|--------------|
| Activation-Time            | Not Present  |
| -Uplink DPCH Info          |              |
| -Secondary scrambling code | 2            |

### RADIO BEARER SETUP (Step 2) (TDD)

For RADIO BEARER SETUP in step 2, use the message sub-type indicated as "Non speech in CS" found in Annex A or the RADIO BEARER SETUP message as found in clause 9 of TS 34.108, with the exception of the following:

| Information Element              | Value/remark                                         |
|----------------------------------|------------------------------------------------------|
| Activation-Time                  | Not Present                                          |
| -Uplink DPCH timeslots and codes |                                                      |
| -First timeslot code list        | A different code combination to that used in step 1. |

#### 8.2.1.17.5 Test requirement

After step 2 the UE shall transmit a RADIO BEARER SETUP COMPLETE message on the DCCH using AM RLC.

### 8.2.1.18 Radio Bearer Establishment for transition from CELL\_FACH to CELL\_DCH: Success (Subsequently received)

#### 8.2.1.18.1 Definition

#### 8.2.1.18.2 Conformance requirement

If the UE receives a RADIO BEARER SETUP message before the UE completes the configuration of the radio bearers according to the previous RADIO BEARER SETUP message, the UE shall ignore the new RADIO BEARER SETUP message and configure according to the previous RADIO BEARER SETUP message. Finally, the UE shall transmit a RADIO BEARER SETUP COMPLETE message on the DCCH using AM RLC.

#### Reference

3GPP TS 25.331 clause 8.2.1, clause 8.6.3.11.

#### 8.2.1.18.3 Test purpose

To confirm that if the UE receives a new RADIO BEARER SETUP message before the UE completes the configuration of the radio bearer according to a previous RADIO BEARER SETUP message, it ignores the new RADIO BEARER SETUP message and configures according to the previous RADIO BEARER SETUP message received.

#### 8.2.1.18.4 Method of test

#### Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH\_FACH (state 6-8) as specified in clause 7.4 of TS 34.108.

### Test Procedure

The UE is in CELL\_FACH state. The SS transmits a RADIO BEARER SETUP message, requesting the UE to setup radio bearers using DPCCH physical channels. SS transmits another RADIO BEARER SETUP message before the activation time specified in the first message has lapsed. The UE ignores the new RADIO BEARER SETUP message and configures the radio bearers according to the former RADIO BEARER SETUP message. On completion of radio bearer configuration, the UE shall transmit a RADIO BEARER SETUP COMPLETE message on the DCCH using AM RLC.

### Expected sequence

| Step | Direction |    | Message                     | Comment                                                                                                                                                                                                                                                  |
|------|-----------|----|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                             |                                                                                                                                                                                                                                                          |
| 1    |           | ←  | RADIO BEARER SETUP          | The "Secondary scrambling code is set to "1" for FDD mode.                                                                                                                                                                                               |
| 2    |           | ←  | RADIO BEARER SETUP          | SS send this message before the expiry of activation time specified in RADIO BEARER SETUP message of step 1. For FDD mode the IE "Secondary scrambling code" is set to "2" and for TDD mode a different code combination to that used in step 1 is used. |
| 3    |           | →  | RADIO BEARER SETUP COMPLETE | The UE ignores the RADIO BEARER SETUP message in step 2 and confirms configuration according to the RADIO BEARER SETUP message in step 1.                                                                                                                |

### Specific Message Contents

#### RADIO BEARER SETUP (Step 1) (FDD)

For this message, use the message sub-type entitled "Packet to CELL\_DCH from CELL\_FACH in PS" in Annex A.

Information element(s) to be changed are listed below:

| Information Element                                | Value/remark                                                                   |
|----------------------------------------------------|--------------------------------------------------------------------------------|
| Activation Time                                    | $[256 + \text{Current CFN} - [\text{current CFN mod } 8 + 8]] \text{MOD } 256$ |
| - Uplink DPCCH Info<br>- Secondary scrambling code | 1                                                                              |

#### RADIO BEARER SETUP (Step 1) (TDD)

For RADIO BEARER SETUP in step 1, use the message sub-type indicated as "Non speech in CS" found in Annex A or the RADIO BEARER SETUP message as found in clause 9 of TS 34.108, with the exception of the following Information Elements:

| Information Element                                              | Value/remark                                                                   |
|------------------------------------------------------------------|--------------------------------------------------------------------------------|
| Activation Time                                                  | $[256 + \text{Current CFN} - [\text{current CFN mod } 8 + 8]] \text{MOD } 256$ |
| - Uplink DPCCH timeslots and codes<br>- First timeslot code list | Assigned in step 1                                                             |

**RADIO-BEARER-SETUP (for Step 2) (FDD)**

For this message, use the message sub-type entitled "Packet to CELL\_DCH from CELL\_FACH in PS" in Annex A. Information element(s) to be changed are listed below:

| Information Element                               | Value/remark |
|---------------------------------------------------|--------------|
| Activation Time                                   | Not Present  |
| - Uplink DPCH Info<br>- Secondary scrambling code | 2            |

**RADIO-BEARER-SETUP (Step 2) (TDD)**

For RADIO-BEARER-SETUP in step 2, use the message sub-type indicated as "Non speech in CS" found in Annex A or the RADIO-BEARER-SETUP message as found in clause 9 of TS 34.108, with the exception of the following:

| Information Element                                             | Value/remark                                         |
|-----------------------------------------------------------------|------------------------------------------------------|
| Activation Time                                                 | Not Present                                          |
| - Uplink DPCH timeslots and codes<br>- First timeslot code list | A different code combination to that used in step 1. |

**8.2.1.18.5 — Test requirement**

After step 2 the UE shall transmit a RADIO-BEARER-SETUP COMPLETE message on the DCCH using AM RLC specified in step 1.

After step 3 the UE shall communicate with the SS on the radio bearer specified in the RADIO-BEARER-SETUP message in step 1.

**8.2.1.19 — Radio Bearer Establishment from CELL\_DCH to CELL\_PCH: Success****8.2.1.19.1 — Definition****8.2.1.19.2 — Conformance requirement**

The UE shall configure radio bearers so as to transit from CELL\_DCH state to CELL\_PCH state according to the received RADIO-BEARER-SETUP message and responds with a RADIO-BEARER-SETUP COMPLETE message on the DCCH using AM RLC.

**Reference**

3GPP TS 25.331 clause 8.2.1.

**8.2.1.19.3 — Test purpose**

To conform that the UE transmits a RADIO-BEARER-SETUP COMPLETE message and enters CELL\_PCH state after it received a RADIO-BEARER-SETUP message for the transition from CELL\_DCH to CELL\_PCH from SS.

**8.2.1.19.4 — Method of test****Initial Condition**

System Simulator: 1 cell.

UE: PS-DCCH\_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

## Test Procedure

The UE is in CELL\_DCH state. The SS transmits a RADIO BEARER SETUP message. The UE transmits RADIO BEARER SETUP COMPLETE message using AM RLC and enters CELL\_PCH state.

## Expected sequence

| Step | Direction |    | Message                     | Comment                      |
|------|-----------|----|-----------------------------|------------------------------|
|      | UE        | SS |                             |                              |
| 1    |           | ←  | RADIO BEARER SETUP          |                              |
| 2    |           | →  | RADIO BEARER SETUP COMPLETE |                              |
| 3    |           |    |                             | The UE is in CELL_PCH state. |

## Specific Message Contents

### RADIO BEARER SETUP (Step 1) (FDD)

Use the same message sub-type titled "Packet to CELL\_FACH from CELL\_DCH in PS" in Annex A with following exceptions:

| Information Element                                                                         | Value/remark |
|---------------------------------------------------------------------------------------------|--------------|
| RRC State Indicator                                                                         | CELL_PCH     |
| Downlink information for each radio link<br>-Primary CPICH info<br>-Primary scrambling code | 100          |

### RADIO BEARER SETUP (Step 1) (TDD)

Use the same message sub-type titled "Packet to CELL\_FACH from CELL\_DCH in PS" in Annex A with following exceptions:

| Information Element                                                                     | Value/remark |
|-----------------------------------------------------------------------------------------|--------------|
| RRC State Indicator                                                                     | CELL_PCH     |
| Downlink information for each radio links<br>-Primary CCPCH info<br>-Cell parameters ID | 4            |

### 8.2.1.19.5 Test requirement

After step 1, the UE shall transmit a RADIO BEARER SETUP COMPLETE message on uplink DCCH using AM RLC.

After step 2, the UE shall enter CELL\_PCH state.

### 8.2.1.20 Radio Bearer Establishment from CELL\_DCH to URA\_PCH: Success

#### 8.2.1.20.1 Definition

#### 8.2.1.20.2 Conformance requirement

The UE shall configure radio bearers so as to transit from CELL\_DCH state to URA\_PCH state according to the received RADIO BEARER SETUP message and responds with a RADIO BEARER SETUP COMPLETE message on the DCCH using AM RLC.

## Reference

3GPP TS 25.331 clause 8.2.1.

**8.2.1.20.3 Test purpose**

To confirm that the UE transmits a RADIO BEARER SETUP COMPLETE message and enters URA\_PCH state after it received a RADIO BEARER SETUP message for the transition from CELL\_DCH to URA\_PCH from SS.

**8.2.1.20.4 Method of test****Initial Condition**

System Simulator: 1 cell.

UE: PS-DCCH\_DCH (state 6-7) as specified in clause 7.4 of TS 34.108.

**Test Procedure**

The UE is in CELL\_DCH state. The SS transmits a RADIO BEARER SETUP message. The UE transmits a RADIO BEARER SETUP COMPLETE message using AM RLC and enters URA\_PCH state.

**Expected sequence**

| Step | Direction |    | Message                     | Comment                     |
|------|-----------|----|-----------------------------|-----------------------------|
|      | UE        | SS |                             |                             |
| 1    |           | ←  | RADIO BEARER SETUP          |                             |
| 2    |           | →  | RADIO BEARER SETUP COMPLETE |                             |
| 3    |           |    |                             | The UE is in URA_PCH state. |

**Specific Message Contents****RADIO BEARER SETUP (Step 1) (FDD)**

Use the same message sub-type titled "Packet to CELL\_FACH from CELL\_DCH in PS" in Annex A with following exceptions:

| Information Element                                                                           | Value/remark |
|-----------------------------------------------------------------------------------------------|--------------|
| RRC State Indicator                                                                           | URA_PCH      |
| Downlink information for each radio link<br>- Primary CPICH info<br>- Primary scrambling code | 100          |

**RADIO BEARER SETUP (Step 1) (TDD)**

Use the same message sub-type titled "Packet to CELL\_FACH from CELL\_DCH in PS" in Annex A with following exceptions:

| Information Element                                                                       | Value/remark |
|-------------------------------------------------------------------------------------------|--------------|
| RRC State Indicator                                                                       | URA_PCH      |
| Downlink information for each radio links<br>- Primary CCPCH info<br>- Cell parameters ID | 4            |

**8.2.1.20.5 Test requirement**

After step 1, the UE shall transmit a RADIO BEARER SETUP COMPLETE message on uplink DCCH using AM RLC.

After step 2, the UE shall enter URA\_PCH state.

### ~~8.2.1.21 RRC connection establishment in CELL\_DCH on another frequency~~

#### ~~8.2.1.21.1 Definition~~

#### ~~8.2.1.21.2 Conformance requirement~~

- ~~1. The UE shall, in the transmitted RRC CONNECTION REQUEST message:~~

- ~~— set the IE "Establishment cause" to the value of the variable ESTABLISHMENT\_CAUSE;~~
- ~~— set the IE "Initial UE identity" to the value of the variable INITIAL\_UE\_IDENTITY;~~
- ~~— set the IE "Protocol error indicator" to the value of the variable PROTOCOL\_ERROR\_INDICATOR;~~
- ~~— include a measurement report in the IE "Measured results on RACH", as specified in the IE "Intra-frequency reporting quantity for RACH reporting" and the IE "Maximum number of reported cells on RACH" in System Information Block type 11.~~

- ~~2. The UE shall compare the value of the IE "Initial UE identity" in the received RRC CONNECTION SETUP message with the value of the variable INITIAL\_UE\_IDENTITY.~~

~~If the values are identical, the UE shall:~~

- ~~— perform the physical layer synchronization procedure~~

#### ~~Reference~~

~~3GPP TS 25.331 clauses 8.3.1.3, 8.3.1.6~~

#### ~~8.2.1.21.3 Test Purpose~~

~~To confirm that the UE manages to synchronize on another frequency when so required by UTRAN in the RRC CONNECTION SET UP message.~~

#### ~~8.2.1.21.4 Method of test~~

##### ~~Initial condition~~

~~System simulator: 2 cells — Cell 1 on UARFCN 1 and Cell 2 on UARFCN 2.~~

~~UE: "Registered idle mode on CS" (state 2) or "Registered idle mode on PS" (state 3) in cell 1 as specified in clause 7.4 of TS 34.108, depending on the CN domain supported by the UE. If the UE supports both CS and PS domains, the initial state shall be "Registered idle mode on CS/PS" (state 7).~~

##### ~~Test procedure~~

~~The UE is initially in idle mode and is camping on cell 1. SIB 11 is broadcast in cell 1, and the parameters used are as specified below.~~

~~SS prompts the operator to make an outgoing call of a supported traffic class. The UE shall transmit an RRC CONNECTION REQUEST on the CCCH, and SS replies with the RRC CONNECTION SETUP, in which the IEs are set as described below. The UE shall send the RRC CONNECTION SETUP COMPLETE back to SS in cell 2 on the DPCH described in the RRC CONNECTION SET UP message received from the SS.~~

## Expected sequence

| — Reporting information for state CELL_DCH       | Not present                         |

## RRC CONNECTION REQUEST (Step 2)

Use the same message type found in clause 9 of TS 34.108, with the following exception:

| Information Element      | Value/remark                                     |
|--------------------------|--------------------------------------------------|
| Measured results on RACH | Check that the Ec/No for the cell 1 is reported. |

## RRC CONNECTION SETUP (Step 3)

Use the same message type found in clause 9 of TS 34.108, with the following exception:

| Information Element  | Value/remark              |
|----------------------|---------------------------|
| Frequency info       |                           |
| -UARFCN uplink(Nu)   | UARFCN uplink of cell 2   |
| -UARFCN downlink(Nd) | UARFCN downlink of cell 2 |

#### 8.2.1.21.5 Test requirement

In step 4, the UE shall send the RRC CONNECTION SETUP COMPLETE message on the frequency indicated in the RRC CONNECTION SETUP message.

### 8.2.2 Radio Bearer Reconfiguration

#### 8.2.2.1 Radio Bearer Reconfiguration from CELL\_DCH to CELL\_DCH: Success

##### 8.2.2.1.1 Definition

##### 8.2.2.1.2 Conformance requirement

The UE shall correctly reconfigure a radio bearer and L1 according to the RADIO BEARER RECONFIGURATION message, which specifies a hard handover to another UL scrambling code and responds with a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

#### Reference

3GPP TS 25.331 clause 8.2.2.

##### 8.2.2.1.3 Test purpose

To confirm that the UE reconfigures the radio bearers according to a RADIO BEARER RECONFIGURATION message, which indicates a hard handover to another UL scrambling code.

##### 8.2.2.1.4 Method of test

#### Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH\_DCH (state 6-9) or PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

#### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, which commands a hard handover in the same cell to a new UL scrambling code to be performed. The UE reconfigures the new physical channel and transmits a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

## Expected sequence

| Step | Direction |    | Message                                  | Comment                         |
|------|-----------|----|------------------------------------------|---------------------------------|
|      | UE        | SS |                                          |                                 |
| 1    |           |    | Void                                     |                                 |
| 2    |           |    | Void                                     |                                 |
| 3    |           | ←  | RADIO-BEARER<br>RECONFIGURATION          | UL-scrambling-code is modified. |
| 4    |           | →  | RADIO-BEARER<br>RECONFIGURATION COMPLETE |                                 |

## Specific Message Contents

## RADIO-BEARER RECONFIGURATION (FDD)

The contents of RADIO-BEARER RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A, with the following exceptions:

| Information Element                                                                                               | Value/remark |
|-------------------------------------------------------------------------------------------------------------------|--------------|
| Uplink DPCH Info<br>—— Scrambling code number                                                                     | 1            |
| Downlink information common for all radio links<br>—— Downlink DPCH info common for all RL<br>—— Timing Indicator | Maintain     |

## RADIO-BEARER RECONFIGURATION (TDD)

The contents of RADIO-BEARER RECONFIGURATION message in this test case is identical to the message sub-type titled "Packet to CELL\_DCH from CELL\_DCH in PS" in Annex A, with the following exceptions:

| Information Element                                                                                               | Value/remark   |
|-------------------------------------------------------------------------------------------------------------------|----------------|
| Uplink DPCH timeslots and codes<br>—— First timeslot code list                                                    | Assigned by SS |
| Downlink information common for all radio links<br>—— Downlink DPCH info common for all RL<br>—— Timing Indicator | Maintain       |

## 8.2.2.1.5 ——— Test requirement

After step 3 the UE shall transmit a RADIO-BEARER RECONFIGURATION COMPLETE message on the new DPCH after the specified activation time has expired.

## 8.2.2.2 ——— Radio Bearer Reconfiguration from CELL\_DCH to CELL\_DCH: Failure (Unsupported configuration)

## 8.2.2.2.1 ——— Definition

## 8.2.2.2.2 ——— Conformance requirement

The UE shall keep its old configuration when the UE receives a RADIO-BEARER RECONFIGURATION message which includes unsupported configuration parameters and transmit a RADIO-BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "configuration unsupported" in IE "failure cause."

## Reference

3GPP TS 25.331 clause 8.2.2.

### 8.2.2.2.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC if the received RADIO BEARER RECONFIGURATION message includes unsupported configuration parameters.

### 8.2.2.2.4 Method of test

#### Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH\_DCH (state 6-9) or PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

#### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE, which includes unsupported configuration parameters for the UE. The UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "configuration unsupported" in IE "failure cause".

#### Expected sequence

| Step | Direction |    | Message                              | Comment                                       |
|------|-----------|----|--------------------------------------|-----------------------------------------------|
|      | UE        | SS |                                      |                                               |
| 1    |           | ←  | RADIO BEARER RECONFIGURATION         | Including unsupported configuration by the UE |
| 2    |           | →  | RADIO BEARER RECONFIGURATION FAILURE | The UE does not change the radio bearer.      |

#### Specific Message Contents

##### RADIO BEARER RECONFIGURATION (FDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Speech in CS" or "Non speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A with the following exceptions:

| Information Element     | Value/remark |
|-------------------------|--------------|
| Frequency info          |              |
| —— UARFCN uplink (Nu)   | 0            |
| —— UARFCN downlink (Nd) | 950          |

##### RADIO BEARER RECONFIGURATION (TDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A with the following exceptions:

| Information Element | Value/remark |
|---------------------|--------------|
| Frequency info      |              |
| —— UARFCN (Nt)      | 0            |

##### RADIO BEARER RECONFIGURATION FAILURE

The contents of RADIO BEARER RECONFIGURATION FAILURE message in this test case is the same as the RADIO BEARER RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark              |
|---------------------|---------------------------|
| Failure-cause       | Configuration unsupported |

#### 8.2.2.2.5 ~~Test requirement~~

After step 1 the UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC with the value "configuration unsupported" set in IE "failure cause".

#### 8.2.2.3 ~~Radio Bearer Reconfiguration from CELL\_DCH to CELL\_DCH: Failure (Physical channel failure and reversion to old configuration)~~

##### 8.2.2.3.1 ~~Definition~~

##### 8.2.2.3.2 ~~Conformance requirement~~

The UE shall revert to the old configuration when the UE fails to reconfigure the new physical channel before timer T312 expires. UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "physical channel failure" in IE "failure cause".

#### Reference

3GPP TS 25.331 clause 8.2.2.

##### 8.2.2.3.3 ~~Test purpose~~

To confirm that the UE reverts to the old configuration and transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC, if the UE fails to reconfigure the radio bearer expires according to the RADIO BEARER RECONFIGURATION message before timer T312.

##### 8.2.2.3.4 ~~Method of test~~

#### Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH\_DCH (state 6-9) or PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

#### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message including the new radio bearer parameters to the UE but it keeps its current dedicated physical channel configuration. The UE shall revert to the old configuration. Then the UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting value "physical channel failure" in IE "failure cause".

#### Expected sequence

| Step | Direction |    | Message                              | Comment                                                                                                                            |
|------|-----------|----|--------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                      |                                                                                                                                    |
| 1    | ←         |    | RADIO BEARER RECONFIGURATION         |                                                                                                                                    |
| 2    |           |    |                                      | SS does not reconfigure L1.                                                                                                        |
| 3    | →         |    | RADIO BEARER RECONFIGURATION FAILURE | The UE shall detect a failure to reconfigure the new radio bearer, and send this message using the old radio bearer configuration. |

## Specific Message Contents

### RADIO BEARER RECONFIGURATION

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non-speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A.

### RADIO BEARER RECONFIGURATION FAILURE

The contents of RADIO BEARER RECONFIGURATION FAILURE message in this test case is the same as the RADIO BEARER RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark             |
|---------------------|--------------------------|
| Failure-cause       | Physical-channel failure |

#### 8.2.2.3.5 ——— Test requirement

After step 2 the UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC setting value "physical channel failure" in IE "failure-cause".

#### 8.2.2.4 ——— Radio Bearer Reconfiguration from CELL\_DCH to CELL\_DCH: Failure (Physical channel failure and reversion failure)

##### 8.2.2.4.1 ——— Definition

##### 8.2.2.4.2 ——— Conformance requirement

The UE shall perform a cell update when the UE fails to revert to the old configuration after the detection of physical channel failure in the radio bearer reconfiguration procedure. After the UE completes cell update procedure, the UE transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set IE "failure-cause" to "physical channel failure".

## Reference

3GPP TS 25.331 clause 8.2.2.

##### 8.2.2.4.3 ——— Test purpose

To confirm that the UE transmits a RADIO BEARER SETUP FAILURE message after it completes a cell update procedure when the UE cannot reconfigure the new radio bearer and a subsequent failure to revert to the old configuration.

##### 8.2.2.4.4 ——— Method of test

## Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH\_DCH (state 6-9) or PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

## Test Procedure

The UE is in CELL\_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message, which includes the new radio bearer parameters, to the UE. After the reception of the acknowledgement for the RADIO BEARER RECONFIGURATION message in SS, the SS shall not reconfigure dedicated physical channel in accordance with the settings in the message and release the previous configuration. The UE discovers that it cannot reconfigure the new

radio-bearer and wants to revert to the old configuration, but the UE cannot revert to the old configuration. The UE transmits a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "radio link failure". The SS shall transmit a CELL UPDATE CONFIRM message on downlink CCCH after receiving a CELL UPDATE message. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC and subsequently transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting the value "physical channel failure" to IE "failure cause".

#### Expected sequence

| Step | Direction |    | Message                                   | Comment                                                                                                                                                         |
|------|-----------|----|-------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                           |                                                                                                                                                                 |
| 1    | ←         |    | RADIO BEARER RECONFIGURATION              |                                                                                                                                                                 |
| 2    |           |    |                                           | The SS does not reconfigure the dedicated physical channel in accordance with the RADIO BEARER RECONFIGURATION message and shall release the old configuration. |
| 3    | →         |    | CELL UPDATE                               | The value "radio link failure" shall be set in IE "Cell update cause".                                                                                          |
| 4    |           |    |                                           | The SS configures the dedicated physical channel according to the IE "Physical channel information elements" included in the CELL UPDATE CONFIRM message.       |
| 5    | ←         |    | CELL UPDATE CONFIRM                       | This message include IE "Physical channel information elements".                                                                                                |
| 6    | →         |    | PHYSICAL CHANNEL RECONFIGURATION COMPLETE |                                                                                                                                                                 |
| 7    | →         |    | RADIO BEARER RECONFIGURATION FAILURE      | The IE "failure cause" shall be set to "physical channel failure"                                                                                               |

#### Specific Message Contents

##### RADIO BEARER RECONFIGURATION message (Step 1)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non-speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as as found in Annex A.

##### CELL UPDATE (Step 3)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in Annex A with the following exceptions:

| Information Element | Value/remark         |
|---------------------|----------------------|
| Cell Update Cause   | "radio link failure" |

**CELL UPDATE CONFIRM (Step 5) (FDD)**

The contents of CELL UPDATE CONFIRM message is identical as "CELL UPDATE CONFIRM message" as found in Annex A with the following exceptions:

| Information Element                       | Value/remark                                                         |
|-------------------------------------------|----------------------------------------------------------------------|
| RRC State indicator                       | CELL_DCH                                                             |
| UplinkDPCH Info                           | Same as RADIO BEARER SETUP message used to move to initial condition |
| Downlink information for each radio links | Same as RADIO BEARER SETUP message used to move to initial condition |

**CELL UPDATE CONFIRM (Step 5) (TDD)**

The contents of CELL UPDATE CONFIRM message is identical as "CELL UPDATE CONFIRM message" as found in Annex A with the following exceptions:

| Information Element                       | Value/remark                                                         |
|-------------------------------------------|----------------------------------------------------------------------|
| RRC State Indicator                       | CELL_DCH                                                             |
| Uplink DPCH timeslots and codes           | Same as RADIO BEARER SETUP message used to move to initial condition |
| Downlink information for each radio links | Same as RADIO BEARER SETUP message used to move to initial condition |

**RADIO BEARER RECONFIGURATION FAILURE (Step 7)**

The contents of RADIO BEARER RECONFIGURATION FAILURE message in this test case is the same as the RADIO BEARER RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark               |
|---------------------|----------------------------|
| Failure cause       | "physical channel failure" |

**8.2.2.4.5 — Test requirement**

After step 2 the UE shall transmit a CELL UPDATE message on the CCCH with IE "Cell update cause" set to "radio link failure".

After step 5 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE on the uplink DCCH using AM RLC.

After step 6 the UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting the IE "failure cause" to "physical channel failure".

**8.2.2.5 — Radio Bearer Reconfiguration from CELL\_DCH to CELL\_DCH: Failure (Incompatible simultaneous reconfiguration)****8.2.2.5.1 — Definition****8.2.2.5.2 — Conformance requirement**

If the UE receives a RADIO BEARER RECONFIGURATION message during a reconfiguring procedure due to a radio bearer message other than RADIO BEARER RECONFIGURATION message, it shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC.

**Reference**

3GPP TS 25.331 clause 8.2.2, clause 8.6.3.11.

### 8.2.2.5.3 ~~Test purpose~~

To confirm that if the UE receives a RADIO BEARER RECONFIGURATION message during a reconfiguring procedure due to a radio bearer message other than RADIO BEARER RECONFIGURATION, it shall keep its configuration as if the RADIO BEARER RECONFIGURATION message had not been received and complete the reconfiguration procedure according to the previously received message.

### 8.2.2.5.4 ~~Method of test~~

#### Initial Condition

System Simulator: 1 cell.

UE: CS\_DCCH\_DCH (state 6-5) or PS\_DCCH\_DCH (state 6-7) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

#### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a RADIO BEARER SETUP message to the UE. The SS transmits a RADIO BEARER RECONFIGURATION message before the "activation time" indicated in the RADIO BEARER SETUP message expires. When the UE receives the RADIO BEARER RECONFIGURATION message, the UE shall keep its current configuration as if it had not received the RADIO BEARER RECONFIGURATION message and shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC with IE "failure cause" set to "incompatible simultaneous reconfiguration". After the SS acknowledges the RADIO BEARER RECONFIGURATION FAILURE message, the UE reconfigures the new physical channel parameters upon the specified activation time and transmits a RADIO BEARER SETUP COMPLETE message on DCCH using AM RLC.

#### Expected sequence

| Step | Direction |    | Message                              | Comment                                                                                                   |
|------|-----------|----|--------------------------------------|-----------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                      |                                                                                                           |
| 1    |           | ←  | RADIO BEARER SETUP                   |                                                                                                           |
| 2    |           | ←  | RADIO BEARER RECONFIGURATION         | Sent before the "activation time" in step 1 has elapsed                                                   |
| 3    |           | →  | RADIO BEARER RECONFIGURATION FAILURE | The UE does not change its configuration according to the RADIO BEARER RECONFIGURATION message in step 2. |
| 4    |           | →  | RADIO BEARER SETUP COMPLETE          | This message is on DCCH using AM RLC.                                                                     |

#### Specific Message Contents

##### RADIO BEARER SETUP (Step 1) (FDD)

For RADIO BEARER SETUP message in step 1, use the message sub-type indicated as "Non speech in CS" as found in Annex A or the RADIO BEARER SETUP message as found in clause 9 of TS 34.108, with following exceptions:

| Information Element                          | Value/remark                        |
|----------------------------------------------|-------------------------------------|
| Activation Time                              | Current CFN-[current CFN mod 8 + 8] |
| Uplink DPCH Info<br>— Scrambling code number | 1                                   |

##### RADIO BEARER SETUP (Step 1) (TDD)

For RADIO BEARER SETUP message in step 1, use the message sub-type indicated as "Non speech in CS" as found in Annex A or the RADIO BEARER SETUP message as found in clause 9 of TS 34.108, with following exceptions:

| Information Element                                            | Value/remark                        |
|----------------------------------------------------------------|-------------------------------------|
| Activation Time                                                | Current CFN-[current CFN mod 8 + 8] |
| Uplink DPCH timeslots and codes<br>—— First timeslot code list | Assigned by SS                      |

### RADIO BEARER RECONFIGURATION (Step 2)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to those in the default contents of layer 3 messages for RRC tests with the following exceptions as "Speech in CS" or "Non-speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A with following exceptions:

| Information Element                           | Value/remark |
|-----------------------------------------------|--------------|
| Activation Time                               | Not Present. |
| Uplink DPCH Info<br>—— Scrambling code number | 2            |

### RADIO BEARER RECONFIGURATION FAILURE

The contents of RADIO BEARER RECONFIGURATION FAILURE message in this test case is the same as the RADIO BEARER RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark                              |
|---------------------|-------------------------------------------|
| Failure cause       | Incompatible simultaneous reconfiguration |

#### 8.2.2.5.5 ——— Test requirement

After step 2, the UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC with IE "failure cause" set to "Incompatible simultaneous reconfiguration".

After step 3, the UE shall transmit a RADIO BEARER SETUP COMPLETE message on the DCCH using AM RLC.

#### 8.2.2.6 ——— Radio Bearer Reconfiguration from CELL\_DCH to CELL\_DCH: Failure (Invalid message reception and Invalid configuration)

##### 8.2.2.6.1 ——— Definition

##### 8.2.2.6.2 ——— Conformance requirement

The UE shall keep its old configuration when the UE receives an invalid RADIO BEARER RECONFIGURATION message, which does not includes any IEs except IE "Message Type". The UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message which is set to "protocol error" in IE "failure cause" and is set to "ASN.1 violation or encoding error" in IE "Protocol error cause".

The UE shall keep existing configuration upon reception of a RADIO BEARER RECONFIGURATION message, which includes some IEs set to give an invalid configuration, and then the UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message including IE "failure cause" set to "invalid configuration".

#### Reference

3GPP TS 25.331 clause 8.2.2.

##### 8.2.2.6.3 ——— Test purpose

To confirm that the UE transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC, if it receives an invalid RADIO BEARER RECONFIGURATION message which does not include any IEs except IE "Message Type".

To confirm that the UE transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC if it receives a RADIO BEARER RECONFIGURATION message including some IEs set to give an invalid configuration.

#### 8.2.2.6.4 Method of test

##### Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH (state 6-9) or PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

##### Test Procedure

The UE is in CELL\_DCH state. The SS transmits an invalid RADIO BEARER RECONFIGURATION message to the UE which does not include any IEs except IE "Message Type". The UE keeps the old configuration and transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "protocol error" in IE "failure cause" and is set to "ASN.1 violation or encoding error" in IE "Protocol error cause". The UE keeps current configuration after SS transmits a RADIO BEARER RECONFIGURATION message including some IEs set to give an invalid configuration. Then UE transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting the value "invalid configuration" to IE "failure cause".

##### Expected sequence

| Step | Direction |    | Message                              | Comment                                                        |
|------|-----------|----|--------------------------------------|----------------------------------------------------------------|
|      | UE        | SS |                                      |                                                                |
| 1    |           | ←  | RADIO BEARER RECONFIGURATION         | See specific message content.                                  |
| 2    |           | →  | RADIO BEARER RECONFIGURATION FAILURE | The UE does not change the configuration.                      |
| 3    |           | ←  | RADIO BEARER RECONFIGURATION         | This message includes IE set to give an invalid configuration. |
| 4    |           | →  | RADIO BEARER RECONFIGURATION FAILURE | The UE does not change the configuration.                      |

##### Specific Message Contents

##### RADIO BEARER RECONFIGURATION (Step 1)

| Information Element | Value/remark |
|---------------------|--------------|
| All IEs             | Not Present  |

##### RADIO BEARER RECONFIGURATION FAILURE (Step 2)

The contents of RADIO BEARER RECONFIGURATION FAILURE message in this test case is the same as the RADIO BEARER RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element          | Value/remark                      |
|------------------------------|-----------------------------------|
| Failure cause                |                                   |
| → Failure cause              | Protocol error                    |
| → Protocol error information |                                   |
| → Protocol error cause       | ASN.1 violation or encoding error |

##### RADIO BEARER RECONFIGURATION (Step 3) (FDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Speech in CS" or "Non speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" found in Annex A with following exceptions:

| Information Element                   | Value/remark |
|---------------------------------------|--------------|
| <del>Default DPCCH Offset Value</del> | 512          |
| <del>DPCCH frame offset</del>         | 1024         |

#### RADIO BEARER RECONFIGURATION (Step 3) (TDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Speech in CS" or "Non speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" found in Annex A with following exceptions:

| Information Element   | Value/remark |
|-----------------------|--------------|
| <del>PRACH TFCS</del> | Present      |

#### RADIO BEARER RECONFIGURATION FAILURE (Step 5)

The contents of RADIO BEARER RECONFIGURATION FAILURE message in this test case is the same as the RADIO BEARER RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark          |
|---------------------|-----------------------|
| Failure cause       | Invalid configuration |

#### 8.2.2.6.5 ~~Test requirement~~

After step 1 the UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC stating the reason "protocol error" in IE "failure cause". The message shall contain the value "ASN.1 violation or encoding error" in IE "Protocol error cause".

After step 3 the UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting the value "invalid configuration" to IE "failure cause".

#### 8.2.2.7 ~~Radio Bearer Reconfiguration from CELL\_DCH to CELL\_DCH: Success (Continue and stop)~~

##### 8.2.2.7.1 ~~Definition~~

##### 8.2.2.7.2 ~~Conformance requirement~~

If the IE "RB information to reconfigure" is included, the UE shall apply the following actions on the radio bearer identified with the value of the IE "RB identity". The UE shall:

...

- if the IE "RB stop/continue" is included; and
  - if the "RB identity" has a value greater than 2; and
    - if the value of the IE "RB stop/continue" is "stop":
      - configure the RLC entity for the radio bearer to stop;
      - set the IE "RB started" in the variable ESTABLISHED\_RABS to "stopped" for that radio bearer;
    - if the value of the IE "RB stop/continue" is "continue":
      - configure the RLC entity for the radio bearer to continue;
      - set the IE "RB started" in the variable ESTABLISHED\_RABS to "started" for that radio bearer;

## Reference

3GPP TS 25.331 clause 8.2.2, 8.6.4.5.

### 8.2.2.7.3 Test purpose

To confirm that the UE reconfigures new radio bearer and stop the transmission and reception of the RLC entity belonging to the RB identity specified in the RADIO BEARER RECONFIGURATION message.

To confirm that the UE reconfigures new radio bearer and restart the transmission and reception of the RLC entity belonging to the RB identity specified in the RADIO BEARER RECONFIGURATION message.

### 8.2.2.7.4 Method of test

#### Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH (state 6-9) or PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

#### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message including IE "RB-stop/continue" set to "continue" for radio bearer with RB identity '3'. The UE reconfigures new radio bearer and transmits a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC. Then, the SS transmits an IDENTITY REQUEST message using AM RLC, the UE responds a IDENTITY RESPONSE message. The SS transmits a RADIO BEARER RECONFIGURATION message including IE "RB-stop/continue" set to "stop" for radio bearer with RB identity "3". The UE reconfigures new radio bearer and transmits a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC. Then, the SS transmits a IDENTITY REQUEST message using AM RLC, the UE does not acknowledge this message and also does not respond with a IDENTITY RESPONSE message.

#### Expected sequence

| Step | Direction |    | Message                               | Comment                                                       |
|------|-----------|----|---------------------------------------|---------------------------------------------------------------|
|      | UE        | SS |                                       |                                                               |
| 1    |           | ←  | RADIO BEARER RECONFIGURATION          | This message include IE "RB stop/continue" set to "continue". |
| 2    |           | →  | RADIO BEARER RECONFIGURATION COMPLETE |                                                               |
| 3    |           | ←  | IDENTITY REQUEST                      |                                                               |
| 3a   |           | →  | IDENTITY RESPONSE                     |                                                               |
| 4    |           | ←  | RADIO BEARER RECONFIGURATION          | This message include IE "RB stop/continue" set to "stop".     |
| 5    |           | →  | RADIO BEARER RECONFIGURATION COMPLETE |                                                               |
| 6    |           | ←  | IDENTITY REQUEST                      |                                                               |
| 7    |           | →  |                                       | The SS shall not receive any data from the UE.                |

#### Specific Message Contents

##### RADIO BEARER RECONFIGURATION (Step 1)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Speech in CS" or "Non speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" found in Annex A with the following exceptions:

| Information Element                                                                                          | Value/remark    |
|--------------------------------------------------------------------------------------------------------------|-----------------|
| RB information to reconfigure list<br>— RB information to reconfigure<br>— RB identity<br>— RB stop/continue | 3<br>"continue" |

#### RADIO BEARER RECONFIGURATION (Step 4)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Speech in CS" or "Non speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A with the following exceptions:

| Information Element                                                                                          | Value/remark |
|--------------------------------------------------------------------------------------------------------------|--------------|
| RB information to reconfigure list<br>— RB information to reconfigure<br>— RB identity<br>— RB stop/continue | 3<br>"stop"  |

#### 8.2.2.7.5 Test requirement

After step 3 the UE shall respond with a IDENTITY RESPONSE message.

After step 6 the UE shall not respond with a IDENTITY RESPONSE message on the stopped RB.

#### 8.2.2.8 Radio Bearer Reconfiguration from CELL\_DCH to CELL\_FACH: Success

##### 8.2.2.8.1 Definition

##### 8.2.2.8.2 Conformance requirement

The UE shall correctly reconfigure radio bearers according to a RADIO BEARER RECONFIGURATION message, which invoke a transition from CELL\_DCH to CELL\_FACH in the same cell and responds with a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

#### Reference

3GPP TS 25.331 clause 8.2.2.

##### 8.2.2.8.3 Test purpose

To confirm that the UE establishes the reconfigured radio bearer(s) using common physical channel, after UE receives a RADIO BEARER RECONFIGURATION message.

##### 8.2.2.8.4 Method of test

#### Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108.

#### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message, which invoke a transition from CELL\_DCH to CELL\_FACH. The UE reconfigures the radio bearers and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

## Expected sequence

| Step | Direction |    | Message                               | Comment                                                                                     |
|------|-----------|----|---------------------------------------|---------------------------------------------------------------------------------------------|
|      | UE        | SS |                                       |                                                                                             |
| 1    |           | ←  | RADIO BEARER RECONFIGURATION          |                                                                                             |
| 2    |           | →  | RADIO BEARER RECONFIGURATION COMPLETE | The UE selects PRACH and S-CCPCH indicated in SIB5 and SIB6 after entering CELL_FACH state. |

## Specific Message Contents

## RADIO BEARER RECONFIGURATION (Step 1)

Use the same message sub-type titled "Packet to CELL\_FACH from CELL\_DCH in PS" in Annex A with the following exception:

| Information Element | Value/remark         |
|---------------------|----------------------|
| New C-RNTI          | 0000 0000 0000 0001B |

## 8.2.2.8.5 — Test requirement

After step 1 the UE shall transmit a RADIO BEARER RECONFIGURATION message.

## 8.2.2.9 — Radio Bearer Reconfiguration from CELL\_DCH to CELL\_FACH: Success (Cell re-selection)

## 8.2.2.9.1 — Definition

## 8.2.2.9.2 — Conformance requirement

The UE shall initiate cell update procedure when the UE performs cell reselection during radio bearer reconfiguration procedure. After the UE completes cell update procedure, the UE shall continue to perform a radio bearer reconfiguration procedure and correctly reconfigure the radio bearer.

## Reference

3GPP TS 25.331 clause 8.2.2.

## 8.2.2.9.3 — Test purpose

To confirm that the UE transmits RADIO BEARER RECONFIGURATION COMPLETE message after it completes a cell update procedure.

## 8.2.2.9.4 — Method of test

## Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108.

