NOTE:— See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See 14.1.1 for test procedure.

#### 14.2.27.4 ————— Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
  - for sub-test 1: RB5/TF1 (1x336).
  - for sub-test 2: RB5/TF2 (2x336).
  - for sub-test 3: RB5/TF3 (3x336).
  - for sub-test 4: RB5/TF4 (4x336).
3. At step 15 the UE shall return
  - for sub-test 1 to 4: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

## 14.2.28 ~~Interactive or background / UL:128 DL:128 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH~~

### 14.2.28.1 ~~Conformance requirement~~

See 14.2.4.1.

### 14.2.28.2 ~~Test purpose~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.28.

### 14.2.28.3 ~~Method of test~~

NOTE:— See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See 14.1.1 for test procedure.

#### 14.2.30.4 ——— Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15 the UE transmitted transport format shall be

- for sub-test 1: RB5/TF1 (1x336).
- for sub-test 2: RB5/TF2 (2x336).
- for sub-test 3: RB5/TF3 (4x336).
- for sub-test 4: RB5/TF4 (8x336).
- for sub-test 5: RB5/TF5 (9x336).

3. At step 15 the UE shall return

— for sub-test 1 to 5: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

NOTE:— See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See 14.1.1 for test procedure.

#### 14.2.32.1.4 ——— Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
  - for sub-test 1: RB5/TF1 (1x336).
  - for sub-test 2: RB5/TF2 (2x336).
  - for sub-test 3: RB5/TF3 (3x336).
  - for sub-test 4 and 5: RB5/TF4 (4x336).
3. At step 15 the UE shall return
  - for sub-test 1 to 5: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

NOTE: — See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See 14.1.1 for test procedure.

#### 14.2.33.2.4 — Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
  - for sub-test 1: RB5/TF1 (1x336).
  - for sub-test 2: RB5/TF2 (2x336).
  - for sub-test 3: RB5/TF3 (4x336).
  - for sub-test 4 to 8: RB5/TF4 (8x336).
3. At step 15 the UE shall return
  - for sub-test 1 to 8: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

## ~~14.2.34 Interactive or background / UL:384 DL:384 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH~~

### ~~14.2.34.1 Interactive or background / UL:384 DL:384 kbps / PS RAB / 10 ms TTI~~

#### ~~14.2.34.1.1 Conformance requirement~~

See 14.2.4.1.

#### ~~14.2.34.1.2 Test purpose~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.34 for the 10 ms TTI case.

#### ~~14.2.34.1.3 Method of test~~

Uplink TFS:

|     | TFI       | RB5<br>(384 kbps, 10ms) | DCCH  |
|-----|-----------|-------------------------|-------|

NOTE: — See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See 14.1.1 for test procedure.

#### 14.2.34.2.4 ——— Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15 the UE transmitted transport format shall be

- for sub-test 1: RB5/TF1 (1x336).
- for sub-test 2: RB5/TF2 (2x336).
- for sub-test 3: RB5/TF3 (4x336).
- for sub-test 4: RB5/TF4 (8x336).
- for sub-test 5: RB5/TF5 (12x336).
- for sub-test 6: RB5/TF6 (16x336).
- for sub-test 7: RB5/TF7 (20x336).
- for sub-test 8: RB5/TF8 (24x336).

3. At step 15 the UE shall return

— for sub-test 1 to 8: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

### ~~14.2.35 Interactive or background / UL:64 DL:2048 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH~~

#### ~~14.2.35.1 Interactive or background / UL:64 DL:2048 kbps / PS RAB / 10 ms TTI~~

##### ~~14.2.35.1.1 Conformance requirement~~

See 14.2.4.1.

##### ~~14.2.35.1.2 Test purpose~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.35 for the 10 ms TTI case.

##### ~~14.2.35.1.3 Method of test~~

| NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. |                          |                        |                                     |                                    |                                  |                                 |

See 14.1.1 for test procedure.

#### 14.2.35.2.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
  - for sub-test 1: RB5/TF1 (1x336).
  - for sub-test 2: RB5/TF2 (2x336).
  - for sub-test 3: RB5/TF3 (3x336).
  - for sub-test 4 to 18: RB5/TF4 (4x336).
3. At step 15 the UE shall return
  - for sub-test 1 to 18: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

#### 14.2.36 Interactive or background / UL:128 DL:2048 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

##### 14.2.36.1 Interactive or background / UL:128 DL:2048 kbps / PS RAB / 10 ms TTI

###### 14.2.36.1.1 Conformance requirement

See 14.2.4.1.

###### 14.2.36.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.36 for the 10 ms TTI case.

## 14.2.36.1.3 Method of test

Uplink TFS:

|     | TFI       | RB5<br>(128 kbps) | DCCH  |
|-----|-----------|-------------------|-------|
| TFS | TF0, bits | 0x336             | 0x148 |
|     | TF1, bits | 1x336             | 1x148 |
|     | TF2, bits | 2x336             | N/A   |
|     | TF3, bits | 4x336             | N/A   |
|     | TF4, bits | 8x336             | N/A   |

Uplink TFCS:

| NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. |                                 |                               |                                     |                                    |                                         |                                        |

See 14.1.1 for test procedure.

#### 14.2.36.1.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

- At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

- 2. At step 15 the UE transmitted transport format shall be
  - for sub-test 1: RB5/TF1 (1x336).
  - for sub-test 2: RB5/TF2 (2x336).
  - for sub-test 3: RB5/TF3 (4x336).
  - for sub-test 4 to 10: RB5/TF4 (8x336).
- 3. At step 15 the UE shall return
  - for sub-test 1 to 10: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

~~14.2.36.2~~ ~~Interactive or background / UL:128 kbps / PS-RAB / 20 ms TTI~~

~~14.2.36.2.1~~ ~~Conformance requirement~~

See 14.2.4.1.

~~14.2.36.2.2~~ ~~Test purpose~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.36 for the 20 ms TTI case.

~~14.2.36.2.3~~ ~~Method of test~~

See 14.1.1 for test procedure.

#### 14.2.36.2.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

- At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
- At step 15 the UE transmitted transport format shall be
  - for sub-test 1: RB5/TF1 (1x336).
  - for sub-test 2: RB5/TF2 (2x336).
  - for sub-test 3: RB5/TF3 (4x336).
  - for sub-test 4 to 18: RB5/TF4 (8x336).
- At step 15 the UE shall return
  - for sub-test 1 to 18: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

#### 14.2.37 Interactive or background / UL:384 DL:2048 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH

##### 14.2.37.1 Interactive or background / UL:384 DL:2048 kbps / PS RAB / 10 ms TTI

###### 14.2.37.1.1 Conformance requirement

See 14.2.4.1.

###### 14.2.37.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.37 for the 10 ms TTI case.

## 14.2.37.1.3 Method of test

| NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. |                                 |                               |                                     |                                     |                               |                              |

See 14.1.1 for test procedure.

~~14.2.37.1.4 Test requirements~~

See 14.1.1 for definition of step 10 and step 15.

- ~~1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.~~
- ~~2. At step 15 the UE transmitted transport format shall be~~
  - ~~— for sub-test 1: RB5/TF1 (1x336).~~
  - ~~— for sub-test 2: RB5/TF2 (2x336).~~
  - ~~— for sub-test 3: RB5/TF3 (4x336).~~
  - ~~— for sub-test 4: RB5/TF3 (8x336).~~
  - ~~— for sub-test 5 to 10: RB5/TF4 (12x336).~~
- ~~3. At step 15 the UE shall return~~
  - ~~— for sub-test 1 to 10: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.~~

~~14.2.37.2 Interactive or background / UL:384 DL:2048 kbps / PS RAB / 20 ms TTI~~~~14.2.37.2.1 Conformance requirement~~

See 14.2.4.1.

~~14.2.37.2.2 Test purpose~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.37 for the 20 ms TTI case.

~~14.2.37.2.3 Method of test~~

| NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. |                          |                        |                                       |                                     |                                  |                                 |

See 14.1.1 for test procedure.

#### 14.2.37.2.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
  - for sub-test 1: RB5/TF1 (1x336).
  - for sub-test 2: RB5/TF2 (2x336).
  - for sub-test 3: RB5/TF3 (4x336).
  - for sub-test 4: RB5/TF4 (8x336).
  - for sub-test 5: RB5/TF5 (12x336).
  - for sub-test 6: RB5/TF6 (16x336).
  - for sub-test 7: RB5/TF7 (20x336).
  - for sub-test 8 to 18: RB5/TF4 (24x336).
3. At step 15 the UE shall return
  - for sub-test 1 to 18: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

### ~~14.2.38 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:32 DL:8 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH~~

#### ~~14.2.38.1 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:32 DL:8 kbps / PS RAB / (TC, 20 ms TTI)~~

##### ~~14.2.38.1.1 Conformance requirement~~

See 14.2.4.1.

##### ~~14.2.38.1.2 Test purpose~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.38 for the turbo channel coding and 20 ms TTI case.

##### ~~14.2.38.1.3 Method of test~~

See 14.1.1 for test procedure.

#### 14.2.38.1.4 ——— Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15 the UE transmitted transport format shall be

- for sub-test 1: RB5/TF1 (1x39);
- for sub-test 2: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60);
- for sub-test 3: RB8/TF1 (1x336)
- for sub-test 4: RB5/TF1 (1x39) and RB8/TF1 (1x336);
- for sub-test 5: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF1 (1x336);
- for sub-test 6: RB8/TF2 (2x336)
- for sub-test 7: RB5/TF1 (1x39) and RB8/TF2 (2x336);
- for sub-test 8: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF2 (2x336);

3. At step 15 the UE shall return

- for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8;
- for sub-test 2: an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8;
- for sub-test 3 and 6: an RLC SDU on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7;
- for sub-test 4 and 7: an RLC SDU on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7;
- for sub-test 5 and 8: an RLC SDU on RB5, RB6, RB7 and RB8 having the same content as sent by SS;

#### ~~14.2.38.2 — Conversational / speech / UL:12.2 kbps / DL:12.2 kbps / CS RAB + Interactive or background / UL:32 kbps / DL:8 kbps / PS RAB / (TC, 10 ms TTI)~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.38 for the turbo channel coding and 10 ms TTI case.

See 14.2.38.1 for test procedure and test requirements. Only sub-tests 1 to 5 are applicable for the 10 ms TTI case.

#### ~~14.2.38.3 — Conversational / speech / UL:12.2 kbps / DL:12.2 kbps / CS RAB + Interactive or background / UL:32 kbps / DL:8 kbps / PS RAB / (CC, 20 ms TTI)~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.38 for the convolutional channel coding and 20 ms TTI case.

See test case 14.2.38.1 for test procedure and test requirement.

#### ~~14.2.38.4 — Conversational / speech / UL:12.2 kbps / DL:12.2 kbps / CS RAB + Interactive or background / UL:32 kbps / DL:8 kbps / PS RAB / (CC, 10 ms TTI)~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.38 for the convolutional channel coding and 10 ms TTI case.

See test case 14.2.38.2 for test procedure and test requirement.

| NOTE:— See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. |                          |                        |                                        |                                              |                                             |                                                           |

See 14.1.1 for test procedure.

**14.2.39.1.4** ~~Test requirements~~

See 14.1.1 for definition of step 10 and step 15.

1. ~~At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.~~
2. ~~At step 15 the UE transmitted transport format shall be~~
  - ~~— for sub-test 1: RB5/TF1 (1x39).~~
  - ~~— for sub-test 2: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).~~
  - ~~— for sub-test 3, 6, 9 and 12: RB8/TF1 (1x336)~~
  - ~~— for sub-test 4, 7, 10 and 13: RB5/TF1 (1x39) and RB8/TF1 (1x336).~~
  - ~~— for sub-test 5, 8, 11 and 14: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF1 (1x336).~~
3. ~~At step 15 the UE shall return~~
  - ~~— for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.~~
  - ~~— for sub-test 2: an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.~~
  - ~~— for sub-test 3, 6, 9 and 12: an RLC SDU on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.~~
  - ~~— for sub-test 4, 7, 10 and 13: an RLC SDU on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.~~
  - ~~— for sub-test 5, 8, 11 and 14: an RLC SDU on RB5, RB6, RB7 and RB8 having the same content as sent by SS.~~

**14.2.39.2** ~~Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:32 DL:64 kbps / PS RAB / (TC, 20 ms TTI)~~**14.2.39.2.1** ~~Conformance requirement~~

See 14.2.4.1.

**14.2.39.2.2** ~~Test purpose~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.39 for the uplink turbo channel coding and 20 ms TTI case.

**14.2.39.2.3** ~~Method of test~~

See 14.1.1 for test procedure.

#### ~~14.2.39.2.4 Test requirements~~

See 14.1.1 for definition of step 10 and step 15.

- ~~1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.~~
- ~~2. At step 15 the UE transmitted transport format shall be~~
  - ~~— for sub-test 1: RB5/TF1 (1x39).~~
  - ~~— for sub-test 2: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).~~
  - ~~— for sub-test 3: RB8/TF1 (1x336)~~
  - ~~— for sub-test 4: RB5/TF1 (1x39) and RB8/TF1 (1x336).~~
  - ~~— for sub-test 5: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF1 (1x336).~~
  - ~~— for sub-test 6, 9 and 12: RB8/TF2 (2x336)~~
  - ~~— for sub-test 7, 10 and 13: RB5/TF1 (1x39) and RB8/TF2 (2x336).~~
  - ~~— for sub-test 8, 11 and 14: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF2 (2x336).~~
- ~~3. At step 15 the UE shall return~~
  - ~~— for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.~~
  - ~~— for sub-test 2: an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.~~
  - ~~— for sub-test 3, 6, 9 and 12: an RLC SDU on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.~~
  - ~~— for sub-test 4, 7, 10 and 13: an RLC SDU on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.~~
  - ~~— for sub-test 5, 8, 11 and 14: an RLC SDU on RB5, RB6, RB7 and RB8 having the same content as sent by SS.~~

#### ~~14.2.39.3 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:32 DL:64 kbps / PS RAB / (CC, 10 ms TTI)~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.39 for the uplink convolutional channel coding and 10 ms TTI case.

See test case 14.2.39.1 for test procedure and test requirement.

#### ~~14.2.39.4 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:32 DL:64 kbps / PS RAB / (CC, 20 ms TTI)~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.39 for the uplink convolutional channel coding and 20 ms TTI case.

See test case 14.2.39.2 for test procedure and test requirement.

## ~~14.2.40 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB+ Interactive or background / UL:64 DL:64 kbps / PS RAB+ UL:3.4 DL: 3.4 kbps SRBs for DCCH~~

### ~~14.2.40.1 Conformance requirement~~

~~See 14.2.4.1.~~

### ~~14.2.40.2 Test purpose~~

~~Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.40.~~

### ~~14.2.40.3 Method of test~~

See 14.1.1 for test procedure.

#### 14.2.40.4 ~~Test requirements~~

See 14.1.1 for definition of step 10 and step 15.

- ~~1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.~~
- ~~2. At step 15 the UE transmitted transport format shall be~~
  - ~~— for sub-test 1: RB5/TF1 (1x39).~~
  - ~~— for sub-test 2: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).~~
  - ~~— for sub-test 3: RB8/TF1 (1x336)~~
  - ~~— for sub-test 4: RB5/TF1 (1x39) and RB8/TF1 (1x336).~~
  - ~~— for sub-test 5: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF1 (1x336).~~
  - ~~— for sub-test 6: RB8/TF2 (2x336)~~
  - ~~— for sub-test 7: RB5/TF1 (1x39) and RB8/TF2 (2x336).~~
  - ~~— for sub-test 8: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF2 (2x336).~~
  - ~~— for sub-test 9: RB8/TF3 (3x336)~~
  - ~~— for sub-test 10: RB5/TF1 (1x39) and RB8/TF3 (3x336).~~
  - ~~— for sub-test 11: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF3 (3x336).~~
  - ~~— for sub-test 12: RB8/TF4 (4x336)~~
  - ~~— for sub-test 13: RB5/TF1 (1x39) and RB8/TF4 (4x336).~~
  - ~~— for sub-test 14: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF4 (4x336).~~
- ~~3. At step 15 the UE shall return~~
  - ~~— for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.~~
  - ~~— for sub-test 2: an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.~~
  - ~~— for sub-test 3, 6, 9 and 12: an RLC SDU on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.~~
  - ~~— for sub-test 4, 7, 10 and 13: an RLC SDU on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.~~
  - ~~— for sub-test 5, 8, 11 and 14: an RLC SDU on RB5, RB6, RB7 and RB8 having the same content as sent by SS.~~

#### ~~14.2.41 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:128 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH~~

##### ~~14.2.41.1 Conformance requirement~~

~~See 14.2.4.1.~~

##### ~~14.2.41.2 Test purpose~~

~~Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.41.~~

See 14.1.1 for test procedure.

#### ~~14.2.41.4 Test requirements~~

~~See 14.1.1 for definition of step 10 and step 15.~~

~~1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.~~

~~2. At step 15 the UE transmitted transport format shall be~~

~~— for sub-test 1: RB5/TF1 (1x39).~~

~~— for sub-test 2: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).~~

~~— for sub-test 3: RB8/TF1 (1x336)~~

~~— for sub-test 4: RB5/TF1 (1x39) and RB8/TF1 (1x336).~~

~~— for sub-test 5: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF1 (1x336).~~

~~— for sub-test 6: RB8/TF2 (2x336)~~

~~— for sub-test 7: RB5/TF1 (1x39) and RB8/TF2 (2x336).~~

~~— for sub-test 8: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF2 (2x336).~~

~~— for sub-test 9: RB8/TF3 (3x336)~~

~~— for sub-test 10: RB5/TF1 (1x39) and RB8/TF3 (3x336).~~

~~— for sub-test 11: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF3 (3x336).~~

~~— for sub-test 12: RB8/TF4 (4x336)~~

~~— for sub-test 13: RB5/TF1 (1x39) and RB8/TF4 (4x336).~~

~~— for sub-test 14: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF4 (4x336).~~

~~3. At step 15 the UE shall return~~

~~— for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.~~

~~— for sub-test 2: an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.~~

~~— for sub-test 3, 6, 9 and 12: an RLC SDU on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.~~

~~— for sub-test 4, 7, 10 and 13: an RLC SDU on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.~~

~~— for sub-test 5, 8, 11 and 14: an RLC SDU on RB5, RB6, RB7 and RB8 having the same content as sent by SS.~~

#### ~~14.2.42 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:256 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH~~

##### ~~14.2.42.1 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:256 kbps / PS RAB / 10 ms TTI~~

###### ~~14.2.42.1.1 Conformance requirement~~

~~See 14.2.4.1.~~

### 14.2.42.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.42 for the downlink 10 ms TTI case.

### 14.2.42.1.3 Method of test

NOTE: — See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See 14.1.1 for test procedure.

#### ~~14.2.42.1.4 Test requirements~~

See 14.1.1 for definition of step 10 and step 15.

- ~~1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.~~
- ~~2. At step 15 the UE transmitted transport format shall be~~
  - ~~— for sub-test 1: RB5/TF1 (1x39).~~
  - ~~— for sub-test 2: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).~~
  - ~~— for sub-test 3: RB8/TF1 (1x336)~~
  - ~~— for sub-test 4: RB5/TF1 (1x39) and RB8/TF1 (1x336).~~
  - ~~— for sub-test 5: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF1 (1x336).~~
  - ~~— for sub-test 6: RB8/TF2 (2x336)~~
  - ~~— for sub-test 7: RB5/TF1 (1x39) and RB8/TF2 (2x336).~~
  - ~~— for sub-test 8: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF2 (2x336).~~
  - ~~— for sub-test 9: RB8/TF3 (3x336)~~
  - ~~— for sub-test 10: RB5/TF1 (1x39) and RB8/TF3 (3x336).~~
  - ~~— for sub-test 11: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF3 (3x336).~~
  - ~~— for sub-test 12: RB8/TF4 (4x336)~~
  - ~~— for sub-test 13: RB5/TF1 (1x39) and RB8/TF4 (4x336).~~
  - ~~— for sub-test 14: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF4 (4x336).~~
- ~~3. At step 15 the UE shall return~~
  - ~~— for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.~~
  - ~~— for sub-test 2: an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.~~
  - ~~— for sub-test 3, 6, 9 and 12: an RLC SDU on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.~~
  - ~~— for sub-test 4, 7, 10 and 13: an RLC SDU on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.~~
  - ~~— for sub-test 5, 8, 11 and 14: an RLC SDU on RB5, RB6, RB7 and RB8 having the same content as sent by SS.~~

#### ~~14.2.42.2 Conversational / speech / UL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:256 kbps / PS RAB / 20 ms TTI~~

##### ~~14.2.42.2.1 Conformance requirement~~

See 14.2.4.1.

##### ~~14.2.42.2.2 Test purpose~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.42 for the downlink 20 ms TTI case.

## 14.2.42.2.3 Method of test

See 14.1.1 for test procedure.

#### 14.2.42.2.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15 the UE transmitted transport format shall be

- for sub-test 1: RB5/TF1 (1x39).
- for sub-test 2: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).
- for sub-test 3: RB8/TF1 (1x336)
- for sub-test 4: RB5/TF1 (1x39) and RB8/TF1 (1x336).
- for sub-test 5: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF1 (1x336).
- for sub-test 6: RB8/TF2 (2x336)
- for sub-test 7: RB5/TF1 (1x39) and RB8/TF2 (2x336).
- for sub-test 8: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF2 (2x336).
- for sub-test 9: RB8/TF3 (3x336)
- for sub-test 10: RB5/TF1 (1x39) and RB8/TF3 (3x336).
- for sub-test 11: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF3 (3x336).
- for sub-test 12, 15 and 18: RB8/TF4 (4x336)
- for sub-test 13, 16 and 19: RB5/TF1 (1x39) and RB8/TF4 (4x336).
- for sub-test 14, 17 and 20: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF4 (4x336).

3. At step 15 the UE shall return

- for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
- for sub-test 2: an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
- for sub-test 3, 6, 9, 12, 15 and 18: an RLC SDU on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 4, 7, 10, 13, 16 and 19: an RLC SDU on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
- for sub-test 5, 8, 11, 14, 17 and 20: an RLC SDU on RB5, RB6, RB7 and RB8 having the same content as sent by SS.

##### ~~14.2.43.1 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:384 kbps / PS RAB / 10 ms TTI~~

###### ~~14.2.43.1.1 Conformance requirement~~

See 14.2.4.1.

###### ~~14.2.43.1.2 Test purpose~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.43 for the downlink 10 ms TTI case.

###### ~~14.2.43.1.3 Method of test~~

#### 14.2.43.1.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15 the UE transmitted transport format shall be

- for sub-test 1: RB5/TF1 (1x39).
- for sub-test 2: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).
- for sub-test 3: RB8/TF1 (1x336)
- for sub-test 4: RB5/TF1 (1x39) and RB8/TF1 (1x336).
- for sub-test 5: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF1 (1x336).
- for sub-test 6: RB8/TF2 (2x336)
- for sub-test 7: RB5/TF1 (1x39) and RB8/TF2 (2x336).
- for sub-test 8: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF2 (2x336).
- for sub-test 9: RB8/TF3 (3x336)
- for sub-test 10: RB5/TF1 (1x39) and RB8/TF3 (3x336).
- for sub-test 11: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF3 (3x336).
- for sub-test 12 and 15: RB8/TF4 (4x336)
- for sub-test 13 and 16: RB5/TF1 (1x39) and RB8/TF4 (4x336).
- for sub-test 14 and 17: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF4 (4x336).

3. At step 15 the UE shall return

- for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
- for sub-test 2: an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
- for sub-test 3, 6, 9, 12 and 15: an RLC SDU on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 4, 7, 10, 13 and 16: an RLC SDU on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

- for sub-test 5, 8, 11, 14, and 17: an RLC SDU on RB5, RB6, RB7 and RB8 having the same content as sent by SS.

### ~~14.2.43.2 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:384 kbps / PS RAB / 20 ms TTI~~

#### ~~14.2.43.2.1 Conformance requirement~~

See 14.2.4.1.

#### ~~14.2.43.2.2 Test purpose~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.43 for the downlink 20 ms TTI case.

#### ~~14.2.43.2.3 Method of test~~

NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See 14.1.1 for test procedure.

#### ~~14.2.43.2.4 Test requirements~~

~~See 14.1.1 for definition of step 10 and step 15.~~

- ~~1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.~~
- ~~2. At step 15 the UE transmitted transport format shall be~~
  - ~~— for sub-test 1: RB5/TF1 (1x39).~~
  - ~~— for sub-test 2: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).~~
  - ~~— for sub-test 3: RB8/TF1 (1x336)~~
  - ~~— for sub-test 4: RB5/TF1 (1x39) and RB8/TF1 (1x336).~~
  - ~~— for sub-test 5: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF1 (1x336).~~
  - ~~— for sub-test 6: RB8/TF2 (2x336)~~
  - ~~— for sub-test 7: RB5/TF1 (1x39) and RB8/TF2 (2x336).~~
  - ~~— for sub-test 8: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF2 (2x336).~~
  - ~~— for sub-test 9: RB8/TF3 (3x336)~~
  - ~~— for sub-test 10: RB5/TF1 (1x39) and RB8/TF3 (3x336).~~
  - ~~— for sub-test 11: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF3 (3x336).~~
  - ~~— for sub-test 12, 15, 18, 21 and 24: RB8/TF4 (4x336)~~
  - ~~— for sub-test 13, 16, 19, 22 and 25: RB5/TF1 (1x39) and RB8/TF4 (4x336).~~
  - ~~— for sub-test 14, 17, 20, 23 and 26: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF4 (4x336).~~
- ~~3. At step 15 the UE shall return~~
  - ~~— for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.~~
  - ~~— for sub-test 2: an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.~~
  - ~~— for sub-test 3, 6, 9, 12, 15, 18, 21 and 24: an RLC SDU on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.~~
  - ~~— for sub-test 4, 7, 10, 13, 16, 19, 22 and 25: an RLC SDU on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.~~
  - ~~— for sub-test 5, 8, 11, 14, 17, 20, 23 and 26: an RLC SDU on RB5, RB6, RB7 and RB8 having the same content as sent by SS.~~

###### ~~14.2.44.1.1 Conformance requirement~~

~~See 14.2.4.1.~~

## 14.2.44.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.44 for the downlink 10-ms TTI case.

## 14.2.44.1.3 Method of test

| NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. |                          |                        |                                               |                                                |                                              |                                                            |

See 14.1.1 for test procedure.

