1. Overall Description:

T3 thanks 3GPP2-TSG-C for their correspondence (T3-030885) on harmonization of the ISIM. T3 has reviewed the attached proposed CR and has no problem in principle for approving it.

However 3GPP TSG T3 would prefer to see the whole picture before approving it:

- storing the P-CSCF address in the ISIM might also be useful in the 3GPP context. 3GPP TSG T3 has sent an LS to other working groups within 3GPP concerning this topic and will probably receive an answer before its next meeting.
- are there any other changes to the ISIM to be envisaged for 3GPP2 needs? In particular, the authentication function of the ISIM is very similar to the authentication function of the USIM, which is itself quite different from the authentication function in the R-UIM. Would the authentication function of the ISIM fit within the 3GPP2 context?
- is it clear for 3GPP2 that the ISIM was designed to work on top of the UICC in parallel to the USIM, and therefore that it would be recommended to define a R-UIM application working on top of the UICC? This application would need to support in particular the selection mechanisms of the UICC, and this would require a specific Application Identifier (AID).

With all these information, 3GPP TSG T3 would be in a position where it could approve the CR proposed by 3GPP2.

T3 would like to emphasize again its interest to work in coordination with 3GPP2-TSG-C.

2. Actions to 3GPP2-TSG-C:

- 1) inform 3GPP TSG T3 about all the modifications to the ISIM that would be needed for 3GPP2 needs
- 2) confirm to 3GPP TSG T3 that 3GPP2 is defining a R-UIM application on top of the UICC

3. Date of Next TSG-T3 Meetings:

Meeting	Date	Location
T3#30	10-13 February 2004	Sophia Antipolis, France