## Test Procedure

The UE is in CELL\_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message, which includes IE "Primary CPICH info" and no dedicated physical channel information to transit from CELL\_DCH to CELL\_FACH. As the UE cannot detect the specified cell, the UE shall initial the cell update procedure. The UE transmits a CELL

UPDATE message on uplink CCCH with IE "Cell update cause" set to "cell reselection". The SS shall transmit a CELL UPDATE CONFIRM message on downlink CCCH after receiving a CELL UPDATE message. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

#### Expected sequence

| Step | Direction |    | Message                               | Comment                                                              |
|------|-----------|----|---------------------------------------|----------------------------------------------------------------------|
|      | UE        | SS |                                       |                                                                      |
| 1    |           |    | Void                                  |                                                                      |
| 2    |           |    | Void                                  |                                                                      |
| 3    |           | ←  | RADIO BEARER RECONFIGURATION          | Assign a transition from CELL_DCH to CELL_FACH.                      |
| 4    |           | →  | CELL UPDATE                           | The value "cell reselection" shall be set in IE "Cell update cause". |
| 5    |           | ←  | CELL UPDATE CONFIRM                   |                                                                      |
| 6    |           |    | Void                                  |                                                                      |
| 7    |           | →  | RADIO BEARER RECONFIGURATION COMPLETE |                                                                      |

#### Specific Message Contents

##### RADIO BEARER RECONFIGURATION (Step 3) (FDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL\_FACH from CELL\_DCH in PS" found in Annex A with the following exceptions:

| Information Element                                                                              | Value/remark |
|--------------------------------------------------------------------------------------------------|--------------|
| Downlink information for each radio links<br>—— Primary CPICH info<br>—— Primary scrambling code | 150          |

##### RADIO BEARER RECONFIGURATION (Step 3) (TDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL\_FACH from CELL\_DCH in PS" found in Annex A with the following exceptions:

| Information Element                                                                         | Value/remark |
|---------------------------------------------------------------------------------------------|--------------|
| Downlink information for each radio links<br>—— Primary CCPCH info<br>—— Cell parameters ID | 4            |

##### CELL UPDATE (Step 4)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in Annex A with the following exceptions:

| Information Element | Value/remark       |
|---------------------|--------------------|
| Cell Update Cause   | "Cell reselection" |

##### CELL UPDATE CONFIRM (Step 5)

The contents of CELL UPDATE CONFIRM message are same as "CELL UPDATE CONFIRM message" as found in Annex A.

#### 8.2.2.9.5 ——— Test requirement

After step 3, the UE shall transmit CELL UPDATE message on the CCCH with IE "Cell update cause" set to "cell reselection".

After step 5, the UE shall transmit RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

#### ~~8.2.2.10 Radio Bearer Reconfiguration: from CELL\_FACH to CELL\_DCH: Success~~

##### ~~8.2.2.10.1 Definition~~

##### ~~8.2.2.10.2 Conformance requirement~~

The UE shall correctly reconfigure radio bearers according to a RADIO BEARER RECONFIGURATION message, which invoke a transition from CELL\_FACH to CELL\_DCH in the same cell and responds with a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

##### Reference

3GPP TS 25.331 clause 8.2.2.

##### ~~8.2.2.10.3 Test purpose~~

To confirm that the UE reconfigures the radio bearers according to a RADIO BEARER RECONFIGURATION message.

##### ~~8.2.2.10.4 Method of test~~

##### Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

##### Test Procedure

The UE is in CELL\_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. The UE reconfigures the radio bearers and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

##### Expected sequence

| Step | Direction |    | Message                               | Comment                                     |
|------|-----------|----|---------------------------------------|---------------------------------------------|
|      | UE        | SS |                                       |                                             |
| 1    |           | ←  | RADIO BEARER RECONFIGURATION          | This message includes IE "Uplink DPCH Info" |
| 2    |           |    |                                       | Reconfiguration of radio bearer             |
| 3    |           | →  | RADIO BEARER RECONFIGURATION COMPLETE |                                             |

##### Specific Message Contents

##### RADIO BEARER RECONFIGURATION (Step 1)

Use the same message sub-type titled "Packet to CELL\_DCH from CELL\_FACH in PS" in Annex A.

##### ~~8.2.2.10.5 Test requirement~~

After step 2 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### 8.2.2.11 ~~Radio Bearer Reconfiguration from CELL\_FACH to CELL\_DCH: Failure (Unsupported configuration)~~

#### 8.2.2.11.1 ~~Definition~~

#### 8.2.2.11.2 ~~Conformance requirement~~

~~The UE shall keep its current configuration when the UE receives a RADIO BEARER RECONFIGURATION message which includes unsupported configuration parameters and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "configuration-unsupported" in IE "failure-cause"~~

#### Reference

3GPP TS 25.331 clause 8.2.2.

#### 8.2.2.11.3 ~~Test purpose~~

~~To confirm that the UE transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC if the received RADIO BEARER RECONFIGURATION message includes unsupported configuration parameters.~~

#### 8.2.2.11.4 ~~Method of test~~

#### Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

#### Test Procedure

~~The UE is in CELL\_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message, which includes unsupported configuration parameters, to the UE. The UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC and set "configuration-unsupported" in IE "failure-cause".~~

#### Expected sequence

| Step | Direction |    | Message                              | Comment                                                      |
|------|-----------|----|--------------------------------------|--------------------------------------------------------------|
|      | UE        | SS |                                      |                                                              |
| 1    |           | ←  | RADIO BEARER RECONFIGURATION         | The message includes an unsupported configuration for the UE |
| 2    |           | →  | RADIO BEARER RECONFIGURATION FAILURE | The UE does not change the radio-bearer.                     |

#### Specific Message Contents

#### RADIO BEARER RECONFIGURATION (FDD)

~~The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL\_DCH from CELL\_FACH in PS" found in Annex A with the following exceptions:~~

| Information Element             | Value/remark |
|---------------------------------|--------------|
| Frequency info                  |              |
| <del>UARFCN uplink (Nu)</del>   | 0            |
| <del>UARFCN downlink (Nd)</del> | 950          |

### RADIO-BEARER RECONFIGURATION (TDD)

The contents of RADIO-BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL\_DCH from CELL\_FACH in PS" found in Annex A with the following exceptions:

| Information Element              | Value/remark |
|----------------------------------|--------------|
| Frequency info<br>—— UARFCN (Nt) | 0            |

### RADIO-BEARER RECONFIGURATION FAILURE

The contents of RADIO-BEARER RECONFIGURATION FAILURE message in this test case is the same as the RADIO-BEARER RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark              |
|---------------------|---------------------------|
| Failure cause       | Configuration unsupported |

#### 8.2.2.11.5 ——— Test requirement

After step 1 the UE shall transmit a RADIO-BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC stating "configuration unsupported" in IE "failure cause".

#### 8.2.2.12 ——— Radio Bearer Reconfiguration from CELL\_FACH to CELL\_DCH: Failure (Physical channel failure and successful reversion to old configuration)

##### 8.2.2.12.1 ——— Definition

##### 8.2.2.12.2 ——— Conformance requirement

The UE shall revert to the old configuration when the UE fails to reconfigure the new physical channel before timer T312 expires and detects the same serving cell only. The UE shall transmit a RADIO-BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "physical channel failure" in IE "failure cause".

### Reference

3GPP TS 25.331 clause 8.2.2.

##### 8.2.2.12.3 ——— Test purpose

To confirm that the UE reverts to the old configuration and transmits a RADIO-BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC if the UE fails to reconfigure the new radio bearer before timer T312 expires according to a RADIO-BEARER RECONFIGURATION message.

##### 8.2.2.12.4 ——— Method of test

### Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

### Test Procedure

The UE is in CELL\_FACH state. The SS transmits a RADIO-BEARER RECONFIGURATION message, which includes the new radio bearer parameters, to the UE and keep its current physical channel configuration. Therefore, the UE cannot reconfigure the radio bearers and shall attempt cell reselection procedure after T312 expires. Then the UE shall detect the same serving cell only and transmit a RADIO-BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC, with the value "physical channel failure" in IE "failure cause".

## Expected sequence

| Step | Direction |    | Message                              | Comment                                                                            |
|------|-----------|----|--------------------------------------|------------------------------------------------------------------------------------|
|      | UE        | SS |                                      |                                                                                    |
| 1    |           | ←  | RADIO-BEARER RECONFIGURATION         |                                                                                    |
| 2    |           | →  | RADIO-BEARER RECONFIGURATION FAILURE | The SS does not reconfigures L1 and the UE fails to reconfigure its radio-bearers. |

## Specific Message Contents

## RADIO-BEARER RECONFIGURATION

Use the same message sub-type titled "Packet to CELL\_DCH from CELL\_FACH in PS" in Annex A.

## RADIO-BEARER RECONFIGURATION FAILURE

The contents of RADIO-BEARER RECONFIGURATION FAILURE message in this test case is the same as the RADIO-BEARER RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark             |
|---------------------|--------------------------|
| Failure cause       | Physical channel failure |

## 8.2.2.12.5 — Test requirement

After step 1 the UE shall transmit a RADIO-BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting "physical channel failure" in IE "failure cause".

## 8.2.2.13 — Radio Bearer Reconfiguration from CELL\_FACH to CELL\_DCH: Failure (Physical channel failure and reversion failure)

## 8.2.2.13.1 — Definition

## 8.2.2.13.2 — Conformance requirement

The UE shall perform a cell update procedure when the UE selects another cell after the detection of physical channel failure in the radio bearer reconfiguration procedure. After the UE completes cell update procedure, the UE transmits a RADIO-BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "physical channel failure" in IE "failure cause".

## Reference

3GPP TS 25.331 clause 8.2.2.

## 8.2.2.13.3 — Test purpose

To confirm that the UE transmits a RADIO-BEARER RECONFIGURATION FAILURE message after it completes a cell update procedure due to a physical channel failure in the radio bearer reconfiguration procedure.

## 8.2.2.13.4 — Method of test

## Initial Condition

System Simulator: 2 cells – Cell 1 and 2 are active.

UE: PS-DCCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108 in cell 1.

## Test Procedure

Table 8.2.2.13

| Parameter              | Unit           | Cell 1 |     | Cell 2       |     |
|------------------------|----------------|--------|-----|--------------|-----|
|                        |                | T0     | T1  | T0           | T1  |
| UTRA-RF Channel Number |                | Ch. 1  |     | Ch. 1        |     |
| CPICH-E <sub>c</sub>   | dBm / 3.84 MHz | -60    | -75 | -75          | -60 |
| P-CCPCH RSCP (TDD)     | dBm            | -60    | -75 | switched-off | -60 |

Table 8.2.2.13 illustrates the downlink power to be applied for the 2-cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 2.

The UE is in CELL\_FACH state in cell 1. The SS transmits a RADIO-BEARER RECONFIGURATION message, which includes the new radio bearer parameters, to the UE but SS does not reconfigure dedicated physical channel in accordance with the settings in the message. At the same time, the SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.13. The UE recognizes that it cannot synchronize with the SS on the new radio bearers. The UE performs cell reselection and transmits a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "cell reselection". The SS shall transmit a CELL UPDATE CONFIRM message on downlink CCCH after receiving a CELL UPDATE message. The UE transmits a RADIO-BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting the value "physical channel failure" to IE "failure cause".

## Expected sequence

| Step | Direction |    | Message                              | Comment                                                                                                                                                                                                                                 |
|------|-----------|----|--------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                      |                                                                                                                                                                                                                                         |
| 1    |           | ←  | RADIO-BEARER RECONFIGURATION         |                                                                                                                                                                                                                                         |
| 2    |           |    |                                      | The SS does not reconfigure the dedicated physical channel in accordance with the RADIO-BEARER RECONFIGURATION message and applies the downlink transmission power settings, according to the values in columns "T1" of table 8.2.2.13. |
| 3    |           |    | Void                                 |                                                                                                                                                                                                                                         |
| 4    |           |    | Void                                 |                                                                                                                                                                                                                                         |
| 5    |           | →  | CELL UPDATE                          | The value "cell reselection" shall be set in IE "Cell update cause".                                                                                                                                                                    |
| 6    |           | ←  | CELL UPDATE CONFIRM                  |                                                                                                                                                                                                                                         |
| 7    |           |    | Void                                 |                                                                                                                                                                                                                                         |
| 8    |           | →  | RADIO-BEARER RECONFIGURATION FAILURE | The IE "failure cause" shall be set to "physical channel failure"                                                                                                                                                                       |

## Specific Message Contents

## RADIO-BEARER RECONFIGURATION (Step 1)

Use the same message sub-type titled "Packet to CELL\_DCH from CELL\_FACH in PS" in Annex A.

## CELL UPDATE (Step 5)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in Annex A with the following exceptions:

| Information Element                                        | Value/remark                                                                         |
|------------------------------------------------------------|--------------------------------------------------------------------------------------|
| U-RNTI<br>--SRNC Identity<br>--S-RNTI<br>Cell Update Cause | Assigned previously in cell 1<br>Assigned previously in cell 1<br>"cell reselection" |

#### CELL UPDATE CONFIRM (Step 6)

The contents of CELL UPDATE CONFIRM message is identical as "CELL UPDATE CONFIRM message" as found in Annex A.

#### RADIO BEARER RECONFIGURATION FAILURE (Step 8)

The contents of RADIO BEARER RECONFIGURATION FAILURE message in this test case is the same as the RADIO BEARER RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark               |
|---------------------|----------------------------|
| Failure cause       | "physical channel failure" |

#### 8.2.2.13.5 Test requirement

After step 4 the UE shall transmit a CELL UPDATE message on the CCCH with IE "Cell update cause" set to "cell reselection".

After step 7 the UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting the IE "failure cause" to "physical channel failure".

#### 8.2.2.14 Radio Bearer Reconfigure from CELL\_FACH to CELL\_DCH: Failure (Incompatible simultaneous reconfiguration)

##### 8.2.2.14.1 Definition

##### 8.2.2.14.2 Conformance requirement

If the UE receives a RADIO BEARER RECONFIGURATION message during a reconfiguring procedure due to a radio bearer message other than RADIO BEARER RECONFIGURATION message, it shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC.

#### Reference

3GPP TS 25.331 clause 8.2.2, clause 8.6.3.11.

##### 8.2.2.14.3 Test purpose

To confirm that if the UE receives a RADIO BEARER RECONFIGURATION message during a reconfiguring procedure due to a radio bearer message other than RADIO BEARER RECONFIGURATION, it shall keep its configuration as if the RADIO BEARER RECONFIGURATION message had not been received and complete the reconfiguration procedure according to the previously received message.

##### 8.2.2.14.4 Method of test

#### Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

## Test Procedure

The UE is in CELL\_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE. The SS transmits a RADIO BEARER RECONFIGURATION message before the "activation time" indicated in the PHYSICAL CHANNEL RECONFIGURATION message expires. When the UE receives the RADIO BEARER RECONFIGURATION message, the UE shall keep the configuration as if it had not received the RADIO BEARER RECONFIGURATION message and shall transmit a RADIO RECONFIGURATION SETUP FAILURE message on the DCCH using AM RLC with IE "failure cause" set to "incompatible simultaneous reconfiguration". After the SS acknowledges the RADIO BEARER RECONFIGURATION FAILURE message, the UE reconfigures the new physical channel parameters and transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on DCCH using AM RLC.

## Expected sequence

| Step | Direction |    | Message                                   | Comment                                                                                         |
|------|-----------|----|-------------------------------------------|-------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                           |                                                                                                 |
| 1    |           | ←  | PHYSICAL CHANNEL RECONFIGURATION          |                                                                                                 |
| 2    |           | ←  | RADIO BEARER RECONFIGURATION              | Sent before the elapse of the "Activation Time" indicated in the previous message.              |
| 3    |           | →  | RADIO BEARER RECONFIGURATION FAILURE      | The UE does not change its configuration according to the RADIO BEARER RECONFIGURATION message. |
| 4    |           | →  | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | This message is on DCCH using AM RLC                                                            |

## Specific Message Contents

### PHYSICAL CHANNEL RECONFIGURATION (Step 1) (FDD)

For PHYSICAL CHANNEL RECONFIGURATION in step 1, use the message sub-type indicated as "Packet to CELL\_DCH from CELL\_FACH in PS" found in Annex A with the following exceptions:

| Information Element      | Value/remark                        |
|--------------------------|-------------------------------------|
| Activation Time          | Current CFN-[current CFN mod 8 + 8] |
| Uplink DPCH Info         |                                     |
| → Scrambling code number | 1                                   |

### PHYSICAL CHANNEL RECONFIGURATION (Step 1) (TDD)

For PHYSICAL CHANNEL RECONFIGURATION in step 1, use the message sub-type indicated as "Packet to CELL\_DCH from CELL\_FACH in PS" found in Annex A with the following exceptions:

| Information Element             | Value/remark                        |
|---------------------------------|-------------------------------------|
| Activation Time                 | Current CFN-[current CFN mod 8 + 8] |
| Uplink DPCH timeslots and codes |                                     |
| → First timeslot code list      | Assigned by SS                      |

### RADIO BEARER RECONFIGURATION (Step 2) (FDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL\_DCH from CELL\_FACH in PS" found in Annex A with the following exceptions:

| Information Element      | Value/remark |
|--------------------------|--------------|
| Activation Time          | Not Present  |
| Uplink DPCH Info         |              |
| → Scrambling code number | 2            |

### RADIO BEARER RECONFIGURATION (Step 2) (TDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL\_DCH from CELL\_FACH in PS" found in Annex A with the following exceptions:

| Information Element                                                               | Value/remark                                         |
|-----------------------------------------------------------------------------------|------------------------------------------------------|
| Activation Time<br>Uplink DPCH timeslots and codes<br>—— First timeslot code list | A different code combination to that used in step 1. |

### RADIO BEARER RECONFIGURATION FAILURE

The contents of RADIO BEARER RECONFIGURATION FAILURE message in this test case is the same as the RADIO BEARER RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark                              |
|---------------------|-------------------------------------------|
| Failure cause       | Incompatible simultaneous reconfiguration |

#### 8.2.2.14.5 ——— Test requirement

After step 2 the UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC with IE "failure cause" set to "Incompatible simultaneous reconfiguration".

After step 3 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

#### 8.2.2.15 ——— Radio Bearer Reconfiguration from CELL\_FACH to CELL\_DCH: Failure (Invalid message reception and Invalid configuration)

##### 8.2.2.15.1 ——— Definition

##### 8.2.2.15.2 ——— Conformance requirement

The UE shall keep its old configuration when the UE receives an invalid RADIO BEARER RECONFIGURATION message, which does not include any IEs except IE "Message Type". Then it shall transmit a RADIO BEARER RECONFIGURATION FAILURE message setting "protocol error" in IE "failure cause" and also setting "ASN.1 violation error or encoding error" in IE "Protocol error cause". The UE shall keep its current configuration upon reception of a RADIO BEARER RECONFIGURATION message, which includes some IEs set to give an invalid configuration, and then the UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE including IE "failure cause" set to "invalid configuration".

#### Reference

3GPP TS 25.331 clause 8.2.2.

##### 8.2.2.15.3 ——— Test purpose

To confirm that the UE transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC if it receives an invalid RADIO BEARER RECONFIGURATION message which does not include any IEs except IE "Message Type".

To confirm that the UE transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC if it receives a RADIO BEARER RECONFIGURATION message including some IEs set to give an invalid configuration.

## 8.2.2.15.4 Method of test

## Initial Condition

System Simulator: 1 cell.

UE: PS-DCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

## Test Procedure

The UE is in CELL\_FACH state. The SS transmits an invalid RADIO BEARER RECONFIGURATION message to the UE which does not include all IEs except IE "Message Type". The UE shall keep the old configuration and transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC indicating "protocol error" in IE "failure cause" and also set "ASN.1 violation error or encoding error" in IE "Protocol error cause". The UE keeps current configuration when SS transmits RADIO BEARER RECONFIGURATION message including some IEs set to give an invalid configuration. The UE transmits a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting the value "invalid configuration" to IE "failure cause".

## Expected sequence

| Step | Direction |    | Message                              | Comment                                       |
|------|-----------|----|--------------------------------------|-----------------------------------------------|
|      | UE        | SS |                                      |                                               |
| 1    |           | ←  | RADIO BEARER RECONFIGURATION         | See specific message content.                 |
| 2    |           | →  | RADIO BEARER RECONFIGURATION FAILURE | The UE does not change the configuration.     |
| 3    |           | ←  | RADIO BEARER RECONFIGURATION         | This message includes IE set to invalid value |
| 4    |           | →  | RADIO BEARER RECONFIGURATION FAILURE | The UE does not change the configuration      |

## Specific Message Contents

## RADIO BEARER RECONFIGURATION (Step 1)

| Information Element | Value/remark |
|---------------------|--------------|
| All IEs             | Not Present  |

## RADIO BEARER RECONFIGURATION FAILURE (Step 2)

The contents of RADIO BEARER RECONFIGURATION FAILURE message in this test case is the same as the RADIO BEARER RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element          | Value/remark                            |
|------------------------------|-----------------------------------------|
| Failure cause                |                                         |
| → Failure cause              | Protocol error                          |
| → Protocol error information |                                         |
| → Protocol error cause       | ASN.1 violation error or encoding error |

## RADIO BEARER RECONFIGURATION (Step 3) (FDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL\_DCH from CELL\_FACH in PS" found in Annex A with the following exceptions:

| Information Element         | Value/remark |
|-----------------------------|--------------|
| → Default DPCH Offset Value | 512          |
| → DPCH frame offset         | 1024         |

### RADIO BEARER RECONFIGURATION (Step 3) (TDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Speech in CS" or "Non speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" found in Annex A with following exceptions:

| Information Element   | Value/remark |
|-----------------------|--------------|
| <del>PRACH TFCS</del> | Present      |

### RADIO BEARER RECONFIGURATION FAILURE (Step 4)

The contents of RADIO BEARER RECONFIGURATION FAILURE message in this test case is the same as the RADIO BEARER RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark          |
|---------------------|-----------------------|
| Failure-cause       | Invalid configuration |

#### 8.2.2.15.5 ~~Test requirement~~

After step 1 the UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC, which includes the cause "protocol error" in IE "failure-cause" and "ASN.1 violation error or encoding error" in IE "Protocol error-cause".

After step 3 the UE shall transmit a RADIO BEARER RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting the value "invalid configuration" to IE "failure-cause".

#### 8.2.2.16 ~~Void~~

#### 8.2.2.17 ~~Radio Bearer Reconfiguration from CELL\_FACH to CELL\_FACH: Success~~

##### 8.2.2.17.1 ~~Definition~~

##### 8.2.2.17.2 ~~Conformance requirement~~

The UE shall correctly reconfigure radio bearers and transit from CELL\_FACH in the current cell to CELL\_FACH in another cell according to a RADIO BEARER RECONFIGURATION message and responds with a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

#### Reference

3GPP TS 25.331 clause 8.2.2.

##### 8.2.2.17.3 ~~Test purpose~~

To confirm that the UE establishes radio bearers according to a RADIO BEARER RECONFIGURATION message.

##### 8.2.2.17.4 ~~Method of test~~

#### Initial Condition

System Simulator: 2 cells — Cell 1 and 2 are active.

UE: PS-DCCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108 in cell 1.

## Test Procedure

Table 8.2.2.17

| Parameter              | Unit         | Cell 1 |     | Cell 2 |     |
|------------------------|--------------|--------|-----|--------|-----|
|                        |              | T0     | T1  | T0     | T1  |
| UTRA—RF Channel Number |              | Ch. 1  |     | Ch. 1  |     |
| CPICH Ec (FDD)         | dBm/3.84 MHz | -60    | -75 | -75    | -60 |
| P-CCPCH (TDD)          | dBm          | -60    | -75 | -75    | -60 |

Table 8.2.2.17 illustrates the downlink power to be applied for the 2-cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 2.

The UE is in CELL\_FACH state in cell 1. The SS transmits a RADIO BEARER RECONFIGURATION message, which invoke a transition from CELL\_FACH in the current cell to CELL\_FACH in cell 2, to the UE. The SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.17. The UE moves to cell 2 and configures the common physical channel and transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC.

## Expected sequence

| Step | Direction |    | Message                               | Comment                                                                                                             |
|------|-----------|----|---------------------------------------|---------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                       |                                                                                                                     |
| 1    |           | ←  | RADIO BEARER RECONFIGURATION          |                                                                                                                     |
| 2    |           |    |                                       | The SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.2.2.17. |
| 3    |           | →  | RADIO BEARER RECONFIGURATION COMPLETE |                                                                                                                     |

## Specific Message Contents

## RADIO BEARER RECONFIGURATION (Step 1) (FDD)

Use the same message sub-type titled "Packet to CELL\_FACH from CELL\_FACH in PS" in Annex A with the following exceptions.

| Information Element                                                                                | Value/remark |
|----------------------------------------------------------------------------------------------------|--------------|
| Downlink information for each radio links<br>——— Primary CPICH info<br>——— Primary scrambling code | 150          |

## RADIO BEARER RECONFIGURATION (Step 1) (TDD)

The contents of RADIO BEARER SETUP message in this test case is identical as "Packet to CELL\_FACH from CELL\_DCH in PS" as found in Annex A with the following exceptions:

| Information Element                                                                           | Value/remark |
|-----------------------------------------------------------------------------------------------|--------------|
| Downlink information for each radio links<br>——— Primary CCPCH info<br>——— Cell parameters ID | 4            |

**8.2.2.17.5** ——— **Test requirement**

After step 2 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC in cell 2.

**8.2.2.18** ——— **Radio Bearer Reconfiguration from CELL\_FACH to CELL\_FACH: Success (Cell re-selection)****8.2.2.18.1** ——— **Definition****8.2.2.18.2** ——— **Conformance requirement**

The UE shall initiate the cell reselection procedure when the UE performs cell reselection during radio bearer reconfiguration procedure. After the UE completes cell update procedure, the UE shall continue to perform a radio bearer reconfiguration procedure and correctly reconfigure the radio bearer.

**Reference**

3GPP TS 25.331 clause 8.2.2.

**8.2.2.18.3** ——— **Test purpose**

To confirm that the UE transmits RADIO BEARER RECONFIGURATION COMPLETE message in cell 2 after it completes a cell update procedure instigated by a RADIO BEARER RECONFIGURATION message.

**8.2.2.18.4** ——— **Method of test****Initial Condition**

System Simulator: 2 cells – Cell 1 and 2 are active.

UE: PS-DCCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

**Test Procedure****Table 8.2.2.18**

| Parameter              | Unit         | Cell 1 |     | Cell 2 |     |
|------------------------|--------------|--------|-----|--------|-----|
|                        |              | T0     | T1  | T0     | T1  |
| UTRA RF Channel Number |              | Ch. 1  |     | Ch. 1  |     |
| CPICH Ec (FDD)         | dBm/3.84 MHz | -60    | -75 | -75    | -60 |
| P-CCPCH (TDD)          | dBm          | -60    | -75 | -75    | -60 |

Table 8.2.2.18 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 2.

The UE is in CELL\_FACH state in cell 1. On transmitting a RADIO BEARER RECONFIGURATION message to the UE, the SS configures its downlink transmission power settings according to columns "T1" in table 8.2.2.18. The UE transmits a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "cell reselection". The SS shall transmit a CELL UPDATE CONFIRM message on downlink CCCH after receiving CELL UPDATE message. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

## Expected sequence

| Step | Direction |    | Message                               | Comment                                                                                                            |
|------|-----------|----|---------------------------------------|--------------------------------------------------------------------------------------------------------------------|

| 1    | ←         |    | RADIO BEARER RECONFIGURATION          |                                                                                                                    |
| 2    |           |    |                                       | The SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.2.1.9. |
| 3    |           |    | Void                                  |                                                                                                                    |
| 4    | →         |    | CELL UPDATE                           | The value "cell reselection" shall be set in IE "cell update cause".                                               |
| 5    | ←         |    | CELL UPDATE CONFIRM                   |                                                                                                                    |
| 6    |           |    | Void                                  |                                                                                                                    |
| 7    | →         |    | RADIO BEARER RECONFIGURATION COMPLETE |                                                                                                                    |

## Specific Message Contents

## RADIO BEARER RECONFIGURATION (Step 1) (FDD)

Use the same message sub-type titled "Packet to CELL\_FACH from CELL\_FACH in PS" in Annex A with the following exceptions:

| Information Element                                                                                              | Value/remark |
|------------------------------------------------------------------------------------------------------------------|--------------|
| Downlink information for each radio links<br><del>Primary CPICH info</del><br><del>Primary scrambling code</del> | Not Present  |

## RADIO BEARER RECONFIGURATION (Step 1) (TDD)

Use the same message sub-type titled "Packet to CELL\_FACH from CELL\_FACH in PS" in Annex A with the following exceptions:

| Information Element                                                                                         | Value/remark |
|-------------------------------------------------------------------------------------------------------------|--------------|
| Downlink information for each radio links<br><del>Primary CCPCH info</del><br><del>Cell parameters ID</del> | Not present  |

## CELL UPDATE (Step 4)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in Annex A with the following exceptions:

| Information Element | Value/remark       |
|---------------------|--------------------|
| Cell Update Cause   | "cell reselection" |

## CELL UPDATE CONFIRM (Step 5)

The contents of CELL UPDATE CONFIRM message is same as "CELL UPDATE CONFIRM message" as found in Annex A.

## 8.2.18.5 Test requirement

After step 2 the UE shall transmit a CELL UPDATE message on the CCCH with IE "cell update cause" set to "cell reselection".

After step 6 UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC

### ~~8.2.2.19 Radio Bearer Reconfiguration from CELL\_DCH to CELL\_DCH: Success (Subsequently received)~~

#### ~~8.2.2.19.1 Definition~~

#### ~~8.2.2.19.2 Conformance requirement~~

~~If the UE receives a RADIO BEARER RECONFIGURATION message before the UE configures the radio bearers according to the previous RADIO BEARER RECONFIGURATION message, the UE shall ignore the new RADIO BEARER RECONFIGURATION message and configure according to the previous RADIO BEARER RECONFIGURATION message. ## RADIO BEARER RECONFIGURATION (Step 1) (TDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Speech in CS" or "Non speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A with the following exceptions:

| Information Element                                              | Value/remark                                                                   |
|------------------------------------------------------------------|--------------------------------------------------------------------------------|
| Activation Time                                                  | $[256 + \text{Current CFN} - [\text{current CFN mod } 8 + 8]] \text{MOD } 256$ |
| – Uplink DPCCH timeslots and codes<br>– First timeslot code list | Assigned by SS                                                                 |

## RADIO BEARER RECONFIGURATION (Step 2) (FDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Speech in CS" or "Non speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A with the following exceptions:

| Information Element                                | Value/remark |
|----------------------------------------------------|--------------|
| Activation Time                                    | Not Present  |
| – Uplink DPCCH Info<br>– Secondary scrambling code | 2            |

### RADIO-BEARER RECONFIGURATION (Step 2) (TDD)

The contents of RADIO-BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL\_DCH from CELL\_DCH in PS" found in Annex A with the following exceptions:

| Information Element                                             | Value/remark                                         |
|-----------------------------------------------------------------|------------------------------------------------------|
| Activation Time                                                 | Not Present                                          |
| ~ Uplink DPCH timeslots and codes<br>~ First timeslot code list | A different code combination to that used in step 1. |

#### 8.2.2.19.5 Test requirement

After step 2 the UE shall transmit a RADIO-BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### 8.2.2.20 Radio Bearer Reconfigure from CELL\_FACH to CELL\_DCH: Success (Subsequently received)

#### 8.2.2.20.1 Definition

#### 8.2.2.20.2 Conformance requirement

If the UE receives a RADIO-BEARER RECONFIGURATION message before the UE configures the radio-bearer according to the previous RADIO-BEARER RECONFIGURATION message, the UE shall ignore the new RADIO-BEARER RECONFIGURATION message and configure according to the previous RADIO-BEARER RECONFIGURATION message. Finally, the UE shall transmit a RADIO-BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

#### Reference

3GPP TS 25.331 clause 8.2.2, clause 8.6.3.11.

#### 8.2.2.20.3 Test purpose

To confirm that if the UE receives a new RADIO-BEARER RECONFIGURATION message before the UE configures the radio-bearer according to a previous RADIO-BEARER RECONFIGURATION message, it ignores the new RADIO-BEARER RECONFIGURATION message and configures the radio-bearer according to the previous RADIO-BEARER RECONFIGURATION message received.

#### 8.2.2.20.4 Method of test

#### Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

#### Test Procedure

The UE is in CELL\_FACH state. SS transmits a RADIO-BEARER RECONFIGURATION message to the UE before the UE configures the radio-bearer according to the RADIO-BEARER RECONFIGURATION message prior to this new message. The UE ignores the new RADIO-BEARER RECONFIGURATION message and configures the radio bearers according to the former RADIO-BEARER RECONFIGURATION message. On completion of radio-bearer configuration, the UE shall transmit a RADIO-BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

## Expected sequence

| Step        | Direction |    | Message                                    | Comment                                                                                                                                                                                                                                                            |
|-------------|-----------|----|--------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|             | UE        | SS |                                            |                                                                                                                                                                                                                                                                    |
| 1           | ←         |    | RADIO BEARER RECONFIGURATION               | For FDD, the IE "Secondary scrambling code" is set to "1".<br>For TDD, the code combination is assigned by SS.                                                                                                                                                     |
| 1a<br>(TDD) |           |    | A code combination is assigned for the SS. |                                                                                                                                                                                                                                                                    |
| 2           | ←         |    | RADIO BEARER RECONFIGURATION               | SS sends this message before the expiry of activation time specified in RADIO BEARER RECONFIGURATION message of step 1. For FDD, the IE "Secondary scrambling code" is set to "2". For TDD, the code combination assigned is different to that assigned in step 1. |
| 3           | →         |    | RADIO BEARER RECONFIGURATION COMPLETE      | The UE ignores the RADIO BEARER RECONFIGURATION message in step 2 and confirms configuration according to the RADIO BEARER RECONFIGURATION message in step 1.                                                                                                      |

## Specific Message Contents

## RADIO BEARER RECONFIGURATION (step 1) (FDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL\_DCH from CELL\_FACH in PS" as found in Annex A with the following exceptions:

| Information Element        | Value/remark                                                              |
|----------------------------|---------------------------------------------------------------------------|
| Activation Time            | $[256 + \text{Current CFN} - [\text{current CFN} \bmod 8 + 8]] \bmod 256$ |
| ~Uplink DPCH Info          |                                                                           |
| ~Secondary scrambling code | 1                                                                         |

## RADIO BEARER RECONFIGURATION (Step 1) (TDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Speech in CS" or "Non speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A with the following exceptions:

| Information Element              | Value/remark                                                              |
|----------------------------------|---------------------------------------------------------------------------|
| Activation Time                  | $[256 + \text{Current CFN} - [\text{current CFN} \bmod 8 + 8]] \bmod 256$ |
| ~Uplink DPCH timeslots and codes |                                                                           |
| ~First timeslot code list        | Assigned by SS                                                            |

## RADIO BEARER RECONFIGURATION (Step 2) (FDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL\_DCH from CELL\_FACH in PS" as found in Annex A with the following exceptions:

| Information Element        | Value/remark |
|----------------------------|--------------|
| Activation Time            | Not Present  |
| ~Uplink DPCH Info          |              |
| ~Secondary scrambling code | 2            |

### RADIO-BEARER RECONFIGURATION (Step 2) (TDD)

The contents of RADIO-BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL\_DCH from CELL\_FACH in PS" found in Annex A with the following exceptions:

| Information Element                                             | Value/remark                                         |
|-----------------------------------------------------------------|------------------------------------------------------|
| Activation Time                                                 | Not Present                                          |
| - Uplink DPCH timeslots and codes<br>- First timeslot code list | A different code combination to that used in step 1. |

#### 8.2.2.20.5 Test requirement

After step 2 the UE shall transmit a RADIO-BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### 8.2.2.21 Radio Bearer Reconfiguration from CELL\_DCH to CELL\_PCH: Success

#### 8.2.2.21.1 Definition

#### 8.2.2.21.2 Conformance requirement

The UE shall configure radio bearers so as to transit from CELL\_DCH state to CELL\_PCH state according to the received RADIO-BEARER RECONFIGURATION message.

#### Reference

3GPP TS 25.331 clause 8.2.2.

#### 8.2.2.21.3 Test purpose

To confirm that the UE transmits a RADIO-BEARER RECONFIGURATION COMPLETE message and enters CELL\_PCH state after it receives a RADIO-BEARER RECONFIGURATION, which invoke the UE to transit from CELL\_DCH to CELL\_PCH, from SS.

#### 8.2.2.21.4 Method of test

#### Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108.

#### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a RADIO-BEARER RECONFIGURATION message. The UE transmits a RADIO-BEARER RECONFIGURATION COMPLETE message using AM RLC and enters CELL\_PCH state. The SS transmits a PAGING TYPE 1 message, causing the UE to enter CELL\_FACH state and the UE shall transmit a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "paging response".

## Expected sequence

| Step | Direction |    | Message                               | Comment                                                    |
|------|-----------|----|---------------------------------------|------------------------------------------------------------|
|      | UE        | SS |                                       |                                                            |
| 1    |           | ←  | RADIO BEARER RECONFIGURATION          |                                                            |
| 2    |           | →  | RADIO BEARER RECONFIGURATION COMPLETE |                                                            |
| 3    |           |    |                                       | The UE is in CELL_PCH state.                               |
| 4    |           | ←  | PAGING TYPE 1                         | The SS transmits this message included a matched identity. |
| 5    |           | →  | CELL UPDATE                           | The UE is in CELL_FACH state.                              |

## Specific Message Contents

## RADIO BEARER RECONFIGURATION (Step 1) (FDD)

Use the same message sub-type titled "Packet to CELL\_FACH from CELL\_DCH in PS" in Annex A with following exceptions:

| Information Element                                                                           | Value/remark |
|-----------------------------------------------------------------------------------------------|--------------|
| RRC State Indicator                                                                           | CELL_PCH     |
| Downlink information for each radio link<br>- Primary CPICH info<br>- Primary scrambling code | 100          |

## RADIO BEARER RECONFIGURATION (Step 1) (TDD)

The contents of RADIO BEARER SETUP message in this test case is identical as "Packet to CELL\_FACH from CELL\_DCH in PS" as found in Annex A with the following exceptions:

| Information Element                                                                       | Value/remark |
|-------------------------------------------------------------------------------------------|--------------|
| RRC State Indicator                                                                       | CELL_PCH     |
| Downlink information for each radio links<br>- Primary CCPCH info<br>- Cell parameters ID | 4            |

## PAGING TYPE 1 (Step 4)

Use the same message sub-type titled "TM (Packet in PS)" in default message content of TS 34.108 with following exceptions:

| Information Element                                                                                             | Value/remark                                                                          |
|-----------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|
| Paging record list<br>Paging record<br>- CHOICE Used paging identity<br>- U-RNTI<br>- SRNC Identity<br>- S-RNTI | UTRAN identity<br><br>Previously assigned SRNC identity<br>Previously assigned S-RNTI |

## CELL UPDATE (Step 5)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in Annex A with the following exceptions:

| Information Element | Value/remark      |
|---------------------|-------------------|
| Cell Update Cause   | "paging response" |

#### 8.2.2.21.5 ~~Test requirement~~

~~After step 1 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on uplink DCCH using AM RLC.~~

~~After step 4 the UE shall transmit a CELL UPDATE message on the CCCH with IE "Cell update cause" set to "paging response".~~

#### 8.2.2.22 ~~Radio Bearer Reconfiguration from CELL\_DCH to URA\_PCH: Success~~

##### 8.2.2.22.1 ~~Definition~~

##### 8.2.2.22.2 ~~Conformance requirement~~

~~The UE shall configure radio bearers so as to transit from CELL\_DCH state to URA\_PCH state according to received RADIO BEARER RECONFIGURATION message.~~

#### Reference

3GPP TS 25.331 clause 8.2.2.

##### 8.2.2.22.3 ~~Test purpose~~

~~To confirm that the UE transmits a RADIO BEARER RECONFIGURATION COMPLETE and enters URA\_PCH state after it received a RADIO BEARER RECONFIGURATION message, which invoke the UE to transit from CELL\_DCH to URA\_PCH, from SS.~~

##### 8.2.2.22.4 ~~Method of test~~

#### Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108.