#### 14.2.44.1.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15 the UE transmitted transport format shall be

- for sub-test 1: RB5/TF1 (1x39).
- for sub-test 2: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).
- for sub-test 3: RB8/TF1 (1x336)
- for sub-test 4: RB5/TF1 (1x39) and RB8/TF1 (1x336).
- for sub-test 5: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF1 (1x336).
- for sub-test 6: RB8/TF2 (2x336)
- for sub-test 7: RB5/TF1 (1x39) and RB8/TF2 (2x336).
- for sub-test 8: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF2 (2x336).
- for sub-test 9: RB8/TF3 (4x336)
- for sub-test 10: RB5/TF1 (1x39) and RB8/TF3 (4x336).
- for sub-test 11: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF3 (4x336).
- for sub-test 12,15,18,21,24,27,30: RB8/TF4 (8x336)

— for sub-test 13,16,19,22,25,28,31: RB5/TF1 (1x39) and RB8/TF4 (8x336).

— for sub-test 14,17,20,23,26,29,32: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF4 (8x336).

3. At step 15 the UE shall return

— for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.

— for sub-test 2: an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.

— for sub-test 3, 6, 9, 12, 15, 18, 21, 24, 27, 30: an RLC SDU on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.

— for sub-test 4, 7, 10, 13, 16, 19, 22, 25, 28, 31: an RLC SDU on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.

— for sub-test 5, 8, 11, 14, 17, 20, 23, 26, 29, 32: an RLC SDU on RB5, RB6, RB7 and RB8 having the same content as sent by SS.

#### 14.2.44.2 ~~Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:128 DL:2048 kbps / PS RAB / 20 ms TTI~~

##### 14.2.44.2.1 ~~Conformance requirement~~

See 14.2.4.1.

##### 14.2.44.2.2 ~~Test purpose~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.44 for the downlink 20 ms TTI case.

##### 14.2.44.2.3 ~~Method of test~~

See 14.1.1 for test procedure.

#### 14.2.44.2.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
  - for sub-test 1: RB5/TF1 (1x39).
  - for sub-test 2: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).
  - for sub-test 3: RB8/TF1 (1x336)
  - for sub-test 4: RB5/TF1 (1x39) and RB8/TF1 (1x336).
  - for sub-test 5: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF1 (1x336).
  - for sub-test 6: RB8/TF2 (2x336)
  - for sub-test 7: RB5/TF1 (1x39) and RB8/TF2 (2x336).
  - for sub-test 8: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF2 (2x336).

- for sub-test 9: RB8/TF3 (4x336)
- for sub-test 10: RB5/TF1 (1x39) and RB8/TF3 (4x336).
- for sub-test 11: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF3 (4x336).
- for sub-test 12,15,18,21,24,27,30,33,36,39,42: RB8/TF4 (8x336)
- for sub-test 13,16,19,22,25,28,31,34,37,40,43: RB5/TF1 (1x39) and RB8/TF4 (8x336).
- for sub-test 14,17,20,23,26,29,32,35,38,41,44: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF4 (8x336).

3. At step 15 the UE shall return

- for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
- for sub-test 2: an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
- for sub-test 3, 6, 9, 12, 15, 18, 21, 24, 27, 30, 33, 36, 39, 42: an RLC SDU on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 4, 7, 10, 13, 16, 19, 22, 25, 28, 31, 34, 37, 40, 43: an RLC SDU on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
- for sub-test 5, 8, 11, 14, 17, 20, 23, 26, 29, 32, 35, 38, 41, 44: an RLC SDU on RB5, RB6, RB7 and RB8 having the same content as sent by SS.

| NOTE: — See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. |                          |                        |                                               |                                                |                                             |                                                           |

See 14.1.1 for test procedure.

#### ~~14.2.45.4 Test requirements~~

~~See 14.1.1 for definition of step 10 and step 15.~~

~~1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.~~

~~2. At step 15 the UE transmitted transport format shall be~~

~~— for sub-test 1: RB5/TF1 (1x39).~~

~~— for sub-test 2: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).~~

~~— for sub-test 3: RB8/TF1 (1x576)~~

~~— for sub-test 4: RB5/TF1 (1x39) and RB8/TF1 (1x576).~~

~~— for sub-test 5: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF1 (1x576).~~

~~— for sub-test 6: RB8/TF2 (2x576)~~

~~— for sub-test 7: RB5/TF1 (1x39) and RB8/TF2 (2x576).~~

~~— for sub-test 8: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF2 (2x576).~~

~~— for sub-test 9: RB8/TF2 (3x576)~~

~~— for sub-test 10: RB5/TF1 (1x39) and RB8/TF3 (3x576).~~

~~— for sub-test 11: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF3 (3x576).~~

~~— for sub-test 12: RB8/TF2 (4x576)~~

~~— for sub-test 13: RB5/TF1 (1x39) and RB8/TF4 (4x576).~~

~~— for sub-test 14: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF4 (4x576).~~

~~3. At step 15 the UE shall return~~

~~— for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.~~

~~— for sub-test 2: an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.~~

~~— for sub-test 3, 6, 9 and 12: an RLC SDU on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.~~

~~— for sub-test 4, 7, 10 and 13: an RLC SDU on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.~~

~~— for sub-test 5, 8, 11 and 14: an RLC SDU on RB5, RB6, RB7 and RB8 having the same content as sent by SS.~~

#### ~~14.2.46 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Streaming / unknown / UL:0 DL:64 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH~~

##### ~~14.2.46.1 Conformance requirement~~

~~See 14.2.4.1.~~

##### ~~14.2.46.2 Test purpose~~

~~Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.46.~~

To be able to test the downlink radio bearer using the UE loopback function for the reference radio bearer UL:0 DL: 64 kbps,, the reference radio bearer configuration according to TS 34.108, clause 6.10.2.4.1.15.1 (Streaming/unknown/UL:14.4 kbps) is used in uplink.

#### 14.2.46.3 Method of test

Uplink TFS:

NOTE 1: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

NOTE 2: RB8: SS is using a DL RLC SDU with 320 bits as test data (=DL RLC PDU size for DL/TF1). UE will return one RLC PDU. SS creates an UL RLC SDU from the first 320 bits of the received RLC PDU.

NOTE 3: RB8: SS is using a DL RLC SDU size of 640 bits as test data (=DL RLC PDU size for DL/TF2). UE will return one RLC PDU. SS creates an UL RLC SDU from the received RLC PDU.

NOTE 4: RB8: SS is using a DL RLC SDU size of 1280 bits as test data (=DL RLC PDU size for DL/TF3). UE will return one RLC PDU. SS creates an UL RLC SDU from the received RLC PDU.

NOTE 5: RB8: SS is using a DL RLC SDU size of 2560 bits as test data (=DL RLC PDU size for DL/TF4). UE will return one RLC PDU. SS creates an UL RLC SDU from the received RLC PDU.

See 14.1.1 for test procedure.

#### 14.2.46.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15 the UE transmitted transport format shall be

— for sub-test 1, 4, 7, 10 and 13: RB5/TF1 (1x39).

— for sub-test 2, 5, 8, 11 and 14: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).

3. At step 15 the UE shall return

— for sub-test 3, 6, 9 and 12: no data on RB5, RB6 and RB7.

— for sub-test 1, 4, 7, 10 and 13: an RLC SDU on RB5 having the same content as sent by the SS; and no data shall be received on RB6 or RB7.

— for sub-test 2, 5, 8, 11 and 14: an RLC SDU on each of RB5, RB6 and RB7 having the same content as sent by the SS.

— for sub-test 1 to 2: no data on RB8.

— for sub-test 3 to 5: an RLC SDU on RB8 having the same content as sent by the SS.

— for sub-test 6 to 14: an RLC SDU on RB5 having the same content as the first 576 bits of the RLC SDU sent by the SS.

##### 14.2.47.1 Conformance requirement

See 14.2.4.1.

## 14.2.47.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.47.

To be able to test the downlink radio bearer using the UE loopback function for the reference radio bearer UL:0 DL: 128 kbps, the reference radio bearer configuration according to TS 34.108, clause 6.10.2.4.1.15.1 (Streaming/unknown/UL:14.4 kbps) is used in uplink.

## 14.2.47.3 Method of test

Uplink-TFS:

| <p>NOTE 1: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.</p> <p>NOTE 2: RB8: SS is using a DL RLC SDU with 320 bits as test data (=DL RLC PDU size for DL/TF1). UE will return 1 RLC PDU. SS creates an UL RLC SDU from the first 320 bits of the received RLC PDU.</p> <p>NOTE 3: RB8: SS is using a DL RLC SDU size of 640 bits as test data (=DL RLC PDU size for DL/TF2). UE will return one RLC PDU. SS creates an UL RLC SDU from the received RLC PDU.</p> <p>NOTE 4: RB8: SS is using a DL RLC SDU size of 1280 bits as test data (=DL RLC PDU size for DL/TF3). UE will return one RLC PDU. SS creates an UL RLC SDU from the received RLC PDU.</p> <p>NOTE 5: RB8: SS is using a DL RLC SDU size of 2560 bits as test data (=DL RLC PDU size for DL/TF4). UE will return one RLC PDU. SS creates an UL RLC SDU from the received RLC PDU.</p> <p>NOTE 6: RB8: SS is using a DL RLC SDU size of 5120 bits as test data (=DL RLC PDU size for DL/TF5). UE will return one RLC PDU. SS creates an UL RLC SDU from the received RLC PDU.</p> |                          |                        |                                              |                                              |                                            |                                                                       |

See 14.1.1 for test procedure.

#### 14.2.47.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
  - for sub-test 1, 4, 7, 10, 13 and 16: RB5/TF1 (1x39);
  - for sub-test 2, 5, 8, 11, 14 and 17: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).
3. At step 15 the UE shall return
  - for sub-test 3, 6, 9, 12 and 15: no data on RB5, RB6 and RB7.
  - for sub-test 1, 4, 7, 10, 13 and 16: an RLC SDU on RB5 having the same content as sent by the SS; and no data shall be received on RB6 or RB7.
  - for sub-test 2, 5, 8, 11, 14 and 17: an RLC SDU on each of RB5, RB6 and RB7 having the same content as sent by the SS.
  - for sub-test 1 to 2: no data on RB8.

- for sub-test 3 to 5: an RLC SDU on RB8 having the same content as sent by the SS.
- for sub-test 6 to 17: an RLC SDU on RB5 having the same content as the first 576 bits of the RLC SDU sent by the SS.

See 14.1.1 for test procedure.

#### 14.2.48.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
  - for sub-test 1, 4, 7, 10, 13, 16, 19 and 22: RB5/TF1 (1x39).
  - for sub-test 2, 5, 8, 11, 14, 17, 20 and 23: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).
3. At step 15 the UE shall return
  - for sub-test 3, 6, 9, 12, 15, 18 and 21: no data on RB5, RB6 and RB7.
  - for sub-test 1, 4, 7, 10, 13, 16, 19 and 22: an RLC SDU on RB5 having the same content as sent by the SS; and no data shall be received on RB6 or RB7.
  - for sub-test 2, 5, 8, 11, 14, 17, 20 and 23: an RLC SDU on each of RB5, RB6 and RB7 having the same content as sent by the SS.
  - for sub-test 1 to 2: no data on RB8.
  - for sub-test 3 to 5: an RLC SDU on RB8 having the same content as sent by the SS.
  - for sub-test 6 to 23: an RLC SDU on RB5 having the same content as the first 576 bits of the RLC SDU sent by the SS.

## ~~14.2.49 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Conversational / unknown / UL:64 DL:64 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH~~

### ~~14.2.49.1 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Conversational / unknown / UL:64 DL:64 kbps / CS RAB / 20 ms TTI~~

#### ~~14.2.49.1.1 Conformance requirement~~

See 14.2.4.1.

#### ~~14.2.49.1.2 Test purpose~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.49 for the 20 ms TTI case.

#### ~~14.2.49.1.3 Method of test~~

#### Initial Conditions

The following RLC Info parameter values shall be set by the SS for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB (RB8):

|                                                       |      |

See 14.1.1 for test procedure.

#### 14.2.49.1.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15 the UE transmitted transport format shall be

— for sub-test 1: RB5/TF1 (1x39).

— for sub-test 2: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).

- for sub-test 3: RB8/TF1 (2x640)
- for sub-test 4: RB5/TF1 (1x39) and RB8/TF1 (2x640).
- for sub-test 5: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF1 (2x640).

3. At step 15 the UE shall return

- for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
- for sub-test 2: an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
- for sub-test 3: an RLC SDU on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 4: an RLC SDU on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
- for sub-test 5: an RLC SDU on RB5, RB6, RB7 and RB8 having the same content as sent by SS.

~~14.2.49.2 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Conversational / unknown / UL:64 DL:64 kbps / CS RAB / 40 ms TTI~~

~~14.2.49.2.1 Conformance requirement~~

See 14.2.4.1.

~~14.2.49.2.2 Test purpose~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.49 for the 40 ms TTI case.

~~14.2.49.2.3 Method of test~~

~~Initial Conditions~~

The following RLC Info parameter values shall be set by the SS for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB (RB8):

|                           |      |
|---------------------------|------|
| Uplink RLC                |      |
| — TM RLC                  |      |
| — Segmentation indication | TRUE |
| Downlink RLC              |      |
| — TM RLC                  |      |
| — Segmentation indication | TRUE |

See 14.1.1 for test procedure.

#### 14.2.49.2.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15 the UE transmitted transport format shall be

- for sub-test 1: RB5/TF1 (1x39).
- for sub-test 2: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).
- for sub-test 3: RB8/TF1 (4x640)
- for sub-test 4: RB5/TF1 (1x39) and RB8/TF1 (2x640).
- for sub-test 5: RB5/TF2 (1x81); RB6/TF1 (1x103); RB7/TF1 (1x60); and RB8/TF1 (4x640).

3. At step 15 the UE shall return

- for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6, RB7 and RB8.
- for sub-test 2: an RLC SDU on RB5, RB6 and RB7 having the same content as sent by SS; and no data shall be received on RB8.
- for sub-test 3: an RLC SDU on RB8 having the same content as sent by SS; and no data shall be received on RB5, RB6 and RB7.
- for sub-test 4: an RLC SDU on RB5 and RB8 having the same content as sent by SS; and no data shall be received on RB6 and RB7.
- for sub-test 5: an RLC SDU on RB5, RB6, RB7 and RB8 having the same content as sent by SS.

## ~~14.2.50 Conversational / unknown / UL:64 DL:64 kbps / CS RAB + Conversational / unknown / UL:64 DL:64 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH~~

### ~~14.2.50.1 Conversational / unknown / UL:64 DL:64 kbps / CS RAB + Conversational / unknown / UL:64 DL:64 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / 20 ms TTI~~

#### ~~14.2.50.1.1 Conformance requirement~~

See 14.2.4.1.

#### ~~14.2.50.1.2 Test purpose~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.50 for the 20 ms TTI case.

#### ~~14.2.50.1.3 Method of test~~

#### Initial Conditions

The following RLC Info parameter values shall be set by the SS for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB (RB5 and RB6):

|                                                         | <b>RB5<br/>(64 kbps)</b> | <b>RB6<br/>(64 kbps)</b> |
|---------------------------------------------------------|--------------------------|--------------------------|
| Uplink RLC<br>—— TM RLC<br>—— Segmentation indication   | TRUE                     | TRUE                     |
| Downlink RLC<br>—— TM RLC<br>—— Segmentation indication | TRUE                     | TRUE                     |

#### Uplink TFS:

|     | <b>TFI</b> | <b>RB5<br/>(64 kbps)</b> | <b>RB6<br/>(64 kbps)</b> | <b>DCCH</b> |
|-----|------------|--------------------------|--------------------------|-------------|
| TFS | TF0, bits  | 0x640                    | 0x640                    | 0x148       |
|     | TF1, bits  | 2x640                    | 2x640                    | 1x148       |
|     | TF2, bits  | N/A                      | N/A                      | N/A         |

NOTE: — See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See 14.1.1 for test procedure.

#### 14.2.50.1.4 — Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15 the UE transmitted transport format shall be

— for sub-test 1: RB5/TF1 (2x640).

— for sub-test 2: RB6/TF1 (2x640).

— for sub-test 3: RB5/TF1 (2x640); RB6/TF1 (2x640)

3. At step 15 the UE shall return

— for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6.

— for sub-test 2: an RLC SDU on RB6 having the same content as sent by SS; and no data shall be received on RB5.

— for sub-test 3: an RLC SDU on RB5 and RB6 having the same content as sent by SS.

### ~~14.2.50.2 Conversational / unknown / UL:64 DL:64 kbps / CS RAB + Conversational / unknown / UL:64 DL:64 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH / 40 ms TTI~~

#### ~~14.2.50.2.1 Conformance requirement~~

See 14.2.4.1.

#### ~~14.2.50.2.2 Test purpose~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.50 for the 40 ms TTI case.

#### ~~14.2.50.2.3 Method of test~~

#### Initial Conditions

The following RLC Info parameter values shall be set by the SS for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB (RB5 and RB6):

|                                                       | <b>RB5<br/>(64 kbps)</b> | <b>RB6<br/>(64 kbps)</b> |

See 14.1.1 for test procedure.

#### 14.2.50.2.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15 the UE transmitted transport format shall be

— for sub-test 1: RB5/TF1 (4x640).

— for sub-test 2: RB6/TF1 (4x640).

— for sub-test 3: RB5/TF1 (4x640); RB6/TF1 (4x640)

3. At step 15 the UE shall return

— for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6.

— for sub-test 2: an RLC SDU on RB6 having the same content as sent by SS; and no data shall be received on RB5.

— for sub-test 3: an RLC SDU on RB5 and RB6 having the same content as sent by SS.

See 14.1.1 for test procedure.

#### 14.2.51.1.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
  - for sub-test 1 and 6: RB6/TF1 (1x336).
  - for sub-test 2 and 7: RB6/TF1 (2x336).
  - for sub-test 3 and 8: RB6/TF1 (3x336).
  - for sub-test 4 and 9: RB6/TF1 (4x336).
  - for sub-test 5, 6, 7, 8 and 9: RB5/TF1 (2x640)
3. At step 15 the UE shall return
  - for sub-test 1, 2, 3, 4: an RLC SDU on RB6 having the same content as sent by SS; and no data shall be received on RB5.

- for sub-test 5: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6;
- for sub-test 6, 7, 8 and 9: an RLC SDU on RB5 and RB6 having the same content as sent by SS.

| NOTE: — See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. |                          |                        |                                               |                                               |                               |                              |

See 14.1.1 for test procedure.

#### 14.2.51.2.4 — Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15 the UE transmitted transport format shall be

— for sub-test 1 and 6: RB6/TF1 (1x336).

— for sub-test 2 and 7: RB6/TF1 (2x336).

— for sub-test 3 and 8: RB6/TF1 (3x336).

— for sub-test 4 and 9: RB6/TF1 (4x336).

— for sub-test 5, 6, 7, 8 and 9: RB5/TF1 (4x640)

3. At step 15 the UE shall return

- for sub-test 1, 2, 3, 4: an RLC SDU on RB6 having the same content as sent by SS; and no data shall be received on RB5;
- for sub-test 5: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6;
- for sub-test 6, 7, 8 and 9: an RLC SDU on RB5 and RB6 having the same content as sent by SS.

#### ~~14.2.51a Conversational / unknown / UL:64 DL:64 kbps / CS RAB + Interactive or Background / UL:8 DL:8 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.51a.

#### ~~14.2.51b Conversational / unknown / UL:64 DL:64 kbps / CS RAB + Interactive or Background / UL:16 DL:64 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.51b.

#### ~~14.2.52 Conversational / unknown / UL:64 DL:64 kbps / CS RAB + Interactive or background / UL:64 DL:128 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH~~

##### ~~14.2.52.1 Conversational / unknown / UL:64 DL:64 kbps / CS RAB / 20 ms TTI + Interactive or background / UL:64 DL:128 kbps / PS RAB~~

###### ~~14.2.52.1.1 Conformance requirement~~

See 14.2.4.1.

###### ~~14.2.52.1.2 Test purpose~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.52 for the 20 ms TTI case.

###### ~~14.2.52.1.3 Method of test~~

#### Initial Conditions

The following RLC Info parameter values shall be set by the SS for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB (RB5):

|                                                       | <b>RB5<br/>(Conv.<br/>64 kbps)</b> |
|-------------------------------------------------------|------------------------------------|
| Uplink RLC<br>— TM RLC<br>— Segmentation indication   | TRUE                               |
| Downlink RLC<br>— TM RLC<br>— Segmentation indication | TRUE                               |

| NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. |                          |                        |                                               |                                               |                               |                              |

See 14.1.1 for test procedure.

#### 14.2.52.1.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15 the UE transmitted transport format shall be

— for sub-test 1 and 6: RB6/TF1 (1x336).

— for sub-test 2 and 7: RB6/TF1 (2x336).

— for sub-test 3 and 8: RB6/TF1 (3x336).

— for sub-test 4 and 9: RB6/TF1 (4x336).

— for sub-test 5, 6, 7, 8 and 9: RB5/TF1 (2x640)

3. At step 15 the UE shall return
- for sub-test 1, 2, 3, 4: an RLC SDU on RB6 having the same content as sent by SS; and no data shall be received on RB5.
  - for sub-test 5: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6.
  - for sub-test 6, 7, 8 and 9: an RLC SDU on RB5 and RB6 having the same content as sent by SS.

~~14.2.52.2 Conversational / unknown / UL:64 DL:64 kbps / CS RAB / 40 ms TTI +  
Interactive or background / UL:64 DL:128 kbps / PS RAB~~

~~14.2.52.2.1 Conformance requirement~~

~~See 14.2.4.1.~~

~~14.2.52.2.2 Test purpose~~

~~Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.51 for the 40 ms TTI case.~~

~~14.2.52.2.3 Method of test~~

~~Initial Conditions~~

~~The following RLC Info-parameter values shall be set by the SS for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB (RB5):~~

2. At step 15 the UE transmitted transport format shall be
  - for sub-test 1 and 6: RB6/TF1 (1x336).
  - for sub-test 2 and 7: RB6/TF1 (2x336).
  - for sub-test 3 and 8: RB6/TF1 (3x336).
  - for sub-test 4 and 9: RB6/TF1 (4x336).
  - for sub-test 5, 6, 7, 8 and 9: RB5/TF1 (4x640)
3. At step 15 the UE shall return
  - for sub-test 1, 2, 3, 4: an RLC SDU on RB6 having the same content as sent by SS; and no data shall be received on RB5.

- for sub-test 5: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6;
- for sub-test 6, 7, 8 and 9: an RLC SDU on RB5 and RB6 having the same content as sent by SS.

See 14.1.1 for test procedure.

#### 14.2.53.1.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
  - for sub-test 1 and 6: RB6/TF1 (1x336).
  - for sub-test 2 and 7: RB6/TF1 (2x336).
  - for sub-test 3 and 8: RB6/TF1 (4x336).
  - for sub-test 4 and 9: RB6/TF1 (8x336).
  - for sub-test 5, 6, 7, 8 and 9: RB5/TF1 (2x640)
3. At step 15 the UE shall return
  - for sub-test 1, 2, 3, 4: an RLC SDU on RB6 having the same content as sent by SS; and no data shall be received on RB5.

- for sub-test 5: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6;
- for sub-test 6, 7, 8 and 9: an RLC SDU on RB5 and RB6 having the same content as sent by SS.

**14.2.53.2** ~~Conversational / unknown / UL:64 DL:64 kbps / CS RAB / 40 ms TTI +  
Interactive or background / UL:128 DL:128 kbps / PS RAB~~

**14.2.53.2.1** ~~Conformance requirement~~

See 14.2.4.1.

**14.2.53.2.2** ~~Test purpose~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.53 for the 40 ms TTI case.

**14.2.53.2.3** ~~Method of test~~

**Initial Conditions**

The following RLC Info parameter values shall be set by the SS for the Conversational / unknown / UL:64 DL:64 kbps / CS RAB (RB5):

|                                                       | <b>RB5<br/>(Conv.<br/>64 kbps)</b> |
|-------------------------------------------------------|------------------------------------|
| Uplink RLC<br>— TM RLC<br>— Segmentation indication   | TRUE                               |
| Downlink RLC<br>— TM RLC<br>— Segmentation indication | TRUE                               |

| NOTE: — See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs. |                          |                        |                                               |                                               |                               |                              |

See 14.1.1 for test procedure.

#### 14.2.53.2.4 — Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
  - for sub-test 1 and 6: RB6/TF1 (1x336).
  - for sub-test 2 and 7: RB6/TF1 (2x336).
  - for sub-test 3 and 8: RB6/TF1 (4x336).
  - for sub-test 4 and 9: RB6/TF1 (8x336).
  - for sub-test 5, 6, 7, 8 and 9: RB5/TF1 (4x640)

3. At step 15 the UE shall return

- for sub-test 1, 2, 3, 4: an RLC SDU on RB6 having the same content as sent by SS; and no data shall be received on RB5.
- for sub-test 5: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6.
- for sub-test 6, 7, 8 and 9: an RLC SDU on RB5 and RB6 having the same content as sent by SS.

#### ~~14.2.54 Interactive or background / UL:64 DL:128 kbps / PS RAB + Streaming / unknown / UL:0 DL:64 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH~~

~~14.2.54.1 Conformance requirement~~

~~See 14.2.4.1.~~

~~14.2.54.2 Test purpose~~

~~Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.54.~~

~~To be able to test the downlink radio bearer using the UE loopback function for the reference radio bearer UL:0 DL: 64 kbps, the reference radio bearer configuration according to TS 34.108, clause 6.10.2.4.1.15.1 (Streaming/unknown/UL:14.4 kbps) is used in uplink.~~

| <p>NOTE 1: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.</p> <p>NOTE 2: RB6: SS is using a DL RLC SDU with 320 bits as test data (=DL RLC PDU size for DL/TF1). UE will return one RLC PDU. SS creates an UL RLC SDU from the first 320 bits of the received RLC PDU.</p> <p>NOTE 3: RB6: SS is using a DL RLC SDU size of 640 bits as test data (=DL RLC PDU size for DL/TF2). UE will return one RLC PDU. SS creates an UL RLC SDU from the received RLC PDU.</p> <p>NOTE 4: RB6: SS is using a DL RLC SDU size of 1280 bits as test data (=DL RLC PDU size for DL/TF3). UE will return one RLC PDU. SS creates an UL RLC SDU from the received RLC PDU.</p> <p>NOTE 5: RB6: SS is using a DL RLC SDU size of 2560 bits as test data (=DL RLC PDU size for DL/TF4). UE will return one RLC PDU. SS creates an UL RLC SDU from the received RLC PDU.</p> |                          |                        |                                               |                                               |                                 |                                    |

See 14.1.1 for test procedure.

#### 14.2.54.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
  - for sub-test 1, 6, 11, 16 and 21: RB5/TF1 (1x336).
  - for sub-test 2, 7, 12, 17 and 22: RB5/TF1 (2x336).
  - for sub-test 3, 8, 13, 18 and 23: RB5/TF1 (3x336).
  - for sub-test 4, 9, 14, 19 and 24: RB5/TF1 (4x336).
3. At step 15 the UE shall return
  - for sub-test 1, 2, 3, 4, 6, 7, 8, 9, 11, 12, 13, 14, 16, 17, 18, 19, 21, 22, 23 and 24: an RLC SDU on RB5 having the same content as sent by the SS.
  - for sub-test 5, 10, 15 and 20: no data shall be received on RB5.
  - for sub-test 1 to 4: no data shall be received on RB6.
  - for sub-test 5 to 9: an RLC SDU on RB6 having the same content as sent by the SS.
  - for sub-test 10 to 24: an RLC SDU on RB5 having the same content as the first 576 bits of the RLC SDU sent by the SS.

## ~~14.2.55 Interactive or background / UL:64 DL:128 kbps / PS RAB + Streaming / unknown / UL:0 DL:128 kbps / CS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH~~

### ~~14.2.55.1 Conformance requirement~~

See 14.2.4.1.

### ~~14.2.55.2 Test purpose~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.55.

To be able to test the downlink radio bearer using the UE loopback function for the reference radio bearer UL:0 DL: 64 kbps, the reference radio bearer configuration according to TS 34.108, clause 6.10.2.4.1.15.1 (Streaming/unknown/UL:14.4 kbps) is used in uplink.

### ~~14.2.55.3 Method of test~~

Uplink TFS:

|     | TFI       | RB5<br>(I/B<br>64 kbps) | RB6<br>(Str.<br>14.4 kbps) | DCCH  |
|-----|-----------|-------------------------|----------------------------|-------|
| TFS | TF0, bits | 0x336                   | 0x576                      | 0x148 |
|     | TF1, bits | 1x336                   | 1x576                      | 1x148 |
|     | TF2, bits | 2x336                   | N/A                        | N/A   |
|     | TF3, bits | 3x336                   | N/A                        | N/A   |
|     | TF4, bits | 4x336                   | N/A                        | N/A   |

| <p>NOTE 1: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.</p> <p>NOTE 2: RB6: SS is using a DL RLC SDU with 320 bits as test data (=DL RLC PDU size for DL/TF1). UE will return one RLC PDU. SS creates an UL RLC SDU from the first 320 bits of the received RLC PDU.</p> <p>NOTE 3: RB6: SS is using a DL RLC SDU size of 640 bits as test data (=DL RLC PDU size for DL/TF2). UE will return one RLC PDU. SS creates an UL RLC SDU from the received RLC PDU.</p> <p>NOTE 4: RB6: SS is using a DL RLC SDU size of 1280 bits as test data (=DL RLC PDU size for DL/TF3). UE will return one RLC PDU. SS creates an UL RLC SDU from the received RLC PDU.</p> <p>NOTE 5: RB6: SS is using a DL RLC SDU size of 2560 bits as test data (=DL RLC PDU size for DL/TF4). UE will return one RLC PDU. SS creates an UL RLC SDU from the received RLC PDU.</p> <p>NOTE 6: RB6: SS is using a DL RLC SDU size of 5120 bits as test data (=DL RLC PDU size for DL/TF5). UE will return one RLC PDU. SS creates an UL RLC SDU. from the received RLC PDU.</p> |                          |                        |                                               |                                               |                                 |                                    |

See 14.1.1 for test procedure.

#### 14.2.55.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15 the UE transmitted transport format shall be

- for sub-test 1, 6, 11, 16, 21 and 26: RB5/TF1 (1x336).
- for sub-test 2, 7, 12, 17, 22 and 27: RB5/TF1 (2x336).
- for sub-test 3, 8, 13, 18, 23 and 28: RB5/TF1 (3x336).
- for sub-test 4, 9, 14, 19, 24 and 29: RB5/TF1 (4x336).

3. At step 15 the UE shall return

- for sub-test 1, 2, 3, 4, 6, 7, 8, 9, 11, 12, 13, 14, 16, 17, 18, 19, 21, 22, 23, 24, 26, 27, 28 and 29: an RLC SDU on RB5 having the same content as sent by the SS.
- for sub-test 5, 10, 15, 20 and 25: no data shall be received on RB5.
- for sub-test 1, 2, 3 and 4: no data shall be received on RB6.
- for sub-test 5 to 9: an RLC SDU on RB6 having the same content as sent by the SS.
- for sub-test 10 to 29: an RLC SDU on RB5 having the same content as the first 576 bits of the RLC SDU sent by the SS.

#### 14.2.56 Interactive or background / UL:8 DL:8 kbps / PS RAB + Interactive or background / UL:8 DL:8 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.1.56.

### ~~14.2.57 Interactive or background / UL:64 DL:64 kbps / PS RAB + Interactive or background / UL:64 DL:64 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH.~~

| <p>NOTE 1: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.</p> <p>NOTE 2: SS is using a DL RLC SDU with 354 bits as test data (=DL RLC PDU size for DL/DSCH_TF1). UE will return two RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 and the first 18 bits of RLC PDU#2.</p> <p>NOTE 3: SS is using a DL RLC SDU size of 708 bits as test data (=DL RLC PDU size for DL/DSCH_TF2). UE will return two RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 and the first 36 bits of RLC PDU#2.</p> <p>NOTE 4: SS is using a DL RLC SDU size of 1416 bits as test data (=DL RLC PDU size for DL/DSCH_TF3). UE will return two RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 and the first 408 bits of RLC PDU#2.</p> <p>NOTE 5: SS is using a DL RLC SDU size of 2832 bits as test data (=DL RLC PDU size for DL/DSCH_TF4). UE will return three RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1, RLC PDU#2 and the first 144 bits of RLC PDU#3.</p> |                          |                        |                                                                      |                                             |                                 |                                |

See 14.1.1 for test procedure.

#### 14.3.1.1.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
  - for sub-test 1: RB5/TF1 (1x336).
  - for sub-test 2: RB5/TF2 (2x336).
  - for sub-test 3: RB5/TF3 (3x336).
  - for sub-test 4: RB5/TF4 (4x336).
3. At step 15 the UE shall return
  - for sub-test 1 to 4: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

#### 14.3.1.2 Interactive or background / UL:64 DL:256 kbps / PS-RAB / 20 ms TTI

##### 14.3.1.2.1 Conformance requirement

See 14.2.4.1.

#### 14.3.1.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.2.1 for the downlink 20 ms TTI case.

#### 14.3.1.2.3 Method of test

Uplink TFS:

| <p>NOTE 1: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.</p> <p>NOTE 2: SS is using a DL RLC SDU with 354 bits as test data (=DL RLC PDU size for DL/DSCH_TF1). UE will return two RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 and the first 18 bits of RLC PDU#2.</p> <p>NOTE 3: SS is using a DL RLC SDU size of 708 bits as test data (=DL RLC PDU size for DL/DSCH_TF2). UE will return two RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 and the first 36 bits of RLC PDU#2.</p> <p>NOTE 4: SS is using a DL RLC SDU size of 1416 bits as test data (=DL RLC PDU size for DL/DSCH_TF3). UE will return two RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 and the first 408 bits of RLC PDU#2.</p> <p>NOTE 5: SS is using a DL RLC SDU size of 2832 bits as test data (=DL RLC PDU size for DL/DSCH_TF4). UE will return three RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1, RLC PDU#2 and the first 144 bits of RLC PDU#3.</p> <p>NOTE 6: SS is using a DL RLC SDU size of 4248 bits as test data (=DL RLC PDU size for DL/DSCH_TF5). UE will return four RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1, RLC PDU#2, RLC PDU#3 and the first 216 bits of RLC PDU#4.</p> <p>NOTE 7: SS is using a DL RLC SDU size of 5664 bits as test data (=DL RLC PDU size for DL/DSCH_TF6). UE will return five RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1, RLC PDU#2, RLC PDU#3, RLC PDU#4 and the first 288 bits of RLC PDU#5.</p> |                          |                        |                                                                      |                                             |                                 |                                |

See 14.1.1 for test procedure.

~~14.3.1.2.4 Test requirements~~

See 14.1.1 for definition of step 10 and step 15.

- ~~1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.~~
- ~~2. At step 15 the UE transmitted transport format shall be~~
  - ~~— for sub-test 1: RB5/TF1 (1x336).~~
  - ~~— for sub-test 2: RB5/TF2 (2x336).~~
  - ~~— for sub-test 3: RB5/TF3 (3x336).~~
  - ~~— for sub-test 4, 5 and 6: RB5/TF4 (4x336).~~
- ~~3. At step 15 the UE shall return~~
  - ~~— for sub-test 1 to 6: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.~~

~~14.3.2 Interactive or background / UL:64 DL:384 kbps / PS RAB + UL:3.4 DL: 3.4 kbps SRBs for DCCH~~~~14.3.2.1 Interactive or background / UL:64 DL:384 kbps / PS RAB / 10 ms TTI~~~~14.3.2.1.1 Conformance requirement~~

See 14.2.4.1.

~~14.3.2.1.2 Test purpose~~

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.2.2 for the downlink 10 ms TTI case.

~~14.3.2.1.3 Method of test~~

| <p>NOTE 1: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.</p> <p>NOTE 2: SS is using a DL RLC SDU with 354 bits as test data (=DL RLC PDU size for DL/DSCH_TF1). UE will return two RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 and the first 18 bits of RLC PDU#2.</p> <p>NOTE 3: SS is using a DL RLC SDU size of 708 bits as test data (=DL RLC PDU size for DL/DSCH_TF2). UE will return two RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 and the first 36 bits of RLC PDU#2.</p> <p>NOTE 4: SS is using a DL RLC SDU size of 1416 bits as test data (=DL RLC PDU size for DL/DSCH_TF3). UE will return two RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 and the first 408 bits of RLC PDU#2.</p> <p>NOTE 5: SS is using a DL RLC SDU size of 2832 bits as test data (=DL RLC PDU size for DL/DSCH_TF4). UE will return three RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1, RLC PDU#2 and the first 144 bits of RLC PDU#3.</p> <p>NOTE 6: SS is using a DL RLC SDU size of 4248 bits as test data (=DL RLC PDU size for DL/DSCH_TF5). UE will return four RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1, RLC PDU#2, RLC PDU#3 and the first 216 bits of RLC PDU#4.</p> |                          |                        |                                                                        |                                             |                                 |                                |

See 14.1.1 for test procedure.

#### 14.3.2.1.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
  - for sub-test 1: RB5/TF1 (1x336).
  - for sub-test 2: RB5/TF2 (2x336).
  - for sub-test 3: RB5/TF3 (3x336).
  - for sub-test 4, 5 and 6: RB5/TF4 (4x336).
3. At step 15 the UE shall return
  - for sub-test 1 to 6: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

#### 14.3.2.2 Interactive or background / UL:64 DL:384 kbps / PS RAB / 20 ms TTI

##### 14.3.2.2.1 Conformance requirement

See 14.2.4.1.

##### 14.3.2.2.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.2.2 for the downlink 20 ms TTI case.

## 14.3.2.2.3 Method of test

Uplink TFS:

|     | TFI       | RB5<br>(64 kbps) | DCCH  |
|-----|-----------|------------------|-------|
| TFS | TF0, bits | 0x336            | 0x148 |
|     | TF1, bits | 1x336            | 1x148 |
|     | TF2, bits | 2x336            | N/A   |
|     | TF3, bits | 3x336            | N/A   |
|     | TF4, bits | 4x336            | N/A   |

Uplink TFCS:

| TFCI    | (RB5, DCCH) |
|---------|-------------|
| UL_TFC0 | (TF0, TF0)  |
| UL_TFC1 | (TF1, TF0)  |
| UL_TFC2 | (TF2, TF0)  |
| UL_TFC3 | (TF3, TF0)  |
| UL_TFC4 | (TF4, TF0)  |
| UL_TFC5 | (TF0, TF1)  |
| UL_TFC6 | (TF1, TF1)  |
| UL_TFC7 | (TF2, TF1)  |
| UL_TFC8 | (TF3, TF1)  |
| UL_TFC9 | (TF4, TF1)  |

DSCH downlink TFS:

|     | TFI            | RB5<br>(384 kbps) |
|-----|----------------|-------------------|

| <p>NOTE 1: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.</p> <p>NOTE 2: SS is using a DL RLC SDU with 354 bits as test data (=DL RLC PDU size for DL/DSCH_TF1). UE will return two RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 and the first 18 bits of RLC PDU#2.</p> <p>NOTE 3: SS is using a DL RLC SDU size of 708 bits as test data (=DL RLC PDU size for DL/DSCH_TF2). UE will return two RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 and the first 36 bits of RLC PDU#2.</p> <p>NOTE 4: SS is using a DL RLC SDU size of 1416 bits as test data (=DL RLC PDU size for DL/DSCH_TF3). UE will return two RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 and the first 408 bits of RLC PDU#2.</p> <p>NOTE 5: SS is using a DL RLC SDU size of 2832 bits as test data (=DL RLC PDU size for DL/DSCH_TF4). UE will return three RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1, RLC PDU#2 and the first 144 bits of RLC PDU#3.</p> <p>NOTE 6: SS is using a DL RLC SDU size of 4248 bits as test data (=DL RLC PDU size for DL/DSCH_TF5). UE will return four RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1, RLC PDU#2, RLC PDU#3 and the first 216 bits of RLC PDU#4.</p> <p>NOTE 7: SS is using a DL RLC SDU size of 4248 bits as test data (=DL RLC PDU size for DL/DSCH_TF6). UE will return five RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 to RLC PDU#4 and the first 288 bits of RLC PDU#5.</p> <p>NOTE 8: SS is using a DL RLC SDU size of 4248 bits as test data (=DL RLC PDU size for DL/DSCH_TF7). UE will return six RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 to RLC PDU#5 and the first 360 bits of RLC PDU#6.</p> <p>NOTE 9: SS is using a DL RLC SDU size of 4248 bits as test data (=DL RLC PDU size for DL/DSCH_TF8). UE will return seven RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 to RLC PDU#6 and the first 432 bits of RLC PDU#7.</p> |                          |                        |                                                                   |                                             |                                 |                                |

See 14.1.1 for test procedure.

#### 14.3.2.2.4 ————— Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
  - for sub-test 1: RB5/TF1 (1x336).
  - for sub-test 2: RB5/TF2 (2x336).
  - for sub-test 3: RB5/TF3 (3x336).
  - for sub-test 4, 5, 6, 7 and 8: RB5/TF4 (4x336).
3. At step 15 the UE shall return
  - for sub-test 1 to 8: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

### 14.3.3 ————— Interactive or background / UL:64 DL:2048 kbps / PS RAB + UL:3.4 DL: 3.4 kbps SRBs for DCCH

#### 14.3.3.1 ————— Interactive or background / UL:64 DL:2048 kbps / PS RAB / 10 ms TTI

##### 14.3.3.1.1 ————— Conformance requirement

See 14.2.4.1.

### 14.3.3.1.2 Test purpose

Test to verify establishment and data transfer of reference radio bearer configuration as specified in TS 34.108, clause 6.10.2.4.2.3 for the downlink 10 ms TTI case.

### 14.3.3.1.3 Method of test

Uplink TFS:

|     | TFI       | RB5<br>(64 kbps) | DCCH  |
|-----|-----------|------------------|-------|
| TFS | TF0, bits | 0x336            | 0x148 |
|     | TF1, bits | 1x336            | 1x148 |
|     | TF2, bits | 2x336            | N/A   |
|     | TF3, bits | 3x336            | N/A   |
|     | TF4, bits | 4x336            | N/A   |

Uplink TFCS:

| TFCI    | (RB5, DCCH) |
|---------|-------------|
| UL_TFC0 | (TF0, TF0)  |
| UL_TFC1 | (TF1, TF0)  |
| UL_TFC2 | (TF2, TF0)  |
| UL_TFC3 | (TF3, TF0)  |
| UL_TFC4 | (TF4, TF0)  |
| UL_TFC5 | (TF0, TF1)  |
| UL_TFC6 | (TF1, TF1)  |
| UL_TFC7 | (TF2, TF1)  |
| UL_TFC8 | (TF3, TF1)  |
| UL_TFC9 | (TF4, TF1)  |

NOTE 1: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

NOTE 2: SS is using a DL RLC SDU with 674 bits as test data (=DL RLC PDU size for DL/DSCH\_TF1). UE will return three RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1, RLC SDU#2 and the first 2 bits of RLC PDU#3.

NOTE 3: SS is using a DL RLC SDU size of 1348 bits as test data (=DL RLC PDU size for DL/DSCH\_TF2). UE will return three RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1, RLC SDU#2 and the first 4 bits of RLC PDU#3.

NOTE 4: SS is using a DL RLC SDU size of 2696 bits as test data (=DL RLC PDU size for DL/DSCH\_TF3). UE will return three RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1, RLC SDU#2 and the first 680 bits of RLC PDU#3.

NOTE 5: SS is using a DL RLC SDU size of 5392 bits as test data (=DL RLC PDU size for DL/DSCH\_TF4). UE will return five RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 to RLC PDU#4 and the first 16 bits of RLC PDU#5.

NOTE 6: SS is using a DL RLC SDU size of 8088 bits as test data (=DL RLC PDU size for DL/DSCH\_TF5). UE will return seven RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 to RLC PDU#6 and the first 24 bits of RLC PDU#7.

NOTE 7: SS is using a DL RLC SDU size of 10784 bits as test data (=DL RLC PDU size for DL/DSCH\_TF6). UE will return nine RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 to RLC PDU#8 and the first 32 bits of RLC PDU#9.

NOTE 8: SS is using a DL RLC SDU size of 13480 bits as test data (=DL RLC PDU size for DL/DSCH\_TF7). UE will return eleven RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 to RLC PDU#10 and the first 40 bits of RLC PDU#11.

NOTE 9: SS is using a DL RLC SDU size of 16176 bits as test data (=DL RLC PDU size for DL/DSCH\_TF8). UE will return thirteen RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 to RLC PDU#12 and the first 48 bits of RLC PDU#13.

NOTE 10: SS is using a DL RLC SDU size of 18872 bits as test data (=DL RLC PDU size for DL/DSCH\_TF9). UE will return fifteen RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 to RLC PDU#14 and the first 56 bits of RLC PDU#15.

NOTE 11: SS is using a DL RLC SDU size of 21568 bits as test data (=DL RLC PDU size for DL/DSCH\_TF10). UE will return seventeen RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 to RLC PDU#16 and the first 64 bits of RLC PDU#17.

See 14.1.1 for test procedure.

#### 14.3.3.1.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15 the UE transmitted transport format shall be

— for sub-test 1: RB5/TF1 (1x336).

— for sub-test 2: RB5/TF2 (2x336).

— for sub-test 3: RB5/TF3 (3x336).

— for sub-test 4, 5, 6, 7, 8, 9 and 10: RB5/TF4 (4x336).

3. At step 15 the UE shall return

— for sub-test 1 to 10: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|------------------------|--------------------|--------------------|---------------------------------|--------------------------------|
| NOTE 1: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.                                                                                                                                                                  |                          |                        |                    |                    |                                 |                                |
| NOTE 2: SS is using a DL RLC SDU with 674 bits as test data (=DL RLC PDU size for DL/DSCH_TF1). UE will return three RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1, RLC SDU#2 and the first 2 bits of RLC PDU#3.                     |                          |                        |                    |                    |                                 |                                |
| NOTE 3: SS is using a DL RLC SDU size of 1348 bits as test data (=DL RLC PDU size for DL/DSCH_TF2). UE will return three RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1, RLC SDU#2 and the first 4 bits of RLC PDU#3.                 |                          |                        |                    |                    |                                 |                                |
| NOTE 4: SS is using a DL RLC SDU size of 2696 bits as test data (=DL RLC PDU size for DL/DSCH_TF3). UE will return three RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1, RLC SDU#2 and the first 680 bits of RLC PDU#3.               |                          |                        |                    |                    |                                 |                                |
| NOTE 5: SS is using a DL RLC SDU size of 5392 bits as test data (=DL RLC PDU size for DL/DSCH_TF4). UE will return five RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 to RLC PDU#4 and the first 16 bits of RLC PDU#5.               |                          |                        |                    |                    |                                 |                                |
| NOTE 6: SS is using a DL RLC SDU size of 8088 bits as test data (=DL RLC PDU size for DL/DSCH_TF5). UE will return seven RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 to RLC PDU#6 and the first 24 bits of RLC PDU#7.              |                          |                        |                    |                    |                                 |                                |
| NOTE 7: SS is using a DL RLC SDU size of 10784 bits as test data (=DL RLC PDU size for DL/DSCH_TF6). UE will return nine RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 to RLC PDU#8 and the first 32 bits of RLC PDU#9.              |                          |                        |                    |                    |                                 |                                |
| NOTE 8: SS is using a DL RLC SDU size of 13480 bits as test data (=DL RLC PDU size for DL/DSCH_TF7). UE will return eleven RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 to RLC PDU#10 and the first 40 bits of RLC PDU#11.          |                          |                        |                    |                    |                                 |                                |
| NOTE 9: SS is using a DL RLC SDU size of 16176 bits as test data (=DL RLC PDU size for DL/DSCH_TF8). UE will return thirteen RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 to RLC PDU#12 and the first 48 bits of RLC PDU#13.        |                          |                        |                    |                    |                                 |                                |
| NOTE 10: SS is using a DL RLC SDU size of 18872 bits as test data (=DL RLC PDU size for DL/DSCH_TF9). UE will return fifteen RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 to RLC PDU#14 and the first 56 bits of RLC PDU#15.        |                          |                        |                    |                    |                                 |                                |
| NOTE 11: SS is using a DL RLC SDU size of 21568 bits as test data (=DL RLC PDU size for DL/DSCH_TF10). UE will return seventeen RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 to RLC PDU#16 and the first 64 bits of RLC PDU#17.     |                          |                        |                    |                    |                                 |                                |
| NOTE 12: SS is using a DL RLC SDU size of 24264 bits as test data (=DL RLC PDU size for DL/DSCH_TF11). UE will return nineteen RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 to RLC PDU#18 and the first 72 bits of RLC PDU#19.      |                          |                        |                    |                    |                                 |                                |
| NOTE 13: SS is using a DL RLC SDU size of 26960 bits as test data (=DL RLC PDU size for DL/DSCH_TF12). UE will return twenty-one RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 to RLC PDU#20 and the first 80 bits of RLC PDU#21.    |                          |                        |                    |                    |                                 |                                |
| NOTE 14: SS is using a DL RLC SDU size of 29656 bits as test data (=DL RLC PDU size for DL/DSCH_TF13). UE will return twenty-three RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 to RLC PDU#22 and the first 88 bits of RLC PDU#23.  |                          |                        |                    |                    |                                 |                                |
| NOTE 15: SS is using a DL RLC SDU size of 32352 bits as test data (=DL RLC PDU size for DL/DSCH_TF14). UE will return twenty-five RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 to RLC PDU#24 and the first 96 bits of RLC PDU#25.   |                          |                        |                    |                    |                                 |                                |
| NOTE 16: SS is using a DL RLC SDU size of 35048 bits as test data (=DL RLC PDU size for DL/DSCH_TF15). UE will return twenty-seven RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 to RLC PDU#26 and the first 104 bits of RLC PDU#27. |                          |                        |                    |                    |                                 |                                |
| NOTE 17: SS is using a DL RLC SDU size of 37744 bits as test data (=DL RLC PDU size for DL/DSCH_TF16). UE will return twenty-nine RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 to RLC PDU#28 and the first 112 bits of RLC PDU#29.  |                          |                        |                    |                    |                                 |                                |
| NOTE 18: SS is using a DL RLC SDU size of 40440 bits as test data (=DL RLC PDU size for DL/DSCH_TF17). UE will return thirty-one RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 to RLC PDU#30 and the first 120 bits of RLC PDU#31.   |                          |                        |                    |                    |                                 |                                |
| NOTE 19: SS is using a DL RLC SDU size of 43136 bits as test data (=DL RLC PDU size for DL/DSCH_TF18). UE will return thirty-three RLC PDUs. The SS creates an UL RLC SDU by concatenating RLC PDU#1 to RLC PDU#32 and the first 128 bits of RLC PDU#33. |                          |                        |                    |                    |                                 |                                |

See 14.1.1 for test procedure.

#### 14.3.3.2.4 Test requirements

See 14.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15 the UE transmitted transport format shall be

- for sub-test 1: RB5/TF1 (1x336).
- for sub-test 2: RB5/TF2 (2x336).
- for sub-test 3: RB5/TF3 (3x336).
- for sub-test 4 to 18: RB5/TF4 (4x336).

3. At step 15 the UE shall return

- for sub-test 1 to 18: an RLC SDU on RB5 having the same content as the DL RLC SDU sent by the SS.

#### ~~14.3.4 Conversational / speech / UL:12.2 DL:12.2 kbps / CS RAB + Interactive or background / UL:64 DL:256 kbps / PS RAB + UL:3.4 DL:3.4 kbps SRBs for DCCH~~

~~This clause is FFS.~~

## 16 Short message service (SMS)

Ref.: 3GPP TS 23.040, 3GPP TS 24.011 (point to point)  
3GPP TS 23.041, (cell broadcast)

### General

The purpose of these tests is to verify that the UE can handle Iu mode system functions when submitting or receiving Short Messages (SM) between UE and a short message service centre as described in 3GPP TS 23.040.