#### Test Procedure

~~The UE is in CELL\_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC and enters into URA\_PCH state. The SS transmits a PAGING TYPE 1 message and the UE shall enter the CELL\_FACH state after receiving this message. UE shall transmit a CELL UPDATE message with IE "Cell update cause" set to "paging response".~~

#### Expected sequence

| Step | Direction |    | Message                               | Comment                                                    |
|------|-----------|----|---------------------------------------|------------------------------------------------------------|
|      | UE        | SS |                                       |                                                            |
| 1    | ←         |    | RADIO BEARER RECONFIGURATION          |                                                            |
| 2    | →         |    | RADIO BEARER RECONFIGURATION COMPLETE |                                                            |
| 3    |           |    |                                       | The UE is in URA_PCH state.                                |
| 4    | ←         |    | PAGING TYPE 1                         | The SS transmits this message included a matched identity. |
| 5    | →         |    | CELL UPDATE                           | The UE is in CELL_FACH state.                              |

## Specific Message Contents

## RADIO BEARER RECONFIGURATION (Step 1)

Use the same message sub-type titled "Packet to CELL\_FACH from CELL\_DCH in PS" in Annex A with following exceptions:

| Information Element                                                                           | Value/remark |
|-----------------------------------------------------------------------------------------------|--------------|
| RRC State Indicator                                                                           | URA_PCH      |
| Downlink information for each radio link<br>— Primary CPICH info<br>— Primary scrambling code | 100          |

## RADIO BEARER RECONFIGURATION (Step 1) (TDD)

The contents of RADIO BEARER SETUP message in this test case is identical as "Packet to CELL\_FACH from CELL\_DCH in PS" as found in Annex A with the following exceptions:

| Information Element                                                                       | Value/remark |
|-------------------------------------------------------------------------------------------|--------------|
| Downlink information for each radio links<br>— Primary CCPCH info<br>— Cell parameters ID | 4            |

## PAGING TYPE 1 (Step 4)

Use the same message sub-type titled "TM (Packet in PS)" in default message content of TS 34.108 with following exceptions:

| Information Element                                                                                             | Value/remark                                                                          |
|-----------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|
| Paging record list<br>Paging record<br>— CHOICE Used paging identity<br>— U-RNTI<br>— SRNC Identity<br>— S-RNTI | UTRAN identity<br><br>Previously assigned SRNC identity<br>Previously assigned S-RNTI |

## CELL UPDATE (Step 5)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in Annex A with the following exceptions:

| Information Element | Value/remark      |
|---------------------|-------------------|
| Cell Update Cause   | "paging response" |

## 8.2.2.22.5 ——— Test requirement

After step 1 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on uplink DCCH using AM RLC.

After step 4 the UE shall transmit a CELL UPDATE message on the CCCH with IE "Cell update cause" set to "paging response".

~~8.2.2.23 Radio Bearer Reconfiguration from CELL\_FACH to CELL\_PCH: Success~~

~~8.2.2.23.1 Definition~~

~~8.2.2.23.2 Conformance requirement~~

~~The UE shall configure radio bearers so as to transit from CELL\_FACH state to CELL\_PCH state according to the received RADIO BEARER RECONFIGURATION message and responds with a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC.~~

~~Reference~~

~~3GPP TS 25.331 clause 8.2.2.~~

~~8.2.2.23.3 Test purpose~~

~~To confirm that the UE transmits RADIO BEARER RECONFIGURATION COMPLETE message and enters CELL\_PCH state after it received a RADIO BEARER RECONFIGURATION message, which invoke the UE to transit from CELL\_FACH to CELL\_PCH.~~

~~8.2.2.23.4 Method of test~~

~~Initial Condition~~

~~System Simulator: 1 cell.~~

~~UE: PS-DCCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.~~

~~Test Procedure~~

~~The UE is in CELL\_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC and enters CELL\_PCH state. The SS transmits a PAGING TYPE 1 message, causing the UE to enter CELL\_FACH state and the UE shall transmit a CELL UPDATE message on uplink CCCH with IE "Cell update-cause" set to "paging response".~~

~~Expected sequence~~

| Step | Direction |    | Message                               | Comment                                                    |
|------|-----------|----|---------------------------------------|------------------------------------------------------------|
|      | UE        | SS |                                       |                                                            |

| 2    |           | →  | RADIO BEARER RECONFIGURATION COMPLETE |                                                            |
| 3    |           |    |                                       | The UE is in CELL_PCH state.                               |
| 4    |           | ←  | PAGING TYPE 1                         | The SS transmits this message included a matched identity. |
| 5    |           | →  | CELL UPDATE                           | The UE is in CELL_FACH state.                              |

~~Specific Message Contents~~

~~RADIO BEARER RECONFIGURATION (Step 1) (FDD)~~

~~Use the same message sub-type titled "Packet to CELL\_FACH from CELL\_FACH in PS" in Annex A with following exceptions:~~

| Information Element                                                                           | Value/remark |
|-----------------------------------------------------------------------------------------------|--------------|
| RRC-State Indicator                                                                           | CELL_PCH     |
| Downlink information for each radio link<br>— Primary CPICH info<br>— Primary scrambling code | 100          |

### RADIO BEARER RECONFIGURATION (Step 1) (TDD)

The contents of RADIO BEARER SETUP message in this test case is identical as "Packet to CELL\_FACH from CELL\_DCH in PS" as found in Annex A with the following exceptions:

| Information Element                                                                         | Value/remark |
|---------------------------------------------------------------------------------------------|--------------|
| Downlink information for each radio links<br>—— Primary CCPCH info<br>—— Cell parameters ID | 4            |

### PAGING TYPE 1 (Step 4)

Use the same message sub-type titled "TM (Packet in PS)" in default message content of TS 34.108 with following exceptions:

| Information Element                                                                                                 | Value/remark                                                                          |
|---------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|
| Paging record list<br>Paging record<br>—— CHOICE Used-paging-identity<br>—— U-RNTI<br>—— SRNC-Identity<br>—— S-RNTI | UTRAN-identity<br><br>Previously-assigned-SRNC-identity<br>Previously-assigned-S-RNTI |

### CELL UPDATE (Step 5)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in Annex A with the following exceptions:

| Information Element | Value/remark      |
|---------------------|-------------------|
| Cell Update Cause   | "paging response" |

#### 8.2.2.23.5 — Test requirement

After step 1 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on uplink DCCH using AM RLC.

After step 4 the UE shall transmit a CELL UPDATE message on the CCCH with IE "Cell update cause" set to "paging response".

#### 8.2.2.24 — Radio Bearer Reconfiguration from CELL\_FACH to URA\_PCH: Success

##### 8.2.2.24.1 — Definition

##### 8.2.2.24.2 — Conformance requirement

The UE shall configure radio bearers so as to transit from CELL\_FACH state to URA\_PCH state according to the received RADIO BEARER RECONFIGURATION message and responds with a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### Reference

3GPP TS 25.331 clause 8.2.2.

### 8.2.2.24.3 ~~Test purpose~~

To confirm that the UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message and enters URA\_PCH state after it receives a RADIO BEARER RECONFIGURATION message, which invoke the UE to transit from CELL\_FACH to URA\_PCH.

### 8.2.2.24.4 ~~Method of test~~

#### Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

#### Test Procedure

The UE is in CELL\_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message. The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC and enters URA\_PCH state. The SS transmits a PAGING TYPE 1 message, causing the UE to enter CELL\_FACH state and the UE shall transmit a CELL UPDATE message on uplink CCCH with IE "Cell update-cause" set to "paging response".

#### Expected sequence

| Step | Direction |    | Message                               | Comment                                                    |
|------|-----------|----|---------------------------------------|------------------------------------------------------------|
|      | UE        | SS |                                       |                                                            |
| 1    |           | ←  | RADIO BEARER RECONFIGURATION          |                                                            |
| 2    |           | →  | RADIO BEARER RECONFIGURATION COMPLETE |                                                            |
| 3    |           |    |                                       | The UE is in URA_PCH state.                                |
| 4    |           | ←  | PAGING TYPE 1                         | The SS transmits this message included a matched identity. |
| 5    |           | →  | CELL UPDATE                           | The UE is in CELL_FACH state.                              |

#### Specific Message Contents

##### RADIO BEARER RECONFIGURATION (Step 1) (FDD)

Use the same message sub-type titled "Packet to CELL\_FACH from CELL\_FACH in PS" in Annex A with following exceptions:

| Information Element                                                                           | Value/remark |
|-----------------------------------------------------------------------------------------------|--------------|
| RRC State Indicator                                                                           | URA_PCH      |
| Downlink information for each radio link<br>- Primary CPICH info<br>- Primary scrambling code | 100          |

##### RADIO BEARER RECONFIGURATION (Step 1) (TDD)

The contents of RADIO BEARER SETUP message in this test case is identical as "Packet to CELL\_FACH from CELL\_DCH in PS" as found in Annex A with the following exceptions:

| Information Element                                                                       | Value/remark |
|-------------------------------------------------------------------------------------------|--------------|
| Downlink information for each radio links<br>- Primary CCPCH info<br>- Cell parameters ID | 4            |

**PAGING TYPE 1 (Step 4)**

Use the same message sub-type titled "TM (Packet in PS)" in default message content of TS 34.108 with following exceptions:

| Information Element            | Value/remark                      |
|--------------------------------|-----------------------------------|
| Paging record list             |                                   |
| Paging record                  |                                   |
| —— CHOICE Used paging identity | UTRAN identity                    |
| —— U-RNTI                      |                                   |
| —— SRNC Identity               | Previously assigned SRNC identity |
| —— S-RNTI                      | Previously assigned S-RNTI        |

**CELL UPDATE (Step 5)**

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in Annex A with the following exceptions:

| Information Element | Value/remark      |
|---------------------|-------------------|
| Cell Update Cause   | "paging response" |

**8.2.2.24.5 ——— Test requirement**

After step 1 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on uplink DCCH using AM RLC.

After step 4 the UE shall transmit a CELL UPDATE message on the CCCH with IE "Cell update cause" set to "paging response".

**8.2.2.25 ——— Radio Bearer Reconfiguration for transition from CELL\_FACH to CELL\_DCH including modification of previously signalled CELL\_DCH configuration****8.2.2.25.1 ——— Definition****8.2.2.25.2 ——— Conformance requirement**

Upon receiving a RADIO BEARER RECONFIGURATION message including a request to move to CELL\_DCH, the UE shall apply a previously signalled configuration for CELL\_DCH, modify the parameters for which reconfiguration was requested in the RADIO BEARER RECONFIGURATION message and transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

**Reference**

3GPP TS 25.331 clause 8.2.2.

**8.2.2.25.3 ——— Test purpose**

To confirm that the UE applies a previously signalled configuration for CELL\_DCH and in addition modifies the parameters for which reconfiguration is requested in the RADIO BEARER RECONFIGURATION message that is used to initiate transition from CELL\_FACH to CELL\_DCH.

**8.2.2.25.4 ——— Method of test****Initial Condition**

System Simulator: 1 cell.

UE: PS-DCCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

### Test Procedure

- a) The UE is in CELL\_FACH state.
- b) The SS transmits a RADIO BEARER RECONFIGURATION message including dedicated physical channel information to request the UE to transit from CELL\_FACH to CELL\_DCH. Upon receiving this message, the UE establishes the radio bearer and transport channel configuration for CELL\_DCH included in a previous RADIO BEARER SETUP message and modifies the parameters for which reconfiguration was requested in the RADIO BEARER RECONFIGURATION message.
- c) The UE transmits a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### Expected sequence

| Step | Direction |    | Message                               | Comment                                             |
|------|-----------|----|---------------------------------------|-----------------------------------------------------|
|      | UE        | SS |                                       |                                                     |
| 1    |           | ←  | RADIO BEARER RECONFIGURATION          | Initiates the transition from CELL_FACH to CELL_DCH |
| 2    |           | →  | RADIO BEARER RECONFIGURATION COMPLETE |                                                     |

### Specific Message Contents

#### RADIO BEARER RECONFIGURATION (Step 1)

The contents of RADIO BEARER RECONFIGURATION message is identical as "RADIO BEARER RECONFIGURATION message" as found in Annex A with the following exceptions:

| Information Element                | Value/remark                       |
|------------------------------------|------------------------------------|
| RB information to reconfigure list |                                    |

| — RLC info                         | Same as for RB identity-2          |
| — RB mapping info                  | Not Present                        |
| — RB stop/continue                 | Not Present                        |

#### RADIO BEARER RECONFIGURATION COMPLETE (Step 2)

The contents of RADIO BEARER RECONFIGURATION COMPLETE message is identical as "RADIO BEARER RECONFIGURATION COMPLETE message" as found in Annex A.

#### 8.2.2.25.5 — Test requirement

After step 2 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM-RLC.

## 8.2.3 Radio Bearer Release

### 8.2.3.1 Radio Bearer Release for transition from CELL\_DCH to CELL\_DCH: Success

#### 8.2.3.1.1 Definition

#### 8.2.3.1.2 Conformance requirement

The UE shall correctly release a radio bearer according to a RADIO BEARER RELEASE message and responds with a RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC.

#### Reference

3GPP TS 25.331 clause 8.2.3.

#### 8.2.3.1.3 Test purpose

To confirm that the UE releases the existing radio bearer according to a RADIO BEARER RELEASE message.

#### 8.2.3.1.4 Method of test

#### Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH\_DCH (state 6-9) or PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

#### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a RADIO BEARER RELEASE message to the UE. The UE releases the radio access bearer and transmits a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC.

#### Expected sequence

| Step | Direction |    | Message                       | Comment                   |
|------|-----------|----|-------------------------------|---------------------------|
|      | UE        | SS |                               |                           |
| 1    |           | ←  | RADIO BEARER RELEASE          |                           |
| 2    |           | →  | RADIO BEARER RELEASE COMPLETE | Release the radio bearer. |

#### Specific Message Contents

#### RADIO BEARER RELEASE

None.

#### 8.2.3.1.5 Test requirement

After step 2 the UE shall transmit a RADIO BEARER RELEASE COMPLETE message.

### 8.2.3.2 ~~Radio Bearer Release for transition from CELL\_DCH to CELL\_DCH: Failure (Unsupported configuration)~~

#### 8.2.3.2.1 ~~Definition~~

#### 8.2.3.2.2 ~~Conformance requirement~~

The UE shall keep its old configuration when the UE receives a RADIO BEARER RELEASE message which includes unsupported configuration parameters and transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, setting value "configuration unsupported" in IE "failure cause".

#### Reference

3GPP TS 25.331 clause 8.2.3.

#### 8.2.3.2.3 ~~Test purpose~~

To confirm that the UE keeps its current configuration and transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, if the received RADIO BEARER RELEASE message indicates an unsupported configuration parameters for the UE.

#### 8.2.3.2.4 ~~Method of test~~

#### Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH\_DCH (state 6-9) or PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

#### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a RADIO BEARER RELEASE message to the UE specifying a frequency which is not supported by the UE. The UE transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC indicating "configuration unsupported" in IE "failure cause".

#### Expected sequence

| Step | Direction |    | Message                      | Comment                                       |
|------|-----------|----|------------------------------|-----------------------------------------------|
|      | UE        | SS |                              |                                               |
| 1    |           | ←  | RADIO BEARER RELEASE         | Including unsupported configuration by the UE |
| 2    |           | →  | RADIO BEARER RELEASE FAILURE | The UE does not change the radio bearer.      |

#### Specific Message Contents

##### RADIO BEARER RELEASE (FDD)

The contents of RADIO BEARER RELEASE message in this test case is identical as "Speech in CS" or "Non speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A with the following exceptions:

| Information Element     | Value/remark |
|-------------------------|--------------|
| Frequency info          |              |
| —— UARFCN uplink (Nu)   | 0            |
| —— UARFCN downlink (Nd) | 950          |

### RADIO BEARER RELEASE (TDD)

The contents of RADIO BEARER RELEASE message in this test case is identical as "Speech in CS" found in Annex A with the following exceptions:

| Information Element              | Value/remark |
|----------------------------------|--------------|
| Frequency info<br>—— UARFCN (Nt) | 0            |

### RADIO BEARER RELEASE FAILURE

The contents of RADIO BEARER RELEASE FAILURE message in this test case is the same as the RADIO BEARER RELEASE FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark              |
|---------------------|---------------------------|
| Failure cause       | Configuration unsupported |

#### 8.2.3.2.5 ——— Test requirement

After step 1 the UE shall transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC with the IE "failure cause" set to "configuration unsupported".

#### 8.2.3.3 ——— Radio Bearer Release for transition from CELL\_DCH to CELL\_DCH: Failure (Physical channel failure and reversion to old configuration)

##### 8.2.3.3.1 ——— Definition

##### 8.2.3.3.2 ——— Conformance requirement

The UE shall revert to the old configuration when the UE fails to reconfigure the radio bearers by timer T312 expiry and transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC which is set to "physical channel failure" in IE "failure cause".

### Reference

3GPP TS 25.331 clause 8.2.3.

##### 8.2.3.3.3 ——— Test purpose

To confirm that the UE reverts to the old configuration and transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC if the UE fails to release the radio bearer according to a RADIO BEARER RELEASE message by timer T312 expiry.

##### 8.2.3.3.4 ——— Method of test

### Initial Condition

System Simulator: 1 cell

UE: CS-DCCH+DTCH\_DCH (state 6-9) or PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a RADIO BEARER RELEASE message but it keeps its current dedicated physical channel configuration. This causes the UE to fail to release the radio bearer, and after T312 expires the UE reverts to the old configuration. The UE then transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC which specifies "physical channel failure" in IE "failure cause".

## Expected sequence

| Step | Direction |    | Message                      | Comment                                                                                                        |
|------|-----------|----|------------------------------|----------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                              |                                                                                                                |
| 1    | ←         |    | RADIO BEARER RELEASE         |                                                                                                                |
| 2    |           |    |                              | The SS keeps its current dedicated physical channel configuration.                                             |
| 3    | →         |    | RADIO BEARER RELEASE FAILURE | After T312 expires, the UE finds that it fails to release a radio bearer and reverts to the old configuration. |

## Specific Message Contents

## RADIO BEARER RELEASE

The contents of RADIO BEARER RELEASE message in this test case is identical as "Speech in CS" or "Non speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in annex A.

## RADIO BEARER RELEASE FAILURE

The contents of RADIO BEARER RELEASE FAILURE message in this test case is the same as the RADIO BEARER RELEASE FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark             |
|---------------------|--------------------------|
| Failure cause       | Physical channel failure |

## 8.2.3.3.5 ——— Test requirement

After step 2 the UE shall transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC which includes the value "physical channel failure" in IE "failure cause".

## 8.2.3.4 ——— Radio Bearer Release for transition from CELL\_DCH to CELL\_DCH: Failure (Physical channel failure and reversion failure)

## 8.2.3.4.1 ——— Definition

## 8.2.3.4.2 ——— Conformance requirement

The UE shall perform a cell update procedure when the UE fails to revert to the old configuration after the detection of physical channel failure in the radio bearer release procedure. After the UE completes cell update procedure, the UE transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC which set IE "failure cause" to "physical channel failure".

## Reference

3GPP TS 25.331 clause 8.2.3.

## 8.2.3.4.3 ——— Test purpose

To confirm that the UE transmits a RADIO BEARER RELEASE FAILURE message after it completes a cell update procedure when the UE cannot revert to the old configuration after encountering a physical channel failure during the execution of a radio bearer release procedure.

#### 8.2.3.4.4 Method of test

##### Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH\_DCH (state 6-9) or PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

##### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a RADIO BEARER RELEASE message to the UE but does not configure dedicated physical channel in accordance with the settings in the message and release the previous configuration. As a result, the UE recognizes that it cannot reconfigure the radio bearers and wants to revert to the old configuration, but the UE cannot revert to the old configuration. The UE transmits a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "radio link failure". The SS shall transmit a CELL UPDATE CONFIRM message on downlink CCCH after receiving CELL UPDATE message. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC and subsequently transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, setting IE "failure cause" to "physical channel failure".

##### Expected sequence

| Step | Direction |    | Message                                   | Comment                                                                                                                                                   |
|------|-----------|----|-------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                           |                                                                                                                                                           |
| 1    | ←         |    | RADIO BEARER RELEASE                      |                                                                                                                                                           |
| 2    |           |    |                                           | The SS does not configure the dedicated physical channel in accordance with the RADIO BEARER RELEASE message and shall release the old configuration.     |
| 3    | →         |    | CELL UPDATE                               | This message includes the value "radio link failure" set in IE "Cell update cause".                                                                       |
| 4    | ←         |    | CELL UPDATE CONFIRM                       | This message includes IE "Physical channel information elements".                                                                                         |
| 5    |           |    |                                           | The SS configures the dedicated physical channel according to the IE "Physical channel information elements" included in the CELL UPDATE CONFIRM message. |
| 6    | →         |    | PHYSICAL CHANNEL RECONFIGURATION COMPLETE |                                                                                                                                                           |
| 7    | →         |    | RADIO BEARER RELEASE FAILURE              | The IE "failure cause" shall be set to "physical channel failure"                                                                                         |

##### Specific Message Contents

##### RADIO BEARER RELEASE

The contents of RADIO BEARER RELEASE message in this test case are identical as "Speech in CS" or "Non speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A.

**CELL UPDATE (Step 3)**

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in Annex A with the following exceptions:

| Information Element | Value/remark                                           |
|---------------------|--------------------------------------------------------|
| U-RNTI              | Check to see if set to '0000 0000 0001'                |
| -SRNC Identity      | Check to see if set to '0000 0000 0000 0000 0000 0001' |
| -S-RNTI             | "radio-link failure"                                   |
| Cell Update Cause   |                                                        |

**CELL UPDATE CONFIRM (Step 4) (FDD)**

The contents of CELL UPDATE CONFIRM message is identical as "CELL UPDATE CONFIRM message" as found in Annex A with the following exceptions:

| Information Element                       | Value/remark                                                         |
|-------------------------------------------|----------------------------------------------------------------------|
| U-RNTI                                    | Same as CELL UPDATE message in step 3                                |
| RRC State indicator                       | CELL_DCH                                                             |
| UplinkDPCH Info                           | Same as RADIO BEARER SETUP message used to move to initial condition |
| Downlink information for each radio links | Same as RADIO BEARER SETUP message used to move to initial condition |

**CELL UPDATE CONFIRM (Step 4) (TDD)**

The contents of CELL UPDATE CONFIRM message is identical as "CELL UPDATE CONFIRM message" as found in Annex A with the following exceptions:

| Information Element                       | Value/remark                                                         |
|-------------------------------------------|----------------------------------------------------------------------|
| U-RNTI                                    | Same as CELL UPDATE message in step 3                                |
| RRC State indicator                       | CELL_DCH                                                             |
| UplinkDPCH timeslots and codes            | Same as RADIO BEARER SETUP message used to move to initial condition |
| Downlink information for each radio links | Same as RADIO BEARER SETUP message used to move to initial condition |

**RADIO BEARER RELEASE FAILURE (Step 7)**

The contents of RADIO BEARER RELEASE FAILURE message in this test case is the same as the RADIO BEARER RELEASE FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark               |
|---------------------|----------------------------|
| Failure cause       | "physical channel failure" |

**8.2.3.4.5 Test requirement**

After step 2 the UE shall transmit a CELL UPDATE message on the uplink CCCH with IE "Cell update cause" set to "radio-link failure".

After step 5 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 6 the UE shall transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, setting the IE "failure cause" to "physical channel failure".

### 8.2.3.5 ~~Radio Bearer Release for transition from CELL\_DCH to CELL\_DCH: Failure (Incompatible simultaneous reconfiguration)~~

#### 8.2.3.5.1 ~~Definition~~

#### 8.2.3.5.2 ~~Conformance requirement~~

If the UE receives a RADIO BEARER RELEASE message during a reconfiguring procedure due to a radio bearer message other than RADIO BEARER RELEASE message, it shall transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC.

#### Reference

3GPP TS 25.331 clause 8.2.3, clause 8.6.3.11.

#### 8.2.3.5.3 ~~Test purpose~~

To confirm that if the UE receives a RADIO BEARER RELEASE message during a reconfiguring procedure due to a radio bearer message other than RADIO BEARER RELEASE, it shall keep its configuration as if the RADIO BEARER RELEASE message had not been received and complete the reconfiguration procedure according to the previously received message.

#### 8.2.3.5.4 ~~Method of test~~

#### Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH\_DCH (state 6-9) or PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

#### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. The SS transmits a RADIO BEARER RELEASE message before the "activation time" indicated in the RADIO BEARER RECONFIGURATION message expires. When the UE receives the RADIO BEARER RELEASE message, the UE shall keep the configuration as if it had not received the RADIO BEARER RELEASE message and shall transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC with IE "failure cause" set to "incompatible simultaneous reconfiguration". When the activation time lapses, the UE reconfigures the new physical channel parameters and transmits a RADIO BEARER RECONFIGURATION COMPLETE message on DCCH using AM RLC.

#### Expected sequence

| Step | Direction |    | Message                               | Comment                                                                                        |
|------|-----------|----|---------------------------------------|------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                       |                                                                                                |
| 1    |           | ←  | RADIO BEARER RECONFIGURATION          |                                                                                                |
| 2    |           | ←  | RADIO BEARER RELEASE                  | Message sent before the "Activation time" indicated in the message of step 1 has elapsed.      |
| 3    |           | →  | RADIO BEARER RELEASE FAILURE          | The UE does not change the configuration due to the reception of RADIO BEARER RELEASE message. |
| 4    |           | →  | RADIO BEARER RECONFIGURATION COMPLETE | This message is on DCCH using AM RLC.                                                          |

## Specific Message Contents

## RADIO BEARER RECONFIGURATION (Step 1) (FDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to the message sub-type title as "Speech in CS" or "Non-speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A, with the following exceptions:

| Information Element                                                                                               | Value/remark                         |
|-------------------------------------------------------------------------------------------------------------------|--------------------------------------|
| Activation Time                                                                                                   | Current CFN-[current CFN mod 8 + 8 ] |
| Uplink DPCH info<br>—— Scrambling code number                                                                     | 1                                    |
| Downlink information common for all radio links<br>—— Downlink DPCH info common for all RL<br>—— Timing Indicator | Maintain                             |

## RADIO BEARER RECONFIGURATION (TDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to the message sub-type titled "Packet to CELL\_DCH from CELL\_DCH in PS" in Annex A, with the following exceptions:

| Information Element                                                                                               | Value/remark   |
|-------------------------------------------------------------------------------------------------------------------|----------------|
| Uplink DPCH timeslots and codes<br>—— First timeslot code list                                                    | Assigned by SS |
| Downlink information common for all radio links<br>—— Downlink DPCH info common for all RL<br>—— Timing Indicator | Maintain       |

## RADIO BEARER RELEASE (Step 2) (FDD)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Packet to CELL\_DCH from CELL\_DCH in PS" found in Annex A with the following exceptions:

| Information Element                           | Value/remark                         |
|-----------------------------------------------|--------------------------------------|
| Activation Time Info                          | Current CFN-[current CFN mod 8 + 8 ] |
| Uplink DPCH Info<br>—— Scrambling code number | 2                                    |

## RADIO BEARER RECONFIGURATION (Step 2) (TDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical as "Packet to CELL\_DCH from CELL\_DCH in PS" found in Annex A with the following exceptions:

| Information Element                                             | Value/remark                                         |
|-----------------------------------------------------------------|------------------------------------------------------|
| Activation Time                                                 | Not Present                                          |
| — Uplink DPCH timeslots and codes<br>— First timeslot code list | A different code combination to that used in step 1. |

## RADIO BEARER RELEASE FAILURE

The contents of RADIO BEARER RELEASE FAILURE message in this test case is the same as the RADIO BEARER RELEASE FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark                              |
|---------------------|-------------------------------------------|
| Failure cause       | Incompatible simultaneous reconfiguration |

#### 8.2.3.5.5 ~~Test requirement~~

~~After step 2 the UE shall transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC with IE "failure cause" set to "Incompatible simultaneous reconfiguration".~~

~~After step 3 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.~~

#### 8.2.3.6 ~~Radio Bearer Release for transition from CELL\_DCH to CELL\_DCH: Failure (Invalid message reception and Invalid configuration)~~

##### 8.2.3.6.1 ~~Definition~~

##### 8.2.3.6.2 ~~Conformance requirement~~

~~The UE shall keep its old configuration when the UE receives an invalid RADIO BEARER RELEASE message which does not include any IEs except IE "Message Type". It shall transmit a RADIO BEARER RELEASE FAILURE message which includes value "protocol error" in IE "failure cause" and value "ASN.1 violation or encoding error" in IE "Protocol error cause". The UE shall keep existing configuration upon reception of a RADIO BEARER RELEASE message, which include some IEs set to give an invalid configuration, and then the UE shall transmit a RADIO BEARER RELEASE FAILURE including IE "failure cause" set to "invalid configuration".~~

#### Reference

3GPP TS 25.331 clause 8.2.3.

##### 8.2.3.6.3 ~~Test purpose~~

~~To confirm that the UE transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC if it receives an invalid RADIO BEARER RELEASE message, which does not include any IEs except IE "Message Type".~~

~~To confirm that the UE transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC if it receives a RADIO BEARER RELEASE message including some IEs set to give an invalid configuration.~~

##### 8.2.3.6.4 ~~Method of test~~

#### Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH\_DCH (state 6-9) or PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

#### Test Procedure

The UE is in CELL\_DCH state. The SS transmits an invalid RADIO BEARER RELEASE message to the UE which does not any IEs except IE "Message Type". The UE keeps the old configuration and transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC. This message shall indicate "protocol error" in IE "failure cause" and also "ASN.1 violation or encoding error" in IE "Protocol error cause". SS transmits a RADIO BEARER RELEASE message including some IEs set to give an invalid configuration. The UE keeps current configuration and transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, setting IE "failure cause" to "invalid configuration".

## Expected sequence

| Step | Direction |    | Message                      | Comment                                                        |
|------|-----------|----|------------------------------|----------------------------------------------------------------|
|      | UE        | SS |                              |                                                                |
| 1    |           | ←  | RADIO BEARER RELEASE         | See specific message content.                                  |
| 2    |           | →  | RADIO BEARER RELEASE FAILURE | The UE shall not change the configuration.                     |
| 3    |           | ←  | RADIO BEARER RELEASE         | This message includes IE set to give an invalid configuration  |
| 4    |           |    |                              | The UE does not change the configuration                       |
| 5    |           | →  | RADIO BEARER RELEASE FAILURE | The IE "failure cause" shall be set to "invalid configuration" |

## Specific Message Contents

## RADIO BEARER RELEASE (Step1)

| Information Element | Value/remark |
|---------------------|--------------|
| All IEs             | Not Present  |

## RADIO BEARER RELEASE FAILURE (Step 2)

The contents of RADIO BEARER RELEASE FAILURE message in this test case is the same as the RADIO BEARER RELEASE FAILURE message as found in Annex A, with the following exceptions:

| Information Element            | Value/remark                      |
|--------------------------------|-----------------------------------|
| Failure-cause                  |                                   |
| ——— Failure cause              | Protocol error                    |
| ——— Protocol error information |                                   |
| ——— Protocol error cause       | ASN.1 violation or encoding error |

## RADIO BEARER RELEASE (Step 3) (FDD)

The contents of RADIO BEARER RELEASE message in this test case is identical as "Speech in CS" or "Non speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A with the following exceptions:

| Information Element           | Value/remark |
|-------------------------------|--------------|
| ——— Default DPCH Offset Value | 512          |
| ——— DPCH frame offset         | 1024         |

## RADIO BEARER RELEASE (Step 3) (TDD)

| Information Element | Value/remark |
|---------------------|--------------|
| ——— PRACH TFCS      | Present      |

## RADIO BEARER RELEASE FAILURE (Step 5)

The contents of RADIO BEARER RELEASE FAILURE message in this test case is the same as the RADIO BEARER RELEASE FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark          |
|---------------------|-----------------------|
| Failure-cause       | Invalid configuration |

### 8.2.3.6.5 ~~Test requirement~~

After step 1 the UE shall transmit a ~~RADIO BEARER RELEASE FAILURE~~ message on the DCCH using AM RLC, which is set to "protocol error" in IE "failure cause" and is set to "ASN.1 violation or encoding error" in IE "Protocol error cause".

After step 4 the UE shall transmit a ~~RADIO BEARER RELEASE FAILURE~~ message on the DCCH using AM RLC, setting the value "invalid configuration" to IE "failure cause".

## 8.2.3.7 ~~Radio Bearer Release for transition from CELL\_DCH to CELL\_FACH:~~ Success

### 8.2.3.7.1 ~~Definition~~

### 8.2.3.7.2 ~~Conformance requirement~~

The UE shall correctly release a radio bearer according to a ~~RADIO BEARER RELEASE~~ message and responds with a ~~RADIO BEARER RELEASE COMPLETE~~ message on the DCCH using AM RLC.

### Reference

3GPP TS 25.331 clause 8.2.3.

### 8.2.3.7.3 ~~Test purpose~~

To confirm that the UE release the existing the radio bearer according to a ~~RADIO BEARER RELEASE~~ message.

### 8.2.3.7.4 ~~Method of test~~

### Initial Condition

System Simulator: 1 cell.

UE: PS-DTCH+DCCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108.

### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a ~~RADIO BEARER RELEASE~~ message to the UE. The UE releases the radio access bearer and transmits a ~~RADIO BEARER RELEASE COMPLETE~~ message on the uplink DCCH using AM RLC.

### Expected sequence

| Step | Direction |    | Message                                  | Comment                                                                                                                                                                                                       |
|------|-----------|----|------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                          |                                                                                                                                                                                                               |
| 1    |           | ←  | <del>RADIO BEARER RELEASE</del>          | SS releases the radio bearer in the fashion specified in the message and allocate common channel resources to carry the remaining radio bearers.                                                              |
| 2    |           |    |                                          | The UE selects PRACH and S-CCPCH indicated in SIB5 and SIB6 after entering CELL_FACH state.<br>The UE shall release dedicated channels, and reconfigure the remaining radio bearers using the common channel. |
| 3    |           | →  | <del>RADIO BEARER RELEASE COMPLETE</del> |                                                                                                                                                                                                               |

## Specific Message Contents

### RADIO BEARER RELEASE (Step 1)

Use the same message sub-type titled "Packet to CELL\_FACH from CELL\_DCH in PS" in Annex A with the following exception:

| Information Element | Value/remark         |
|---------------------|----------------------|
| New C-RNTI          | 0000 0000 0000 0001B |

#### 8.2.3.7.5 Test requirement

After step 2 the UE shall transmit a RADIO BEARER RELEASE COMPLETE message.

### 8.2.3.8 Radio Bearer Release for transition from CELL\_DCH to CELL\_FACH: Success (Cell re-selection)

#### 8.2.3.8.1 Definition

#### 8.2.3.8.2 Conformance requirement

The UE shall initiate the cell update procedure when the UE performs cell reselection during a radio bearer release procedure. After the UE completes cell update procedure, the UE shall continue to perform the radio bearer release procedure and correctly release the radio bearer.

#### Reference

3GPP TS 25.331 clause 8.2.3.

#### 8.2.3.8.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RELEASE COMPLETE message after the UE completes a cell update procedure.

#### 8.2.3.8.4 Method of test

#### Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108.

#### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a RADIO BEARER RELEASE message to request the UE to transit from CELL\_DCH to CELL\_FACH. The UE initiates the cell update procedure because the UE cannot detect the specified cell in this message. The UE transmits a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "cell reselection". The SS shall transmit a CELL UPDATE CONFIRM message on downlink CCCH after receiving CELL UPDATE message. The UE transmits a RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC.

## Expected sequence

| Step | Direction |    | Message                       | Comment                                                              |
|------|-----------|----|-------------------------------|----------------------------------------------------------------------|
|      | UE        | SS |                               |                                                                      |
| 1    |           |    | Void                          |                                                                      |
| 2    |           |    | Void                          |                                                                      |
| 3    |           | ←  | RADIO-BEARER-RELEASE          | Assigned the transition from CELL_DCH to CELL_FACH                   |
| 4    |           | →  | CELL-UPDATE                   | The value "cell reselection" shall be set in IE "cell update cause". |
| 5    |           | ←  | CELL-UPDATE-CONFIRM           |                                                                      |
| 6    |           |    | Void                          |                                                                      |
| 7    |           | →  | RADIO-BEARER-RELEASE-COMPLETE |                                                                      |

## Specific Message Contents

## RADIO-BEARER-RELEASE (Step 3) (FDD)

Use the same message sub-type titled "Packet to CELL\_FACH from CELL\_DCH in PS" in Annex A with the following exceptions:

| Information Element                                                                                | Value/remark |
|----------------------------------------------------------------------------------------------------|--------------|
| Downlink information for each radio links<br>——→ Primary CPICH info<br>——→ Primary scrambling code | 150          |

## RADIO-BEARER-RELEASE (Step 3) (TDD)

Use the same message sub-type titled "Packet to CELL\_FACH from CELL\_DCH in PS" in Annex A with the following exceptions:

| Information Element                                                                           | Value/remark |
|-----------------------------------------------------------------------------------------------|--------------|
| Downlink information for each radio links<br>——→ Primary CCPCH info<br>——→ Cell parameters-ID | 4            |

## CELL-UPDATE (Step 4)

The contents of CELL-UPDATE message is identical as "Contents of CELL-UPDATE message" as found in Annex A with the following exceptions:

| Information Element | Value/remark       |
|---------------------|--------------------|
| Cell Update Cause   | "cell reselection" |

## CELL-UPDATE-CONFIRM (Step 5)

The contents of CELL-UPDATE-CONFIRM message is same as "CELL-UPDATE-CONFIRM message" as found in Annex A.

## 8.2.3.8.5 ———→ Test requirement

After step 3 the UE shall transmit a CELL-UPDATE message on the CCCH with IE "Cell update cause" set to "cell reselection".

After step 6 UE shall transmit a RADIO-BEARER-RELEASE-COMPLETE message on the DCCH using AM RLC.

~~8.2.3.9 Radio Bearer Release for transition from CELL\_FACH to CELL\_DCH: Success~~

~~8.2.3.9.1 Definition~~

~~8.2.3.9.2 Conformance requirement~~

~~The UE shall correctly release radio bearers according to a RADIO BEARER RELEASE message and responds with a RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC.~~

~~Reference~~

~~3GPP TS 25.331 clause 8.2.3.~~

~~8.2.3.9.3 Test purpose~~

~~To confirm that an UE, in state CELL\_FACH, releases the radio access bearers using common physical channel. After the release, it shall access the affected radio bearers on the DPCH.~~

~~8.2.3.9.4 Method of test~~

~~Initial Condition~~

~~System Simulator: 1 cell.~~

~~UE: PS-DCCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.~~

~~Test Procedure~~

~~The UE is in CELL\_FACH state. The SS transmits a RADIO BEARER RELEASE message to the UE. In this message, SS commands the UE to release radio access bearers on common physical channel. At the same time, SS allocates DPCH to support the affected radio bearers. The UE shall release the indicated radio access bearers and transmit a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC.~~

~~Expected sequence~~

| Step | Direction |    | Message                       | Comment                                                                       |

~~Specific Message Contents~~

~~RADIO BEARER RELEASE (Step 1)~~

~~Use the same message sub-type titled "Packet to CELL\_DCH from CELL\_FACH in PS" in Annex A.~~

~~8.2.3.9.5 Test requirement~~

~~After step 2 the UE shall transmit a RADIO BEARER RELEASE COMPLETE message using the dedicated physical channel allocated.~~

### 8.2.3.10 Radio Bearer Release for transition from CELL\_FACH to CELL\_DCH: Failure (Unsupported configuration)

#### 8.2.3.10.1 Definition

#### 8.2.3.10.2 Conformance requirement

The UE shall keep its old configuration when it receives a RADIO BEARER RELEASE message which specifies unsupported configuration parameters for the UE. Then the UE shall transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC which, setting value "configuration unsupported" in IE "failure cause".

#### Reference

3GPP TS 25.331 clause 8.2.3.

#### 8.2.3.10.3 Test purpose

To confirm that the UE keeps its configuration and transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC if the received RADIO BEARER RELEASE message requests for configuration unsupported by the UE.

#### 8.2.3.10.4 Method of test

#### Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

#### Test Procedure

The UE is in CELL\_FACH state. The SS transmits a RADIO BEARER RELEASE message to the UE, referring to a frequency which cannot be supported by the UE. The UE shall transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC and set "configuration unsupported" in IE "failure cause".

#### Expected sequence

| Step | Direction |    | Message                      | Comment                                                      |
|------|-----------|----|------------------------------|--------------------------------------------------------------|
|      | UE        | SS |                              |                                                              |
| 1    |           | ←  | RADIO BEARER RELEASE         | The message contains a configuration not supported by the UE |
| 2    |           | →  | RADIO BEARER RELEASE FAILURE | The UE shall not change the radio bearer configuration.      |

#### Specific Message Contents

#### RADIO BEARER RELEASE (FDD)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Packet to CELL\_DCH from CELL\_FACH in PS" found in Annex A with the following exceptions:

| Information Element     | Value/remark |
|-------------------------|--------------|
| Frequency info          |              |
| —— UARFCN uplink (Nu)   | 0            |
| —— UARFCN downlink (Nd) | 950          |

### RADIO-BEARER RELEASE (TDD)

The contents of RADIO-BEARER RELEASE message in this test case is identical to the message sub-type title "Packet to CELL\_DCH from CELL\_FACH in PS" found in Annex A with the following exceptions:

| Information Element              | Value/remark |
|----------------------------------|--------------|
| Frequency info<br>—— UARFCN (Nt) | 0            |

### RADIO-BEARER RELEASE FAILURE

The contents of RADIO-BEARER RELEASE FAILURE message in this test case is the same as the RADIO-BEARER RELEASE FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark              |
|---------------------|---------------------------|
| Failure cause       | Configuration unsupported |

#### 8.2.3.10.5 ——— Test requirement

After step 1 the UE shall transmit a RADIO-BEARER RELEASE FAILURE message on the DCCH using AM RLC, stating the reason "configuration unsupported" in IE "failure cause".