The procedures are based upon services provided by the Mobility Management (MM) sublayer and GPRS Mobility Management (GMM) sublayer which are not tested in this case.

The SMS comprises three basic services; SMS point to point services on CS mode, on PS mode and SMS cell broadcast service. The SMS point to point services on CS mode shall work in an active UE at any time independent of whether or not there is a speech or data call in progress. The SMS point to point services on PS mode shall work in an active UE at any time independent of whether or not there is a PDP context in progress. The SMS cell broadcast service only works when the UE is in idle mode.

Since the timer TC1M currently is not standardized, the value of TC1M shall be declared by the manufacturer (to be used in clauses 16.1.1 and 16.1.2).

The manufacturer shall declare whether SMS messages are stored in the USIM and/or the ME. This shall be referred to as the SMS message store in the following tests.

Unless otherwise stated default message contents from 3GPP TS 34.108 applies for following tests.

## 16.1 Short message service point to point on CS mode

All of test cases in this clause are applied to UE supporting CS mode.

### 16.1.1 SMS mobile terminated

#### 16.1.1.1 Definition

#### 16.1.1.2 Conformance requirements

An active UE shall be able to receive short message TPDU (SMS-DELIVER) at any time, independently of whether or not there is a speech or data call in progress. A report will always be returned to the SC, confirming that the UE has received the short message.

#### Reference

3GPP TS 23.040, clause 3.1.

#### 16.1.1.3 Test purpose

To verify the ability of a UE to receive and decode the SMS where provided for the point to point service.

#### 16.1.1.4 Method of test

#### Initial Conditions

- System simulator;
- 1 cell, default parameters.

- User Equipment:
  - the UE shall be in MM-state "Idle, updated";
  - the SMS message storage shall be empty.

#### Related ICS/IXIT Statements

Support for Short message MT/PP.

The value of timer TC1M.

Whether SMS messages are stored in the USIM and/or the ME.

Support for call control state U10.

#### Test procedure

- a) Mobile terminates establishment of Radio Resource Connection. After the completion of RRC Connection SS authenticates UE.
  - After the SS receives SECURITY MODE COMPLETE, the SS sends a CP-DATA message. The information element of the CP-DATA message will be RP-DATA RPDU (SMS DELIVER TPDU).
- b) The SS waits a maximum of 25 s for the CP-ACK message and then a maximum of 60 s for the CP-DATA message containing the RP-ACK RPDU.
- c) The SS sends a CP-ACK to the UE within TC1M with no further CP-DATA messages and the SS initiates RRC Connection release.
- d) Steps a), b) and c) are repeated but the first CP-DATA message from the UE is not acknowledged. The second CP-DATA message from the UE is acknowledged by a CP-ACK within a time TC1M.
- e) Steps a) and b) are repeated. The SS is configured not to send CP-ACK. Then maximum 3 CP-DATA retransmissions may occur. After a duration of TC1M + 5 s after the last CP-DATA retransmission the SS then initiates the channel release. The 5 s is the appropriate time to wait to verify that the UE does not send more than the maximum allowed (3) CP-DATA retransmissions.
- f) The SMS message store shall be cleared manually by the operator.
- g) A data or speech call is established on a DTCH with the SS and the state U10 of call control is entered.
  - The SS sends a CP-DATA message. The information element of the CP-DATA message will be RP-DATA RPDU (SMS DELIVER TPDU). The SS waits a maximum of 25 s for the CP-ACK message and then a maximum of 60 s for the CP-DATA message containing the RP-ACK RPDU.
- h) The SS sends a CP-ACK to the UE within TC1M with no further CP-DATA messages and the SS initiates RRC Connection release. The SMS message store shall be cleared manually by the operator.
- i) Steps g) and h) are repeated but the first CP-DATA message from the UE is not acknowledged. The second CP-DATA message from the UE is acknowledged by a CP-ACK within a time TC1M.
- j) Step g) is repeated. The SS is configured not to send CP-ACK. Then maximum 3 CP-DATA retransmissions may occur. After a duration of TC1M + 15 s after the last CP-DATA retransmission the SS initiates the channel release. The 15 s is the appropriate time to wait to verify that the UE does not send more than the maximum allowed (3) CP-DATA retransmissions (during a call in progress).

- k) A data or speech call is established on a DTCH with the SS and the state U10 of call control shall be entered. The speech call is cleared by the SS with a disconnect message. (The call clearing is continued on the DCCH in parallel to the following exchange of messages related to SMS):
- The SS sends a CP-DATA RPDU (SMS DELIVER TPDU) message. The information element of the CP-DATA message is RP-DATA.
  - The SS waits a maximum of 25 s for the CP-ACK message and then a maximum of 60 s for the CP-DATA message containing the RP-ACK RPDU.
  - The SS sends a CP-ACK to the UE within TC1M with no further CP-DATA messages and the SS initiates channel release.
  - The SMS message store shall be cleared manually by the operator.
- l) A data or speech call is established with the SS and the state U10 of call control is entered. The speech call shall be cleared from the UE. (The call clearing is continued in parallel to the following exchange of messages related to SMS):
- The SS sends a CP-DATA message. The information element of the CP-DATA message is RP-DATA RPDU (SMS DELIVER TPDU).
  - The SS waits a maximum of 25 s for the CP-ACK message and then a maximum of 60 s for the CP-DATA message containing the RP-ACK RPDU.
  - The SS sends a CP-ACK to the UE within TC1M with no further CP-DATA messages and the SS initiates RRC Connection release.
  - The SMS message store shall be cleared manually by the operator.

#### Expected sequence

| NOTE: — The 160 characters in TP-UD shall include at least one occurrence of each character in the default alphabet (see 3GPP TS 23.038, clause 6.2.1). |                                  |

### ~~16.1.1.5 Test requirements~~

~~After step 7 UE shall receive SMS-DELIVER TPDU and send CP-ACK within 25 s and CP-DATA containing RP-ACK within 60 s.~~

~~After step 25 UE shall retransmit CP-DATA containing RP-ACK within twice TC1M.~~

~~After step 30 UE shall indicate that an SM has arrived.~~

~~After step 43 UE shall repeat CP-DATA retransmissions as many times as the decided maximum number.~~

~~After step 48 UE shall indicate that an SM has arrived.~~

~~After step 51 UE shall receive SMS-DELIVER TPDU and send CP-ACK within 25 s and CP-DATA containing RP-ACK within 60 s.~~

~~After step 67 UE shall retransmit CP-DATA containing RP-ACK within twice TC1M.~~

~~After step 74 UE shall indicate that an SM has arrived.~~

~~After step 79 UE shall repeat CP-DATA retransmissions as many times as the decided maximum number.~~

~~After step 90 UE shall indicate that an SM has arrived.~~

~~After step 95 UE shall receive SMS-DELIVER TPDU and send CP-ACK within 25 s and CP-DATA containing RP-ACK within 60 s.~~

~~After step 107 UE shall receive SMS-DELIVER TPDU and send CP-ACK within 25 s and CP-DATA containing RP-ACK within 60 s.~~

## ~~16.1.2 SMS mobile originated~~

### ~~16.1.2.1 Definition~~

### ~~16.1.2.2 Conformance requirements~~

~~An active UE shall be able to submit short message TPDU (SMS-SUBMIT) at any time, independently of whether or not there is a speech or data call in progress.~~

### ~~Reference~~

~~3GPP TS 23.040 clause 3.1.~~

### ~~16.1.2.3 Test purpose~~

~~To verify that the UE is able to correctly send a short message where the SMS is provided for the point to point service.~~

### ~~16.1.2.4 Method of test~~

### ~~Initial Conditions~~

- ~~— System simulator:~~
  - ~~— 1 cell, default parameters.~~
- ~~— User Equipment:~~
  - ~~— the UE shall be in MM-state "Idle, updated";~~
  - ~~— the SMS message storage shall be empty.~~

### Related ICS/IXIT Statements

Support for Short message MO/PP.

Support for state U10 of call control.

The value of timer TC1M.

Whether SMS messages are stored in the USIM and/or the ME.

Maximum length (characters) of a mobile originated short message.

### Test procedure

- a) The UE shall be set up to send a SM to the SS. The SS responds to RRC CONNECTION REQUEST by allocating a CCCH. The SS receives RRC CONNECTION SETUP COMPLETE on DCGH and then performs the authentication.
- b) After receiving SECURITY MODE COMMAND UE shall send SECURITY COMMAND COMPLETE.
- c) The SS responds to the CP-DATA containing RP-DATA RPDU (SMS SUBMIT TPDU) from the UE with a CP-ACK message within TC1M followed by a CP-DATA message containing the correct RP-ACK RPDU. The SS waits a maximum of 25 s for the CP-ACK message.
- d) The SS sends a channel release message to the UE.
- e) Steps a) and b) are repeated. The SS is configured not to send the CP-ACK message. Then maximum 3 CP-DATA retransmissions may occur. After a duration of TC1M + 5 s after the last CP-DATA retransmission the SS initiates channel release. The 5 s is the appropriate time to wait to verify that the UE does not send more than the maximum CP-DATA retransmissions.
- f) Steps a) and b) are repeated. On receipt of the CP-DATA from the UE the SS sends a CP-ERROR message within TC1M containing a "Network Failure" cause. Then the SS initiates channel release.
- g) A data or speech call is established with the SS and the state U10 of call control is entered. The UE is set up to send an SM to the SS. After the reception of the CM SERVICE REQUEST, the SS sends a CM SERVICE ACCEPT message.
- h) The SS responds to the CP-DATA containing RP-DATA RPDU (SMS SUBMIT TPDU) from the UE with a CP-ACK message within TC1M followed by a CP-DATA message containing the correct RP-ACK RPDU. The SS waits a maximum of 25 s for the CP-ACK message. Then the SS sends a channel release message to the UE.
- i) Step g) is repeated. The SS is configured not to send the CP-ACK message. Then maximum 3 CP-DATA retransmissions may occur. After a duration of TC1M + 15 s after the last CP-DATA retransmission the SS initiates channel release. The 15 s is the appropriate time to wait to verify that the UE does not send more than the maximum CP-DATA retransmissions (during a call in progress).
- j) (void)
- k) The UE is set up to send an SM to the SS. On receipt of the CM SERVICE REQUEST the SS sends a CM SERVICE REJECT message with the reject cause set to "Service Option not supported" or "Service Option temporarily out of order". After 5 s the SS initiates channel release.

|----------------------------------|---------------------------------------------------------------------------------------------------------------|
| TP-UDL<br>TP-UD (140 octets max) | as applicable<br>maximum number of characters (text of message) as defined by the manufacturer (see ICS/IXIT) |

#### 16.1.2.5 — Test requirements

After step 9 UE shall send a CP-DATA containing RP-data. The RP-DATA shall contain SMS SUBMIT TPDU.

After step 27 UE shall retransmit a CP-DATA containing RP-data. The RP-DATA shall contain SMS SUBMIT TPDU.

After step 44 UE shall send the RRC CONNECTION RELEASE COMPLETE.

After step 49 UE shall send a CP-DATA containing RP-data. The RP-DATA shall contain SMS SUBMIT TPDU.

After step 60 UE shall repeat CP-DATA retransmissions as many times as the decided maximum number.

After step 83 UE shall not send CP-DATA.

### ~~16.1.3—Test of memory full condition and memory available notification:~~

The Memory Available Notification provides a means for the UE to notify the network that it has memory available to receive one or more short messages. The SMS status field in the USIM contains status information on the "memory available" notification flag.

#### ~~16.1.3.1—Definition~~

#### ~~16.1.3.2—Conformance requirement~~

- ~~1. When a mobile terminated message is Class 2, the UE shall ensure that the message has been transferred to the SMS data field in the USIM before sending an acknowledgement to the SC. The UE shall return a protocol error message if the short message cannot be stored in the USIM and there is other short message storage available in the UE. If all the short message storage in the UE is already in use, the UE shall return "memory capability exceeded".~~
- ~~2. When the UE rejects a short message due to lack of available memory capability the need to transfer notification shall be stored in the USIM.~~
- ~~3. If the memory capability becomes available because memory is cleared, the value of the memory capability exceeded notification flag in the USIM is read. If the flag is set, the UE notifies the network that memory capability is now available. After a positive acknowledgement from the network, the ME unsets the memory capability exceeded notification flag in the USIM.~~

- ~~—3GPP TS 23.040 clause 10.3 (operation 14).~~

#### ~~16.1.3.3—Test purpose~~

- ~~1. To verify that the UE sends the correct acknowledgement when its memory in the USIM becomes full.~~
- ~~2. To verify that the UE sends the correct acknowledgement when its memory in the ME and the USIM becomes full, and sets the "memory exceeded" notification flag in the USIM.~~
- ~~3. To verify that the UE performs the "memory available" procedure when its message store becomes available for receiving short messages, and only at this moment.~~

#### ~~16.1.3.4—Method of test~~

#### Initial conditions

- ~~—System Simulator:~~
  - ~~—1 cell, default parameters.~~
- ~~—User Equipment:~~
  - ~~—the UE shall be in MM-state "Idle, updated";~~
  - ~~—the SMS message storage shall be empty;~~
  - ~~—the UE shall be connected to the USIM simulator. The following shall be present in the USIM simulator:~~
    - ~~—EF<sub>SMS</sub> with at least one record;~~
    - ~~—EF<sub>SMSstatus7</sub> with SMS "Memory Cap. Exceed" notification flag set to "memory available";~~
    - ~~—Service no. 4 (SMS) in EF<sub>SST</sub> set to allocated and activated.~~

- for storing of Class 1 Short Messages the UE shall be set up to store Short Messages in the ME memory (by way of MMI, as described in ICS/IXIT statement).

#### Related ICS/IXIT Statements

Support for Short message MT/PP.

Whether SMS messages are stored in the USIM and/or the ME.

The value of timer TC1M.

#### Test procedure

- a) step a) of clause 16.1.5.3 (test of Class 2 Short Messages) is repeated until the UE sends a negative acknowledgement (RP-ERROR). The USIM simulator shall indicate if the "memory capability exceeded" notification flag has been set on the USIM.
- b) a Class 1 Short Message is sent to the UE.
- c) step b) is repeated until the UE sends a negative acknowledgement (RP-ERROR). The USIM simulator shall indicate if the "memory capability exceeded" notification flag has been set on the USIM.
- d) a Short Message is sent to the UE with the DCS field of the SMS-DELIVER TPDU set to 0.
- e) the SS prompts the operator to read a short message and to remove it from the message store of the UE.
- f) the SS waits for a RRC CONNECTION REQUEST from the UE, and sends a RRC CONNECTION SETUP.
- g) after the SS receives a RRC CONNECTION SETUP COMPLETE, the SS authenticates the UE and activates ciphering.
- h) the SS answers to the RP-SMMA from the UE with a CP-DATA containing a RP-ACK RPDU.
- i) after the UE has acknowledged the CP-DATA with a CP-ACK, the SS releases the RRC connection. The USIM simulator shall indicate if the "memory capability exceeded" notification flag has been unset on the USIM.
- j) step e) is repeated.

#### Expected sequence

| Step | Direction |    | Message                                                      | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

### 16.1.3.5 — Test requirements

After UE sends a negative acknowledgement (RP-ERROR) in step 11, the USIM simulator shall indicate if the "memory capability exceeded" notification flag has been set on the USIM.

After UE sends a negative acknowledgement (RP-ERROR) in step 23, the USIM simulator shall indicate if the "memory capability exceeded" notification flag has been set on the USIM.

After step 53 the ME shall unset the "memory capability exceeded" notification flag on the USIM.

After step 56 UE shall not attempt to send a RP-SMMA RPDU.

### 16.1.4 — Test of the status report capabilities and of SMS-COMMAND:

This test applies to UEs which support the status report capabilities.

#### 16.1.4.1 — Definition

#### 16.1.4.2 — Conformance requirement

The SMS offers the SC the capabilities of informing the UE of the status of a previously sent mobile originated short message. This is achieved by the SC returning a status report TPDU (SMS-STATUS-REPORT) to the originating UE.

SMS-COMMAND enables an UE to invoke an operation at the SC.

The UE shall increment TP-MR by 1 for each SMS-SUBMIT or SMS-COMMAND being submitted.

— 3GPP TS 23.040 clause 3.2.9.

— 3GPP TS 23.040 clause 9.2.3.6.

#### ~~16.1.4.3 Test purpose~~

- ~~1) To verify that the UE is able to accept a SMS-STATUS-REPORT TPDU.~~
- ~~2) To verify that the UE is able to use the SMS-COMMAND functionality correctly and sends an SMS-COMMAND TPDU with the correct TP-Message-Reference.~~

#### ~~16.1.4.4 Method of test~~

##### ~~Initial conditions~~

- ~~— System Simulator:~~
  - ~~— 1 cell, default parameters.~~
- ~~— User Equipment:~~
  - ~~— the UE shall be in MM-state "Idle, updated".~~

##### ~~Related ICS/IXIT Statements~~

~~Support of SMS MO/PP and MT/PP.~~

##### ~~Test procedure~~

- ~~a) The UE is made to send a Mobile Originated short message setting TP-SRR as in steps a) to d) of test 16.1.2 (SMS Mobile originated).~~
- ~~b) The SS sends a CP-DATA message containing a RP-DATA RPDU itself containing an SMS-STATUS-REPORT TPDU.~~
- ~~c) The SS sends a RRC CONNECTION RELEASE message.~~
- ~~d) The UE is made to send an SMS-COMMAND message enquiring about the previously submitted short message.~~
- ~~e) void.~~
- ~~f) The SS acknowledges the CP-DATA message from the UE with a CP-ACK followed by a CP-DATA message containing an RP-ACK RPDU~~
- ~~g) After receiving the CP-ACK from the UE, the SS releases the RRC connection by using a RRC CONNECTION RELEASE message.~~
- ~~h) The UE is made to send an SMS-COMMAND message requiring to delete the previously submitted short message.~~
- ~~i) steps e) to g) are repeated.~~

### Specific Message Contents

#### SMS-SUBMIT-TPDU

| Information element | Comment Value                   |
|---------------------|---------------------------------|
| TP-SRR              | status report is requested—"1"B |

#### SMS-STATUS-REPORT-TPDU (SS to UE in step 23):

| Information element | Comment Value                                     |
|---------------------|---------------------------------------------------|
| TP-MR               | same as previous SMS-SUBMIT                       |
| TP-MMS              | no more messages—"1"B                             |
| TP-SRQ              | result of SMS-SUBMIT—"0"B                         |
| TP-RA               | same as the Destination address of the SMS-SUBMIT |
| TP-ST               | SM received—"00000000"B                           |

#### first SMS-COMMAND-TPDU (UE to SS in step 39)

| Information element | Comment Value                                                      |
|---------------------|--------------------------------------------------------------------|
| TP-MR               | TP-MR in previous SMS-SUBMIT plus "1"                              |
| TP-SRR              | status report requested—"1"B                                       |
| TP-CT               | Enquiry relating to previously submitted short message—"00000000"B |
| TP-MN               | not checked (TP-MR in previous SMS-SUBMIT)                         |

#### second SMS-COMMAND-TPDU (UE to SS in step 54)

| Information element | Comment Value                                         |
|---------------------|-------------------------------------------------------|
| TP-MR               | TP-MR in previous SMS-COMMAND plus "1"                |
| TP-CT               | Delete previously submitted short message—"00000010"B |
| TP-MN               | not checked (TP-MR in previous SMS-SUBMIT)            |

### 16.1.4.5 Test requirements

After step 23 UE accept a SMS-STATUS-REPORT-TPDU.

After step 38 UE shall send a SMS-COMMAND-TPDU with the correct TP-Message-Reference.

After step 53 UE shall send a SMS-COMMAND-TPDU with the correct TP-Message-Reference.

## ~~16.1.5 Test of message class 0 to 3~~

### ~~16.1.5.1 Short message class 0~~

#### ~~16.1.5.1.1 Definition~~

#### ~~16.1.5.1.2 Conformance requirement~~

~~When a mobile terminated message is class 0 and the UE has the capability of indicating short messages, the UE shall indicate the message immediately and send an acknowledgement to the SC when the message has successfully reached the UE irrespective of whether there is memory available in the USIM or ME. The message shall not be automatically stored in the USIM or ME.~~

#### ~~References~~

~~3GPP TS 23.038 clause 4.~~

#### ~~16.1.5.1.3 Test purpose~~

~~To verify that the UE will accept and indicate but not store a class 0 message, and that it will accept and indicate a class 0 message if its message store is full.~~

~~NOTE:—failure of this test in a UE could cause it to reject a class 0 message when its SMS memory becomes full. This could lead to unwanted repetitions between the UE and the service centre.~~

#### ~~16.1.5.1.4 Method of test~~

#### ~~Initial conditions~~

- ~~—System Simulator:~~
  - ~~— 1 cell, default parameters.~~
- ~~—User Equipment:~~
  - ~~— the UE shall be in MM-state "Idle, updated";~~
  - ~~— the UE message store shall be empty.~~

#### ~~Related ICS/IXIT Statements~~

~~Support for Short message MT/PP.~~

~~The value of timer TC1M.~~

~~Whether SMS messages are stored in the USIM and/or the ME.~~

#### ~~Test procedure~~

- ~~a) The SS sends a class 0 message by using the method described in step a) of clause 16.1.1 but with the TPDU described in this clause.~~
- ~~b) The UE message store shall be filled (for example by using the method of clause 16.1.3 test of the memory available notification) with the same SMS-DELIVER TPDU except that TP-DCS is set to class 1.~~
- ~~c) The SS sends a class 0 message as in step a).~~

## Specific Message Contents

## SMS-DELIVER TPDU (containing a class 0 message) (SS to UE)

| Information element | CommentValue                            |
|---------------------|-----------------------------------------|
| TP-DCS              | default alphabet, class 0 "1111 0000" B |

## SMS-DELIVER TPDU (containing a class 1 message to fill the UE message store) (SS to UE)

| Information element | CommentValue                            |
|---------------------|-----------------------------------------|
| TP-DCS              | default alphabet, class 1 "1111 0001" B |

## 16.1.5.1.5 Test requirements

After step 7 UE shall accept and indicate but not store a class 0 message.

After step 21 UE shall accept and indicate a class 0 message.

### ~~16.1.5.2 Test of class 1 short messages~~

~~This test shall apply to UEs which support:~~

- ~~— storing of received Class 1 Short Messages; and~~
- ~~— indicating of stored Short Messages.~~

#### ~~16.1.5.2.1 Definition~~

#### ~~16.1.5.2.2 Conformance requirement~~

~~When a mobile terminated message is class 1, the UE shall send an acknowledgement to the SC when the message has successfully reached the UE and can be stored, either in the ME or in the USIM.~~

#### ~~References~~

~~3GPP TS 23.038 clause 4.~~

#### ~~16.1.5.2.3 Test purpose~~

~~This procedure verifies that the UE acts correctly on receiving a class 1 message, i.e. that it stores the message in the ME or USIM and sends an acknowledgement (at RP and CP Layer).~~

#### ~~16.1.5.2.4 Method of test~~

##### ~~Initial conditions~~

- ~~— System Simulator:~~
  - ~~— 1 cell, default parameters.~~
- ~~— User Equipment:~~
  - ~~— the UE shall be in MM-state "Idle, updated";~~
  - ~~— the UE message store shall be empty;~~
  - ~~— for storing of class 1 Short Messages, the UE shall be set up to store Short Messages in the ME memory (by way of MMI, as described in ICS/IXIT statement).~~

##### ~~Related ICS/IXIT Statements~~

~~Support for Short message MT/PP.~~

~~The value of timer TC1M.~~

~~Whether SMS messages are stored in the USIM and/or the ME.~~

##### ~~Test procedure~~

- ~~a) The SS delivers a Short Message of class 1 to the UE as specified in clause 16.1.1, step a).~~
- ~~b) The Short Message is recalled (e.g. by means of the MMI).~~

| 13   | UE        |    |                                                              | The short message shall be recalled and indicated at the UE.    |

## Specific Message Contents

## SMS-DELIVER-TPDU (containing a class 1 message) (SS to UE)

| Information element | CommentValue                           |
|---------------------|----------------------------------------|
| TP-DCS              | default alphabet, class 1 "1111 0001"B |

## 16.1.5.2.5 Test requirements

After step 7 UE shall store the message in the ME or USIM and send an acknowledgement.

## 16.1.5.3 Test of class 2 short messages

## 16.1.5.3.1 Definition

Class 2 Short Messages are defined as USIM-specific, and the UE shall ensure that a message of this class is stored on the USIM.

## 16.1.5.3.2 Conformance requirement

When a mobile terminated message is Class 2, the UE shall ensure that the message has been correctly transferred to the SMS data field in the USIM before sending an acknowledgement to the SC. The UE shall return a "protocol error, unspecified" error message if the short message cannot be stored in the USIM and there is other short message storage available at the UE. If all the short message storage at the UE is already in use, the UE shall return "memory capacity exceeded".

## Reference(s)

3GPP TS 23.040 clause 9.2.3.10.

3GPP TS 23.038 clause 4.

3GPP TS 34.108 clause 8.3.2.28.

## 16.1.5.3.3 Test purpose

This procedure verifies that the UE acts correctly on receiving a class 2 message, i.e. that it stores the message correctly in the USIM, and if this is not possible, returns a protocol error message, with the correct error cause, to the network.

There are 2 cases:

- 1) if the UE supports storing of short messages in the USIM and in the ME, and storage in the ME is not full, and the short message cannot be stored in the USIM, the error cause shall be "protocol error, unspecified";
- 2) if the UE supports storing of short messages in the USIM and not in the ME, and storage in the ME is not full, and the short message cannot be stored in the USIM, the error cause shall be "memory capacity exceeded".

NOTE: If the UE supports storing of short messages in the USIM and the ME, and storage in the ME is full, and the short message cannot be stored in the USIM, the error cause shall be "memory capacity exceeded". This case is not tested in this test.

#### 16.1.5.3.4 Method of test

##### Initial conditions

— System Simulator:

— 1 cell, default parameters.

— User Equipment:

— the UE shall be in MM-state "Idle, updated";

— the ME message store shall be empty;

— the ME shall be connected to the USIM simulator. The following shall be present in the USIM simulator:

— EF<sub>SMS</sub> with at least two free records and one full record;

— EF<sub>SMSstatus</sub> with SMS "Memory Cap. Exceed" notification flag set to "memory available";

— Service no. 4 (SMS) in EF<sub>SS-T</sub> set to allocated and activated;

— for storing of Class 1 Short Messages the UE shall be set up to store Short Messages in the ME memory (by way of MMI, as described in ICS/IXIT statement).

##### Related ICS/IXIT Statements

Support for Short message MT/PP.

The value of timer TC1M.

Whether SMS messages are stored in the USIM and/or the ME.

##### Test procedure

- a) The SS delivers a Short Message of class 2 to the UE as specified in clause 16.1.1, step b).
- b) Following an attempt by the ME to store the short message in a free record of EF<sub>SMS</sub> in the USIM, the USIM simulator returns the status response "OK" ("90 00").
- c) Step a) is repeated.
- d) Following an attempt by the ME to store the short message in a free record of EF<sub>SMS</sub> in the USIM, the USIM simulator returns the status response "memory problem" ("92 40").
- e) The USIM simulator indicates if an attempt was made in steps a) and c) to store the messages and if the messages are stored according to the requirement.

## Expected sequence

## Specific Message Contents

## SMS-DELIVER TPDU (containing a class 2 message) (SS to UE)

| Information element | CommentValue                                  |
|---------------------|-----------------------------------------------|
| TP-DCS              | default alphabet, class 2 ————— "1111 0010" B |

#### ~~16.1.5.3.5 Test requirements~~

~~After step 10 UE shall confirm that the short message is stored in the USIM and send CP-DATA containing RP-ACK RPDU.~~

~~After step 24 UE shall confirm that the short message cannot be stored in the USIM and send CP-DATA containing RP-ERROR RPDU. If UE supports storing of short message in the ME, the error cause of RP-ERROR RPDU shall be "protocol error, unspecified", and if not the error cause of RP-ERROR RPDU shall be "memory capacity exceeded"~~

#### ~~16.1.5.4 Test of class 3 short messages~~

~~For further study.~~

#### ~~16.1.6 Test of short message type 0~~

~~For further study.~~

#### ~~16.1.7 Test of the replace mechanism for SM type 1-7~~

##### ~~16.1.7.1 Definition~~

##### ~~16.1.7.2 Conformance requirement~~

~~On receipt of a short message, the UE shall check to see if the associated Protocol Identifier contains a Replace Short Message Type code. If such a code is present, then the UE will check the associated originating address (TP-OA) and replace any existing stored message having the same Protocol Identifier code and originating address with the new short message.~~

~~3GPP TS 23.040 clause 9.2.3.9.~~

##### ~~16.1.7.3 Test purpose~~

~~This procedure verifies the correct implementation of the replace mechanism for Replace Short Messages.~~

##### ~~16.1.7.4 Method of test~~

##### ~~Initial conditions~~

- ~~— System Simulator:~~
  - ~~— 1 cell, default parameters.~~
- ~~— User Equipment:~~
  - ~~— the UE shall be in MM-state "Idle, updated";~~
  - ~~— the UE message store shall be empty.~~

##### ~~Related ICS/IXIT Statements~~

~~Support for Short message MT/PP.~~

~~The value of timer TC1M.~~

## Test procedure

- a) Two different numbers n and m are drawn randomly between 1 and 7. Two different addresses for TP-Originating-Address (TPOA1 and TPOA2) are drawn.
- b) The SS delivers a short message to the UE as specified in clause 16.1.1 step a). In the SMS-DELIVER TPDU, the TP-Protocol-Identifier parameter is "Replace Short Message Type n", the TP-Originating-Address is TPOA1, and the RP-Originating-Address is RPOA.
- c) Step b) is repeated but with a different TP-Originating-Address (TPOA2), and different contents of TP-User-Data in the SMS-DELIVER TPDU. The other parameters are the same as in step b).
- d) Void
- e) Step c) is repeated but with the TP-Protocol-Identifier equal to "Replace Short Message Type m", and contents of TP-User-Data different from the former two messages. The other parameters are the same as in step c).
- f) Step e) is repeated but the contents of TP-User-Data are different from that used in step e).
- g) The SS prompts the operator to indicate the Short Messages stored in the UE.

## Expected sequence

| Step | Direction |    | Message                                                      | Comments                                                                                                                                         |

### Specific Message Contents

#### SMS-DELIVER TPDU

| Information element | CommentValue                                                            |
|---------------------|-------------------------------------------------------------------------|
| TP-MMS              | no more messages are waiting in SC "1" B                                |
| TP-PID              | binary 01000xxx, xxx represents n resp. m (see test method description) |

#### 16.1.7.5 Test requirements

After step 60 only the Short Messages delivered in step 7, 19 and 55 shall be retrieved and indicated.

### 16.1.8 Test of the reply path scheme

#### 16.1.8.1 Definition

#### 16.1.8.2 Conformance requirement

When a replying UE receives an original mobile terminated short message it has:

- originating SME = TP-Originating Address in the SMS-DELIVER TPDU;
- original SC = RP-Originating Address in the RP-MT-DATA.

When submitting the reply mobile originated short message, the replying UE should use parameters as follows:

- TP-Destination Address in SMS-SUBMIT TPDU = originating SME;
- RP-Destination Address in RP-MO-DATA = original SC.

#### Reference(s)

3GPP TS 23.040 Annex D.5, D.6

#### 16.1.8.3 ————— Test purpose

This procedure verifies that the UE is able to send a Reply Short Message back to the correct originating SME even if in the meantime it receives another Short Message.

#### 16.1.8.4 ————— Method of test

#### Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated";
  - the UE message store shall be empty.

#### Related ICS/IXIT Statements

Support for Short message MT/PP.

Support for Short message MO/PP.

The value of timer TC1M.

#### Test procedure

- a) The SS delivers a Short Message as specified in clause 16.1.1, step b) with TP-Reply-Path set to 1.
- b) Step a) is repeated but with:
  - different TP-Originating-Address for the originating SME;
  - different RP-Originating-Address for the original SC; and
  - different message contents TP-User-Data.
- c) UE sends the Reply Short Message corresponding to one of two received Short Messages (e.g. by means of the MMI).
- d) step c) is repeated for the other Short Message.

#### Expected sequence

| Step | Direction |     | Message                                                      | Comments          |
|------|-----------|-----|--------------------------------------------------------------|-------------------|
|      | UE        | SS  |                                                              |                   |

#### 16.1.8.5 Test requirements

After step 34 UE shall send the Reply Short Message corresponding to one of two previously received short messages.

After step 50 UE shall send the Reply Short Message corresponding to the other of two previously received short messages.

## 16.1.9 Multiple SMS mobile originated

### 16.1.9.1 UE in idle mode

This test applies to UE supporting the ability of sending multiple short messages on the same RRC connection when there is no call in progress.

#### 16.1.9.1.1 Definition

#### 16.1.9.1.2 Conformance requirements

When the UE chooses to use the same RRC connection to send another short message or a memory available notification, then:

- the UE shall transmit a CM SERVICE REQUEST for the new CM connection before the final CP-ACK (e.g. the one that acknowledges the CP-DATA that carried the RP-ACK) for the old MM connection is transmitted;
- before transmission of the first CP-DATA on the new MM connection, the UE shall transmit the CP-ACK for the old MM connection;
- the Transaction Identifier used on the new MM connection shall be different to that used on the old MM connection; and
- the UE shall not initiate establishment of the new MM connection before the final CP-DATA (e.g. the one carrying the RP-ACK) has been received.

## Reference

- 3GPP TS 23.040 clause 3.1.
- 3GPP TS 24.011 clause 5.4.

### ~~16.1.9.1.3 Test purpose~~

~~To verify that the UE is able to correctly send multiple short messages on the same RRC connection when using a DCCH.~~

### ~~16.1.9.1.4 Method of test~~

#### ~~Initial conditions~~

- ~~— System simulator:~~
  - ~~— 1 cell, default parameters.~~
- ~~— User Equipment:~~
  - ~~— the UE shall be in MM-state "Idle, updated";~~
  - ~~— the SMS message storage shall be empty.~~

#### ~~Related ICS/IXIT statements~~

~~Support for multiple short message MO/PP on the same RRC connection.~~

~~Description of how to enter multiple SMS.~~

~~Whether SMS messages are stored in the USIM and/or the ME.~~

#### ~~Foreseen final state of UE~~

~~Idle, updated.~~

#### ~~Test procedure~~

- ~~a) The UE shall be set up to send 3 short messages as multiple SM to the SS. The SS answers correctly to RRC CONNECTION REQUEST on CCCH and then performs the authentication.~~
- ~~b) After receiving SECURITY MODE COMMAND UE shall send SECURITY COMMAND COMPLETE.~~
- ~~c) The SS responds to the CP-DATA containing RP-DATA RPDU (SMS SUBMIT TPDU) from the UE with a CP-ACK message followed by a CP-DATA message containing the correct RP-ACK RPDU. The Transaction Identifier used on this MM connection is 'x'.~~
- ~~d) The UE shall transmit a CM SERVICE REQUEST for the new CM connection (for the second short message) before the final CP-ACK (the one that acknowledges the CP-DATA that carried the RP-ACK before) for the old MM connection is transmitted. The UE shall not initiate establishment of the new MM connection before the final CP-DATA (i.e. the one carrying the RP-ACK for the first short message) has been received. Before transmission of the first CP-DATA on the new MM connection, the UE shall transmit the CP-ACK for the old MM connection. The Transaction Identifier used on the new MM connection shall be y, where y <-> x (see procedure c)).~~
- ~~e) The SS waits a maximum of 5 s after receiving the CM SERVICE REQUEST for the CP-ACK message from the UE.~~
- ~~f) The SS responds to the CP-DATA containing RP-DATA RPDU (SMS SUBMIT TPDU) from the UE with a CP-ACK message followed by a CP-DATA message containing the correct RP-ACK RPDU.~~

- g) The UE shall transmit a CM SERVICE REQUEST for the new CM connection (for the third short message) before the final CP-ACK (the one that acknowledges the CP-DATA that carried the RP-ACK before) for the old MM connection is transmitted. Before transmission of the first CP-DATA on the new MM connection, the UE shall transmit the CP-ACK for the old MM connection. The Transaction Identifier used on the new MM connection shall be z, where  $z < y$  (see procedure d)). The UE shall not initiate establishment of the new MM connection before the final CP-DATA (i.e. the one carrying the RP-ACK for the second short message) has been received.
- h) The SS waits a maximum of 5 s after receiving the CM SERVICE REQUEST for the CP-ACK message from the UE.
- i) The SS responds to the CP-DATA containing RP-DATA RPDU (SMS SUBMIT TPDU) from the UE with a CP-ACK message followed by a CP-DATA message containing the correct RP-ACK RPDU.
- j) The SS waits a maximum of 5 s after sending CP-DATA for the CP-ACK message from the UE.
- k) The SS sends a RRC CONNECTION RELEASE to the UE.

#### 16.1.9.1.5 Test requirements

In step 13 the UE shall transmit a CM SERVICE REQUEST for the new CM connection (for the second short message) before the final CP-ACK for the old MM connection is transmitted.

In step 19 the UE shall transmit a CM SERVICE REQUEST for the new CM connection (for the third short message) before the final CP-ACK for the old MM connection is transmitted.

#### ~~16.1.9.2 UE in active mode~~

This test applies to UE supporting the ability of sending concatenated multiple short messages when there is a call in progress.

##### ~~16.1.9.2.1 Definition~~

##### ~~16.1.9.2.2 Conformance requirements~~

When the UE chooses to use the same RRC connection to send another short message or a memory available notification, then:

- the UE shall transmit a CM SERVICE REQUEST for the new CM connection before the final CP-ACK (e.g. the one that acknowledges the CP-DATA that carried the RP-ACK) for the old MM connection is transmitted;
- before transmission of the first CP-DATA on the new MM connection, the UE shall transmit the CP-ACK for the old MM connection;
- the Transaction Identifier used on the new MM connection shall be different to that used on the old MM connection; and
- the UE shall not initiate establishment of the new MM connection before the final CP-DATA (e.g. the one carrying the RP-ACK) has been received.

#### Reference

- 3GPP TS 23.040 clause 3.1.
- 3GPP TS 24.011 clause 5.4.

##### ~~16.1.9.2.3 Test purpose~~

To verify that the UE is able to correctly concatenate multiple short messages on the same RRC connection when sent parallel to a call.

##### ~~16.1.9.2.4 Method of test~~

#### ~~Initial conditions~~

- System simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in MM-state "Idle, updated";
  - the SMS message storage shall be empty.

#### Related ICS/IXIT statements

Support for multiple short message MO/PP on the same RRC connection.

Description of how to enter multiple SMS.

Support for state U10 of call control.

Whether SMS messages are stored in the USIM and/or the ME.

## Foreseen final state of UE

Idle, updated.

## Test procedure

- a) A data or speech call is established on a DTCH with the SS and the state U10 of call control is entered. The UE is set up to send 3 short messages as multiple SM to the SS. After the reception of the CM SERVICE REQUEST, the SS sends a CM SERVICE ACCEPT message.
- b) Steps c) to k) of the test procedure in clause 16.1.9.1.4 are repeated.

## 16.1.9.2.5 Test requirements

In step 10 the UE shall transmit a CM SERVICE REQUEST for the new CM connection (for the second short message) before the final CP-ACK for the old MM connection is transmitted.

In step 16 the UE shall transmit a CM SERVICE REQUEST for the new CM connection (for the third short message) before the final CP-ACK for the old MM connection is transmitted.

## ~~16.1.10 Test of capabilities of simultaneously receiving a short message whilst sending a mobile originated short message~~

### ~~16.1.10.1 Definition~~

### ~~16.1.10.2 Conformance requirements~~

~~An active UE shall be able to receive short message TPDU (SMS-SUBMIT) at any time, independently of whether or not there is in SMS mobile originated.~~

### ~~Reference~~

~~3GPP TS 23.040 clause 3.1.~~

### ~~16.1.10.3 Test purpose~~

~~The test verifies that the UE is capable of simultaneously receiving a network originated SM whilst sending a mobile originated SM.~~

### ~~16.1.10.4 Method of test~~

#### ~~Initial Conditions~~

- ~~— System simulator:~~
  - ~~— 1 cell, default parameters.~~
- ~~— User Equipment:~~
  - ~~— the UE shall be in MM-state "Idle, updated";~~
  - ~~— the SMS message storage shall be empty.~~

#### ~~Related ICS/EXIT Statements~~

~~Support for Short message MO/PP and MT/PP.~~

~~Support for state U10 of call control.~~

~~The value of timer TC1M.~~

~~Whether SMS messages are stored in the USIM and/or the ME.~~

~~Maximum length (characters) of a mobile originated short message.~~

#### ~~Test procedure~~

- ~~a) The SS is configured to receive a mobile originated SM. In clause 16.1.2 steps a) and b) are repeated and, using the end of the CP-DATA message from the UE as a trigger, the SS sends a SM to the UE. In this case a new transaction identifier shall be used in the CP messages of SMS mobile terminated.~~

| 13                                                                                                                                              |           | UE  |                               | The UE shall correctly receive the SM and indicate that a message has arrived. In the MO case the UE shall send the CP-ACK message with transaction identifier assigned to this transfer. In the MT case the UE shall send a CP-ACK message and a CP-DATA message containing the RP-ACK RPDU. The transaction identifier shall be the same as chosen by the SS for the MT transfer. |
| NOTE: — Time values for SS wait times are chosen sufficiently high to be sure that the UE has enough time to respond to the different messages. |           |     |                               |                                                                                                                                                                                                                                                                                                                                                                                     |

16.1.10.5 — Test requirements

After step 12 UE shall correctly receive the SM and indicate that a message has arrived.

16.2 — Short message service point to point on PS mode

All of test cases in this clause are applied to the UE supported PS mode.

16.2.1 — SMS mobile terminated

16.2.1.1 — Definition

16.2.1.2 — Conformance requirements

An active UE shall be able to receive short message TPDU (SMS-DELIVER) at any time, independently of whether or not there is a PDP context in progress. A report will always be returned to the SC, confirming that the UE has received the short message.

Reference

3GPP TS 23.040 clause 3.1.

### ~~16.2.1.3 Test purpose~~

~~To verify the ability of a UE to receive and decode the SMS where provided for the point to point service.~~

### ~~16.2.1.4 Method of test~~

#### ~~Initial Conditions~~

- ~~— System simulator:~~
  - ~~— 1 cell, default parameters.~~
- ~~— User Equipment:~~
  - ~~— the UE shall be in GMM-state "GMM-REGISTERED";~~
  - ~~— the SMS message storage shall be empty.~~

#### ~~Related ICS/IXIT Statements~~

~~Support for Short message MT/PP.~~

~~The value of timer TC1M.~~

~~Whether SMS messages are stored in the USIM and/or the ME.~~

~~Support for session management state "PDP-ACTIVE".~~

#### ~~Test procedure~~

- ~~a) Mobile terminates establishment of Radio Resource Connection. After the completion of RRC Connection the SS authenticates the UE and activates ciphering.~~
  - ~~— After the SS receives SECURITY MODE COMPLETE, the SS sends a CP-DATA message. The information element of the CP-DATA message will be RP-DATA RPDU (SMS DELIVER TPDU).~~
- ~~b) The SS waits a maximum of 25 s for the CP-ACK message and then a maximum of 60 s for the CP-DATA message containing the RP-ACK RPDU.~~
- ~~c) The SS sends a CP-ACK to the UE within TC1M with no further CP-DATA messages and the SS initiates channel release.~~
- ~~d) Steps a), b) and c) are repeated but the first CP-DATA message from the UE is not acknowledged. The second CP-DATA message from the UE is acknowledged by a CP-ACK within a time TC1M.~~
- ~~e) Steps a) and b) are repeated. The SS is configured not to send CP-ACK. Then maximum 3 CP-DATA retransmissions may occur. After a duration of TC1M + 5 s after the last CP-DATA retransmission the SS then initiates the channel release. The 5 s is the appropriate time to wait to verify that the UE does not send more than the maximum allowed (3) CP-DATA retransmissions.~~
- ~~f) The SMS message store shall be cleared manually by the operator.~~
- ~~g) A PDP context is established with the SS and the state PDP-ACTIVE of session management is entered.~~
  - ~~— The SS sends a CP-DATA message. The information element of the CP-DATA message will be RP-DATA RPDU (SMS DELIVER TPDU). The SS waits a maximum of 25 s for the CP-ACK message and then a maximum of 60 s for the CP-DATA message containing the RP-ACK RPDU.~~
- ~~h) The SS sends a CP-ACK to the UE within TC1M with no further CP-DATA messages and the SS initiates channel release. The SMS message store shall be cleared manually by the operator.~~
- ~~i) Steps g) and h) are repeated but the first CP-DATA message from the UE is not acknowledged. The second CP-DATA message from the UE is acknowledged by a CP-ACK within a time TC1M.~~

- j) ~~Step g) is repeated. The SS is configured not to send CP-ACK. Then maximum 3 CP-DATA retransmissions may occur. After a duration of TC1M + 15 s after the last CP-DATA retransmission the SS initiates the channel release. The 15 s is the appropriate time to wait to verify that the UE does not send more than the maximum allowed (3) CP-DATA retransmissions (during PDP context in progress).~~
- k) ~~A PDP context is established with the SS and the state PDP-ACTIVE of session management is entered. The PDP context is cleared by the SS with a disconnect message. (The PDP context deactivating is continued in parallel to the following exchange of messages related to SMS).~~
- ~~— The SS sends a CP-DATA RPDU (SMS DELIVER TPDU) message. The information element of the CP-DATA message is RP-DATA.~~
- ~~— The SS waits a maximum of 25 s for the CP-ACK message and then a maximum of 60 s for the CP-DATA message containing the RP-ACK RPDU.~~
- ~~— The SS sends a CP-ACK to the UE within TC1M with no further CP-DATA messages and the SS initiates channel release.~~
- ~~— The SMS message store shall be cleared manually by the operator.~~
- l) ~~A PDP context is established with the SS and the state PDP-ACTIVE of session management is entered. The PDP context shall be cleared from the UE. (The PDP context deactivating is continued in parallel to the following exchange of messages related to SMS).~~
- ~~— The SS sends a CP-DATA message. The information element of the CP-DATA message is RP-DATA RPDU (SMS DELIVER TPDU).~~
- ~~— The SS waits a maximum of 25 s for the CP-ACK message and then a maximum of 60 s for the CP-DATA message containing the RP-ACK RPDU.~~
- ~~— The SS sends a CP-ACK to the UE within TC1M with no further CP-DATA messages and the SS initiates channel release.~~
- ~~— The SMS message store shall be cleared manually by the operator.~~

## Expected sequence

| Step | Direction |    | Message                                                      | Comments                                                                                                                                                     |

| TP-UDL                                                                                                                                                | 160                              |
| TP-UD (140 octets)                                                                                                                                    | text of message (160 characters) |
| NOTE: The 160 characters in TP-UD shall include at least one occurrence of each character in the default alphabet (see 3GPP TS 23.038, clause 6.2.1). |                                  |

#### 16.2.1.5 Test requirements

After step 7 UE shall receive SMS-DELIVER TPDU and send CP-ACK within 25 s and CP-DATA containing RP-ACK within 60 s.

After step 25 UE shall retransmit CP-DATA containing RP-ACK within twice TC1M.

After step 30 UE shall indicate that an SM has arrived.

After step 43 UE shall repeat CP-DATA retransmissions as many times as the decided maximum number.

After step 48 UE shall indicate that an SM has arrived.

After step 51 UE shall receive SMS-DELIVER TPDU and send CP-ACK within 25 s and CP-DATA containing RP-ACK within 60 s.

After step 67 UE shall retransmit CP-DATA containing RP-ACK within twice TC1M.

~~After step 73 UE shall indicate that an SM has arrived.~~

~~After step 78 UE shall repeat CP-DATA retransmissions as many times as the decided maximum number.~~

~~After step 89 UE shall indicate that an SM has arrived.~~

~~After step 94 UE shall receive SMS-DELIVER TPDU and send CP-ACK within 25 s and CP-DATA containing RP-ACK within 60 s.~~

~~After step 106 UE shall receive SMS-DELIVER TPDU and send CP-ACK within 25 s and CP-DATA containing RP-ACK within 60 s.~~

## ~~16.2.2 SMS mobile originated~~

### ~~16.2.2.1 Definition~~

### ~~16.2.2.2 Conformance requirements~~

~~An active UE shall be able to submit short message TPDU (SMS-SUBMIT) at any time, independently of whether or not there is a PDP context in progress.~~

### ~~Reference~~

~~3GPP TS 23.040 clause 3.1.~~

### ~~16.2.2.3 Test purpose~~

~~To verify that the UE is able to correctly send a short message where the SMS is provided for the point to point service.~~

### ~~16.2.2.4 Method of test~~

### ~~Initial Conditions~~

- ~~— System simulator:~~
  - ~~— 1 cell, default parameters.~~
- ~~— User Equipment:~~
  - ~~— the UE shall be in GMM-state "GMM-REGISTERED";~~
  - ~~— the SMS message storage shall be empty.~~

### ~~Related ICS/IXIT Statements~~

~~Support for Short message MO/PP.~~

~~Support for state PDP-ACTIVE of session management.~~

~~The value of timer TC1M.~~

~~Whether SMS messages are stored in the USIM and/or the ME.~~

~~Maximum length (characters) of a mobile originated short message.~~

### ~~Test procedure~~

- ~~a) The UE shall be set up to send a SM to the SS. The SS responds to RRC CONNECTION REQUEST by allocating a CCCH. The SS receives RRC CONNECTION SETUP COMPLETE on DCCH and then performs the authentication.~~
- ~~b) After receiving SECURITY MODE COMMAND UE shall send SECURITY COMMAND COMPLETE.~~

- c) The SS responds to the CP-DATA containing RP-DATA RPDU (SMS SUBMIT TPDU) from the UE with a CP-ACK message within TC1M followed by a CP-DATA message containing the correct RP-ACK RPDU. The SS waits a maximum of 25 s for the CP-ACK message.
- d) The SS sends a channel release message to the UE.
- e) Steps a) and b) are repeated. The SS is configured not to send the CP-ACK message. Then maximum 3 CP-DATA retransmissions may occur. After a duration of TC1M + 5 s after the last CP-DATA retransmission the SS initiates channel release. The 5 s is the appropriate time to wait to verify that the UE does not send more than the maximum CP-DATA retransmissions.
- f) Steps a) and b) are repeated. On receipt of the CP-DATA from the UE the SS sends a CP-ERROR message within TC1M containing a "Network Failure" cause. Then the SS initiates channel release.
- g) A PDP context is established with the SS and the state PDP-ACTIVE of session management is entered. The UE is set up to send an SM to the SS. After the reception of the SERVICE REQUEST, the SS sends a SERVICE ACCEPT message.
- h) The SS responds to the CP-DATA containing RP-DATA RPDU (SMS SUBMIT TPDU) from the UE with a CP-ACK message within TC1M followed by a CP-DATA message containing the correct RP-ACK RPDU. The SS waits a maximum of 25 s for the CP-ACK message. Then the SS sends a channel release message to the UE.
- i) Step g) is repeated. The SS is configured not to send the CP-ACK message. Then maximum 3 CP-DATA retransmissions may occur. After a duration of TC1M + 15 s after the last CP-DATA retransmission the SS initiates channel release. The 15 s is the appropriate time to wait to verify that the UE does not send more than the maximum CP-DATA retransmissions (during a PDP context in progress).
- j) (void)
- k) The UE is set up to send an SM to the SS. On receipt of the SERVICE REQUEST the SS sends a SERVICE REJECT message with the reject cause set to "GPRS services not allowed". After 5 s the SS initiates channel release.

| TP-UDL<br>TP-UD (140 octets max) | as applicable<br>maximum number of characters (text of message) as defined by the manufacturer (see ICS/IXIT) |

### 16.2.2.5 Test requirements

After step 9 UE shall send a CP-DATA containing RP-data. The RP-DATA shall contain SMS SUBMIT TPDU.

After step 26 UE shall retransmit a CP-DATA containing RP-data. The RP-DATA shall contain SMS SUBMIT TPDU.