#### 8.2.3.11 ——— Radio Bearer Release for transition from CELL\_FACH to CELL\_DCH: Failure (Physical channel failure and successful reversion to old configuration)

##### 8.2.3.11.1 ——— Definition

##### 8.2.3.11.2 ——— Conformance requirement

The UE shall revert to the old configuration when the UE fails to reconfigure the radio bearers before T312 timer expires and detects the same serving cell only. Then it shall transmit a RADIO-BEARER RELEASE FAILURE message on the DCCH using AM RLC, setting the value "physical channel failure" in IE "failure cause" after it reverts to the old configuration.

### Reference

3GPP TS 25.331 clause 8.2.3.

##### 8.2.3.11.3 ——— Test purpose

To confirm that the UE reverts to the old configuration and transmits a RADIO-BEARER RELEASE FAILURE message on the DCCH using AM RLC if the UE fails to release the radio bearers in accordance with the specified settings in RADIO-BEARER RELEASE message before T312 timer expires.

##### 8.2.3.11.4 ——— Method of test

### Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

## Test Procedure

The UE is in CELL\_FACH state. The SS transmits a RADIO BEARER RELEASE message and keeps its current physical channel configuration. The UE is expected to encounter a failure while releasing the radio bearer. After T312 timer expires, the UE shall revert to the old radio bearer configuration, so the UE transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC which is set to "physical channel failure" in IE "failure cause".

## Expected sequence

| Step | Direction |    | Message                      | Comment                                                                                        |
|------|-----------|----|------------------------------|------------------------------------------------------------------------------------------------|
|      | UE        | SS |                              |                                                                                                |
| 1    |           | ←  | RADIO BEARER RELEASE         |                                                                                                |
| 2    |           |    |                              | The SS does not configure the specified L1.                                                    |
| 3    |           | →  | RADIO BEARER RELEASE FAILURE | After T312 expiry the UE fails to release a radio bearer and reverts to the old configuration. |

## Specific Message Contents

### RADIO BEARER RELEASE

Use the message sub-type titled "Packet to CELL\_DCH from CELL\_FACH in PS" in Annex A.

### RADIO BEARER RELEASE FAILURE

The contents of RADIO BEARER RELEASE FAILURE message in this test case is the same as the RADIO BEARER RELEASE FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark             |
|---------------------|--------------------------|
| Failure-cause       | Physical channel failure |

### 8.2.3.11.5 — Test requirement

After step 2 the UE shall transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, setting the value "physical channel failure" in IE "failure cause".

### 8.2.3.12 — Radio Bearer Release for transition from CELL\_FACH to CELL\_DCH: Failure (Physical channel failure and reversion failure)

#### 8.2.3.12.1 — Definition

#### 8.2.3.12.2 — Conformance requirement

The UE shall perform a cell update procedure when the UE selects another cell after the detection of physical channel failure during a radio bearer release procedure. After the UE completes cell update procedure, the UE transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC which is set IE "failure cause" to "physical channel failure".

## Reference

3GPP TS 25.331 clause 8.2.3.

#### 8.2.3.12.3 — Test purpose

To confirm that the UE transmits a RADIO BEARER RELEASE FAILURE message after it completes a cell update procedure following a physical channel failure during the radio bearer release procedure.

## 8.2.3.12.4 Method of test

## Initial Condition

System Simulator: 2 cells – Cell 1 and 2 are active.

UE: PS-DCCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

## Test Procedure

Table 8.2.3.12

| Parameter              | Unit         | Cell 1 |     | Cell 2 |     |
|------------------------|--------------|--------|-----|--------|-----|
|                        |              | T0     | T1  | T0     | T1  |
| UTRA-RF Channel Number |              | Ch. 1  |     | Ch. 1  |     |
| CPICH Ec (FDD)         | dBm/3.84 MHz | -60    | -75 | -75    | -60 |
| P-CCPCH RSCP (TDD)     | dBm          | -60    | -75 | -75    | -60 |

Table 8.2.3.12 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 2.

The UE is in CELL\_FACH state in cell 1. The SS transmits a RADIO BEARER RELEASE message to the UE, but it does not configure the specified L1 in accordance with the settings in the message. This is expected to cause the UE to experience a failure to release the radio bearer and it subsequently tries to revert to the old configuration. The SS configures its downlink transmission power settings according to columns "T1" in table 8.2.3.12. The UE shall find cell 2 and transmits CELL\_UPDATE message on uplink CCCH with IE "Cell update cause" set to "cell reselection". The SS shall transmit a CELL\_UPDATE\_CONFIRM message on downlink CCCH after receiving CELL\_UPDATE message. The UE transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, setting IE "failure cause" to "physical channel failure".

## Expected sequence

| Step | Direction |    | Message                      | Comment                                                                                                                                                                                                    |
|------|-----------|----|------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                              |                                                                                                                                                                                                            |
| 1    | ←         |    | RADIO BEARER RELEASE         |                                                                                                                                                                                                            |
| 2    |           |    |                              | The SS does not configure the specified L1 in accordance with the settings in the message and applies the downlink transmission power settings, according to the values in columns "T1" of table 8.2.3.12. |
| 3    | ←         |    | Void                         |                                                                                                                                                                                                            |
| 4    | →         |    | CELL_UPDATE                  | The UE finds a new cell 2 and enter CELL_FACH state. This message includes the value "cell reselection" set in IE "Cell update cause".                                                                     |
| 5    | ←         |    | CELL_UPDATE_CONFIRM          |                                                                                                                                                                                                            |
| 6    |           |    | Void                         |                                                                                                                                                                                                            |
| 7    | →         |    | RADIO BEARER RELEASE FAILURE | The IE "failure cause" shall be set to "physical channel failure"                                                                                                                                          |

### Specific Message Contents

#### RADIO BEARER RELEASE (Step 1)

Use the message sub-type titled "Packet to CELL\_DCH from CELL\_FACH in PS" in Annex A.

#### CELL UPDATE (Step 4)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in Annex A with the following exceptions:

| Information Element | Value/remark                  |
|---------------------|-------------------------------|
| U-RNTI              | Assigned previously in cell 1 |
| -SRNC Identity      | Assigned previously in cell 1 |
| -S-RNTI             | Assigned previously in cell 1 |
| Cell Update Cause   | "cell reselection"            |

#### CELL UPDATE CONFIRM (Step 5)

The contents of CELL UPDATE CONFIRM message is identical as "CELL UPDATE CONFIRM message" as found in Annex A.

#### RADIO BEARER RELEASE FAILURE (Step 7)

The contents of RADIO BEARER RELEASE FAILURE message in this test case is the same as the RADIO BEARER RELEASE FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark               |
|---------------------|----------------------------|
| Failure-cause       | "physical channel failure" |

#### 8.2.3.12.5 Test requirement

After step 3 the UE shall transmit a CELL UPDATE message on the uplink CCCH with IE "Cell update cause" set to "cell reselection".

After step 6 the UE shall transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, setting the IE "failure-cause" to "physical channel failure".

### 8.2.3.13 Radio Bearer Release for transition from CELL\_FACH to CELL\_DCH: Failure (Incompatible simultaneous reconfiguration)

#### 8.2.3.13.1 Definition

#### 8.2.3.13.2 Conformance requirement

If the UE receives a RADIO BEARER RELEASE message during a reconfiguring procedure due to a radio bearer message other than RADIO BEARER RELEASE message, it shall transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC.

#### Reference

3GPP TS 25.331 clause 8.2.3, clause 8.6.3.11.

#### 8.2.3.13.3 Test purpose

To confirm that if the UE receives a RADIO BEARER RELEASE message during a reconfiguring procedure due to a radio bearer message other than a RADIO BEARER RELEASE message, it shall keep its configuration as if the

RADIO BEARER RELEASE message had not been received and complete the reconfiguration procedure according to the previously received message.

#### 8.2.3.13.4 Method of test

##### Initial Condition

System Simulator: 1 cell.

UE: PS-DCCCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

##### Test Procedure

The UE is in CELL\_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. The SS transmits a RADIO BEARER RELEASE message before the "activation time" indicated in the RADIO BEARER RECONFIGURATION message expires. When the UE receives the RADIO BEARER RELEASE message, the UE shall keep the configuration as if it had not received the RADIO BEARER RELEASE message and shall transmit a RADIO BEARER RELEASE FAILURE message on the DCCCH using AM RLC with IE "failure cause" set to "incompatible simultaneous reconfiguration". After the SS acknowledges the RADIO BEARER RELEASE FAILURE message, the UE reconfigures the new physical channel parameters upon the activation time and transmits a RADIO BEARER RECONFIGURATION COMPLETE message on DCCCH using AM RLC.

##### Expected sequence

| Step | Direction |    | Message                               | Comment                                                                                                |
|------|-----------|----|---------------------------------------|--------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                       |                                                                                                        |
| 1    |           | ←  | RADIO BEARER RECONFIGURATION          | The UE receives any message other than RADIO BEARER RELEASE. (e.g. RADIO BEARER SETUP)                 |
| 2    |           | ←  | RADIO BEARER RELEASE                  | Sent before the expiry of IE "Activation Time" stated in message in step 1.                            |
| 3    |           | →  | RADIO BEARER RELEASE FAILURE          | The UE does not change the configuration due to the reception of RADIO BEARER RECONFIGURATION message. |
| 4    |           | →  | RADIO BEARER RECONFIGURATION COMPLETE | This message is on DCCCH using AM RLC.                                                                 |

##### Specific Message Contents

##### RADIO BEARER RECONFIGURATION (Step 1) (FDD)

The contents of RADIO BEARER RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL\_DCH from CELL\_FACH in PS" found in Annex A. Information element(s) to be changed are listed below:

| Information Element                          | Value/remark                        |
|----------------------------------------------|-------------------------------------|
| Activation Time                              | Current CFN-[current CFN mod 8 + 8] |
| Uplink DPCH Info<br>— Scrambling code number | 1                                   |

##### RADIO BEARER RECONFIGURATION (Step 1) (TDD)

The contents of RADIO BEARER SETUP message in this test case is identical to the message sub-type title "Packet to CELL\_DCH from CELL\_FACH in PS" found in Annex A. Information element(s) to be changed are listed below:

| Information Element              | Value/remark                        |
|----------------------------------|-------------------------------------|
| Activation-Time                  | Current CFN-[current CFN mod 8 + 8] |
| —Uplink DPCH timeslots and codes |                                     |
| ——First timeslot code list       | Assigned by SS                      |

### RADIO BEARER RELEASE (Step 2) (FDD)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Packet to CELL\_DCH from CELL\_FACH in PS" found in Annex A with the following exceptions:

| Information Element      | Value/remark |
|--------------------------|--------------|
| Activation-Time-Info     | Not Present  |
| Uplink-DPCH-Info         |              |
| ——Scrambling code number | 2            |

### RADIO BEARER RELEASE (Step 2) (TDD)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Packet to CELL\_DCH from CELL\_FACH in PS" found in Annex A with the following exceptions:

| Information Element              | Value/remark                                         |
|----------------------------------|------------------------------------------------------|
| Activation-Time-Info             | Current CFN-[current CFN mod 8 + 8]                  |
| —Uplink DPCH timeslots and codes |                                                      |
| —First timeslot code list        | A different code combination to that used in step 1. |

### RADIO BEARER RELEASE FAILURE

The contents of RADIO BEARER RELEASE FAILURE message in this test case is the same as the RADIO BEARER RELEASE FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark                              |
|---------------------|-------------------------------------------|
| Failure-cause       | Incompatible simultaneous reconfiguration |

#### 8.2.3.13.5 ——— Test requirement

After step 2 the UE shall transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC with IE "failure-cause" set to "Incompatible simultaneous reconfiguration".

After step 3 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message using the new physical channel parameters reconfigured as a result of the RADIO BEARER RECONFIGURATION message.

#### 8.2.3.14 ——— Radio Bearer Release for transition from CELL\_FACH to CELL\_DCH: Failure (Invalid message reception and Invalid configuration)

##### 8.2.3.14.1 ——— Definition

##### 8.2.3.14.2 ——— Conformance requirement

The UE shall keep its old configuration when the UE receives an invalid RADIO BEARER RELEASE message which does not include any IEs except IE "Message Type". It shall transmit a RADIO BEARER RELEASE FAILURE message which indicate the value "protocol error" in IE "failure-cause" and setting "ASN.1 violation or encoding error" in IE "Protocol error cause". The UE shall keep existing configuration upon reception of a RADIO BEARER RELEASE message, which includes some IEs set to give an invalid configuration, and then the UE shall transmit a RADIO BEARER RELEASE FAILURE including IE "failure-cause" set to "invalid configuration".

## Reference

3GPP TS 25.331 clause 8.2.3.

### 8.2.3.14.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC if it receives an invalid RADIO BEARER RELEASE message which does not include any IEs except IE "Message Type".

To confirm that the UE transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC if it receives a RADIO BEARER RELEASE message including some IEs set to give an invalid configuration.

### 8.2.3.14.4 Method of test

#### Initial Condition

System Simulator: 1 cell.

UE: PS\_DCCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

#### Test Procedure

The UE is in CELL\_FACH state. The SS transmits an invalid RADIO BEARER RELEASE message, which does not include any IEs except IE "Message Type", to the UE. The UE keeps the old configuration and transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, which shall indicate the value "protocol error" in IE "failure cause" and also "ASN.1 violation or encoding error" in IE "Protocol error cause". SS transmits a RADIO BEARER RELEASE message including some IEs set to give an invalid configuration. The UE keeps current configuration and transmits a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, setting the value "invalid configuration" to IE "failure cause".

#### Expected sequence

| Step | Direction |    | Message                      | Comment                                                        |
|------|-----------|----|------------------------------|----------------------------------------------------------------|
|      | UE        | SS |                              |                                                                |
| 1    |           | ←  | RADIO BEARER RELEASE         | See specific message content.                                  |
| 2    |           | →  | RADIO BEARER RELEASE FAILURE | The UE shall not change its current configuration.             |
| 3    |           | ←  | RADIO BEARER RELEASE         | This message includes IE set to give an invalid configuration. |
| 4    |           |    |                              | The UE does not change its configuration                       |
| 5    |           | →  | RADIO BEARER RELEASE FAILURE | The IE "failure cause" shall be set to "invalid configuration" |

#### Specific Message Contents

##### RADIO BEARER RELEASE (Step 1)

| Information Element | Value/remark |
|---------------------|--------------|
| All IEs             | Not Present  |

##### RADIO BEARER RELEASE FAILURE (Step 2)

The contents of RADIO BEARER RELEASE FAILURE message in this test case is the same as the RADIO BEARER RELEASE FAILURE message as found in Annex A, with the following exceptions:

| Information Element            | Value/remark                      |
|--------------------------------|-----------------------------------|
| Failure-cause                  |                                   |
| ——— Failure-cause              | Protocol-error                    |
| ——— Protocol-error information |                                   |
| ——— Protocol-error cause       | ASN.1-violation-or-encoding-error |

### RADIO BEARER RELEASE (Step 3) (FDD)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Packet to CELL\_DCH from CELL\_FACH in PS" found in Annex A with the following exceptions:

| Information Element           | Value/remark |
|-------------------------------|--------------|
| ——— Default DPCH Offset Value | 512          |
| ——— DPCH frame offset         | 1024         |

### RADIO BEARER RELEASE (Step 3) (TDD)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Packet to CELL\_DCH from CELL\_FACH in PS" found in Annex A with the following exceptions:

| Information Element | Value/remark |
|---------------------|--------------|
| ——— PRACH TFCS      | Present      |

### RADIO BEARER RELEASE FAILURE (Step 5)

The contents of RADIO BEARER RELEASE FAILURE message in this test case is the same as the RADIO BEARER RELEASE FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark          |
|---------------------|-----------------------|
| Failure-cause       | Invalid-configuration |

#### 8.2.3.14.5 ——— Test requirement

After step 1 the UE shall transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, setting "protocol error" in IE "failure-cause" and also indicating "ASN.1 violation or encoding error" in IE "Protocol error cause".

After step 3 the UE shall transmit a RADIO BEARER RELEASE FAILURE message on the DCCH using AM RLC, setting IE "failure cause" to "invalid configuration".

### 8.2.3.15 ——— Radio Bearer Release for transition from CELL\_FACH to CELL\_FACH: Success

#### 8.2.3.15.1 ——— Definition

#### 8.2.3.15.2 ——— Conformance requirement

The UE shall correctly release a radio bearer according to the RADIO BEARER RELEASE message received and responds with a RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC.

#### Reference

3GPP TS 25.331 clause 8.2.3.

### 8.2.3.15.3 ~~Test purpose~~

~~To confirm that the UE releases the existing the radio bearer(s) according to the RADIO BEARER RELEASE message.~~

### 8.2.3.15.4 ~~Method of test~~

#### ~~Initial Condition~~

~~System Simulator: 1 cell.~~

~~UE: PS-DCCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.~~

#### ~~Test Procedure~~

~~The UE is in CELL\_FACH state. The SS transmits a RADIO BEARER RELEASE message to the UE. The UE releases the radio access bearer and transmits a RADIO BEARER RELEASE COMPLETE message on the uplink DCCH using AM RLC.~~

#### ~~Expected sequence~~

| Step | Direction |    | Message                       | Comment                                                                                                          |
|------|-----------|----|-------------------------------|------------------------------------------------------------------------------------------------------------------|

#### ~~Specific Message Contents~~

#### ~~RADIO BEARER RELEASE~~

~~Use the same message sub-type titled "Packet to CELL\_FACH from CELL\_FACH in PS" in Annex A.~~

### 8.2.3.15.5 ~~Test requirement~~

~~After step 1 the UE shall transmit a RADIO BEARER RELEASE COMPLETE message using AM RLC on the common physical channel.~~

### 8.2.3.16 ~~Radio Bearer Release for transition from CELL\_DCH to CELL\_DCH: Success (Subsequently received)~~

#### 8.2.3.16.1 ~~Definition~~

#### 8.2.3.16.2 ~~Conformance requirement~~

~~If the UE receives a RADIO BEARER RELEASE message before the UE releases the radio bearer according to the previous RADIO BEARER RELEASE message, the UE shall ignore the new RADIO BEARER RELEASE message and releases according to the previous RADIO BEARER RELEASE message. Finally, the UE shall transmit a RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC.~~

#### ~~Reference~~

~~3GPP TS 25.331 clause 8.2.3, clause 8.6.3.11.~~

### 8.2.3.16.3 Test purpose

To confirm that if the UE receives a new RADIO BEARER RELEASE message before the UE releases the radio bearer according to a previous RADIO BEARER RELEASE message it ignore the new RADIO BEARER RELEASE message and configures according to the previous RADIO BEARER RELEASE message received.

### 8.2.3.16.4 Method of test

#### Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH\_DCH (state 6-9) or PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

#### Test Procedure

The UE is in CELL\_DCH state. When the SS transmits a RADIO BEARER RELEASE message to the UE before the UE releases the radio access bearer, the UE ignores the second RADIO BEARER RELEASE message and releases the radio bearer according to the previous RADIO BEARER RELEASE message received. Finally, the UE shall transmit RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC.

#### Expected sequence

| Step | Direction |    | Message                       | Comment                                                                                                                                                                                                                          |

|      | UE        | SS |                               |                                                                                                                                                                                                                                  |
| 1    |           | ←  | RADIO BEARER RELEASE          | For FDD, the SS sets its UL scrambling code to "1".                                                                                                                                                                              |
| 2    |           | ←  | RADIO BEARER RELEASE          | Message sent before the expiry of "activation time" specified in message in step 1. For FDD, the IE "Secondary scrambling code" is set to "2". For TDD the code combination assigned is different from that assigned in stage 1. |
| 3    |           | →  | RADIO BEARER RELEASE COMPLETE | The UE ignores the RADIO BEARER RELEASE message in step 2 and release radio bearer according to the RADIO BEARER RELEASE message in step 1.                                                                                      |

#### Specific Message Contents

##### RADIO BEARER RELEASE (Step 1) (FDD)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Speech in CS" or "Non-speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A, with the following exceptions:

| Information Element                               | Value/remark                                     |
|---------------------------------------------------|--------------------------------------------------|
| Activation Time                                   | [256+Current CFN-[current CFN mod 8 + 8]]MOD 256 |
| - Uplink DPCH Info<br>- Secondary scrambling code | 1                                                |

##### RADIO BEARER RELEASE (Step 1) (TDD)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Speech in CS" or "Non-speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A, with the following exceptions:

| Information Element                                           | Value/remark                                     |
|---------------------------------------------------------------|--------------------------------------------------|
| Activation-Time                                               | [256+Current CFN-[current CFN mod 8 + 8]]MOD 256 |
| Uplink-DPCH-timeslots-and-codes<br>——First timeslot-code-list | Assigned-by-SS                                   |

### RADIO-BEARER-RELEASE (Step 2) (FDD)

The contents of RADIO-BEARER-RELEASE message in this test case is identical to the message sub-type title "Speech in CS" or "Non-speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A, with the following exceptions:

| Information Element                             | Value/remark |
|-------------------------------------------------|--------------|
| Activation-Time                                 | Not Present  |
| –Uplink-DPCH-Info<br>–Secondary-scrambling-code | 2            |

### RADIO-BEARER-RELEASE (Step 2) (TDD)

The contents of RADIO-BEARER-RELEASE message in this test case is identical to the message sub-type title "Speech in CS" or "Non-speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A, with the following exceptions:

| Information Element                                           | Value/remark                                         |
|---------------------------------------------------------------|------------------------------------------------------|
| Activation-Time                                               | Not Present                                          |
| –Uplink-DPCH-timeslots-and-codes<br>–First-timeslot-code-list | A different code combination to that used in step 1. |

### 8.2.3.16.5 ——— Test requirement

After step 2 the UE shall transmit an RADIO-BEARER-RELEASE COMPLETE message on the DCCH using AM RLC.

### 8.2.3.17 ——— Radio-Bearer-Release for transition from CELL\_FACH to CELL\_DCH: Success (Subsequently received)

#### 8.2.3.17.1 ——— Definition

#### 8.2.3.17.2 ——— Conformance requirement

If the UE receives a RADIO-BEARER-RELEASE message before the UE releases the radio-bearer according to the previous RADIO-BEARER-RELEASE message, the UE shall ignore the new RADIO-BEARER-RELEASE message and releases the radio-bearers according to the previous RADIO-BEARER-RELEASE message. Finally, the UE shall transmit a RADIO-BEARER-RELEASE COMPLETE message on the DCCH using AM RLC.

#### Reference

3GPP TS 25.331 clause 8.2.3, clause 8.6.3.11.

#### 8.2.3.17.3 ——— Test purpose

To confirm that if the UE receives a new RADIO-BEARER-RELEASE message before the UE releases the radio-bearer according to a previous RADIO-BEARER-RELEASE message, it ignores the new RADIO-BEARER-RELEASE message and configures according to the previous RADIO-BEARER-RELEASE message received.

#### 8.2.3.17.4 Method of test

##### Initial Condition

System Simulator: 1 cell.

UE: PS-DCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

##### Test Procedure

The UE is in CELL\_FACH state. When the SS transmits a RADIO BEARER RELEASE message to the UE before the UE releases the radio access bearer, the UE ignores the second RADIO BEARER RELEASE message and releases the radio bearers according to the previous RADIO BEARER RELEASE message received. Finally, the UE shall transmit a RADIO BEARER RELEASE COMPLETE message on the DCH using AM-RLC.

##### Expected sequence

| Step | Direction |    | Message                       | Comment                                                                                                                                                                                                                                       |

| 1    |           | ←  | RADIO BEARER RELEASE          | For FDD, the SS sets its UL scrambling code to "1".                                                                                                                                                                                           |
| 2    |           | ←  | RADIO BEARER RELEASE          | Sent before the expiry stated in IE "Activation Time" of RADIO BEARER RELEASE message in step 1. For TDD the IE "Secondary scrambling code" is set to "2". For TDD, the code combination assigned is different from that assigned in stage 1. |
| 3    |           | →  | RADIO BEARER RELEASE COMPLETE | The UE ignores the RADIO BEARER RELEASE message in step 2 and release radio bearers according to the RADIO BEARER RELEASE message in step 1.                                                                                                  |

##### Specific Message Contents

##### RADIO BEARER RELEASE (Step 1) (FDD)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Packet to CELL\_DCH from CELL\_FACH in PS" found in Annex A with the following exceptions:

| Information Element       | Value/remark                                                                   |
|---------------------------|--------------------------------------------------------------------------------|
| Activation Time Info      | $[256 + \text{Current CFN} - [\text{current CFN mod } 8 + 8]] \text{MOD } 256$ |
| Uplink DPCCH Info         |                                                                                |
| Secondary scrambling code | 1                                                                              |

##### RADIO BEARER RELEASE (Step 1) (TDD)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A with the following exceptions:

| Information Element              | Value/remark                                                                   |
|----------------------------------|--------------------------------------------------------------------------------|
| Activation Time Info             | $[256 + \text{Current CFN} - [\text{current CFN mod } 8 + 8]] \text{MOD } 256$ |
| Uplink DPCCH timeslots and codes |                                                                                |
| First timeslot code list         | Assigned by SS                                                                 |

##### RADIO BEARER RELEASE (Step 2) (FDD)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Packet to CELL\_DCH from CELL\_FACH in PS" found in Annex A with the following exceptions:

| Information Element        | Value/remark |
|----------------------------|--------------|
| Activation Time            | Not Present  |
| ~Uplink DPCH Info          |              |
| ~Secondary scrambling code | 2            |

### RADIO BEARER RELEASE (Step 2) (TDD)

The contents of RADIO BEARER RELEASE message in this test case is identical to the message sub-type title "Packet to CELL\_DCH from CELL\_FACH in PS" found in Annex A with the following exceptions:

| Information Element              | Value/remark                                         |
|----------------------------------|------------------------------------------------------|
| Activation Time                  | Not Present                                          |
| ~Uplink DPCH timeslots and codes |                                                      |
| ~First timeslot code list        | A different code combination to that used in step 1. |

#### 8.2.3.17.5 Test requirement

After step 2 the UE shall transmit an RADIO BEARER RELEASE COMPLETE message on the DCCH using AM RLC.

### 8.2.3.18 Radio Bearer Release from CELL\_DCH to CELL\_PCH: Success

#### 8.2.3.18.1 Definition

#### 8.2.3.18.2 Conformance requirement

The UE shall transmit a RADIO BEARER RELEASE COMPLETE message on uplink DCCH using AM RLC before it transits from CELL\_DCH to CELL\_PCH when UE receives a RADIO BEARER RELEASE message. And then, the UE shall release radio access bearers according to the RADIO BEARER RELEASE message.

#### Reference

3GPP TS 25.331 clause 8.2.2.

#### 8.2.3.18.3 Test purpose

To confirm that the UE transmits a RADIO BEARER RELEASE COMPLETE before entering CELL\_PCH state after it received a RADIO BEARER RELEASE message and released its radio access bearers.

#### 8.2.3.18.4 Method of test

#### Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108.

#### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a RADIO BEARER RELEASE message. The UE transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC and enters into CELL\_PCH state. The SS transmits a PAGING TYPE 1 message causing the UE to enter CELL\_FACH state and the UE shall transmit a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "paging response".

## Expected sequence

| Step | Direction |    | Message                          | Comment                                                         |
|------|-----------|----|----------------------------------|-----------------------------------------------------------------|
|      | UE        | SS |                                  |                                                                 |
| 1    |           | ←  | RADIO-BEARER<br>RELEASE          |                                                                 |
| 2    |           | →  | RADIO-BEARER<br>RELEASE COMPLETE | The UE sends this message before it completes state transition. |
| 3    |           | ←  | PAGING TYPE 1                    | The SS transmits this message with a matched identity.          |
| 4    |           | →  | CELL-UPDATE                      | The UE is in CELL_FACH state.                                   |

## Specific Message Contents

## RADIO-BEARER RELEASE (Step 1) (FDD)

Use the same message sub-type titled "Packet to CELL\_FACH from CELL\_DCH in PS" in Annex A with following exceptions:

| Information Element                                                                           | Value/remark |
|-----------------------------------------------------------------------------------------------|--------------|
| RRC State Indicator                                                                           | CELL_PCH     |
| Downlink information for each radio link<br>- Primary CPICH info<br>- Primary scrambling code | 100          |

## RADIO-BEARER RELEASE (Step 1) (TDD)

Use the same message sub-type titled "Packet to CELL\_FACH from CELL\_DCH in PS" in Annex A with following exceptions:

| Information Element                                                                       | Value/remark |
|-------------------------------------------------------------------------------------------|--------------|
| RRC State Indicator                                                                       | CELL_PCH     |
| Downlink information for each radio links<br>- Primary CCPCH info<br>- Cell parameters ID | 4            |

## PAGING TYPE 1 (Step 3)

Use the same message sub-type titled "TM (Packet in PS)" in default message content of TS 34.108 with following exceptions:

| Information Element                                                                                             | Value/remark                                                                          |
|-----------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|
| Paging record list<br>Paging record<br>- CHOICE Used paging identity<br>- U-RNTI<br>- SRNC Identity<br>- S-RNTI | UTRAN identity<br><br>Previously assigned SRNC identity<br>Previously assigned S-RNTI |

## CELL-UPDATE (Step 4)

The contents of CELL-UPDATE message is identical as "Contents of CELL-UPDATE message" as found in Annex A with the following exceptions:

| Information Element | Value/remark      |
|---------------------|-------------------|
| Cell Update Cause   | "paging response" |

**8.2.3.18.5** ————— **Test requirement**

After step 1 the UE transmits a RADIO BEARER RELEASE COMPLETE message on uplink DCCH using AM RLC.

After step 3 the UE shall transmit a CELL UPDATE message on the CCCH with IE "Cell update cause" set to "paging response".

**8.2.3.19** ————— **Radio Bearer Release from CELL\_DCH to URA\_PCH: Success****8.2.3.19.1** ————— **Definition****8.2.3.19.2** ————— **Conformance requirement**

The UE shall transmit a RADIO BEARER RELEASE COMPLETE message before it transits from CELL\_DCH to URA\_PCH when UE receives a RADIO BEARER RELEASE message. And then, the UE shall release radio access bearers according to the RADIO BEARER RELEASE message.

**Reference**

3GPP TS 25.331 clause 8.2.2.

**8.2.3.19.3** ————— **Test purpose**

To confirm that the UE transmits a RADIO BEARER RELEASE COMPLETE before entering URA\_PCH state after it received a RADIO BEARER RELEASE message and released its radio bearers.

**8.2.3.19.4** ————— **Method of test****Initial Condition**

System Simulator: 1 cell.

UE: PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108.

**Test Procedure**

The UE is in CELL\_DCH state. The SS transmits a RADIO BEARER RELEASE message. The UE transmits a RADIO BEARER RELEASE COMPLETE message using AM RLC and enters into URA\_PCH state. The SS transmits a PAGING TYPE 1 message, causing the UE to enter CELL\_FACH state and the UE shall transmit a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "paging response".

**Expected sequence**

| Step | Direction |    | Message                       | Comment                                                         |
|------|-----------|----|-------------------------------|-----------------------------------------------------------------|
|      | UE        | SS |                               |                                                                 |
| 1    |           | ←  | RADIO BEARER RELEASE          |                                                                 |
| 2    |           | →  | RADIO BEARER RELEASE COMPLETE | The UE sends this message before it completes state transition. |
| 3    |           | ←  | PAGING TYPE 1                 | The SS transmits this message with a matched identity.          |
| 4    |           | →  | CELL UPDATE                   | The UE is in CELL_FACH state.                                   |

## Specific Message Contents

## RADIO BEARER RELEASE (Step 1) (FDD)

Use the same message sub-type titled "Packet to CELL\_FACH from CELL\_DCH in PS" in Annex A with following exceptions:

| Information Element                                                                           | Value/remark |
|-----------------------------------------------------------------------------------------------|--------------|
| RRC State Indicator                                                                           | URA_PCH      |
| Downlink information for each radio link<br>— Primary CPICH info<br>— Primary scrambling code | 100          |

## RADIO BEARER RELEASE (Step 1) (TDD)

| Information Element                                                                       | Value/remark |
|-------------------------------------------------------------------------------------------|--------------|
| RRC State Indicator                                                                       | CELL_PCH     |
| Downlink information for each radio links<br>— Primary CCPCH info<br>— Cell parameters ID | 4            |

## PAGING TYPE 1 (Step 3)

Use the same message sub-type titled "TM (Packet in PS)" in default message content of TS 34.108 with following exceptions:

| Information Element                                                                                             | Value/remark                                                                          |
|-----------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|
| Paging record list<br>Paging record<br>— CHOICE Used paging identity<br>— U-RNTI<br>— SRNC Identity<br>— S-RNTI | UTRAN identity<br><br>Previously assigned SRNC identity<br>Previously assigned S-RNTI |

## CELL UPDATE (Step 4)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in Annex A with the following exceptions:

| Information Element | Value/remark      |
|---------------------|-------------------|
| Cell Update Cause   | "paging response" |

## 8.2.3.19.5 — Test requirement

After step 1 the UE transmits a RADIO BEARER RELEASE COMPLETE message to the UE on uplink DCCH using AM RLC.

After step 3 the UE shall transmit a CELL UPDATE message on the CCCH with IE "Cell update cause" set to "paging response".

~~8.2.4 Transport channel reconfiguration~~

~~8.2.4.1 Transport channel reconfiguration from CELL\_DCH to CELL\_DCH: Success with no transport channel type switching~~

~~8.2.4.1.1 Definition~~

~~8.2.4.1.2 Conformance requirement~~

~~The UE shall transmit TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC after it correctly reconfigures the radio bearers according to the TRANSPORT CHANNEL RECONFIGURATION message, which specifies a hard handover by changing the scrambling code for the DPCCH.~~

~~Reference~~

~~3GPP TS 25.331 clause 8.2.4.~~

~~8.2.4.1.3 Test purpose~~

~~To confirm that the UE reconfigures the channel configuration according to a TRANSPORT CHANNEL RECONFIGURATION message, which also specifies a hard handover by changing the scrambling code for the DPCCH.~~

~~8.2.4.1.4 Method of test~~

~~Initial Condition~~

~~System Simulator: 1 cell~~

~~UE: CS-DCCH+DTCH\_DCH (state 6-9) or PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.~~

~~Test Procedure~~

~~The UE is in CELL\_DCH state. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE, which includes new configuration parameters. The UE shall reconfigure the new configuration and then transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.~~

~~Expected sequence~~

| Step | Direction |    | Message                                    | Comment                         |
|------|-----------|----|--------------------------------------------|---------------------------------|
|      | UE        | SS |                                            |                                 |
| 1    |           |    | Void                                       |                                 |
| 2    |           |    | Void                                       |                                 |
| 3    |           | ←  | TRANSPORT CHANNEL RECONFIGURATION          | UL scrambling code is modified. |
| 4    |           |    | Void                                       |                                 |
| 5    |           | →  | TRANSPORT CHANNEL RECONFIGURATION COMPLETE |                                 |

~~Specific Message Contents~~

~~TRANSPORT CHANNEL RECONFIGURATION (FDD)~~

~~The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A, with the following exceptions:~~

| Information Element                                                                                                 | Value/remark                        |

#### 8.2.4.1.5 ——— Test requirement

After step 3 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

#### 8.2.4.1a ——— Transport channel reconfiguration (Transmission Rate Modification with Timing Maintained) from CELL\_DCH to CELL\_DCH of the same cell: Success

##### 8.2.4.1a.1 ——— Definition

##### 8.2.4.1a.2 ——— Conformance requirement

The UE shall transmit TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC after it correctly reconfigures the radio bearers according to the TRANSPORT CHANNEL RECONFIGURATION message, which specifies a hard handover to modify the transmission rate by (1) changing physical channel information and (2) changing either TFCS and TFS or TFCS only.

#### Reference

3GPP TS 25.331 clause 8.2.4.

##### 8.2.4.1a.3 ——— Test purpose

To confirm that the UE reconfigures the physical channel and transport channel configuration according to a TRANSPORT CHANNEL RECONFIGURATION message, which specifies a hard handover by changing physical channel information and either TFCS and TFS or TFCS only.

##### 8.2.4.1a.4 ——— Method of test

#### Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108.

Note : Transmission rate shall be set to the maximum rate for the UE during the radio bearer establishment procedure.

### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE to modify the transmission rate which includes a new physical channel information and the TFCS is reconfigured to restrict the use of TFCI. The UE shall reconfigure the new configuration and then transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC. Next the SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE to modify the transmission rate which includes new physical channel information and new TFCS and TFS. The UE shall reconfigure the new configuration and then transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

### Expected sequence

| Step | Direction |    | Message                                    | Comment |
|------|-----------|----|--------------------------------------------|---------|
|      | UE        | SS |                                            |         |
| 1    |           | ←  | TRANSPORT CHANNEL RECONFIGURATION          |         |
| 2    |           | →  | TRANSPORT CHANNEL RECONFIGURATION COMPLETE |         |
| 3    |           | ←  | TRANSPORT CHANNEL RECONFIGURATION          |         |
| 4    |           | →  | TRANSPORT CHANNEL RECONFIGURATION COMPLETE |         |

### Specific Message Contents

#### TRANSPORT CHANNEL RECONFIGURATION (Step 1)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A, with the following exceptions:

| Information Element                                               | Value/remark                                                                                                                                                                   |

| → Power offset information                                        | Not Present                                                                                                                                                                    |
| Added or Reconfigured DL TrCH information                         | Not Present                                                                                                                                                                    |

#### 8.2.4.1a.5 Test requirement

After step 1 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

After step 3 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

## 8.2.4.2 ~~Transport channel reconfiguration from CELL\_DCH to CELL\_DCH: Failure (Unsupported configuration)~~

### 8.2.4.2.1 ~~Definition~~

### 8.2.4.2.2 ~~Conformance requirement~~

The UE shall keep its old configuration when the UE receives a TRANSPORT CHANNEL RECONFIGURATION message which includes unsupported configuration parameters and transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "configuration unsupported" in IE "failure cause".

### Reference

3GPP TS 25.331 clause 8.2.4.

### 8.2.4.2.3 ~~Test purpose~~

To confirm that the UE transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if the received TRANSPORT CHANNEL RECONFIGURATION message specifies unsupported configuration parameters.

### 8.2.4.2.4 ~~Method of test~~

### Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH\_DCH (state 6-9) or PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message, which includes configuration parameters unsupported by the UE. The UE transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, reporting the event "configuration unsupported" in IE "failure cause".

### Expected sequence

| Step | Direction |    | Message                                   | Comment                                                              |
|------|-----------|----|-------------------------------------------|----------------------------------------------------------------------|
|      | UE        | SS |                                           |                                                                      |
| 1    |           | ←  | TRANSPORT CHANNEL RECONGURATION           | Including configuration unsupported by the UE                        |
| 2    |           | →  | TRANSPORT CHANNEL RECONFIGURATION FAILURE | The UE shall not change the settings used by the transport channels. |

### Specific Message Contents

#### TRANSPORT CHANNEL RECONFIGURATION (FDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title as "Speech in CS" or "Non-speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A with the following exceptions:

| Information Element                                                | Value/remark |
|--------------------------------------------------------------------|--------------|
| Frequency info<br>—— UARFCN uplink (Nu)<br>—— UARFCN downlink (Nd) | 0.<br>950    |

#### TRANSPORT CHANNEL RECONFIGURATION (TDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title as "Speech in CS" or "Non-speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A with the following exceptions:

| Information Element              | Value/remark |
|----------------------------------|--------------|
| Frequency info<br>—— UARFCN (Nt) | 0            |

#### TRANSPORT CHANNEL RECONFIGURATION FAILURE

The contents of TRANSPORT CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the TRANSPORT CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark              |
|---------------------|---------------------------|
| Failure cause       | Configuration unsupported |

#### 8.2.4.2.5 ——— Test requirement

After step 1 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, indicating "configuration unsupported" in IE "failure cause".

#### 8.2.4.3 ——— Transport channel reconfiguration from CELL\_DCH to CELL\_DCH: Failure (Physical channel failure and reversion to old configuration)

##### 8.2.4.3.1 ——— Definition

##### 8.2.4.3.2 ——— Conformance requirement

The UE shall revert to the old configuration when the UE fails to reconfigure the new physical channel according to the received TRANSPORT CHANNEL RECONFIGURATION message and transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "physical channel failure" in IE "failure cause".

### Reference

3GPP TS 25.331 clause 8.2.4.

8.2.4.3.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, if the UE fails to reconfigure the new configuration according to a TRANSPORT CHANNEL RECONFIGURATION message.

8.2.4.3.4 Method of test

Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH\_DCH (state 6-9) or PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

Test Procedure

The UE is in CELL\_DCH state. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE, which includes new configuration parameters but the SS does not configure the new physical channel specified in this message and keep its old configuration. Therefore, the UE cannot synchronise with the SS on the new physical channel and shall revert to the old configuration after T312 expires. Then the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting "physical channel failure" in IE "failure-cause".

Expected sequence

| Step | Direction |    | Message                                   | Comment                                                                |
|------|-----------|----|-------------------------------------------|------------------------------------------------------------------------|
|      | UE        | SS |                                           |                                                                        |
| 1    |           | ←  | TRANSPORT CHANNEL RECONGURATION           | Specifies a change in the TFS of the dedicated transport channel used. |
| 2    |           |    |                                           | The SS does not reconfigure the new configuration.                     |
| 3    |           | →  | TRANSPORT CHANNEL RECONFIGURATION FAILURE | The UE reverts to the old configuration and transmits this message.    |

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION

Use the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A.

TRANSPORT CHANNEL RECONFIGURATION FAILURE

The contents of TRANSPORT CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the TRANSPORT CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark             |
|---------------------|--------------------------|
| Failure-cause       | Physical channel failure |

8.2.4.3.5 Test requirement

After step 2 the UE shall revert to the old configuration and transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, and it shall set the value "physical channel failure" in IE "failure-cause".

#### ~~8.2.4.4 Transport channel reconfiguration from CELL\_DCH to CELL\_DCH: Failure (Physical channel failure and reversion failure)~~

##### ~~8.2.4.4.1 Definition~~

##### ~~8.2.4.4.2 Conformance requirement~~

~~The UE shall perform a cell update when physical channel failure and reversion failure occur. After the UE completes cell update procedure, the UE transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which set IE "failure cause" to "physical channel failure".~~

##### ~~Reference~~

~~3GPP TS 25.331 clause 8.2.4.~~

##### ~~8.2.4.4.3 Test purpose~~

~~To confirm that the UE transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message after it completes a cell update procedure when the UE cannot synchronise with the SS on the new channel before T312 expires and fails to revert to the old configuration.~~

##### ~~8.2.4.4.4 Method of test~~

##### ~~Initial Condition~~

~~System Simulator: 1 cell.~~

~~UE: CS-DCCH+DTCH\_DCH (state 6-9) or PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.~~

##### ~~Test Procedure~~

~~The UE is in CELL\_DCH state. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE. The message specifies a new configuration but the SS does not reconfigure the new channel specified in this message and release the old configuration. The UE cannot synchronise with SS before T312 expires and shall attempt to revert to the old configuration. The UE cannot revert to the old configuration and then transmit a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "radio link failure". The SS shall transmit a CELL UPDATE CONFIRM message on downlink CCCH after receiving CELL UPDATE message. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC and subsequently transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting IE "failure cause" to "physical channel failure".~~

## Expected sequence

| Step | Direction |    | Message                                      | Comment                                                                                                                                                |
|------|-----------|----|----------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                              |                                                                                                                                                        |
| 1    | ←         |    | TRANSPORT CHANNEL<br>RECONFIGURATION         |                                                                                                                                                        |
| 2    |           |    |                                              | The SS does not reconfigure L1 in accordance with TRANSPORT CHANNEL RECONFIGURATION message and release the old configuration.                         |
| 3    | →         |    | CELL UPDATE                                  | This message includes the value "radio-link failure" set in IE "Cell update cause".                                                                    |
| 4    | ←         |    | CELL UPDATE CONFIRM                          | This message includes IE "Physical channel information elements".                                                                                      |
| 5    |           |    |                                              | The SS changes physical channel configuration according to the IE "Physical channel information elements" included in the CELL UPDATE CONFIRM message. |
| 6    | →         |    | PHYSICAL CHANNEL<br>RECONFIGURATION COMPLETE |                                                                                                                                                        |
| 7    | →         |    | TRANSPORT CHANNEL<br>RECONFIGURATION FAILURE | The IE "failure cause" shall be set to "physical channel failure"                                                                                      |

## Specific Message Contents

## TRANSPORT CHANNEL RECONFIGURATION (Step 1)

Use the message sub-type titled as "Speech in CS" or "Non-speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A.

## CELL UPDATE (Step 3)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in Annex A with the following exceptions:

| Information Element | Value/remark                                           |
|---------------------|--------------------------------------------------------|
| U-RNTI              |                                                        |
| - SRNC Identity     | Check to see if set to '0000-0000-0001'                |
| - S-RNTI            | Check to see if set to '0000-0000-0000-0000-0000-0001' |
| Cell Update Cause   | "radio-link failure"                                   |

## CELL UPDATE CONFIRM (Step 4) (FDD)

The contents of CELL UPDATE CONFIRM message is identical as "CELL UPDATE CONFIRM message" as found in Annex A with the following exceptions:

| Information Element                       | Value/remark                                                         |
|-------------------------------------------|----------------------------------------------------------------------|
| UplinkDPCH Info                           | Same as RADIO BEARER SETUP message used to move to initial condition |
| Downlink information for each radio links | Same as RADIO BEARER SETUP message used to move to initial condition |

#### CELL UPDATE CONFIRM (Step 4) (TDD)

The contents of CELL UPDATE CONFIRM message is identical as "CELL UPDATE CONFIRM message" as found in Annex A with the following exceptions:

| Information Element                       | Value/remark                                                         |
|-------------------------------------------|----------------------------------------------------------------------|
| RRC State Indicator                       | CELL_DCH                                                             |
| Uplink DPCH timeslots and codes           | Same as RADIO BEARER SETUP message used to move to initial condition |
| Downlink information for each radio links | Same as RADIO BEARER SETUP message used to move to initial condition |

#### TRANSPORT CHANNEL RECONGURATION FAILURE (Step 7)

The contents of TRANSPORT CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the TRANSPORT CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark               |
|---------------------|----------------------------|
| Failure-cause       | "physical channel failure" |

#### 8.2.4.4.5 Test requirement

After step 2 the UE shall transmit a CELL UPDATE message on the uplink CCCH with IE "Cell update cause" set to "radio link failure".

After step 5 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

After step 6 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting the IE "failure-cause" to "physical channel failure".

#### 8.2.4.5 Transport Channel Reconfiguration from CELL\_DCH to CELL\_DCH: Failure (Incompatible simultaneous reconfiguration)

##### 8.2.4.5.1 Definition

##### 8.2.4.5.2 Conformance requirement

If the UE receives a TRANSPORT CHANNEL RECONFIGURATION message during a reconfiguring procedure due to a radio bearer message other than TRANSPORT CHANNEL RECONFIGURATION message, it shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC.

#### Reference

3GPP TS 25.331 clause 8.2.4, clause 8.6.3.11.

##### 8.2.4.5.3 Test purpose

To confirm that if the UE receives a TRANSPORT CHANNEL RECONFIGURATION message during a reconfiguring procedure due to a radio bearer message other than a TRANSPORT CHANNEL RECONFIGURATION, it shall keep its configuration as if the TRANSPORT CHANNEL RECONFIGURATION message had not been received and complete the reconfiguration procedure according to the previously received message.

#### 8.2.4.5.4 Method of test

##### Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH\_DCH (state 6-9) or PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

##### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message before the "activation time" indicated in the RADIO BEARER RECONFIGURATION message expires. When the UE receives the TRANSPORT CHANNEL RECONFIGURATION message, the UE shall keep the configuration as if it had not received the TRANSPORT CHANNEL RECONFIGURATION message and shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC with IE "failure-cause" set to "incompatible simultaneous reconfiguration". After the SS acknowledges the TRANSPORT CHANNEL RECONFIGURATION FAILURE message, the UE reconfigures the new physical configuration parameters upon the activation time and transmits a RADIO BEARER RECONFIGURATION COMPLETE message on DCCH using AM RLC.

##### Expected sequence

| Step | Direction |    | Message                                   | Comment                                                                                                      |
|------|-----------|----|-------------------------------------------|--------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                           |                                                                                                              |
| 1    |           | ←  | RADIO BEARER RECONFIGURATION              | Including IE "Uplink DPCH info" for FDD mode                                                                 |
| 2    |           | ←  | TRANSPORT CHANNEL RECONFIGURATION         | Sent before the time specified in IE "Activation Time Info" of message in step 1 has elapsed.                |
| 3    |           | →  | TRANSPORT CHANNEL RECONFIGURATION FAILURE | The UE shall not change the configuration due to the reception of TRANSPORT CHANNEL RECONFIGURATION message. |
| 4    |           | →  | RADIO BEARER RECONFIGURATION COMPLETE     | This message is on DCCH using AM RLC.                                                                        |

##### Specific Message Contents

##### RADIO BEARER RECONFIGURATION (Step 1) (FDD)

For RADIO BEARER RECONFIGURATION in step 1, use the message sub-type indicated as "Speech in CS" or "Non speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A with the following exceptions:

| Information Element    | Value/remark                        |
|------------------------|-------------------------------------|
| Activation Time        | Current CFN-[current CFN mod 8 + 8] |
| Uplink DPCH info       |                                     |
| Scrambling code number | 1                                   |

##### RADIO BEARER RECONFIGURATION (Step 1) (TDD)

For RADIO BEARER RECONFIGURATION in step 1, use the message sub-type indicated as "Speech in CS" or "Non speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A with the following exceptions:

| Information Element             | Value/remark                        |
|---------------------------------|-------------------------------------|
| Activation Time                 | Current CFN-[current CFN mod 8 + 8] |
| Uplink DPCH timeslots and codes |                                     |
| First timeslot code list        | Assigned by SS                      |

**TRANSPORT CHANNEL RECONFIGURATION (Step 2) (FDD)**

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type indicated as "Speech in CS" or "Non-speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A with the following exceptions:

| Information Element        | Value/remark                        |
|----------------------------|-------------------------------------|
| Activation Time            | Current CFN-[current CFN mod 8 + 8] |
| Uplink DPCH info           |                                     |
| ——— Scrambling code number | 2                                   |

**TRANSPORT CHANNEL RECONFIGURATION (Step 2) (TDD)**

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type indicated as as "Speech in CS" or "Non-speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A with the following exceptions:

| Information Element             | Value/remark                                       |
|---------------------------------|----------------------------------------------------|
| Activation Time                 | Current CFN-[current CFN mod 8 + 8]                |
| Uplink DPCH timeslots and codes |                                                    |
| ——— First timeslot code list    | A different code combination that used previously. |

**TRANSPORT CHANNEL RECONFIGURATION FAILURE**

The contents of TRANSPORT CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the TRANSPORT CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark                              |
|---------------------|-------------------------------------------|
| Failure cause       | Incompatible simultaneous reconfiguration |

**8.2.4.5.5 ——— Test requirement**

After step 2 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC with IE "failure cause" set to "Incompatible simultaneous reconfiguration".

After step 3 the UE transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the new coniguration specified in step 1.

**8.2.4.6 ——— Transport channel reconfiguration from CELL\_DCH to CELL\_DCH: Failure (Invalid message reception and Invalid configuration)****8.2.4.6.1 ——— Definition****8.2.4.6.2 ——— Conformance requirement**

The UE shall keep its old configuration when the UE receives an invalid TRANSPORT CHANNEL RECONFIGURATION message which does not include any IEs except IE "Message Type". Then it shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message with the value "protocol error" set in IE "failure cause" and also "ASN.1 violation or encoding error" in IE "Protocol error cause". The UE shall keep existing configuration upon reception of a TRANSPORT CHANNEL RECONFIGURATION message, which includes some IEs set to give an invalid configuration, and then the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message including IE "failure cause" set to "invalid configuration".

**Reference**

3GPP TS 25.331 clause 8.2.4.

### 8.2.4.6.3 ————— Test purpose

To confirm that the UE transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, if the received TRANSPORT CHANNEL RECONFIGURATION message which does not include any IEs except IE "Message Type".

To confirm that the UE transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if it receives a TRANSPORT CHANNEL RECONFIGURATION message including some IEs set to give an invalid configuration..

### 8.2.4.6.4 ————— Method of test

#### Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH\_DCH (state 6-9) or PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

#### Test Procedure

The UE is in CELL\_DCH state. The SS transmits an invalid TRANSPORT CHANNEL RECONFIGURATION message to the UE, which does not include any IEs except IE "Message Type". The UE shall keep the old configuration and transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, specifying "protocol error" in IE "failure cause" and also indicating "ASN.1 violation or encoding error" in IE "Protocol error cause". SS transmits a TRANSPORT CHANNEL RECONFIGURATION message including some IEs set to give an invalid configuration. The UE keeps current configuration and transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting the value "invalid configuration" to IE "failure cause".

#### Expected sequence

| Step | Direction |    | Message                                   | Comment                                                        |
|------|-----------|----|-------------------------------------------|----------------------------------------------------------------|
|      | UE        | SS |                                           |                                                                |
| 1    |           | ←  | TRANSPORT CHANNEL RECONFIGURATION         | See specific message content.                                  |
| 2    |           | →  | TRANSPORT CHANNEL RECONFIGURATION FAILURE | The UE does not change its configuration.                      |
| 3    |           | ←  | TRANSPORT CHANNEL RECONFIGURATION         | This message includes IE set to give an invalid configuration  |
| 4    |           |    |                                           | The UE does not change its configuration                       |
| 5    |           | →  | TRANSPORT CHANNEL RECONFIGURATION FAILURE | The IE "failure cause" shall be set to "invalid configuration" |

#### Specific Message Contents

##### TRANSPORT CHANNEL RECONFIGURATION (Step 1)

| Information Element | Value/remark |
|---------------------|--------------|
| All IEs             | Not Present  |

##### TRANSPORT CHANNEL RECONFIGURATION FAILURE (Step 2)

The contents of TRANSPORT CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the TRANSPORT CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element                      | Value/remark                      |
|------------------------------------------|-----------------------------------|
| <del>Failure cause</del>                 |                                   |
| <del>—— Failure cause</del>              | Protocol error                    |
| <del>—— Protocol error information</del> |                                   |
| <del>—— Protocol error cause</del>       | ASN.1 violation or encoding error |

#### ~~TRANSPORT CHANNEL RECONFIGURATION (Step 3) (FDD)~~

Use the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A with the following exceptions:

| Information Element                     | Value/remark |
|-----------------------------------------|--------------|
| <del>—— Default DPCH Offset Value</del> | 512          |
| <del>—— DPCH frame offset</del>         | 1024         |

#### ~~TRANSPORT CHANNEL RECONFIGURATION (Step 3) (TDD)~~

Use the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A with the following exceptions:

| Information Element      | Value/remark |
|--------------------------|--------------|
| <del>—— PRACH TFCS</del> | Present      |

#### ~~TRANSPORT CHANNEL RECONFIGURATION FAILURE (Step 5)~~

The contents of TRANSPORT CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the TRANSPORT CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element      | Value/remark          |
|--------------------------|-----------------------|
| <del>Failure cause</del> | Invalid configuration |

#### ~~8.2.4.6.5 — Test requirement~~

After step 1 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC. The message shall specify "protocol error" in IE "failure cause" and set value "ASN.1 violation or encoding error" in IE "Protocol error cause".

After step 4 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting IE "failure cause" to "invalid configuration".

#### ~~8.2.4.7 — Transport channel reconfiguration from CELL\_DCH to CELL\_FACH: Success~~

##### ~~8.2.4.7.1 — Definition~~

##### ~~8.2.4.7.2 — Conformance requirement~~

The UE shall correctly reconfigure the channels according to TRANSPORT CHANNEL RECONFIGURATION message and transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

#### ~~Reference~~

3GPP TS 25.331 clause 8.2.4.

### 8.2.4.7.3 ~~Test purpose~~

~~To confirm that the UE reconfigures the channel according to a TRANSPORT CHANNEL RECONFIGURATION message.~~

### 8.2.4.7.4 ~~Method of test~~

#### ~~Initial Condition~~

~~System Simulator: 1 cell.~~

~~UE: PS-DCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108.~~

#### ~~Test Procedure~~

~~The UE is in CELL\_DCH state. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE and the UE performs a state transition from CELL\_DCH to CELL\_FACH in the same cell. The UE then reconfigures the new channels according to this message and system information messages. Finally, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC.~~

#### ~~Expected sequence~~

| Step | Direction |    | Message                                       | Comment                                                                    |
|------|-----------|----|-----------------------------------------------|----------------------------------------------------------------------------|
|      | UE        | SS |                                               |                                                                            |
| 1    | ←         |    | TRANSPORT CHANNEL<br>RECONFIGURATION          | IE "Uplink-DPCH Info" and IE<br>"Downlink-DPCH Info" are not<br>specified. |
| 2    |           |    |                                               | UE shall perform the<br>reconfiguration                                    |
| 3    | →         |    | TRANSPORT CHANNEL<br>RECONFIGURATION COMPLETE |                                                                            |

#### ~~Specific Message Contents~~

#### ~~TRANSPORT CHANNEL RECONFIGURATION~~

~~Use the message sub-type titled "Packet to CELL\_FACH from CELL\_DCH in PS" in Annex A with the following exception:~~

| Information Element | Value/remark         |
|---------------------|----------------------|
| New C-RNTI          | 0000 0000 0000 0001B |

### 8.2.4.7.5 ~~Test requirement~~

~~After step 2 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the common physical channel.~~

~~8.2.4.8 Void~~~~8.2.4.9 Transport channel reconfiguration from CELL\_DCH to CELL\_FACH: Success (Cell re-selection)~~~~8.2.4.9.1 Definition~~~~8.2.4.9.2 Conformance requirement~~

~~The UE shall initiate a cell update procedure when the UE performs cell reselection during a transport channel reconfiguration procedure. After the UE completes a cell update procedure, the UE shall continue to perform the transport channel reconfiguration procedure and correctly reconfigure the channel.~~

~~Reference~~

~~3GPP TS 25.331 clause 8.2.4.~~

~~8.2.4.9.3 Test purpose~~

~~To confirm that the UE transmits TRANSPORT CHANNEL RECONFIGURATION COMPLETE message after it completes a cell update procedure.~~

~~8.2.4.9.4 Method of test~~~~Initial Condition~~

~~System Simulator: 1 cell.~~

~~UE: PS-DCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108.~~

~~Test Procedure~~

~~The UE is in CELL\_DCH state. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message, which includes IE "Primary CPICH info" and no dedicated physical channel information to transit from CELL\_DCH to CELL\_FACH, to the UE. As the UE cannot detect the specified cell, the UE shall initiate a cell re-selection procedure and transmits a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "cell reselection". The SS shall transmit a CELL UPDATE CONFIRM message on downlink CCCH after receiving a CELL UPDATE message. The UE transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCH using AM RLC.~~

~~Expected sequence~~

| Step | Direction |    | Message                                       | Comment                                                                 |
|------|-----------|----|-----------------------------------------------|-------------------------------------------------------------------------|
|      | UE        | SS |                                               |                                                                         |
| 1    |           |    | Void                                          |                                                                         |
| 2    |           |    | Void                                          |                                                                         |
| 3    |           | ←  | TRANSPORT CHANNEL<br>RECONGURATION            | This message include IE<br>"Primary CPICH info".                        |
| 4    |           | →  | CELL UPDATE                                   | The value "cell reselection" shall<br>be set in IE "Cell update cause". |
| 5    |           | ←  | CELL UPDATE CONFIRM                           |                                                                         |
| 6    |           |    | Void                                          |                                                                         |
| 7    |           | →  | TRANSPORT CHANNEL<br>RECONFIGURATION COMPLETE |                                                                         |

## Specific Message Contents

### TRANSPORT CHANNEL RECONFIGURATION (Step 3) (FDD)

Use the message sub-type titled "Packet to CELL\_FACH from CELL\_DCH in PS" in Annex A with the following exceptions:

| Information Element                                                                              | Value/remark |
|--------------------------------------------------------------------------------------------------|--------------|
| Downlink information for each radio links<br>—— Primary CPICH info<br>—— Primary scrambling code | 150          |

### TRANSPORT CHANNEL RECONFIGURATION (Step 3) (TDD)

Use the message sub-type titled "Packet to CELL\_FACH from CELL\_DCH in PS" in Annex A with the following exceptions:

| Information Element                                                                         | Value/remark |
|---------------------------------------------------------------------------------------------|--------------|
| Downlink information for each radio links<br>—— Primary CCPCH info<br>—— Cell parameters ID | 4            |

### CELL UPDATE (Step 4)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in Annex A with the following exceptions:

| Information Element | Value/remark       |
|---------------------|--------------------|
| Cell Update Cause   | "cell reselection" |

### CELL UPDATE CONFIRM (Step 5)

The contents of CELL UPDATE CONFIRM message is same as "CELL UPDATE CONFIRM message" as found in Annex A.

#### 8.2.4.9.5 Test requirement

After step 3 the UE shall transmit a CELL UPDATE message on the CCCH with IE "Cell update cause" set to "cell reselection".

After step 6 UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### 8.2.4.10 Transport channel reconfiguration from CELL\_FACH to CELL\_DCH: Success

#### 8.2.4.10.1 Definition

#### 8.2.4.10.2 Conformance requirement

The UE shall correctly reconfigure the channels according to a TRANSPORT CHANNEL RECONFIGURATION message, which trigger a state transition from CELL\_FACH to CELL\_DCH in the same cell.

#### Reference

3GPP TS 25.331 clause 8.2.4.

### 8.2.4.10.3 ~~Test purpose~~

To confirm that the UE reconfigures a new channel using dedicated physical channel according to a TRANSPORT CHANNEL RECONFIGURATION message.

### 8.2.4.10.4 ~~Method of test~~

#### ~~Initial Condition~~

System Simulator: 1 cell.

UE: PS-DCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

#### ~~Test Procedure~~

The UE is in CELL\_FACH state. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message, which includes IE "Uplink DPCH info" and IE "Downlink DPCH info" leading to a state transition from CELL\_FACH to CELL\_DCH in the same cell, to the UE. The UE shall reconfigure the new channel according to this message. Finally, the UE transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

#### ~~Expected sequence~~

| Step | Direction |    | Message                                    | Comment                                                                         |
|------|-----------|----|--------------------------------------------|---------------------------------------------------------------------------------|
|      | UE        | SS |                                            |                                                                                 |
| 1    | ←         |    | TRANSPORT CHANNEL RECONFIGURATION          | Includes both IE "Uplink DPCH Info" and IE "Downlink DPCH Info" in the message. |
| 2    |           |    |                                            | Reconfiguration of transport channel                                            |
| 3    | →         |    | TRANSPORT CHANNEL RECONFIGURATION COMPLETE |                                                                                 |

#### ~~Specific Message Contents~~

#### ~~TRANSPORT CHANNEL RECONFIGURATION~~

Use the message sub-type titled "Packet to CELL\_DCH from CELL\_FACH in PS" in Annex A.

### 8.2.4.10.5 ~~Test requirement~~

After step 2 the UE shall transmit a TRANSPORT RECONFIGURATION COMPLETE message on the newly configured DPCH.

### 8.2.4.11 ~~Transport channel reconfiguration from CELL\_FACH to CELL\_DCH: Failure (Unsupported configuration)~~

#### 8.2.4.11.1 ~~Definition~~

#### 8.2.4.11.2 ~~Conformance requirement~~

The UE shall keep its old configuration when the UE receives a TRANSPORT CHANNEL RECONFIGURATION message which includes unsupported configuration parameters and transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "configuration unsupported" in IE "failure cause".

#### ~~Reference~~

3GPP TS 25.331 clause 8.2.4

### 8.2.4.11.3 ~~Test purpose~~

To confirm that the UE transmits a ~~TRANSPORT CHANNEL RECONFIGURATION FAILURE~~ message on the DCCH using AM RLC when it receives a ~~TRANSPORT CHANNEL RECONFIGURATION~~ message which includes unsupported configuration parameters.

### 8.2.4.11.4 ~~Method of test~~

#### ~~Initial Condition~~

~~System Simulator: 1 cell.~~

~~UE: PS-DCCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.~~

#### ~~Test Procedure~~

The UE is in CELL\_FACH state. The SS transmits a ~~TRANSPORT CHANNEL RECONFIGURATION~~ message, which includes configuration parameters unsupported by the UE, to the UE. The UE shall transmit a ~~TRANSPORT CHANNEL RECONFIGURATION FAILURE~~ message on the DCCH using AM RLC, setting "configuration unsupported" in IE "failure cause".

#### ~~Expected sequence~~

| Step | Direction |    | Message                                              | Comment                                                  |
|------|-----------|----|------------------------------------------------------|----------------------------------------------------------|
|      | UE        | SS |                                                      |                                                          |
| 1    | ←         |    | <del>TRANSPORT CHANNEL RECONGURATION</del>           | The message includes configuration unsupported by the UE |
| 2    | →         |    | <del>TRANSPORT CHANNEL RECONFIGURATION FAILURE</del> | The UE shall not change its configuration.               |

#### ~~Specific Message Contents~~

##### ~~TRANSPORT CHANNEL RECONFIGURATION (FDD)~~

The contents of ~~TRANSPORT CHANNEL RECONFIGURATION~~ message in this test case is identical to the message sub-type title "Packet to CELL\_DCH from CELL\_FACH in PS" as found in Annex A with the following exceptions:

| Information Element             | Value/remark |
|---------------------------------|--------------|
| Frequency info                  |              |
| <del>UARFCN uplink (Nu)</del>   | 0            |
| <del>UARFCN downlink (Nd)</del> | 950          |

##### ~~TRANSPORT CHANNEL RECONFIGURATION (TDD)~~

The contents of ~~TRANSPORT CHANNEL RECONFIGURATION~~ message in this test case is identical to the message sub-type title "Packet to CELL\_DCH from CELL\_FACH in PS" as found in Annex A with the following exceptions:

| Information Element    | Value/remark |
|------------------------|--------------|
| Frequency info         |              |
| <del>UARFCN (Nt)</del> | 0            |

##### ~~TRANSPORT CHANNEL RECONFIGURATION FAILURE~~

The contents of ~~TRANSPORT CHANNEL RECONFIGURATION FAILURE~~ message in this test case is the same as the ~~TRANSPORT CHANNEL RECONFIGURATION FAILURE~~ message as found in Annex A, with the following exceptions:

| Information Element | Value/remark              |
|---------------------|---------------------------|
| Failure-cause       | Configuration unsupported |

#### 8.2.4.11.5 ——— Test requirement

After step 1 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC. The UE shall set "configuration unsupported" in IE "failure-cause" of the message.

#### 8.2.4.12 ——— Transport channel reconfiguration from CELL\_FACH to CELL\_DCH: Failure (Physical channel failure and successful reversion to old channel)

##### 8.2.4.12.1 ——— Definition

##### 8.2.4.12.2 ——— Conformance requirement

The UE shall revert to the old configuration when the UE has failed to reconfigure the new transport channel requested and detects the same serving cell only. The UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message to UTRAN.

#### Reference

3GPP TS 25.331 clause 8.2.4.

##### 8.2.4.12.3 ——— Test purpose

To confirm that the UE reverts to the old configuration and transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, if the UE fails to reconfigure the new channel according to a TRANSPORT CHANNEL RECONFIGURATION message.

##### 8.2.4.12.4 ——— Method of test

#### Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

#### Test Procedure

The UE is in CELL\_DCH state. SS transmits a TRANSPORT CHANNEL RECONFIGURATION message, which includes the new transport channel parameters, to the UE. However, SS keeps its current physical channel configuration.. Hence, the UE shall experience a failure in the reconfiguration process. After T312 expires, the UE shall revert to the old channel configuration. Then the UE transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, stating the reason "physical channel failure" in IE "failure-cause".

#### Expected sequence

| Step | Direction |    | Message                                   | Comment                                                                                    |
|------|-----------|----|-------------------------------------------|--------------------------------------------------------------------------------------------|
|      | UE        | SS |                                           |                                                                                            |
| 1    |           | ←  | TRANSPORT CHANNEL RECONGURATION           | Message includes IE "Downlink DPCCH Info" and IE "Uplink DPCCH Info"                       |
| 2    |           |    |                                           | SS does not reconfigure the channel causing the UE to detect a physical channel failure.   |
| 3    |           | →  | TRANSPORT CHANNEL RECONFIGURATION FAILURE | After T312 expires the UE shall revert to the old configuration and transmit this message. |

## Specific Message Contents

### TRANSPORT CHANNEL RECONFIGURATION

Use the message sub-type titled "Packet to CELL\_DCH from CELL\_FACH in PS" in Annex A.

### TRANSPORT CHANNEL RECONFIGURATION FAILURE

The contents of TRANSPORT CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the TRANSPORT CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark             |
|---------------------|--------------------------|
| Failure cause       | Physical channel failure |

#### 8.2.4.12.5 Test requirement

After step 2 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting the value "physical channel failure" in IE "failure cause".

#### 8.2.4.13 Transport channel reconfiguration from CELL\_FACH to CELL\_DCH: Failure (Physical channel failure and reversion failure)

##### 8.2.4.13.1 Definition

##### 8.2.4.13.2 Conformance requirement

The UE shall initiate a cell update procedure when it selects another cell, following a physical channel failure in the transport channel reconfiguration procedure. After the UE completes the cell update procedure, the UE transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "physical channel failure" in IE "failure cause".

## Reference

3GPP TS 25.331 clause 8.2.4.

##### 8.2.4.13.3 Test purpose

To confirm that the UE transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message after it completes a cell update procedure, when the UE cannot reconfigure the new channel before timer T312 expires.

##### 8.2.4.13.4 Method of test

## Initial Condition

System Simulator: 2 cells – Cell 1 and 2 are active.

UE: PS-DCCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108 in cell 1.

## Test Procedure

Table 8.2.4.13

| Parameter              | Unit         | Cell 1 |     | Cell 2 |     |
|------------------------|--------------|--------|-----|--------|-----|
|                        |              | T0     | T1  | T0     | T1  |
| UTRA-RF Channel Number |              | Ch. 1  |     | Ch. 1  |     |
| CPICH-Ec (FDD)         | dBm/3.84 MHz | -60    | -75 | -75    | -60 |
| P-CCPCH RSCP (TDD)     | dBm          | -60    | -75 | -75    | -60 |

Table 8.2.4.13 illustrates the downlink power to be applied for the 2-cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 2.

The UE is in CELL\_FACH state in cell 1. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE in cell 1. The message includes a new configuration parameters. However, the SS does not reconfigure the specified configuration. At the same time, the SS configures its downlink transmission power settings according to columns "T1" in table 8.2.4.13. As a result, the UE cannot synchronise with the SS on the new DPCH before T312 expires. The UE initiates the cell re-selection procedure transmits a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "cell reselection" in cell 2. The SS shall transmit a CELL UPDATE CONFIRM message on downlink CCCH after receiving a CELL UPDATE message. The UE transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM-RLC, setting the value "physical channel failure" to IE "failure cause".

## Expected sequence

| Step | Direction |    | Message                                   | Comment                                                                                                                                                                                                               |
|------|-----------|----|-------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                           |                                                                                                                                                                                                                       |
| 1    |           | ←  | TRANSPORT CHANNEL RECONFIGURATION         |                                                                                                                                                                                                                       |
| 2    |           |    |                                           | The SS does not reconfigure L1 and transport channel in accordance with the settings in the message, and applies the downlink transmission power settings, according to the values in columns "T1" of table 8.2.4.13. |
| 3    |           |    | Void                                      |                                                                                                                                                                                                                       |
| 4    |           |    |                                           | The UE shall find cell 2, camp onto it,                                                                                                                                                                               |
| 5    |           | →  | CELL UPDATE                               | This message include the value "cell reselection" set in IE "Cell update cause".                                                                                                                                      |

| 8    |           | →  | TRANSPORT CHANNEL RECONFIGURATION FAILURE | The IE "failure cause" shall be set to "physical channel failure"                                                                                                                                                     |

## Specific Message Contents

## TRANSPORT CHANNEL RECONFIGURATION (Step 1)

Use the message sub-type titled "Packet to CELL\_DCH from CELL\_FACH in PS" in Annex A.

### CELL UPDATE (Step 5)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in Annex A with the following exceptions:

| Information Element | Value/remark                  |
|---------------------|-------------------------------|
| U-RNTI              |                               |
| -SRNC Identity      | Assigned previously in cell 1 |
| -S-RNTI             | Assigned previously in cell 1 |
| Cell Update Cause   | "cell reselection"            |

### CELL UPDATE CONFIRM (Step 6)

The contents of CELL UPDATE CONFIRM message are identical as "CELL UPDATE CONFIRM message" as found in Annex A.

### TRANSPORT CHANNEL RECONFIGURATION FAILURE (Step 8)

The contents of TRANSPORT CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the TRANSPORT CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark               |
|---------------------|----------------------------|
| Failure-cause       | "physical channel failure" |

#### 8.2.4.13.5 — Test requirement

After step 4 the UE shall transmit a CELL UPDATE message on the uplink CCCH with IE "Cell update cause" set to "cell reselection" in cell 2.

After step 7 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting the IE "failure-cause" to "physical channel failure".

#### 8.2.4.14 — Transport Channel Reconfiguration from CELL\_FACH to CELL\_DCH: Failure (Incompatible simultaneous reconfiguration)

##### 8.2.4.14.1 — Definition

##### 8.2.4.14.2 — Conformance requirement

If the UE receives a TRANSPORT CHANNEL RECONFIGURATION message during a reconfiguring procedure due to a radio bearer message other than TRANSPORT CHANNEL RECONFIGURATION message, it shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC.

#### Reference

3GPP TS 25.331 clause 8.2.4, clause 8.6.3.11.

##### 8.2.4.14.3 — Test purpose

To confirm that if the UE receives a TRANSPORT CHANNEL RECONFIGURATION message during a reconfiguring procedure due to a radio bearer message other than a TRANSPORT CHANNEL RECONFIGURATION, it shall keep its configuration as if the TRANSPORT CHANNEL RECONFIGURATION message had not been received and complete the reconfiguration procedure according to the previously received message.

#### 8.2.4.14.4 Method of test

##### Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

##### Test Procedure

The UE is in CELL\_FACH state. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message before the "activation time" indicated in the RADIO BEARER RECONFIGURATION message expires. When the UE receives the TRANSPORT CHANNEL RECONFIGURATION message, the UE shall keep its current configuration as if it had not received the TRANSPORT CHANNEL RECONFIGURATION message and shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC with IE "failure cause" set to "incompatible simultaneous reconfiguration". After the SS acknowledges the TRANSPORT CHANNEL RECONFIGURATION FAILURE message, the UE reconfigures the new physical channel parameters upon the activation time and transmits a RADIO BEARER RECONFIGURATION COMPLETE message on DCCH using AM RLC.

##### Expected sequence

| Step | Direction |    | Message                                   | Comment                                                                                 |
|------|-----------|----|-------------------------------------------|-----------------------------------------------------------------------------------------|
|      | UE        | SS |                                           |                                                                                         |
| 1    | ←         |    | RADIO BEARER RECONFIGURATION              |                                                                                         |
| 2    | ←         |    | TRANSPORT CHANNEL RECONFIGURATION         | Sent before the elapse of the Activation time specified in step 1.                      |
| 3    |           | →  | TRANSPORT CHANNEL RECONFIGURATION FAILURE | The UE does not reconfigure according to the TRANSPORT CHANNEL RECONFIGURATION message. |
| 4    |           | →  | RADIO BEARER RECONFIGURATION COMPLETE     | This message is on DCCH using AM RLC.                                                   |

##### Specific Message Contents

##### RADIO BEARER RECONFIGURATION (Step 1) (FDD)

For RADIO BEARER RECONFIGURATION in step 1, use the message sub-type indicated as "Packet to CELL\_DCH from CELL\_FACH in PS" found in Annex A with the following exceptions

| Information Element    | Value/remark                        |
|------------------------|-------------------------------------|
| Activation Time Info   | Current CFN-[current CFN mod 8 + 8] |
| Uplink DPCH info       |                                     |
| Scrambling code number | 1                                   |

##### RADIO BEARER RECONFIGURATION (Step 1) (TDD)

For RADIO BEARER RECONFIGURATION in step 1, use the message sub-type indicated as "Packet to CELL\_DCH from CELL\_FACH in PS" found in Annex A with the following exceptions

| Information Element             | Value/remark                        |
|---------------------------------|-------------------------------------|
| Activation Time                 | Current CFN-[current CFN mod 8 + 8] |
| Uplink DPCH timeslots and codes |                                     |
| First timeslot code list        | Assigned by SS                      |

##### TRANSPORT CHANNEL RECONFIGURATION (Step 2) (FDD)

For TRANSPORT CHANNEL RECONFIGURATION in step 2, use the message sub-type indicated as "Packet to CELL\_DCH from CELL\_FACH in PS" as found in Annex A with the following exceptions:

| Information Element       | Value/remark |
|---------------------------|--------------|
| Activation-Time Info      | Not Present  |
| Uplink DPCH info          |              |
| ———Scrambling-code-number | 2            |

#### TRANSPORT CHANNEL RECONFIGURATION (Step 2) (TDD)

For TRANSPORT CHANNEL RECONFIGURATION in step 2, use the message sub-type indicated as "Packet to CELL\_DCH from CELL\_FACH in PS" as found in Annex A with the following exceptions:

| Information Element              | Value/remark                                       |
|----------------------------------|----------------------------------------------------|
| Activation-Time                  | Not Present                                        |
| -Uplink DPCH timeslots and codes |                                                    |
| -First timeslot code list        | A different code combination that used previously. |

#### TRANSPORT CHANNEL RECONFIGURATION FAILURE

The contents of TRANSPORT CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the TRANSPORT CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark                              |
|---------------------|-------------------------------------------|
| Failure-cause       | Incompatible simultaneous reconfiguration |

##### 8.2.4.14.5 ——— Test requirement

After step 2 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC with IE "failure-cause" set to "Incompatible simultaneous reconfiguration".

After step 3 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message.

##### 8.2.4.15 ——— Transport channel reconfiguration from CELL\_FACH to CELL\_DCH: Failure (Invalid message reception and Invalid configuration)

###### 8.2.4.15.1 ——— Definition

###### 8.2.4.15.2 ——— Conformance requirement

The UE shall keep its old configuration when the UE receives an invalid TRANSPORT CHANNEL RECONFIGURATION message which does not includes any IEs except IE "Message Type". The UE shall then transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message, specifying "protocol error" in IE "failure-cause" and also "ASN.1 violation or encoding error" in IE "Protocol error cause". The UE shall keep existing configuration upon the reception of a TRANSPORT CHANNEL RECONFIGURATION message, which includes some IEs set to give an invalid configuration, and then the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE including IE "failure-cause" set to "invalid configuration".

#### Reference

3GPP TS 25.331 clause 8.2.4.

###### 8.2.4.15.3 ——— Test purpose

To confirm that the UE transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, if it receives an invalid TRANSPORT CHANNEL RECONFIGURATION message which does not include any IEs except IE "Message Type".

To confirm that the UE transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if it receives a TRANSPORT CHANNEL RECONFIGURATION message including some IEs set to give an invalid configuration.

#### 8.2.4.15.4 Method of test

##### Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

##### Test Procedure

The UE is in CELL\_FACH state. The SS transmits an invalid TRANSPORT CHANNEL RECONFIGURATION message, which does not include any IEs except IE "Message Type", to the UE. The UE shall keep the old configuration and then transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC. This message shall contain the value "protocol error" in IE "failure cause" and also "ASN.1 violation or encoding error" in IE "Protocol error cause". SS transmits TRANSPORT CHANNEL RECONFIGURATION message including some IEs set to give an invalid configuration. The UE keeps its current configuration and transmits a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting IE "failure cause" to "invalid configuration".

##### Expected sequence

| Step | Direction |    | Message                                   | Comment                                                                 |
|------|-----------|----|-------------------------------------------|-------------------------------------------------------------------------|
|      | UE        | SS |                                           |                                                                         |
| 1    |           | ←  | TRANSPORT CHANNEL RECONFIGURATION         | See specific message content.                                           |
| 2    |           | →  | TRANSPORT CHANNEL RECONFIGURATION FAILURE | The UE does not change its configuration.                               |
| 3    |           | ←  | TRANSPORT CHANNEL RECONFIGURATION         | This message includes IEs which is set to give an invalid configuration |
| 4    |           |    |                                           | The UE does not change its configuration.                               |
| 5    |           | →  | TRANSPORT CHANNEL RECONFIGURATION FAILURE | The IE "failure cause" shall be set to "invalid configuration"          |

##### Specific Message Contents

##### TRANSPORT CHANNEL RECONFIGURATION (Step 1)

| Information Element | Value/remark |
|---------------------|--------------|
| All IEs             | Not Present  |

##### TRANSPORT CHANNEL RECONFIGURATION FAILURE (Step 2)

The contents of TRANSPORT CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the TRANSPORT CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element          | Value/remark                      |
|------------------------------|-----------------------------------|
| Failure cause                |                                   |
| → Failure cause              | Protocol error                    |
| → Protocol error information |                                   |
| → Protocol error cause       | ASN.1 violation or encoding error |

### TRANSPORT CHANNEL RECONFIGURATION (Step 3) (FDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL\_DCH from CELL\_FACH in PS" as found in Annex A with the following exceptions:

| Information Element                  | Value/remark |
|--------------------------------------|--------------|
| <del>Default DPCH Offset Value</del> | 512          |
| <del>DPCH frame offset</del>         | 1024         |

### TRANSPORT CHANNEL RECONFIGURATION (Step 3) (TDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL\_DCH from CELL\_FACH in PS" as found in Annex A with the following exceptions:

| Information Element   | Value/remark |
|-----------------------|--------------|
| <del>PRACH TFCS</del> | Present      |

### TRANSPORT CHANNEL RECONFIGURATION FAILURE (Step 5)

The contents of TRANSPORT CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the TRANSPORT CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark          |
|---------------------|-----------------------|
| Failure cause       | Invalid configuration |

#### 8.2.4.15.5 ~~Test requirement~~

After step 1 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC. The content of the message shall specify "protocol error" in IE "failure cause" and also "ASN.1 violation or encoding error" in IE "Protocol error cause".