After step 43 UE shall send the RRC CONNECTION RELEASE COMPLETE.

After step 48 UE shall send a CP-DATA containing RP-data. The RP-DATA shall contain SMS SUBMIT TPDU.

After step 61 UE shall repeat CP-DATA retransmissions as many times as the decided maximum number.

After step 82 UE shall not send CP-DATA.

### 16.2.3 Test of memory full condition and memory available notification:

The Memory Available Notification provides a means for the UE to notify the network that it has memory available to receive one or more short messages. The SMS status field in the USIM contains status information on the "memory available" notification flag.

#### 16.2.3.1 Definition

#### 16.2.3.2 Conformance requirement

- When a mobile terminated message is Class 2, the UE shall ensure that the message has been transferred to the SMS data field in the USIM before sending an acknowledgement to the SC. The UE shall return a protocol error message if the short message cannot be stored in the USIM and there is other short message storage available in the UE. If all the short message storage in the UE is already in use, the UE shall return "memory capability exceeded".
- When the UE rejects a short message due to lack of available memory capability the need to transfer notification shall be stored in the USIM.
- If the memory capability becomes available because memory is cleared, the value of the memory capability exceeded notification flag in the USIM is read. If the flag is set, the UE notifies the network that memory capability is now available. After a positive acknowledgement from the network, the ME unsets the memory capability exceeded notification flag in the USIM.

## References

- 3GPP TS 23.040 clause 9.2.3.10, 3GPP TS 23.038 clause 4.
- 3GPP TS 23.040 clause 10.3 (operation 14).
- 3GPP TS 23.040 clause 10.3 (operation 14).

### 16.2.3.3 Test purpose

1. To verify that the UE sends the correct acknowledgement when its memory in the USIM becomes full.
2. To verify that the UE sends the correct acknowledgement when its memory in the ME and the USIM becomes full, and sets the "memory exceeded" notification flag in the USIM.
3. To verify that the UE performs the "memory available" procedure when its message store becomes available for receiving short messages, and only at this moment.

### 16.2.3.4 Method of test

#### Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in GMM-state "GMM-REGISTERED";
  - the SMS message storage shall be empty;
  - the UE shall be connected to the USIM simulator. The following shall be present in the USIM simulator:
    - EF<sub>SMS</sub> with at least one record;
    - EF<sub>SMSstatus</sub> with SMS "Memory Cap. Exceed" notification flag set to "memory available";
    - Service no. 4 (SMS) in EF<sub>SS-T</sub> set to allocated and activated.
  - for storing of Class 1 Short Messages the UE shall be set up to store Short Messages in the ME memory (by way of MMI, as described in ICS/IXIT statement).

#### Related ICS/IXIT Statements

Support for Short message MT/PP.

Whether SMS messages are stored in the USIM and/or the ME.

The value of timer TC1M.

#### Test procedure

- a) step a) of clause 16.2.5.3 (test of Class 2 Short Messages) is repeated until the UE sends a negative acknowledgement (RP-ERROR). The USIM simulator shall indicate if the "memory capability exceeded" notification flag has been set on the USIM.
- b) a Class 1 Short Message is sent to the UE.
- c) step b) is repeated until the UE sends a negative acknowledgement (RP-ERROR). The USIM simulator shall indicate if the "memory capability exceeded" notification flag has been set on the USIM.
- d) a Short Message is sent to the UE with the DCS field of the SMS-DELIVER TPDU set to 0.
- e) the SS prompts the operator to read a short message and to remove it from the message store of the UE.

- f) the SS waits for a RRC CONNECTION REQUEST from the UE, and sends a RRC CONNECTION SETUP.
- g) after the SS receives a RRC CONNECTION SETUP COMPLETE, the SS authenticates the UE and activates ciphering.
- h) the SS answers to the RP-SMMA from the UE with a CP-DATA containing a RP-ACK RPDU.
- i) after the UE has acknowledged the CP-DATA with a CP-ACK, the SS releases the RRC connection. The USIM simulator shall indicate if the "memory capability exceeded" notification flag has been unset on the USIM.
- j) step e) is repeated.

## Expected sequence

| Step | Direction |    | Message                                                      | Comments                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| 13   | ←         |    | RRC CONNECTION RELEASE                                       | RRC connection is released. Step 1-18 is repeated until UE sends a negative acknowledgement (RP-ERROR) in step 11. The RP-ERROR RPDU cause field shall be "Protocol error, unspecified" if there is message capability in the ME, or "Memory capability exceeded" if there is no message capability in the ME. If the total memory store of the UE is full, the ME shall set the "memory capability exceeded" notification flag on the USIM. |

### 16.2.3.5 ~~Test requirements~~

After UE sends a negative acknowledgement (RP-ERROR) in step 11, the USIM simulator shall indicate if the "memory capability exceeded" notification flag has been set on the USIM.

After UE sends a negative acknowledgement (RP-ERROR) in step 23, the USIM simulator shall indicate if the "memory capability exceeded" notification flag has been set on the USIM.

After step 53 the ME shall unset the "memory capability exceeded" notification flag on the USIM.

After step 56 UE shall not attempt to send a RP-SMMA RPDU.

## 16.2.4 ~~Test of the status report capabilities and of SMS-COMMAND:~~

This test applies to UEs which support the status report capabilities.

### 16.2.4.1 ~~Definition~~

### 16.2.4.2 ~~Conformance requirement~~

The SMS offers the SC the capabilities of informing the UE of the status of a previously sent mobile-originated short message. This is achieved by the SC returning a status report TPDU (SMS-STATUS-REPORT) to the originating UE.

SMS-COMMAND enables an UE to invoke an operation at the SC.

The UE shall increment TP-MR by 1 for each SMS-SUBMIT or SMS-COMMAND being submitted.

### References

- 3GPP TS 23.040 clause 3.2.9.
- 3GPP TS 23.040 clause 9.2.3.6.

### 16.2.4.3 ~~Test purpose~~

- 1) To verify that the UE is able to accept a SMS-STATUS-REPORT TPDU.
- 2) To verify that the UE is able to use the SMS-COMMAND functionality correctly and sends an SMS-COMMAND TPDU with the correct TP-Message-Reference.

### 16.2.4.4 ~~Method of test~~

#### Initial conditions

- System Simulator:
  - 1 cell, default parameters.
- User Equipment:
  - the UE shall be in GMM-state "GMM-REGISTERED".

#### Related ICS/IXIT Statements

Support of SMS MO/PP and MT/PP.

## Test procedure

- a) The UE is made to send a Mobile Originated short message setting TP-SRR as in steps a) to d) of test 16.2.2 (SMS Mobile-originated).
- b) The SS sends a CP-DATA message containing a RP-DATA RPDU itself containing an SMS-STATUS-REPORT TPDU.
- c) The SS sends a RRC CONNECTION RELEASE message.
- d) The UE is made to send an SMS-COMMAND message enquiring about the previously submitted short message.
- e) Void.
- f) The SS acknowledges the CP-DATA message from the UE with a CP-ACK followed by a CP-DATA message containing an RP-ACK RPDU.
- g) After receiving the CP-ACK from the UE, the SS releases the RRC connection by using a RRC CONNECTION RELEASE message.
- h) The UE is made to send an SMS-COMMAND message requiring to delete the previously submitted short message.
- i) steps e) to g) are repeated.

## Expected sequence

| Step | Direction |    | Message                                                      | Comments                                       |

### Specific Message Contents

#### SMS-SUBMIT TPDU

| Information element | Comment Value                   |
|---------------------|---------------------------------|
| TP-SRR              | status report is requested—"1"B |

#### SMS-STATUS-REPORT TPDU (SS to UE in step 23):

| Information element | Comment Value                                     |
|---------------------|---------------------------------------------------|
| TP-MR               | same as previous SMS-SUBMIT                       |
| TP-MMS              | no more messages—"1"B                             |
| TP-SRQ              | result of SMS-SUBMIT—"0"B                         |
| TP-RA               | same as the Destination address of the SMS-SUBMIT |
| TP-ST               | SM received—"00000000"B                           |

first SMS-COMMAND-TPDU (UE to SS in step 39)

| Information element | Comment Value                                                      |
|---------------------|--------------------------------------------------------------------|
| TP-MR               | TP-MR in previous SMS-SUBMIT plus "1"                              |
| TP-SRR              | status-report requested "1"B                                       |
| TP-CT               | Enquiry relating to previously submitted short message "00000000"B |
| TP-MN               | not checked (TP-MR in previous SMS-SUBMIT)                         |

second SMS-COMMAND-TPDU (UE to SS in step 54)

| Information element | Comment Value                                         |
|---------------------|-------------------------------------------------------|
| TP-MR               | TP-MR in previous SMS-COMMAND plus "1"                |
| TP-CT               | Delete previously submitted short message "00000010"B |
| TP-MN               | not checked (TP-MR in previous SMS-SUBMIT)            |

#### 16.2.4.5 Test requirements

After step 23 UE accept a SMS-STATUS-REPORT-TPDU.

After step 39 UE shall send a SMS-COMMAND-TPDU with the correct TP-Message-Reference.

After step 54 UE shall send a SMS-COMMAND-TPDU with the correct TP-Message-Reference.

### 16.2.5 Test of message class 0 to 3

#### 16.2.5.1 Short message class 0

##### 16.2.5.1.1 Definition

##### 16.2.5.1.2 Conformance requirement

When a mobile terminated message is class 0 and the UE has the capability of indicating short messages, the UE shall indicate the message immediately and send an acknowledgement to the SC when the message has successfully reached the UE irrespective of whether there is memory available in the USIM or ME. The message shall not be automatically stored in the USIM or ME.

#### References

3GPP TS 23.038, clause 4.

##### 16.2.5.1.3 Test purpose

To verify that the UE will accept and indicate but not store a class 0 message, and that it will accept and indicate a class 0 message if its message store is full.

NOTE: failure of this test in a UE could cause it to reject a class 0 message when its SMS memory becomes full. This could lead to unwanted repetitions between the UE and the service centre.

##### 16.2.5.1.4 Method of test

#### Initial conditions

— System Simulator:

— 1 cell, default parameters.

— User Equipment:

— the UE shall be in GMM-state "GMM-REGISTERED";

— the UE message store shall be empty.

#### Related ICS/IXIT Statements

Support for Short message MT/PP.

The value of timer TC1M.

Whether SMS messages are stored in the USIM and/or the ME.

#### Test procedure

- a) The SS sends a class 0 message by using the method described in step a) of clause 16.2.1 but with the TPDU described in this clause.
- b) The UE message store shall be filled (for example by using the method of clause 16.2.3 test of the memory available notification) with the same SMS-DELIVER TPDU except that TP-DCS is set to class 1.
- c) The SS sends a class 0 message as in step a).

#### Expected sequence

| Step | Direction |    | Message                                                      | Comments                                                        |

### Specific Message Contents

#### SMS-DELIVER TPDU (containing a class 0 message) (SS to UE)

| Information element | CommentValue                           |
|---------------------|----------------------------------------|
| TP-DCS              | default alphabet, class 0 "1111 0000"B |

#### SMS-DELIVER TPDU (containing a class 1 message to fill the UE message store) (SS to UE)

| Information element | CommentValue                           |
|---------------------|----------------------------------------|
| TP-DCS              | default alphabet, class 1 "1111 0001"B |

#### 16.2.5.1.5 Test requirements

After step 7 UE shall accept and indicate but not store a class 0 message.

After step 21 UE shall accept and indicate a class 0 message.

#### 16.2.5.2 Test of class 1 short messages

This test shall apply to UEs which support:

- storing of received Class 1 Short Messages; and
- indicating of stored Short Messages.

#### 16.2.5.2.1 Definition

#### 16.2.5.2.2 Conformance requirement

When a mobile terminated message is class 1, the UE shall send an acknowledgement to the SC when the message has successfully reached the UE and can be stored, either in the ME or in the USIM.

### References

3GPP TS 23.038 clause 4.

#### 16.2.5.2.3 Test purpose

This procedure verifies that the UE acts correctly on receiving a class 1 message, i.e. that it stores the message in the ME or USIM and sends an acknowledgement (at RP and CP Layer).

#### 16.2.5.2.4 Method of test

### Initial conditions

- System Simulator:
- 1 cell, default parameters.
- User Equipment:

- the UE shall be in GMM-state "GMM-REGISTERED";
- the UE message store shall be empty;
- for storing of class 1 Short Messages, the UE shall be set up to store Short Messages in the ME memory (by way of MMI, as described in ICS/IXIT statement).

#### Related ICS/IXIT Statements

Support for Short message MT/PP.

The value of timer TC1M.

Whether SMS messages are stored in the USIM and/or the ME.

#### Test procedure

- a) The SS delivers a Short Message of class 1 to the UE as specified in clause 16.2.1, step a).
- b) The Short Message is recalled (e.g. by means of the MMI).

#### Expected sequence

| Step | Direction |    | Message                                                      | Comments                                                                                                                                                                                  |

#### Specific Message Contents

SMS-DELIVER TPDU (containing a class 1 message) (SS to UE)

| Information element | CommentValue                            |
|---------------------|-----------------------------------------|
| TP-DCS              | default alphabet, class 1 "1111 0001" B |

#### 16.2.5.2.5 Test requirements

After step 7 UE shall store the message in the ME or USIM and send an acknowledgement.

### 16.2.5.3 — Test of class 2 short messages

#### 16.2.5.3.1 — Definition

Class 2 Short Messages are defined as USIM-specific, and the UE shall ensure that a message of this class is stored on the USIM.

#### 16.2.5.3.2 — Conformance requirement

When a mobile terminated message is Class 2, the UE shall ensure that the message has been correctly transferred to the SMS data field in the USIM before sending an acknowledgement to the SC. The UE shall return a "protocol error, unspecified" error message if the short message cannot be stored in the USIM and there is other short message storage available at the UE. If all the short message storage at the UE is already in use, the UE shall return "memory capacity exceeded".

#### Reference(s)

3GPP TS 23.040 clause 9.2.3.10; 3GPP TS 23.038 clause 4. 3GPP TS 34.108 clause 8.3.2.28.

#### 16.2.5.3.3 — Test purpose

This procedure verifies that the UE acts correctly on receiving a class 2 message, i.e. that it stores the message correctly in the USIM, and if this is not possible, returns a protocol error message, with the correct error cause, to the network.

There are 2 cases:

- 1) if the UE supports storing of short messages in the USIM and in the ME, and storage in the ME is not full, and the short message cannot be stored in the USIM, the error cause shall be "protocol error, unspecified";
- 2) if the UE supports storing of short messages in the USIM and not in the ME, and storage in the ME is not full, and the short message cannot be stored in the USIM, the error cause shall be "memory capacity exceeded".

NOTE: If the UE supports storing of short messages in the USIM and the ME, and storage in the ME is full, and the short message cannot be stored in the USIM, the error cause shall be "memory capacity exceeded". This case is not tested in this test.

#### 16.2.5.3.4 — Method of test

##### Initial conditions

— System Simulator:

- 1 cell, default parameters.

— User Equipment:

- the UE shall be in GMM-state "GMM-REGISTERED";
- the ME message store shall be empty;
- the ME shall be connected to the USIM simulator. The following shall be present in the USIM simulator:
  - EF<sub>SMS</sub> with at least two free records and one full record;
  - EF<sub>SMSstatus</sub> with SMS "Memory Cap. Exceed" notification flag set to "memory available";
  - Service no. 4 (SMS) in EF<sub>ST</sub> set to allocated and activated;
  - for storing of Class 1 Short Messages the UE shall be set up to store Short Messages in the ME memory (by way of MMI, as described in ICS/IXIT statement).

**Related ICS/IXIT Statements**

Support for Short message MT/PP.

The value of timer TC1M.

Whether SMS messages are stored in the USIM and/or the ME.

**Test procedure**

- a) The SS delivers a Short Message of class 2 to the UE as specified in clause 16.2.1, step b).
- b) Following an attempt by the ME to store the short message in a free record of EF<sub>SMS</sub> in the USIM, the USIM simulator returns the status response "OK" ("90 00").
- c) Step a) is repeated.
- d) Following an attempt by the ME to store the short message in a free record of EF<sub>SMS</sub> in the USIM, the USIM simulator returns the status response "memory problem" ("92 40").
- e) The USIM simulator indicates if an attempt was made in steps a) and c) to store the messages and if the messages are stored according to the requirement.

**Expected sequence**

| Step | Direction |      | Message                                                      | Comments                                                                                                                                                                                                                                                                                                                                                                                          |

### Specific Message Contents

#### SMS-DELIVER TPDU (containing a class 2 message) (SS to UE)

| Information element | CommentValue                           |
|---------------------|----------------------------------------|
| TP-DCS              | default alphabet, class 2 "1111 0010"B |

#### 16.2.5.3.5 Test requirements

After step 10 UE shall confirm that the short message is stored in the USIM and send CP-DATA containing RP-ACK RPDU.

After step 24 UE shall confirm that the short message cannot be stored in the USIM and send CP-DATA containing RP-ERROR RPDU. If UE supports storing of short message in the ME, the error cause of RP-ERROR RPDU shall be "protocol error, unspecified", and if not the error cause of RP-ERROR RPDU shall be "memory capacity exceeded"

#### 16.2.5.4 Test of class 3 short messages

For further study.

#### 16.2.6 Test of short message type 0

For further study.

#### 16.2.7 Test of the replace mechanism for SM type 1-7

##### 16.2.7.1 Definition

##### 16.2.7.2 Conformance requirement

On receipt of a short message, the UE shall check to see if the associated Protocol Identifier contains a Replace Short Message Type code. If such a code is present, then the UE will check the associated originating address (TP-OA) and replace any existing stored message having the same Protocol Identifier code and originating address with the new short message.

#### Reference(s)

3GPP TS 23.040; clause 9.2.3.9.

~~16.2.7.3 Test purpose~~

~~This procedure verifies the correct implementation of the replace mechanism for Replace Short Messages.~~

~~16.2.7.4 Method of test~~~~Initial conditions~~

- ~~— System Simulator:~~
  - ~~— 1 cell, default parameters.~~
- ~~— User Equipment:~~
  - ~~— the UE shall be in GMM-state "GMM-REGISTERED";~~
  - ~~— the UE message store shall be empty.~~

~~Related ICS/IXIT Statements~~

~~Support for Short message MT/PP.~~

~~The value of timer TC1M.~~

~~Test procedure~~

- ~~a) Two different numbers n and m are drawn randomly between 1 and 7. Two different addresses for TP-Originating-Address (TPOA1 and TPOA2) are drawn.~~
- ~~b) The SS delivers a short message to the UE as specified in clause 16.2.1 step a). In the SMS-DELIVER TPDU, the TP-Protocol-Identifier parameter is "Replace Short Message Type n", the TP-Originating-Address is TPOA1, and the RP-Originating-Address is RPOA.~~
- ~~c) Step b) is repeated but with a different TP-Originating-Address (TPOA2), and different contents of TP-User-Data in the SMS-DELIVER TPDU. The other parameters are the same as in step b).~~
- ~~d) –~~
- ~~e) Step c) is repeated but with the TP-Protocol-Identifier equal to "Replace Short Message Type m", and contents of TP-User-Data different from the former two messages. The other parameters are the same as in step c).~~
- ~~f) Step e) is repeated but the contents of TP-User-Data are different from that used in step e).~~
- ~~g) The SS prompts the operator to indicate the Short Messages stored in the UE.~~

~~Expected sequence~~

#### 16.2.7.5 Test requirements

After step 60 only the Short Messages delivered in step 7, 19 and 55 shall be retrieved and indicated.

## 16.2.8 Test of the reply path scheme

### 16.2.8.1 Definition

### 16.2.8.2 Conformance requirement

When a replying UE receives an original mobile terminated short message it has:

- originating SME = TP-Originating Address in the SMS-DELIVER TPDU;
- original SC = RP-Originating Address in the RP-MT-DATA.

When submitting the reply mobile originated short message, the replying UE should use parameters as follows:

- TP-Destination Address in SMS-SUBMIT TPDU = originating SME;
- RP-Destination Address in RP-MO-DATA = original SC.

### Reference(s)

3GPP TS 23.040 Annex D clauses D.5 and D.6.

### 16.2.8.3 Test purpose

This procedure verifies that the UE is able to send a Reply Short Message back to the correct originating SME even if in the meantime it receives another Short Message.

### 16.2.8.4 Method of test

#### Initial conditions

- System Simulator:
- 1 cell, default parameters.
- User Equipment:

- the UE shall be in GMM-state "GMM-REGISTERED";
- the UE message store shall be empty.

#### Related ICS/IXIT Statements

Support for Short message MT/PP.

Support for Short message MO/PP.

The value of timer TC1M.

#### Test procedure

- a) The SS delivers a Short Message as specified in clause 16.2.1, step b) with TP-Reply-Path set to 1.
- b) Step a) is repeated but with:
  - different TP-Originating-Address for the originating SME;
  - different RP-Originating-Address for the original SC; and
  - different message contents TP-User-Data.
- c) UE sends the Reply Short Message corresponding to one of two received Short Messages (e.g. by means of the MMI).
- d) step c) is repeated for the other Short Message.

#### Expected sequence

### Specific Message Contents

#### SMS-DELIVER TPDU

| Information element | Comment/Value                            |
|---------------------|------------------------------------------|
| TP-MMS              | no more messages are waiting in SC "1" B |
| TP-RP               | Reply Path exists "1" B                  |

### 16.2.8.5 Test requirements

After step 34 UE shall send the Reply Short Message corresponding to one of two previously received short messages.

After step 51 UE shall send the Reply Short Message corresponding to the other of two previously received short messages.

## ~~16.2.9 Multiple SMS mobile originated~~

### ~~16.2.9.1 UE in idle mode~~

This test is not applicable for R99.

### ~~16.2.9.2 UE in active mode~~

This test is not applicable for R99.

## ~~16.2.10 Test of capabilities of simultaneously receiving a short message whilst sending a mobile originated short message~~

### ~~16.2.10.1 Definition~~

### ~~16.2.10.2 Conformance requirements~~

An active UE shall be able to receive short message TPDU (SMS-SUBMIT) at any time, independently of whether or not there is in SMS mobile originated.

### ~~Reference~~

3GPP TS 23.040 clause 3.1.

### ~~16.2.10.3 Test purpose~~

The test verifies that the UE is capable of simultaneously receiving a network originated SM whilst sending a mobile originated SM.

### ~~16.2.10.4 Method of test~~

### ~~Initial Conditions~~

- ~~— System simulator:~~
  - ~~— 1 cell, default parameters.~~
- ~~— User Equipment:~~
  - ~~— the UE shall be in GMM-state "GMM-REGISTERED";~~
  - ~~— the SMS message storage shall be empty.~~

### ~~Related ICS/IXIT Statements~~

Support for Short message MO/PP and MT/PP.

Support for state PDP-ACTIVE of session management.

The value of timer TC1M.

Whether SMS messages are stored in the USIM and/or the ME.

Maximum length (characters) of a mobile originated short message.

Test procedure

- a) The SS is configured to receive a mobile originated SM. In clause 16.2.2 steps a) and b) are repeated and, using the end of the CP-DATA message from the UE as a trigger, the SS sends a SM to the UE. In this case a new transaction identifier shall be used in the CP messages of SMS mobile terminated.

Expected sequence

16.2.10.5 Test requirements

After step 12 UE shall correctly receive the SM and indicate that a message has arrived.

16.3 Short message service cell broadcast

16.3.1 Definition

16.3.2 Conformance requirements

In idle mode, the UE listens to the BCCH and to the paging sub-channel for the paging group it belongs to. The UE is required to receive and analyse the paging messages and immediate assignment messages sent on the paging subchannel corresponding to its paging subgroup.

## Reference

- 3GPP TS 23.041 clause 8.
- 3GPP TS 25.324 clause 11.

### 16.3.3 Test purpose

This test verifies that an UE supporting SMS-CB is able to receive SMS-CB messages.

### 16.3.4 Method of test

#### Initial conditions

- System Simulator:
  - 1 cell, default parameters;
  - the SS provides a BCCH/CCCH to support the UE in idle mode;
  - periodic location updating is disabled.
- User Equipment:
  - the UE shall be in the idle updated state.

#### Related ICS/IXIT Statements

Support for short message transmission-cell broadcast.

#### Test procedure

Three Cell Broadcast (CB) messages are sent by the SS on the CBCH with message codes 0,1,1 in serial number fields respectively.

The UE shall respond to the page.

#### Expected sequence

Since the SMS-CB messages are sent continuously, a table is not applicable in this test.

## 17 User Equipment features (MMI, VHE, MexE, SAT)

### 17.1 Test of autocalling restrictions

#### 17.1.1 General

It is essential that all autocalling apparatus is prevented from continuously dialling a given number, to avoid machines repeatedly disturbing PSTN-subscribers in error, or numerous repeat attempts to unobtainable numbers which cause waste of valuable network resources. Therefore autocalling restrictions are defined by TS 22.001.

The tests shall be performed using all of the call methods specified by the supplier in the IXIT statement TS 34.123-2. The supplier shall state any autocalling procedures implemented and how many times they can be repeated to a single number and the minimum re-attempt interval(s), i.e. the complete re-try schedule or algorithm with parameter values. The supplier shall further describe any automatic methods for making repeated calls to a single number. The supplier shall also state in the IXIT statement the number of B-party numbers that can be stored on the list of blacklisted numbers as described in TS 22.001, annex E.

For an external R-interface the supplier shall state in the IXIT statement the procedure for autocalling restrictions for that interface and the possible parameter settings for the number of times the LTE can make a re-attempt and the minimum accepted time between re-attempts accepted by the UE. The conditions for clearing the autocalling constraints shall be stated in the IXIT statement.

For external interfaces the LTE must be programmed so that it clearly attempts to violate the autocalling constraints.

For all the tests in this clause the call setup procedure uses the Generic Setup Procedure for Circuit Switched connection as specified in TS 34.108 clause 7. A Radio Access Bearer to set up shall be selected from one of the speech or CS data bearers within the capability of the UE as specified in the ICS statement. Unless otherwise indicated, this procedure shall only run to the transmission by the SS or UE of the SETUP message (CC).