After step 4 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting IE "failure cause" to "invalid configuration".

#### 8.2.4.16 ~~Transport channel reconfiguration from CELL\_FACH to CELL\_FACH: Success with no transport channel type switching~~

##### 8.2.4.16.1 ~~Definition~~

##### 8.2.4.16.2 ~~Conformance requirement~~

The UE shall remain in CELL\_FACH state in another cell and transmit TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC after transition from CELL\_FACH in the current cell to CELL\_FACH in another cell as requested in the received TRANSPORT CHANNEL RECONFIGURATION message.

#### Reference

3GPP TS 25.331 clause 8.2.4.

##### 8.2.4.16.3 ~~Test purpose~~

To confirm that the UE transits from CELL\_FACH in the current cell to CELL\_FACH in another cell according to a TRANSPORT CHANNEL RECONFIGURATION message received from the SS.

8.2.4.16.4 Method of test

Initial Condition

System Simulator: 2 cells—Cell 1 and 2 are active.

UE: PS-DCCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

Table 8.2.4.16

| Parameter              | Unit          | Cell 1 |     | Cell 2 |     |
|------------------------|---------------|--------|-----|--------|-----|
|                        |               | T0     | T1  | T0     | T1  |
| UTRA—RF Channel Number |               | Ch. 1  |     | Ch. 1  |     |
| CPICH Ec (FDD)         | dBm/ 3.84 MHz | -60    | -75 | -75    | -60 |
| P-CCPCH RSCP (TDD)     | dBm           | -60    | -75 | -75    | -60 |

Table 8.2.4.16 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 2.

The UE is in CELL\_FACH state in cell 1. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message, which includes the parameters that invoke the UE to transit from CELL\_FACH in the current cell to CELL\_FACH in cell 2, to the UE. Then the SS configures its downlink transmission power settings according to columns "T1" in table 8.2.4.16. The UE moves to cell 2 and configures the new transport channels and the common physical channel according to the system information messages and transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM-RLC.

Expected sequence

| Step | Direction |    | Message                                    | Comment                                                                                                             |
|------|-----------|----|--------------------------------------------|---------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                            |                                                                                                                     |
| 1    | ←         |    | TRANSPORT CHANNEL RECONFIGURATION          |                                                                                                                     |
| 2    |           |    |                                            | The SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.2.4.16. |
| 3    | →         |    | TRANSPORT CHANNEL RECONFIGURATION COMPLETE |                                                                                                                     |

Specific Message Contents

TRANSPORT CHANNEL RECONFIGURATION (FDD)

Use the message sub-type titled "Packet to CELL\_FACH from CELL\_FACH in PS" in Annex A with the following exceptions:

| Information Element                                                                                | Value/remark |
|----------------------------------------------------------------------------------------------------|--------------|
| Downlink information for each radio links<br>——→ Primary CPICH info<br>——→ Primary scrambling code | 150          |

**TRANSPORT CHANNEL RECONFIGURATION (TDD)**

Use the message sub-type titled "Packet to CELL\_FACH from CELL\_FACH in PS" in Annex A with the following exceptions:

| Information Element                                                                                         | Value/remark |
|-------------------------------------------------------------------------------------------------------------|--------------|

**8.2.4.16.5 ~~Test requirement~~**

After step 2 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on DCCH using AM RLC in cell 2.

**8.2.4.17 ~~Transport channel reconfiguration from CELL\_FACH to CELL\_FACH: Success (Cell re-selection)~~****8.2.4.17.1 ~~Definition~~****8.2.4.17.2 ~~Conformance requirement~~**

The UE shall initiate the cell update procedure when the UE performs cell reselection during a transport channel reconfiguration procedure. After the UE complete cell update procedure, the UE shall continue to perform the transport channel reconfiguration procedure and correctly reconfigure the channel.

**Reference**

3GPP TS 25.331 clause 8.2.4.

**8.2.4.17.3 ~~Test purpose~~**

To confirm that the UE transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message after UE completes a cell update procedure indicated by a TRANSPORT CHANNEL RECONFIGURATION message.

**8.2.4.17.4 ~~Method of test~~****Initial Condition**

System Simulator: 2 cells – Cell 1 and 2 are active.

UE: PS-DCCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

**Test Procedure****Table 8.2.4.17**

| Parameter              | Unit         | Cell 1 |     | Cell 2 |     |
|------------------------|--------------|--------|-----|--------|-----|
|                        |              | T0     | T1  | T0     | T1  |
| UTRA-RF Channel Number |              | Ch. 1  |     | Ch. 1  |     |
| CPICH Ec (FDD)         | dBm/3.84 MHz | -60    | -75 | -75    | -60 |
| P-CCPCH RSCP (TDD)     | dBm          | -60    | -75 | -75    | -60 |

Table 8.2.4.17 illustrates the downlink power to be applied for the 2-cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission-power settings for cell 1 and cell 2.

The UE is in CELL\_FACH state in cell 1. On transmitting a TRANSPORT CHANNEL RECONFIGURATION message, which does not include the IE "Primary CPICH info", the SS configures its downlink transmission power settings according to columns "T1" in table 8.2.4.17. The UE shall initiate the cell reselection procedure. The UE transmits a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "cell reselection" in cell 2. The SS shall transmit a CELL UPDATE CONFIRM message on downlink CCCH after receiving a CELL UPDATE message. The UE transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

#### Expected sequence

| Step | Direction |    | Message                                    | Comment                                                                                                             |
|------|-----------|----|--------------------------------------------|---------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                            |                                                                                                                     |
| 1    | ←         |    | TRANSPORT CHANNEL RECONFIGURATION          | This message does not include IE "Primary CPICH info"                                                               |
| 2    |           |    |                                            | The SS applies the downlink transmission-power settings, according to the values in columns "T1" of table 8.2.4.17. |
| 3    |           |    | Void                                       |                                                                                                                     |
| 4    | →         |    | CELL UPDATE                                | The value "cell reselection" shall be set in IE "Cell update cause".                                                |
| 5    | ←         |    | CELL UPDATE CONFIRM                        |                                                                                                                     |

| 7    | →         |    | TRANSPORT CHANNEL RECONFIGURATION COMPLETE |                                                                                                                     |

#### Specific Message Contents

##### TRANSPORT CHANNEL RECONFIGURATION (Step 1) (FDD)

Use the message sub-type titled "Packet to CELL\_FACH from CELL\_FACH in PS" in Annex A with the following exceptions:

| Information Element                                                                            | Value/remark |
|------------------------------------------------------------------------------------------------|--------------|
| Downlink information for each radio links<br>→ Primary CPICH info<br>→ Primary scrambling code | Not Present  |

##### TRANSPORT CHANNEL RECONFIGURATION (Step 1) (TDD)

Use the message sub-type titled "Packet to CELL\_FACH from CELL\_FACH in PS" in Annex A with the following exceptions:

| Information Element                                                                       | Value/remark |
|-------------------------------------------------------------------------------------------|--------------|
| Downlink information for each radio links<br>→ Primary CCPCH info<br>→ Cell parameters ID | Not present  |

##### CELL UPDATE (Step 4)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in Annex A for FDD and Annex A for TDD.

### CELL UPDATE CONFIRM (Step 5)

The contents of CELL UPDATE CONFIRM message is same as "CELL UPDATE CONFIRM message" as found in Annex A.

#### 8.2.4.17.5 Test requirement

After step 3 the UE shall transmit a CELL UPDATE message on the CCCH with IE "Cell update cause" set to "cell reselection".

After step 6 UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### 8.2.4.18 Transport Channel Reconfiguration from CELL\_DCH to CELL\_DCH: Success (Subsequently received)

#### 8.2.4.18.1 Definition

#### 8.2.4.18.2 Conformance requirement

If the UE receives a TRANSPORT CHANNEL RECONFIGURATION message before the UE configures the radio bearer according to the previous TRANSPORT CHANNEL RECONFIGURATION message, the UE shall ignore the new TRANSPORT CHANNEL RECONFIGURATION message and configure according to the first TRANSPORT CHANNEL RECONFIGURATION message received. Finally, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

#### Reference

3GPP TS 25.331 clause 8.2.4, clause 8.6.3.11.

#### 8.2.4.18.3 Test purpose

To confirm that if the UE receives a TRANSPORT CHANNEL RECONFIGURATION message before the UE configures the radio bearer according to the previous TRANSPORT CHANNEL RECONFIGURATION message it ignores the second TRANSPORT CHANNEL RECONFIGURATION message and configures according to the previous TRANSPORT CHANNEL RECONFIGURATION message.

#### 8.2.4.18.4 Method of test

#### Initial Condition

System Simulator: 1 cell

UE: CS-DCCH+DTCH\_DCH (state 6-9) or PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

## Test Procedure

The UE is in CELL\_DCH state. When the SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE before the activation time specified in the previous TRANSPORT CHANNEL RECONFIGURATION message elapses, the UE ignores the new TRANSPORT CHANNEL RECONFIGURATION message and configures according to the previous TRANSPORT CHANNEL RECONFIGURATION message. Finally, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

## Expected sequence

| Step | Direction |    | Message                                    | Comment                                                                                                                                                                                                                                                         |
|------|-----------|----|--------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                            |                                                                                                                                                                                                                                                                 |
| 1    |           | ←  | TRANSPORT CHANNEL RECONFIGURATION          | For FDD, the "Secondary scrambling code is set to "1" and for TDD , the code combination is assigned by SS.                                                                                                                                                     |
| 2    |           | ←  | TRANSPORT CHANNEL RECONFIGURATION          | SS send this message before the expiry of "activation time" specified in TRANSPORT CHANNEL SETUP message of step 1. For FDD the IE "Secondary scrambling code" is set to "2". For TDD the code combination assigned is different from that assigned in stage 1. |
| 3    |           | →  | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | The UE ignores the TRANSPORT CHANNEL RECONFIGURATION message in step 2 and configures according to the TRANSPORT CHANNEL RECONFIGURATION message in step 1.                                                                                                     |

## Specific Message Contents

### TRANSPORT CHANNEL RECONFIGURATION (Step 1) (FDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION messages in this test case is identical to the message sub-type title as "Speech in CS" or "Non-speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A with the following exceptions:

| Information Element        | Value/remark                                     |
|----------------------------|--------------------------------------------------|
| Activation Time            | [256+Current CFN-[current CFN mod 8 + 8]]MOD 256 |
| ~Uplink DPCH Info          |                                                  |
| ~Secondary scrambling code | 1                                                |

### TRANSPORT CHANNEL RECONFIGURATION (Step 1) (TDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION messages in this test case is identical to the message sub-type title as "Speech in CS" or "Non-speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A with the following exceptions:

| Information Element              | Value/remark                                     |
|----------------------------------|--------------------------------------------------|
| Activation Time                  | [256+Current CFN-[current CFN mod 8 + 8]]MOD 256 |
| ~Uplink DPCH timeslots and codes |                                                  |
| ~First timeslot code list        | Assigned in step 1                               |

### TRANSPORT CHANNEL RECONFIGURATION (Step 2)

The contents of TRANSPORT CHANNEL RECONFIGURATION messages in this test case is identical to the message sub-type title as "Speech in CS" or "Non-speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A with the following exceptions:

| Information Element        | Value/remark |
|----------------------------|--------------|
| Activation-Time            | Not Present  |
| ~Uplink DPCH Info          |              |
| ~Secondary scrambling code | 2            |

#### TRANSPORT CHANNEL RECONFIGURATION (Step 2) (TDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION messages in this test case is identical to the message sub-type title as "Speech in CS" or "Non-speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A with the following exceptions:

| Information Element              | Value/remark                                         |
|----------------------------------|------------------------------------------------------|
| Activation-Time                  | Not Present                                          |
| ~Uplink DPCH timeslots and codes |                                                      |
| ~First timeslot code list        | A different code combination to that used in step 1. |

#### 8.2.4.18.5 Test requirement

After step 2 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

#### 8.2.4.19 Transport Channel Reconfiguration from CELL\_FACH to CELL\_DCH: Success (Subsequently received)

##### 8.2.4.19.1 Definition

##### 8.2.4.19.2 Conformance requirement

If the UE receives a TRANSPORT CHANNEL RECONFIGURATION message before the UE configures the radio bearer according to the previous TRANSPORT CHANNEL RECONFIGURATION message, the UE shall ignore the new TRANSPORT CHANNEL RECONFIGURATION message and configure according to the first TRANSPORT CHANNEL RECONFIGURATION message received. Finally, the UE shall transmit TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

#### Reference

3GPP TS 25.331 clause 8.2.4, clause 8.6.3.11.

##### 8.2.4.19.3 Test purpose

To confirm that if the UE receives a TRANSPORT CHANNEL RECONFIGURATION message before the UE configures the radio bearer according to the previous TRANSPORT CHANNEL RECONFIGURATION message it ignores the second TRANSPORT CHANNEL RECONFIGURATION message and configures according to the previous TRANSPORT CHANNEL RECONFIGURATION message.

##### 8.2.4.19.4 Method of test

#### Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

#### Test Procedure

The UE is in CELL\_FACH state. When the SS transmits a TRANSPORT CHANNEL RECONFIGURATION message to the UE before the activation time specified in the previous TRANSPORT CHANNEL RECONFIGURATION message elapses, the UE ignores the new TRANSPORT CHANNEL RECONFIGURATION message and configures

according to the previous TRANSPORT CHANNEL RECONFIGURATION message. Finally, the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

#### Expected sequence

| Step | Direction |    | Message                                    | Comment                                                                                                                                                                                                   |
|------|-----------|----|--------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                            |                                                                                                                                                                                                           |
| 1    | ←         |    | TRANSPORT CHANNEL RECONFIGURATION          | For FDD, the "Secondary scrambling code" is set to "1" and for TDD, the code combination is assigned by SS.                                                                                               |
| 2    | ←         |    | TRANSPORT CHANNEL RECONFIGURATION          | Sent before the elapse of the activation time specified in step 1. For FDD the IE "Secondary scrambling code" is set to "2". For TDD the code combination assigned is different that assigned in stage 1. |
| 3    | →         |    | TRANSPORT CHANNEL RECONFIGURATION COMPLETE | The UE ignores the TRANSPORT CHANNEL RECONFIGURATION message in step 2 and configures according to the TRANSPORT CHANNEL RECONFIGURATION message in step 1.                                               |

#### Specific Message Contents

##### TRANSPORT CHANNEL RECONFIGURATION (Step 1) (FDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL\_DCH from CELL\_FACH in PS" found in Annex A with the following exceptions:

| Information Element         | Value/remark                                                                   |
|-----------------------------|--------------------------------------------------------------------------------|
| Activation Time Info        | $[256 + \text{Current CFN} - [\text{current CFN mod } 8 + 8]] \text{MOD } 256$ |
| - Uplink DPCH Info          |                                                                                |
| - Secondary scrambling code | 1                                                                              |

##### TRANSPORT CHANNEL RECONFIGURATION (Step 1) (TDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL\_DCH from CELL\_FACH in PS" found in Annex A with the following exceptions:

| Information Element               | Value/remark                                                                   |
|-----------------------------------|--------------------------------------------------------------------------------|
| Activation Time                   | $[256 + \text{Current CFN} - [\text{current CFN mod } 8 + 8]] \text{MOD } 256$ |
| - Uplink DPCH timeslots and codes |                                                                                |
| - First timeslot code list        | Assigned in step 1                                                             |

##### TRANSPORT CHANNEL RECONFIGURATION (Step 2) (FDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL\_DCH from CELL\_FACH in PS" found in Annex A with the following exceptions:

| Information Element         | Value/remark |
|-----------------------------|--------------|
| Activation Time             | Not Present  |
| - Uplink DPCH Info          |              |
| - Secondary scrambling code | 2            |

### TRANSPORT CHANNEL RECONFIGURATION (Step 2) (TDD)

The contents of TRANSPORT CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL\_DCH from CELL\_FACH in PS" found in Annex A with the following exceptions:

| Information Element                                             | Value/remark                                         |
|-----------------------------------------------------------------|------------------------------------------------------|
| Activation Time                                                 | Not Present                                          |
| - Uplink DPCH timeslots and codes<br>- First timeslot code list | A different code combination to that used in step 1. |

#### 8.2.4.19.5 Test requirement

After step 2 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### 8.2.4.20 Transport Channel Reconfiguration from CELL\_DCH to CELL\_PCH: Success

#### 8.2.4.20.1 Definition

#### 8.2.4.20.2 Conformance requirement

The UE shall transmit TRANSPORT CHANNEL RECONFIGURATION COMPLETE message after it receives a TRANSPORT CHANNEL RECONFIGURATION message which invoke the UE to transit from CELL\_DCH to CELL\_PCH. And then, the UE shall enter CELL\_PCH state.

#### Reference

3GPP TS 25.331 clause 8.2.4.

#### 8.2.4.20.3 Test purpose

To confirm that the UE transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message and enters CELL\_PCH state after it receives a TRANSPORT CHANNEL RECONFIGURATION message, which invoke the UE to transit from CELL\_DCH to CELL\_PCH.

#### 8.2.4.20.4 Method of test

#### Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108.

#### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message, which invoke the UE to transit from CELL\_DCH to CELL\_PCH. The UE transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC and enters CELL\_PCH state. The SS transmits a PAGING TYPE 1 message, causing the UE to enter CELL\_FACH state and the UE shall transmit a CELL\_UPDATE message on uplink CCCH with IE "Cell update cause" set to "paging response".

## Expected sequence

| Step | Direction |    | Message                                    | Comment                                                    |
|------|-----------|----|--------------------------------------------|------------------------------------------------------------|
|      | UE        | SS |                                            |                                                            |
| 1    |           | ←  | TRANSPORT CHANNEL RECONFIGURATION          |                                                            |
| 2    |           | →  | TRANSPORT CHANNEL RECONFIGURATION COMPLETE |                                                            |
| 3    |           |    |                                            | The UE is in CELL_PCH state.                               |
| 4    |           | ←  | PAGING TYPE 1                              | The SS transmits this message included a matched identity. |
| 5    |           | →  | CELL UPDATE                                | The UE is in CELL_FACH state.                              |

## Specific Message Contents

## TRANSPORT CHANNEL RECONFIGURATION (Step 1) (FDD)

Use the same message sub-type titled "Packet to CELL\_FACH from CELL\_DCH in PS" in Annex A with following exceptions:

| Information Element                                                                           | Value/remark |
|-----------------------------------------------------------------------------------------------|--------------|
| RRC State Indicator                                                                           | CELL_PCH     |
| Downlink information for each radio link<br>— Primary CPICH info<br>— Primary scrambling code | 100          |

## TRANSPORT CHANNEL RECONFIGURATION (Step 1) (TDD)

Use the same message sub-type titled "Packet to CELL\_FACH from CELL\_DCH in PS" in Annex A with following exceptions:

| Information Element                          | Value/remark |
|----------------------------------------------|--------------|
| RRC State Indicator                          | CELL_PCH     |
| — Primary CCPCH info<br>— Cell parameters ID | 4            |

## PAGING TYPE 1 (Step 4)

Use the same message sub-type titled "TM (Packet in PS)" in default message content of TS 34.108 with following exceptions:

| Information Element                                                                                             | Value/remark                                                                          |
|-----------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|
| Paging record list<br>Paging record<br>— CHOICE Used paging identity<br>— U-RNTI<br>— SRNC Identity<br>— S-RNTI | UTRAN identity<br><br>Previously assigned SRNC identity<br>Previously assigned S-RNTI |

## CELL UPDATE (Step 5)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in Annex A with the following exceptions:

| Information Element | Value/remark      |
|---------------------|-------------------|
| Cell Update Cause   | "paging response" |

#### 8.2.4.20.5 ~~Test requirement~~

After step 1 the UE shall transmit TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on uplink DCCH using AM RLC.

After step 4 the UE shall transmit a CELL UPDATE message on the CCCH with IE "Cell update cause" set to "paging response".

#### 8.2.4.21 ~~Transport Channel Reconfiguration from CELL\_DCH to URA\_PCH: Success~~

##### 8.2.4.21.1 ~~Definition~~

##### 8.2.4.21.2 ~~Conformance requirement~~

The UE shall transmits TRANSPORT CHANNEL RECONFIGURATION COMPLETE message after it receives a TRANSPORT CHANNEL RECONFIGURATION message which invoke the UE to transits from CELL\_DCH to URA\_PCH. And then, the UE shall enter URA\_PCH state.

#### Reference

3GPP TS 25.331 clause 8.2.4.

##### 8.2.4.21.3 ~~Test purpose~~

To confirm that the UE transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message and enters URA\_PCH state after it received a TRANSPORT CHANNEL RECONFIGURATION message, which invoke the UE to transit from CELL\_DCH to URA\_PCH.

##### 8.2.4.21.4 ~~Method of test~~

#### Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108.

#### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message, which invoke the UE to transit from CELL\_DCH to URA\_PCH. The UE transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message using AM RLC and enters URA\_PCH state. The SS transmits a PAGING TYPE 1 message, causing the UE to enter CELL\_FACH state and the UE shall transmit a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "paging response".

#### Expected sequence

| Step | Direction |    | Message                                    | Comment                                                    |
|------|-----------|----|--------------------------------------------|------------------------------------------------------------|
|      | UE        | SS |                                            |                                                            |

| — CHOICE Used-paging identity | UTRAN-identity                    |
| — U-RNTI                      |                                   |
| — SRNC-Identity               | Previously assigned SRNC identity |
| — S-RNTI                      | Previously assigned S-RNTI        |

#### CELL UPDATE (step 5)

The contents of CELL UPDATE is identical to "Contents of CELL UPDATE message" as found in Annex A with the following exceptions:

| Information Element | Value/remark      |
|---------------------|-------------------|
| Cell Update Cause   | "paging response" |

#### 8.2.4.22.5 Test requirement

After step 1 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on uplink DCCH using AM RLC.

After step 4 the UE shall transmit CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "paging response".

#### 8.2.4.23 Transport Channel Reconfiguration from CELL\_FACH to URA\_PCH: Success

##### 8.2.4.23.1 Definition

##### 8.2.4.23.2 Conformance requirement

The UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message after it receives a TRANSPORT CHANNEL RECONFIGURATION message which invokes the UE to and transits from CELL\_FACH to URA\_PCH. And then, the UE shall enter URA\_PCH state.

#### Reference

3GPP TS 25.331 clause 8.2.4

##### 8.2.4.23.3 Test purpose

To confirm that the UE transmits a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message and enters URA\_PCH state after it receives a TRANSPORT CHANNEL RECONFIGURATION message which invokes the UE to transit from CELL\_FACH to CELL\_PCH.

##### 8.2.4.23.4 Method of test

#### Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH\_FACH(state 6-11) as specified in clause 7.4 of TS 34.108.

#### Test Procedure

The UE is in CELL\_FACH state. The SS transmits a TRANSPORT CHANNEL RECONFIGURATION message which invokes the UE to transit from CELL\_FACH to CELL\_PCH. The UE transmits a TRANSPORT CHANNEL

RECONFIGURATION COMPLETE message using AM RLC and enters URA\_PCH state. The SS transmits a PAGING TYPE 1 message, causing the UE to enter CELL\_FACH state and the UE shall transmit a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "paging response".

#### Expected sequence

| Step | Direction |    | Message                                    | Comment                                                    |
|------|-----------|----|--------------------------------------------|------------------------------------------------------------|
|      | UE        | SS |                                            |                                                            |
| 1    |           | ←  | TRANSPORT CHANNEL RECONFIGURATION          |                                                            |
| 2    |           | →  | TRANSPORT CHANNEL RECONFIGURATION COMPLETE |                                                            |
| 3    |           |    |                                            | The UE is in URA_PCH state.                                |
| 4    |           | ←  | PAGING TYPE 1                              | The SS transmits this message included a matched identity. |
| 5    |           | →  | CELL UPDATE                                | The UE is in CELL_FACH state.                              |

#### Specific Message Contents

##### TRANSPORT CHANNEL RECONFIGURATION (Step 1)

Use the same message sub-type titled "Packet to CELL\_FACH from CELL\_FACH in PS" in Annex A with following exceptions:

| Information Element          | Value/remark |
|------------------------------|--------------|
| RRC State Indicator          | URA_PCH      |
| Physical channel information | Not Present  |

##### PAGING TYPE 1 (Step 4)

Use the same message sub-type titled "TM (Packet in PS)" in default message contents of TS 34.108 with following exceptions:

| Information Element            | Value/remark                      |
|--------------------------------|-----------------------------------|
| Paging record list             |                                   |
| Paging record                  |                                   |
| —— CHOICE Used paging identity | UTRAN identity                    |
| ——→ U-RNTI                     |                                   |
| ——→ SRNC Identity              | Previously assigned SRNC identity |
| ——→ S-RNTI                     | Previously assigned S-RNTI        |

##### CELL UPDATE (step 5)

The contents of CELL UPDATE is identical to "Contents of CELL UPDATE message" as found in Annex A with the following exceptions:

| Information Element | Value/remark      |
|---------------------|-------------------|
| Cell Update Cause   | "paging response" |

#### 8.2.4.23.5 ————— Test requirement

After step 1 the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION COMPLETE message on uplink DCCH using AM RLC.

After step 4 the UE shall transmit a CELL UPDATE message on the CCCH with IE "Cell update cause" set to "paging response".

## 8.2.5 Transport format combination control

### 8.2.5.1 Transport format combination control in CELL\_DCH: restriction

#### 8.2.5.1.1 Definition

#### 8.2.5.1.2 Conformance requirement

The UE shall change the subset of the allowed uplink transport format combination when the UE receives TRANSPORT FORMAT COMBINATION CONTROL message.

#### Reference

3GPP TS 25.331 clause 8.2.5.

#### 8.2.5.1.3 Test purpose

To confirm that the UE does not transmit any data on the DCH for the signalling radio bearer on the uplink, following the reception of TRANSPORT FORMAT COMBINATION CONTROL message sent from the SS, which is set to the value in IE "Restricted TrCH information".

#### 8.2.5.1.4 Method of test

#### Initial Condition

System Simulator: 1 cell

UE: DCCH+DTCH\_DCH (state 6-9 or state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

#### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a TRANSPORT FORMAT COMBINATION CONTROL message using AM\_RLC on the DCCH, which indicates that only TF0 is allowed on the uplink for DCH transport channel on the DCCH. The SS transmits a UE CAPABILITY ENQUIRY message using AM\_RLC on the downlink DCCH and wait for the reception of a STATUS PDU. The UE shall be restricted from transmitting the DCH carrying STATUS PDU and the SS does not receive the STATUS PDU.

#### Expected sequence

| Step | Direction |    | Message                              | Comment                                                                                                                                                  |
|------|-----------|----|--------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                      |                                                                                                                                                          |
| 1    |           |    |                                      | UE is in CELL_DCH state with a DCH for a signalling radio bearer and a DCH for a radio access bearer.                                                    |
| 2    |           | ←  | TRANSPORT FORMAT COMBINATION CONTROL | The SS indicates the UE that it is restricted to use the TFS defined in Restricted TrCH information IE as the DCH is not transmitted on the uplink DCCH. |
| 2a   |           | ←  | UE CAPABILITY ENQUIRY                | The SS transmits this message to make the UE send an uplink STATUS PDU.                                                                                  |
| 3    |           |    |                                      | The UE shall not transmit a STATUS PDU.                                                                                                                  |

## Specific Message Contents

### TRANSPORT FORMAT COMBINATION CONTROL

Use the same message sub-type titled "TRANSPORT FORMAT COMBINATION CONTROL" in Annex A with following exceptions:

| Information Element               | Value/remark |
|-----------------------------------|--------------|
| TrCH information elements         |              |
| →DPCH/PUSCH TFCS uplink in uplink |              |
| → Restricted TrCH information     |              |
| → Uplink transport channel type   | DCH          |
| → Restricted UL TrCH identity     | 5            |
| → Allowed TFI                     | 0            |

#### 8.2.5.1.5 Test requirement

After step 2a the UE shall not transmit a STATUS PDU on the uplink DCCH.

### 8.2.5.2 Transport format combination control in CELL\_DCH: release a restriction

#### 8.2.5.2.1 Definition

#### 8.2.5.2.2 Conformance requirement

The UE shall change the subset of allowed transport format combination of uplink when it receives TRANSPORT FORMAT COMBINATION CONTROL message, specifying that an existing restriction for the usage of TFCS be removed.

#### Reference

3GPP TS 25.331 clause 8.2.5.

#### 8.2.5.2.3 Test purpose

To confirm that the UE transmit DTCH on the uplink signalling radio bearer, following the reception of a TRANSPORT FORMAT COMBINATION CONTROL message which include IE "Full transport format combination set".

#### 8.2.5.2.4 Method of test

#### Initial Condition

System Simulator: 1 cell.

UE: DCCH+DTCH\_DCH (state 6-9 or state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

#### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a TRANSPORT FORMAT COMBINATION CONTROL message which indicates that only TF0 is allowed on the uplink for DCH transport channel on the DCCH. The SS transmits a TRANSPORT FORMAT COMBINATION CONTROL message which includes IE "Full transport format combination set" to remove the restriction for the uplink TFC. The SS transmits a UE CAPABILITY ENQUIRY message UE and UE shall transmit a UE CAPABILITY INFORMATION message on the uplink DCCH. The SS transmits a UE CAPABILITY INFORMATION CONFIRM.

## Expected sequence

| Step | Direction |    | Message                              | Comment                                                                                                                                             |
|------|-----------|----|--------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                      |                                                                                                                                                     |
| 1    |           |    |                                      | UE is in CELL_DCH state with a DCH for a signalling radio bearer and a DCH for a radio access bearer.                                               |
| 2    |           | ←  | TRANSPORT FORMAT COMBINATION CONTROL | The SS indicates to UE that it is restricted to the TFS defined in Restricted TrCH information IE as the DCH is not transmitted on the uplink DCCH. |
| 3    |           | ←  | TRANSPORT FORMAT COMBINATION CONTROL | The SS indicates the UE that it removes the restriction to use the TFS defined in Restricted TrCH information IE in step 2.                         |
| 4    |           | ←  | UE CAPABILITY ENQUIRY                | The SS transmits this message to make the UE send a response message.                                                                               |
| 5    |           | →  | UE CAPABILITY INFORMATION            |                                                                                                                                                     |
| 6    |           | ←  | UE CAPABILITY INFORMATION CONFIRM    |                                                                                                                                                     |

## Specific Message Contents

## TRANSPORT FORMAT COMBINATION CONTROL (Step 2)

Use the same message sub-type titled "TRANSPORT FORMAT COMBINATION CONTROL" in Annex A with following exceptions:

| Information Element                | Value/remark |
|------------------------------------|--------------|
| TrCH information elements          |              |
| → DPCH/PUSCH TFCS uplink in uplink |              |
| → Restricted TrCH information      |              |
| → Uplink transport channel type    | DCH          |
| → Restricted UL TrCH identity      | 5            |
| → Allowed TFI                      | 0            |

## TRANSPORT FORMAT COMBINATION CONTROL (Step 3)

Use the same message sub-type titled "TRANSPORT FORMAT COMBINATION CONTROL" in Annex A with following exceptions:

| Information Element                     | Value/remark |
|-----------------------------------------|--------------|
| TrCH information elements               |              |
| → DPCH/PUSCH TFCS uplink in uplink      |              |
| → Full transport format combination set | Null         |

## 8.2.5.2.5 Test requirement

After step 4 the UE shall transmit a UE CAPABILITY INFORMATION message on the uplink DCCH using AM RLC.

## 8.2.5.3 Void

### ~~8.2.5.4 Transport format combination control in CELL\_DCH: Failure (Invalid message reception and Invalid configuration)~~

#### ~~8.2.5.4.1 Definition~~

#### ~~8.2.5.4.2 Conformance requirement~~

~~The UE shall keep its current configuration when it receives an invalid TRANSPORT FORMAT COMBINATION CONTROL message. It shall then transmit a TRANSPORT FORMAT COMBINATION CONTROL FAILURE message, indicating "protocol error" in IE "failure cause" and "ASN.1 violation or encoding error" in IE "Protocol error cause". The UE shall keep existing configuration upon the reception of a TRANSPORT FORMAT COMBINATION CONTROL message, which includes some IEs set to give an invalid configuration, and then the UE shall transmit a TRANSPORT CHANNEL RECONFIGURATION FAILURE including IE "failure cause" set to "invalid configuration".~~

#### ~~Reference~~

~~3GPP TS 25.331 clause 8.2.5.~~

#### ~~8.2.5.4.3 Test purpose~~

~~To confirm after the UE receives an invalid TRANSPORT FORMAT COMBINATION CONTROL message, it transmits a TRANSPORT FORMAT COMBINATION CONTROL FAILURE message and keeps the TFC subset as if no TRANSPORT FORMAT COMBINATION CONTROL message has been received.~~

~~To confirm that the UE transmits a TRANSPORT FORMAT COMBINATION CONTROL FAILURE message on the DCCH using AM RLC if it receives a TRANSPORT FORMAT COMBINATION CONTROL message including some IEs set to give an invalid configuration.~~

#### ~~8.2.5.4.4 Method of test~~

#### ~~Initial Condition~~

~~System Simulator: 1 cell.~~

~~UE: DCCH+DTCH\_DCH (state 6-9 or state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.~~

#### ~~Test Procedure~~

~~The UE is in CELL\_DCH state. The SS transmits an invalid TRANSPORT FORMAT COMBINATION CONTROL message which does not include any IEs except IE "Message Type". The UE shall transmit a TRANSPORT FORMAT COMBINATION CONTROL FAILURE message which is set to "ASN.1 violation or encoding error" in IE "Protocol error cause". SS transmits a TRANSPORT FORMAT COMBINATION CONTROL message including some IEs set to get an invalid configuration. The UE keeps its current configuration and transmits a TRANSPORT FORMAT COMBINATION CONTROL FAILURE message on the DCCH using AM RLC, setting the value "invalid configuration" to IE "failure cause".~~

| → Restricted TrCH information     |                                           |
| → Uplink transport channel type   | DCH                                       |
| → Restricted UL TrCH identity     | 15 ( for RACH transport channel identity) |
| → Allowed TFI                     | 0                                         |

**TRANSPORT FORMAT COMBINATION CONTROL FAILURE (Step 6)**

| Information Element        | Value/remark                                                                                                                                                                                                                                       |
|----------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Message Type               | "TRANSPORT FORMAT COMBINATION CONTROL FAILURE"                                                                                                                                                                                                     |
| RRC-transaction identifier | Checked to see if it is set to identical value of the same IE in the downlink TRANSPORT FORMAT COMBINATION CONTROL message.                                                                                                                        |
| Integrity-check info       | The presence of this IE is dependent on IXIT statements in TS 34.123-2; if integrity protection is indicated to be active, this IE shall be present with the values of the sub-IEs as stated below. Else, this IE and the sub-IEs shall be absent. |
| Failure-cause              | Invalid configuration                                                                                                                                                                                                                              |

**8.2.5.4.5 — Test requirement**

After step 2 the UE shall transmit a TRANSPORT FORMAT COMBINATION CONTROL FAILURE message on the DCCH using AM RLC. The UE shall set the value "protocol error" in IE "Failure-cause" and the value "ASN.1 violation or encoding error" in IE "protocol error information".

After step 4 the UE shall transmit a TRANSPORT FORMAT COMBINATION CONTROL FAILURE message on the DCCH using AM RLC, setting IE "failure-cause" to "invalid configuration".

**8.2.6 — Physical channel reconfiguration****8.2.6.1 — Physical channel reconfiguration for transition from CELL\_DCH to CELL\_DCH (code modification): Success****8.2.6.1.1 — Definition****8.2.6.1.2 — Conformance requirement**

The UE shall correctly reconfigure a physical channel according to the PHYSICAL CHANNEL RECONFIGURATION message, which indicates a hard handover procedure and transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

**Reference**

3GPP TS 25.331 clause 8.2.6.

**8.2.6.1.3 — Test purpose**

To confirm that the UE reconfigures the physical channel parameters according to a PHYSICAL CHANNEL RECONFIGURATION message received from the SS. After the reconfiguration, the UE shall be able to communicate with the SS on the new physical channel.

**8.2.6.1.4 — Method of test****Initial Condition**

System Simulator: 1 cell.

UE: CS-DCCH+DTCH\_DCH (state 6-9) or PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending to the CN domain(s) supported by the UE.

### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, which includes a new UL scrambling code. The UE shall reconfigure the physical channel at the activation time specified in this message and transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH AM RLC after its transition.

### Expected sequence

| Step | Direction |    | Message                                   | Comment                           |
|------|-----------|----|-------------------------------------------|-----------------------------------|
|      | UE        | SS |                                           |                                   |
| 1    |           | ←  | PHYSICAL CHANNEL RECONFIGURATION          | Including new UL scrambling code. |
| 2    |           | →  | PHYSICAL CHANNEL RECONFIGURATION COMPLETE |                                   |

### Specific Message Contents

#### PHYSICAL CHANNEL RECONFIGURATION (FDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A, with the following exceptions:

| Information Element                                                                                                 | Value/remark                        |

| Downlink information common for all radio links<br>——— Downlink DPCH info common for all RL<br>——— Timing Indicator | Maintain                            |

#### 8.2.6.1.5 ——— Test requirement

After step 1 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.

## 8.2.6.2 ~~Physical channel reconfiguration for transition from CELL\_DCH to CELL\_DCH (code modification): Failure (Unsupported configuration)~~

### 8.2.6.2.1 ~~Definition~~

### 8.2.6.2.2 ~~Conformance requirement~~

The UE shall keep its configuration when the UE receives a PHYSICAL CHANNEL RECONFIGURATION message which includes an unsupported configuration and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, with the reason "configuration unsupported" in IE "failure-cause".

### Reference

3GPP TS 25.331 clause 8.2.6.

### 8.2.6.2.3 ~~Test purpose~~

To confirm that the UE keeps its configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if the received PHYSICAL CHANNEL RECONFIGURATION message includes unsupported configuration parameters for the UE.

### 8.2.6.2.4 ~~Method of test~~

### Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH\_DCH (state 6-9) or PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE which includes configuration parameters unsupported by the UE. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "configuration unsupported" in IE "failure-cause".

### Expected sequence

| Step | Direction |    | Message                                  | Comment                                                                               |
|------|-----------|----|------------------------------------------|---------------------------------------------------------------------------------------|
|      | UE        | SS |                                          |                                                                                       |
| 1    |           | ←  | PHYSICAL CHANNEL RECONFIGURATION         | Includes configuration unsupported by the UE                                          |
| 2    |           | →  | PHYSICAL CHANNEL RECONFIGURATION FAILURE | The UE shall not reconfigure and continue to communicate using the old configuration. |

## Specific Message Contents

### PHYSICAL CHANNEL RECONFIGURATION (FDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title as "Speech in CS" or "Non-speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A with the following exceptions:

| Information Element    | Value/remark |
|------------------------|--------------|
| Frequency info         |              |
| ——UARFCN uplink (Nu)   | 0            |
| ——UARFCN downlink (Nd) | 950          |

### PHYSICAL CHANNEL RECONFIGURATION (TDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL\_DCH from CELL\_DCH in PS" found in Annex A with the following exceptions:

| Information Element | Value/remark |
|---------------------|--------------|
| Frequency info      |              |
| ——UARFCN (Nt)       | 0            |

### PHYSICAL CHANNEL RECONFIGURATION FAILURE

The contents of PHYSICAL CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the PHYSICAL CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark              |
|---------------------|---------------------------|
| Failure-cause       | Configuration unsupported |

#### 8.2.6.2.5 ——— Test requirement

After step 1 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC and set "configuration unsupported" in IE "failure-cause".

#### 8.2.6.3 ——— Physical channel reconfiguration for transition from CELL\_DCH to CELL\_DCH (code modification): Failure (Physical channel failure and reversion to old channel)

##### 8.2.6.3.1 ——— Definition

##### 8.2.6.3.2 ——— Conformance requirement

The UE shall revert to the old configuration when the UE fails to reconfigure the new physical channel before the expiry of timer T312, and then transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC indicating "physical channel failure" in IE "failure cause".

## Reference

3GPP TS 25.331 clause 8.2.6.

### 8.2.6.3.3 Test purpose

To confirm that the UE reverts to the old configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if the UE fails to reconfigure the new physical channel according to the received PHYSICAL CHANNEL RECONFIGURATION message before timer T312 expiry.