## ~~17.1.2 Constraining the access to a single number (TS 22.001 category 3)~~

### ~~17.1.2.1 Definition~~

This test checks that when an auto-dialled call to a B-party number fails due to a category 3 cause, only one retry to that number is permitted.

During this test the SETUP messages shall contain the same B-party number.

No manual intervention shall be performed except to initiate and end the test.

### ~~17.1.2.2 Conformance requirement~~

A repeat call attempt may be made when a call attempt is unsuccessful for the reasons listed below (as defined in TS 24.008).

These reasons are classified in three major categories:

1. "Busy destination";
2. "Unobtainable destination – temporary";
3. "Unobtainable destination – permanent/long term".

NOTE: Cause values for each category are defined in TS 22.001, annex E.

The table below describes a repeat call restriction pattern to any B-number. This pattern defines a maximum number (n) of call repeat attempts; when this number n is reached, the associated B-number shall be blacklisted by the UE until a manual re-set at the UE is performed in respect of that B-number. When a repeat attempt to any one B-number fails, or is blacklisted, this does not prevent calls being made to other B-numbers.

For the categories 1 and 2 above, n shall be 10; for category 3, n shall be 1.

| Call attempt         | Minimum duration between call attempts |
|----------------------|----------------------------------------|
| Initial call attempt | -                                      |
| 1st repeat attempt   | 5 s                                    |
| 2nd repeat attempt   | 1 min                                  |
| 3rd repeat attempt   | 1 min                                  |
| 4th repeat attempt   | 1 min                                  |
| 5th repeat attempt   | 3 min                                  |
| —                    |                                        |
| —                    |                                        |
| nth repeat attempt   | 3 min                                  |

Reference:

3GPP TS 22.001 annex E.

### ~~17.1.2.3 Test purpose~~

To ensure the correct behaviour of the UE to TS 22.001 Category 3.

### ~~17.1.2.4 Method of test~~

Initial condition.

There shall be no numbers in the list of blacklisted numbers in the UE. The time set between the first re-attempt and the next re-attempt is set to the minimum value possible. The number of re-attempts is set to the lowest possible number, greater than 1, that is supported by the UE. The autocalling function is invoked for the B-party number to be used during the test.

**Related ICS/IXIT Statement(s)**ICS: ~~—— TBD.~~IXIT: ~~—— Description of auto-calling management:~~

- ~~—— selection of the auto-calling;~~
- ~~—— indication that the call failed and a re-try is attempted;~~
- ~~—— indication that a call finally failed.~~

**Test Procedure**

| Step | Direction |    | Message                                                     | Comments                                                                                           |

| 11   | UE        |    |                                                             | Clear the auto-calling constraint after a minimum of 2 minutes from step 9.                        |

**17.1.2.5 ~~—— Test requirements~~**

The time between step 4 and 7 must be minimum 5 s.

No further call attempt shall be made after step 9.

**17.1.3 ~~Constraining the access to a single number (TS 22.001 categories 1 and 2)~~****17.1.3.1 ~~—— Definition~~**

This test checks that when an auto-dialled call to a B-party number fails due to a category 2 cause, the time between of retries complies with the requirements, and the number of retries does not exceed that declared by the UE manufacturer, and is never more than 10.

During this test the SETUP messages shall contain the same B-party number.

No manual intervention shall be performed except to initiate and end the test.

**17.1.3.2 ~~Conformance requirement~~**

The UE must fulfil the requirements for category 1 and 2, see clause 17.1.2.2.

**Reference:**

3GPP TS 22.001 annex E.

### ~~17.1.3.3 Test purpose~~

~~To ensure the correct behaviour of the UE to TS 22.001 Categories 1 and 2.~~

### ~~17.1.3.4 Method of test~~

#### ~~Initial condition~~

~~There shall be no numbers in the list of blacklisted numbers in the UE. The re-try scheme is set to give the shortest possible intervals between re-tries. The number of re-attempts is set to the maximum possible number (N), that is supported by the UE. The autocalling function is invoked for the B-party number to be used during the test.~~

#### ~~Related ICS/EXIT Statement(s)~~

~~ICS: TBD~~

~~EXIT: Description of auto-calling management:~~

- ~~— selection of the auto-calling;~~
- ~~— indication that the call failed and a re-try is attempted;~~
- ~~— indication that a call finally failed.~~

#### ~~Test Procedure~~

~~A, UE originated, generic call setup is performed up to the SETUP message. The SS then releases the establishment with a cause value from category 1 or 2 (TS 22.001, annex E).~~

~~The UE is continuously making new generic call setup attempts invoked by the auto-calling function after each RRC CONNECTION RELEASE from the SS.~~

The UE shall not make more than maximum 10 re-attempts.                                                                                                                                                                                                                                                     |
| 12   | UE        |    |                                                                   | Clear the auto calling constraint by manual intervention after a minimum of 4 minutes from step 11. Following the final completion of step 11 the UE initiate a call prior to manual intervention.                                                                                                                                                                          |

### 17.1.3.5 Test requirements

1: At the first re-attempt the time between step 4 and 7 must be minimum 5 sec. 2: At the 2<sup>nd</sup>, 3<sup>rd</sup> and 4<sup>th</sup> re-attempt the time between step 4 and 7 must be minimum 1 min. 3: At the 5<sup>th</sup> to 10<sup>th</sup> re-attempt the time between step 4 and 7 must be minimum 3 min.

The UE shall not make more than maximum 10 re-attempts.

## 17.1.4 Behaviour of the UE when its list of blacklisted numbers is full

### 17.1.4.1 Definition and applicability

This tests that the UE does not allow autocalling when its list of blacklisted numbers is full.

The number of B-party numbers that can be stored in the list of blacklisted numbers, as stated in the I\_XIT statement, is M.

This test shall only apply to UE that are capable of autocalling more than M B-party numbers.

### 17.1.4.2 Conformance requirement

The number of B numbers that can be held in the blacklist is at the manufacturers discretion but there shall be at least 8. However, when the blacklist is full the UE shall prohibit further automatic call attempts to any one number until the blacklist is manually cleared at the UE in respect of one or more B numbers.

## Reference

TS 22.001, Annex E.

### 17.1.4.3 Test purpose

To ensure the correct behaviour of the UE when its list of blacklisted numbers is full.

### 17.1.4.4 Method of test

#### Initial condition

The list of blacklisted numbers, in the UE, shall be full. This may be achieved as described in the procedure in clause 17.1.2, applied to M-B-party numbers.

#### Related ICS/IXIT Statement(s)

PICS: TBD.

PIXIT: Description of auto-calling management:

- selection of the auto-calling;
- indication that the call failed and a re-try is attempted;
- indication that a call finally failed.

#### Test Procedure

The autocalling function is invoked for a B-party number that is not in the list of blacklisted numbers.

Clear the autocalling constraint by manual intervention after a minimum of 10 s.

### 17.1.4.5 Test requirements

The UE must not initiate a call.

---

## 18 Multi-Layer Functional Tests

The present clause specifies the multi-layer functional test cases that are not covered by the interoperability radio bearer test cases in clause 14 or by any other test cases in the present document.

### 18.1 Radio Bearer Tests for 1.28 Mcps TDD option

#### 18.1.1 General information for radio bearer tests (1.28 Mcps TDD)

The purpose of these radio bearer test cases is to test properly the Reference Radio Bearer configurations included in TS34.108 [9], clause 6.11 for 1.28 Mcps TDD option.

The applicability of radio bearer tests is dependent on the UE uplink and downlink radio access capabilities and UE support tele- and bearer-services. See TS 34.123-2, annex B for applicability of the specific test cases.

##### 18.1.1.1 Generic radio bearer test procedure

#### Initial conditions

UE in idle mode

### Test procedure

- a) ~~The SS setup the reference radio bearer configuration as specified in TS 34.108, clause 6.11 for the actual radio bearer test.~~
- b) ~~The SS limits the UE allowed uplink transport format combinations according to the "Restricted UL TFCIs", as specified for the sub-test of the actual radio bearer test, using the RRC transport format combination control procedure.~~
- c) ~~The SS closes the test loop using UE test loop mode 1 and setting the UL RLC SDU size parameter, for all radio bearers under test, according to the "UL RLC SDU size" value as specified for the sub-test of the actual radio bearer test.~~
- d) ~~The SS transmits, for all radio bearers under test, an RLC SDU having the size equal to the "Test data size" as specified for the sub-test of the actual radio bearer test. See note 1.~~
- e) ~~The SS checks that, for all radio bearers under test, the content of the received RLC SDU has the correct content and is received having the correct transport format. See TS 34.109 [10] clause 5.3.2.6.2 for details regarding the UE loopback of RLC SDUs.~~
- f) ~~The SS opens the UE test loop.~~
- g) ~~Steps b) to f) are repeated for all sub-tests~~
- h) ~~The SS may optionally release the radio bearer.~~
- i) ~~The SS may optionally deactivate the radio bearer test mode.~~

~~NOTE: For the case when the reference radio bearer configuration under test uses RLC transparent mode in downlink then the radio bearer test case shall use a DL RLC SDU size (defined by the "Test data size" parameter) equal to the DL RLC PDU size. This is due to that the UE test loop function has no ability to perform reassembly of segmented DL RLC SDUs while the RLC is operated in transparent mode. See [7] TS 25.322 for details regarding UE operation in RLC transparent mode.~~

NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See 14.1.1 for test procedure.

#### 18.1.2.4.4 Test requirements

See 18.1.1.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
2. At step 15 the UE transmitted transport format shall be
  - for sub-test 1: RB5/TF1 (1x39);
  - for sub-test 2: RB5/TF2 (1x81); RB6/TF1 (1x103); and RB7/TF1 (1x60).
3. At step 15 the UE shall return
  - for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6 or RB7.
  - for sub-test 2: an RLC SDU on each of RB5, RB6 and RB7 having the same content as sent by SS

NOTE: See TS 34.109 [10] clause 5.3.2.6.2 for details regarding loopback of RLC SDUs.

See clause 18.1.1.1 for test procedure.

#### 18.1.2.5.4 Test requirements

See 18.1.1.1 for definition of step 10 and step 15.

- At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.
- At step 15 the UE transmitted transport format shall be
  - for sub-test 1: RB5/TF1 (1x39);
  - for sub-test 2: RB5/TF2 (1x65); RB6/TF1 (1x99); and RB7/TF1 (1x40).

3. At step 15 the UE shall return

- for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6 or RB7.
- for sub-test 2: an RLC SDU on each of RB5, RB6 and RB7 having the same content as sent by SS.

#### 18.1.2.8.4 Test requirements

See clause 18.1.1.1 for definition of step 10 and step 15.

1. At step 10 the UE shall send RADIO BEARER SETUP COMPLETE.

2. At step 15 the UE transmitted transport format shall be

— for sub-test 1: RB5/TF1 (1x39);

— for sub-test 2: RB5/TF2 (1x58) and RB6/TF1 (1x76);

3. At step 15 the UE shall return

— for sub-test 1: an RLC SDU on RB5 having the same content as sent by SS; and no data shall be received on RB6;

— for sub-test 2: an RLC SDU on each of RB5 and RB6 having the same content as sent by SS

## Annex A (normative): (void)Default RRC Message Contents

### A.1 Default RRC Message Contents (FDD)

This clause contains the default values of RRC messages, other than those specified in TS 34.108 clauses 6 and 9. Unless indicated otherwise in specific test cases, they shall be transmitted by the system simulator in RRC messages, and which are required to be received from the UE under test.

The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements which are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).

In this clause, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.

Default SYSTEM INFORMATION:

NOTE:—SYSTEM INFORMATION BLOCK TYPE 1 (except for PLMN type "GSM-MAP"), SYSTEM INFORMATION BLOCK TYPE 8, SYSTEM INFORMATION BLOCK TYPE 9, SYSTEM INFORMATION BLOCK TYPE 10, SYSTEM INFORMATION BLOCK TYPE 14, SYSTEM INFORMATION BLOCK TYPE 15 and SYSTEM INFORMATION BLOCK TYPE 16 messages are not used.

Contents of ACTIVE SET UPDATE message: AM

| Information Element                   | Value/remark                                                                                                                                                                                                                             |
|---------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Message Type                          | Arbitrarily selects one integer between 0 to 3                                                                                                                                                                                           |
| RRC transaction identifier            | The presence of this IE is dependent on IXIT statements in TS 34.123-2. If integrity protection is indicated to be active, this IE is present with the values of the sub-IEs as stated below. Else, this IE and the sub-IEs are omitted. |
| Integrity check info                  | SS calculates the value of MAC-I for this message and writes to this IE.                                                                                                                                                                 |
| ——— message authentication code       | SS provides the value of this IE, from its internal counter.                                                                                                                                                                             |
| ——— RRC message sequence number       | Not Present                                                                                                                                                                                                                              |

## A.2 Default RRC Message Contents (3.84 Mcps TDD)

[FFS]

## ~~A.3 Default RRC Message Contents (1.28 Mcps TDD)~~

~~This clause contains the default values of RRC messages, other than those specified in TS 34.108 clauses 6 and 9. Unless indicated otherwise in specific test cases, they shall be transmitted by the system simulator in RRC messages, and which are required to be received from the UE under test.~~

~~The necessary L3 messages are listed in alphabetic order, with the exception of the SYSTEM INFORMATION messages, where it is the information elements which are listed in alphabetic order (this is because some information elements occur in several SYSTEM INFORMATION types).~~

~~In this clause, decimal values are normally used. However, sometimes a hexadecimal value, indicated by an "H", or a binary value, indicated by a "B" is used.~~

~~Default SYSTEM INFORMATION:~~

~~NOTE 1: SYSTEM INFORMATION BLOCK TYPE 1 (except for PLMN type "GSM-MAP"), SYSTEM INFORMATION BLOCK TYPE 8, SYSTEM INFORMATION BLOCK TYPE 9, SYSTEM INFORMATION BLOCK TYPE 10, SYSTEM INFORMATION BLOCK TYPE 14, SYSTEM INFORMATION BLOCK TYPE 15 and SYSTEM INFORMATION BLOCK TYPE 16 messages are not used.~~

| COUNT-C activation time                            | The presence of this IE depends on the following 2 factors: (a) There exists RB(s) mapped to RLC-TM, (b) UE is transiting to CELL_DCH state after the reconfiguration procedure. Else, this IE is absent.                                          |

| Integrity check info                                           | The presence of this IE is dependent on I-XIT statements in TS 34.123-2. If integrity protection is indicated to be active, this IE is present with the values of the sub-IEs as stated below. Else, this IE and the sub-IEs are omitted. SS calculates the value of MAC-I for this message and writes to this IE. |
| —→ Message authentication code                                 |                                                                                                                                                                                                                                                                                                                    |
| —→ RRC Message sequence number                                 | SS provides the value of this IE, from its internal counter.                                                                                                                                                                                                                                                       |

## Annex B (informative): (void)Core specification versions to which test cases relate

The table B.1 lists for each clause of the present document the related core specification version on which the test cases were based. Where the test cases have been partially updated towards the next released version, but this work has not completed yet, each change request considered is listed in the final column.

**Table B.1**

| Clause number | Clause heading                                               | Related core specifications | Current R99 version supported | Current Rel-4 version supported | Current change requests taken into account |
|---------------|--------------------------------------------------------------|-----------------------------|-------------------------------|---------------------------------|--------------------------------------------|

**3rd Generation Partnership Project;  
Technical Specification Group Terminals;  
User Equipment (UE) conformance specification;  
Part 1: Protocol conformance specification  
(Release 4)**

The present document has been developed within the 3<sup>rd</sup> Generation Partnership Project (3GPP™) and may be further elaborated for the purposes of 3GPP.

The present document has not been subject to any approval process by the 3GPP Organisational Partners and shall not be implemented. This Specification is provided for future development work within 3GPP only. The Organisational Partners accept no liability for any use of this Specification. Specifications and reports for implementation of the 3GPP™ system should be obtained via the 3GPP Organisational Partners' Publications Offices.

|-----------------------------------------------------------------------------------------------|----|
| Foreword.....                                                                                 | 22 |
| Introduction .....                                                                            | 22 |
| 1 Scope .....                                                                                 | 23 |
| 2 References .....                                                                            | 23 |
| 3 Definitions and abbreviations.....                                                          | 25 |
| 3.1 Definitions .....                                                                         | 25 |
| 3.2 Abbreviations .....                                                                       | 25 |
| 4 Overview .....                                                                              | 25 |
| 4.1 Test Methodology.....                                                                     | 25 |
| 4.1.1 Testing of optional functions and procedures .....                                      | 25 |
| 4.1.2 Test interfaces and facilities.....                                                     | 25 |
| 4.2 Implicit Testing .....                                                                    | 25 |
| 5 Reference Conditions .....                                                                  | 25 |
| 5.1 Generic setup procedures .....                                                            | 26 |
| 6 Idle mode operations .....                                                                  | 26 |
| 6.1 In a pure 3GPP environment .....                                                          | 29 |
| 6.1.1 PLMN selection and reselection .....                                                    | 29 |
| 6.1.1.1 PLMN selection of RPLMN, HPLMN, UPLMN and OPLMN; Manual mode .....                    | 29 |
| 6.1.1.2 PLMN selection of "Other PLMN / access technology combinations"; Manual mode.....     | 32 |
| 6.1.1.3 PLMN selection; independence of RF level and preferred PLMN; Manual mode .....        | 35 |
| 6.1.1.4 PLMN selection of RPLMN, HPLMN, UPLMN and OPLMN; Automatic mode .....                 | 38 |
| 6.1.1.5 PLMN selection of "Other PLMN / access technology combinations"; Automatic mode ..... | 40 |
| 6.1.1.6 UE will transmit only if PLMN available .....                                         | 43 |
| 6.1.1.7 Cell reselection of ePLMN in manual mode .....                                        | 44 |
| 6.1.2 Cell selection and reselection.....                                                     | 45 |
| 6.1.2.1 Cell reselection.....                                                                 | 45 |
| 6.1.2.2 Cell reselection using Qhyst, Qoffset and Treselection .....                          | 47 |
| 6.1.2.3 HCS Cell reselection .....                                                            | 50 |
| 6.1.2.4 HCS Cell reselection using reselection timing parameters for the H criterion.....     | 52 |
| 6.1.2.5 HCS Cell reselection using reselection timing parameters for the R criterion .....    | 55 |
| 6.1.2.6 Emergency calls .....                                                                 | 57 |
| 6.1.2.7 Emergency calls; Intra-frequency cell "Not allowed" .....                             | 59 |
| 6.1.2.8 Cell reselection: Equivalent PLMN .....                                               | 61 |
| 6.2 Multi-mode environment (2G/3G case).....                                                  | 63 |
| 6.2.1 PLMN and RAT selection and reselection.....                                             | 63 |
| 6.2.1.1 Selection of the correct PLMN and associated RAT.....                                 | 63 |
| 6.2.1.2 Selection of RAT for HPLMN; Manual mode .....                                         | 65 |
| 6.2.1.3 Selection of RAT for UPLMN; Manual mode .....                                         | 67 |
| 6.2.1.4 Selection of RAT for OPLMN; Manual mode .....                                         | 69 |
| 6.2.1.5 Selection of "Other PLMN / access technology combinations"; Manual mode .....         | 71 |
| 6.2.1.6 Selection of RAT for HPLMN; Automatic mode .....                                      | 74 |
| 6.2.1.7 Selection of RAT for UPLMN; Automatic mode .....                                      | 77 |
| 6.2.1.8 Selection of RAT for OPLMN; Automatic mode .....                                      | 78 |
| 6.2.1.9 Selection of "Other PLMN / access technology combinations"; Automatic mode .....      | 80 |
| 6.2.2 Cell selection and reselection.....                                                     | 82 |
| 6.2.2.1 Cell reselection if cell becomes barred or $S < 0$ ; UTRAN to GSM .....               | 82 |
| 6.2.2.2 Cell reselection if cell becomes barred or $C1 < 0$ ; GSM to UTRAN .....              | 85 |
| 6.2.2.3 Cell reselection timings; GSM to UTRAN .....                                          | 87 |
| 7 Layer 2.....                                                                                | 90 |
| 7.1 MAC.....                                                                                  | 90 |
| 7.1.1 Mapping between logical channels and transport channels .....                           | 90 |

|           |                                                                                               |     |
|-----------|-----------------------------------------------------------------------------------------------|-----|
| 7.1.1.1   | CCCH mapped to RACH/FACH / Invalid TCTF .....                                                 | 90  |
| 7.1.1.2   | DTCH or DCCH mapped to RACH/FACH / Invalid TCTF .....                                         | 94  |
| 7.1.1.3   | DTCH or DCCH mapped to RACH/FACH / Invalid C/T Field .....                                    | 97  |
| 7.1.1.4   | DTCH or DCCH mapped to RACH/FACH / Invalid UE ID Type Field .....                             | 99  |
| 7.1.1.5   | DTCH or DCCH mapped to RACH/FACH / Incorrect UE ID .....                                      | 102 |
| 7.1.1.6   | DTCH or DCCH mapped to DSCH or USCH .....                                                     | 104 |
| 7.1.1.7   | DTCH or DCCH mapped to CPCH .....                                                             | 106 |
| 7.1.1.8   | DTCH or DCCH mapped to DCH / Invalid C/T Field.....                                           | 109 |
| 7.1.2     | RACH/FACH procedures .....                                                                    | 113 |
| 7.1.2.1   | Selection and control of Power Level .....                                                    | 113 |
| 7.1.2.1.1 | Selection and control of Power Level (FDD) .....                                              | 113 |
| 7.1.2.1.2 | Selection and control of Power Level (3,84 Mcps TDD option) .....                             | 116 |
| 7.1.2.1.3 | Selection and control of Power Level (1,28 Mcps TDD option) .....                             | 116 |
| 7.1.2.2   | Correct application of Dynamic Persistence .....                                              | 117 |
| 7.1.2.2.1 | Correct application of Dynamic Persistence (FDD) .....                                        | 117 |
| 7.1.2.2.2 | Correct application of Dynamic Persistence (3.84 Mcps TDD option).....                        | 119 |
| 7.1.2.2.3 | Correct application of Dynamic Persistence (1.28 Mcps TDD option).....                        | 119 |
| 7.1.2.3   | Correct Selection of RACH parameters .....                                                    | 120 |
| 7.1.2.3.1 | Correct Selection of RACH parameters (FDD) .....                                              | 120 |
| 7.1.2.3.2 | Correct Selection of RACH parameters (3.84 Mcps TDD option).....                              | 124 |
| 7.1.2.3.3 | Correct Selection of RACH parameters (1.28 Mcps TDD option).....                              | 124 |
| 7.1.2.4   | Correct Detection and Response to FPACH (1.28 Mcps TDD option).....                           | 125 |

| 8.2.1.16 | Radio Bearer Establishment for transition from CELL_FACH to CELL_FACH: Success .....                                                                         | 423 |
| 8.2.1.17 | Radio Bearer Establishment for transition from CELL_DCH to CELL_DCH: success (Subsequently received) .....                                                   | 424 |
| 8.2.1.18 | Radio Bearer Establishment for transition from CELL_FACH to CELL_DCH: Success (Subsequently received) .....                                                  | 426 |
| 8.2.1.19 | Radio Bearer Establishment from CELL_DCH to CELL_PCH: Success .....                                                                                          | 428 |
| 8.2.1.20 | Radio Bearer Establishment from CELL_DCH to URA_PCH: Success .....                                                                                           | 429 |
| 8.2.1.21 | RRC connection establishment in CELL_DCH on another frequency .....                                                                                          | 431 |
| 8.2.2    | Radio Bearer Reconfiguration .....                                                                                                                           | 433 |
| 8.2.2.1  | Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success .....                                                                                        | 433 |
| 8.2.2.2  | Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Failure (Unsupported configuration) .....                                                            | 434 |
| 8.2.2.3  | Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Failure (Physical channel failure and reversion to old configuration) .....                          | 436 |
| 8.2.2.4  | Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Failure (Physical channel failure and reversion failure) .....                                       | 437 |
| 8.2.2.5  | Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Failure (Incompatible simultaneous reconfiguration) .....                                            | 439 |
| 8.2.2.6  | Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Failure (Invalid message reception and Invalid configuration) .....                                  | 441 |
| 8.2.2.7  | Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (Continue and stop) .....                                                                    | 443 |
| 8.2.2.8  | Radio Bearer Reconfiguration from CELL_DCH to CELL_FACH: Success .....                                                                                       | 445 |
| 8.2.2.9  | Radio Bearer Reconfiguration from CELL_DCH to CELL_FACH: Success (Cell re-selection) .....                                                                   | 446 |
| 8.2.2.10 | Radio Bearer Reconfiguration: from CELL_FACH to CELL_DCH: Success .....                                                                                      | 448 |
| 8.2.2.11 | Radio Bearer Reconfiguration from CELL_FACH to CELL_DCH: Failure (Unsupported configuration) .....                                                           | 449 |
| 8.2.2.12 | Radio Bearer Reconfiguration from CELL_FACH to CELL_DCH: Failure (Physical channel failure and successful reversion to old configuration) .....              | 450 |
| 8.2.2.13 | Radio Bearer Reconfiguration from CELL_FACH to CELL_DCH: Failure (Physical channel failure and reversion failure) .....                                      | 451 |
| 8.2.2.14 | Radio Bearer Reconfigure from CELL_FACH to CELL_DCH: Failure (Incompatible simultaneous reconfiguration) .....                                               | 453 |
| 8.2.2.15 | Radio Bearer Reconfiguration from CELL_FACH to CELL_DCH: Failure (Invalid message reception and Invalid configuration) .....                                 | 455 |
| 8.2.2.16 | Void .....                                                                                                                                                   | 457 |
| 8.2.2.17 | Radio Bearer Reconfiguration from CELL_FACH to CELL_FACH: Success .....                                                                                      | 457 |
| 8.2.2.18 | Radio Bearer Reconfiguration from CELL_FACH to CELL_FACH: Success (Cell re-selection) .....                                                                  | 459 |
| 8.2.2.19 | Radio Bearer Reconfiguration from CELL_DCH to CELL_DCH: Success (Subsequently received) .....                                                                | 461 |
| 8.2.2.20 | Radio Bearer Reconfigure from CELL_FACH to CELL_DCH: Success (Subsequently received) .....                                                                   | 463 |
| 8.2.2.21 | Radio Bearer Reconfiguration from CELL_DCH to CELL_PCH: Success .....                                                                                        | 465 |
| 8.2.2.22 | Radio Bearer Reconfiguration from CELL_DCH to URA_PCH: Success .....                                                                                         | 467 |
| 8.2.2.23 | Radio Bearer Reconfiguration from CELL_FACH to CELL_PCH: Success .....                                                                                       | 469 |
| 8.2.2.24 | Radio Bearer Reconfiguration from CELL_FACH to URA_PCH: Success .....                                                                                        | 470 |
| 8.2.2.25 | Radio Bearer Reconfiguration for transition from CELL_FACH to CELL_DCH including modification of previously signalled CELL_DCH configuration .....           | 472 |
| 8.2.3    | Radio Bearer Release .....                                                                                                                                   | 475 |