### 8.2.6.3.4 Method of test

#### Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH\_DCH (state 6-9) or PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

#### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE which includes new UL scrambling code. However, the SS keeps its current dedicated physical channel configuration. The UE fails to synchronise with the SS on the new physical channel and after T312 timer expires the UE shall revert to the old configuration. Finally, the UE transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC specifies "physical channel failure" in IE "failure cause".

#### Expected sequence

| Step | Direction |    | Message                                  | Comment                                                                                                           |
|------|-----------|----|------------------------------------------|-------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                          |                                                                                                                   |
| 1    |           | ←  | PHYSICAL CHANNEL RECONFIGURATION         | Including a new UL scrambling code for FDD and First timeslot code list for TDD.                                  |
| 2    |           |    |                                          | The SS does not reconfigure the physical channel so that the UE fails to synchronise on the new physical channel. |
| 3    |           | →  | PHYSICAL CHANNEL RECONFIGURATION FAILURE | After T312 expires, the UE shall revert to the old configuration and transmits this message.                      |

#### Specific Message Contents

##### PHYSICAL CHANNEL RECONFIGURATION (FDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A, with the following exceptions:

| ——Timing Indicator                              | Maintain                            |

## PHYSICAL CHANNEL RECONFIGURATION FAILURE

The contents of PHYSICAL CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the PHYSICAL CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark             |
|---------------------|--------------------------|
| Failure-cause       | Physical channel failure |

### 8.2.6.3.5 Test requirement

After step 2 the UE shall revert to the old configuration and transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, with the value "physical channel failure" in IE "failure cause".

### 8.2.6.4 Physical channel reconfiguration for transition from CELL\_DCH to CELL\_DCH (code modification): Failure (Physical channel failure and reversion failure)

#### 8.2.6.4.1 Definition

#### 8.2.6.4.2 Conformance requirement

The UE shall perform a cell update procedure when the UE fails to revert to the old configuration, after the detection of physical channel failure during the course of executing a physical channel reconfiguration procedure. After the UE completes the cell update procedure, the UE transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set IE "failure cause" to "physical channel failure".

#### Reference

3GPP TS 25.331 clause 8.2.6.

#### 8.2.6.4.3 Test purpose

To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message after UE completes a cell update procedure when the UE fails synchronise on the old physical channel after the UE cannot synchronise on the new physical channel according to the received PHYSICAL CHANNEL RECONFIGURATION message.

#### 8.2.6.4.4 Method of test

#### Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH\_DCH (state 6-9) or PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

## Test Procedure

The UE is in CELL\_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, which includes new UL scrambling code, but the SS does not configure the new physical channel and release the old configuration. The UE fails to synchronise on the new dedicated physical channel and tries to revert to the old configuration. But the SS already deleted the old physical channel configuration and the UE cannot revert to the old configuration. The UE transmits a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "radio link failure". The SS shall transmit a CELL UPDATE CONFIRM message on downlink CCCH after receiving CELL UPDATE message. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC and subsequently transmits PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting the value "physical channel failure" to IE "failure cause".

## Expected sequence

| Step | Direction |    | Message                                   | Comment                                                                                                                                                                                                       |
|------|-----------|----|-------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                           |                                                                                                                                                                                                               |
| 1    |           |    | Void                                      |                                                                                                                                                                                                               |
| 2    |           |    | Void                                      |                                                                                                                                                                                                               |
| 3    |           | ←  | PHYSICAL CHANNEL RECONFIGURATION          | The message includes new UL scrambling code for FDD and First timeslot code list for TDD.                                                                                                                     |

| 8    |           | →  | PHYSICAL CHANNEL RECONFIGURATION COMPLETE |                                                                                                                                                                                                               |
| 9    |           | →  | PHYSICAL CHANNEL RECONFIGURATION FAILURE  | The IE "failure cause" shall be set to "physical channel failure"                                                                                                                                             |

## Specific Message Contents

### PHYSICAL CHANNEL RECONFIGURATION (Step 3) (FDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A, with the following exceptions:

| Information Element                             | Value/remark                        |
|-------------------------------------------------|-------------------------------------|
| Activation Time                                 | Current CFN-[current CFN mod 8 + 8] |
| Uplink DPCH info                                |                                     |
| ——— Scrambling code number                      | 1                                   |
| Downlink information common for all radio links |                                     |
| ——— Downlink DPCH info common for all RL        |                                     |
| ——— Timing Indicator                            | Maintain                            |

**PHYSICAL CHANNEL RECONFIGURATION (Step 3) (TDD)**

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non-speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A, with the following exceptions:

| Information Element                             | Value/remark                        |
|-------------------------------------------------|-------------------------------------|
| Activation Time                                 | Current CFN-[current CFN mod 8 + 8] |
| - Uplink DPCH timeslots and codes               |                                     |
| —— First timeslot code list                     | Assigned by SS                      |
| Downlink information common for all radio links |                                     |
| —— Downlink DPCH info common for all RL         |                                     |
| —— Timing Indicator                             | Maintain                            |

**CELL UPDATE (Step 5)**

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in Annex A for FDD and Annex A for TDD with the following exceptions:

| Information Element | Value/remark                                      |
|---------------------|---------------------------------------------------|
| U-RNTI              |                                                   |
| - SRNC Identity     | Check to see if set to '0000-0000-0001'           |
| - S-RNTI            | Check to see if set to '0000-0000-0000-0000-0001' |
| Cell Update Cause   | "radio-link failure"                              |

**CELL UPDATE CONFIRM (Step 6) (FDD)**

The contents of CELL UPDATE CONFIRM message is identical as "CELL UPDATE CONFIRM message" as found in Annex A with the following exceptions:

| Information Element                       | Value/remark                                                         |
|-------------------------------------------|----------------------------------------------------------------------|
| U-RNTI                                    | Same as CELL UPDATE message in step 4                                |
| RRC State indicator                       | CELL_DCH                                                             |
| Uplink DPCH Info                          | Same as RADIO BEARER SETUP message used to move to initial condition |
| Downlink information for each radio links | Same as RADIO BEARER SETUP message used to move to initial condition |

**CELL UPDATE CONFIRM (Step 6) (TDD)**

The contents of CELL UPDATE CONFIRM message is identical as "CELL UPDATE CONFIRM message" as found in Annex A with the following exceptions:

| Information Element                       | Value/remark                                                         |
|-------------------------------------------|----------------------------------------------------------------------|
| U-RNTI                                    | Same as CELL UPDATE message in step 4                                |
| RRC State Indicator                       | CELL_DCH                                                             |
| Uplink DPCH timeslots and codes           | Same as RADIO BEARER SETUP message used to move to initial condition |
| Downlink information for each radio links | Same as RADIO BEARER SETUP message used to move to initial condition |

**PHYSICAL CHANNEL RECONGURATION FAILURE (Step 9)**

The contents of PHYSICAL CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the PHYSICAL CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark               |
|---------------------|----------------------------|
| Failure cause       | "physical-channel failure" |

#### 8.2.6.4.5 ~~Test requirement~~

~~After step 4 the UE shall transmit a CELL\_UPDATE message using RLC-TM mode on the uplink CCCH with IE "Cell update cause" set to "radio link failure".~~

~~After step 7 the UE shall transmit a PHYSICAL\_CHANNEL\_RECONFIGURATION\_COMPLETE message on the uplink DCCH using AM RLC.~~

~~After step 8 the UE shall transmit a PHYSICAL\_CHANNEL\_RECONFIGURATION\_FAILURE message on the DCCH using AM RLC, setting the IE "failure cause" to "physical channel failure".~~

#### 8.2.6.5 ~~Physical channel reconfiguration for transition from CELL\_DCH to CELL\_DCH (code modification): Failure (Incompatible simultaneous reconfiguration)~~

##### 8.2.6.5.1 ~~Definition~~

##### 8.2.6.5.2 ~~Conformance requirement~~

~~If the UE receives a PHYSICAL\_CHANNEL\_RECONFIGURATION message during a reconfiguring procedure due to a radio bearer message other than PHYSICAL\_CHANNEL\_RECONFIGURATION message, it shall transmit a PHYSICAL\_CHANNEL\_RECONFIGURATION\_FAILURE message on the DCCH using AM RLC.~~

#### Reference

~~3GPP TS 25.331 clause 8.2.6, clause 8.6.3.11.~~

##### 8.2.6.5.3 ~~Test purpose~~

~~To confirm that if the UE receives a PHYSICAL\_CHANNEL\_RECONFIGURATION message during a reconfiguring procedure due to a radio bearer message other than PHYSICAL\_CHANNEL\_RECONFIGURATION, it shall keep its configuration as if the PHYSICAL\_CHANNEL\_RECONFIGURATION message had not been received and complete the reconfiguration procedure according to the previously received message.~~

##### 8.2.6.5.4 ~~Method of test~~

#### Initial Condition

System Simulator: 1 cell

UE: CS-DCCH+DTCH\_DCH (state 6-9) or PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

#### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a RADIO\_BEARER\_RECONFIGURATION message to the UE. The SS transmits a PHYSICAL\_CHANNEL\_RECONFIGURATION message before the "activation time" indicated in the RADIO\_BEARER\_RECONFIGURATION message expires. When the UE receives the PHYSICAL\_CHANNEL\_RECONFIGURATION message, the UE shall keep the configuration as if it had not received the PHYSICAL\_CHANNEL\_RECONFIGURATION message and shall transmit a PHYSICAL\_CHANNEL\_RECONFIGURATION\_FAILURE message on the DCCH using AM RLC with IE "failure cause" set to "incompatible simultaneous reconfiguration". After the SS acknowledges the PHYSICAL\_CHANNEL\_RECONFIGURATION\_FAILURE message, the UE reconfigures the new physical channel parameters upon the activation time and transmits a RADIO\_BEARER\_RECONFIGURATION\_COMPLETE message on DCCH using AM RLC.

## Expected sequence

| Step | Direction |    | Message                                  | Comment                                                                                                      |
|------|-----------|----|------------------------------------------|--------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                          |                                                                                                              |
| 1    |           | ←  | RADIO-BEARER-RECONFIGURATION             |                                                                                                              |
| 2    |           | ←  | PHYSICAL-CHANNEL-RECONFIGURATION         | Sent before the "activation time" specified in the message in step 1 has elapsed.                            |
| 3    |           | →  | PHYSICAL-CHANNEL-RECONFIGURATION-FAILURE | The UE does not change the configuration due to the reception of a PHYSICAL-CHANNEL-RECONFIGURATION message. |
| 4    |           | →  | RADIO-BEARER-RECONFIGURATION COMPLETE    | This message is on DCCH using AM RLC.                                                                        |

## Specific Message Contents

## RADIO-BEARER-RECONFIGURATION (Step 1) (FDD)

For RADIO-BEARER-RECONFIGURATION in step 1, use the message sub-type indicated as "Speech in CS" or "Non speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A with the following exceptions:

| Information Element                             | Value/remark                        |
|-------------------------------------------------|-------------------------------------|
| Activation Time Info                            | Current CFN-[current CFN mod 8 + 8] |
| Uplink DPCH info                                |                                     |
| ——→ Scrambling code number                      | 1                                   |
| Downlink information common for all radio links |                                     |
| ——→ Downlink DPCH info common for all RL        |                                     |
| ——→ Timing Indicator                            | Maintain                            |

## RADIO-BEARER-RECONFIGURATION (Step 1) (TDD)

| Information Element                             | Value/remark                        |
|-------------------------------------------------|-------------------------------------|
| Activation Time                                 | Current CFN-[current CFN mod 8 + 8] |
| – Uplink DPCH timeslots and codes               |                                     |
| ——→ First timeslot code list                    | Assigned by SS                      |
| Downlink information common for all radio links |                                     |
| ——→ Downlink DPCH info common for all RL        |                                     |
| ——→ Timing Indicator                            | Maintain                            |

## PHYSICAL-CHANNEL-RECONFIGURATION (Step 2) (FDD)

The contents of PHYSICAL-CHANNEL-RECONFIGURATION message in this test case is identical to the message sub-type titled as "Speech in CS" or "Non speech in CS" or "Packet to CELL\_DCH from CELL\_DCH in PS" as found in Annex A, with the following exceptions:

| Information Element                             | Value/remark |
|-------------------------------------------------|--------------|
| Activation Time                                 | Not Present  |
| Uplink DPCH info                                |              |
| ——→ Scrambling code number                      | 2            |
| Downlink information common for all radio links |              |
| ——→ Downlink DPCH info common for all RL        |              |
| ——→ Timing Indicator                            | Maintain     |

### PHYSICAL CHANNEL RECONFIGURATION (Step 2) (TDD)

| Information Element                             | Value/remark                        |
|-------------------------------------------------|-------------------------------------|
| Activation Time                                 | Current CFN-[current CFN mod 8 + 8] |
| — Uplink DPCCH timeslots and codes              |                                     |
| — First timeslot code list                      | Different as assigned in Step 1     |
| Downlink information common for all radio links |                                     |
| — Downlink DPCCH info common for all RL         |                                     |
| — Timing Indicator                              | Maintain                            |

### PHYSICAL CHANNEL RECONFIGURATION FAILURE (step 3)

The contents of PHYSICAL CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the PHYSICAL CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark                              |
|---------------------|-------------------------------------------|
| Failure cause       | Incompatible simultaneous reconfiguration |

#### 8.2.6.5.5 Test requirement

After step 2 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC with IE "failure cause" set to "Incompatible simultaneous reconfiguration".

After step 3 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message using AM RLC on the DCCH.

#### 8.2.6.6 Physical channel reconfiguration for transition from CELL\_DCH to CELL\_DCH (code modification): Failure (Invalid message reception and Invalid configuration)

##### 8.2.6.6.1 Definition

##### 8.2.6.6.2 Conformance requirement

The UE shall keep its old configuration when the UE receives an invalid PHYSICAL CHANNEL RECONFIGURATION message, which does not include any IEs except IE "Message Type". It shall then transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message which contains the value "protocol error" in IE "failure cause" and also "ASN.1 violation or encoding error" in IE "Protocol error cause". The UE shall keep existing configuration upon reception of a PHYSICAL CHANNEL RECONFIGURATION message when the PHYSICAL CHANNEL RECONFIGURATION message that includes some IEs set to give an invalid configuration, and then the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE including IE "failure cause" set to "invalid configuration".

#### Reference

3GPP TS 25.331 clause 8.2.6.

##### 8.2.6.6.3 Test purpose

To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if it receives an invalid PHYSICAL CHANNEL RECONFIGURATION message which does not include any IEs except IE "Message Type".

To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if it receives a PHYSICAL CHANNEL RECONFIGURATION message including some IEs set to give an invalid configuration.

#### 8.2.6.6.4 Method of test

##### Initial Condition

System Simulator: 1 cell.

UE: CS-DCCH+DTCH\_DCH (state 6-9) or PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.

##### Test Procedure

The UE is in CELL\_DCH state. The SS transmits an invalid PHYSICAL CHANNEL RECONFIGURATION message to the UE, which does not include any IEs except IE "Message Type". The UE keeps the old configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, with a value "protocol error" in IE "failure cause" and also a value "ASN.1 violation or encoding error" in IE "Protocol error cause". SS transmits a PHYSICAL CHANNEL RECONFIGURATION message including some IEs which are set to give an invalid configuration. The UE keeps its initial configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting the value "invalid configuration" to IE "failure cause".

##### Expected sequence

| Step | Direction |    | Message                                  | Comment                                                                 |
|------|-----------|----|------------------------------------------|-------------------------------------------------------------------------|
|      | UE        | SS |                                          |                                                                         |
| 1    |           | ←  | PHYSICAL CHANNEL RECONFIGURATION         | See specific message content.                                           |
| 2    |           | →  | PHYSICAL CHANNEL RECONFIGURATION FAILURE | The UE does not change its configuration.                               |
| 3    |           | ←  | PHYSICAL CHANNEL RECONFIGURATION         | This message includes IEs which is set to give an invalid configuration |
| 4    |           |    |                                          | The UE does not change its configuration                                |
| 5    |           | →  | PHYSICAL CHANNEL RECONFIGURATION FAILURE | The IE "failure cause" shall be set to "invalid configuration"          |

##### Specific Message Contents

##### PHYSICAL CHANNEL RECONFIGURATION (Step 1)

| Information Element | Value/remark |
|---------------------|--------------|
| All IEs             | Not Present  |

##### PHYSICAL CHANNEL RECONFIGURATION FAILURE (Step 2)

The contents of PHYSICAL CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the PHYSICAL CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element          | Value/remark                      |
|------------------------------|-----------------------------------|
| Failure cause                |                                   |
| → Failure cause              | Protocol error                    |
| → Protocol error information |                                   |
| → Protocol error cause       | ASN.1 violation or encoding error |

##### PHYSICAL CHANNEL RECONFIGURATION (Step 3) (FDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title as "Speech in CS" or "Non-speech in CS" or "Packet to CELL\_FACH from CELL\_DCH in PS" as found in Annex A with the following exceptions:

| Information Element                  | Value/remark |
|--------------------------------------|--------------|
| <del>Default DPCH Offset Value</del> | 512          |
| <del>DPCH frame offset</del>         | 1024         |

### PHYSICAL CHANNEL RECONFIGURATION (Step 3) (TDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title as "Speech in CS" or "Non-speech in CS" or "Packet to CELL\_FACH from CELL\_DCH in PS" as found in Annex A with the following exceptions:

| Information Element   | Value/remark |
|-----------------------|--------------|
| <del>PRACH TFCS</del> | Present      |

### PHYSICAL CHANNEL RECONFIGURATION FAILURE (Step 5)

The contents of PHYSICAL CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the PHYSICAL CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark          |
|---------------------|-----------------------|
| Failure-cause       | Invalid configuration |

#### 8.2.6.6.5 ~~Test requirement~~

After step 1 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting value "protocol error" in IE "failure cause" and also setting value "ASN.1 violation or encoding error" in IE "Protocol error cause".

After step 4 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting IE "failure cause" to "invalid configuration".

### 8.2.6.7 ~~Physical channel reconfiguration for transition from CELL\_DCH to CELL\_FACH: Success~~

#### 8.2.6.7.1 ~~Definition~~

#### 8.2.6.7.2 ~~Conformance requirement~~

The UE shall correctly reconfigure a physical channel according to a PHYSICAL CHANNEL RECONFIGURATION message, which invoke the UE to transit from CELL\_DCH to CELL\_FACH and transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

#### Reference

3GPP TS 25.331 clause 8.2.6.

#### 8.2.6.7.3 ~~Test purpose~~

To confirm that the UE reconfigures a common physical channel according to the PHYSICAL CHANNEL RECONFIGURATION message, which invoke the UE to transit from CELL\_DCH to CELL\_FACH.

#### 8.2.6.7.4 ~~Method of test~~

#### Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108

### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE. The UE shall then reconfigure the specified common physical channel according to this message and the system information messages. Following this, it shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC on the DCCH.

### Expected sequence

| Step | Direction |    | Message                                   | Comment                                                              |
|------|-----------|----|-------------------------------------------|----------------------------------------------------------------------|
|      | UE        | SS |                                           |                                                                      |
| 1    |           | ←  | PHYSICAL CHANNEL RECONFIGURATION          | IE "Uplink DPCH Info" and IE "Downlink DPCH Info" are not specified. |
| 2    |           |    |                                           | UE shall perform the reconfiguration.                                |
| 3    |           | →  | PHYSICAL CHANNEL RECONFIGURATION COMPLETE |                                                                      |

### Specific Message Contents

#### PHYSICAL CHANNEL RECONFIGURATION

Use the message sub-type titled "Packet to CELL\_FACH from CELL\_DCH in PS" in Annex A with the following exception:

| Information Element | Value/remark         |
|---------------------|----------------------|
| New C-RNTI          | 0000 0000 0000 0001B |

#### 8.2.6.7.5 Test requirement

After step 2 the UE shall transit from CELL\_DCH to CELL\_FACH and transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the common physical channel.

#### 8.2.6.8 Physical channel reconfiguration for transition from CELL\_DCH to CELL\_FACH: Success (Cell re-selection)

##### 8.2.6.8.1 Definition

##### 8.2.6.8.2 Conformance requirement

The UE shall initiate the cell update procedure when the UE performs cell reselection during a physical channel reconfiguration procedure. After the UE completes cell update procedure, the UE shall continue to perform the physical channel reconfiguration procedure and correctly reconfigure the physical channel.

### Reference

3GPP TS 25.331 clause 8.2.6.

##### 8.2.6.8.3 Test purpose

To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message after the UE completes a cell update procedure.

## 8.2.6.8.4 Method of test

## Initial Condition

System Simulator: 1 cell.

UE: PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108

## Test Procedure

The UE is in CELL\_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which includes IE "Primary CPICH info" and no dedicated physical channel information to invoke the UE to transit from CELL\_DCH to CELL\_FACH. As the UE cannot detect the specified cell, the UE shall initiate the cell update procedure. The UE transmits a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "cell reselection". The SS shall transmit a CELL UPDATE CONFIRM message on downlink CCCH after receiving a CELL UPDATE message. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

## Expected sequence

| Step | Direction |    | Message                                   | Comment                                                                              |
|------|-----------|----|-------------------------------------------|--------------------------------------------------------------------------------------|
|      | UE        | SS |                                           |                                                                                      |
| 1    |           |    | Void                                      |                                                                                      |
| 2    |           | ←  | PHYSICAL CHANNEL RECONFIGURATION          | This message include IE "Primary CPICH info" for FDD and Primary CCPCH info for TDD. |
| 3    |           |    | Void                                      |                                                                                      |
| 4    |           | →  | CELL UPDATE                               | The value "cell reselection" shall be set in IE "Cell update cause".                 |
| 5    |           | ←  | CELL UPDATE CONFIRM                       |                                                                                      |
| 6    |           |    | Void                                      |                                                                                      |
| 7    |           | →  | PHYSICAL CHANNEL RECONFIGURATION COMPLETE |                                                                                      |

## Specific Message Contents

## PHYSICAL CHANNEL RECONFIGURATION (Step 3) (FDD)

Use the message sub-type titled "Packet to CELL\_FACH from CELL\_DCH in PS" in Annex A with the following exceptions:

| Information Element                                                                                | Value/remark |
|----------------------------------------------------------------------------------------------------|--------------|
| Downlink information for each radio links<br>——→ Primary CPICH info<br>——→ Primary scrambling code | 150          |

## PHYSICAL CHANNEL RECONFIGURATION (Step 3) (TDD)

Use the message sub-type titled "Packet to CELL\_FACH from CELL\_DCH in PS" in Annex A with the following exceptions:

| Information Element                                                                           | Value/remark |
|-----------------------------------------------------------------------------------------------|--------------|
| Downlink information for each radio links<br>——→ Primary CCPCH info<br>——→ Cell parameters ID | 4            |

### CELL UPDATE (Step 4)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in Annex A for FDD and Annex A for TDD with the following exceptions:

| Information Element | Value/remark       |
|---------------------|--------------------|
| Cell Update Cause   | "cell reselection" |

### CELL UPDATE CONFIRM (Step 5)

The contents of CELL UPDATE CONFIRM message is same as "CELL UPDATE CONFIRM message" as found in Annex A for FDD and Annex A for TDD.

#### 8.2.6.8.5 Test requirement

After step 3 the UE shall transmit a CELL UPDATE message on the CCCH with IE "Cell update cause" set to "cell reselection".

After step 6 UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### 8.2.6.9 Physical channel reconfiguration for transition from CELL\_FACH to CELL\_DCH: Success

#### 8.2.6.9.1 Definition

#### 8.2.6.9.2 Conformance requirement

The UE shall correctly reconfigure a physical channel according to a PHYSICAL CHANNEL RECONFIGURATION message, which invoke UE to transit from CELL\_FACH to CELL\_DCH and shall transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

#### Reference

3GPP TS 25.331 clause 8.2.6.

#### 8.2.6.9.3 Test purpose

To confirm that the UE reconfigures a new physical channel according to a PHYSICAL CHANNEL RECONFIGURATION message, which invoke UE to transit from CELL\_FACH to CELL\_DCH.

#### 8.2.6.9.4 Method of test

##### Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108

##### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to transit from CELL\_DCH to CELL\_FACH. The UE shall reconfigure the common physical channel correctly according to this message. To complete this procedure, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to invoke the UE to transit from CELL\_FACH to CELL\_DCH. The UE shall reconfigure the new dedicated physical channel correctly according to this message. To complete this procedure, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC.

## Expected sequence

| Step | Direction |    | Message                                   | Comment                                                              |
|------|-----------|----|-------------------------------------------|----------------------------------------------------------------------|
|      | UE        | SS |                                           |                                                                      |
| 1    |           | ←  | PHYSICAL CHANNEL RECONFIGURATION          | IE "Uplink DPCH Info" and IE "Downlink DPCH Info" are not specified. |
| 2    |           |    |                                           | UE shall perform the reconfiguration.                                |
| 3    |           | →  | PHYSICAL CHANNEL RECONFIGURATION COMPLETE |                                                                      |
| 4    |           | ←  | PHYSICAL CHANNEL RECONFIGURATION          |                                                                      |
| 5    |           |    |                                           | The UE shall configure the allocated dedicated physical channels.    |
| 6    |           | →  | PHYSICAL CHANNEL RECONFIGURATION COMPLETE |                                                                      |

## Specific Message Contents

## PHYSICAL CHANNEL RECONFIGURATION (Step 1)

Use the message sub-type titled "Packet to CELL\_FACH" in Annex A for FDD and Annex A for TDD.

## PHYSICAL CHANNEL RECONFIGURATION (Step 4)

Use the message sub-type titled "Packet to CELL\_DCH from CELL\_FACH in PS" in Annex A.

## 8.2.6.9.5 Test requirement

After step 2 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION message on the common physical channel.

After step 5 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION message on the new dedicated physical channel.

## 8.2.6.10 Physical channel reconfiguration for transition from CELL\_FACH to CELL\_DCH: Failure (Unsupported configuration)

## 8.2.6.10.1 Definition

## 8.2.6.10.2 Conformance requirement

The UE shall keep its old configuration when it receives a PHYSICAL CHANNEL RECONFIGURATION message, which specifies configuration parameters unsupported by the UE. It shall then transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, reporting the cause "configuration unsupported" in IE "failure-cause".

## Reference

3GPP TS 25.331 clause 8.2.6

## 8.2.6.10.3 Test purpose

To confirm that the UE keeps its configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, if the received PHYSICAL CHANNEL RECONFIGURATION message includes unsupported configuration parameters.

8.2.6.10.4 ~~Method of test~~~~Initial Condition~~~~System Simulator: 1 cell~~~~UE: PS-DCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108~~~~Test Procedure~~

The UE is in CELL\_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to invoke the UE to transit from CELL\_DCH to CELL\_FACH. The UE shall reconfigure the common physical channel correctly according to this message. To complete this procedure, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, which includes unsupported frequency for the UE. The UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCH using AM RLC, setting "configuration unsupported" in IE "failure-cause".

~~Expected sequence~~

| Step | Direction |    | Message                                      | Comment                                                                                                             |

| 5    | →         |    | PHYSICAL CHANNEL<br>RECONFIGURATION FAILURE  | The UE shall not change the physical channel configuration; this message shall be sent using the old configuration. |

~~Specific Message Contents~~~~PHYSICAL CHANNEL RECONFIGURATION (Step 1)~~~~Use the message sub-type titled "Packet to CELL\_FACH from CELL\_DCH in PS" in Annex A.~~~~PHYSICAL CHANNEL RECONFIGURATION (Step 3) (FDD)~~

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL\_DCH from CELL\_FACH in PS" as found in Annex A with the following exceptions:

| Information Element             | Value/remark |
|---------------------------------|--------------|
| Frequency info                  |              |
| <del>UARFCN uplink (Nu)</del>   | 0            |
| <del>UARFCN downlink (Nd)</del> | 950          |

~~PHYSICAL CHANNEL RECONFIGURATION (Step 3) (TDD)~~

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL\_DCH from CELL\_FACH in PS" as found in Annex A with the following exceptions:

| Information Element    | Value/remark |
|------------------------|--------------|
| Frequency info         |              |
| <del>UARFCN (Nt)</del> | 0            |

## PHYSICAL CHANNEL RECONFIGURATION FAILURE

The contents of PHYSICAL CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the PHYSICAL CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark              |
|---------------------|---------------------------|
| Failure-cause       | Configuration unsupported |

### 8.2.6.10.5 ——— Test requirement

After step 2 the UE shall transit from CELL\_DCH to CELL\_FACH and transmit a PHYSICAL CHANNEL RECONFIGURATION message on the common physical channel.

After step 4 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, the IE "failure-cause" shall be set to "configuration unsupported".

### 8.2.6.11 ——— Physical channel reconfiguration for transition from CELL\_FACH to CELL\_DCH: Failure (Physical channel failure and successful reversion to old configuration)

#### 8.2.6.11.1 ——— Definition

#### 8.2.6.11.2 ——— Conformance requirement

The UE shall revert to the old configuration when the UE fails to reconfigure the new physical channel before timer T312 expires and detects the same serving cell only. It shall report the failure by transmitting a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, indicating "physical channel failure" in IE "failure-cause".

#### Reference

3GPP TS 25.331 clause 8.2.6.

#### 8.2.6.11.3 ——— Test purpose

To confirm that the UE reverts to the old configuration and transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC if the UE fails to reconfigure the new physical channel according to a PHYSICAL CHANNEL RECONFIGURATION message before the T312 expiry.

#### 8.2.6.11.4 ——— Method of test

#### Initial Condition

System Simulator: 1 cell

UE: DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108

#### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to invoke the UE to transit from CELL\_DCH to CELL\_FACH. The UE shall reconfigure the common physical channel correctly according to this message. To complete this procedure, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to invoke the UE to transit from CELL\_FACH to CELL\_DCH. However, the SS keeps its current physical channel configuration and then the UE cannot synchronise with the SS. After T312 expires, the UE attempt to revert to the old configuration. Then the UE shall transmit a PHYSICAL CHANNEL

RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set "physical channel failure" in IE "failure cause".

#### Expected sequence

| Step | Direction |    | Message                                       | Comment                                                                                                                           |
|------|-----------|----|-----------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                               |                                                                                                                                   |
| 1    |           | ←  | PHYSICAL CHANNEL<br>-RECONFIGURATION          | IE "Uplink DPCH Info" and IE "Downlink DPCH Info" are not specified.                                                              |
| 2    |           |    |                                               | UE shall perform the reconfiguration                                                                                              |
| 3    |           | →  | PHYSICAL CHANNEL<br>-RECONFIGURATION COMPLETE |                                                                                                                                   |
| 4    |           | ←  | PHYSICAL CHANNEL<br>-RECONFIGURATION          |                                                                                                                                   |
| 5    |           |    |                                               | The SS does not reconfigure the physical channel, hence the UE shall detect a failure to reconfigure to the new physical channel. |
| 6    |           | →  | PHYSICAL CHANNEL<br>-RECONFIGURATION FAILURE  | After T312 expires the UE reverts to the old configuration and transmits this message.                                            |

#### Specific Message Contents

##### PHYSICAL CHANNEL RECONFIGURATION (Step 1)

Use the message sub-type titled "Packet to CELL\_FACH from CELL\_DCH in PS" in Annex A for FDD and Annex A for TDD.

##### PHYSICAL CHANNEL RECONFIGURATION (Step 4)

Use the message sub-type titled "Packet to CELL\_DCH from CELL\_FACH in PS" in Annex A for FDD and Annex A for TDD.

##### PHYSICAL CHANNEL RECONFIGURATION FAILURE

The contents of PHYSICAL CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the PHYSICAL CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark             |
|---------------------|--------------------------|
| Failure cause       | Physical channel failure |

#### 8.2.6.11.5 Test requirement

After step 2 the UE shall transit from CELL\_DCH to CELL\_FACH and transmit a PHYSICAL CHANNEL RECONFIGURATION message on the common physical channel.

After step 5 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, specifying "physical channel failure" in IE "failure cause".

### 8.2.6.12 ~~Physical channel reconfiguration for transition from CELL\_FACH to CELL\_DCH: Failure (Physical channel failure and reversion failure)~~

#### 8.2.6.12.1 ~~Definition~~

#### 8.2.6.12.2 ~~Conformance requirement~~

The UE shall perform a cell update procedure when the UE selects another cell after the detection of physical channel failure in the physical channel reconfiguration procedure. After the UE completes cell update procedure, the UE transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC which is set to "physical channel failure" in IE "failure-cause".

#### Reference

3GPP TS 25.331 clause 8.2.6

#### 8.2.6.12.3 ~~Test purpose~~

To confirm that the UE initiates a cell update procedure after it fails to reconfigure the new physical channel and selects another cell.

To confirm that UE transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message after UE completes cell update procedure.

#### 8.2.6.12.4 ~~Method of test~~

#### Initial Condition

System Simulator: 2 cells – Cell 1 and 2 are active.

UE: PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108 in cell 1

#### Test Procedure

**Table 8.2.6.12**

| Parameter              | Unit         | Cell 1 |     | Cell 2 |     |
|------------------------|--------------|--------|-----|--------|-----|
|                        |              | T0     | T1  | T0     | T1  |
| UTRA-RF Channel Number |              | Ch. 1  |     | Ch. 1  |     |
| CPICH Ec (FDD)         | dBm/3.84 MHz | -60    | -75 | -75    | -60 |
| P-CCPCH RSCP (TDD)     | dBm          | -60    | -75 | -75    | -60 |

Table 8.2.6.12 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 2.

The UE is in CELL\_DCH state in cell 1. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to invoke the UE to transit from CELL\_DCH to CELL\_FACH. The UE shall reconfigure the common physical channel correctly according to this message. To complete this procedure, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE, but the SS does not reconfigure L1 accordingly. The SS configures its downlink transmission power settings according to columns "T1" in table 8.2.6.12. As a result, the UE fails to synchronise on the new physical channel before timer T312 expires and reselect cell 2 and then the UE shall transmit a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "Cell reselection". The SS shall

transmit a CELL UPDATE CONFIRM message on downlink CCCH after receiving a CELL UPDATE message. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting IE "failure cause" to "physical channel failure".

#### Expected sequence

| Step | Direction |    | Message                                   | Comment                                                                                                                                                                                                                      |
|------|-----------|----|-------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

| 10   |           | →  | PHYSICAL CHANNEL RECONGURATION FAILURE    | UE shall transmit this message in the cell 2.                                                                                                                                                                                |

#### Specific Message Contents

##### PHYSICAL CHANNEL RECONFIGURATION (Step 1)

Use the message sub-type titled "Packet to CELL\_FACH from CELL\_DCH in PS" in Annex A for FDD and Annex A for TDD.

##### PHYSICAL CHANNEL RECONFIGURATION (Step 4)

Use the message sub-type titled "Packet to CELL\_DCH from CELL\_FACH in PS" in Annex A for FDD and Annex A for TDD.

##### CELL UPDATE (Step 7)

The contents of CELL UPDATE message is identical as "Contents of CELL UPDATE message" as found in Annex A for FDD and Annex A for TDD with the following exceptions:

| Information Element                                        | Value/remark                                                                         |
|------------------------------------------------------------|--------------------------------------------------------------------------------------|
| U-RNTI<br>- SRNC Identity<br>- S-RNTI<br>Cell Update Cause | Assigned previously in cell 1<br>Assigned previously in cell 1<br>"cell reselection" |

##### CELL UPDATE CONFIRM (Step 8)

The contents of CELL UPDATE CONFIRM message is identical as "CELL UPDATE CONFIRM message" as found in Annex A.

### PHYSICAL CHANNEL RECONGURATION FAILURE (Step 10)

The contents of PHYSICAL CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the PHYSICAL CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark               |
|---------------------|----------------------------|
| Failure cause       | "physical channel failure" |

#### 8.2.6.12.5 ——— Test requirement

After step 2 the UE shall transit from CELL\_DCH to CELL\_FACH and transmit a PHYSICAL CHANNEL RECONFIGURATION message on the common physical channel.

After step 6 the UE shall transmit a CELL UPDATE message using RLC-TM mode on the uplink CCCH with IE "Cell update cause" set to "cell reselection" in cell 2.

After step 9 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting the IE "failure cause" to "physical channel failure".

### 8.2.6.13 ——— Physical channel reconfiguration for transition from CELL\_FACH to CELL\_DCH: Failure (Incompatible simultaneous reconfiguration)

#### 8.2.6.13.1 ——— Definition

#### 8.2.6.13.2 ——— Conformance requirement

If the UE receives a PHYSICAL CHANNEL RECONFIGURATION message during a reconfiguring procedure due to a radio bearer message other than a PHYSICAL CHANNEL RECONFIGURATION message, it shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC.

#### Reference

3GPP TS 25.331 clause 8.2.6, clause 8.6.3.11.

#### 8.2.6.13.3 ——— Test purpose

To confirm that if the UE receives a PHYSICAL CHANNEL RECONFIGURATION message during a reconfiguring procedure due to a radio bearer message other than a PHYSICAL CHANNEL RECONFIGURATION, it shall keep its configuration as if the PHYSICAL CHANNEL RECONFIGURATION message had not been received and complete the reconfiguration procedure according to the previously received message.

#### 8.2.6.13.4 ——— Method of test

#### Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108

#### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to invoke the UE to transit from CELL\_DCH to CELL\_FACH. The UE shall reconfigure the common physical channel correctly according to this message. To complete this procedure, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. The SS transmits a RADIO BEARER RECONFIGURATION message to the UE. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message before the "activation time" indicated in the RADIO BEARER RECONFIGURATION message expires. When the UE receives the PHYSICAL CHANNEL RECONFIGURATION message, the UE shall keep its configuration as if

it had not received the PHYSICAL CHANNEL RECONFIGURATION message and shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC with IE "failure-cause" set to "incompatible simultaneous reconfiguration". After the UE transmits the PHYSICAL CHANNEL RECONFIGURATION FAILURE message, the UE reconfigures the new physical channel parameters upon the activation time and transmits a RADIO BEARER RECONFIGURATION COMPLETE message on DCCH using AM RLC.

#### Expected sequence

|------|-----------|----|-------------------------------------------|-------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                           |                                                                                                                   |
| 1    |           | ←  | PHYSICAL CHANNEL RECONFIGURATION          | IE "Uplink DPCH Info" and IE "Downlink DPCH Info" are not specified.                                              |
| 2    |           |    |                                           | UE shall perform the reconfiguration                                                                              |
| 3    |           | →  | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE enters CELL_FACH state.                                                                                    |
| 4    |           | ←  | RADIO BEARER RECONFIGURATION              |                                                                                                                   |
| 5    |           | ←  | PHYSICAL CHANNEL RECONFIGURATION          | Sent before the elapse of the frame number specified in IE "Activation time" of the message dispatched in step 4. |
| 6    |           | →  | PHYSICAL CHANNEL RECONFIGURATION FAILURE  | The UE does not change the configuration due to the reception of PHYSICAL CHANNEL RECONFIGURATION message.        |
| 7    |           | →  | RADIO BEARER RECONFIGURATION COMPLETE     | This message is on DCCH using AM RLC.                                                                             |

#### Specific Message Contents

##### PHYSICAL CHANNEL RECONFIGURATION (Step 1)

Use the message sub-type titled "Packet to CELL\_FACH from CELL\_DCH in PS" in Annex A.

##### RADIO BEARER RECONFIGURATION (Step 4) (FDD)

For RADIO BEARER RECONFIGURATION in step 1, use the message sub-type indicated as "Packet to CELL\_DCH from CELL\_FACH in PS" as found in Annex A with the following exceptions:

| Information Element    | Value/remark                        |
|------------------------|-------------------------------------|
| Activation Time Info   | Current CFN-[current CFN mod 8 + 8] |
| Uplink DPCH info       |                                     |
| Scrambling code number | 1                                   |

##### RADIO BEARER RECONFIGURATION (Step 4) (TDD)

For RADIO BEARER RECONFIGURATION in step 1, use the message sub-type indicated as "Packet to CELL\_DCH from CELL\_FACH in PS" as found in Annex A with the following exceptions

| Information Element               | Value/remark                        |
|-----------------------------------|-------------------------------------|
| Activation Time                   | Current CFN-[current CFN mod 8 + 8] |
| - Uplink DPCH timeslots and codes |                                     |
| - First timeslot code list        | Assigned by SS                      |

##### PHYSICAL CHANNEL RECONFIGURATION (Step 5) (FDD)

For PHYSICAL CHANNEL RECONFIGURATION in step 5, use the message sub-type indicated as "Packet to CELL\_DCH from CELL\_FACH in PS" as found in Annex A with the following exceptions:

| Information Element       | Value/remark |
|---------------------------|--------------|
| Activation-Time Info      | Not Present  |
| Uplink DPCH info          |              |
| ———Scrambling-code-number | 2            |

### PHYSICAL CHANNEL RECONFIGURATION (Step 5) (TDD)

For PHYSICAL CHANNEL RECONFIGURATION in step 5, use the message sub-type indicated as "Packet to CELL\_DCH from CELL\_FACH in PS" as found in Annex A with the following exceptions:

| Information Element              | Value/remark                     |
|----------------------------------|----------------------------------|
| Activation-Time                  | Not present                      |
| –Uplink DPCH timeslots and codes |                                  |
| –First timeslot code list        | Different as assigned previously |

### PHYSICAL CHANNEL RECONFIGURATION FAILURE (Step 6)

The contents of PHYSICAL CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the PHYSICAL CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark                              |
|---------------------|-------------------------------------------|
| Failure-cause       | Incompatible simultaneous reconfiguration |

#### 8.2.6.13.5 ——— Test requirement

After step 2 the UE shall transit from CELL\_DCH to CELL\_FACH and transmit a PHYSICAL CHANNEL RECONFIGURATION message on the common physical channel.

After step 5 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC with IE "failure-cause" set to "Incompatible simultaneous reconfiguration".

After step 6 the UE shall transmit a RADIO BEARER RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

#### 8.2.6.14 ——— Physical channel reconfiguration for transition from CELL\_FACH to CELL\_DCH: Failure (Invalid message reception and Invalid configuration)

##### 8.2.6.14.1 ——— Definition

##### 8.2.6.14.2 ——— Conformance requirement

The UE shall keep its old configuration when the UE receives an invalid PHYSICAL CHANNEL RECONFIGURATION message which does not includes any IEs except IE "Message Type". It shall then transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message, set "protocol error" in IE "failure-cause" and also set "ASN.1 violation or encoding error" in IE "Protocol error cause". The UE shall keep existing configuration upon reception of a PHYSICAL CHANNEL RECONFIGURATION message, which includes some IEs which are set to give an invalid configuration, and then the UE shall transmit PHYSICAL CHANNEL RECONFIGURATION FAILURE including IE "failure-cause" set to "invalid configuration"

#### Reference

3GPP TS 25.331 clause 8.2.6

### 8.2.6.14.3 ~~Test purpose~~

To confirm that the UE transmits a ~~PHYSICAL CHANNEL RECONFIGURATION FAILURE~~ message on the DCCH using AM RLC if the received message does not include any IEs except IE "Message Type".

To confirm that the UE transmits a ~~PHYSICAL CHANNEL RECONFIGURATION FAILURE~~ message on the DCCH using AM RLC if it receives a ~~PHYSICAL CHANNEL RECONFIGURATION~~ message including some IEs which are set to give an invalid configuration.

### 8.2.6.14.4 ~~Method of test~~

#### ~~Initial Condition~~

System Simulator: 1 cell

UE: PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108

#### ~~Test Procedure~~

The UE is in CELL\_DCH state. The SS transmits a ~~PHYSICAL CHANNEL RECONFIGURATION~~ message to the UE to invoke the UE to transit from CELL\_DCH to CELL\_FACH. The UE shall reconfigure the common physical channel correctly according to this message. To complete this procedure, the UE shall transmit a ~~PHYSICAL CHANNEL RECONFIGURATION COMPLETE~~ message using AM RLC. The SS transmits an invalid ~~PHYSICAL CHANNEL RECONFIGURATION~~ message to the UE which does not include any IEs except IE "Message Type". The UE keeps the old configuration and transmits a ~~PHYSICAL CHANNEL RECONFIGURATION FAILURE~~ message on the DCCH using AM RLC, setting "protocol error" in IE "failure cause" and also setting "ASN.1 violation or encoding error" in IE "Protocol error cause". SS transmits ~~PHYSICAL CHANNEL RECONFIGURATION~~ message including some IEs which are set to give an invalid configuration. The UE keeps current configuration and transmits a ~~PHYSICAL CHANNEL RECONFIGURATION FAILURE~~ message on the DCCH using AM RLC, setting IE "failure cause" to "invalid configuration".

#### ~~Expected sequence~~

| Step | Direction |    | Message                                              | Comment                                                                   |
|------|-----------|----|------------------------------------------------------|---------------------------------------------------------------------------|
|      | UE        | SS |                                                      |                                                                           |
| 1    |           | ←  | <del>PHYSICAL CHANNEL RECONFIGURATION</del>          | IE "Uplink DPCH Info" and IE "Downlink DPCH Info" are not specified.      |
| 2    |           |    |                                                      | UE shall perform the reconfiguration                                      |
| 3    |           | →  | <del>PHYSICAL CHANNEL RECONFIGURATION COMPLETE</del> | The UE enters CELL_FACH state.                                            |
| 4    |           | ←  | <del>PHYSICAL CHANNEL RECONFIGURATION</del>          | See specific message content.                                             |
| 5    |           | →  | <del>PHYSICAL CHANNEL RECONFIGURATION FAILURE</del>  | The UE does not change the configuration.                                 |
| 6    |           | ←  | <del>PHYSICAL CHANNEL RECONFIGURATION</del>          | This message includes IEs which are set to give an invalid configuration. |
| 7    |           |    |                                                      | The UE does not change the configuration                                  |
| 8    |           | →  | <del>PHYSICAL CHANNEL RECONFIGURATION FAILURE</del>  | The IE "failure cause" shall be set to "invalid configuration"            |

#### ~~Specific Message Contents~~

#### ~~PHYSICAL CHANNEL RECONFIGURATION (Step 1)~~

Use the message sub-type titled "Packet to CELL\_FACH from CELL\_DCH in PS" in Annex A for FDD and Annex A for TDD.

**PHYSICAL CHANNEL RECONFIGURATION (Step 4)**

| Information Element | Value/remark |
|---------------------|--------------|
| All IEs             | Not Present  |

**PHYSICAL CHANNEL RECONFIGURATION FAILURE (Step 5)**

The contents of PHYSICAL CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the PHYSICAL CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element            | Value/remark                      |
|--------------------------------|-----------------------------------|
| Failure-cause                  |                                   |
| ——— Failure cause              | Protocol error                    |
| ——— Protocol error information |                                   |
| ——— Protocol error cause       | ASN.1 violation or encoding error |

**PHYSICAL CHANNEL RECONFIGURATION (Step 6) (FDD)**

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL\_DCH from CELL\_FACH in PS" as found in Annex A with the following exceptions:

| Information Element           | Value/remark |
|-------------------------------|--------------|
| ——— Default DPCH Offset Value | 512          |
| ——— DPCH frame offset         | 1024         |

**PHYSICAL CHANNEL RECONFIGURATION (Step 6) (TDD)**

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL\_DCH from CELL\_FACH in PS" as found in Annex A with the following exceptions:

| Information Element | Value/remark |
|---------------------|--------------|
| ——— PRACH TFCS      | Present      |

**PHYSICAL CHANNEL RECONFIGURATION FAILURE (Step 7)**

The contents of PHYSICAL CHANNEL RECONFIGURATION FAILURE message in this test case is the same as the PHYSICAL CHANNEL RECONFIGURATION FAILURE message as found in Annex A, with the following exceptions:

| Information Element | Value/remark          |
|---------------------|-----------------------|
| Failure-cause       | Invalid configuration |

**8.2.6.14.5 ——— Test requirement**

After step 2 the UE shall transit from CELL\_DCH to CELL\_FACH and transmit a PHYSICAL CHANNEL RECONFIGURATION message on the common physical channel.

After step 4 the UE shall keep its old configuration, transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC with "protocol error" in IE "failure-cause" and also "ASN.1 violation or encoding error" in IE "Protocol error cause".

After step 7 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION FAILURE message on the DCCH using AM RLC, setting IE "failure-cause" to "invalid configuration".

**8.2.6.15** ~~Physical channel reconfiguration for transition from CELL\_FACH to CELL\_FACH: Success~~

**8.2.6.15.1** ~~Definition~~

**8.2.6.15.2** ~~Conformance requirement~~

The UE shall correctly reconfigure a common physical channel in another cell according to a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL\_FACH in a current cell to CELL\_FACH in the specified another cell.

**Reference**

3GPP TS 25.331 clause 8.2.6

**8.2.6.15.3** ~~Test purpose~~

To confirm that the UE reconfigures a new common physical channel in another cell according to the PHYSICAL CHANNEL RECONFIGURATION message received from the SS.

**8.2.6.15.4** ~~Method of test~~

**Initial Condition**

System Simulator: 2 cells—Cell 1 and 2 are active.

UE: PS-DCCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108

**Test Procedure**

**Table 8.2.6.15**

| Parameter              | Unit                | Cell 1 |     | Cell 2 |     |
|------------------------|---------------------|--------|-----|--------|-----|
|                        |                     | T0     | T1  | T0     | T1  |
| UTRA—RF Channel Number |                     | Ch. 1  |     | Ch. 1  |     |
| CPICH Ec               | dBm/<br>3.84<br>MHz | -60    | -75 | -75    | -60 |
| P-CCPCH RSCP (TDD)     | dBm                 | -60    | -75 | -75    | -60 |

Table 8.2.6.15 illustrates the downlink power to be applied for the 2-cells at various time instants of the test-execution. SS switches the power settings from columns "T0" to "T1", whenever the description in multi-cell condition specifies the transmission power settings for cell 1 and cell 2.

The UE is in the CELL\_FACH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which invoke the UE to transit from CELL\_FACH in the current cell to CELL\_FACH in cell 2, to the UE. The SS configures its downlink transmission power settings according to columns "T1" in table 8.2.6.15. The UE shall move to cell 2 and configure the common physical channel and transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC on the DCCH.

## Expected sequence

| Step | Direction |    | Message                                   | Comment                                                                                                             |
|------|-----------|----|-------------------------------------------|---------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                                           |                                                                                                                     |
| 1    | ←         |    | PHYSICAL CHANNEL RECONFIGURATION          |                                                                                                                     |
| 2    |           |    |                                           | The SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.2.6.15. |
| 3    | →         |    | PHYSICAL CHANNEL RECONFIGURATION COMPLETE |                                                                                                                     |

## Specific Message Contents

## PHYSICAL CHANNEL RECONFIGURATION (FDD)

Use the message sub-type titled "Packet to CELL\_FACH from CELL\_FACH in PS" in Annex A with the following exceptions:

| Information Element                                                                                | Value/remark         |
|----------------------------------------------------------------------------------------------------|----------------------|
| New C-RNTI                                                                                         | 0000-0000-0000-0001B |
| Downlink information for each radio links<br>——→ Primary CPICH info<br>——→ Primary scrambling code | 150                  |

## PHYSICAL CHANNEL RECONFIGURATION (TDD)

Use the message sub-type titled "Packet to CELL\_FACH from CELL\_FACH in PS" in Annex A with the following exceptions:

| Information Element                                                                           | Value/remark |
|-----------------------------------------------------------------------------------------------|--------------|
| Downlink information for each radio links<br>——→ Primary CCPCH info<br>——→ Cell parameters ID | 4            |

## 8.2.6.15.5 ——— Test requirement

After step 2 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message in cell 2.

## 8.2.6.16 ——— Physical channel reconfiguration for transition from CELL\_FACH to CELL\_FACH: (Cell re-selection)

## 8.2.6.16.1 ——— Definition

## 8.2.6.16.2 ——— Conformance requirement

The UE shall initiate the cell reselection procedure when the UE performs cell reselection during a physical channel reconfiguration procedure. After the UE completes cell update procedure, the UE shall continue to perform the physical channel reconfiguration procedure and correctly reconfigure the physical channel.

## Reference

3GPP TS 25.331 clause 8.2.6

### 8.2.6.16.3 Test purpose

To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message after the UE completes a cell update procedure indicated by a PHYSICAL CHANNEL RECONFIGURATION message.

### 8.2.6.16.4 Method of test

#### Initial Condition

System Simulator: 2 cells – Cell 1 and 2 are active.

UE: PS-DCCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108

#### Test Procedure

**Table 8.2.6.16**

| Parameter              | Unit         | Cell 1 |     | Cell 2 |     |
|------------------------|--------------|--------|-----|--------|-----|
|                        |              | T0     | T1  | T0     | T1  |
| UTRA RF Channel Number |              | Ch. 1  |     | Ch. 1  |     |
| CPICH Ec (FDD)         | dBm/3.84 MHz | -60    | -75 | -75    | -60 |
| P-CCPCH RSCP (TDD)     | dBm          | -60    | -75 | -75    | -60 |

Table 8.2.6.16 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. SS switches the power settings between columns "T0" and "T1", whenever the description in multi-cell condition specifies a reverse in the transmission power settings for cell 1 and cell 2.

The UE is in CELL\_FACH state in cell 1. On transmitting a PHYSICAL CHANNEL RECONFIGURATION message, which does not include the IE "Primary CPICH info", the SS configures its downlink transmission power settings according to columns "T1" in table 8.2.6.16. The UE shall initiate the cell update procedure and transmits a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "cell reselection" in cell 2. The SS shall transmit a CELL UPDATE CONFIRM message on downlink CCCH after receiving CELL UPDATE message. The UE transmits a UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH using AM RLC and transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

#### Expected sequence

| U-RNTI<br>New U-RNTI<br>- SRNC Identity<br>- S-RNTI<br>New C-RNTI | Same as CELL UPDATE message in step 4<br>'0000-0000-0000-0001'<br>Different from previous S-RNTI<br>Different from previous C-RNTI |

## 8.2.6.16.5 — Test requirement

After step 3 the UE shall transmit a CELL UPDATE message on the CCCH with IE "Cell update cause" set to "cell reselection" in cell 2.

After step 5 the UE shall transmit UTRAN MOBILITY INFORMATION CONFIRM message on the uplink DCCH using AM RLC.

After step 6 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### ~~8.2.6.17 Physical channel reconfiguration for transition from CELL\_DCH to CELL\_DCH (code modification): Success (Subsequently received)~~

#### ~~8.2.6.17.1 Definition~~

#### ~~8.2.6.17.2 Conformance requirement~~

~~If the UE receives a PHYSICAL CHANNEL RECONFIGURATION message before the UE reconfigures the radio bearer according to the previous PHYSICAL CHANNEL RECONFIGURATION message, the UE shall ignore the new PHYSICAL CHANNEL RECONFIGURATION message and reconfigure according to the previous PHYSICAL CHANNEL RECONFIGURATION message received. Finally, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.~~

#### ~~Reference~~

~~3GPP TS 25.331 clause 8.2.6, clause 8.6.3.11.~~

#### ~~8.2.6.17.3 Test purpose~~

~~To confirm that if the UE receives a PHYSICAL CHANNEL RECONFIGURATION message before the UE reconfigures the radio bearer according to the previous PHYSICAL CHANNEL RECONFIGURATION message it ignores the new PHYSICAL CHANNEL RECONFIGURATION message and reconfigures according to the previous PHYSICAL CHANNEL RECONFIGURATION message.~~

#### ~~8.2.6.17.4 Method of test~~

#### ~~Initial Condition~~

~~System Simulator: 1 cell~~

~~UE: CS-DCCH+DTCH\_DCH (state 6-9) or PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108, depending on the CN domain(s) supported by the UE.~~

#### ~~Test Procedure~~

~~The UE is in the CELL\_DCH state. When the SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE before the activation time specified in the previous PHYSICAL CHANNEL RECONFIGURATION message elapses, the UE ignores the new PHYSICAL CHANNEL RECONFIGURATION message and reconfigures according to the previous PHYSICAL CHANNEL RECONFIGURATION message received. Finally, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.~~

| ~ Uplink DPCH timeslots and codes<br>~ First timeslot code list | A different code combination to that used in step 1. |

#### 8.2.6.17.5 Test requirement

After step 2 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### 8.2.6.18 Physical channel reconfiguration for transition from CELL\_FACH to CELL\_DCH: Success (Subsequently received)

#### 8.2.6.18.1 Definition

#### 8.2.6.18.2 Conformance requirement

If the UE receives a PHYSICAL CHANNEL RECONFIGURATION message before the UE reconfigures the radio bearer according to the previous PHYSICAL CHANNEL RECONFIGURATION message, the UE shall ignore the new PHYSICAL CHANNEL RECONFIGURATION message and reconfigure according to the previous PHYSICAL CHANNEL RECONFIGURATION message received. Finally, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

#### Reference

3GPP TS 25.331 clause 8.2.6, clause 8.6.3.11.

#### 8.2.6.18.3 Test purpose

To confirm that if the UE receives a PHYSICAL CHANNEL RECONFIGURATION message before the UE reconfigures the radio bearer according to the previous PHYSICAL CHANNEL RECONFIGURATION message it ignores the new PHYSICAL CHANNEL RECONFIGURATION message and reconfigures according to the previous PHYSICAL CHANNEL RECONFIGURATION message.

#### 8.2.6.18.4 Method of test

#### Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108

#### Test Procedure

The UE is in CELL\_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE to invoke the UE to transit from CELL\_DCH to CELL\_FACH. The UE shall reconfigure the common physical channel correctly according to this message. To complete this procedure, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC. When the SS transmits a PHYSICAL CHANNEL RECONFIGURATION message to the UE before the activation time specified in the previous PHYSICAL CHANNEL RECONFIGURATION message, the UE ignores the new PHYSICAL CHANNEL RECONFIGURATION message and reconfigures according to the previous PHYSICAL CHANNEL RECONFIGURATION message received. Finally, the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

| ~ Uplink DPCH info          |                                                                                |
| ~ Secondary scrambling code | 1                                                                              |

## PHYSICAL CHANNEL RECONFIGURATION (Step 4) (TDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL\_DCH from CELL\_FACH in PS" as found in Annex A with the following exceptions:

| Information Element               | Value/remark                                                                   |
|-----------------------------------|--------------------------------------------------------------------------------|
| Activation Time                   | $[256 + \text{Current CFN} - [\text{current CFN mod } 8 + 8]] \text{MOD } 256$ |
| ~ Uplink DPCH timeslots and codes |                                                                                |
| ~ First timeslot code list        | Assigned in step 1                                                             |

### PHYSICAL CHANNEL RECONFIGURATION (Step 5) (FDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL\_DCH from CELL\_FACH in PS" found in Annex A with the following exceptions:

| Information Element         | Value/remark |
|-----------------------------|--------------|
| Activation Time             | Not Present  |
| - Uplink DPCH info          |              |
| - Secondary scrambling code | 2            |

### PHYSICAL CHANNEL RECONFIGURATION (Step 5) (TDD)

The contents of PHYSICAL CHANNEL RECONFIGURATION message in this test case is identical to the message sub-type title "Packet to CELL\_DCH from CELL\_FACH in PS" found in Annex A with the following exceptions:

| Information Element               | Value/remark                                         |
|-----------------------------------|------------------------------------------------------|
| Activation Time                   | Not Present                                          |
| - Uplink DPCH timeslots and codes |                                                      |
| - First timeslot code list        | A different code combination to that used in step 1. |

#### 8.2.6.18.5 Test requirement

After step 2 the UE shall transit from CELL\_DCH to CELL\_FACH and transmit a PHYSICAL CHANNEL RECONFIGURATION message on the common physical channel.

After step 5 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

### 8.2.6.19 Physical Channel Reconfiguration from CELL\_DCH to CELL\_PCH: Success

#### 8.2.6.19.1 Definition

#### 8.2.6.19.2 Conformance requirement

The UE shall transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message after it receives a PHYSICAL CHANNEL RECONFIGURATION message which invokes the UE to transit from CELL\_DCH to CELL\_PCH. And then, the UE shall enter CELL\_PCH state.

#### Reference

3GPP TS 25.331 clause 8.2.6.

#### 8.2.6.19.3 Test purpose

To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and enter CELL\_PCH state after it received a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL\_DCH to CELL\_PCH.

#### 8.2.6.19.4 Method of test

#### Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108

## Test Procedure

The UE is in CELL\_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL\_DCH to CELL\_PCH. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC and enters CELL\_PCH state. The SS transmits a PAGING TYPE 1 message, causing the UE to enter CELL\_FACH state and the UE shall transmit a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "paging response".

## Expected sequence

| Step | Direction |    | Message                                   | Comment                                                |
|------|-----------|----|-------------------------------------------|--------------------------------------------------------|
|      | UE        | SS |                                           |                                                        |
| 1    |           | ←  | PHYSICAL CHANNEL RECONFIGURATION          |                                                        |
| 2    |           | →  | PHYSICAL CHANNEL RECONFIGURATION COMPLETE |                                                        |
| 3    |           |    |                                           | The UE is in CELL_PCH state.                           |
| 4    |           | ←  | PAGING TYPE 1                             | The SS transmits this message with a matched identity. |
| 5    |           | →  | CELL UPDATE                               | The UE is in CELL_FACH state.                          |

## Specific Message Contents

### PHYSICAL CHANNEL RECONFIGURATION (Step 1) (FDD)

Use the same message sub-type titled "Packet to CELL\_FACH from CELL\_DCH in PS" in Annex A with following exceptions:

| Information Element                                                                           | Value/remark |

#### 8.2.6.19.5 ——— Test requirement

After step 1 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

After step 4 the UE shall transmit a CELL UPDATE message on the CCCH with IE "Cell update cause" set to "paging response".

#### 8.2.6.20 ——— Physical Channel Reconfiguration from CELL\_DCH to URA\_PCH: Success

##### 8.2.6.20.1 ——— Definition

##### 8.2.6.20.2 ——— Conformance requirement

The UE shall transmit PHYSICAL CHANNEL RECONFIGURATION COMPLETE message after it receives a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL\_DCH to URA\_PCH. And then, the UE shall reconfigure radio bearers according to the PHYSICAL CHANNEL RECONFIGURATION message and enter URA\_PCH state.

#### Reference

3GPP TS 25.331 clause 8.2.6.

##### 8.2.6.20.3 ——— Test purpose

To confirm that the UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message and enter URA\_PCH state after it received a PHYSICAL CHANNEL RECONFIGURATION message, which invokes the UE to transit from CELL\_DCH to URA\_PCH.

##### 8.2.6.20.4 ——— Method of test

#### Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH\_DCH (state 6-10) as specified in clause 7.4 of TS 34.108

#### Test Procedure

The UE is in the CELL\_DCH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message, which invoke the UE to transit from CELL\_DCH to URA\_PCH. The UE transmits a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message using AM RLC and enters URA\_PCH state. The SS transmits a PAGING TYPE 1 message, causing the UE to enter CELL\_FACH state and the UE shall transmit a CELL UPDATE message on uplink CCCH with IE "Cell update cause" set to "paging response".

#### Expected sequence

## 8.2.6.20.5 — Test requirement

After step 1 the UE shall transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the DCCH using AM RLC.

After step 4 the UE shall transmit a CELL UPDATE message on the CCCH with IE "Cell update cause" set to "paging response".

## 8.2.6.21 — Physical Channel Reconfiguration from CELL\_FACH to URA\_PCH: Success

## 8.2.6.21.1 — Definition

## 8.2.6.21.2 — Conformance requirement

1. In case the procedure was triggered by reception of a PHYSICAL CHANNEL RECONFIGURATION message, the UE shall:
  - transmit a PHYSICAL CHANNEL RECONFIGURATION COMPLETE as response message on the uplink DCCH using AM RLC;
2. If the new state is CELL\_PCH or URA\_PCH, the response message shall be transmitted using the old configuration before the state transition, but the new C-RNTI shall be used if the IE "New C-RNTI" was included in the received reconfiguration message, and the UE shall:
  - when RLC has confirmed the successful transmission of the response message;

- for each radio bearer in the variable PDCP\_SN\_INFO:
- if the IE "RB started" in the variable ESTABLISHED\_RABS is set to "started":
  - configure the RLC entity for that radio bearer to "continue";
- enter the new state (CELL\_PCH or URA\_PCH, respectively);

Reference

3GPP TS 25.331 clause 8.2.2.4

8.2.6.21.3 Test purpose

1. To verify that the UE, when receiving a PHYSICAL CHANNEL RECONFIGURATION message, responds by transmitting a PHYSICAL CHANNEL RECONFIGURATION COMPLETE message on the uplink DCCH using AM RLC.
2. To verify that the response message is transmitted using the old configuration before the state transition, and that the UE enters the URA\_PCH state.

8.2.6.21.4 Method of test

Initial Condition

System Simulator: 1 cell

UE: PS-DCCH+DTCH\_FACH (state 6-11) as specified in clause 7.4 of TS 34.108.

Test Procedure

The UE is in the CELL\_FACH state. The SS transmits a PHYSICAL CHANNEL RECONFIGURATION message. The UE transmits PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the SS using AM RLC and enters into URA\_PCH state. The SS transmits a PAGING TYPE 1 message and the UE accepts it and enters the CELL\_FACH state again.

Expected sequence

| Step | Direction |    | Message                                   | Comment                                                     |
|------|-----------|----|-------------------------------------------|-------------------------------------------------------------|
|      | UE        | SS |                                           |                                                             |
| 1    | ←         |    | PHYSICAL CHANNEL RECONFIGURATION          |                                                             |
| 2    | →         |    | PHYSICAL CHANNEL RECONFIGURATION COMPLETE | The UE sends this message before start state transition.    |
| 3    |           |    |                                           | Reconfiguration of Physical Channel after state transition. |
| 4    | ←         |    | PAGING TYPE 1                             | The SS transmits this message included a matched identity.  |
| 5    | →         |    | CELL UPDATE                               | The UE is in CELL_FACH state.                               |

Specific Message Contents

PHYSICAL CHANNEL RECONFIGURATION (Step 1)

Use the same message sub-type titled "Packet to CELL\_FACH from CELL\_FACH in PS" in Annex A with following exceptions:

| 4    | ←         |    | PAGING TYPE 1                             | The SS transmits this message included a matched identity.  |
| 5    | →         |    | CELL UPDATE                               | The UE is in CELL_FACH state.                               |

#### ~~Specific Message Contents~~

##### ~~PHYSICAL CHANNEL RECONFIGURATION (Step 1)~~

~~Use the same message sub-type titled "Packet to CELL\_FACH from CELL\_FACH in PS" in Annex A with following exceptions:~~

| Information Element                       | Value/remark |
|-------------------------------------------|--------------|
| RRC State Indicator                       | CELL_PCH     |
| Downlink information for each radio links |              |
| - Choice mode                             |              |
| - Primary CPICH info                      |              |
| → Primary scrambling code                 | 100          |

##### ~~PAGING TYPE 1 (Step 4)~~

~~Use the same message sub-type titled "TM (Packet in PS)" in default message content of TS34.108 with following exceptions:~~

| Information Element           | Value/remark                      |
|-------------------------------|-----------------------------------|
| Paging record list            |                                   |
| Paging record                 |                                   |
| — CHOICE Used-paging identity | UTRAN-identity                    |
| — U-RNTI                      |                                   |
| — SRNC-Identity               | Previously-assigned SRNC-identity |
| — S-RNTI                      | Previously-assigned S-RNTI        |

#### 8.2.6.22.5 Test requirement

1. After step 1 the UE transmits PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to the UE on uplink DCCH using AM RLC.
2. In step 5 the UE shall transmit a CELL UPDATE message.

### 8.2.7 Physical Shared Channel Allocation [TDD only]

[Editor's note: This message is not included in Release99 so this is FFS.]

### 8.2.8 PUSCH capacity request [TDD only]

[Editor's note: This message is not included in Release99 so this is FFS.]

### 8.2.9 Void

## 8.3 RRC connection mobility procedure

### 8.3.1 Cell Update

#### 8.3.1.1 Cell Update: cell reselection in CELL\_FACH

##### 8.3.1.1.1 Definition

##### 8.3.1.1.2 Conformance requirement

This procedure is used to update UTRAN with the current cell of the UE after it has performed a cell reselection in CELL\_FACH state.

#### Reference

3GPP TS 25.331 clause 8.3.1

##### 8.3.1.1.3 Test purpose

To confirm that the UE executes a cell update procedure after the successful reselection of another UTRA cell. To confirm that the UE sends the correct uplink response message when executing cell update procedure due to cell reselection.

##### 8.3.1.1.4 Method of test

#### Initial Condition

System Simulator: 2 cells – Cell 1 and 2 are active.

UE: PS-DCCH+DTCH\_FACH (state 6-11) in cell 1 as specified in clause 7.4 of TS 34.108.

Test Procedure

Table 8.3.1.1

| Parameter              | Unit        | Cell 1 |     | Cell 2 |     |
|------------------------|-------------|--------|-----|--------|-----|
|                        |             | T0     | T1  | T0     | T1  |
| UTRA RF Channel Number |             | Ch. 1  |     | Ch. 1  |     |
| CPICH Ec               | dBm/3.84MHz | -60    | -75 | -75    | -60 |

Table 8.3.1.1 illustrates the downlink power to be applied for the 2 cells at various time instants of the test execution. Columns marked "T0" denote the initial conditions. SS switches the power settings repeatedly between columns "T1" and "T0", whenever the description below specifies that the transmission power settings for cell 1 and cell 2 be reversed.

The UE is in the CELL\_FACH state, camping onto cell 1. SS configures its downlink transmission power settings according to columns "T1" in table 8.3.1.1. The UE shall find cell 2 to be more suitable for service and hence perform a cell reselection. After the completion of cell reselection, the UE shall transmit a CELL UPDATE message to the SS on the uplink CCCH of cell 2 and set IE "Cell update cause" to "Cell Reselection". After the SS receives this message, it transmits a CELL UPDATE CONFIRM message, which includes the IE "RRC State Indicator" set to "CELL\_FACH", to the UE on the downlink DCCH. SS verifies that the UE does not send any response to this message. UE shall stay in CELL\_FACH state. SS configures its downlink transmission power settings according to columns "T0" in table 8.3.1.1. The UE shall send a CELL UPDATE message on the uplink CCCH of cell 1. SS replies with CELL UPDATE CONFIRM message and allocates new C-RNTI and U-RNTI identities to the UE. The IE "RRC State Indicator" is set to "CELL\_FACH" in this message. The UE shall transmit UTRAN MOBILITY INFORMATION CONFIRM message. Following this, SS configures its downlink transmission power settings according to columns "T1" in table 8.3.1.1. The UE shall initiate a cell update procedure by transmitting a CELL UPDATE message and stating the cause as 'cell reselection'. SS replies with a CELL UPDATE CONFIRM message which contains IE "Physical channel information elements". The UE shall send PHYSICAL CHANNEL RECONFIGURATION COMPLETE message to acknowledge the change in physical resources. Then, SS configures its downlink transmission power settings according to columns "T0" in table 8.3.1.1. The UE shall send a CELL UPDATE message on the uplink CCCH of cell 1. SS replies with a CELL UPDATE CONFIRM message which contains IE "Transport channel information elements". The UE shall send TRANSPORT CHANNEL RECONFIGURATION COMPLETE message. Following this, SS configures its downlink transmission power settings according to columns "T1" in table 8.3.1.1. The UE shall send a CELL UPDATE message on the uplink CCCH of cell 2. SS replies with a CELL UPDATE CONFIRM message which contains IE "RB information to be affected list". The UE shall send RADIO BEARER RECONFIGURATION COMPLETE message. Then, SS configures its downlink transmission power settings according to columns "T0" in table 8.3.1.1. The UE shall send a CELL UPDATE message on the uplink CCCH of cell 1. SS replies with a CELL UPDATE CONFIRM message which contains IE "RB information to release list". The UE shall send RADIO BEARER RELEASE COMPLETE message. Finally, SS configures its downlink transmission power settings according to columns "T1" in table 8.3.1.1. The UE shall send a CELL UPDATE message on the uplink CCCH of cell 2. SS shall not respond to this message but SS configures its downlink transmission power settings according to columns "T0" in table 8.3.1.1. UE shall send a CELL UPDATE message on the uplink CCCH of cell 1. SS shall then send CELL UPDATE CONFIRM message to UE.

#### Expected sequence

| Step | Direction |    | Message             | Comment                                                                                                                                                                                                                                                                    |
|------|-----------|----|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                     |                                                                                                                                                                                                                                                                            |
| 1    |           |    |                     | The UE is in the CELL_FACH state in cell 1                                                                                                                                                                                                                                 |
| 2    |           |    | Void                | SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.3.1.1. The UE shall find that the cell 2 is better for service and perform a reselection. SS waits for the maximum duration required for the UE to camp to cell 2. |
| 3    | →         |    | CELL UPDATE         | Value "cell reselection" shall be indicated in IE "Cell update cause"                                                                                                                                                                                                      |
| 4    | ←         |    | CELL UPDATE CONFIRM | IE "RRC State Indicator" is set to "CELL_FACH". SS set k=0.                                                                                                                                                                                                                |
| 5    |           |    |                     | SS checks the uplink PRACH channel to verify that no response is sent by UE.                                                                                                                                                                                               |
| 6    |           |    |                     | SS reverses the transmission power level of cell 1 and cell 2.                                                                                                                                                                                                             |
| 7    | →         |    | CELL UPDATE         |                                                                                                                                                                                                                                                                            |
| 8    | ←         |    | CELL UPDATE CONFIRM | IE "RRC State Indicator" is set                                                                                                                                                                                                                                            |

|    |   |                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|----|---|--------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|    |   |                                            | to "CELL_FACH". If $k \geq 0$ , new C-RNTI and U-RNTI identities are assigned to the UE. If $k > 0$ , IE "Physical channel information elements" is included in this message. If $k > 1$ , IE "Transport channel information elements" is included in this message. If $k > 2$ , IE "RB information to be affected list" is included in this message. If $k > 3$ , IE "RB information to release list" is included in this message. Increment $k$ by 1. |
| 9  | → | UTRAN MOBILITY INFORMATION CONFIRM         | If $k=1$ when SS received this message, go to step 6. Else test fails. If this message is not received, proceed to next step.                                                                                                                                                                                                                                                                                                                           |

| U-RNTI<br>-SRNC Identity<br>-S-RNTI | Check to see if set to '0000 0000 0001'<br>In step 3, check to see if set to '0000 0000 0000 0000 0001'. In step 7 and when $k < 1$ , check to see if set to '0000 0000 0000 0000 0001'. In step 7 and when $k > 0$ , check to see if set to same string in IE "S-RNTI" in IE "New U-RNTI" of CELL UPDATE CONFIRM message in previous step 8. In step 15 and 17, check to see if set to same string in IE "S-RNTI" in IE "New U-RNTI" of CELL UPDATE CONFIRM message in previous step 8. |
| Cell Update Cause                   | Check to see if set to 'Cell Re-selection'                                                                                                                                                                                                                                                                                                                                                                                                                                               |

**CELL UPDATE CONFIRM (Step 4 and 18)**

Use the same message sub-type found in Annex A, with the following exceptions:

| Information Element | Value/remark |
|---------------------|--------------|
| RRC State Indicator | CELL_FACH    |

**CELL UPDATE CONFIRM (Step 8 and k = 0)**

Use the same message sub-type found in step 4, with the following exceptions:

| Information Element                     | Value/remark                                                                                                            |
|-----------------------------------------|-------------------------------------------------------------------------------------------------------------------------|
| New U-RNTI<br>-SRNC Identity<br>-S-RNTI | '0000-0000-0001'<br>An arbitrary 20-bits string which is different from original S-RNTI                                 |
| New C-RNTI                              | An arbitrary 16-bits string which is different from original C-RNTI assigned in RRC connection establishment procedure. |

**CELL UPDATE CONFIRM (Step 8 and k=1)**

Use the same message sub-type found in step 8 and k=0, with the following exceptions:

| Information Element             | Value/remark                                                                                               |
|---------------------------------|------------------------------------------------------------------------------------------------------------|
| Maximum allowed uplink TX power | 3 dB below the follow value:<br>Minimum of {33 dBm, maximum uplink power allowed under the UE power class} |

**CELL UPDATE CONFIRM (Step 8 and k=2)**

Use the same message sub-type found in step 8 and k=1, with the following exceptions:

| Information Element                             | Value/remark                                |
|-------------------------------------------------|---------------------------------------------|
| Added or Reconfigured uplink TrCH information   | Same as the system information block type 5 |
| Added or Reconfigured downlink TrCH information | Same as the system information block type 5 |

**CELL UPDATE CONFIRM (Step 8 and k=3)**

Use the same message sub-type found in step 8 and k=2, with the following exceptions:

| Information Element                                                                                                                   | Value/remark                                                           |

| RB information to release<br>——RB identity | 4            |

#### 8.3.1.1.5 ~~Test requirement~~

~~After step 2 the UE shall reselect to cell 2 and then it shall transmit a CELL\_UPDATE message which, sets the value "cell reselection" in IE "Cell update cause".~~

~~After step 4 the UE shall not transmit any uplink message in response to the CELL\_UPDATE\_CONFIRMATION message received in step 4.~~

~~After step 6 the UE shall send a CELL\_UPDATE message to the cell with stronger transmitting power, in order to indicate that a cell reselection has taken place.~~

~~After step 8, if k=1, the UE shall transmit a UTRAN\_MOBILITY\_INFORMATION\_CONFIRM message to acknowledge that it has started to use the new RNTI identities allocated.~~

~~If k=2, the UE shall transmit a PHYSICAL\_CHANNEL\_RECONFIGURATION\_COMPLETE message on the new physical channel assigned.~~

~~If k=3, the UE shall transmit a TRANSPORT\_CHANNEL\_RECONFIGURATION\_COMPLETE message to acknowledge that it has reconfigured the transport channels.~~

~~If k=4, the UE shall transmit a RADIO\_BEARER\_RECONFIGURATION\_COMPLETE message to acknowledge that it has reconfigured the radio bearers.~~

~~If k=5, the UE shall transmit a RADIO\_BEARER\_RELEASE\_COMPLETE message to acknowledge that it has released its radio bearers.~~

~~After step 14 the UE shall transmit a CELL\_UPDATE message to the cell with stronger transmitting power, in order to indicate that a cell reselection has taken place.~~

~~After step 16 the UE shall transmit a CELL\_UPDATE message to the cell with stronger transmitting power, in order to indicate that a cell reselection has taken place.~~

### 8.3.1.2 ~~Cell Update: cell reselection in CELL\_PCH~~

#### 8.3.1.2.1 ~~Definition~~

#### 8.3.1.2.2 ~~Conformance requirement~~

~~This procedure is to update UTRAN with information of the current cell, after a cell reselection has occurred in CELL\_PCH state.~~

#### Reference

~~3GPP TS 25.331 clause 8.3.1.~~

#### 8.3.1.2.3 ~~Test purpose~~

~~To confirm that the UE, in CELL\_PCH state, executes a cell update procedure after the successful reselection of another UTRA cell.~~

#### 8.3.1.2.4 ~~Method of test~~

#### Initial Condition

System Simulator: 2 cells — Cell 1 and 2 are active.

UE: CELL\_PCH (state 6-12) in cell 1 as specified in clause 7.4 of TS 34.108.

#### Test Procedure

The UE is brought to CELL\_PCH state and is camped onto cell 1. SS configures its downlink transmission power settings according to columns "T1" in table 8.3.1.1. When the UE detects the presence of cell 2, it moves to

CELL\_FACH state and transmits a CELL\_UPDATE message on the uplink CCCH. The value "cell reselection" shall be set in IE "Cell update cause" in CELL\_UPDATE message. Upon reception of CELL\_UPDATE message, SS replies with a CELL\_UPDATE\_CONFIRM message with the IE "RRC State Indicator" set to "CELL\_PCH". After receiving this message, the UE returns to CELL\_PCH state without transmitting any uplink message. The SS transmits a PAGING TYPE 1 message, causing the UE to enter CELL\_FACH state and the UE shall transmit a CELL\_UPDATE message on uplink CCCH with IE "Cell update cause" set to "paging response". SS shall respond with a CELL\_UPDATE\_CONFIRM message.

#### Expected sequence

| Step | Direction |    | Message             | Comment                                                                                                                                                                                               |
|------|-----------|----|---------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|      | UE        | SS |                     |                                                                                                                                                                                                       |
| 1    |           |    |                     | The UE is brought to CELL_PCH state in cell 1.                                                                                                                                                        |
| 2    |           |    |                     | SS applies the downlink transmission power settings, according to the values in columns "T1" of table 8.3.1.1. The UE shall find that the cell 2 is better and attempt to perform a cell reselection. |
| 3    |           | →  | CELL_UPDATE         | The UE moves to CELL_FACH state and transmits this message with the IE "Cell update cause" set to "cell reselection".                                                                                 |
| 4    |           | ←  | CELL_UPDATE_CONFIRM | IE "RRC State Indicator" is set to "CELL_PCH".                                                                                                                                                        |
| 5    |           |    |                     | The UE is in CELL_PCH state.                                                                                                                                                                          |
| 6    |           | ←  | PAGING TYPE 1       | The SS transmits this message with a matched identity.                                                                                                                                                |
| 7    |           | →  | CELL_UPDATE         | The UE is in CELL_FACH state.                                                                                                                                                                         |
| 8    |           | ←  | CELL_UPDATE_CONFIRM |                                                                                                                                                                                                       |

#### Specific Message Contents

##### CELL\_UPDATE (Steps 3 and 7)

The same message found in Annex A shall be transmitted by the UE on the uplink CCCH, with the exception of the following IEs:

| Information Element                 | Value/remark                                                                                                                                                                                                           |
|-------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| U-RNTI<br>-SRNC-Identity<br>-S-RNTI | Check to see if set to '0000-0000-0001'<br>Check to see if set to '0000-0000-0000-0000-0001'<br>Check to see if set to 'Cell Re-selection' when in step 3.<br>Check to see if set to "paging response" when in step 7. |
| Cell Update Cause                   |                                                                                                                                                                                                                        |

##### CELL\_UPDATE\_CONFIRM (Step 4)