|          |                                                                                                                                                       |     |
|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 8.2.3.1  | Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success.....                                                                           | 475 |
| 8.2.3.2  | Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Failure (Unsupported configuration).....                                               | 476 |
| 8.2.3.3  | Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Failure (Physical channel failure and reversion to old configuration).....             | 477 |
| 8.2.3.4  | Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Failure (Physical channel failure and reversion failure).....                          | 478 |
| 8.2.3.5  | Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Failure (Incompatible simultaneous reconfiguration).....                               | 481 |
| 8.2.3.6  | Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Failure (Invalid message reception and Invalid configuration).....                     | 483 |
| 8.2.3.7  | Radio Bearer Release for transition from CELL_DCH to CELL_FACH: Success .....                                                                         | 485 |
| 8.2.3.8  | Radio Bearer Release for transition from CELL_DCH to CELL_FACH: Success (Cell re-selection).....                                                      | 486 |
| 8.2.3.9  | Radio Bearer Release for transition from CELL_FACH to CELL_DCH: Success .....                                                                         | 488 |
| 8.2.3.10 | Radio Bearer Release for transition from CELL_FACH to CELL_DCH: Failure (Unsupported configuration).....                                              | 489 |
| 8.2.3.11 | Radio Bearer Release for transition from CELL_FACH to CELL_DCH: Failure (Physical channel failure and successful reversion to old configuration)..... | 490 |
| 8.2.3.12 | Radio Bearer Release for transition from CELL_FACH to CELL_DCH: Failure (Physical channel failure and reversion failure).....                         | 491 |
| 8.2.3.13 | Radio Bearer Release for transition from CELL_FACH to CELL_DCH: Failure (Incompatible simultaneous reconfiguration).....                              | 493 |
| 8.2.3.14 | Radio Bearer Release for transition from CELL_FACH to CELL_DCH: Failure (Invalid message reception and Invalid configuration).....                    | 495 |
| 8.2.3.15 | Radio Bearer Release for transition from CELL_FACH to CELL_FACH: Success .....                                                                        | 497 |
| 8.2.3.16 | Radio Bearer Release for transition from CELL_DCH to CELL_DCH: Success (Subsequently received).....                                                   | 498 |
| 8.2.3.17 | Radio Bearer Release for transition from CELL_FACH to CELL_DCH: Success (Subsequently received).....                                                  | 500 |
| 8.2.3.18 | Radio Bearer Release from CELL_DCH to CELL_PCH: Success.....                                                                                          | 502 |
| 8.2.3.19 | Radio Bearer Release from CELL_DCH to URA_PCH: Success .....                                                                                          | 504 |
| 8.2.4    | Transport channel reconfiguration .....                                                                                                               | 506 |
| 8.2.4.1  | Transport channel reconfiguration from CELL_DCH to CELL_DCH: Success with no transport channel type switching.....                                    | 506 |
| 8.2.4.1a | Transport channel reconfiguration (Transmission Rate Modification with Timing Maintained) from CELL_DCH to CELL_DCH of the same cell: Success.....    | 507 |
| 8.2.4.2  | Transport channel reconfiguration from CELL_DCH to CELL_DCH: Failure (Unsupported configuration).....                                                 | 509 |
| 8.2.4.3  | Transport channel reconfiguration from CELL_DCH to CELL_DCH: Failure (Physical channel failure and reversion to old configuration).....               | 510 |
| 8.2.4.4  | Transport channel reconfiguration from CELL_DCH to CELL_DCH: Failure (Physical channel failure and reversion failure).....                            | 512 |
| 8.2.4.5  | Transport Channel Reconfiguration from CELL_DCH to CELL_DCH: Failure (Incompatible simultaneous reconfiguration).....                                 | 514 |
| 8.2.4.6  | Transport channel reconfiguration from CELL_DCH to CELL_DCH: Failure (Invalid message reception and Invalid configuration).....                       | 516 |
| 8.2.4.7  | Transport channel reconfiguration from CELL_DCH to CELL_FACH: Success .....                                                                           | 518 |
| 8.2.4.8  | Void.....                                                                                                                                             | 520 |
| 8.2.4.9  | Transport channel reconfiguration from CELL_DCH to CELL_FACH: Success (Cell re-selection).....                                                        | 520 |
| 8.2.4.10 | Transport channel reconfiguration from CELL_FACH to CELL_DCH: Success .....                                                                           | 521 |
| 8.2.4.11 | Transport channel reconfiguration from CELL_FACH to CELL_DCH: Failure (Unsupported configuration).....                                                | 522 |
| 8.2.4.12 | Transport channel reconfiguration from CELL_FACH to CELL_DCH: Failure (Physical channel failure and successful reversion to old channel).....         | 524 |
| 8.2.4.13 | Transport channel reconfiguration from CELL_FACH to CELL_DCH: Failure (Physical channel failure and reversion failure).....                           | 525 |
| 8.2.4.14 | Transport Channel Reconfiguration from CELL_FACH to CELL_DCH: Failure (Incompatible simultaneous reconfiguration).....                                | 527 |

|          |                                                                                                                                                                     |     |
|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|

| 10.1.3.4.4 | Incoming call / U7 call received / RELEASE received .....                                                  | 1153 |
| 10.1.3.4.5 | Incoming call / U7 call received / lower layer failure .....                                               | 1155 |
| 10.1.3.4.6 | Incoming call / U7 call received / unknown message received .....                                          | 1156 |
| 10.1.3.4.7 | Incoming call / U7 call received / DTCH assignment .....                                                   | 1157 |
| 10.1.3.4.8 | Incoming call / U7 call received / RELEASE COMPLETE received .....                                         | 1158 |
| 10.1.3.5   | Incoming call / U8 connect request .....                                                                   | 1160 |
| 10.1.3.5.1 | Incoming call / U8 connect request / CONNECT acknowledged .....                                            | 1160 |
| 10.1.3.5.2 | Incoming call / U8 connect request / timer T313 time-out .....                                             | 1161 |
| 10.1.3.5.3 | Incoming call / U8 connect request / termination requested by the user .....                               | 1162 |
| 10.1.3.5.4 | Incoming call / U8 connect request / DISCONNECT received with in-band information .....                    | 1163 |
| 10.1.3.5.5 | Incoming call / U8 connect request / DISCONNECT received without in-band information .....                 | 1164 |
| 10.1.3.5.6 | Incoming call / U8 connect request / RELEASE received .....                                                | 1165 |
| 10.1.3.5.7 | Incoming call / U8 connect request / lower layer failure .....                                             | 1167 |
| 10.1.3.5.8 | Incoming call / U8 connect request / DTCH assignment .....                                                 | 1168 |
| 10.1.3.5.9 | Incoming call / U8 connect request / unknown message received .....                                        | 1169 |
| 10.1.4     | In call functions .....                                                                                    | 1170 |
| 10.1.4.1   | In-call functions / DTMF information transfer .....                                                        | 1170 |
| 10.1.4.1.1 | In-call functions / DTMF information transfer / basic procedures .....                                     | 1170 |
| 10.1.4.2   | In-call functions / user notification .....                                                                | 1172 |
| 10.1.4.2.1 | In-call functions / User notification / UE terminated .....                                                | 1172 |
| 10.1.4.3   | In-call functions / channel changes .....                                                                  | 1173 |
| 10.1.4.3.1 | In-call functions / channel changes / a successful channel change in active state/ Hard<br>handover .....  | 1173 |
| 10.1.4.3.2 | In-call functions / channel changes / an unsuccessful channel change in active mode/Hard<br>handover ..... | 1175 |
| 10.1.4.4   | In-call functions / UE terminated in-call modification .....                                               | 1176 |
| 10.1.4.4.1 | In-call functions / UE terminated in-call modification / modify when new mode is not<br>supported .....    | 1176 |
| 10.1.4.5   | In-call functions / UE originated in-call modification .....                                               | 1176 |
| 10.1.4.5.1 | In-call functions / UE originated in-call modification / a successful case of modifying .....              | 1176 |

|            |                                                                                                                                     |      |
|------------|-------------------------------------------------------------------------------------------------------------------------------------|------|
| 10.1.4.5.2 | In-call functions / UE originated in-call modification / modify rejected .....                                                      | 1176 |
| 10.1.4.5.3 | In-call functions / UE originated in-call modification / an abnormal case of acceptance .....                                       | 1176 |
| 10.1.4.5.4 | In-call functions / UE originated in-call modification / an abnormal case of rejection .....                                        | 1176 |
| 10.1.4.5.5 | In-call functions / UE originated in-call modification / time-out of timer T323 .....                                               | 1176 |
| 10.1.4.5.6 | In-call functions / UE originated in-call modification / a successful channel change in state<br>mobile originating modify .....    | 1176 |
| 10.1.4.5.7 | In-call functions / UE originated in-call modification / an unsuccessful channel change in<br>state mobile originating modify ..... | 1176 |
| 10.1.4.5.8 | In-call functions / UE originated in-call modification / unknown message received .....                                             | 1176 |
| 10.1.4.5.9 | In-call functions / UE originated in-call modification / a release complete received .....                                          | 1176 |
| 10.2       | Call Re-establishment .....                                                                                                         | 1177 |
| 10.2.1     | Call Re-establishment/call present, re-establishment allowed .....                                                                  | 1177 |
| 10.3       | User to user signalling .....                                                                                                       | 1178 |
| 11         | Session Management Procedures .....                                                                                                 | 1181 |
| 11.1       | PDP context activation .....                                                                                                        | 1181 |
| 11.1.1     | Initiated by the UE .....                                                                                                           | 1181 |
| 11.1.1.1   | Attach initiated by context activation/QoS Offered by Network is the QoS Requested .....                                            | 1181 |
| 11.1.1.2   | QoS offered by the network is a lower QoS .....                                                                                     | 1183 |
| 11.1.1.2.1 | QoS accepted by UE .....                                                                                                            | 1183 |
| 11.1.1.2.2 | QoS rejected by UE .....                                                                                                            | 1184 |
| 11.1.2     | PDP context activation requested by the network, successful and unsuccessful .....                                                  | 1185 |

## CHANGE REQUEST

⌘ **TS 34.123-1 CR 256** ⌘ rev **-** ⌘ Current version: **4.2.0** ⌘

For **HELP** on using this form, see bottom of this page or look at the pop-up text over the ⌘ symbols.

**Proposed change affects:** ⌘ (U)SIM ☐ ME/UE ☒ Radio Access Network ☐ Core Network ☐

**Title:** ⌘ Creation of 34.123-1 REL-5: Merging of REL-5, REL-4 and R99 protocol test specifications

**Source:** ⌘ Vodafone D2 GmbH

**Work item code:** ⌘ TEI

**Date:** ⌘ 23.05.2002

**Category:** ⌘ **F**

Use one of the following categories:

**F** (correction)

**A** (corresponds to a correction in an earlier release)

**B** (addition of feature),

**C** (functional modification of feature)

**D** (editorial modification)

Detailed explanations of the above categories can be found in 3GPP [TR 21.900](#).

**Release:** ⌘ Rel-5

Use one of the following releases:

**2** (GSM Phase 2)

**R96** (Release 1996)

**R97** (Release 1997)

**R98** (Release 1998)

**R99** (Release 1999)

**REL-4** (Release 4)

**REL-5** (Release 5)

**Reason for change:** ⌘ New Test Cases applicable for REL-5 added. Therefore a REL-5 Test Specification is required. Since the Protocol Test Specifications of 3GPP TSG-T WG1 are merged, only the latest version of the Protocol Test Specification will be maintained.

Annex B is deleted since it is not necessary to maintain this.

**Summary of change:** ⌘ Addition of references to Release 5, Deletion of Annex B

**Consequences if not approved:** ⌘ High effort for the maintenance of the specification, what will slow down the progress of the group.

**Clauses affected:** ⌘ Front Page, Introduction, s1, s2, Annex B

**Other specs affected:** ⌘ ☐ Other core specifications  
⌘ ☒ Test specifications  
⌘ ☐ O&M Specifications

3GPP TS 34.123-2

*Technical Specification*

## **3rd Generation Partnership Project; Technical Specification Group Terminals; User Equipment (UE) conformance specification; Part 1: Protocol conformance specification (Release ~~4~~5)**

---

The present document has been developed within the 3<sup>rd</sup> Generation Partnership Project (3GPP<sup>TM</sup>) and may be further elaborated for the purposes of 3GPP.

The present document has not been subject to any approval process by the 3GPP Organisational Partners and shall not be implemented.  
This Specification is provided for future development work within 3GPP only. The Organisational Partners accept no liability for any use of this Specification.  
Specifications and reports for implementation of the 3GPP<sup>TM</sup> system should be obtained via the 3GPP Organisational Partners' Publications Offices.

## Foreword

This Technical Specification (TS) has been produced by the 3<sup>rd</sup> Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

- x the first digit:
  - 1 presented to TSG for information;
  - 2 presented to TSG for approval;
  - 3 or greater indicates TSG approved document under change control.
- y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.
- z the third digit is incremented when editorial only changes have been incorporated in the document.

---

## Introduction

The present document is the first part of a multi-part conformance specification valid for 3GPP Release 1999, and 3GPP Release 4 and 3GPP Release 5. 3GPP TS 34.123-2 [11] contains a pro-forma for the Implementation Conformance Statement (ICS) and an applicability table, indicating the release from which each test case is applicable. 3GPP TS 34.123-3 [12] contains a detailed and executable description of the test cases written in a standard testing language, TTCN, as defined in ISO/IEC 9646.

For at least a minimum set of services, the prose descriptions of test cases will have a matching detailed test case implemented in TTCN [12].

For Release 1999, the minimum set of services are defined as:

- voice calls;
- emergency calls;
- SMS (both Point-to-point and Cell broadcast);
- Circuit Switched data at up to 64 k bits/second;
- fax;

including the underlying layers to support these services.

Release 1999 will also include the areas:

- auto-calling restrictions.

The present document may contain descriptions of tests for additional services, but these tests may not have matching TTCN test cases.

The present document will not contain any tests on the USIM, or the interface between the UE and the USIM. These tests are documented elsewhere.

---

# 1 Scope

The present document specifies the protocol conformance testing for the 3<sup>rd</sup> Generation User Equipment (UE).

This is the first part of a multi-part test specification. The following information can be found in this part:

- the overall test structure;
- the test configurations;
- the conformance requirement and reference to the core specifications;
- the test purposes; and
- a brief description of the test procedure, the specific test requirements and short message exchange table.

The following information relevant to testing can be found in accompanying specifications:

- the default setting of the test parameters [9];
- the applicability of each test case [11].

A detailed description of the expected sequence of messages can be found in the 3<sup>rd</sup> part of this test specification.

The Implementation Conformance Statement (ICS) pro-forma can be found in the 2<sup>nd</sup> part of the present document.

The present document is valid for UE implemented according to 3GPP Release 1999, ~~or~~ 3GPP Release 4 or 3GPP Release 5.

---

# 2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document in the same Release as the present document.
  - For a Release 1999 UE, references to 3GPP documents are to version 3.x.y, when available.
  - For a Release 4 UE, references to 3GPP documents are to version 4.x.y, when available.
  - For a Release 5 UE, references to 3GPP documents are to version 5.x.y, when available.

## Annex B (informative): Core specification versions to which test cases relate

The table B.1 lists for each clause of the present document the related core specification version on which the test cases were based. Where the test cases have been partially updated towards the next released version, but this work has not completed yet, each change request considered is listed in the final column.

Table B.1

| Clause number | Clause heading                                               | Related core specifications | Current R99 version supported | Current Rel-4 version supported | Current change requests taken into account |
|---------------|--------------------------------------------------------------|-----------------------------|-------------------------------|---------------------------------|--------------------------------------------|
| 6             | Idle mode operations                                         | 25.304                      | 3.7.0                         |                                 |                                            |
|               |                                                              | 23.122                      | 3.7.0                         |                                 |                                            |
|               |                                                              | 31.102                      | 3.6.0                         |                                 |                                            |
|               |                                                              | 25.133                      | 3.6.0                         |                                 |                                            |
|               |                                                              | 25.123                      | 3.6.0                         |                                 |                                            |
|               |                                                              | TS 03.22                    | 8.5.0                         |                                 |                                            |
|               |                                                              | TS 05.08                    | 8.10.0                        |                                 |                                            |

|                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|--------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Reason for change:</b>            | ⌘ It is proposed to create the new REL-5 of 34.123-1 as a merged document with the R99 and REL-4 specification. As consequence, the R99 and REL-4 specification will be no longer maintained.<br>In order to avoid confusion, a pointer to the maintained version of the specification is included in 34.123-1 R99 and REL-4 and the specification can be closed after the implementation of this CR.<br>Note: All the testcases related to R99 and REL-4 can be found in TS 34.123-1 REL-5. |
| <b>Summary of change:</b>            | ⌘ Deletion of text and inclusion of pointer to the updated version of the specification                                                                                                                                                                                                                                                                                                                                                                                                      |
| <b>Consequences if not approved:</b> | ⌘ It will not be clear that this release of the specification is not longer maintained.                                                                                                                                                                                                                                                                                                                                                                                                      |

|                              |                                                                                                                                                                    |                    |  |

|                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|--------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Reason for change:</b>            | ⌘ For SMS Type 0 there is currently no test existing. However, this feature is used by many network operators in order to get UE positioning data or to check whether an UE is 'on air' in the network. An UE receiving such a message shall behave according to the core specifications. Since the conformance requirement has been made harder from REL-4 to REL-5, the REL-5 relevant Test Cases have been created as sections 16.1.6a and 16.2.6a respectively. |
| <b>Summary of change:</b>            | ⌘ Addition of a new test in section 16.1.6 & 16.1.6a (CS) and 16.2.6 & 16.2.6a (PS)                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Consequences if not approved:</b> | ⌘ The UE is not tested according to this requirement and may show service affecting behaviour when receiving a Type 0 Short Message                                                                                                                                                                                                                                                                                                                                 |

|                              |                                                             |   |                  |

| <b>Other comments:</b>       | ⌘ The corresponding test case of 3GPP TS 51.010-1 is 34.2.6 |   |                  |

## 16.1.6 Test of short message type 0 (R99 and REL-4 UE)

For further study:

### 16.1.6.1 Definition and applicability

This tests that the UE correctly acknowledges the receipt of the short message type 0 to the SC in Circuit Switched mode. It is highly recommended that the UE discards the contents of the short message type 0.

This test shall apply to all R99 and REL-4 UEs supporting receipt of short messages in CS mode.

### 16.1.6.2 Conformance requirement

When a mobile terminated message is type 0, the UE shall acknowledge receipt of the short message to the SC but may discard its contents.

Note: It is highly recommended that the UE discards the type 0 short message. This means that the UE is able to receive the type 0 short message irrespective of whether there is memory available in the (U)SIM or ME or not, the UE does not indicate the receipt of the type 0 short message to the user, and the message is not stored in the (U)SIM or ME.

### Reference(s)

3GPP TS 23.040, 9.2.3.9.

### 16.1.6.3 Test purpose

To verify that the UE will acknowledge receipt of the short message to the SC. The UE should discard its contents.

NOTE: failure of this test in a UE could cause it to reject a type 0 message when the network is trying to reach the UE. This could lead to unwanted repetitions between the US and the service centre.

### 16.1.6.4 Method of test

#### Initial conditions

#### System Simulator:

1 cell, default parameters.

#### User Equipment:

the UE shall be in MM-state "Idle, updated".

#### Related ICS/IXIT Statements

Support for Short Message MT/PP.

The value of timer TC1M.

#### Foreseen Final State of UE

Idle, updated.

#### Test Procedure

The SS sends a type 0 message by using the method described in step a) of section 16.1.1 but with the TPDU described in this section.

16.1.6a Test of short message type 0 (≥ REL-5 UE)16.1.6a.1 Definition and applicability

This tests that the UE correctly acknowledges the receipt of the short message type 0 to the SC in Circuit Switched mode. The UE shall discard the contents of the short message type 0.

This test shall apply to all ≥ REL-5 UEs supporting receipt of short messages in CS mode.

16.1.6a.2 Conformance requirement

When a mobile terminated message is type 0, the UE shall acknowledge receipt of the short message to the SC but shall discard its contents. This means that

- the UE shall be able to receive the type 0 short message irrespective of whether there is memory available in the (U)SIM or ME or not,
- the UE shall not indicate the receipt of the type 0 short message to the user,
- the short message shall neither be stored in the (U)SIM nor ME.

#### Reference(s)

3GPP TS 23.040, 9.2.3.9.

#### 16.1.6a.3 Test purpose

To verify that the UE will acknowledge receipt of the short message to the SC. The UE shall discard its contents. This means that

- the UE shall be able to receive the type 0 short message irrespective of whether there is memory available in the (U)SIM or ME or not,
- the UE shall not indicate the receipt of the type 0 short message to the user,
- the short message shall neither be stored in the (U)SIM nor ME.

NOTE: failure of this test in a UE could cause it to reject a type 0 message when the network is trying to reach the UE. This could lead to unwanted repetitions between the US and the service centre. In addition service affecting restrictions could happen to the customer.

#### 16.1.6a.4 Method of test

##### Initial conditions

##### System Simulator:

1 cell, default parameters.

##### User Equipment:

the UE shall be in MM-state "Idle, updated".

the ME- and (U)SIM message store shall be empty.

##### Related ICS/IXIT Statements

Support for Short Message MT/PP.

Whether SMS messages are stored in the USIM and/or the ME.

UE capable of displaying short messages

The value of timer TC1M.

##### Foreseen Final State of UE

Idle, updated.

##### Test Procedure

- a) The SS sends a type 0 short message by using the method described in step a) of clause 16.1.1 but with the TPDU described in this section.
- b) The ME- and (U)SIM short message store shall be filled (for example by using the method of clause 16.1.3 test of the memory available notification).
- c) The SS sends a type 0 short message as in step a).

Maximum Duration of Test5 minutesExpected sequence

## 16.2 Short message service point to point on PS mode

All of test cases in this clause are applied to the UE supported PS mode.

[...]

### 16.2.6 Test of short message type 0 (R99 and REL-4 UE)

For further study:

#### 16.2.6.1 Definition and applicability

This tests that the UE correctly acknowledges the receipt of the short message type 0 to the SC in Packet Switched mode. It is highly recommended that the UE discards the contents of the short message type 0.

This test shall apply to all R99 and REL-4 UEs supporting receipt of short messages in PS mode.

#### 16.2.6.2 Conformance requirement

When a mobile terminated message is type 0, the UE shall acknowledge receipt of the short message to the SC but may discard its contents.

Note: It is highly recommended that the UE discards the type 0 short message. This means that the UE is able to receive the type 0 short message irrespective of whether there is memory available in the (U)SIM or ME or not, the UE does not indicate the receipt of the type 0 short message to the user, and the message is not stored in the (U)SIM or ME.

#### Reference(s)

3GPP TS 23.040, 9.2.3.9.

#### 16.2.6.3 Test purpose

To verify that the UE will acknowledge receipt of the short message to the SC. The UE should discard its contents.

NOTE: failure of this test in a UE could cause it to reject a type 0 message when the network is trying to reach the UE. This could lead to unwanted repetitions between the US and the service centre.

Specific Message Contents:SMS-DELIVER TPDU (containing a type 0 message) (SS to UE):

| <u>Information element</u> | <u>CommentValue</u>                  |
|----------------------------|--------------------------------------|

16.2.6a Test of short message type 0 ( $\geq$  REL-5 UE)16.2.6a.1 Definition and applicability

This tests that the UE correctly acknowledges the receipt of the short message type 0 to the SC in Packet Switched mode. The UE discards the contents of the short message type 0.

This test shall apply to all  $\geq$  REL-5 UEs supporting receipt of short messages in PS mode.

16.2.6a.2 Conformance requirement

When a mobile terminated message is type 0, the UE shall acknowledge receipt of the short message to the SC but shall discard its contents. This means that

- the UE shall be able to receive the type 0 short message irrespective of whether there is memory available in the (U)SIM or ME or not,
- the UE shall not indicate the receipt of the type 0 short message to the user,
- the short message shall neither be stored in the (U)SIM nor ME.

Reference(s)

3GPP TS 23.040, 9.2.3.9.

16.2.6a.3 Test purpose

To verify that the UE will acknowledge receipt of the short message to the SC. The UE shall discard its contents. This means that

- the UE shall be able to receive the type 0 short message irrespective of whether there is memory available in the (U)SIM or ME or not,
- the UE shall not indicate the receipt of the type 0 short message to the user,
- the short message shall neither be stored in the (U)SIM nor ME.

NOTE: failure of this test in a UE could cause it to reject a type 0 message when the network is trying to reach the UE. This could lead to unwanted repetitions between the US and the service centre. In addition service affecting restrictions could happen to the customer.

16.2.6a.4 Method of testInitial conditionsSystem Simulator:

1 cell, default parameters.

User Equipment:

the UE shall be in GMM-state "GMM-REGISTERED";

the ME- and (U)SIM message store shall be empty.

Related ICS/IXIT Statements

Support for Short Message MT/PP.

Whether SMS messages are stored in the USIM and/or the ME.

UE capable of displaying short messages

The value of timer TC1M.

Foreseen Final State of UE

Idle, updated.

Test Procedure

- a) The SS sends a type 0 short message by using the method described in step a) of clause 16.2.1 but with the TPDU described in this section.
- b) The ME- and (U)SIM short message store shall be filled (for example by using the method of clause 16.2.3 test of the memory available notification).
- c) The SS sends a type 0 short message as in step a).

Maximum Duration of Test

5 minutes

Expected sequence
